He read the main questions from printed sheets; they were not of his invention. He had hardly originality enough to change a syllable in the questions to make their meaning clearer. And such questions! Some of them absolutely horrified me. I had been in lands where one had to have passports to travel, and where life is spent under very strict government surveillance, but never where the lines were more tightly drawn round one's personal liberty. I thought of Russia and then of the England I had already renounced. Did I really want to give up English freedom for citizenship in a land where I could not be free to read what books I liked, or to attend public meetings of all kinds? "Are you an anarchist?" I was asked, and, as upon the former occasion, I answered that I was not. "Do you ever read any anarchist books or papers?" I was then asked, and I stood for a moment dumfounded. I ought to have said: "I decline to answer that question here," but I did not. I parried it by saying: "I *do* not read anarchist papers," laying some slight emphasis upon the present tense. It was perhaps a cowardly answer. I despised myself for making it. For of course I *have* read anarchist books. I have read my Thoreau on the "Duty of Civil Disobedience"; I have read much in Herbert Spencer's pages which the anarchists claim to be good gospel. I have read Tolstoy and Kropotkin. But that pompous little representative of the United States Government would never have been able to get into his head that a man could read such books and be other than an "undesirable citizen."

Then I was asked whether I ever attended anarchist meetings. To this I could truthfully enough give a negative answer. Still, the answer shamed me somewhat. Why should I not attend an anarchist lecture if I should feel disposed to do so? What right has the Government of the United States to ask what kind of meetings I like any more than to ask what kind of pudding I like?

The anarchist bogey has evidently frightened the authorities at Washington. Their representative looked very solemn and spoke with a comical attempt at impressiveness: "What do you think of anarchy?" It never entered the poor fellow's stupid brain that if a man never read anything about it, nor listened to expositions of it, his opinion of anarchism could not be of any value to himself or anybody else. He was a man without a sense of humor, representing authority at Washington likewise without a sense of humor.

I smiled at the question. "How much space have you for that answer, Mr. Attorney?" I asked. He showed me just one short line. My opinion of anarchism must be comprest into a single line therefore. So I said: "Mr. Attorney, you will please record my opinion that anarchism is 'a very foolish proposition.'"

I doubt whether the attorney has yet wondered that one who never read any anarchist literature could have such opinions as my "unofficial" opinion of anarchism above quoted! Quickly he past to the next question. "Explain why you desire to become an American citizen," he commanded. I replied to the effect that I believed it to be my duty to the country in which I reside to assume my fair share of civic responsibilities. In the mind of the attorney this answer was translated in the following words, which he wrote in his report: "Because I want to vote." But I let it go at that.

Why on earth that examination should have been held no one has been able to inform me. It did not save any applicant or witness from attending the Supreme Court, for each person was told that it would still be necessary to appear in court. It did not save a single moment in court so far as I have been able to learn, for every bit of the performance had to be gone over again.

About a week later, in company with my two witnesses, I attended the court as directed. The courtroom was almost

full of applicants for citizenship and their witnesses. Arriving promptly at nine o'clock we were among the first present and hoped that we might get away in reasonable time. Fifty minutes we waited for the judge to appear, and then when he came in at ten minutes to ten we were shocked to see the jury seats begin to fill up. A moment later our fears were realized: the judge announced that there would be no naturalization hearings until one o'clock, an officer of the court repeated the announcement and came to where we were packed together and practically ordered us to leave the courtroom. I was desperate. One of my witnesses had an important engagement at one o'clock twenty miles away and to miss it would mean a loss of hundreds of dollars perhaps. Striding up to the judge I explained the situation, and he was good enough to agree to "swear in" that witness and take his testimony, so that he could leave. My other witness and myself must return at one o'clock.

That was a small mercy, but we were grateful enough. My second witness and myself, with three hours to kill, took a drive into the country and luncheon at a well-known road house, returning to the courtroom five minutes before one o'clock. The court was still in session, but we were informed that there would be no naturalization after all; that a few minutes after all the applicants and witnesses had been sent out of the courtroom another judge had appeared, and, having nothing else to do, decided to take the naturalization cases! Nearly thirty applicants had gone away as ordered and would return at one o'clock, but there were two or three belated arrivals in court. These applicants were disposed of, and no others being present at the time the hearing of naturalization cases were declared finished for the day, the judge going home. There we sat, thirty applicants with witnesses, about ninety persons in all, stunned and enraged.

Again I went up to the judge who had been so obliging in the morning and asked if he could not dispose of my case under the circumstances. He was very cordial and polite, apologizing profusely for the manner in which I had been hounded from pillar to post. "You have a right to kick," he said. "It is not a fair deal. I would like to help you out and hear your case if I could. But I am helpless. The representative of the Federal Government (the same who had examined us in our city hall) must be present to do the examining, and he has gone away. Moreover, there are no books and no records of your previous examination. It's too bad, but I cannot help you." Then, over the protest of the clerk of the court, he agreed to "swear in" and examine my second witness, in the hope that the United States representative would accept that in lieu of further appearance at court.

The examination was conducted by the clerk amid much confusion. Perhaps because the irritating turn events had taken had irritated him, my witness became confused, and in reply to the question "How long were you in this country before you got your certificate of naturalization?" answered "About two years." Immediately the clerk turned to the judge, who had been attending to other matters, and asked that my petition be dismissed, on the ground that the witness himself had, by his own showing, no legal right to his citizenship, having obtained his papers before he was in the country five years. Here was a pretty kettle o' fish! At first the judge agreed to the request for a dismissal of my application, but changed it to an adjournment in response to my plea.

What had happened was that my witness in his excitement had misunderstood the drift of the question and supposed that it referred to his "first papers," his declaration of intention. As a matter of fact, he had been in the country almost ten years before getting his final papers, as he was able later to prove by various deeds to property in his possession. But I had had a very narrow escape!

Acting on the advice of the judge, we hastened back to our home town and sought out the United States attorney, explaining the situation to him. He was in no good humor, apparently resenting the action of the judge in taking it upon himself to examine my witnesses in his absence. He promised to see that I received notice to appear at the next session of the court at which naturalization

cases would be taken up, intimating that the previous examination of my witnesses would not be taken into account at all, and that they must both reappear. Progress to citizenship was exceedingly slow!

No notice came of that next hearing. Luckily, however, my witnesses and myself had decided to be present. I was determined, if possible, to force a hearing this time. Again we were present at nine o'clock, the scheduled opening time, and again the judge was late, appearing a few minutes after ten o'clock. I saw with relief that the judge was an old friend, and knew that if I could only get my case called, success was assured. But to get called was not easy. Not having been notified, my name was not on the list. Further, there were many applicants, and most of them were brought by machine politicians. Men holding political offices, party leaders, swarmed within the enclosure reserved for counsel. They went up to the clerk and dictated the order in which names were to be called, and themselves acted as witnesses in all these cases. I observed that in these cases the examination was almost a farce, practically all the questions relating to the applicant's knowledge of our form of government being omitted.

Evidences of "pull" were abundant. To say that I was disgusted is to describe my feelings mildly. Again I was asking myself whether citizenship was, under the circumstances, worth striving for. I appreciated the feelings of the old Scotchman who, the week before, appeared in the office of the representative of the United States and threw down his certificate of citizenship in disgust, saying: "Take this paper. I do not want it, for I am sick of the corruption and favoritism shown everywhere. I don't want to be a citizen in a land where there is no justice."

The attitude of my friend, the judge, interested me. The unimaginative attorney asked an Italian laborer if he believed in polygamy, and the poor fellow sat helpless and puzzled, wondering what he should say. Finally, when the question was repeated, he answered, "Ya." Just then the judge was listening and he broke in sharply: "What's the use of asking him if he believes in polygamy, when he does not understand the word?" Then, turning to the applicant, he said: "Do you think one wife at a time is enough for a man?" and the applicant understood. He fairly shook with laughter as he replied: "Ya. One wife trouble enough for any man." Another man was asked if he believed in anarchy, and likewise failed to comprehend. "Ask him whether he believes in burning down a man's house," directed the judge, and again the reply was a very certain negative. It was rather a queer definition of anarchy, but I am sure the judge got far nearer to the real man in the witness chair than did the hidebound representative of the United States.

At last, after nearly four hours' waiting, I reached the witness chair. The judge was chatting with a group of lawyers and quite unconscious of my presence, otherwise I should have had an easier time. As it was, the examination was by no means a severe ordeal. All the questions I had twice before answered were repeated, and I replied to them as patiently as possible, once more swearing that I did not believe in polygamy or anarchism, once more testifying about myself and my family. A few questions about the government of the United States and I was past, subject to a satisfactory examination of my witnesses. I stept up to sign my name in a big book at the judge's desk and was at once warmly greeted by my friend and engaged in a chat. I am inclined to think that I thus unconsciously enjoyed the benefits of a "pull," for my witnesses were both rushed thru, and instead of being treated roughly and rudely by every minor court functionary, I was at once the object of marked courtesy and deference.

Officially, I was now a citizen of the United States, but there were still some formalities to go thru. Before I could get my certificate I must wait for all the other applicants to get thru with their hearings. Then I must stand in line and wait for my turn to get such particulars as the color of my hair and eyes, the shape of my nose, my height and weight, entered in my certificate. I say I had to "wait my turn," but that is not quite correct. One does not object to taking one's turn in line upon the principle of "first come first served," but rebels against

having the last man come first because of a whisper from some politician. First the fortunate possessors of "pull" were attended to by the little clerk with an indictment for fraud menacing his future. How long I should have had to wait I cannot say, but quite early a prominent member of the legal profession came along, and, after a word of greeting, upon his own initiative, spoke my name in the ear of the little clerk. The effect was magical! I was attended to, even before the favored protégés of the political bosses, and left at once, followed by the envious and angry glances of the wronged crowd. Thus, by a strange fate, my first experience of citizenship in a republic was the enjoyment of undue privilege obtained by "pull."

That the present naturalization law is unconstitutional I have been assured by eminent jurists. There is good reason to believe that the States themselves have a right to determine the terms upon which they will grant citizenship to the alien, and grave doubt of the right of the Federal Government to assume sole jurisdiction in the matter. However that may be—and I am not a constitutional lawyer—I believe that this simple record of personal experience will show that the present method of naturalization involves a great deal of quite useless red tape. The whole procedure is unnecessarily tedious, irksome and costly to the applicant for citizenship, and well calculated to deter the most intelligent and self-respecting from becoming citizens.

I do not hesitate to say that the present method is a grave scandal and should be changed as speedily as possible. Like all Englishmen, I have ever enjoyed the right to grumble. In England I should have written a letter to *The Times* about such abuses, or insisted that the member for my division "ask a question about it" in Parliament. I have abandoned my English allegiance, but cannot so readily abandon my English instinct to protest against what seems to me a crying evil. As an American citizen with the English instinct for justice and fair play, therefore, I protest against the present ridiculous and unjust methods of naturalizing aliens.

YONKERS, N. Y.

Let Not the Vision Fail!

BY MARIAN WARNER WILDMAN

IF but the Vision fail not, I can bear
  That petty duties fill my passing days,
  Too full for golden tasks of song and praise;
That I must chain swift thought to lowly care;
That I must keep me house-bound who would fare
  By breezy hill and grassy meadow ways;
  That I must fix on earth eyes I would raise
Unto the stars and let them linger there.

What matters it? If but the Vision falls
  Sometimes across my commonplace; a gleam,
A shaft auroral o'er the daylight pale,
A sudden, mystic splendor that recalls
  My plodding spirit to the Hights of Dream
Where Beauty bides! *Let not the Vision fail!*

NORWALK, OHIO.

Literature

Studies in the Constitution

MANY years since Dr. Woodrow Wilson published a book on "Congressional Government," in which he described the method of Congressional legislation by committee. His present book* shows an advance from the more technical method that he then followed, and he deals free hand with the broad subject of "Constitutional Government in the United States." His chapters have much of the life of the spoken word; indeed, they were lectures, and stimulating ones, before Columbia University.

From his initial question, "What is Constitutional Government?" thru his discussion of its various phases in President, Congress and courts, and in the inter-relation of State and nation, to his remarkable review of the present condition of "Party Government in the United States," he maintains the simple and often neglected proposition that the government of the country is of vital importance to the citizens and is vitally affected by them. The relation of the various branches of the Government to the people is always in view. The word "academic" is to be applied to no part of the book.

Usually Dr. Wilson is optimistic and he loves to find in the relation of State to nation an example of the federation of the world, but he has no fear of obliteration of State lines. Now and again he puts in a nutshell and answers a question that fills volumes of discussion. Of the Philippine Islands he says, "Self-government is not a thing that can be given to any people, because it is a form of character and not a form of constitution."

The perennial accusation that justice is not as accessible to the poor man as to the rich (indeed, nature seems as unable as society to treat all men equally, tho granting them equal rights) is stated at length, but a solution of the difficulty, if indeed there really be a governmental difficulty in it, Dr. Wilson does not give, but leaves it with somewhat destructive criticism. He decries also the too practical tendency of our legislation that leads to the makeshift escape from temporary inconvenience. He deals also with the experimental legislation we have had as to cities, that we fear has been thrust upon us by unprecedented conditions.

The real worth of the book, and for this we hope it may be widespread, is that it often answers the cry for law to correct this or that iniquity. "Moralization," he says, "is by life and not by statute"; and then in his chapter on party government, in which he shows anew the necessity for party government and for politicians and even for political methods as we generally know them, he gives a really splendid challenge to political activity.

Dr. Wilson's lectures are clearly intended for the thoughtful citizen not necessarily learned in the law—a popular treatise.

Prof. Frederic J. Stimson, on the other hand, has prepared an extremely useful and needed volume[2] which analyzes more technically the composition of the constitutions of the United States and of different States. Chiefly by inference he deals with their workings, altho he offers criticisms and suggestions of great value.

Professor Stimson is already known as a thoro student of the Constitution and of statutory law and methods, and his present work deserves immediate standing. It is introduced by a group of essays on the origin and growth of the American constitutions, dealing with the right to law, to liberty, to labor, the Injunction Order Government organization and allied topics. These pave the way and define the field which the professor then occupies by citations arranged chronologically showing the principles in

[1]CONSTITUTIONAL GOVERNMENT IN THE UNITED STATES. *By Woodrow Wilson, Ph. D., LL. D.* New York: Macmillan Co. $1.50.

[2]THE LAW OF THE FEDERAL AND STATE CONSTITUTIONS OF THE UNITED STATES—With a Comparative Digest of the Constitutions of the Forty-six States. *By Frederic Jesup Stimson.* Boston: Boston Book Co. $3.50.

English charters and statutes since the Conquest, and in our American constitutions and statutes, the principles that indicate the liberties and limitations, the rights and duties of the State and of the citizen. The important steps in social legislation are similarly grouped. He classifies exclusive Federal powers; powers favored by State and nation; powers reserved by the States and those forbidden to the United States; those forbidden to the States and those rights that are reserved or retained by the people.

All this is prefatory to the masterly comparative analysis of the Federal and forty-six State constitutions which gives title to the book. The trend of constitutional government shows out very clearly in this comparison. The wonder is that he could indicate and tell so much in so little space.

Here we mark the increased attention to the rights of labor, to insurance, to railroads and mining, and the reader must remember that the comparison is not a comparison of all the laws of the various States, because all the States have laws on these matters, but it is significant that in many States they are dealt with as primary. The unfortunate distrust of the people in their own representatives in the various legislatures appears in a tendency to increase the scope of the constitutions which supposedly spring from the people and to multiply the subjects dealt with in detail by them. Whether or no this distrust is justified is not the sole question, for it certainly is one of the very worst tendencies of the present day and one that has been only half considered by the people at large. We say only half considered, otherwise why do the people permit the bosses to elect their own men and dicker at the capitol? Why is not the boss compelled to be the servant of the people, as certainly he should be, volunteer as he is, however much he may tyrannize inside the machine?

So we find in recent constitutions and amendments matter that should be simply statute, and that because it deals with secondary, not primary, principles, or deals with principles in a transient instead of permanent manner, is carried to its extreme in the last constitution adopted in the country, namely, that of Oklahoma. The question naturally arises, If the people sleep now, what will they do when they have fixt, or think they have fixt, laws encroaching even on police regulation in what they call a constitution, contained in upward of two hundred close-printed pages as in Oklahoma's case?

In a broad sense Professor Stimson gives us a view of the political or constitutional life of the country—an almost indispensable thing to the investigator of today.

The Greatest Heroine

THE title of this novel* sounds ironical, but it is not ironical, it is felicitous. Miss Driver is the greatest woman created in recent fiction—not the best; no one knows who the best woman is anywhere—but the greatest. Here is a difference that is not merely a distinction, for one may be very good indeed without being great, and, like Miss Driver, one may be great without being altogether good. "Great" is an unharnessed adjective that has more native descriptive force when applied to power than to morals. And it is in this sense that the heroine of Mr. Hope's new novel is great. She is a woman of power rather than of righteousness. The story thru which she moves is splendid and written with that spirited charm which always enables Anthony Hope to take the top rail of the reader's imagination with so much ease. But the incidents of it would fail of their shining significance without the amazing heroine to star them. She makes the book, mars it, mends it, and sums it up at last in her own personality, which is both plebeian, brilliant and noble, destructive and creative, whimsical and steadfast.

She is the daughter of one Richard Driver, a rich, forceful man of the middle class in England. She is the issue of an unhappy marriage, her mother dies and her father has that kind of antipathy for her which makes it impossible for him to bear the sight of her. He therefore "farms" her out, so to speak, while she is growing up and getting the strength of her head and spirit. There is a scandalous episode in her early girlhood with

*THE GREAT MISS DRIVER. *By Anthony Hope.* New York: McClure Co. $1.50.

an adventurer, and the reader is surprised at the assurance with which the author presents what appears to be the ordinary type of the commonplace, rich young vixen. There is something challenging in the way he refuses to conceal or condone her faults, as if she could afford the expense, morally speaking, and as if they were the prerogatives of a great nature in the process of development.

After the death of her father Miss Driver comes to Breyswater, accompanied by her governess, very much as a worldly woman sometimes preserves and cherishes an old battered doll thru affectionate sentimentality. Here she meets her father's lawyer and secretary. She accepts both in their respective capacities, and some of the best passages in the book are the comments of these two men upon her character. Austin, the secretary, has been telling the story all along, and from this point he tells it better, as if he had been both stung and stimulated. She takes possession of her great fortune, and at once begins to develop those qualities which entitle her to be called great, without showing the slightest feminine finickiness for virtue, taken as the wizened personal attribute for what we sometimes call little good women.

Now, when a woman wears the world as if it were a feather in her cap or the dust beneath her feet, when she makes her own will law and takes possession of all her powers, she is abler than a man, because by nature she is less scrupulous. Miss Driver had this invincible use of herself and her resources. She pressed every issue of life to the danger point and then stept over it, not because she was reckless, but because she was able, and must go to the limit before retrieving the situation with infinite wisdom and tact. She finally elopes with a big, gracious, eccentric, irascible man, to the great mortification of her friends and the confusion and disgust of her aristocratic lover. And she elopes, not because any one could or would oppose her marriage, but because she would not risk the yoke of marriage even with the man she loved.

And while she is away, out of the narrative, so to speak, bent upon this adventure, the author achieves a curious and daring triumph in his art. The light goes out of his pages, purposely. And the gloom of her absence is the first overpowering intimation the reader has of her fascination for him also, of her bigness and beacon brightness in the life about her. It is a new experiment in literary art and explains in a measure Mr. Hope's fitness as an interpreter of a character like that of Jenny Driver. He also has *insouciance* of courage, which carries the issue to the danger point in experiment.

After the tragic death of her lover in Paris she returns to Breyswater with the determination to reinstate herself in the favor of a respectable and scandalized community—not on account of any desire for forgiveness, exactly, but because the difficulty of the undertaking appeals to her indomitable spirit, and because she is determined to have the approval of people about as another might set his heart upon a certain investment in real estate. What she achieves may be read in the book. It is all good, brave, witty, and of a bigness in keeping with her own nature, and it is accomplished with some of the dignity of a queen, the insolence of a common woman, and the humor and toleration of a philosopher.

By this time the reader is asking himself, "Where have I read before of just such a woman?" Suddenly the great Miss Driver stands out luminous against the background of history, with eyes that mock and challenge memory. Mr. Hope himself reveals the secret in the last pages of the book. It is the character of the great Queen Elizabeth that he has dramatized in the life of his heroine.

The ease and politeness of manner with which the story is told may be compared with that of an intelligent, cultivated man who tells a story fascinatingly, yet with a certain deprecatory air, as if he said, "But do not let me tire you!" and the reader's response is, "Pray go on, sir; you could not tire me if your tale lasted till morning."

The Psychology of Advertising. By Walter Dill Scott. Boston: Small, Maynard & Co. Pp. 269. $2.00.

Dr. Scott is one of the pioneers in the movement for applying the principles of psychology to advertising, his previous volume, "The Theory of Advertising,"

published in 1904, having contained much of the substance of the present work. Since 1904, the principles and theories enunciated by Dr. Scott have been widely adopted and practically applied, and if, as Dr. Scott indicates, a further study of these principles will lead not only to the elimination of ugly and offensive advertising and of advertising that offends our esthetic feelings, but also to a gradual elimination of sensational and yellow journals, the warm good wishes of the community will go with him in his campaign. Sooner or later, asserts Dr. Scott, sensational journalism will be discovered to be poor business. Sensational journals cannot command confidence, hence such journals are not valuable as advertising media. Sooner or later publishers will discover this fact, and, as from 50 to 90 per cent. of their income is derived from their advertising pages, anything which makes these pages more valuable will be preferred, even tho the policy adopted may reduce the circulation. The same principle, Dr. Scott believes, will gradually eliminate unreliable patent medicines, questionable financial offers and all fake schemes from advertising columns, while a similar regard for psychological effects will convince billboard and other advertisers that to associate their goods with a feeling of irritation is the poorest method of bringing them to public notice.

A Star of the Salons. By Camille Jebb. New York: G. P. Putnam's Sons. $2.50.

We published a review of Mademoiselle Lespinasse's Letters some years ago when Mrs. Humphry Ward's novel, "Lady Rose's Daughter," first appeared, based upon the life of the famous Frenchwoman. At this time the identity of her father was still unknown, and it has only been a little more than a year since M. de Ségur discovered that Gaspard de Vichy was the man. He was the lover, first, of Mademoiselle's mother, and afterward married the unfortunate girl's elder sister. The revolting revelation is the only thing added by her new biographer to what we already knew of this brilliant star of the salons whose orbit was too erratic to be computed according to any moral law. The curious thing is that whether her biographer is a man or a woman, all excuses are made for her sweetly tender departures from virtue, which indicates that a woman whose spirit can still defend her so far down the ages must have been extraordinarily good as well as fascinating. The chief feature of interest in this new biography is not, indeed, the comparatively brief account it contains here and there of Mademoiselle Lespinasse, but it is the minute study it contains of the times in which she lived.

Historic Ghosts and Ghost Hunters. By A. Addington Bruce. New York: Moffat, Yard & Co. $1.25.

Now that ghosts are again in fashion after having been under a cloud for thirty or forty years, this volume is timely, for it shows how little their habits have changed from Dr. Dee to Dr. Hyslop. They manifest the same aversion to light, the same reluctance to give definite answers to direct questions, the same fondness for rapping on furniture and moving it around. Nor have the labors of the Society for Psychical Research made much improvement in the character of the evidence for the supernatural. It is, as ever, convincing to those who wish to be convinced or have had striking personal experiences; unconvincing to the world at large and scientists in particular. Mr. Bruce tells in a popular style of devils of Loudun, the haunting of the Wesleys, the visions of Swedenborg, the Cock Lane ghost, and a half dozen other celebrated manifestations. We do not see the reasons for his arrangement or selection, why, for example, the most remarkable of all, the Fox sisters, Katie King, Eusapio and Mrs. Piper, should have been omitted, but the ghost stories he has told us are interesting and not easily attainable.

Browning and the Dramatic Monologue. By S. S. Curry, Ph. D., Litt. D. Boston: Expression Company. $1.25; to teachers, $1.10 postpaid.

It is still considered proper to jest of Browning's unintelligibility. Dr. Curry points out very clearly that the difficulty which is generally found in understanding him is certainly not due to intentional obscurity, nor even so much to his naturally elliptical mode of expression, as to

the inevitable form of the dramatic monolog into which almost all of his work is thrown. With a very large part of the dramatic vividness and rapid movement of the stage, with its unexampled power of suggesting to the imagination an actual scene, and its keen psychological analysis of a speaker talking to and conditioned by the man who listens to him, this literary form was the one possible mode of expression for such a mind as Browning's, and he brought it to its greatest perfection. Hence the loyal enthusiasm of those who have the zeal to penetrate the inevitable difficulties which such a method binds itself up in. Dr. Curry makes a lucid analysis of the form of the monolog—the speaker, the hearer, the place, the suggested action, the dramatic unfolding of the character of the principal actor, and he furnishes for every teacher or public reader a valuable commentary upon the bodily and vocal rendering of these monologs, their relation to their meters, dialects and properties. All of this is done in connection with a running use of a number of Browning's best pieces as examples, with a clearness and detail which are most excellent.

Confessions of a Railroad Signalman. By J. O. Fagan. Boston: Houghton, Mifflin & Co. $1.00.

In the Twenty-first Annual Report of the Interstate Commerce Commission, issued December 23d, 1907, the following arraignment of American railways is given place:

"Accidents to trains on the railroads in the United States continue to occur in such large numbers that the record, as has been repeatedly declared by conservative judges, is a world-wide reproach to the railroad profession in America."

Mr. Fagan, in his present book, forcefully discusses, with more than ordinary intelligence, some of the problems in American railroading. He writes as one having authority and from personal experience. His investigations have been carefully made and his contribution to the literature relative to railroads is highly important. His conclusions will tend to antagonize the railroad unions, but if his book should happen to be the means of saving a single life he will not have written in vain. The conditions prevailing on American railroads as set forth by Mr. Fagan are, it must be said, far from hopeful. The time is coming when the management of our railroads must be less hampered than is now the case. There is sad need for more discipline before our railways can compare with European railways in point of safety in operation. There are other reforms that cry out for institution, and the Fagan volume will do good in directing attention now lukewarm to many of these reforms.

The Bible and the Problem of Poverty. By Samuel M. Godbey. 16mo, pp. 193. New York: Fleming H. Revell Co. $1.00

The title suggests correctly that this is not a theoretical or practical investigation of the problem of poverty, but simply an elucidation of the biblical treatment of property and poverty. More than half the volume is devoted to the Old Testament data, and the rest to the New Testament and the subsequent history of the Christian Church. It is a full and careful discussion, and at times illuminating, as where we are told that the Jewish system of titles of land produce substantially agrees with the single tax theory, being really a tax on the value of the land. It is shown that Judaism solved the great social problem of progress and poverty more satisfactorily than it had been solved in any other nation, inasmuch as the laws which were designed to modify the inequalities in fortune were inwrought into the requirements of religion. Jesus put brotherly kindness before religious service, and James said that pure and undefiled religious service was to show brotherliness to those in need. The author's conclusion is that Christianity's faith in the brotherhood of man offers the only basis for meeting the problem of poverty, but that this is far from being realized in Christian nations, and remains a prophecy of better things. The book does not go beyond its topic, and leaves us to doubt how that prophecy is to be fulfilled. We take note occasionally of the influence of studies not always welcomed in the Southern Methodist Church, of which Dr. Godbey is an honored member, as where it is said that

some of the Mosaic laws may have originated at a period much after the time of Moses, and that laws based on desert needs were not later obligatory.

Literary Notes

....The translation into Swedish of Arthur Stringer's fascinating tale, *The Wire Tappers,* is now to be followed by its translation into Danish. Boston: Little, Brown & Co.

....Owing to the serious illness of Gertrude Stiles, the publication of her book on *Elementary Bookbinding,* recently announced by The Manual Arts Press, of Peoria, Ill., has been indefinitely postponed.

....Henry Clews, LL. D., the well known banker, who delivered an address at the annual meeting of the American Institute of Banking, held at Baltimore, Md., on October 13th last, has now issued his address in pamphlet form. It bears the dual title, *No Government Guarantee of Bank Deposits, and No Ownership of Railroads by the Government.* Copies of this pamphlet may be obtained by addressing Mr Clews at 15 Broad street, New York.

....The field of mental speculation is always full of interest. In this connection we cannot help wondering if Theodore Roosevelt had happened to have been cast away on a desert island would he have been paid for his Scribner material at the rate of one dollar per or would he have been offered $30,000 for a year's editorial connection with a magazine. Without further dalliance with such speculation it may truly be said that literature hath her victories no less renowned than commerce, always provided——

....One would naturally think that the duties of a college president would be enough to take up most of his time. There is a very general impression prevailing that undergraduates are not the most easily managed individuals in the world. The burdens of his office seem to rest lightly upon the shoulders of William DeWitt Hyde, president of Bowdoin College, however, for he has somehow or other found time to write a book of everyday philosophy or meditation under the title of *Abba Father, or the Religion of Everyday Life,* which is issued through the Revell Company.

....Two little volumes of verse are by contributors to THE INDEPENDENT, Charlotte M. Packard and Grace Denio Litchfield. Miss Packard's title is *From the Foothills of Song,* and many of them have appeared in the magazines. They are short, tender, with a touch of the religious spirit, and reach the heart. Miss Litchfield is the author of a dozen volumes of verse, of which this is named *Narcissus,* after its leading poem which occupies forty of the sixty pages. It is the Greek story of the youth who perished from longing for his own image in the water, "for love of that which he had failed to be," and is told with grace and skill.

....In *The Ladies' Pageant* as edited by E. V. Lucas there has been gathered much that is very interesting. Prose as well as poetry has been included so long as the eternal feminine has been the *motif.* Woman in many phases flits thru the pages of the volume, and no man can take it up without obtaining more or less inspiration. It will also interest female readers to find how far some of the poets have gone afield in their imagination. (Macmillan, $1.25.)

THE young college girl was proudly exhibiting a diploma from a well known university, when the fond parent asked what she thought of the political situation. Whereupon she enthusiastically replied: "O! I am for Chafin, he invented the chafin dish.—*From a subscriber of thirty-five years standing.*

STORY OF THE GAME,

(Third Inning.)

TINKER tickled the clouds with a beautiful Wilbur Wright and stopped off at Devlinville to get the view. Kling ripped one through the grass that sounded like a hired man eating celery. His ticket only read to first, but in the meantime Tinker returned, bronzed by the southern exposure, and glad to be back home once more. Brown made a short approach on first with a hoopsy-day-day and changed his mind about making an extended trip. Kling insinuated himself as far as second and stopt to discuss the Balkan war cloud with Herzog. John, of Troy, got free transportation to Tenneyville after a little desultory firing by the mighty Matthewson.

Bang! A twelve pounder by Schulte out in the left field hinterland, which gave Kling a franchise for the right of way from keystone to home, sweet home, via Devlinville, also a stopover for himself and friends at the half way house. The Trojan paused on third because it was unconstitutional to proceed onward. Cap. Chance doubled to right field, scoring Evers and Schulte. Two in the casket and Steiny died an unnatural death, surrounded by the home folks. The vampire handed him a dish of arsenic. His last words were: "Better luck next time."—*Chicago Tribune.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Japan and America

JAPAN'S welcome last week to the American fleet has touched the heart of the nation.

Here are a people who were brutally insulted only a short time ago by our Pacific Coast, a people we call "heathen" and send missionaries to Christianize, actually teaching us a lesson in Christian ethics. Then they were all but driven from California; now they literally strew our path with flowers. Then they were excluded from the schools of our greatest far Western city; now they suffer their little children to greet us singing our national hymn. President Roosevelt, by his indirect stand at the Algeciras Conference in favor of a result which ultimately made the Anglo-Japanese treaty less valuable; by his advocacy of a lock instead of a sea-level canal, so as to get our battleships as quickly as possible from the Atlantic to the Pacific; by his settling the Russo-Japanese War to the advantage of Russia, and by his sending the fleet to the Pacific, has created a chain of circumstances that have led some people to think that he is not Japan's best friend. Yet the Emperor of Japan, the very Son of Heaven, breaks his sacred seclusion to meet our sailors as man to man, and tells them to convey to President Roosevelt this message:

"The historic relations, the good understanding, and the genuine friendship of the United States I count as a valued heritage of my reign, and it shall be in the future, as it has been in the past, my constant aim and desire to weld ties of amity uniting the two countries in indissoluble bonds of good neighborhood and perfect accord."

Surely there is no nobler object lesson in history than this story of how Japan, by returning good for evil, gained a moral victory over us greater even than her physical victory over Russia. Hobson, Beveridge and Lodge should hang their heads in shame.

We rejoice that from now on our ancient friendship for these modern Greeks will be renewed and quickened. Certainly no American will again challenge Japan's friendship for us and get a respectful hearing.

In 1854 the American fleet under Perry opened Japan to the world; in 1908 the American fleet under Sperry reopened Japan to America.

Business and the Election

THERE is proof of encouraging progress toward complete recovery from the depression which followed last year's panic. It is seen in the increase of railroad gross earnings, the steady growth of iron output, immigration statistics, the advance in the price of standard securities, the rehabilitation of embarrassed banks, growing foreign trade, resumption of work in mills that have been idle, and in reports recently obtained from several thousand manufacturers. How will this upward movement be affected by the result of the approaching election? Complete recovery is greatly to be desired, especially in the interest of wage-earners. A large majority of the American people would suffer loss or injury if the movement should be checked, if progress should give way to stagnation.

"They tell you," said Mr. Bryan, last week, "that if I am elected business will be bad. Let them give bond that business will be good if I am defeated." Mr. Taft asserts that the election of Mr.

Bryan would retard recovery and be a menace to prosperity.

It is true that a large majority of business men see in the election of Mr. Taft no menace to American business interests, but hold that it would promote full recovery from depression. They expect that, if he should be made President, public confidence would not be shaken; that the course pursued by the Government during the last few years for the suppression of abuses would be followed without interruption; that regulation of the conduct of great corporations would be sought, instead of destructive attack upon them; and that the methods used would be those which have been tried and approved, rather than those which are radical, untried and probably impracticable. Replying a week ago to a series of questions concerning the condition of their branches of business, the 3,000 members of the National Association of Manufacturers reported a considerable increase of activity. More than nine-tenths of them were optimistic as to future improvement. They had been asked "to make any suggestions that might serve to better conditions." All answered this by saying that much help would be given by the election of Mr. Taft, while many of them exprest also the opinion that the election of Mr. Bryan would exert a very unfavorable influence upon business.

Why is it that the election of Mr. Bryan would be regarded as a misfortune by so many manufacturers and other business men?

First, they believe he is still an enemy of the gold standard. They have seen no evidence to the contrary. After his defeat in 1896 he said, in a formal address:

"The friends of bimetallism have not been vanquished; they have simply been overcome. They believe that the gold standard is a conspiracy of the money changers against the welfare of the human race, and until convinced of their error, they will continue the warfare against it."

His attitude toward the gold standard was unchanged in the campaign of 1900. Some months earlier that standard had been definitely establisht by the statute of March 14th. His speeches in the convention of 1904 showed that he was still the foe of this standard. And in July, 1906, he said:

"I am more radical than I was in 1896, and have nothing to withdraw on economic questions which have been under discussion."

During the present campaign he has carefully avoided the subject of currency standards.

Many business men are unwilling to see a foe of the gold standard exercising the veto power of a President. Such a man in the White House, they say, might at least use this power effectively against legislation designed for the further support of this standard. His Secretary of the Treasury would probably be in accord with him, an advocate of silver coinage or bimetallism. Thus the administration of existing gold standard laws would not be in friendly hands. This would be a cause of apprehension and disquiet.

Again, it is seen by many representatives of business interests that the election of Mr. Bryan would probably be accompanied by the election of a Democratic House, and that tariff agitation in Congress might continue thruout his term. For two years, at least, and possibly for four, there will be a Republican majority in the Senate. With a Democratic House there could be, for at least two years, no revision of the tariff, but wrangling over tariff bills might continue thru those years. Obviously, the effect upon manufacturing industries would not be beneficial and stimulating. On the other hand, the election of Mr. Taft and a Republican House would insure prompt revision, and revision of a kind that would not greatly change present tariff conditions.

It is pointed out that Mr. Bryan's plan for dealing with the great incorporated combinations, if an attempt to use it should be made, would greatly disturb industrial corporations capitalized at several billions and employing more than 1,000,000 persons. An important part of this combination interest would be outlawed and the remainder would be harassed. While the plan is believed to be impracticable there is a conviction that the election of the candidate and the party advocating the use of it would check industrial development by causing alarm and discouraging further investment in great industrial corporations. Such also would be the effect, it is predicted, of the success of a party com-

mitted to the policy of withdrawing all tariff protection from the products of great incorporated combinations.

While the exprest policy of Mr. Bryan and his party concerning the railroads does not differ widely and fundamentally from that of the Republican party and Mr. Taft, it is recalled that supporters of Mr. Bryan have been prominent in procuring severe State legislation for a reduction of rates, and it is predicted that the election of Mr. Bryan and a Democratic House would open the door for attempts to obtain similar legislation in Congress, as well as for discussion that would tend to discourage investment in railway projects, and might affect unfavorably the interests of 1,500,000 employees and the many persons who own railroad securities.

Manufactures and commerce, it is said by the opponents of Mr. Bryan, would watch with some trepidation not only the course of Mr. Bryan's Secretary of the Treasury and Comptroller of the Currency, but also the action of Mr. Bryan's Attorney-General. The recent loud complaints of Mr. Bryan's intimate political friends about Attorney-General Bonaparte's alleged failure to accomplish anything by proceedings under the Sherman act show that the Department of Justice under Mr. Bryan would set out to surpass speedily the long list of prosecutions made while Mr. Roosevelt has been President. These complaints indicate that the Democratic interpretation of the Sherman act would permit a more general attack by Mr. Bryan's Attorney-General and district attorneys upon incorporated combinations than has been made by Mr. Knox, Mr. Moody and Mr. Bonaparte. Such an attack, it is predicted, would cause alarm, confusion and financial restraint.

These are the chief reasons why it is thought by many who are engaged in manufactures, the railway industry or general trade that the election of Mr. Bryan would retard the country's progress toward recovery by checking the growth of that public confidence without which prosperity cannot be restored. We think that, on the whole, they are sufficient to warrant a belief that such would be the effect during at least the earlier part of his term. On the other hand, it seems to us that if Mr. Taft becomes President the upward movement will not be interrupted.

More Archbold Letters

THE ethically and politically worst of all the Archbold letters yet published by Mr. Hearst are those which he read last Saturday, addrest to ex-Governor Stone, of Pennsylvania, and his Attorney-General, John P. Elkin. They strike at the very foundations of law and justice.

One of Mr. Archbold's letters, that of December 5th, 1902, asked that Judge Morrison, of the Court of Common Pleas, be appointed to the Supreme Court of Pennsylvania. The reason given by Mr. Archbold, of New York, for this Pennsylvania appointment was that it was "a subject in which, both personally and in behalf of my company, I am greatly interested"; also, "his great familiarity with all that pertains to the great industries of oil and gas." Judge Morrison was appointed by Governor Stone a member of the Superior bench of Pennsylvania. A previous letter of September 5th, 1900, asks Governor Stone to appoint Judge John Henderson, also of the Court of Common Pleas, to the Supreme bench, and assures the Governor that if it can be done "it will be a matter of intense personal satisfaction to me." Judge Henderson occupies a position on the Superior bench of Pennsylvania, but not by Governor Stone's appointment.

Then follow four other very peculiar letters and a telegram which require explanation. The first is a simple announcement accompanying a letter of introduction from Mr. William Rockefeller to H. McK. Twombly, one of our multimillionaires, which he "hopes will be of service." Next is a telegram of March 15th, 1900, in which Mr. Archbold tells Mr. Elkin that he "will do as requested" in the telegram received. On the same date, "in accordance with your telegraphic request of today," Mr. Archbold encloses "certificate of deposit," not a check, and impossible to trace, "to your favor for $5,000 in fulfilment of our understanding." But this was not the first time that Mr. Archbold had sent a handsome certificate of deposit to Mr. Elkin. On February 5th, 1900, in answer to a

telegraphic request, Mr. Archbold sent him a certificate of deposit for $10,000. A letter of a year later asks Mr. Elkin to see to it that a bill before the Legislature be killed.

Governor Stone offers no defense for himself. He simply says that he appointed one of the men and did not appoint the other. But he does defend Judge Elkin, saying that probably these payments made to him by Mr. Archbold in February and March on telegraphic request were contributions for political campaign purposes. Perhaps so, altho it was rather early in the year; but here are other illustrations of the corruption involved in corporations making large contributions, in this case to the State's legal adviser, for contributions which would give force to a succession of requests for the Standard Oil's control of the Supreme Court of Pennsylvania, and for influence in killing bills. We have the further information that the general counsel of the Standard Oil Company actively urged the appointment of these two men as judges. It is thoroly bad, and we are glad that our States are by law forbidding such contributions.

Now who was and is John P. Elkin? He was at this time Governor Stone's principal legal adviser. He was the Attorney-General of the State of Pennsylvania; and he has been a member of the Supreme Court of that State since 1904. We do not know that there may not possibly have been some innocent financial transaction in which the Attorney-General of the State may have received $15,000 within seven weeks from the managing head of the Standard Oil business, a business which had its chief productive center in Pennsylvania, and as to whose legal interests, as well as to the Supreme Court appointments in that State, the Standard Oil confest to a very great interest; but we admit that any such relation is subject to the greatest suspicion, and ought to have been avoided under all circumstances. Indeed, the effort to secure these appointments shows a freedom of relation and advice which makes one question whether the Standard Oil's interest was not secured in other ways. That at this same time when the Standard Oil was in 1900 asking Judge Henderson's appointment, the Attorney-General of the State was under late obligations for the receipt of $15,000 is a very ugly feature. Such facts as these give color to the charges, generally false, we believe, and which even President Roosevelt has seemed to support, that the courts are liable to be timid in the presence of powerful financial interests.

We have said that these letters are ethically and politically worse than those previously publisht. It is bad to try to buy legislation; it is worse to try to corrupt the courts or to control them by the appointment of prejudiced men. The courts are the last defense of either justice or liberty. They stand between the poor and the rich. They should show no favoritism. When confidence in the courts is lost the only defense is revolution.

Professor Schmidt's Jesus

We have ventured this week to give our readers the view of Jesus held by one of our ablest American biblical scholars, Professor Nathaniel Schmidt, of Cornell University, and we accompany it by a more conservative view by Professor Crane, lately of Chicago Theological Seminary. We take the liberty to add a few remarks of our own.

Professor Schmidt denies that Jesus was more than an extraordinary man. He does not believe that he performed miracles, or was raised from the dead, or that he was the Messiah, or even claimed to be such. When Jesus used the term "Son of Man," applied to himself, he meant nothing more than *man,* because that, in the Galilean Aramaic which he spoke, *bar-nasha, son of man,* was the regular word for *man* and would mean nothing else; and so when used by Jesus himself it could not mean *Son of Man,* that is the *Messiah.* Indeed, Professor Schmidt says that this is "the only Aramaic term which Jesus can have used." We have no literary Galilean Aramaic preserved earlier than a hundred years after Christ, but we have the Aramaic of Daniel, supposed to be perhaps two centuries before Christ, and in the seventh chapter we have *bar 'anash,* son of man, once, and *'anash,* man, several times. There is not the

slightest evidence that in our Lord's time the simple *man* was not used, as well as *son of man.* But Jesus seems to have used "Son of Man" in a peculiar and Messianic sense, that is, unless the critic cuts it out every time as not genuine.

But we cannot discuss these two articles at length. Let us add a word to what Professor Crane has said. In order to sustain Professor Schmidt's contention it is necessary to reverse the whole sense and feeling of the Synoptic Gospels as well as of John's Gospel. In order to accomplish this Professor Schmidt puts their date very late, as late as 100 A. D., so as to allow time for the accretion of myth, and holds them to be full of interpolations. But he cannot do this for Paul. Paul was the contemporary of our Lord, altho he never saw him, being in Tarsus. He came to Jerusalem to study under Gamaliel, and there he met the disciples of Jesus. He got his facts directly from them before there was time for legendary accretions. He talked freely with Peter, James and John. He repeats in First Corinthians the words with which he was told that our Lord instituted the last supper, the same as we have in the Gospels: "This cup is the new covenant in my blood"; and Paul adds: "As often as ye eat this bread and drink the cup, ye proclaim the Lord's death till he come." Paul learned from the disciples themselves that Jesus would come again, that he was the Messiah, that he rose from the dead. There is no question of this, and with this the Synoptic Gospels agree. One who is going to eviscerate the Gospels and leave Jesus as nothing but a mere human teacher has got to deal first with Paul and then with the disciples, from whom Paul learned the story and the teachings of Jesus. He must explain how it happens that the contemporary Paul got all this from Christ's own contemporaries, who were with him for three years, and who were present at his death, and who believed they saw him alive after his passion. With Paul agree the Four Gospels. To get rid of all this and reduce Jesus to a teacher who claimed nothing and did nothing but repeat a cycle of beautiful and noble parables, is a psychological problem which passes our solution.

Duties to Our Non-Contiguous Possessions

Non-contiguous is the word under which we now include, in legal parlance, Alaska as well as Porto Rico, Hawaii, Samoa, Guam and the Philippines. All these, except Alaska, we speak of as our *insular* possessions.

For these we have very different forms of government. Hawaii is autonomous, making its own local laws, but subject, thru a Governor, to the United States. The same is true of the Philippines, except that the Council, or Senate, is appointive, and consists of four Americans and three natives. Porto Rico has a similar appointive Council, consisting of five Americans and four native members. In both Porto Rico and the Philippines the Assembly is wholly elected, and no law can pass both houses that is not approved by the natives in the Assembly and the American majority in the Council. On the whole, this works well. Alaska is under the government of all but one of the departments at Washington, and, as might be presumed, there is confusion and delay in the administration of affairs which concentration of responsibility would have prevented.

The Mohonk Conference has been spending three days in the study of the needed reforms of administration in all these our dependencies as well as among our American Indians. There were present a large number who have had the closest knowledge of affairs either at Washington or in these our dependencies. The recommendations arrived at we give on another page. But to understand the full meaning of these recommendations one should have heard the discussions there.

Here is an example. The platform adopted recommends for Hawaii that Congress give relief for the ill working of the Coastwise Navigation Act as far as passenger traffic is concerned. Who has known that if an American visitor in Hawaii has a cable dispatch telling him that one of his family is dangerously ill, he cannot return by the next steamer, if it is British, or Japanese or German? He must wait for an American steamer, which may not sail for two weeks. To do it is illegal and involves a fine of $200,

while the regular fare is $75. The law is intended to protect American shipping, but it is an unjust nuisance, and its great evil is that it prevents easy intercourse both ways between Hawaii and our mainland. We here are allowed to travel when we please between Boston and San Francisco; but we cannot go as we please between San Francisco and Honolulu, just because there is no railroad between the two cities.

Here is another ridiculous wrong suffered by the Porto Ricans. A Porto Rican young man graduated at Cornell, studied law and asked to be admitted to the New York bar. He was refused because he was not an American citizen. He was told he must renounce some foreign government. "What one?" he asked. He was told, the Government of Spain. "But," said he, "Spain has not governed Porto Rico these eight years. Porto Rico is governed by Americans, by American courts, under American laws." Nevertheless, he was required to renounce the King of Spain, and he added, "The Emperor of Germany as well," and he might as well have added, the world, the flesh and the devil. It is a great wrong that Porto Ricans have thus far been refused American citizenship.

The principle under which we govern all our non-contiguous possessions is substantially altruistic. We are governing for their interests, not our own. That may in a measure be said of Great Britain's government of her Eastern colonies. But the difference is that we are educating our colonies into absolute self-government, and at a rate that to Englishmen seems recklessly rapid. But our theory is that these our colonies, particularly Porto Rico and the Philippines, must become as soon as possible self-governing and independent. This independence may come in three ways: The Philippines may, when ready, be cast off, left to their own rule, a separate nation; or these our colonies may become independent States in the Union, and we hope this ere long for Porto Rico and Hawaii; or they may be granted independent self-government under such a freedom as Great Britain gives to Canada—independent and yet protected. Which of these will be wise in the end time must determine, but independence in some sort they ought to have, as well as we, as soon as they are fitted for it.

The Farm Commission

We have waited for some authoritative announcement of what President Roosevelt's commission proposes. We already have three pronouncements, besides the Presidential outline, and these are succeeded by a circular from the commission itself. This last is a thoroly digested and orderly invitation to "farmers, teachers, ministers, business men and any others acquainted with country life conditions" to send in suggestions to the commission. Twelve questions are specifically asked, including the condition of farm homes, of farm schools, the returns from farm crops, transit accommodations, the service from telephone and post office, farm organizations, farm rents, farm labor, conditions of farm labor, farm accommodations for banking and insurance, farm sanitation, and opportunities for social intercourse. This certainly is comprehensive enough, and cannot fail to end in the accumulation of a good deal of important data.

For the most part the agricultural papers are meeting the proposition with more or less resentment or quizzing. Professor Bailey has accepted a place on the commission with some hesitation. It has been a problem why agriculture should be interviewed in this specific manner, any more than manufactures. The President seems to overlook the fact that for the last twenty years agriculture has been decidedly more prosperous than its rivals. His implication of the benighted farmer leaves out the fact that the trade balance, which began to be in our favor a little over ten years ago, was due almost entirely to the agricultural enterprise of the country. Up to present date that trade balance remains in our favor, owing almost as largely to the products of the land and the trade push of our farmers. Without this farm achievement the United States would be today practically bankrupt; that is, we should be a nation deeply in debt to our

neighbors. Within that same period of time the farmer has gained the trolley, which is substantially a rural acquisition, in the way of transit. It is backing up to his farm gate and taking his "trolley wagons" directly to market. The rural telephone is rapidly linking together all the farm houses in America. It is a very exceptional case where the telephone cannot be had at the almost nominal service of one dollar per month. Free rural mail delivery, it is estimated, will within four years have completed its mission of serving the whole American people. Did the President also forget that the manufacturer has been crying for high tariff protection during these years while the farmer has shrugged his shoulders at the suggestion of Mr. Lubin that he demand a compensative export duty? He demands only an equal chance.

More than all, the President seems to have overlooked the fact that the great system of national schools, or agricultural colleges and experiment stations, belong strictly to the farmer; that these schools are working a revolution greater than the world ever before saw; that they are literally enabling two blades of grass to grow where one grew before; and that all the people of the United States are being organized, inspired, and industrialized by these institutions, and that they are gradually becoming more efficient and powerful than all the universities the world ever knew, and that this power and influence and knowledge are making all the sciences contributory to farm work. It is a very narrow conception of agriculture, or of the farmer, that looks upon him as benighted, or behind this age. It is true that there are backwoods farmers; but even deserted farmhouses mean the determination of our land tillers toward betterment.

Frankly, we do not see why most of the propositions embodied in the circular of the commission do not apply more aptly to town life. Farm buildings are *not* notably behind the times. Go up and down the land where you will, and the farmers' houses shine out from the hillsides and valleys conspicuously well built and comfortable, while their barns are capacious and very suggestive of bulging crops. Farm schools must be delivered from bondage to an old and worn out conception of education. They must be freed from the idea that the farm boy must be stuffed with a lot of memorized facts before he can be pronounced worthy of carrying a diploma, his hands meanwhile being totally uncared for, indeed, despised. But industrializing education is rapidly coming about. The commission is well constructed to consider this question. As for farm crops, it is a question of the census, and transit accommodations are mostly a matter of local enterprise. The farmer does need better postal service in the way of parcels and savings banks, and these are to be had just as soon as Congress ceases to be a political organization and undertakes to obey the will of the people. The question of farm roads is, of course, open to investigation, and it is no light matter when we consider that good roads will reduce the cost of haulage at least two-thirds. The States are taking up this matter with a good deal of zest, and possibly the commission may be of some value in stimulating the movement.

The help problem is something that can hardly be mended by governmental interference. It is a matter to be solved probably by the change of power from steam to electricity, and the increased social and economic conditions of the country. Farm sanitation is getting a pretty thoro overhauling by the health departments of the States, and increased social accommodations must depend upon improved postal and telephone service. When the President says that the farmers have had hitherto less than their full share of public attention along the lines of business and social life, he is talking somewhat at random. This question of farmers' woes may or may not be one of the really important affairs, requiring governmental examination and aid. But the cry of paternalism does not end all consideration of the proposition. We can endure a stretch or two more along the line of social co-operation without disturbing individualism. Yet after looking the matter all over we are strongly of the conviction that what the farmer wants is mostly fair dealing. The conditions under which the farmer lives at present are: (1) Steam power, which is

concentrative, the servant of town life rather than farm life. This condition is rapidly changing, with electricity as a distributive force. (2) Isolation; a difficulty rapidly vanishing before telephones and trolleys and free mail delivery. (3) Big farms and extensive culture; a system of farming steadily passing away in favor of small farms, intensive culture, and more room for homes. (4) Schools facing away from the farm; a condition that must be absolutely swept away. (5) Lack of banking facilities; a lack which should be immediately negatived by postal savings banks. (6) Extreme protection for manufactures, a false economic principle, which has cost the United States billions of money, to the removal of which both parties are pledged.

The Government can be fairly called upon for a let-alone system, with these exceptions: (1) Give the farmer and country life in general postal savings banks, as recommended by nearly every Postmaster-General for the last thirty years. (2) Lower taxation, and build up internal waterway systems and improve highways. Let the money that is spent upon war preparation be largely deflected to the improvement of internal transit. Let us comprehend our own country and make it immensely powerful by developing its wealth and its people. (3) Remove favoritism in dealing with the industries; in other words, let the Government cease to meddle with partiality in our industrial development. (4) Let the Government do what it can to advance the industrialization of education.

The farmer does not wish to be "molly-coddled," and asks for nothing else from the Government but fair equality. He wants the parcels post, and he wants cheaper telegraph and telephone service, and he wants to get out from under a tariff that was granted in the first place for his rival, the manufacturer, on a 20 per cent. basis, and now stands at a far higher basis for the same rival. If faithful to the farmers' interests the commission can be of real service. It will need to do more than pile up statistics about bad roads, lack of help and unstable markets. We know these things now.

Humorists and Physicians

THE physician has always been the butt of the humorist. From the oldest times he has furnished abundant material for wit and humor. When the mother-in-law joke was still young and the widow's anxiety to get another husband still a novelty in literature, and this means almost in paleontological times, the physician was doubtless a favorite subject for jokers. "Life," as some one has said, "is a dangerous thing at best and very few of us get out of it alive." The physician was always handicapped by the fact that his patients would die in spite of all that he could do. Old age and weakness would come on anyhow, and so his work was doomed ultimately to failure. In France particularly the jokes on the physicians have been frequent and bitter. Long before Molière castigated them they were the favorite target for witticism. As medicine has progressed—and no one can doubt its progress—the wits have not found less material for their shafts to play about, but rather more. French comic journals have made a commonplace of the physician and not a number appears without its bitter joke on him. It is no wonder that they have provoked an answer and it is of the fitness of things that the man who takes up literary arms in the cause of the physician and his calling is well worthy of the difficult task he essays.

In one of the recent numbers of the *Revue des Deux Mondes* Prof. Charles Richet, the distinguished professor for many years at the University of Paris of Physiology and the Allied Sciences, writes his rejoinder under the title "Medicine, Physicians and Medical Education." Professor Richet, however, is much more than a teacher of physiology and an investigator in the biological sciences. He is a well known literary man, has written a successful novel and is a recognized authority on esthetics in Paris. There are many other phases of his accomplishment which show the breadth of mind of the man. He is one of the leaders in France of the movement against the free consumption of alcohol. In this very article he does not hesitate to say that it is absurd that a man cannot

buy many harmless medicines without a prescription, tho he can purchase thousands of gallons of absinthe and dispense it to millions of consumers at great profit without any regulation by the state, or any hindrance on the part of the authorities, tho there we have in one of its worst of forms a poison that is destroying civilization. Professor Richet is also one of the distinguished investigators in the biological and physical sciences who, like Alfred Russell Wallace and Sir William Crookes and Sir Oliver Lodge, in England, and Lombroso, in Italy, are convinced that there is something in spiritism.

He does not hesitate to confess that many of the objections against medicine and physicians which form the basis of humorist sallies are not without an element of truth. It is still true that most maladies have a definite tendency to get better of themselves and that this is the most important therapeutic element in many cases. On the other hand not a few diseases are surely fatal, and medicine can do nothing for them. For some maladies very many remedies are recommended. The greater the number of drugs thus recommended the more certain is it that drugs mean little or nothing for the cure of that particular disease, since if there is a definite remedy that and no other will do the work. It is indeed in the matter of treatment that medicine is weakest. Homeopathy still maintains its place in spite of a hundred years of contradiction by regular medicine and every decade sees the invention of some new method of treatment, which gains a foothold and sometimes maintains itself for several generations. Nothing proves more completely the imperfection of medical therapeutics than the vogue which certain new remedies enjoy for a time even at the hands of scientific physicians, yet afterward come to be entirely neglected. The remark of the humorist sceptic, "Hurry up and take that new remedy now while it still cures," is as applicable at the present time as it was twenty or forty years ago. The remedial measures of the olden times are amusing and amazing in their absurdities. The history of medicine so far as regards therapeutics is eminently discouraging Almost none of the remedies that men employed even a hundred years ago maintain themselves, and the important lesson of the history of medicine seems to be that our methods of treatment will be laughed at quite as freely by the generations that come after us as we laugh at those of two or three generations ago. Admitting all this, however, Professor Richet has found much to say in favor of physicians and modern medicine and brings out very clearly what has actually been accomplished.

He says that most of the objections urged against modern physicians are due to ignorance. One of the most frequent sources of criticism, for instance, is the number of diagnoses that a patient will receive if he goes to a series of physicians. Professor Richet points out that this is true only if the physicians he goes to are not serious, up-to-date students of medical science. Many of the physicians whose names are best known would not be listened to at all if they aired their opinions in medical society meetings with regard to the ailments which they are supposed to be most successful in treating. The best known physicians are, as a rule, simply those who know best how to advertise. Young physicians are now examined for hospital positions by submitting a patient to them for diagnosis. In nine cases out of every ten, tho the diagnostic problem is a difficult one, there will be entire agreement among the members of the staff of the hospital as to what the ailment is, and practically always the successful candidates will reach this same diagnosis. If people go to unscientific physicians, they must expect to get unscientific diagnoses, and they will usually be told that they are suffering from something that comes in the special department of the man they consult.

While physicians have not and will never put death out of the world, they have nearly succeeded in eliminating pain. Pain used to be the awful fact in human life. The rôle of the physician is not to cure disease that depends on nature's power, but "he cures sometimes, he often brings relief, and he always brings consolation." The modern physician may well say with regard to diseases, "I shall make many of them disap-

pear; I shall lessen the virulence of all of them; I shall be able to cure some of them." It is only the healthy who make fun of the physician. The more one has been ailing the greater is the confidence in the physician and the greater the respect for what medicine has accomplished. There is a feeling of natural aversion with regard to the man who must be appealed to when sickness and death come, as if somehow he were associated with these ills of humanity, but once the ills have come his soothing care is one of the great consolations of life. To lessen confidence in the physician by bitter recrimination is to diminish the sources of comfort for the ailing and either to exhibit one's own ignorance of the genuine progress in medicine or a personal animus against a great philanthropic profession.

Charles Eliot Norton

For quiet, but large, personal influence there is no position superior to that of a professor in a college, if one has the gifts and grace to deal with impressible young men. Professor Norton imprest himself on the Harvard students as few men have ever done, and they almost gave him worship. He died last week, having past his eightieth year. He was professor of art, but with him art connected itself with all culture and all morals. Perhaps nothing else shows his strong yet attractive character better than the names of his friends. He was a little younger than Ruskin, but Ruskin, who traveled with him over Europe, in his "Praeterita" speaks of him as his "first real tutor," "who saw all my weaknesses, measured all my narrownesses, and from the first took seriously, and as it seemed of necessity, a kind of paternal authority over me, and a right of guidance." And they remained close friends, and when Ruskin died in 1900 it was our Norton who became his literary executor and edited his letters and works. Thomas Carlyle was another of his friends, and on his death Professor Norton was called on to edit his correspondence with Goethe and Emerson, and his "Letters and Reminiscences." The same service he did for his friend Lowell and George William Curtis. He was editor of *The North American Review* during the Civil War and helped found *The Nation*. He was for twenty years from its beginning the president of the American Institute of Archeology, and wrote much on the history of art. He was a special student of Italian literature, and particularly of Dante, whose works he translated. But it was his personal influence over his students that is his greatest claim to honor, and that is embodied in character, not in visible memorials. Harvard University is rich—the country is rich in such a large and good man.

Municipal Nickelodeons

One suggestion of our correspondent who writes about saloons elsewhere in this issue deserves especial endorsement. He urges that our school boards give free houseroom to nickelodeon shows evenings, providing that all moving pictures used be approved by some educational authority. The People's Institute and the University Settlement have already proved that these moving pictures can be made popular without sensationalism, vapidity or indecency. The children are "crazy" over them, and even the old people attend in crowds, while the usual admission price of five cents is within the reach of all. Hundreds of New Yorkers attend the public lectures under the able directorship of Dr. Leipziger, but thousands would attend nickelodeon performances of the right sort. The People's Institute have already organized a representative committee of public-spirited citizens, who pass upon all plays produced in town, and those approved are offered to wage earners, shop girls, teachers and school children at reduced rates. Some similar scheme might be adopted for the nickelodeon. THE INDEPENDENT suggests, therefore, to the Boards of Education in New York City and elsewhere that they open their schools for automatic piano concerts and nickelodeon performances in addition to the more serious lectures that have already proved so successful. Thus the children will be reached as well as a class of older people who do not now attend the lectures, and the city will begin to redeem itself for having failed to provide for its citizens parks, playgrounds and other

means of innocent recreation and enjoyment.

Dr. Hanna's Heresies

We have taken pains to see the issues of the *Analecta,* the official publication at Rome in which the documents issued by the Pope and the Congregations appear, and in which the editor, the Most Rev. Alexius M. Lépicier, Procurator-General of the Servants of the Blessed Virgin Mary, and Professor of Dogmatic Theology of the Propaganda, denounces the heresies of Dr. Hanna, of Syracuse, whose name is now held up after he had been nominated as Coadjutor Archbishop of San Francisco. The criticisms we here quote appear in the numbers for May and July. As the *Analecta* is entirely in Latin we translate. Speaking of Immanence he says:

"The prudent reader will judge how dangerously Dr. Ed. Hanna has written:

"'It is with the apologetic of Duns Scotus and Cardinal Newman that the Catholic writer to-day meets the agnostic position, . . . and brings the good old doctrine of immanence to the help of intellectualism in his campaign against unbelief.'"—P. 209.

Again:

"They wander far from the truth who say with Père Lagrange that we are not obliged to accept statements as to things in Scripture bearing on the order of nature, since, they say, these cannot be objects of faith; for, even if they do not pertain chiefly to faith, yet they are so closely connected with faith that if they are denied conclusions will follow contrary to faith. This same erroneous opinion Edward J. Hanna has propounded:

"'No one can compel acceptance of truths [contained in the Holy Scripture] of the profane order, because there is nothing to prove that such things are imposed on us as articles of belief, for the simple reason that, being of the profane order, they cannot of themselves be objects of faith.'"—P. 213.

Once more:

"Hence that is false which the same author writes:

"'The Roman Catholic religion . . . may be considered as a theology representing the adjustment of divine revelation to the growing intellectual needs of mankind.'"—P. 30.

The above quotations from Dr. Hanna are from *The American Journal of Theology.* The next is from the "Catholic Encyclopedia" and is thus repudiated:

"They wander far from the truth to whom it seems that the Church in the first centuries timidly and as if uncertainly made trial of what it ought to teach; or under that law of evolution which we have repudiated above, had come to the full acquisition of revealed truth. . . . Thus the language of the writer above cited is to be reprobated (Catholic Encyclopedia, Vol. I. Art Absolution):"

"'It is one thing to assert that the power of absolution is granted to the Church, and another to say that a full realization of the grant was in the consciousness of the Church from the beginning.'

"Wrongly has the same writer added further on, speaking of the exercise of the power of the keys:

"'At first this power is timidly exercised against the rigorist party,'" etc.

"A De-Christianized Nation"

Bishop Paret, of the Episcopal diocese of Maryland, has published a brief reply to Cardinal Gibbons's recent articles in *The New York Times,* in which he declared that ours is becoming "a de-Christianized nation"; that the reason for this is "because of our public schools, from which Christ is debarred," and for this asserted evil he proposes the old remedy:

"Let the State appropriate funds, so much *per capita,* to support the parochial or other schools equipt and operated by Catholics, Protestants, Jews, or those of any other belief."

Bishop Paret has no difficulty in showing that ours is not "a de-Christianized nation," nor is it at all likely that it will become such. It is one of the two or three most pervasively and believingly Christian nations in the world. Even the too numerous divorces the Cardinal recounts in contrast with Canada are no proof of his claim that parochial schools are the only safeguard against unbelief. We are willing to match the morality of this country against that of Italy, Spain, Austria or any other country which has depended on ecclesiastical education. As to the plan proposed by the Cardinal, that the State support parochial schools, let us see how it would work. The Catholic Church has a million parochial scholars, while all others put together—Jewish, Lutheran and Episcopalian—would probably not reach a hundred thousand. Thus, at the estimated cost of $20 a child, the Catholic Church would receive from the State $20,000,000 for its support, while all the rest would not get over $2,000,000; hardly an even show, and an utter denial of our accepted principle of separation of Church and State, which

the Cardinal glories in when he is abroad. That principle is settled. Bishop Paret recalls that in 1893 this claim was actively made in Maryland, and warmly discussed, and eminent Catholic laymen opposed subvention to their schools. Said Judge McSherry, the Chief Judge of the Maryland Court of Appeals:

"I am bitterly and intensely hostile to the whole scheme. I am a Roman Catholic; but because I am it does not follow that I approve or endorse very wild or visionary measure which religious zealots choose on their own responsibility to inaugurate. . . . When it comes to the point that this is attempted, it is time for every Catholic layman to raise his voice in vigorous protest. I believe that Catholic laymen of the country are almost a unit in opposition to this proposed interference with the school fund; and I feel an abiding conviction that they will never tolerate the diversion of a single dollar."

That most of our colleges do not succeed in making their pupils able to read Latin with any ease, not to speak of writing or talking it, is a fact well known. But we had hoped the Catholic colleges do better. Yet we read in *The Catholic Fortnightly Review* that the Rector of the Baltimore Seminary says, that their colleges do not give their students "the ability to give the sense of any ordinary piece of Latin after an attentive reading and a little reflection, to explain it grammatically, and to express simple thoughts in correct Latin, with the help of an English-Latin lexicon." This is not much to ask. He adds that many of the papers handed in for examination for admission by young men holding a certificate of A. B. graduation from Catholic colleges "would have been thoroly discreditable to any bright boy after one good year of Latin." If the righteous Latinists can scarcely be saved, where shall the ungodly Protestants appear?

Governor Patterson, of Tennessee, is quoted as favoring a conference of the Governors of Missouri, Alabama, Mississippi, Arkansas, Kentucky, Tennessee and other States in which night-riding marauders have been doing murder and committing acts of incendiarism. The object of this conference would be to arrange concerted action against the assassins and marauders. The good citizens of all these States would heartily support a vigorous suppression of these acts of violence, which seem to be spreading. But Governor Patterson is doing more than talk; fifty night-riders have just been arrested in Tennessee.

A curious letter in the *Yale Alumni News* written from a father to his son entering college is going the round of the college press. He gives his son parental warnings not to gamble except very moderately, as, of course, the boy will play cards; but he must not cheat, and he must not take money from those who cannot afford to lose. He would like to have him to take a religious position, if he can. He would have his son take part in athletics, and when on a team never quit; but he has not one word to say as to the one purpose for which a boy goes to college, hard study and mental culture.

In his appeal to the country in behalf of the Democratic party, as published in THE INDEPENDENT last week, Mr. Bryan speaks strongly for the political independence of the eight million Filipinos but has not one word for the enfranchisement of eight million negroes in our own country, to whom the right of suffrage and equal civil privileges are denied.

From the memorial sermon in honor of "Uncle Remus," Joel Chandler Harris, preached by his intimate friend. James W. Lee, D.D., we take this very characteristic passage. It was very shortly before his death that his son asked him: "How are you this morning, father?" "Well, I am about the extent of the tenth of a gnat's heel better."

Three negroes lynched during the last week, one of them a negro by negroes, the other two for murderous assault on white men; and in each of the three cases a legal trial and conviction were certain.

Insurance

Mr. Dunham's Speech Before the Board of Casualty and Surety Underwriters

THE fifth annual meeting of the Board of Casualty and Surety Underwriters was held at the Hotel Astor last week. Representatives from many of the big casualty companies of the United States were present. The convention closed with a dinner. Sylvester C. Dunham, president of the Travelers Insurance Company, of Hartford, Conn., also the retiring president of the board, in a notable address spoke in part as follows:

"The disclosures made by the inquiry into the management of life insurance companies in New York in 1905 were of such a nature that the Legislature deemed it necessary to place definite restrictions upon the expenditures of the New York companies, chief among which was the compensation they might pay their agents. But to do this would expose them to competition by companies of other States in which like excesses had not been shown to exist and in which such restrictions had not been found necessary by the Legislatures, whose duty it was to regulate their affairs. To meet this embarrassment the New York Legislature incorporated in the bill for the government of its own companies a provision that no company of another State should be permitted to do business in New York unless it should adopt, not only in New York, but everywhere, the New York method of compensation. This was a novel disregard of the comity that has always prevailed and should prevail between the several States of the Union.

"No State can prescribe and enforce regulations for the government of corporations of another State, but it can exclude them, unless they shall comply with its enacted requirements, which may be arbitrary and capricious. But such depredations invite reprisals, and it is not surprising to find that Texas enacted a law expelling companies of other States from Texas, unless they should make Texas investments, which forced the retirement of twenty-six life companies, and that Wisconsin enacted laws requiring specific apportionment of dividends, with which twenty-three companies were unable to comply, so that they had no choice but to withdraw from Wisconsin. Nor is it surprising that in many other States various measures were proposed, of which the most original and significant were bills limiting the compensation foreign companies might pay to their officers under penalty of expulsion, in retaliation for the limitations placed by the New York statutes upon the compensation of agents.

"Forty-one Legislatures are to convene the coming winter, and it is to be hoped that they will not continue the policy of retaliation and expulsion, but will afford substantial relief from the embarrassments the companies now suffer by the repeal of laws intended to have an extra territorial effect and open the way to uniform laws by the several States, each acting within its proper jurisdiction. While such a reform should be promoted as a palliative of present irritation, I still believe that the ultimate healing is to be found in Federal control of corporations that are National in their activities."

The following officers were elected for the ensuing year: President, Edson S. Lott, president of the United States Casualty Company, of New York; vice-president, William B. Joyce, president of the National Surety Company, New York; secretary, William F. Moore, president of the New Amsterdam Casualty Company, New York; treasurer, Eugene F. Winslow, president of the Metropolitan Casualty Insurance Company, New York.

The executive committee is composed of George F. Seward, Thomas A. Whelan, H. G. B. Alexander, Francis B. Allen and F. H. Kingsbury.

SUPERINTENDENT KELSEY'S report, issued last week, deals with the decrease of life insurance business during the year covered by it. It appears that 159,303 less policies were written than during the corresponding period of 1906. During 1907 the insurance written fell off $241,496,308. The panic in October doubtless exercised some influence in bringing about this decrease, but other agencies were at work along the same lines, some of which were the legislative enactments relating to insurance that were past in April. Many of the laws now in force are not popular with insurance executives, some instances of this having been very forcibly noted by Mr. Dunham in his speech in this city at the Hotel Astor last week, to which reference is elsewhere made in this department. Hostility to Governor Hughes on the part of insurance men is one of the features of the present campaign, in regard to the causes for which the present Kelsey report is illuminating.

Financial

Banking Recovery

About one year ago the public first heard of those reckless and unlawful transactions in certain New York banks which precipitated the panic. Fifteen banks and trust companies in New York City closed their doors, nine in October and six several weeks later. The depositors in these institutions either have received all of their money or soon will have it. Two banks have wound up their affairs. One of these has paid its depositors with interest; the other will soon pay a last instalment of 10 per cent. Settlements have been effected in some other cases on a basis of deferred payments, but a considerable number of these payments have been anticipated. Five instalments have been anticipated by the Knickerbocker Trust Company, whose deposits were about $50,000,000. Reorganization has so strengthened several of the institutions that they have regained a large proportion of their old deposit accounts. Morse is on trial, F. A. Heinze is under indictment, and the Thomases have been eliminated from the banking business. One result of the failures was the enactment of a series of excellent laws at Albany, in the interest of banking reform, under the direction of the new Superintendent of Banks, Mr. Williams. In the year that has elapsed much has been done which worthy bankers and the public can regard with satisfaction.

Short Term Notes

In the financial columns of the newspapers there is printed daily a list of short-term notes, with quotations. These securities deserve to be considered by investors who are not seeking those which have long terms. The list contains more than thirty issues, and nearly all are those of railroad companies. It will be remembered that, during the last two or three years, when the public had no appetite for new railroad bonds, the companies made large borrowings on such notes. A majority of the notes are soon to mature, about half of them in 1910, but there are some which run until 1912, and a few have terms that are two or four years longer. As to some, the name of the issuing road is an ample guarantee. Almost without exception, the interest rate is 5 per cent., payable semi-annually. Current prices (to which must be added the interest accrued since the last interest day) yield a return not much below 5 per cent. For example, several of the strongest issues are selling at from 101 to 103, and it is not probable that, in the life of the note, they will go below par. But if the return to the investor is higher than that which is yielded by the bonds of the same companies, there is an offset in the shortness of the term. The buyer of notes maturing in 1912, for example, should realize that he must be ready within a comparatively short time to shift his investment and seek another security, or, perhaps, to accept another which the company may offer. Of course, the notes of our leading railroad companies are perfectly safe. They are easily convertible and are quite stable in market value. As a rule, such notes are better adapted for the uses of business men and of financial institutions than for those of the small investor, but exceptional conditions may make them attractive to the latter. Appreciation in value is not to be expected. Bankers should be consulted. They will carefully estimate the return to the investor for the full term of the note.

....The number of idle freight cars continues to decrease. During the two weeks ending on October 14th it declined from 125,678 to 101,837.

....Speaking of the Great Northern iron ore lease to the United States Steel Corporation, James J. Hill said recently that at the end of the present year the Corporation would have expended about $6,000,000 without taking out a ton of ore. The terms of the lease will call for nearly $2,000,000, and about $4,000,000 has been spent in exploration work, in drilling, in stripping the surface, and in other preparations for rapid mining. This work has shown that the ore deposits are much larger than they were estimated to be when the lease was made.

The Independent

VOL. LXV NEW YORK, THURSDAY, NOVEMBER 5, 1908 No. 3127

Survey of the World

Last Days of the Campaign

In the closing week of the campaign both Mr. Taft and Mr. Bryan were in New York. Mr. Taft's last speech in the East was made at Rochester. In his address at Buffalo he denounced the agreement or compact alleged to have been made by Mr. Bryan and Mr. Gompers. He predicted that New York would give a majority of 100,000 for the Republican national ticket. Secretary Root spoke in Ohio, considering mainly the relation of the two party programs to business. Ex-Governor Black, in an elaborate address at New York on the 30th, attacked the President by implication or innuendo, while advocating the election of Taft. His references to Mr. Roosevelt were not acceptable to the greater part of his audience. Governor Hughes was hard at work in his own State. A parade of 55,000 Republican business men in New York, on Saturday, was reviewed by Mr. Sherman and Secretary Root. Mr. Bryan asserted that the Republicans, with a large fund, intended to buy every vote that could be bought. At Albany he was introduced by ex-Senator David B. Hill, who said that Mr. Bryan was absolutely right on all the contested questions. Many additional contributions to the Democratic fund were published, among them $10,000 from Treasurer Herman Ridder and $9,000 from each of his three sons. Mr. Bryan summed up the arguments of his speeches in a brief "final appeal," which was published on the 1st. The most interesting feature of the closing days was the discussion excited by Mr. Rockefeller's announcement of his intention to vote for Taft and by the additional Standard Oil letters given to the public by Mr. Hearst. Newspapers reported that the betting was 7 to 1 in favor of Taft.

John D. Rockefeller Will Vote for Taft

For the second time in fourteen years, John D. Rockefeller visited the Standard Oil Company's office in New York on the 29th, and there prepared the following statement, which, dated October 29th, he gave to the press that evening:

"Mr. John D. Rockefeller was found this afternoon at his office on the fourteenth floor of 26 Broadway, which he was visiting after a long absence, and consented to talk upon the Presidential situation. He seemed to be in good health and condition and spoke as follows:

"'It seems to me at this time when the question is put directly to any American citizen which candidate he will support by his vote for the Presidency, he should be manly enough to answer it just as directly. I therefore say that I expect to cast my vote for William H. Taft.

"'If for no other reason, I support Taft because on comparing him personally with Mr. Bryan, his chief opponent, I find the balance of fitness and temperament entirely on his side. The election of Mr. Taft will, I believe, make for law and order and stability of business. He is not a man, I judge, to adventure with rash experiments or to impede a return to prosperity by advocating measures subversive of industrial progress.

"'The question of candidates seems to me peculiarly a personal one in this campaign, as the leading orators on both sides have not succeeded in drawing party lines, as based on platforms, with any great clearness. I do, however, support the general Republican position on the tariff and the currency. I have always been a Republican.

"'I feel the more impelled to answer this question because it cannot be said that the present Administration has in any way whatever favored the special interest to which my life has been devoted. That, however, does not excuse me from publishing my opinion and doing what I consider my duty as a citizen.'"

This caused some surprise, because it had not been Mr. Rockefeller's custom to publish his political views. By the Republican leaders it was regarded as an attempt to injure and defeat Mr. Taft. That this is Mr. Roosevelt's opinion was shown by the prompt publication at the White House (on the 30th) of the following statement:

"At the White House the announcement of Mr. Rockefeller, thru the press agent of the Standard Oil Company, was regarded with some amusement, in view of what the Administration has done to the Standard Oil Company and of the bitter hatred borne by the Standard Oil Company to the Administration. It is a perfectly palpable and obvious trick on the part of the Standard Oil people to try to damage Taft—a trick so palpable that it can deceive no one."

Mr. Bryan (then in Ohio) at once made use of the Rockefeller statement, asserting that Mr. Rockefeller was for Mr. Taft because Mr. Taft was for him and because he had reason to expect that Mr. Taft would not enforce the laws against the Standard Oil Company. If the Republican party were honest, he continued, it would admit that it had made arrangements with the Trusts to finance its campaign and had undertaken to shield them from punishment. That party's real master had now stepped forth and asserted his claim. No one should longer be deceived as to the indissoluble tie that bound the Republican organization to the predatory interests. Mr. Taft was in Buffalo. There, on the 30th, he said:

"Mr. Bryan is greatly troubled about my attitude toward the Trusts, and by the announcement of Mr. Rockefeller that he is for me. If the Standard Oil Company were really anxious to bring about my election, I think the last thing it would have done would have been to advertise its support of me. Therefore this publication which Mr. Bryan is now making so much of seems to me to have little significance in the attempt to show that the Standard Oil or any other Trust, because it hopes for immunity from me, is supporting me in this campaign. That is not the way support is tendered when the desire is to bring about such results in an election."

He also asserted that neither the Standard Oil Company nor any one connected with it had contributed one cent to the Republican campaign fund, and that, if elected, he would carry out the Roosevelt policies concerning this Trust and other combinations. On the 31st the following announcement was made from the White House:

"The President has received numerous letters and telegrams showing that this trick of Rockefeller, doubtless made by agreement with the Democratic party, will fail absolutely. It is self-evident on its face, as Mr. Taft has said, that if Mr. Rockefeller had really wanted him elected, he would have kept quiet about it, and that he has come out for him as being the way in which he can damage him most."

Senator Lodge said in Boston that the Rockefeller indorsement was an eleventh-hour trick to defeat Taft. The Republican committee, he added, had evidence that the Standard Oil Company had ordered its 60,000 employees to vote for Bryan. "It is a cheap campaign trick, and will fool no one," said Secretary Garfield; "it was intended to aid Bryan. Rockefeller has everything to gain by his election." It was asserted that Standard Oil influence had been exerted against Taft in Ohio and Indiana during the campaign. In a speech made Saturday night, Secretary Straus said that Mr. Rockefeller, "the greatest enemy the country has ever had," hated the Republican party for obvious reasons and was seeking revenge, his announcement being positive proof that he was working for Bryan. Chairman Mack of the Democratic committee asserted that Mr. Rockefeller had held back until he got his terms, and that with the statement he had given $1,000,000 to the campaign fund. The statement, in his opinion, would turn 250,000 votes to Bryan. Chairman Hitchcock at once said that not a cent had been received from Mr. Rockefeller or any other person connected with the company. The remark of Mr. Carnegie that the election of Bryan would be a tragedy was resented by the latter. Mr. Carnegie, he said, had amassed great wealth by special privilege and was under obligations to the Administration because Mr. Roosevelt had consented to the absorption of the Tennessee Coal and Iron Company by the Steel Corporation, whose first mortgage bonds for an enormous amount Mr. Carnegie held.

More Archbold Letters

Mr. Hearst has given to the public several additional letters written or received by John D. Archbold, vice-president of the Standard Oil Company. On the 29th ult., in New York, he asserted that Congressman Gardner, of New Jersey, as chairman of the House Commit-

tee on Labor, had opposed labor bills. He read a letter, dated December 20th, 1899, and addressed to Senator Sewell, in which Mr. Archbold, after speaking of a forthcoming preliminary report of the Industrial Commission concerning industrial corporations, said:

"It seems very important that this report should be wisely and conservatively shaped. Representative John J. Gardner, of Atlantic City, N. J., is a member of that commission and we think it very desirable indeed that you should have a word with him on the subject. We have no doubt from what we know of him and coming from the locality he does that he will treat the subject judicially and sensibly, but, as I say, it seems very desirable to be as sure as possible."

Mr. Gardner says that he has had no communication with Archbold, that Senator Sewell did not speak to him about the report, and that during the Commission's inquiry he brought out facts which the Standard wanted to conceal. There was another letter in which Mr. Archbold thanked Senator Sewell for his "prompt attention to the matter" and said he would be glad to see Mr. Gardner, "as suggested." On the 31st ult., in New York, Mr. Hearst read nine letters. Pointing out that Mr. Archbold had said that Judge Morrison had no knowledge of his commendation of him to Governor Stone, and that the judge had spoken to the same effect, he produced a letter (August 3d, 1899) written to Judge Morrison by Mr. Archbold, in which the latter, acknowledging "receipt of your favor of August 1st," said he had urged Senators Quay and Penrose to support Morrison "for the Supreme judgeship." Mr. Archbold's letters of the same date to the two Senators were also read. The next letter, addressed by Mr. Archbold (October 10th, 1902), to R. H. Edmonds, Baltibore, was as follows:

"Responding to your favor of the 9th, it gives me pleasure to enclose you herewith certificate of deposit to your favor for $3,000, covering a year's subscription to the *Manufacturers' Record.*"

Remarking that the regular subscription price of the *Record* was $4 a year, Mr. Hearst read the following, addressed (December 18th, 1901) to Thomas P. Grasty:

"DEAR MR. GRASTY—I have your favor of yesterday, and beg to return you herewith the telegram from Mr. Edmonds to you. We are willing to continue the subscription of $5,000 to *The Southern Farm Magazine* for another year, payments to be made the same as they have been this year. We do not doubt but that the influence of your publications thruout the South is of the most helpful character."

The regular price of the magazine, Mr. Hearst said, was 50 cents a year. Next came a letter addressed to Prof. George Gunton, New York:

"MY DEAR PROFESSOR—Responding to your favor it gives me pleasure to enclose you herewith certificate of deposit to your favor for $5,000 as an additional contribution to that agreed upon and to aid you in your most excellent work. I most earnestly hope that the way will open for an enlarged scope, as you anticipate."

To W. A. Magee, of the Pittsburgh *Times*, January 17th, 1899, Mr. Archbold sent a certificate of deposit for $1,250. In a long letter, dated March 7th, 1905, Congressman Sibley suggested to Mr. Archbold "a permanent and healthy control of the Associated Press." Sibley had been talking with "an important 'official'" who wanted to start a "back fire," but whose hands and tongue were tied because he was "a member of the reigning family." Public sentiment must be educated. Sibley had explained matters to Senator Long and Representative Curtis, "the strong men of the Kansas delegation." "This agitation" had "started from the top" and would run its course. There should be delay until temperate action could be secured:

"An efficient literary bureau is needed, not for a day or a crisis, but a permanent and healthy control of the Associated Press and kindred avenues. It will cost money, but it will be the cheapest in the end, and can be made self suporting. The next four years is, more than any previous epoch, to determine the future of the country. No man values public opinion or fears it so much as Roosevelt. No man seeks popularity so much as he. Mild reproof or criticism of his policy would nearly paralyze him. Today he hears only the chorus of a rabble and he thinks it is public sentiment. I don't know whether the industrial corporations and the transportation companies have enough at stake to justify a union of forces for concerted action. It seems to me necessary."

The longest of all the letters was one from Thomas P. Grasty (December 4th, 1903) to Mr. Archbold. Referring to an article in the *Manufacturers' Record* in which J. Pierpont Morgan had been commend-

ed as the leader in rescuing transportation properties, Mr. Grasty said:

"Now, while it is expedient under existing conditions to do all that we can to turn the tide of anti-Morgan sentiment, nevertheless I want to say to you that I think it would be a good thing if Mr. Morgan could be peacefully and quietly supplanted as the most conspicuous representative of financial power."

Mr. Archbold could scarcely realize, he continued, how much harm had been done by "that great man's loss of the public confidence," or by what people considered the exposure of his methods. The effect of the discredit which had befallen him had been to make the public take seriously sensational stories concocted for demagogic effect. "Interests of such immeasurable magnitude as Mr. Morgan is supposed to dominate ought to be under the control of wiser men—men with sense enough to see and avoid such palpable pitfalls as surrounded the shipbuilding deal":

"A substitution of controlling power—a change of generals—seems to me the only way to escape the consequence of and head off public distrust of our great organizations and to stop the supply of fresh ammunition to the 'trust busters.' Now, among the latter I put Theodore Roosevelt and W. R. Hearst in the same category—and Hearst today has an organization of immense efficiency, made up of first-class, high-priced brains—backed not by a barrel but by a hogshead, and is liable to be the Democratic nominee for the Presidency. That Roosevelt will be the Republican nominee is a foregone conclusion. Now in times of depression the slogan 'Anything for a change' goes a long way. If a change be even possible—in my opinion it is probable—people who stand for the maintenance of American institutions and for 'the greatest good to the greatest number' ought to be arranging to prevent the possibility of such a disaster as Hearst's election to the Presidency."

The San Francisco Bribery Cases

The story of an attempt to bribe a juror in the interest of Abraham Ruef was told last week in a San Francisco court. E. A. S. Blake, a contractor, was recently tried for attempting to induce John M. Kelly to qualify on the jury which was about to try Ruef, and to vote for Ruef's acquittal. He was convicted. On the 29th ult., when sentence was about to be pronounced, Blake made a full confession. Having declared under oath that there had been no promise of immunity, he said that A. S. Newburgh and F. J. Murphy had employed him to bribe Kelly. The latter had refused his first offer of $500, but had accepted $1,000. This transaction led to Blake's arrest. Whereupon (Blake continued) Murphy promised to pay him $10,000 if he would say nothing, and, if he should be convicted, to pay his wife $100 a month during the term of his imprisonment. Notes in his favor for $10,000, purporting to be signed by Ruef, were placed in the hands of Martin Stevens, who had been employed as counsel for Blake by Ruef's attorneys. Blake was to receive the money before going to prison. When asked by the District Attorney to explain, Stevens declined to do so. The case against Blake was continued for two weeks. In an adjoining courtroom the twelfth member of the jury to try Ruef had just been accepted. In selecting this jury more than two months had been consumed.

The Election in Canada

At the general election of members of the House of Commons in Canada, on the 26th ult., the Liberal party was again victorious, and Sir Wilfrid Laurier, the present Premier, will remain in office for another term. He has given notice of his intention to retire from public life at the end of it. In the last House the Liberal majority was 66. This is slightly reduced in the new House. The latest available reports show a majority of 56, and it is probable that in seven remote districts where the elections were deferred the Liberal candidates will be successful. All the Ministers were re-elected except William Templeman, of Victoria, B. C., who lost his seat by five votes. R. L. Borden, Conservative leader, was elected in Halifax, where he was defeated four years ago.

Cleveland's Street Railways

The United States Circuit Court has been asked to appoint a receiver for Mayor Johnson's street railway company in Cleveland, and a temporary restraining order has been issued forbidding the company to contract new obligations or to pay out money except for labor and the maintenance of the

property. Suit was brought by several creditors whose claims were for small amounts, but the application to which first place will be given is that of the Central Trust Company, of New York, trustee for the bondholders under mortgages upon the property amounting to a little more than $8,000,000. This company asserts in its petition that the Municipal Traction Company is insolvent, that it has been insolvent from the beginning of its existence, and that its liabilities permit no hope of solvency hereafter. It alleges also that those controlling the company have sold much stock upon an agreement that it shall be redeemed at par. The situation is so complicated that there is a wide diversity of opinion as to the outcome. A recent vote in the City Council shows that the Mayor has lost nine members who had supported his policy, but he still has a majority of three.

Kaiser William's Interview

On Wednesday of last week the London *Telegraph* published an authorized interview of the Emperor of Germany with an unnamed Englishman who has past from public to private life, and with whom the Emperor had talked freely on public affairs. The purpose given was to show the English that it is a great error to suppose that the German Emperor is hostile to Great Britain. The interview, which has excited all Europe, is authenticated in Germany, and has caused the resignation of the Prime Minister Von Buelow. It is made up of the substance of various conversations, and was published by the Emperor's permission. In it he said:

"You English are as mad, mad, mad as March hares. What has come over you that you are completely given over to suspicions that are quite unworthy of a great nation? What more can I do than I have done? I declared with all the emphasis at my command in my speech at the Guildhall that my heart was set upon peace and that it was one of my dearest wishes to live on the best terms with England. . . . This is a personal insult which I resent; to be forever misjudged, to have my repeated offers of friendship weighed and scrutinized with jealous, mistrustful eyes taxes my patience severely. I have said time after time that I am a friend of England, and your press, or at least a considerable section of it, bids the people of England to refuse my proffered hand and insinuates that the other hand holds a dagger. How can I convince a nation against its will?

"The prevailing sentiment of large sections of the middle and lower classes of my own people is not friendly to England. I am, therefore, so to speak, in the minority in my own land, but it is a minority of the best elements, just as it is in England respecting Germany. . . ."

When reminded that the German people and newspapers were hostile to England in the Boer War, the Emperor asked:

"But what of official Germany? What brought to a sudden stop, indeed to an absolute collapse, the European tour of the Boer delegates, who were striving to obtain European intervention?

"They were fêted in Holland. France gave them a rapturous welcome. They wished to come to Berlin, where the German people would have crowned them with flowers, but when they asked me to receive them I refused. The agitation immediately died away and the delegates returned empty handed. Was that the action of a secret enemy?

"Again, when the struggles was at its hight, the German Government was invited by France and Russia to join them in calling upon England to end the war. The moment had come, they said, not only to save the Boer republics, but also to humiliate England to the dust. What was my reply? I said so far from Germany joining in any concerted European action to bring pressure against England and bring about her downfall Germany would always keep aloof from politics that could bring her into complications with a sea power like England.

"Posterity will one day read the exact terms of a telegram, now in the archives of Windsor Castle, in which I informed the sovereign of England of the answer I returned to the Powers which then sought to compass her fall. Englishmen who now insult me by doubting my word should know what my actions were in the hour of adversity.

"Nor was that all. During your black week in December, 1899, when disasters followed one another in rapid succession, I received a letter from Queen Victoria, my revered grandmother, written in sorrow and affliction and bearing manifest traces of the anxieties which were preying upon her mind and health. I at once returned a sympathetic reply. I did more. I bade one of my officers to procure as exact an account as he could obtain of the number of combatants on both sides and the actual positions of the opposing forces.

"With the figures before me I worked out what I considered the best plan of campaign in the circumstances and submitted it to my general staff for criticism. Then I despatched it to England. That document likewise is among the state papers at Windsor awaiting the serenely impartial verdict of history.

"Let me add as a curious coincidence that the plan which I formulated ran very much on the same lines as that actually adopted by General Roberts and carried by him into successful operation. Was that the act of one who

wished England ill? Let Englishmen be just and say. . . .

"Who can foresee what may take place in the Pacific in the days to come, days not so distant as some believe, but days at any rate for which all European Powers with Far Eastern interests ought to steadily prepare?

"Look at the accomplished rise of Japan. Think of a possible national awakening in China, and then judge of the vast problems of the Pacific. Only those Powers which have great navies will be listened to with respect when the future of the Pacific comes to be solved, and if for that reason only Germany must have a powerful fleet. It may even be that England herself will be glad that Germany has a fleet when they speak together in the great debates of the future."

The interview is coldly received in England, where the Emperor's famous telegram to the Boer President is remembered. In Germany it has created consternation and indignation. It seems that the Emperor, as was proper, sent it to Von Buelow, who sent it to the Foreign Bureau. But the Emperor, Von Buelow and the Minister of Foreign Affairs were all absent in different directions for a holiday, and it went to a subordinate, who did not dare to offer any criticism of the Emperor's action, but simply did his duty in certifying to the correctness of the historical statements made. It then came back to Von Buelow with other documents, and his secretary did not call his attention to its important nature, and Von Buelow did not read it till it appeared in print. This revelation of blunders has compelled Von Buelow to give in his resignation, which the Emperor refuses to receive, but the Minister of Foreign Affairs, Von Schön, is reported sick, which may mean that he will be made the scapegoat. The Reichstag, which meets on Wednesday of this week, may force Von Buelow's resignation. The press has with extraordinary freedom denounced the Emperor's interview.

The Suffragets and Laborites

The suffragets have again invaded the British House of Commons. Certain of them were admitted to the ladies' gallery, which is protected by a lattice, called a grill, from the gaze of the members below. One of them shrilly demanded that the women of England be allowed to vote, and thrust thru the grill a placard on which the precise demands of the suffragets were emblazoned. The member speaking was compelled to stop, as the cries continued from the gallery, and a man threw down a bundle of papers from the visitors' gallery, at the same time crying: "I am a man, and I protest against injustice to women." He was soon ejected with little tenderness; but when the attempt was made to eject the women, it was found that two of them had chained themselves to the grill. They continued to cry: "We demand votes for women!" while the members watched the proceedings with great interest. Eventually the attendants, who were unable to release the women from their self-fastened chains, were obliged to remove a portion of the grill and file the chains before they could eject the suffragets. The women were Muriel Matters and Helen Fox. Meanwhile, thirteen women were arrested for haranguing the crowd outside the Parliament building. After this interruption Minister Asquith asked the Speaker to take measures to maintain its dignity and order. Ex-Premier Balfour seconded the request. When the loud and general approving cheers had subsided the Speaker said that, in consequence of the decencies having been violated and privileges grossly abused, not for the first time, he had reluctantly decided that the strangers' gallery and the ladies' gallery should be closed until further notice.——James Keir Hardie, a Socialist member of Parliament, in a speech in the House of Commons, spoke passionately of the measures taken for relief of the poor as inadequate, and declared there were 2,250,000 workmen unemployed, of whom 750,000 were skilled artisans. He declared he would go to the country and take the responsibility for the advice he would give them, as the country must be shocked out of its lethargy. Then John Burns told what the Government was doing, organizing public works at a cost of $15,000,000, besides municipal work. He told his Laborite opposers that the average British workman spent more than five shillings a week for liquor. He declared that these Laborites were no friends of the workmen if they did not tell them where the responsibilities for their miseries lay. If the millions wasted by workmen in the time of their prosperity were spent in insurance and trade

societies, their position would be far different. He added:

"Indiscriminate charity, mistaken philanthropy at other people's expense and relief works badly organized would lead to universal bankruptcy and universal loaferdom."

Mr. Burns's statements that the American workmen spend much less for liquor, and are better drest and save more money, has greatly angered the Laborites, one of whose speakers, lately in America as a delegate, declared that drinking had much increased of late years among American workmen, and that the American delegates drank more than the British.——The unemployed are giving the British Government much concern. The number is increasing, and the winter will create much suffering. The mayors in many great towns are abandoning the mayor's banquets at their inauguration and giving the money for poor relief.——After a long conference the delegates to the trades unions interested in shipbuilding have advised their members to accept experimentally the partnership offers made to the men by the great shipbuilding firm of Furness, Withey & Co. They had announced to the men that work must stop unless there were an end of strikes. The firm offered to sell out the business to the unions, or to take the men as partners on a profit-sharing basis. The scheme provides that the men buy 4 per cent. shares, the payment to be made by deducting 5 per cent. from their wages.

The Balkan Situation

There has been during the past week no very important development in the Turkish and Balkan situation. The question of a Conference of the Powers is yet undetermined, but is under consideration awaiting the agreement as to what shall be considered, or as to whether the questions cannot be settled in the ordinary diplomatic correspondence. Austria still refuses to go into a conference unless her absorption of Bosnia and Herzegovina is admitted, and Germany backs Austria. But Bulgaria has receded from her determination not to pay any pecuniary compensation to Turkey for the loss of the Rumelian railway and, it is reported, will consent to a reasonable lump sum of $13,500,000 to be paid in lieu of the annual tribute of $800,000. Prince George, of Servia, has been most cordially received at St. Petersburg, but the Government did not allow any popular demonstrations that might give offense to Austria. A meeting in his honor which had been allowed, and was in session, was dispersed by Government orders. The action of Austria, regarded as hostile to Slav interests, is being discussed in the Duma which met last week. This is a new step for the Duma, which is the first Duma to reach a second session. Austria has seized war material belonging to Servia going thru her territory, including 40,000 rifles. The Servian Parliament has sent to the President of the Russian Duma an appeal to prevent the annexation of Bosnia and Herzegovina, and begging that Russia will not leave Servia alone in her misery. There have been threats of disorder in Turkey created by the reactionaries, but they have thus far done little damage. The Imperial Guard has not been in sympathy with the revolution, and was to be replaced. Three battalions which were to leave Saturday for Jeddah, in Arabia, and were being replaced by loyal Salonica and other troops, opened fire on Salonica battalion who were proceeding to their barracks. They were immediately attacked and fifteen were killed and six wounded, and the others put under arrest.

The Moroccan Question

The German reply to the Franco-Spanish note insisting that Mulai Hafid should be required to accept the Algeciras convention before his recognition by the Powers is said to be conciliatory in tone and to admit the main points, altho with some reservations. Germany agrees that the new Sultan must accept the conditions and obligations determined upon by the Powers at Algeciras, but insists that these must be applied "in accordance with Moroccan law," an ambiguous phrase that gives the French an excuse for suspecting that Germany's concession is not as complete as it appears. The German reply does not dispute the reimbursement of France and Spain for their military expenditure and compensation for the murder of their citizens, but it hopes that these Powers will consider in connection with

these claims Morocco's financial position, the improvement of which is important to all. It agrees that the new Sultan ought to recognize the obligations and engagements of Abd-el-Aziz with the Powers and with individuals, but none of the agreements with individuals and no debts should be regarded as binding unless contracted in accordance with the Algeciras convention. This is obviously directed against the supposed secret treaty which France is suspected of having made with the ex-Sultan.

Various Items

French interest is still taken up in dirigible balloons and aeroplanes. A very successful flight of a military balloon is reported. Wilbur Wright had an accident with his aeroplane, caused by the explosion of the motor, but no serious injury resulted. He has since continued his flights at a hight of 150 feet, giving lessons to Count de Lambert, according to his contract. M. Farman has made a very successful flight of 18 miles in twenty minutes from Mourmelon to Rheims, where he landed without mishap.——Cardinal Mathieu, a French Academician, died October 26th. He was Archbishop of Toulouse. A Spanish Cardinal has since died, and there is an old belief that Cardinals die in batches of three.——On February 1st of this year King Carlos, of Portugal, was assassinated by Manuel Silva Buissa. His will, dated three days before his act, has lately come to light. He said he had no property to leave his children other than "my name, my respect and my compassion for those who suffer. I beg that my children be brought up in the principle of liberty, equality and fraternity, for which they will soon become orphans."——Portugal finds itself unable from its income to pay current debts, the usual deposits in foreign banks being exhausted. It is reported that funds will be raised by leasing the Lourenço Marquez railroad in Portuguese East Africa to a South African syndicate. That syndicate would be British, and this recalls the proposition of some years ago to sell Portuguese East Africa to Great Britain, which fell thru from popular opposition. The Transvaal has no outlet to the coast except thru this railroad to Lourenço Marquez.——Interesting finds are reported from Pompeii, consisting of two sepulchral monuments, one of the Edile Vestorius Priscus, decorated with frescoes, and the other of a woman named Septima. The latter is a marble inscribed tablet and a semi-circular seat around a column surmounted with a sun dial.——The Russian Duma opened last week for its autumn session, which is expected to be very important. Two measures which will have priority are connected with the agrarian problem, namely, the law permitting the dissolution of communes and the transfer of lands to individual ownership, and reform of the local courts among the peasantry. The new university statute, the law governing religious freedom and that relating to local self-government are also on the calendar for this session. The relations between the various parties have been greatly improved of late, and the conscientious manner in which the Social Democrats and the Reactionaries are working together in committee has given great encouragement to the leaders in the Parliament. The Poles have appealed to the Duma in connection with the closing of all the private schools in retaliation for the frequent attacks made by Polish upon Russian university students in the streets.——M. Nicholas Tchaykovsky, the Russian revolutionist and writer, has been liberated on payment by English and American friends of $25,000 bail. But he is not yet allowed to leave the country. He had been in prison eleven months and five days. ——Altho the Japanese Exposition has been put off till 1914 the American commission remains in Japan, and Mr. Loomis, formerly Minister to Venezuela, and his party, are reported as being splendidly entertained.——The French Government made complaint against China for the incursion of Chinese soldiers into Tonking and the killing of French soldiers. The Chinese Government has ordered that two officers responsible for the act be beheaded and seven others severely punished.——The Russian troops in the Chihli province, including the legation guard at Peking, are to be withdrawn. Japan has also ordered the withdrawal of half of her force of 800 men guarding the railroad in that province.

Much Needed Legislation

BY GEORGE VON L. MEYER

Postmaster General of the United States.

THERE are at the present time 1,453 savings banks in the United States, with deposits distributed as follows:

New England (6 States)	$1,257,537,895	
New York	1,378,232,780	
New Jersey	92,631,487	
Pennsylvania	160,638,670	
Maryland	78,469,584	
Ohio	53,930,291	
Illinois	181,361,054	
Iowa	132,748,558	
California	254,695,083	
In 14 States	$3,590,245,402	—98.4%
In remaining 32 States and all Territories	70,308,543	— 1.6%
	$3,660,553,945	

Therefore, in thirty-two States, with their vast territory, there is but 1.6 per cent. of the total savings bank deposits of the United States. This shows that adequate facilities are not being provided for many of our people to deposit their money. This need can be met most thoroly and extensively by means of postal savings banks. There are 61,000 post offices in the United States, located in every section of the country where people are located; 40,000 of these offices already do a money order business, and there can be no question of their ability to serve as postal savings depositories. Reports from postmasters show that during the last fiscal year $8,104,447 in money orders were purchased, payable to the buyers themselves, thus indicating that this sum was deposited with the post offices for savings purposes. It shows that there is a timid class which has only faith in Government institutions, and that there are people who are so anxious to have a Government depository for their earnings, that they are willing to pay the Government for keeping it. As a matter of fact, this sum purchased represents about $25,000 in fees paid to the United States Post Office. During the last calendar year about $100,000,000 were sent abroad thru the postal money order system, much of it going to postal savings banks, notwithstanding that the savings banks in the United States as a whole have a record of which the banking fraternity may well be proud. Many of the foreigners are ignorant of our language and institutions, and have no knowledge of the standing of our banks, and will not deposit in private banks here.

That they would deposit great sums in the aggregate with the postal savings bank is evidenced by the fact that they buy money orders payable to themselves, and also that they frequently call at post offices and ask the postmasters to take care of their money for them. That the postal savings bank institutions have proved successful is satisfactorily attested by the results attained in England and in other countries, as the following table demonstrates:

	Year established.	Depositors.	Deposits.	Average.
United Kingdom	1861	10,692,555	$766,474,125	$72.00
Austria	1883	1,967,998	104,762,446	53.00
Belgium	1869	2,088,448	146,996,000	70.00
Canada	1868	230,216	62,158,450	270.00
France	1882	4,577,390	246,703,726	54.00
Hungary	1886	577,554	27,006,459	47.00
India	1882	1,115,758	45,396,741	39.00
Italy	1876	4,689,669	233,735,421	50.00
Netherlands	1881	1,259,681	56,153,000	45.00
New South Wales	1871	254,331	38,702,715	152.00
New Zealand	1867	276,066	42,153,735	153.00
Russia	1895	1,488,432	99,649,925	67.00
Sweden	1884	567,032	14,648,559	26.00
Japan	1875	6,658,758	33,713,037	5.06

The statistics also show that in most of these countries the deposits have about doubled in the past eight or ten years. In Germany there is a system of municipal savings banks which is controlled by the Government.

The Republican platform commits the Republican party to the adoption of a postal savings banks law; the President, in messages to Congress, has urged its enactment, and Mr. Taft is strongly advocating its adoption. Hearings were had at the last session by the Senate Committee on Post Offices and Post Roads, and, as a result, there is now before the Senate a bill which received the unanimous favorable report of the committee. The Department has had assurances that more than a majority of the Senate will support the bill. General debate on it has been set for December 14th,

which will be continued until a final vote is had. Senator Carter, of Montana, is championing the measure.

Whatever opposition there may be to the proposition by banking institutions is from a misunderstanding of its purposes or from purely selfish motives. Instead of injuring present financial institutions, as some would profess to believe it, it would be a great benefit and would act as a feeder to existing savings banks. Any depositor who at present has dealings with a savings bank and is getting 4 per cent. interest would not be likely to take his deposit away and thereby reduce his income one-half by placing it in the post office.

The individual who opens an account with a national or State bank or a trust company has the advantage of a check book, enabling him to pay his bills in a convenient manner and to have his paper and that of his customers or clients discounted. None of these advantages accrues to a depositor in a postal savings bank. Again, when the depositors had accumulated money to the amount of two or three hundred dollars they would, in all probability, withdraw it and place it in a savings bank, where they could obtain much larger returns. Furthermore, in times of nervous fright, such as have existed in the past, it would be a benefit to banking institutions (should the depositor place it with postal savings banks instead of withdrawing it for the purpose of putting it in hiding), as it would be deposited by the Government immediately with the local national bank, thus strengthening that institution and the community with new money.

It it believed that eventually fully $500,000,000 now in hiding or otherwise withdrawn from circulation by the people would be brought to the postal savings banks, and that no other agency could restore this money to the chanenls of trade. Also, the money that is carried in the pocket of the boy and girl and others who now have no bank account and who "throw their money away" would be attracted to the postal savings bank. The post office is common ground, practically always open; thus the wage-earner or laborer returning home with his week's earnings finds the banks closed, but the saloon wide open. Certainly some of his money would reach the post office bank. Many people going to the post office to purchase stamps, to call for a general delivery letter, to buy a money order, or to register a letter, would be reminded that *there* was a secure place of deposit for their spare dimes.

By the terms of the bill, accounts may be opened by any person of the age of ten years or over, in his or her name, and by a married woman in her own name and free from any control or interference by her husband. No person shall have more than one postal savings account, except that a trustee, parent, guardian or other person may have an individual account and an account in a representative capacity for any other person. Each depositor will be given a passbook, in which his name and other memoranda for identification will be entered and entry of all deposits will be made. One dollar or a larger amount in multiples of ten cents will be necessary to open an account, but deposits of ten cents or multiples thereof will be received after an account is opened. Upon receiving the deposit the postmaster is required to enter it in the passbook of the depositor and immediately to notify the Postmaster-General of the amount of the deposit and the name of the depositor. The Postmaster-General, upon receipt of such notice, is required to send an acknowledgment thereof to the depositor, which acknowledgment will conclusively show the making of such deposit and serve as a check on the postmaster.

Not more than $200 can be deposited in any one month, and interest will be allowed at the rate of 2 per cent. per annum on an account not exceeding $500. A deposit may be allowed to accumulate up to $1,000. Thus it will be seen that the design is not to get large deposits, but to encourage saving.

The system will be self-sustaining, as the money is to be redeposited in the national banks in the neighborhood of the post offices where it is first received, the banks to pay to the Post Office Department interest at the rate of 2¼ per cent. per annum.

WASHINGTON, D. C.

A Story Which Will Never Be Finished

BY LEONID ANDREYEV

[Leonid Andreyev, Russia's most popular writer today, was born in 1871, in the government of Oryol. He studied law and starved while he studied. His first story was about a starving student. "I cried when I wrote it," he said in his autobiography," and the editor, who returned the manuscript, laughed. That story of mine remained unpublished. . . . In 1894, in January, I made an unsuccessful attempt to kill myself by shooting. As a result of this unsuccessful attempt I was forced by the authorities into religious penitence, and I contracted heart trouble. . . ." In 1898 he wrote his first story which was published and which attracted considerable attention. His first volume of short stories called forth a vehement attack upon the young author from Countess Sophie Tolstoy, wife of Count Leo Tolstoy. This served to make the young author's name. His short stories were eagerly sought by the Russian reading public, and were even translated into other languages. Maxime Gorky, in a recent interview, said: "Can you mention in all European literature a more interesting writer than Leonid Andreyev? I regard Andreyev as the most interesting writer in Europe, both for his choice of subjects and for his manner of writing." Among Andreyev's strongest and most striking works are "The Lie," "Once Upon a Time," "Red Laughter," "The Life of Father Vassily," "To the Stars," "Life of Man" and "The Seven Who Were Hanged." This latter, one of his latest works, which has created a sensation in Europe, is believed to have influenced Count Tolstoy to write "I Cannot Be Silent," that powerful denunciation of the wholesale executions committed daily in Russia. "The Story Which Will Never Be Finished," Andreyev's latest short story, has been translated especially for THE INDEPENDENT by Herman Bernstein, author of "Contrite Hearts," "In the Gates of Israel," etc., who recently returned from Russia, where he visited Leonid Andreyev in his home in Finland.—EDITOR.]

EXHAUSTED with the painful uncertainty of the day, I fell asleep, dressed, on my bed. Suddenly my wife aroused me. In her hand a candle was flickering, which appeared to me in the middle of the night as bright as the sun. And behind the candle her chin, too, was trembling, and enormous, unfamiliar dark eyes stared motionlessly.

"Do you know," she said, "do you know they are building barricades on our street?"

It was quiet. We looked straight into each other's eyes, and I felt how my face was turning pale. Life vanished somewhere and then returned again with a loud throbbing of the heart. It was quiet and the flame of the candle was quivering, and it was small, dull, but sharp-pointed, like a crooked sword.

"Are you afraid?" I asked.

The pale chin trembled, but her eyes remained motionless and looked at me, without blinking, and only now I noticed what unfamiliar, what terrible eyes they were. For ten years I had looked into them and had known them better than my own eyes, and now there was something new in them which I am unable to define. I would have called it pride, but there was something different in them, something new, entirely new. I took her hand; it was cold. She grasped my hand firmly and there was something new, something I had not known before, in her hand clasp.

She had never before clasped my hand as she did this time.

"How long?" I asked.

"About an hour already. Your brother has gone away. He was apparently afraid that you would not let him go, so he went away quietly. But I saw it."

It was true then; the time had arrived. I rose, and, for some reason, washed myself for a long time, as was my wont in the morning before going to work, and my wife held the light. Then we put out the light and walked over to the window overlooking the street. It was spring; it was May, and the air that came in from the open window was such as we had never before felt in that old, large city. For several days the factories and the roads had been idle; and the air, free from smoke, was filled with the fragrance of the fields and the flowering

gardens, perhaps with that of the dew. I do not know what it is that smells so wonderfully on spring nights when I go out far beyond the outskirts of the city. Not a lantern, not a carriage, not a single sound of the city over the unconcerned stony surface; if you had closed your eyes you would really have thought that you were in a village. There a dog was barking. I had never before heard a dog barking in the city, and I laughed for happiness.

"Listen, a dog is barking."

My wife embraced me, and said:

"It is there, on the corner."

We bent over the window-sill, and there, in the transparent, dark depth, we saw some movement—not people, but movement. Something was moving about like a shadow. Suddenly the knocks of a hatchet or a hammer resounded. They sounded so cheerful, so resonant, as in a forest, as on a river when you are mending a boat or building a dam. And in the presentiment of cheerful, harmonious work, I firmly embraced my wife, while she looked above the houses, above the roofs, looked at the young crescent of the moon, which was already setting. The moon was so young, so queer, even as a young girl who is dreaming and is afraid to tell her dreams to anybody; and it was shining only for itself.

"When will we have a full moon? . . . "

"You must not! You must not!" my wife interrupted. "You must not speak of that which will be. What for? *It* is afraid of words. Come here."

It was dark in the room, and we were silent for a long time, without seeing each other, yet thinking of the same thing. And when I started to speak, it seemed to me that some one else was speaking; I was not afraid, yet the voice of the other one was hoarse, as tho suffocating for thirst.

"How is it going to be?"

"And—they?"

"You will be with them. It will be enough for them to have a mother. I cannot remain."

"And I? Can I?"

I know that she did not stir from her place, but I felt distinctly that she was going away, that she was far—far. I began to feel so cold, I stretched out my hands—but she pushed them aside.

"People have such a holiday once in a hundred years, and you want to deprive me of it. Why?" she said.

"But they may kill you there. And our children will perish."

"Life will be merciful to me. But even if they should perish——"

And this was said by her, my wife—a woman with whom I had lived for ten years. But yesterday she had known nothing except our children, and had been filled with fear for them; but yesterday she had caught with terror the stern symptoms of the future. What had come over her? Yesterday—but I, too, forgot everything that was yesterday.

"Do you want to go with me?"

"Do not be angry"—she thought that I was afraid, angry—"Don't be angry. Tonight, when they began to knock here, and you were still sleeping, I suddenly understood that my husband, my children—all these were simply temporary . . . I love you, very much"—she found my hand and shook it with the same new, unfamiliar grasp—"but do you hear how they are knocking there? They are knocking, and something seems to be falling, some kind of walls seem to be falling—and it is so spacious, so wide, so free. It is night now, and yet it seems to me that the sun is shining. I am thirty years of age, and I am old already, and yet it seems to me that I am only seventeen, and that I love some one with my first love—a great, boundless love."

"What a night!" I said. "It is as if the city were no more. You are right, I have also forgotten how old I am."

"They are knocking, and it sounds to me like music, like singing of which I have always dreamed—all my life. And I did not know whom it was that I loved with such a boundless love, which made me feel like crying and laughing and singing. There is freedom—do not take my happiness away, let me die with those who are working there, who are calling the future so bravely, and who are rousing the dead past from its grave.

"There is no such thing as time."

"What do you say?"

"There is no such thing as time. Who

are you? I did not know you. Are you a human being?"

She burst into such ringing laughter as tho she were really only seventeen years old.

"I did not know you, either. Are you, too, a human being? How strange and how beautiful it is—a human being!"

That which I am writing happened long go, and those who are sleeping now in the sleep of gray life and who die without awakening—those will not believe me: in those days there was no such a thing as time. The sun was rising and setting, and the hand was moving around the dial—but time did not exist. And many other great and wonderful things happened in those days. . . .

LEONID ANDREYEV AND HIS WIFE.
Photographed by Herman Bernstein during his visit to Finland, 1908.

"Comrade," said I.

"Yes, comrade."

In the open windows came the breath of the fields, and silence, and from time to time, the cheerful strokes of the ax, and I sat by the table and looked and listened, and everything was so mysteriously new that I felt like laughing. I looked at the walls and they seemed to

And those who are sleeping now the sleep of this gray life and who die without awakening, will not believe me.

"I must go," said I.

"Wait, I will give you something to eat. You haven't eaten anything today. See how sensible I am: I shall go tomorrow. I shall give away the children and find you."

me to be transparent. As if embracing all eternity with one glance, I saw how all these walls had been built, I saw how they were being destroyed, and only I alone was always and always will be. Everything will pass, but I will remain. And everything seemed to me strange and comical—so unnatural—the table and the food upon it, and all outside of me. It all seemed to me transparent and light, existing only temporarily.

"Why don't you eat?" asked my wife.

I smiled:

"Bread—it is so strange."

She glanced at the bread, at the stale, dry crust of bread, and for some reason her face became sad. Still continuing to look at him, she silently adjusted her apron with her hands and her head turned slightly, very slightly, in the direction where the children were sleeping.

"Do you feel sorry for them?" I asked.

She shook her head without removing her eyes from the bread.

"No, but I was thinking of what happened in our life-before."

How incomprehensible! As one who awakens from a long sleep, she surveyed the room with her eyes and all seemed to her so incomprehensible. Is this the place where they had lived?

"You were my wife."

"And there are our children."

"Here, beyond the wall, your father died."

"Yes. He died. He died without awakening."

The smallest child, frightened at something in her sleep, began to cry. And this simple childish cry, apparently demanding something, sounded so strange amid these phantom walls, while there, below, people were building barricades.

She cried and demanded—caresses, certain comical words and promises to soothe her. And she soon was soothed.

"Well, go!" said the wife in a whisper.

"I should like to kiss them."

"I am afraid you will wake them up."

"No, I will not."

It turned out that the oldest child was awake—he had heard and understood everything. He was but nine years old, but he understood everything—he met me with a deep, stern look.

"Will you take your gun?" he asked, thoughtfully and earnestly.

"I will."

"It is behind the stove."

"How do you know? Well, kiss me. Will you remember me?"

He jumped up in his bed, in his short little shirt, hot from sleep, and firmly clasped my neck. His arms were burning—they were so soft and delicate. I lifted his hair on the back of his head and kissed his little neck.

"Will they kill you?" he whispered right into my ear.

"No, I will come back."

But why did he not cry? He had cried sometimes when I had simply left the house for a while: Is it possible that IT had reached him, too? Who knows? So many strange things happened during the great days.

I looked at the walls, the bread, at the candle, at the flame which had kept flickering, and took my wife by the hand.

"Well—till we meet again!"

"Yes—till we meet again!"

That was all. I went out. It was dark on the stairway and there was the odor of old filth. Surrounded on all sides with the stones and the darkness, groping down the stairs, I was seized with a tremendous, powerful and all-absorbing feeling of the new, unknown and joyous something to which I was going.

The American University and the College President

BY DAVID STARR JORDAN, LL.D.

President of Leland Stanford, Jr., University.

JUST now, in academic circles, there is a strong disposition to question the necessity and the usefulness of the president in American colleges and universities. It is claimed that this official as now existing is an anomaly in academic development. He is a monarch in what should be a democracy. While our universities are growing at an amazing rate, in wealth, in influence, and in population, the position of the individual professor in the university is not improving. In dignity and in freedom his condition compares very unfavorably with that of his colleagues in Germany or England. It is claimed that one prime cause of this evil condition is found in the exaggerated importance attached to the university president, who holds a monopoly of public attention on the one hand and of academic power on the other. If all authority of the president, and most of that of our boards of trustees were relegated to the university faculty, it is claimed that these evils would disappear.

In this statement there is considerable truth. The university president is an anomaly. He represents a temporary stage in the development of the democracy of science, of the republic of letters. The university as such requires no leader. Its executive should be its servant, and as time goes on scientific eminence will more and more outbalance administrative skill. The university president of the next century, should the title continue, will stand in relations to the university faculty very different from those which now obtain. All this we may admit, but in the institutions of higher education, as they now exist in America, the practical need of a continuous and firm-handed executive cannot be questioned. In my judgment the president ought not to stand alone in this responsibility; no appointment in the faculty and no single act of importance, as related to academic work, should be accomplished without the consent and approval of the academic faculty. The president should represent his colleagues in all forward movements. But the initiative should rest somewhere, and as things now are it should rest with the college president. I use the term "college president" advisedly, not "university president." A university actually organized needs no central controlling authority, but a college takes its individuality, its color and its movement from some master spirit. To call our colleges universities does not make them such. To draw the line between "college" and "university," terms which with us still mean the same thing, is now the most important matter in our higher education.

The existing necessity for the college president in America rests on three main facts:

Our American institutions are not universities.

Their professors are not university professors.

It is no conceivable part of the work of a university to teach elementary grammar in any language, nor the fundamental conceptions of mathematics, nor the beginnings of science. These belong in Germany to the gymnasium or high school. In America, they belong to the high school, or to its continuation, the college. Half the so-called university students of America are engaged in just such studies. The teacher or the drill-master is required for their discipline, not the university professor. They demand personal attention, not the freedom of research. If, for example, we were to add to any German university of two thousand students as many boys from the last two years of the gymnasium, the student body thus formed, if under common control and administration, would not be a university student body. If to the two hundred professors as many more were added from the gymnasium staff, these teachers having an equal vote

in all faculty councils, the resultant would not be a university faculty. The American university president is in the main a representative of the collegiate side of the institution. He is a college president, in fact, as he is in popular language. The American assistant professor represents in a general way the instructor of the gymnasium. In the university a man should be a professor or nothing. The assistant professor belongs to the college. As matters are he is everywhere subject to the double criticism. He is on the one hand reproached because he is too completely a teacher, without university ideals or ambitions; on the other hand he is reproached for neglecting his students in pursuit of his ambition for research. But in any case half our academic staff are in the nature of things shut out from *Lehrfreiheit* as half the students are not ready to attach any real meaning to *Lehrfreiheit.* To let freshmen and sophomores choose their own studies does not make university students of them. To subject them to the discipline identical with that which university students receive is in every regard whatever unjust to both. To entrust university matters to a college faculty is to curtail university ideals. To entrust college matters to a university faculty may mean carelessness as to detail in the training of boys for manhood.

It is claimed that inequality of salaries among college professors represents a great evil. For this evil the college president is held responsible. He claims the skill that fits salary to performance, to know that one man's services are worth three hundred dollars per month, while those of another deserve no more than two hundred and ninety. But this function is that of trying to do the best it can for the money. No American college has half the money it needs for the adequate prosecution of the work it tries to do. For this reason equality of salaries may be a greater evil than inequality. Waste may harm as much as stinginess. Equality of salaries among college men has always tended to the elimination of the ablest professors. These are drawn to richer institutions where the average of financial support is higher.

In such cases some one must decide what is the best way to use the money at hand. The question is rarely "What is the ideal?" but "What is best under the circumstances?" To take the initiative in such decisions is one of the least welcome tasks of the American college president. Some one must take it. The president is in a better position to do this than are the members of a financial board. The members of the faculty cannot deal with matters personal to themselves and to each other; and the worst possible system is the one general in Europe, of determining the professor's stipend by the fees his students pay.

The salary of a college president is greater than that usually paid to professors in the same institution; not that executive work is more important than the work of a scholar, but that it involves more difficult, more costly and less pleasant duties, and under far greater risks. Only scholars of high degree are fitted for such work, for only scholars can understand a scholar's business. It is a rare man who can hold his place among scholars, with all the burdens of action, noble and petty, which fall on a college president. The fact that by taking an executive position a scholar can help other men to do the work he has abandoned, is frequently the chief motive which leads a scholar to accept this sort of promotion. Moreover, the expenses of living are doubled by executive responsibility, and the chances of failure, and possibly enforced inactivity, are tenfold increased by the necessity of dealing with the multitude of varying interests now the work of the college president.

In passing also we may note that it is easy to criticise the operations of the American university trustees. Sometimes, thru ignorance or perversity or partisanship, these boards do very strange or very reprehensible things. On the whole, however, they have rendered most faithful and intelligent service, not usually in the line of university development, in which most of them are not experts, but in the line of the intelligent control, investment and expenditure of endowment funds. This work is not a function of a university faculty. In Europe it is usually the duty of some minister of state. It is nevertheless a work which must be done, if endowments are to persist, and it is best done by just such men as are chosen to the boards of our stronger institutions.

The formation of boards of control, made partly of professors, partly of alumni ,and in part of outside business men and men of leisure, as known in England and Australia, is in every way less satisfactory than is the American adjustment at its best. Such boards seldom handle investments to the best advantage, while they are likely to occupy themselves to the more interesting labor of meddling with the individual affairs of the college faculty.

In a university as finally organized, the professors are equal. Their position in science and in education is assured. They are chosen by their fellows on the strength of well-established reputations. It is not necessary to introduce on short notice a dozen new instructors to meet an incoming class of unusual size. Such assistants as there are are personal helpers of the professors, below whom there is a great gulf fixt, and administration is divisible among two score heads instead of being centered in one office. Each professor is the head of his own department of *Anstalt,* and quite independent in most of his affairs. He is his own president, and the university is no more than the sum of all its parts.

The American universities are not yet universities. They are destined to become such, but not until as a first step the first two years, the students and the teachers of the junior college are relegated to the high school, or the college. To abolish the president, or to cut off his salary, to change his powers materially, or to find some other type of man, would not affect the case materially, so long as teaching of boys is regarded as university business. This is college business. The college is a co-operating organism far more than the sum of all its parts. It has moral duties, more vital than its duties to research. So long as the institution tries to carry this double function of college and university in the same buildings, with the same staff, the present difficulties must persist. In this same period we must bear the double criticism that our professors do not do their part in the advancement of science, and on the other hand that they talk too much of research and give too little attention to mental drill, and to the moral and social development of boys under their charge.

Besides all this, all our universities or colleges are still in process of creation. Not one of them is an existing institution. The president must furnish the initiative, set the pace, mark the color of a growing institution. He must consider relative values, what expenditure of money will count for most in the long run, and the ways and means by which the necessary money can be obtained. The Duke of Wellington once observed that an army may be commanded by a very ordinary man, but "not by a debating society." "An institution is the elongated shadow of a man."

Taking any of our great State universities as an illustration, can we believe that any one of these has reached its final status? Do we not feel sure that every one of these will have in another ten years double the resources, double the equipment, double the prestige it has now? Do we believe that in any case this change would be possible unless the university had the service of individuality in its executive relations? The people pay for the university, and the people in America pay not because the maintenance of universities is a function of government, but from the feeling that the university is doing their work and that there is no better use to be made of their money. The universities on private foundation depend equally on public appreciation, and in equal degree they are forced to appeal to their own public.

So long as no single institution of higher learning in America has its permanent form, so long as its administration is a struggle, not a function, so long as we all agree that each school must and should die if it cannot progress rapidly and toward some ideal, every college or university will recognize some leader, and this leader will have most of the functions of a college president. This fact will not justify all the things any college president may do, not even most of the things some individuals among them do. Still on the whole their operations have been marked by wise patience and well considered action. We cannot do without them yet. No one will look forward more eagerly than they to the time when they and their kind will be found unnecessary in the higher education of America.

PALO ALTO, CAL.

HENRY AUGUSTUS GARFIELD

MR. GARFIELD, the son of James A. Garfield, the twentieth President of the United States, was installed as president of Williams College on October 7th. He was born at Hiram, Portage County, Ohio, on October 11th, 1863. After graduating at the college of which he is now president in 1885, he studied law at the Columbia Law School, Oxford, England, and Inns of Court, London. He was a member of the law firm of Garfield, Garfield & Howe in Cleveland from 1888 to 1903, when he was called to Princeton University as professor of politics, where he remained until his election to his present office of president of his alma mater. Dr. Garfield was president of the Cleveland Chamber of Commerce, 1898-99, and has been very active in municipal affairs, economics and in civil service reform. Our readers will perhaps recall an article from his pen publisht in our columns entitled "The Remodeling of the Consular Service."

The Rightfulness of Happiness

BY BOLTON HALL

Author of "Things as They Are," Etc.

THE longing to be happy is universal, but the puritanic or Calvinistic influence makes most of us either distrust happiness or despair of it. When a little girl was asked, "What is sin?" she said, "Anything that I like to do." Thus we have been taught that "these things have I spoken unto you that your joy may be full," can refer only to some other world, and that here it is even not quite right to be happy.

When we say we have any happiness we knock on wood (probably a relic of the Druid worship of the oak) to ward off the jealousy of the gods; when some one says he is happy we think it an objectionable assumption of superiority or vain imaginings. In our hearts we distrust the statement; we have known so little happiness. Yet we know that to say that the divine law of Nature, if we obey it, would not or could not give us happiness, is to charge God with folly or to impute unto the Almighty lack of understanding. We hesitate to do this, so force ourselves to accept conditions, fearing to investigate.

Happiness is natural; it is the will of Nature; pain is a sign of something wrong, and when it appears we should begin at the beginning, to find where the trouble is. If we have a toothache we go to the dentist, that he may find the diseased part and remove it. What should we think of him if he said: "Toothache is the common lot of man, discipline sent by God. You must wait for Heaven before you can be rid of it"? We should say: "I know that the ache is sent by Nature, in kindness, to warn me of something wrong which it is your business as a physician to find and remove, and then to show me what kind of care is necessary to avoid its return."

If, when people come to us with their difficulties, we cannot show them how to be happy, there must be something wrong with us—unless, indeed, as many do, they wish to hug their misery because they need it.

When we are not entirely and continuously happy, we should examine ourselves to find what we or our fellows (for we are of one flesh) are doing that is wrong. The body: The kind of food; do we chew it enough; do we eat when we are not hungry or eat too much; do we take those things that affect the nerves, coffee, tobacco; what are our habits of body exercise? and so on. The mind: Do we read too much, or take in much sensation that does not result in action; are we "engaged in gainful occupation," that is to say, in something we like to do? and so on. The "soul": Do we dislike any one, or want to run the world ourselves; have we set our affections on things rather than on heaven, the heaven of the spirit within us?

But how can one be happy while so many, like the Russian exiles, are suffering frightfully? If we had no pain except on account of others' woes there are few who would be unhappy; and even those few would find that to relieve the woes of others would assuage their own.

Some one will say: "My affections are set on some person; it is that which worries me." To satisfy ourselves with any love less than the love of God, the Universal Love, is to invite pain and to insure disappointment. That is the commonest of troubles, and being in the innermost part of our nature, affects all the rest.

"Is it wrong, then, to love those who are closest to us?" We are always confusing ourselves with those words, "right" and "wrong." "He that loveth, knoweth God." Does that mean, loveth his wife or his children only, or does it mean, He who is Love? The question answers itself; it means, he who loves in the broadest and most inclusive sense, as God loves, as Jesus loved, the prostitute and the coward and the thief; tho, maybe, even He had not learned to love the Pharisee; or, more likely, the Pharisee was the only one who, tho he was really poor and miserable and in need of all things, thought himself rich, and so refused to accept love, the pearl of

great price, and turned to rend the hand that offered it.

My brother, there is no other message given to us than this—to learn and to proclaim that the simple, open secret of happiness is to know in our bodies and minds and souls that nothing is worth doing but loving.

Hear now a parable and try it on the children (for parables that the children do not understand are no good).

Love Is of God.

This is what happened to me, Pietri Pietro, as I sat alone in the chapel; and this is the reason I no longer stay within my cell:

A great light shone upon me and the Angel of the Lord came from the altar and mounted the pulpit stairs, and preached to me of God—to me alone; and I listened very carefully to what he said, and as sometimes I painfully scratch with my nails a text upon my cell's hard walls, so, painfully, I wrote the message on my heart.

But mostly I looked at him, my Angel of the Lord, and because I have great skill with the brush, I made a picture of him, wonderful, strange, with the message in his eyes; so that those who saw it wished to look at it all day long because of the love that was written in the angel face, "for we needs must love the highest when we see it."

And all thought I would put the picture in the chapel, but I am weak and old and cannot often go to prayers, to see the Face. So I kept it for myself. Because I wished always to see that Face I put it in my cell. Night and day I looked upon the Face. For in the Face I saw the eyes of God and felt Him near. Such joy! Such pleasure! Such happiness—happiness? Nay, alas! I saw it always, yet it did not make me happy.

But as I sat in the chapel yesterday there came a little child and asked me why I hid the picture in my cell. So I told the child, and then he asked me what was the message that the angel brought. And, because I thought he could understand plain things alone, I told the child that the message was only Love, Love, Love! He danced for joy and said, "What is it that you see in the Face?" I answered, without thinking, "Only Love." But when I had spoken, I knew that I had answered right, for you remember it is written, "He that loveth knoweth God, for God is Love."

And so I put the portrait on the chapel wall.

Now I see Love in every face.

New York City.

Meteorological Researches in the Higher Atmosphere

BY THE PRINCE OF MONACO

[The author of this article has devoted much money and labor to oceanographic studies. At Monaco he has created a most valuable museum which illustrates the whole vast subject, and a year of two ago he endowed a school of oceanography at the University of Paris. The following article is based, with the Prince's permission and the help of one of his aids, on two addresses, one delivered in Edinburg and the other in Paris. —Editor.]

METEOROLOGY is a science which is much less advanced than many others. This is due to two principal causes. In the first place, it is only quite recently that it has been the object of experimental research; and, in the second place, the field of this research has been the latitudes of Europe and North America, in the so-called temperate zone, where the conditions are those of transition from the simple conditions obtaining at the Equator to the equally simple, but opposite, conditions obtaining at the Poles. The meteorology of Northern Europe, the most complicated and difficult problem in the science, has been attacked first, and the reason of this is obvious, because it was there

that the means of attack were first furnished.

Meteorological observatories, at first, were confined to the centers of population, but further progress soon made clear the necessity of extending the researches into unpeopled and higher strata, with the result that observatories were installed on the tops of many mountains. In the last few years, the improvements effected in the manufacture of steel have made it possible to fly kites at great hights, carrying self-registering instruments and held by a wire, as light as it is strong. Now, the india-rubber industry renders it possible to send to altitudes hitherto inaccessible by any other means balloons also carrying self-registering meteorological instruments.

The first experimenters who used kites were Americans. Guided by Edy in 1891 and by Rotch in 1894, their instruments attained a hight of about 13,000 feet. Shortly afterward the French Hermite and Bezancon, in 1892, launched the first *ballons-sonde* (captive balloon): a much more independent class of instruments which very soon attained hights above the land up to 65,620 feet. Quite recently the scientific spirit of the Germans, supported by the liberality of the Emperor William, has created at Lindenberg, in Prussia, a magnificent establishment where meteorological researches in the higher regions of the atmosphere are pursued regularly with both systems. These researches are necessarily restricted to the air over the land. There remained the atmosphere over the ocean, a much greater region, and its exploration appeared to be of paramount importance. It was Professor Hergesell, of Strasburg, in the year 1904, who first interested me in the subject, and I decided at once to attack it.

In the spring of the same year I was able, after making some alterations in the sounding machine of my ship, the "Princesse Alice," to use it for sending kites to a hight of 15,000 feet in the northern region of the trade winds between Portugal and the Canary Islands.

In order that the kite which carries the recording instruments—a combination of barometer, thermometer and hygrometer, weighing 600 grams, shall ascend to any great hight it is necessary to attach to the line or wire a series of kites at intervals varying from 1,500 to 5,000 feet. Each of these, by adding its effort to that of the one which precedes it, contributes to the ascensional force of the system at the moment when the

THE PRINCE OF MONACO.

weight of the wire in the air would stop further upward movement. By successive relays it is possible to send a kite with instruments to a very great hight, provided that no layers of calm are met with, or if they exist, that the speed of the ship is such that the kite can be towed at a minimum speed of 15½ miles per hour.

Owing to the difficulties attending the dispatch of kites on board ship, and the complications which arise from the fact that the upper currents travel in directions which generally vary irregularly from one level to another, a hight of 20,000 or 22,000 feet is the greatest that can be reached. In a recent experiment at Lindenberg, in which the kite reached a hight of 19,500 feet, it was necessary to use 55,000 feet of cable, and the final strain on the wire was 187 pounds.

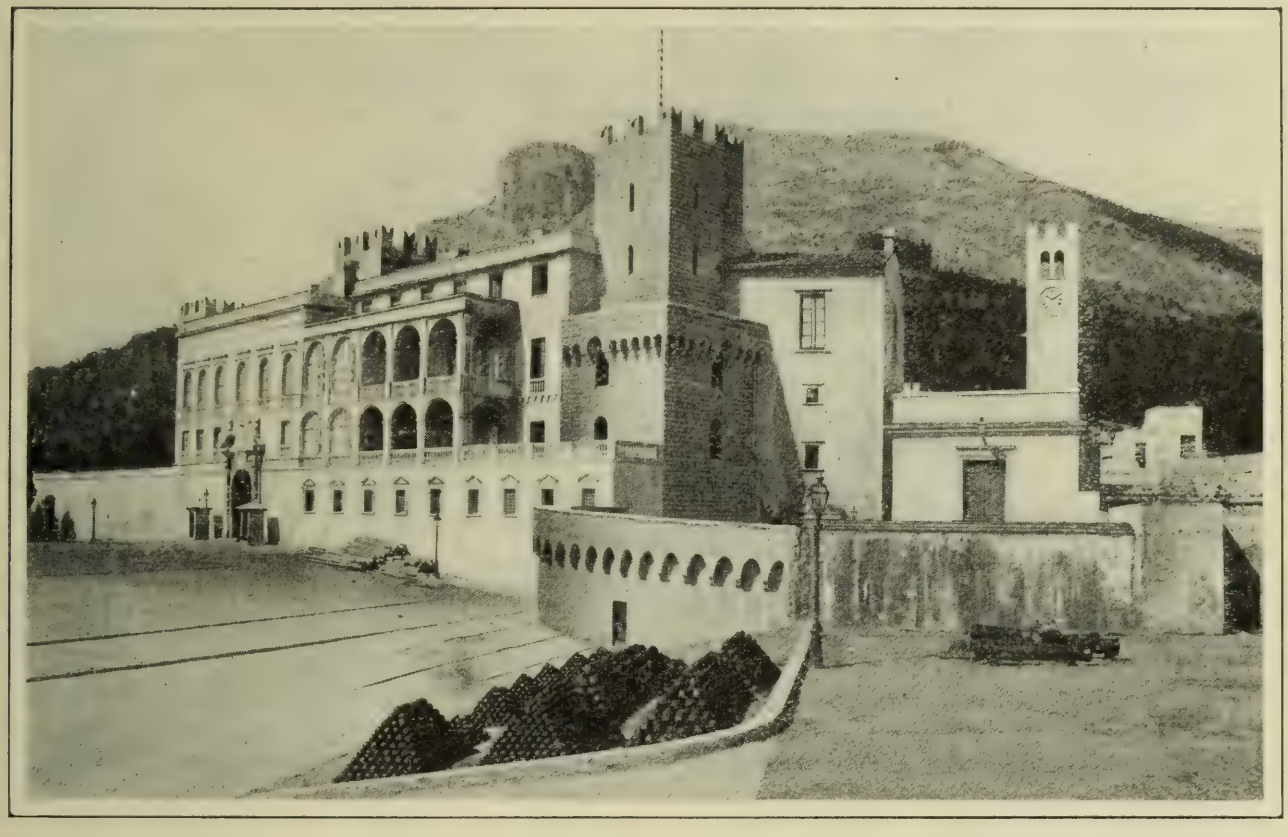
The launching of a kite from a ship is always a delicate operation, and one which demands experience on account of the vortices found in the aerial wake of the ship: of which those visible in the aqueous wake are the image. Often when the apparatus has reached a hight where it appears to be out of danger it may be caught by one of these risky vortices and precipitated into the sea. In stormy weather such a catastrophe may occur even after the kite has risen to a hight of several hundred meters.

When the kites have reached the greatest altitude permitted by the circumstances, the paying out of the wire is stopt, and, either by increasing the speed of the ship, or by heaving in the wire as quickly as possible, a little final augmentation of hight is obtained.

A kite operation, at a hight of 3,000 or 4,000 meters, lasts almost the whole day, and the ship, which must at times steam full speed in order to enable the kites to pass thru zones of light wind or of calm, may easily cover a distance of 50 or 60 miles during the operation.

I have made use of these instruments in the investigation of the counter-trade of the northern hemisphere and with the following results: The kites sent to a hight of 15,000 feet have not furnished any indication which permitted Professor Hergesell to recognize the existence of the counter-trades in the regions explored, altho their existence has often been reported by observers. As to the observation of Humboldt of a southwest wind at the summit of the Peak of Tenerife, it is to be explained in another manner. This wind is due to a purely local cause; but it would not occur to any one to pretend that the counter-trade does not exist. The masses of air drawn into the tropical regions by the trade winds of both hemispheres must regain the regions abandoned by them, but the path which they follow is still unexplored.

After a season's work with kites in the Atlantic, I resolved to apply to the meteorological research of the atmosphere at great altitudes above the ocean, the system of *ballons-sonde* which had already been giving excellent results on the continents. Two very light india-rubber balloons were inflated, one to a slightly greater extent than the other, with hydrogen, of which a supply was carried in steel cylinders. The less inflated balloon carried the registering instrument, enclosed in a small basket, an instrument analogous to that used with the kites, but more complete, as well as a float suspended at the end of a line 50 meters long. The more inflated balloon was connected with the other by a line also 50 meters in length. Its function was, first, to facilitate the ascent by rendering the necessary assistance to the other balloon and, afterward, to facilitate its descent with the registering instrument by quitting it at the altitude determined beforehand by the degree of inflation given, on which depends the hight at which the balloon burst. The first balloon, now become a simple parachute, brought the instrument back toward the sea, above which it remained floating so soon as the float at the end of the stray line touched the surface of the water. In this way, the basket containing the instrument was kept clear of the waves, and the balloon remained visible at a distance of 8 to 10 miles. During the ascent it was necessary to make observations as often as possible with the sextant and the compass so as to fix the altitude and azimuth of the balloons at different instants with a view to establishing the route followed thru the air, and thus to obtain the elements for arriving at a knowledge of the strength and direction of the aerial currents in the different layers traversed. It must be understood that the ship was following the system at full speed, in order not to lose sight of it, a result which was obtained, thanks not only to the excellent prismatic glasses used, but also to the keenness of sight of some of the observers. An operation of this kind was possible only in very clear weather, because the disappearance of the balloons behind a cloud would have made very doubtful the discovery of the place where they fell.



But this method presented various grave difficulties; first, the recovery of the balloon if it had been sent to a great hight, and second, the exact fixation of the point where the ascent of the balloon would be stopt by the bursting of the subsidiary balloon. In fact, any fault in the india rubber of which the balloon was made might advance or retard the time of

explosion. We have been able to remedy these difficulties. The subsidiary balloon is now detached from the system altogether at the desired hight by the action of the electric current furnished by a small dry cell on a spring, which takes effect the moment the pen of the recording barometer touches a conductor set for the desired altitude.

But the *ballons-sonde* are not the only apparatus which we have employed, along with kites, for investigating the phenomena of which the high atmosphere is the seat. In certain circumstances, for instance, when the sky is covered with clouds, or if the vicinity of inhospitable land makes it unlikely that balloons would be recovered, we have used captive balloons, sent to moderate hights. A *ballon-sonde* was fixt to the end of the very light wire of the kites, and when it had reached the greatest elevation which its ascensional force, diminished by the weight of the wire, permitted, a second balloon was allowed to slip up along the wire, which, when it arrived near the first, gave the system a fresh charge of ascensional force and permitted it to rise higher. In this way we sent a group of three or four balloons.

We have also launched pilot balloons, which sever all connection with those who dispatch them. They rise to prodigious hights and disappear for ever. They carry no instruments, but they furnish valuable information regarding the direction and the violence of the aerial currents in the highest regions of the atmosphere. The following is the manner of their employment:

The weather being clear and otherwise favorable, three observers—forming a triple alliance—land on the shore of a continent or of an island. They take with them a small balloon inflated to a diameter of not more than one meter, and a theodolite, the telescope of which is especially powerful.

THE PRINCE OF MONACO'S PALACE AT MONTE CARLO.

The theodolite permits the observer to follow the balloon without losing sight of it, while his two assistants read and note, every half minute, the angles furnished.

Our best results have been realized with pilot balloons. These instruments, which are small enough to be embraced by the arms of a man, have been followed with a special theodolite to the extraordinary altitude of 97,700 feet, or, at the very least, to an altitude of 82,000 feet. Further, the one which attained this hight

was, at the moment of its disappearance, at a distance of 49½ miles from the observers. So remarkable a result is explained by the transparence of the atmosphere in th Arctic regions, a transparence which, under other circumstances, permitted us to follow distinctly, on the snow of a glacier, at a distance of 24 miles, the movements of a party of four persons whom I had sent on a mission of exploration in the interior of Spitzbergen.

The information furnished by the pilot balloons, which carry no instrument because they are sacrificed, concerns questions of capital importance for meteorology; the direction and the velocity of the upper currents. Our pilot balloons have taught us that there exists in the Arctic regions, in the neighborhood of the 80th parallel, at a hight of about 44,000 feet, certain winds of 132 miles per hour, a force for which we have no equivalent at the surface of the globe. Their direction was S. 68° W.

If the principal states of the world were willing to diminish a little the expense of international quarrels by submitting them to the judgment of a tribunal less costly than that of war, and if they preserved more of their resources for the veritable interests of humanity, it would be possible, with powerful means, very soon to ascertain the laws of meteorology, the key of which seems to be found in the higher atmospheric regions.

THE PALACE, MONACO.

The Woman and the Master

BY HENRY FLETCHER HARRIS

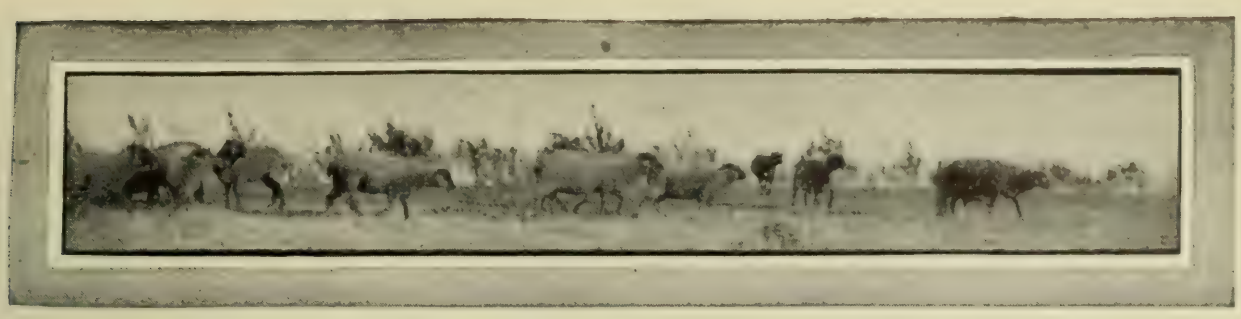
THE Master paused a space with eyes uplifted,
And then the crashing keys,
Under his fingers, broke into a tumult
Of sudden harmonies.

Shading her eyes, a woman mused and pondered
Beside the driftwood blaze;
While, in the music's wake, her memory journeyed
How many ways and days!

Again she seemed to see in fairer heavens,
White with diviner fire,
A young moon, hoary as the bleachéd samite,
Herself in gold attire.

And the wide sea, made weird with dusky moonlight,
Broke into stormy snow;
While up the deep-vined wall's romantic blackness
Rose pleadingly and low:

"O queen, whose hair is colored like wild honey,
And lips like moon-shot wine,
Lean down, lean down, athwart the odorous darkness
And lay thy heart on mine!"



But hark, the music grows more dim and eerie;
It seems to float along
A star-white shallop with a Dream for pilot
Thru shadowy coves of song.

And now she sees within a cloistered chamber,
All faint with bridal spray,
A young girl sleep, while ever thru the darkness,
Draws on her marriage day.

And now in dreams she wanders with her lover
Past many a silent fold,
With hand in hand, once more grown little children,
Chastened of God, and old.

But as the music dies to depths profounder,
With Voices heard from far,
She sees the vision of her love re-risen
In some untraveled star!

OAKLAND, FLA.

A Little Holiday Drive

BY POULTNEY BIGELOW

MALDEN on Hudson is the center of the earth—to me. There are other places claiming this distinction, but an article in THE INDEPENDENT must be brief and we shall therefore drop a consideration of Rome, Paris, Boston and other hubs in order to start our pair of Morgan horses, harnessed to a light road wagon, heading from the foot of the Catskills on the Hudson River, bound for Long Island Sound by way of West Point and the Croton watershed. It is October, and we travel from Malden along the river thru Saugerties, fifteen miles, over the newly opened State road to Kingston, once the capital of the State and now chiefly known as producing periodical scares of typhoid and smallpox owing to politics in the health department and sewage in the aqueduct. This State road I found little better than an ordinary one, with two heavy ruts resulting from heavy teaming and local neglect.

In parenthesis, whilst touching on State roads, let me note another State road opened only four years ago from Saugerties ten miles to the Catskills at Woodstock. This road also I traveled this month and found it as bad as a neglected highway of Spain—heavy ruts, heavy dust, stones loosely scattered about to the danger of horses, and the fencing already tumbling to pieces at the sides of embankments.

Patches of State road I passed over at various points of my 350-mile drive, and the lack of strategy was obvious—that is to say, there were bits here and there, but apparently no general plan of connecting important centers, or of maintaining the roadways in passable shape.

Much has been done and praise is due to the engineers, but we can never hope for permanently good roads anywhere until the State road is treated like the railway, with permanent employees watching sections of it from day to day, and making the needed repairs immediately, rather than, as at present, waiting until the road has fallen into a scandalous condition. From Kingston to Newburg the road offers beautiful glimpses of the Hudson and is thruout fairly well maintained, here and there patches of macadam.

At the Newburg ferry were two gorgeously drest policemen whom I watched while they in turn watched two partially drunk citizens who were in their turn watching over a comrade who was hopelessly intoxicated, and who fell to the ground and was then hoisted on to his wobbly legs to again sink into alcoholic helplessness.

It was a beautiful Sabbath morning, and the trio were evidently from a neighboring saloon which had been transgressing the law regarding sale of liquor on the Sabbath.

The waiting passengers appeared to be accustomed to the two policemen and their ways of enforcing the law, and on my inquiring, was told that the policemen, no less than the saloonkeeper, had "political pulls," and therefore there would be no arrests.

When the ferry to Fishkill came in, the ferryman attempted to stop the drunken party from boarding the boat, but the two handsomely drest policemen interfered and helped the drunks to get beyond the limits of their jurisdiction.

The ferryman exposed himself to dismissal for taking a helpless drunk as

passenger; he was exposing himself to a clubbing if he irritated the policemen; the club was close at hand, the dismissing officer further off. And thus we reached the northern slopes of the highlands and skirted them thru Fishkill village, eight miles east of the river, and so on over beautiful country roads until high noon, when, horses being hungry, and no town or livery offering, we halted at a little crossroads called Shenandoah. Not a soul appeared to live here, but on shouting loudly a gentle old lady opened a door and informed me that everybody was in church and so soon as service was over Deacon Smith would let me have some feed for my nags, and another neighbor would probably let me have some milk for Colon and Panama, my two greyhounds.

Out streamed the little congregation from the crossroads meeting house, and now we learned true hospitality, Deacon Smith opening his grain store and letting me have a feed for my cattle, and, moreover, the freedom of his stable as shelter from the storm approaching from the southeast. Then another neighbor not only offered milk to the dogs, but invited me in to the family dinner, where he and his wife and six children made a happy group 'round a well-laden table. So I munched my sandwich in good company, whilst they went on with their meal, and we discussed the crops, and the tariff, and the high rates of transportation, and other burdens which farmers alone fully appreciate.

From noon on it rained steadily; the roads grew heavy, sticky. It was dark when I reached Croton Falls after passing many patches of water which are part of the supply for New York. My objective was the home of an illustrious fellowcraftsman at Bedford—a man of truth, and yet successful. I mean Stephen Bonsal.

The darkness grew more so. I had to steer by the telegraph poles and the overhead arching of the trees; finally even these failed me, owing to dark becoming black.

At length I saw a lantern; hailed it; a female voice answered. I asked where I was; she informed me I was far out of my way; also that the nearest livery was some miles back; she lived near there. Then in desperation I said I would follow her lantern, for I had none nor could I see anything but her little far-away light.

Then she said something unintelligible in a frightened voice, her light was extinguished, my dripping self was obviously taken to be a bandit, and on we squdged in the mud away from this scared and stony-hearted woman. On and on we plodded. The horses did nobly, for have I not said that they are of the Morgan breed—of Middlebury, in Vermont — the ideal American horse. They plodded nobly, with fifty-five miles of up and down hill behind us since morning. The greyhounds whined pitifully in the sleety rain. Our pace could not have been more than two miles an hour, for there was now nothing to guide me save the consciousness of being in the ditch now on one side and then on the other.

Finally, another light, again far away, for of wayfarers there were none that sad Sabbath night.

We all stopped automatically and I hailed the hopeful sign. A gruff voice returned my greeting, and with that my two horses burst forward and pulled me into black vacancy, stopping only when their two noses were flattened up against the doors of a huge barn.

As I discovered next morning, they had turned straight from the road thru an entrance in a stone wall and unerringly taken the nearest way to their adopted home.

At the barn door the gruff voice informed me that there was no room. "Then," said I, "you will pass a bad night, for I shall sleep here where my horses have landed me, and my ghost will torment you all night long!" At which Colon and Panama whined still more, the horses pushed their noses at the barn door, and the burly farmer consulted with two burly sons whilst the water trickled down the inside of my collar and into my boots.

To cut this tale in two, that night my horses slept happily in the barn of good Farmer Dickinson, who pushed out two of his own beasts in order that those of the stranger might have their places. He took me to his house, his grown-up daughter turned out and gave me her

room. The head of the house (I mean Mrs. Dickinson) treated me as a long-lost son returned from a voyage—and, in short, when it came to parting time next morning, it was a parting of those who hope to meet again.

The Dickinson family are of the old landed aristocracy, whose ancestors have farmed these acres for more than two centuries. They are now being driven out by the new aristocracy of Wall Street, who buy ancestral crests from the proceeds of yesterday's deal in copper and steel. The newcomers look down upon the original settlers, and nod to them on the road as to such as may be useful in the way of day labor, but not to be thought of as social assets!

And thus is social evolution paving the way for political revolution! This episode with the good Dickinson family is but typical of what you, dear reader, may meet with if you push out fearlessly on the broad highway of this country in search of fresh air and health. You will find immense variety, but need never lack for wholesome and elevating society among those who outwardly lay no claim to fame from the "social register."

This same experience was mine in some of the most unpromising districts of South Africa when I went in search of information regarding the social and political life of the Boers. I have found it true in many parts of Europe, notably in remote sections of Spain, and therefore to intending students of a country let me whisper—go alone, and throw yourself trustingly upon the people of the soil.

Now, then, once more on the way. And this reminds me that for the most part my way carried me among people who spoke only Italian. Every country place appeared to be an Italian colony; every railway line appeared to be strung with Italian track-workers. When I sought to ask my way in English I was stared at as tho I had been in Piedmont or Sicily. What is to be the next generation?

Take a circle of fifty miles 'round New York and within it I find today more of Italian than any other labor, and whilst much of it returns to Italy and buys a little estate or shop, the majority remains and sweetens our national life by the sunny admixture of a population that has not yet forgotten how to sing and to dance and to play harmless games without spitting tobacco juice, without getting drunk and without the smashing of heads.

Westchester County is now almost all a park, and in parks the driving is monotonous, so let's cross the Hudson from Tarrytown to Nyack and drive up the west side thru Haverstraw and 'round by Stony Point, that grand old fortress of the Revolution, one of the notable battles decided by cold steel.

Need I repeat that not a foot of the whole journey down or up is devoid of scenic or historic interest, altho of it all maybe the most romantic is that stretch along under the Donderbergs, from Stony Point to West Point, passing Iona Island (where the navy has a powder depot), past the dilapidated revolutionary ramparts of Fort Montgomery and Fort Clinton, at the mouth of the Popelo Kill.

Before this little tale sees the light the State road will probably be in fit condition for motors, for it lacks only a short mile or two to give an excellent driveway between New York and the military academy. It is like the so-called cornice road which runs from Nice along the sea to Genoa, chiseled picturesquely from the side of the rocky mountains and winding along by waters offering every variety of outlook.

But the American road has more of beauty than that of Europe, for on this road we have the mountains on the other side of the river—Anthony's Nose above Peekskill, the beautiful sweep up the Hudson with Sugar Loaf in the middle ground, and the majestic mountains above Cold Spring closing the picture at the north.

Let us stop for a chat whilst wallowing thru the section under construction beneath Doodletown, where an interesting engineer—and what engineer can but be such—is in charge of an Italian army blasting rock and dragging material to the new roadbed.

He tells me that yesterday two deer came down the mountain side and tried to swim across the river, but were killed—wild deer within forty miles of the Central Park!

Bear, too, there are in these mountains, also wild cat, twin cousin to the tiger.

This is the neighborhood selected for the new State prison—and a worse selection can hardly be imagined, unless it be the purpose of our lawmakers to cause needless expense to the taxpayer.

This is a magnificent national park, from Stony Point all the way to West Point, and from the river all the way back to the Ramapo. It is a country about ten miles in each direction, watered by charming little streams tumbling over granite boulders. The land is worth next to nothing for agricultural purposes, else it would not be still the home of beasts who shun human habitation.

It is readily accessible by steamers in summer for excursionists, and eminently a splendid health resort for parties desiring to camp out during the summer holidays and restoring their city-sapped vitality among these rugged mountains.

West Point needs a vast park of this kind, over which the cadets might make summer maneuvers and acquire practice in field exercises for which the "Point" itself is somewhat cramped.

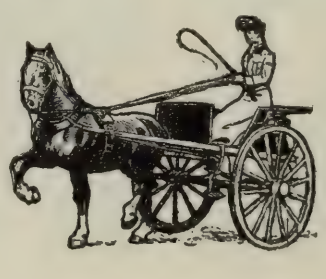
We cannot linger at West Point; it is too sad to those who like myself grew up within the shade of those old academic buildings and have learned to venerate every stone about the place.

The contractor now reigns supreme; it is a scene of derricks and monstrous piles of brick and stone. The noble old building where the "hops" used to be held and where cadets learned their first lesson in flirtation 'round the ice-water tank—all this has vanished, and now there goes up a horrid mass, shutting out air and sunlight, a street running between tall buildings. The section rooms will be so noisy that the professors will have to teach by aid of the megaphone. The poor little parade ground will look like the back yard of a city complex, and the cadets will soon have a campus suggestive more of Columbia University than the breezy point where Benny Havens blossomed into sainthood.

The man responsible for the present desecration of West Point deserves to be linked in Hades with that other who cut down the college fence at Yale. But this article deals only with natural beauty, so let's climb the mountain again, skirting old Fort Putnam, now happily restored, and push on over the prospective national park, up the Eagle Valley, to the Ramapo, and so to Tuxedo—all the way lovely and rugged scenery, tumbling streams, charming mountain lakes; just the place for lovers of Nature who can afford neither the time nor the money for luxuriating at Saranac.

The road is rough, to be sure—very rough for the man of motor—and the two or three houses along this trail speak nothing but Italian! But what of that? The slower the better in such a paradise.

From Tuxedo is an admirable road up to Newburg, and thus we have completed our circuit and once more reach Malden on Hudson, the horses fresh as the day they left their barn, the greyhounds in even fitter form, and the driver with renewed health and richer experience.



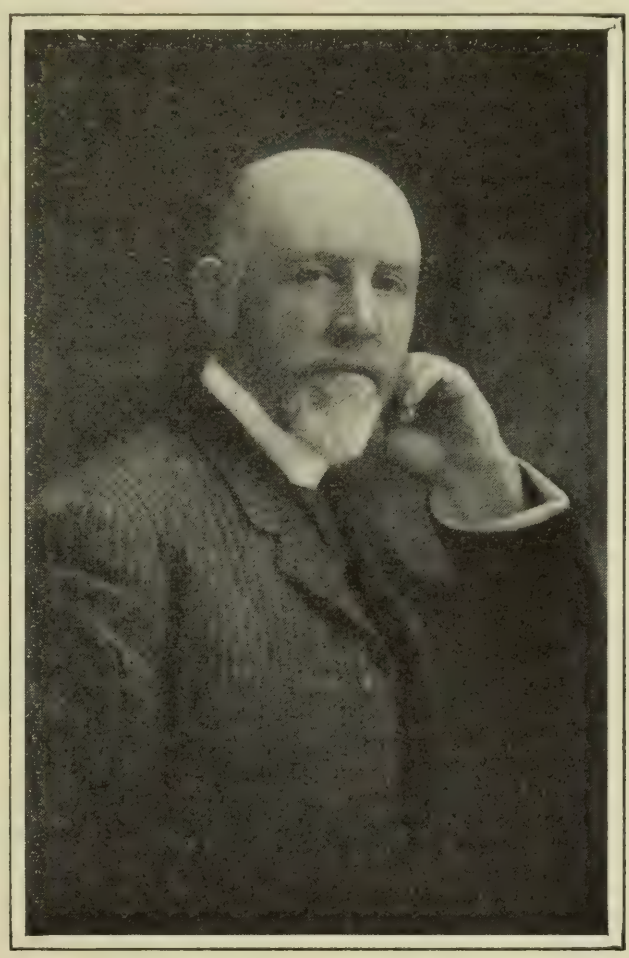
My little sermon is now done, and I hope it will encourage others to attempt similar trips.

Never be in a hurry and always trust the farmers. The smaller hotels are pretty sure to be unfit for civilized folk—bad food badly cooked and still more badly served.

Better chance it at any fair-looking farmhouse than at the average tavern, which you can discover in the dark from its odor of bad whiskey and stale spittoons.

Of course, there are exceptions, and again, therefore, I say, travel slowly; talk with the sideway folks as you move along, and from them you will learn many useful things.

MALDEN ON HUDSON.



Canada's Labor Disputes Act

BY W. R. GIVENS

[The Labor Disputes Act of Canada is attracting a great deal of attention from economists and students of politics. President Eliot has said it is one of the most promising Acts for the settlement of the labor question ever passed by a legislature.—EDITOR.]

IN the comparatively few months that the so-called Labor Disputes Act has been in force in Canada—it was assented to by Parliament on March 22d, 1907—it has accomplished so much and in so effective and peaceful a manner that it is perhaps not to be wondered that a representative from the United States, commissioned directly by President Roosevelt, has recently been in Canada following closely the workings of the Act with a view, apparently, of patterning an American Act after it, in so far, that is, as in the United States it will be possible legally to follow the Canadian Act. That the measure is a very excellent one, enforcing an arbitration that is nevertheless not compulsory and, pending a final settlement, preventing either a strike or a lockout, is borne out by the numerous cases already happily settled under it and by the appeals for settlement now pending or pressing. A short time ago a serious strike on the Grand Trunk Railway was averted by a resort to the provisions of the Act, and only quite recently serious threatened labor entanglements involving marine shipping, at that time opening up, were straightened out under the happy supervision of the board appointed under the Act, with Prof. Adam Shortt, of Queen's University, Kingston, Ontario, as chairman—a position that, tho the Act provides for no permanent chairman, seems nevertheless to have fallen to him more or less permanently by reason of his great force and ability. All his life Professor Shortt has been a student in the field of labor and economics, so that now, without doubt, he is one of the foremost authorities in Canada on these matters, while to his knowledge is added a judicial temperament that makes him an eminently fitting person to preside over the deliberations and investigations of the Board of Conciliation provided by the Canadian Act.

PROFESSOR ADAM SHORTT,

Of Queen's University, Kingston, Ontario, who, as chairman of the Conciliation Boards appointed under the Labor Disputes Act in Canada, has helped settle many important labor controversies and avert serious labor troubles. Professor Shortt is regarded as the foremost authority in Canada on labor and economics.

Considering what the Act has accomplished in the one short year of its existence — not one but many disputes having been happily settled — its simplicity is really remarkable. All told, it contains only seventy clauses, and of these more than half are explanatory or, so to speak, non-enacting. The strength of the Act, moreover, lies not alone in what may be done under it but in what may not be

done. Under it certain threatened disputes may be settled; under it, as well, certain threatened strikes or lockouts may not be carried into effect. More: the measure not only enacts but it accomplishes. It has not been put on the statute books merely to be there; it has been put on to be observed and enforced, and observed and enforced it certainly has been.

As has been said, it not only enforces but it prevents. That is to say, it not alone affords a means for the settlement of disputes but, pending that settlement, it prevents absolutely any possibility of strikes or lockouts, as witness these enacting clauses:

56. It shall be unlawful for any employer to declare or cause a lockout, or for any employee to go on strike, on account of any dispute, prior to or during a reference of such dispute to a board of conciliation and investigation under the provisions of this act, or prior to or during a reference under the provisions concerning railway disputes in the Conciliation and Labor Act. Provided, that nothing in this Act shall prohibit the suspension or discontinuance of any industry or of the working of any person therein for any cause not constituting lockout or strike.

57. Employers and employees shall give at least thirty days' notice of an intended change affecting conditions of employment with respect to wages or hours; and in every case where a dispute has been referred to a board, until the dispute has been finally dealt with by the board, neither of the parties nor the employees affected shall alter the conditions of employment with respect to wages or hours, or on account of the dispute do or be concerned in doing, directly or indirectly, anything in the nature of a lockout or strike, or a suspension or discontinuance of employment or work, but the relationship of employer and employee shall continue uninterrupted by the dispute, or anything arising out of the dispute; but if, in the opinion of the board, either party uses this or any other provision of this Act for the purpose of unjustly maintaining a given condition of affairs thru delay, and the board so reports to the Minister, such party shall be guilty of an offense and liable to the same penalties as are imposed for a violation of the next preceding section.

58. Any employer declaring or causing a lockout contrary to the provisions of this Act shall be a liable to a fine of not less than one hundred dollars nor more than one thousand dollars for each day or part of a day that such lockout exists.

59. Any employee who goes on strike contrary to the provisions of this Act shall be liable to a fine of not less than ten dollars nor more than fifty dollars for each day or part of a day that such employee is on strike.

60. Any person who incites, encourages or aids in any manner any employer to declare or continue a lockout, or any employee to go or continue on strike contrary to the provisions of this act, shall be guilty of an offense and liable to a fine of not less than fifty dollars or more than one thousand dollars.

To begin now at the beginning it may be said that the Act—the costs of all proceedings under it are borne by the Government, thereby relieving the disputants of a charge that might be deemed by them unnecessary or excessive—applies to all disputes involving ten or more persons owning, operating or employed upon any mining property, agency of transportation or communication or public service utility, including railroads, steamships, telegraphs or telephone lines, gas, electric light, water or power works. The issues that may be determined are wages, hours, sex, employment of children, dismissal of or refusal to employ any particular person or persons or class of persons; preference to certain classes, materials used or supplied, established customs or usages, and the interpretation of any agreement or clause thereof. When any matters of this kind in these lines of business are under dispute such dispute may be referred under the provisions of the Act, application for such reference being made to the Minister of Labor, who within fifteen days after the date of such application shall establish a Conciliation Board as provided for. This board consists of three members appointed by the Minister, but of the three members one "shall" (not "may," be it observed, but "shall") be appointed on the recommendation of the employer and one on the recommendation of the employees who are parties to the dispute, and the third on the recommendation of the members so chosen, this last named to be the chairman. When no recommendations are made or the two first named cannot agree on a third the Minister names the men, and thus it is that Professor Shortt has come to be practically a permanent chairman, tho, as has been set forth, no regular permanent chairman is provided for by the Act and any third person may in fact be chosen. The chairman receives $20 a day and expenses for each full day's sitting, and $10 for half a day, while the other members receive each $15 and expenses for a full day and $7 for half a day—clearly not an extravagant allowance.

The board appointed, sittings are held as soon as possible, and for the purpose

of the inquiry, the board, in respect to its power to summon witnesses, compel testimony, enforce the production of books, documents, etc., has all the power vested in any court of record in civil cases; while if the dispute be one involving a railroad company any witness summoned by the board is entitled to free transportation over any railroad on his way to and from the meeting of the board. Incidentally it may be said in this connection that before the board begins its work the members must take an oath not only to do their work well and conscientiously but "except in the discharge of their duties" they must not "disclose to any person any of the evidence or other matter brought before the board." Of course, once a decision is reached it is made public, but before this is done the parties to the dispute must sign a memorandum of agreement as drawn up by the board. If a settlement is not arrived at the board is to draw up recommendations and submit them to the Minister, but it is a noteworthy fact that up to date a settlement has been effected in each case that has been considered. To help it in arriving at the best settlement the board, while it has all the powers of a court of record, nevertheless "may accept, admit and call for such evidence as in equity and good conscience it thinks fit, whether strictly legal evidence or not," while, of course, it may make whatever inspection it may think fit of any premises, property, etc., etc., and any one who undertakes to prevent or interfere in such inspection is liable to a fine not exceeding one hundred dollars. Experts also may be employed by the board, and each party, at the discretion of the board, may be represented by three or less than three persons as counsel. It is also provided that no Provincial or Dominion Court "shall have power or jurisdiction to recognize or enforce or to receive in evidence any report of a board, or any testimony or proceedings before a board, as against any person or for any purpose, except in the case of the prosecution of such person for perjury."

These, then, are the salient provisions of this Canadian Act that has worked so well and that seems to safeguard all concerned. While, considering the present temper of the American people, it is hardly possible that all the provisions of the Act would be acceptable in the United States, nevertheless there is little doubt that when President Roosevelt's commissioner returns from his trip of investigation in Canada his recommendations for any Labor Disputes Settlement Act that may be adopted in the United States will follow the lines as laid down in the Canadian Act, which is regarded by economists as a model one. It remains to be seen how serious a stumbling block the limitations of the constitutional powers of Congress will be in this connection as compared with the powers of the Canadian Parliament. Certainly, if the people of the United States want an effective law to settle labor disputes and avoid strikes and lockouts, they cannot do much better than pattern after this Canadian measure that has been found to work so simply, so expeditiously and so smoothly.

In conclusion, it is only necessary to set out in some detail what actually has been done under the Act. A return, which was handed down to Parliament up to February 15th of the present year, shows the results very clearly. From March 22d, 1907, to February 15th, 1908, the work done under the Act shows as follows:

	Concerning mines and smelters.		Concerning transportation and communication.		
	Coal mines.	Metalliferous mines.	Railways.	Shipping.	Street Rys.
	15	3	8	2	1
Strikes averted or ended	13	3	8	2	1
Strikes not averted or ended...	1	0	0	0	0
	14	3	8	2	1

There was settled also a dispute that threatened at one time to tie up a great part of the coal mining industry of Nova Scotia. Between 7,000 and 10,000 men of the Dominion Coal Company were directly affected, the matters in dispute covering a very broad range, from wages and hours down to the rates to be paid for different kinds of work in different mines, for working pillar coal, for running machines, and for the employment of mechanics and boys. Every worker stuck to his post while the board was considering the matter, not a man walking out. The upshot of it was that in two weeks' time an agreement was amicably reached—an agreement so satisfactory to both sides that Professor

Shortt, the chairman, has today in his possession letters from the laborers, letters from the mine owners, and letters from the Government, thanking him for the excellent and satisfactory work done. Indeed, the laborers even past a formal resolution of thanks to the board, and everybody was happy.

In the railway field the success of the Act has been pronounced. For instance, a year ago September, all lines of the Canadian Pacific were affected by a threatened strike of railroad telegraphers. In exactly thirteen days, according to the memorandum, the "differences were adjusted and an agreement concluded before the board, dating from October 1, a strike being thereby averted." Similarly, a strike of the railroad telegraphers of the Grand Trunk Railway was averted, while in respect to a disagreement between the Intercolonial Railway of Canada and freight handlers in its employ, in Halifax, N. S., there is this memorandum:

"On June 29th employees went on strike, and when informed that the provisions of the Act applied, both parties agreed to refer the differences under the Act, and employees returned to work. On the request of the parties, proceedings were subsequently adopted under the Conciliation and Labor Act, and a settlement effected, the terms of which were made applicable to the company's employees at St. John, N. B., as well as at Halifax, N. S., and further cessation of work was thereby averted."

In respect to the dispute not coming under the Act, but referred to the board nevertheless—one between the Montreal Cotton Company and its 2,200 employees—there is this memorandum:

"The employees went on strike on August 13, and the good offices of the Department were requested with a view of effecting a settlement. Mr. F. A. Acland, Secretary of the Department, and Mr. V. DuBreuil, Fair Wages Officer, visited the scene of the dispute and explained the provisions of the Act to the parties with special reference to the sections enabling a dispute in any industry other than that of a mine or public utility to be referred by mutual agreement between the disputing parties to a Board of Conciliation and Investigation. As a result of the explanations and efforts at conciliation on the part of the officers of the department, an application for a board was forwarded to the minister, the employees in the meantime returning to work on August 26. The board was duly established, with the result that the differences were adjusted, and an agreement concluded before the board, dating from September 17, 1907, to be effective until May 4, 1908, and thereafter until either side was given a written notice of cancellation of the same. A feature of the agreement was the establishment of a permanent Committee of Conciliation. to which it was agreed that all subsequent disputes should be referred."

And thus it has been from the beginning to the end—conciliation and a satisfactory settlement.

If Canada might offer any advice to the United States on the labor situation, it would undoubtedly be, "Read our law and go then and do likewise."

KINGSTON, ONTARIO.

Apples

BY MARGUERITE OGDEN BIGELOW

APPLES russet, apples red,
Flesh of sweetest, firmest white,
Hang from boughs above my head,
All a harvest of delight.

Prisoned rain and prisoned sun,
Treasures of the healthy earth,
Kisses of the wind were won,
Ere an apple had its birth.

Deftly did the mother tree
Gather all things for her need;
On her life, most lovingly,
Did the fair, pink blossoms feed.

Then they withered, but at last,
When the air is crisp and tart,
And the summer fires have past
Into golden autumn's heart,

Ruddy, in the loaded trees,
We may find the summer's wealth;
Ay, and stored with nature's ease,
For the coming winter, health!

GRANSTON, ILL.

Loan Slaves and Their Emancipation

BY LEWIS EDWIN THEISS

[Mr. Theiss is a newspaper man who has made a first hand study of the "loan sharks" and their iniquitous practices. His solution of the evil deserves serious attention—EDITOR.]

INTO the office of District-Attorney Jerome there came one day a grief-bowed, broken-hearted old man. For twenty-five years he had lived happily with the wife of his choice. Then came disaster. His gray-haired sweetheart lay near to death, and, neglecting all else, the aged lover gave himself up to nursing his dear one back to health. Naturally his business suffered. In an evil hour he sought relief by borrowing from a usurer. And now, unable to pay the exorbitant interest demanded, he was about to lose thru foreclosure of a chattel mortgage his printing plant—the one thing that stood between himself and the poorhouse. Fear of the future, and the certainty that the knowledge of the foreclosure would kill his wife, had driven the helpless old man into a frenzy of despair. When he found relief at the hands of the District Attorney his gratitude was touching.

Pitiful as was his case, it was, nevertheless, an ordinary occurrence; for the old printer is but one of thousands, who, forced by pressing necessity, have sought relief in a usurer's loan, and found themselves only the more deeply enmeshed. Despite the crusades waged against them, the loan sharks of America have continued to thrive, and the system of usury has steadily become more remorseless.

The rates of interest charged by the usurers range from 50 to 400 per cent. per annum. The aged printer already mentioned paid $7.50 a month interest on each $100 of his loan—exactly 90 per cent. Another case on record in the courts of New York is that of a man who paid $125 interest for five months' use of $225, or 133 per cent. a year. At the rate of 150 per cent. a year two other men borrowed jointly $200, to pay for an operation on the bride of one of the borrowers—an operation necessary to save her life. Yet before they could secure the loan, they had to sign promissory notes for $300, payable in four months, and give chattel mortgages on $1,500 worth of personal property.

It is upon the very poor, however, that the burden of the loan shark falls heaviest. The sums these people are able to borrow are small, and the rates of interest increase as the size of the loan diminishes. Twenty-five dollars is an ordinary loan. For this the usurer compels the return of $33 at the end of one or two months. In the latter case the borrower is paying 197 per cent. interest a year. In the former 384 per cent. And small loans constitute the bulk of the usury business.

Recently a New York clerk got into financial straits and was lured into borrowing $25 from a usurer. His need was so imperative that he agreed to pay $14 a month interest— an annual rate of 672 per cent. At the end of the month he was not able to pay back the loan. The usurers began to hound him. He extended the loan another month and agreed to pay $14 more interest. By the most rigid economy and self-denial he got free. But for two months' use of $25 he paid the usurer $28 interest.

What this man escaped, many who borrow from loan sharks are unable to avoid. The poor live so close to the danger line that the slightest necessity for unusual expenditure puts them hopelessly in debt. Many who take out these $25 loans earn only $40 or $50 a month, and some even less. To save $33 in one month, or even in two months, out of such small sums is obviously impossible. When the day of reckoning comes, the borrower is unable to pay his indebtedness. So he pays the interest and lets the principal stand. At the end of the second month the borrower is just where he was at the end of the first. Once more the interest is paid and the loan renewed. Again and again this happens

until the borrower loses hope of ever being free from debt and becomes a loan slave.

Incredible tho it may seem, these wretched people continue to pay tribute to the usurers month after month and year after year. And at every new emergency requiring money they sink deeper into the loan shark's toils. Recently a woman came into a New York police court hysterical with fear. Her furniture was about to be seized. For six months she had toiled early and late to save it. Worn out at last, she had defaulted in the payment of her interest, and now her furniture was to go—because she owed the paltry sum of $25, altho she had paid back $48 in interest.

Among the papers in the District Attorney's office are the records of two policemen. The first one paid $7 interest every two months on a $100 loan. At the end of five years the usurers pushed him so hard for the principal—wishing to put their money out at a higher rate of interest—that he sought relief thru the public prosecutor. The second policeman paid $12 interest a month for three years on a similar loan. Then he died. He had paid $432 interest, but still owed the $100. Immediately the usurer came to seize the widow's furniture; and her few possessions were saved to her only thru payment by friends of her husband's of the usurer's demands.

Even more pitiful is the case of a telegrapher, the father of twelve children. With an income of only $18 a week, it was necessary, whenever there came a demand for unusual expenditure, for him to resort to the loan sharks. He could save nothing from his salary to repay these loans. So he borrowed from Peter to pay Paul. But every new loan put him more hopelessly in debt. His furniture was mortgaged, his salary assigned, and a default in payment meant loss of both his chattels and his employment. Obviously it was necessary for him to do extra work. As his financial burdens increased, so did his hours of labor. For months now he has been working nearly eighteen hours a day. Yet his family profits little by his extra efforts. Almost half of his earnings goes to the loan sharks—as *interest*. The principal of his indebtedness he can by no human probability ever repay. He is sold for life.

What is true of these men is true of hundreds of thousands of others in the United States today. To be sure, not every one who falls into a usurer's hands is deserving of pity. Some borrow money to spend it foolishly. Usually these are wayward young men. Men of family are really the pillars of usury. Necessity drives them to the Shylocks. So small are the wages of the average worker that the slightest call for extraordinary expenditure often necessitates the borrowing of money. Thus legions of the unfortunate, before they see how they are to meet the obligations they contract, bind themselves with the usurer's chains.

That is because they do not realize that their agreements are chains. The entire business of usury is conducted in a cunning, sugar-coated manner that completely deceives the uninitiated. The borrower sees only the velvet side of the usurer's claw. He does not realize what rending claws are beneath the velvet. The usurer's advertisements are typical of his whole manner of business. Here is a typical sample:

LOANS QUICKLY MADE.

Money brought to your home.
Our rates lower than others.
We defy all competition.
Every man in New York getting a salary call at our office and get all the money you want on your plain note. A written guarantee will be given not to enforce payment through your firm.

We Must Get Our Money Out.

Hence, every one come and get it.
Easy payments—lowest rates. Kindly call.

SOUND CREDIT CO.

In similar vein are couched the advertisements of the others. They sound attractive, do they not?

"But how," you will naturally ask, "is it possible for men thus to be held in slavery when the entire system of usury is illegal?" The answer is simple: Thru the bondage of fear.

From the borrower the usurer always requires a complete personal history, a promissory note and a salary assignment, and frequently a chattel mortgage and the signing of what is called a "misappropriation of trust funds" clause.

What a galling chain these various links compose the borrower little dreams until he is unable to meet his obligations.

Unwittingly employers are often the usurer's strongest ally. When an employer forbids transactions with loan sharks under penalty of loss of employment, the usurer has only to threaten to file a salary assignment with a defaulting debtor's employer to bring the borrower to terms. Rather than permit his dealings with the usurer to be known, the borrower will submit to the utmost limit of self-sacrifice and deprivation. Thus unconsciously employers often place in a usurer's hands a club that is used with terrible effect.

How dreadful may be the fate of one who cannot meet his obligations is shown by what befell a Philadelphia clerk last February. To furnish a flat at the time of his marriage he borrowed $75, agreeing to pay back $125. For a time things went well. Then came a baby. The wife remained sick. The clerk could not keep up his payments. The usurer, altho he had already received $113, seized the borrower's furniture and filed his salary assignment. The clerk was discharged. Worn out, penniless, burdened with a sick wife and child, the unfortunate man sought employment—and no man in the city of Philadelphia would hire him because he had borrowed money from a usurer. In utter despair this frail clerk dug ditches, hoping thereby to feed his dear ones. Of course he fell sick, and had not kind-hearted people learned of his plight and assisted him, he might have died and his family starved to death.

When the employer stands by his men the usurer resorts to the chattel mortgage to force payment. That usually covers all the borrower's possessions. No man is willing to sacrifice his all to avoid paying a small debt, and so the money is forthcoming. Were it not, the borrower's family would be reduced to a condition of abject misery.

No less terrifying is the "misappropriation of trust funds" clause—an agreement whereby the borrower agrees to handle his own salary merely as an agent of the usurer. Tho no court of justice would uphold the usurer, the ignorant borrower who has defaulted is made to believe that he can be imprisoned unless he pays.

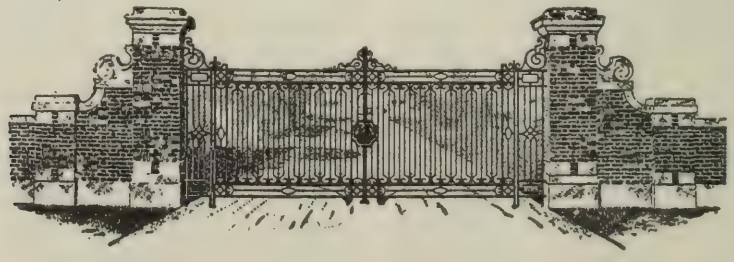
Should all these methods fail the usurer hounds the borrower into payment, sending to his home loud-mouthed harpies to discredit him among his relatives and neighbors, and cut off his credit with the local tradesmen.

Flight is useless. All over the land the loan sharks have their agents to spy out defaulting debtors, and lawyers to frighten them into payment. I know a telegrapher who was driven out of Chicago by the usurers, and who for months has been living in New York the furtive life of a fugitive, fearful lest he be discovered and again persecuted. His life is a hell on earth.

To evade the law the usurer resorts to many expedients. He avoids unfavorable notoriety by subsidizing the newspapers with advertisements. He makes it difficult to produce proof against him by never parting with incriminating documents. His papers are so made out, also, as to make it appear that the borrower received nearly as much money as he pays back. Thus a complaining borrower has only his own word to prove his statement as to excessive interest, whereas the usurer has his doctored receipts to disprove such statement. When usury was forbidden in Missouri, the loan sharks ceased lending money, and thenceforth bought salaries. In New York State they had the usury law changed so as to make salary assignments legal security for usurious loans.

It is not on account of laws, or lack of laws, however, that the loan shark has continued to exist and grow more prosperous. It is because he has supplied a need. Continually we are raising our standard of living without an adequate increase in wages. In consequence the poor have been unable to get away from the danger line. Sooner or later the day of need comes to most of them, and the loan shark is the only man who welcomes a needy borrower. So long as economic conditions remain as they are the poor will continue to need periodic loans. The only way to put the loan shark out of business is to compete with him and underbid him.

Already many movements are on foot



to accomplish this end. In New York we have the Provident Loan Society, started with a gift of $100,000. It lends money at the rate of 1 per cent. a month, and cuts that rate in half for prompt repayment. Last year it made 286,000 loans. The Hebrew Free Loan Association is a similar organization. It lends money to any Hebrew who can get good endorsement. Then there are the St. Bartholomew's Loan Bureau of New York, the Collateral Loan Company and the Workingman's Loan Association of Boston, and similar organizations in other cities. Their object is not only to help the poor over slippery places, but also to teach them thrift and economy.

Better yet, as showing an active interest in one's employees, is the system of lending money that a New York department store has instituted. Small sums are advanced to employees without interest, the money advanced being deducted from the borrowers' pay envelopes in ten weekly deductions. Slight as is this assistance, it is just the help that is needed—and it is assistance without price. Many employers now help their employees in this way.

Best of all is the movement toward self-help in the form of mutual loan associations that is spreading everywhere among the poor. A typical organization of this kind can be found in a New York newspaper office. Each member of the staff may carry three shares of stock. For each he pays $1 a week. From the sum so collected he may at any time borrow an amount equal to his equity, and non-members may borrow upon endorsement of a member. A slight weekly charge is made for these loans. At the end of the year the money in the treasury is divided among the stockholders. Each share is then worth about $75. Thus the borrowers have made money by lending themselves money. Organizations somewhat similar to this are springing up all over the country, bringing timely relief without an accompanying penalty. When they come the usurer goes.

To establish such a charity as the Provident Loan Society is within the power of few people. But it is within the power of many people to help others by establishing, or helping them to establish, loan associations of their own. Every employer has employees who at times are prest to make both ends meet. A very little assistance will tide them over their difficulties. The average amount of the 286,000 loans of the Provident Loan Society in 1907 was $37. Wherever the idea of a mutual loan association is suggested employees take to it readily. Workingmen are fully competent to run their own societies, and even to organize them. But in many cases they have not thought of the possibility of such societies. So long has the workingman lived as an individual that the possibilities of combination percolate but slowly thru his brain. Recently he has learned to organize to secure better wages. In future he will organize to furnish himself at low rates the assistance he now secures from usurers at high rates. When that day comes the usurer will vanish from the land. In accomplishing this happy end the workingman will increase his self-respect and manliness. At the same time he will become a better and more efficient employee. Thus the employer who assists toward the accomplishment of this end will not only help his employees, but will at the same time benefit himself.

New York City.

The Anti-Trust Crusade in Texas

BY HERBERT N. CASSON

Author of "The Red Light," "The Crime of Credulity," "The Romance of Steel," etc.

DURING the past year the legislative experiment station of the United States has unquestionably been Texas. Other States, notably Oklahoma, have attracted attention by the manufacture of new laws; but the Texans, who are more serious and determined than any other of our forty-six American tribes, have not only enacted a brand-new set of laws, but they have done something vastly more difficult—they have enforced them.

At the present time the Texas branch of the Standard Oil Company has not only been fined $1,623,900, but it has been delivered bag and baggage into the hands of a Federal receiver. The International Harvester Company has been fined $35,000, not because of any oppressive practices, but merely for the formal offense of being a "combination in restraint of trade." The money has been collected, and the Harvester Company is now an exile from the State.

Also for the crime of being combinations, the express companies have paid fines amounting to $40,000, the Cassidy Southwestern Commission Company has paid $7,500, and the United States Fidelity and Guarantee Company, $12,000. Twenty-three of the largest life insurance companies have voluntarily shaken the sand of Texas from their feet, because of a law which required them to invest three-fourths of their Texas earnings in Texas. And a suit is now in full swing to break in pieces the flour millers' union, which has more than a hundred members.

In Texas the railways are wholly under the control of a State commission, a condition which exists nowhere else in the United States. This commission is not at all a mere inquisitorial or advisory body. It issues its decrees—six thousand of them in 1907—and compels the railroads to obey. It fixes rates on all manner of freight, from squabs to automobiles. It decides where a new depot shall be built, how much it shall cost, and what the style of architecture shall be. It compels the five or six different railway systems to compete, and prevents them from issuing any new securities without its official consent.

This harsh supervision has so cowed the railroad kings that they lack the courage to make any open resistance. Their dividends in 1906 amounted to less than $40 per mile of road—$472,000. The total earnings averaged less than 5 per cent. Yet one of the Harriman railroads meekly testifies, in one of its latest folders, that Texas has "equitable laws, rigidly enforced."

Taking the Sherman Anti-Trust Law as a starting point, Texas has developed a code of unparalleled severity against combinations. It defines a "trust" as "a combination of capital, skill or acts by two or more persons, firms, corporations or associations of persons, or either two

or more of them, for either, any or all of the following purposes

1. To create, or which may tend to create, restrictions in trade or commerce, or *aids to commerce,* or in the preparation of any product for market or transportation, or to create restrictions in the free pursuit of any business.
2. To fix, maintain, increase or *reduce* the price of merchandise, produce or commodities, etc.
3. To prevent or lessen competition, etc.
4. To fix any figure whereby the price of an article, etc., shall be in any manner affected, controlled or established.
5. To fix or limit the output of an article.
6. To abstain from engaging in or continuing business, or from the purchase or sale of merchandise.

And so forth, and so forth, for half a dozen pages of the most irascible anti-trust legislation that has ever been, anywhere, enacted. According to the letter of this law, so I was informed by an eminent judge in Dallas, no sort of combination is legal, not even the simplest partnership.

The penalty for the violation of these laws was at first a sufficiently severe one. The culprit was fined at the rate of from $200 to $5,000 for every offense, and *each day of violation* constituted a separate offense. This made it possible to levy a fine of a million dollars upon every combination that is eight months old, and there are several hundred such combinations in Texas. But this was not nearly drastic enough for the Legislature of 1907.

An amendment was passed which enacted that every offender against the Anti-Trust Law should not only be fined, but imprisoned as well, for "not less than two nor more than ten years." Also, it was decreed that any agent, member, employee, officer, director or stockholder of any combination should be held directly responsible and punished by fine and imprisonment. The Attorney-General was given power to pounce without warning upon any suspected company and investigate its books and papers. If he brought suit against any corporation, the State was to have an immediate lien upon the corporation's property. And upon the collection of the fine, the prosecuting attorney was to receive a liberal share of the money, varying from 10 to 25 per cent.

Because of this machinery of enforcement there has come, not only a general feeling of alarm among business men, but also a very serious disarrangement of commercial plans and enterprises. Railroad building has completely stopped, altho a number of new lines had been projected. Two-thirds of the flour mills are inactive. The building of a hotel de luxe in Houston by the Equitable Assurance Company has been abandoned. The trade of the International Harvester Company, whose rice binders are indispensable in Texas, has been forced upon a most unsatisfactory basis, so far as the farmers are concerned. In all probability, Texas will pay in 1908 about $150,000 more for its farm machinery than it would if it had not broken up the Harvester Company's finely organized system of agencies.

To use a Rooseveltian phrase, Texas has deliberately "carried to an extreme the national virtue of self-reliance." Her lawmakers have wholly ignored the evils and wastes of competition, and have begun a campaign of violent disintegration. "We prefer to pay a higher price, or to use a poorer quality, rather than to put ourselves in the grip of a trust," said the president of a business league in Austin.

The Texan's creed is that every man shall "paddle his own canoe." He knows little, by experience, of the advantages of consolidation, or of the big unit of production which now rules in the manufacturing world. He cannot realize that a modern iron furnace has become the equivalent of a million dollars, or that fully five millions would be necessary to establish a well-equipped harvester company. The one big thing of which he has personal knowledge is the cattle ranch; and that, he knows, can be broken up into small farms with the best of results to the State. Naturally, therefore, he asks, Why not break up the giant organizations of business?

The animus against "trusts" is as bitter as was the hostility to railroads in the Granger States in 1876. It is not mainly a political *motif,* as it is in Kansas. It is deep seated and uncompromising. In one State report I found "trusts" alluded to as "freebooters," and in the last year-book of the Bureau of Statistics there is a newspaper account of the enormous wealth of John D. Rockefeller, sandwiched in between tables of figures.

The basic reason for this hatred of

"trusts" is to be found, in my opinion, in the history of Texas. The fact that this immense State—226,000 square miles of desert and fertility—was for ten years an independent republic has had great influence in shaping Texan character and Texan policies. It has naturally taught the Texan to resent the compulsions that inevitably follow an era of organization. He sincerely prefers the hit-or-miss methods of free competition to the orderly methods of organized industry. He believes that the systemization of business has gone too far, and he has virtually become a seceder from the interdependent scheme of things, which has been developed during the past twenty years.

As yet, this policy of industrial disintegration and secession has not done what it was intended to do. A few small local factories are being built, but the whole swing of the anti-trust movement is at the present time having the extraordinary result of committing Texas to a program of public ownership. In theory, Texas is the land of uncompromising individualism, but, as a matter of actual performance, it has already become the most socialistic State in the Union.

Texas now makes iron on the socialistic plan at the Rush Penitentiary, and has recently bought three large sugar plantations, 20,000 acres in extent, so that the convicts of the latter prison can make sugar in competition with the Sugar Trust. The endowment of its public schools with a fifty-million-dollar tract of land was in itself an act of unparalleled socialism, tho it is not recognized as such by the Texans themselves. The income from this vast area of school land was last year very nearly two millions of dollars.

By the formation of its effective railroad commission it has gone much further toward government ownership of railways than any other American State. It has deprived the railroads of practically every feature of private ownership except the risk. Texas believes, and with good reason, that it has the right to dominate its railways, because it has given them 35,000,000 acres of land—enough to make four States as large as Massachusetts, Connecticut, New Jersey and Rhode Island. And the Texan statesmen have already laid a solid basis for public ownership by making a State valuation of railways.

Also, the Texans prove that they can make exceptions, when necessary, to their general policy of "trust busting." They have inconsistently inserted an exemption clause, for instance, which forbids their anti-trust law to operate against trade unions, and they openly encourage the farmers to organize "combinations in restraint of trade." The most conspicuous "trust" in Texas is the "Farmers' Union," which has been formed to hold cotton until the price is raised to 15 cents a pound. Meetings are being held to strengthen this combine. Warehouses are plainly marked with its name. Its promoters are regarded with general favor. Every one knows that if the anti-trust law were impartially enforced, these organized farmers would be fined $5,000 a day and imprisoned for at least two years; but in the present state of public opinion in the Southwest there is no prospect whatever of any such prosecution.

So, while the Texas laws are elaborately designed to push the State backward into a state of primitive industrialism, the attempt to enforce them has placed Texas in the same class with Belgium, New Zealand, Australia and other socialistic countries. The Lone Star State is the most striking example, at the present moment, of that irresistible drift, whether for good or for evil we do not yet know, toward the public control or ownership of all organized industries.

New York City.

Literature

A New Encyclopedia*

THE experience of Dr. Hastings in editing his "Dictionary of the Bible" has fitted him to undertake this immense and important work. It is promised in "about ten volumes," but as this volume only goes as far as "Art," it will take fourteen volumes if we can judge from the space occupied thus far in the "Encyclopædia Britannica," unless more compression is adopted. The scope of the plan is immense, and everything embraced in or related to religion or ethics seems to be included. Indeed there are articles in which the relation to either subject is very slight, if anything at all, such as "Amazons," in history, and "Abiogenesis," in biology. But we are grateful even for these admirable studies.

Of American scholars invited to this work the first recognition is given to Dr. Louis H. Gray, who has read every page and contributed articles on Persian and Avestan topics. Prof. A. V. W. Jackson has also written on Persian religion; Prof. G. A. Burton on "Altar," Prof. G. A. Coe on "Adolescence," Prof. D. B. Macdonald on "Allah," Prof. A. C. McGiffert on "Apostolic Age," Prof. W. J. McGlothlin on "Anabaptism," Prof. A. H. Newman on "Æons," Prof. Mary M. Patrick on "Anaxagoras," Prof. E. Riess on "Alchemy," Prof. K. F. Smith on "Ages of the World," Prof. J. M. Sterrett on "Antinomianism," besides others that might be mentioned; but the majority of the writers are Europeans, as might be expected.

Some of the important articles are developed to great length and distributed among several writers. Among these are "Alexandrian Theology," "Adoption," "Adultery," "Ages of the World," "Altar," "Ancestor Worship," "Anointing," "Architecture" and "Art," some of which might make sizable volumes. A very few, such as "Ægean," "Ainus" and "Architecture," are illustrated, and we wish it for others, such as "Altar," and gods like "Agni" and "Ahriman." Under "Animals," the bison is treated of entirely as American, forgetful that it is the bison which Gilgamesh fights in the earliest art, as it is the buffalo in the next period. In this same article the relation of other animals to Egyptian worship is mentioned, but not of the lion to Ishtar and Nergal in the Babylonian and Assyrian religion, of the scorpion to Ishkhara, the bull to Adad, or the ram and the tortoise to Ea; nor, in Phenicia, of the cow to Ashtoreth.

Perhaps no article in this initial volume is of more interest than that on "Alexandrian Theology" by Professor Inge. Its relation to Neo-Platonism is less close than has often been supposed, and the distinction is here closely observed; and it deals chiefly with Philo, Clement and Origen. As precursors of Philo the Septuagint, the Sibyllic Oracles and the "Wisdom of Solomon" are treated of, but we miss a discussion of the relation of the highly developed personification of Wisdom in the book of Proverbs to the Logos of Philo and of John's Gospel. We are told that in the Wisdom of Solomon "the influence of Greek philosophy appears chiefly in the conception of a harmonious and beautifully ordered world directed by an immanent principle (Wisdom)." But this is precisely the conception of Proverbs, from which directly the idea was drawn, altho how much of that conception in Proverbs came from Greek philosophy may be questioned. So when Professor Inge comes to discuss Philo he draws the word *Logos* from Greek Stoic philosophy, but its attributes from Plato. Yet why not from Proverbs? Philo called the Logos the chief of the "powers," and next to God. But that is precisely what Wisdom says in Proverbs:

"The Lord possessed me in the beginning of his way,
Before his works of old. . . .
When he marked out the foundations of the earth,
Then I was by him as a master workman;
And I was daily his delight,
Rejoicing always before him."

Philo did not like the word *Wisdom* as applied to the chief divine principle, be-

*ENCYCLOPÆDIA OF RELIGION AND ETHICS. Edited by James Hastings, A.M., D.D.; with the assistance of John A. Selbie, A.M., D.D., and other scholars. Vol. I A—Art. 4to pp. xxii, 888. Imported by Charles Scribner's Sons, New York. Sold only in sets. $7.00, in cloth.

cause the Greek *sophia* is feminine, and so he chose the masculine *logos,* but it is Wisdom all the same; and from Philo's choice of the word as personifying the wisdom of God has come the Logos of John's Gospel.

This new encyclopedia will be an essential for the library of every student of religion and ethics, and it will provide the material for much theology. We need it for the study of comparative religion, and comparative religion affects Christian theology.

Booth Tarkington's Happy Discovery of the Scientific Process of Regeneration

ONE would as soon expect to find metaphysics in a bird's song as in one of Booth Tarkington's stories, but that is what we discover in his new novel—metaphysics, subjected to the alchemy of a genius's imagination, freshened with the immortality of hope, sweetened with the phenomena of love—metaphysics applied, you will find, with the grace of an archangel (who had but recently been a sinner himself) to the unholy life of a man and the dainty goodness of a woman. The process of moral amalgam makes the story.

For a very long time the world, in its sober, repentant moments, has been worrying to know how a bad man could be made perfectly and entirely good. The philosophers have been too academic in their theories to be of much assistance. The humanitarians are impractical; they could make him healthy and prosperous under ideal conditions, but not good. The Christians have made the highest pretensions, but their methods are so drastic and require such incredible qualities in the applicant that very many fail by nature to come up to the standard. And all the time it was a mere matter of surgery and proper mental condition during the convalescence of the patient. So Mr. Tarkington demonstrates in his new story.*

Larrabee Harmon is the most dissolute rake in Paris, a putrefying young American millionaire, who forsakes a good and beautiful young wife for a scandalous creature of the dancing harpy type. He is now merely a brute with some of the mental faculties of a man, but with the spirit of him so "overlaid" with transgressions that, while not dead, it is useless to him. In an automobile accident he is nearly killed, and a certain part of his brain is scattered by the roadside. When he recovers physically he has lost all recollection of his past life. His *memories* are faded, but not the *faculty* for remembering. His Pandora box is gone, but not his motor power for filling another. A German psychologist, who is an idealist, believing in the immutable goodness of man's spirit, takes possession of Harmon, hides him in the Tyrolese Mountains while he is educating him again. His purpose is to store his innocent, empty but very brilliant mind with *good* memories in place of the bad ones he has lost in the automobile accident. Mr. Tarkington's theory is that a man is controlled, degraded or elevated by his own personally made memories, not, it appears, by his will. The will itself is enchanted by them. The effect of the experiment upon Harmon is remarkable. He becomes a perfect specimen of physical beauty and health. His instincts are as normal as Adam's before he saw Eve or tasted the apple, and as innocent. When he reaches this stage of Kingdom-of-Heaven-nativity, he is suddenly brought into contact again with his wife. He not only falls in love with her at once, but, when occasion arises, he shows the most horrified antipathy for the woman who had been his mistress and the partner of his sinful days.

The story ends happily and leaves the reader smiling friendly questions in the face of Mr. Tarkington's psychological optimism. The brain is composed of two hemispheres, just as the world is, only there is more in the brain than in all the worlds put together, and when you come to the actual business, you might have to search thru both hemispheres (one of which is said still to be unexplored) in each man's head to find the swamp spot where he keeps his iniquity treasure of bad memories. Only the traveling phrenologists are absolutely certain of the topography of this strange country, and a surgeon might easily lose his way in it. And this makes Mr. Tarkington's meth-

*THE GUEST OF QUESNAY. *By Booth Tarkington.* New York: McClure Co. $1.50.

od almost as impractical as Christianity. However, Harmon would have been saved from his evil courses even without the auto accident if he had remained in Mr. Tarkington's story. He would have been rescued by some good woman. The peculiar charm of all this writer's fiction is the sweetness, fidelity and goodness of his womenkind. And when nearly every other writer in the country is inserting the original Serpent into the character of his heroine, the moral fairness of Tarkington's "leading ladies" is gratefully received. This quaintly adoring, poetic ideal of them as guardians of what is good in men is one of his deepest convictions, apparently, and he dramatizes it as if it were a part of his last forlornly enthusiastic hope of redemption. Deprived of this inspiration, his books would lose their tearful, smiling, tender radiance, their caroling hopefulness.

A Story of the Efficacy of Sin in the Moral World

CHRISTIAN charity is getting very weak in fiction, and it is spreading until it can cover a multitude of sins without a qualm. That is to say, it is a charity which has the noble manner and the great language of Christianity, but it idealizes men and women who have been guilty of the worst crimes as the victims of respectability, and pities them with a lofty compassion which places mere righteousness among the vicious, narrow-minded tendencies of this age. Here is the "running theme" of Anne Douglas Sedgwick's new novel. Amabel Somebody marries Lord Channice because she is "brought out" and told to marry him. She does not love him, but she resents his neglect and his lack of love for her. She becomes infatuated with a young novelist, elopes with him, discovers at the end of a week that he is offensive as a lover, and elopes away from him. She is given sanctuary, so to speak, by her husband in a remote country house, where her illegitimate child is born. She lives here alone for twenty years, devoting herself to her son, receiving formal visits from her husband. He is a dissolute man, with many mistresses, whom he supports with his repentant wife's money. When he is cast off by his last mistress he returns to make love to his wife and to claim her. And in this capacity she conceives the same horror of him that she had had of her lover.

The author commands sympathy for Amabel from the beginning. It is not a moral awakening that makes her fly from her lover, but it is the revolt of a fastidious lady who cannot endure even a genius in the privacies of life because he is not quite a gentleman. She "flunked" because she did not have the nerve to play the game that many another woman plays in social vice to a brilliant finish, and she has, therefore, made a "mess" of things from the worldly point of view.

ANNE DOUGLAS SEDGWICK.

This is the author's representation of the case. Henceforth Amabel moves thru the dull and pathetic scenes of her isolated life like a nun, elevated, purified, made fine and good by what, according to average experience, casts a woman down, degrades and coarsens her nature. Now, there are men and women of the spirit—always, whether good or bad, they are of the spirit, rather than of the fiber of the world. Amabel belongs to this type. And we are given to understand that her fault has resulted in more loveliness of character than the virtuous lives of most decent people ever develop. The inference is that a sin is more conducive to the highest moral perfection, accepted in the proper penitential manner, than a good

*AMABEL CHANNICE. *By Anne Douglas Sedgwick.* New York: The Century Co. $1.50.

deed. And some of us are willing to admit that the process of getting out of evil *is* the higher mathematics of the soul. The point is that so few of us are capable of making this grade. And when all is said, adultery does not have the effect upon character that our author represents; the *rule* is quite the contrary to that of Amabel's life. It springs from an immoral toxic condition of the mind. It does not awaken, but deadens or renders desperate what we call the "better nature." It does not incline women or men to repentance, but to remorse, madness and death. A wife in real life who has eloped with another man cannot voluntarily renounce the world and the distractions in it, live the life of a saint in an isolated and desolate house for twenty years. She would have too exclusively the comradeship of a dreadful memory. Madness is the only logic of such an environment — not extended youth, health, peace and beauty, which we are told Amabel obtained and kept.

The danger of such novels is that they present ideal spiritual conditions resulting from evil actions, and so they tempt real people to risk the evil with the toxic delusion that the ideal purification will be possible later, will follow easily when desired. But purification under the best conditions provided in life is a drastic and terrible process, to say nothing of the martyrdom it entails when the moral nature has been outraged and partially destroyed.

It goes without saying that the book is written with that fine discrimination for which Mrs. Sedgwick is so justly famous. She knows how to give spiritual definitions to all that is stupid and commonplace with an efficacy that is entirely too celestial to be veracious.

Two Plays

Dr. Van Dyke is very careful to indicate by a footnote that the second scene of his third act is not intended for the stage; we have a right, therefore, to infer that *The House of Rimmon*[1] was written to be acted. Yet, as a typical example of the so-called "poetic drama," this new play, just issued, is little suited to the theater. The story of the Damascus captain, seized with leprosy, and the captive maid of Israel, who cares for him in the stead of a faithless wife, is told in a slow-moving, narrative fashion, with not sufficient action to raise it much above the pictorial scene, on the one hand, or above the contemplative dialog (fraught with many feeling lines) on the other.

The House of Rimmon is built according to conventional models, and its pre-Christian setting is sympathetically imagined; the psychology of character is bound up in some haunting poetry; but when that is said, all is said. Dr. Van Dyke has fallen into the error of all "poetic dramatists"; his scenes are fragmentary and his material is shaped for imaginative effect, not for externalizing. The plot is dramatic, but the execution narrative.

Entirely different in scope and medium is the sparkling, deliciously satiric comedy by Mr. Mackaye, which was published simultaneously with its New York stage production. If the piece failed to have a wide appeal in the theater, there were two apparent reasons outside of the true literary and prescribed dramatic merits of the dialog. Drama never turns back to pick up lost threads let slip by the audience; therefore drama must keep pace with the average grasp of the people. "Mater" is so pulsing with wit, with a mixture of light motif and deep maturity, that it is hard to follow on the stage. Therefore, the printed book brings this remarkable *genre* play to a closer view and to a slower and surer appreciation.

It is remarkable for two reasons: first because satire is applied poignantly to American conditions in the guise of charming fancy and poetic allegory; second, because it subjects American life, as portrayed on the stage, to a literary treatment that adds to Mr. Mackaye's poetic reputation—a sense of humor that sinks below situation and touches character.

The dialog does not forsake the realm of poetic imagery, despite its prose and despite its quick conversational style. It points to a hopeful future, and will redound to Mr. Mackaye's credit in the bulk, even tho its stage career be short. It is almost as difficult to act comedy of

[1] The House of Rimmon. *Henry Van Dyke.* Scribner, $1.00.

this kind as it is to define comedy of this kind. The author's title-page bears the line: "An American Study in Comedy," and *Mater*,[2] with two overserious children, is the human mold into which love, laughter and tears are mixt. Is there a problem? Yes, chiefly intent upon showing how a politician is changed, how a son is put into public office, how a daughter is brought to her senses thru the cleansing effect of laughter. Mater, therefore, is an intricate rôle to act: there is infinite depth below the delicate crust of humor. It is this fine balance which was lacking on the stage, but which one should obtain from the reading text.

The stage career of "Mater" should bear some meaning for Mr. Mackaye; a caviare drama that is caviare because of certain sharpness of technique—a tendency to "talk" on one hand, a tendency to lose the thread for the sake of a thrust on the other—needs certain pruning. And after reading the play, we are still doubtful whether its democratic ideas are quite clear, and whether or not its levity is sufficiently under control. But the book is an achievement to the decided credit of Mr. Mackaye.

The House Dignified. Its Design, Its Arrangement and Its Decoration. By Lillie Hamilton French, Author of "Homes and Their Decoration." With Seventy-five Original Illustrations. New York: G. P. Putnam's Sons.

This work is designed for the use and guidance of people of large wealth. Its aim is to check elaborate outlays, suggested by fashionable upholsterers, and to restrain rich Americans, of untrained taste, from following each new craze in building and furnishing, the end whereof is chaos in the house. The book treats of interiors, tho a few exteriors appear among the sixty (not seventy-five) illustrations. Nearly two-thirds of these, thirty-eight, to be exact, are drawn from the residences of well-known American millionaires, and nearly half of the houses selected for illustration were designed by the firm of McKim, Mead & White. The various chapters discuss entrances and halls, stairways, dining-rooms, salons and drawing-rooms, libraries, bedrooms, bath and dressing rooms, boudoirs, dens and smoking-rooms, windows and doors, fireplaces, methods and appliances of lighting, mirrors, ceilings, servants' quarters, nurseries and play-rooms. Miss French constantly and wisely urges simplification and restraint, and her suggestions, tho

written for the rich, can profitably be read and followed by any householder who has the large happiness "to be seated in the mean"; and, if not on the visiting list of multimillionaires, he can here find an easy way to satisfy his natural curiosity to "see these handsome houses where the wealthy nobles dwell." The volume is an attractive one, carrying out the suggestion of luxury, not in its pictures of palatial dwellings alone, but in its presswork, paper, wide margins and tasteful binding.

The Mills of the Gods. By Elizabeth Robins. New York: Moffatt, Yard & Co. $1.00

Satanuccio, the unheroic hero of this story, is an Italian. He has in youth had his "fling." "Even the spending of a mysterious revenue with princely generosity, even laying waste the lives of sundry fair and noble ladies, had come to pall on him," and, at the opening of the story, he is in the mood of finding, if he can, and winning, some fair—yes, the fairest and most lovable girl in the world—and settling down to enjoy at leisure a soft repentance. The leisure he has, and he gets the girl, and the repentance—but just how it would spoil the interest of the story if we told. The interest centers in three persons—the girl, in

[2] MATER. *Percy Mackaye.* Macmillan. $1.25.

Satanuccio, whose real name was Renzo Bellucci, and in the mother-by-accident, Madame Paravicini. The background, painted with much skill, is chiefly the half-furnished, ancient, somber palace of the Counts Bellucci, remote in the Lombard Alps, the atmosphere of which, as depicted by Miss Robins, is comparable to that of the plague in New York, as painted in the early part of last century by Charles Brockden Brown. There is plenty of shadow, relieved only by other shadows. The realism is that of romance —the realism of somber, half imaginary, diseased mental life, conceivable, but exaggerated, like the realism of Balzac, of Hawthorne, and the school that finds moral government, not precisely as it is found in the world, but as the sterner spirits would have it if the government of the world were placed in the hands of —say, Jonathan Edwards or Increase Mather.

The River-Man. By Stewart Edward White. New York: The McClure Co. $1.50.

This is a new story in the sense that the author has chosen a situation almost unknown in fiction. The scenes are laid

STEWART EDWARD WHITE,
Author of "The River-Man."
The McClure Co., publishers.

on a river in the timber belt of Michigan. The life of the "river jacks," hardy, rude, half-amphibious men who follow and drive the logs down stream after the thaw in the spring to the various saw mills at the towns and cities below, is depicted in colors as somber as they are suggestive of the strength and sullenness of the characters portrayed. The author has familiarized himself not only with the life, but its vernacular, and his story is enriched with a freshet of slang phrases that belong to the river jack's vocabulary. He goes with them into the town and gives scenes from their orgies in "Hell's Half Mile" with the same vim of words that he employs in describing their courage among the logs on the river. He selects his hero from this group and touches the figure of him with the fine light of romance by showing him at rest in a home of refinement when he is away from the gang on the river. And as he takes the hero from the brawn and bone and spirit of the river-bred manhood, so he thrusts the villain into it, a thin-faced, gray-coated young man, whose nature the reader never suspects till it is revealed in a big swindle. The incidents of the drive of logs on the river, incidents bristling with pioneer temper, the love affair of the big River-Man and a New York girl, and the attempt of the gray-coated scamp to get entire possession of their joint property make the story, and it is a good one if you free Mr. White from observing the usual canons of literary construction; he has ignored these to the bewilderment of the reader. The fact that he develops a series of apparently important characters is no sign that you will meet them in the next chapter, or anywhere else in the book. He portrays four such persons in New York and drops them without so much as an epitaph to account for them afterward. His purpose is to show all the possibilities of his really admirable hero, quite independent of the needs of the story. In short, the book is like the river that flows thru it, log laden, flooding here and dammed there, full of heroic obstructions that must be overcome. Mr. White deflects his singularly vivid tale time and again with similar obstructions for the pleasure he takes in having the River-Man demolish them. And there is one big simple sentence uttered out of the forest stillness of his great nature by way of concluding a difficult matter that is worth quoting in these tremendous days when every honest man is wondering what his duty is: "I think a fellow ought always to act as if he were making the world. He ought

to try not to put things into it that are going to make it an unpleasant or an evil world. We don't always do it, but we ought to try." There is many a muck-mad, socialistic-talking prophet among us who does not get as much as that said in a lifetime of streaked eloquence.

The Point of Honor. By Joseph Conrad. New York: The McClure Co. $1.50.

This is a story of duelling in Napoleon Bonaparte's army. The principals of the tale are two young cavalry officers. The occasion of their first encounter was trivial, but since they never divulge it, it was regarded as very serious and mysterious. Thruout the course of the imperial wars they fought upon

JOSEPH CONRAD,
Author of "The Point of Honor."
The McClure Company, publishers.

every possible occasion, and in every possible fashion. When one was promoted, the other strove also to be promoted that he might continue to enjoy the privilege of fighting his enemy, which was impossible so long as they were of different ranks. They grew old, the army was disbanded, Napoleon was banished to St. Helena, but they continued to challenge and to meet one another here and there at daybreak with pistols for the most deadly purpose. The end is more fortunate than one might expect for two men who have sought each other's lives for many years. And the charm of the tale consists in the lightness and humor with which it is told.

The New Schaff-Herzog Encyclopedia of Religious Knowledge, Embracing Biblical, Historical, Doctrinal and Practical Theology, and Biblical, Theological and Ecclesiastical Biography from the Earliest Times to the Present Day. Samuel Macauley Jackson, Editor-in-Chief, with the assistance of Charles Colebrook Sherman and George William Gilmore, Associate Editors. Volume I: Aechen-Basilians. New York: Funk & Wagnalls Co. $5.00 per volume.

For over fifty years the standard Protestant religious encyclopedia in Germany has been one or another edition of Herzog's "Realencyklopädie für protestantische Theologie und Kirche." A third edition has recently been completed, under the editorship of Dr. Albert Hauck, Professor of Church History, at Leipsic. Many years ago Prof. Philip Schaff, who imported so much German knowledge into America, was the editor of an English edition, in much condensed form, of the German work. This has had wide circulation, but for many years has been out of date. The present edition of Dr. Jackson is brought abreast of the times and will be much more complete and thoro. It is founded upon the recent third German edition, but the German articles have been revised, condensed and adapted to the needs of English readers. It will be a useful addition to any religious library. In the field of church history and Christian biography it possesses high merit, and the painstaking and elaborate bibliographies at the close of each article, prepared by Mr. Gilmore, alone render it invaluable as a work of reference. Honorable mention should also be made of Mr. Gilmore's valuable articles on Babylonia and Assyria. In a work of so many hands unevenness is bound to appear, and, as a matter of fact, both good, bad and indifferent articles are here to be found. In general the historical articles, mostly by Germans, are superior, while the treatment of biblical themes is scant, and the encyclopedia will by no means displace the Bible dictionaries of Hastings and Cheyne. An interesting and instructive feature is the different stages of opinion manifest in the treatment of a topic upon

which more than one hand has labored, as in the article "Ark of the Covenant," where Volck, a deceased scholar, presents the priestly description of the ark as historical, and Professor McCurdy calls attention to the different views of the ark which prevailed at different literary periods. The twelve volumes of the completed work will be a credit to the editors and a useful addition to the equipment of any student of religion.

Documentary Source Book of American History, 1606-1898. Edited with Notes by William Macdonald. New York: The Macmillan Company, 1908. $1.50.

Professor Macdonald has employed, with much success, the processes of omission and condensation in preparing his new collection of American documents. For several years his three volumes of "Charters," "Documents" and "Statutes" have been in constant use upon the reference shelves for students of American history, while the place which they have made for themselves has not been threatened by any other compilation. Reduced in size to one volume, the most significant of the documents included in the three are now brought within the purchasing power of the individual student, so that the work may now have a wider use as a textbook. One is not called upon to approve of every document that is either included or omitted. In the aggregate the collection will meet the need of most students. We can only regret that the editor has not extended the period of his compilation, in order to include some of the commoner documents of the last ten years.

The Christian Method of Ethics. By Henry W. Clark. New York: Fleming H. Revell Co. $1.25.

It is perhaps unfortunate that the title of Mr. H. W. Clark's new book is one that is not likely to appeal to many who might find its chapters most helpful. Mr. Clark sets out to examine how the Christian religion may be brought into living touch with the multifarious and complex problems of modern life, to answer the question as to what course a Christian ought to pursue when faced by any of the thousand problems which clever dialecticians are always ready to propound, and which do recur quite frequently in the experience of individual Christians. It is not as a dialectician, making fine distinctions, that Mr. Clark would solve these problems. There is no easy road for Christians in his scheme of life. Christianity to be real must possess a modern man in these twentieth century days as it possest St. Paul or St. Ignatius. A man's religion, it is Mr. Clark's conviction, is something transcending in importance worldly prosperity and comfort, and of more value than earthly or heavenly happiness, and as nothing of any value can be gained without cost, so the man who really desires to be a Christian must be ready for effort and sacrifice. Life for him on many sides will be austere and strenuous, just as life must be for the athlete in training who greatly desires to win the prize, or for the man who has set his heart on becoming a millionaire, and who therefore cannot afford to take cheaper pleasures on the way. This presentation of religion as something worthy of supreme effort, rather than the easing down and popularizing of Christianity which is now the fashion with many Churches, is Mr. Clark's message, and such a message makes a really far stronger appeal to young men and women than can be made by any easy-going demands on their spiritual natures.

Lee and His Cause; or, the Why and the How of the War Between the States. By John R. Deering, D. D. New York: and Washington: The Neale Publishing Company, 1907.

The list of authorities upon which Dr. Deering bases his recent defense of secession and the seceders shows but thirteen entries, all of them highly partisan in character and including only one title that a competent historical scholar could regard as really a source. The book belongs to that increasing group of works by Confederate veterans in which, thru iteration and allusion to the perfect character of General Lee, the attempt is made to save the South from infamy in history. Dr. Deering, like most of his class, has no knowledge of the literature of the Civil War, and is unaware that the cause of the slave-holding South is to-

day much safer in the hands of modern Northern historians than in those of its zealous apologists. He writes in the spirit of Bishop Pierce, whom he admiringly quotes: "We are fighting against robbery and lust and rapine; against ruthless invasion, a treacherous despotism, the blight of its own land and the scorn of the world; mongrel armies whose bond of union is plunder, and whose watchwords are but delusion and falsehood; a fraud against the African, a lie to the North, and an insult to the South." History cannot come from an attitude like this.

The State and the Farmer. By L. H. Bailey. New York: The Macmillan Co. $1.25.

This is a specially timely book. We have very soon to solve the problem how far the state can encroach wisely on the individuality of the land tiller. Mr. Bailey does not believe that interference on the part of the Government is needed on account of abandoned farms or farm values running down. Between 1900 and 1905 all medium farms advanced in value 18 per cent. Dairy farms went from $46 per acre to very nearly $60; fruit farms from about $70 to $85; truck farms from about $70 per acre to over $80. We know that farm values are still increasing, and that the ratio of increase is more rapid. As for abandoned farms, it is mostly false reading of the census. There has been considerable consolidation of farms, but in one township where there were forty-five vacant farmhouses, it was found that not an acre was out of cultivation. There are a few deserted houses here and there, and these stand for families who have sold out, while their lands are merged in neighbors' possessions. The real difficulty just now is nothing that the Government can properly meddle with, but will be cured by natural evolution. It was no small thing for the farm population of the United States to shake off old methods and readjust itself to new tools, new methods, new ideas all around. You will have to give the farmer time, and it will take a full generation yet before he can work in the bulletins, showered upon him by the National and the State governments, to make them tell in the way of small farms beter tilled and every way up to date. It is very questionable whether President Roosevelt's commission can find anything else to do than advise the Government to keep its hands off. Professor Bailey insists that every governmental factor that touches agriculture should aim only at developing personal initiative and local community feeling. You cannot impose on our rural communities a system worked out by a commission. What the farmer does specially need, according to Professor Bailey, is a better banking system. Our present banks do not touch the farmer except to drive him to the usurer. Professor Bailey also counts out the fairs, which have been supposed to stand for agriculture. These huge and costly concerns are utterly meaningless so far as the land tiller is concerned. They exhibit prodigies and get lost in horse racing. The rural church and the rural school each get their required and frank discussion at the hands of the author. The book needs and deserves a very wide circle of readers. It must not, however, be cursorily read and laid aside. The problems discussed are very deep, and we close our review with an endorsement of the statement that we must have a new sort of statesmanship as well as a new sort of farmers.

PROF. L. H. BAILEY.

Literary and Biographical Essays. A Volume of Papers by the Way. By Charles William Pearson. Boston: Sherman, French & Co. $1.25.

Literary and Biographical Essays forms a first of three volumes by the same author, all treating in popular manner subjects suited to the lecture platform. While the essays lean a little to the pulpit treatment, they are wholly and wholesomely adapted to the general reader who may happen to take a lively interest in the best literature of our time. Following three topics—"Poetry as It Should Be Defined," "Poetry as It Was a Century Ago in America," and the "Art of Verse-making"—is a treatise on the English language, that language which, in the making, was a form of poetizing. The author thinks the language is yet far from finished, and incidentally he enters the field which Mr. Carnegie has made his own, of putting quite to sleep certain dumb consonants, which, like the dumb, appeal too much to the eye, as he seems to think, and get much in the way of little boys and of foreigners, who, but for these dumb stumbling blocks, would take kindly to English as the universal language. This theme is, however, with him only "by the way." He treats very handsomely and *in extenso* Alexander Pope—"a name never to be pronounced by me," he says, "without reverence," tho many in these days find little to reverence in the little man of Twickenham, and none would think of writing in his manner. Other themes are "Macaulay," "Tennyson," "Browning," "Ruskin," "James Martineau," "Longfellow," "Washington," and our "Lincoln." There is room enough for genuine reverence among these names, and the author does not spare the honors. The poets, particularly—both the art and the heart of them—are considered from all points of view, and the viewpoints illustrated in felicitous quotations in great abundance. The unversed but willing reader will find much to enlighten him as to a successful pursuit of the art of verse-making.

There is here and there an oversight in the proofreading—or was it a malicious moment in the mood of the printer's "devil" that left the following sentence unreconstructed?—"Pope was the favorite poet of the greatest of metaphysicians, Kant, and the eminent Scotch professor of moral philosophy asserts that the 'Essay on Man' is 'the noblest specimen of philosophical poetry which our language affords,'" etc. There is nothing in the context to tell us who that eminent Scotch metaphysician was, if not Kant, and Kant, it is generally supposed, "never in the whole course of his life traveled above seven miles from his beloved Königsberg." John Milton, too, would have shed bitter tears over that unlucky "do" that has crept into the marvelous lines of his "Nativity":

"Apollo from his shrine
Can *do* no more divine
With hollow shriek the steep of Delphos leaving."

Mr. Pearson, with his fine sense of true poetry, would, next to Milton himself, have shrunk from the "do"-ings of the "devil."

The Winter's Tale. Edited by F. J. Furnivall, with introduction and notes by F. W. Clarke. [The Old Spelling Shakespear.] Duffield & Co. $1.00.

The reviewer who has to consider any new edition of Shakespeare has little scope, unless he enter minutely into the technical details. That edition is best which allows none of the essentials to pass, but which unerringly discards the useless. Lay open before you copies of the three or four "First Folio" editions, recently published, and the character of the editor is denoted by the varying styles of type used on a page. Each style represents an editorial idea. Dr. Furnivall's edition of *The Winter's Tale* is but another example of how bold-faced type and italics and other printers' devices may convey or symbolize the differences in folio texts. In no way does it add to the spirit of Shakespeare, but it simplifies the matter of notes. Such editorial condensation demands respect, not only because of the established scholarship of the editor, but also because of the mechanical law and order which it exhibits on the surface. We have had occasion to mention in these columns the excellent pocket "First Folio" edition of Shakespeare, edited by Charlotte Porter and Helen A. Clarke. Between this and the one being issued by Dr. Furnivall

and Prof. I. Gollancz, there is small difference in choice for the average scholar. It is only the expert who might hesitate. After all, the best "First Folio" of any of Shakespeare's plays will be that which photographs each page of a *bone fide* folio edition. This has already been done in a clumsy fashion; it has yet to be done well.

The Physical Basis of Civilization. By T. W. Heineman. Chicago: Forbes & Co. $1.25.

This extraordinary book purports to be a demonstration that "Two small anatomical modifications determined physical, mental, moral, economic, social and political conditions." After this sort of an introduction one hastens to learn what these two exceedingly potent "anatomical modifications" were. It turns out that, according to the author, "When sexual reproduction among mammalian creatures resembling the quadrumana produced a variation in the ento-cuneiform bones of their posterior extremities and shifted the occipital foramen magnum to a position a little back of the center of the base of the skull, then was the birthday of the human race." It comes as a good deal of a shock to learn that cuneiform bones and foramina magna form together the physical basis of civilization, including economics and politics. We are repeatedly assured by the author, however, that he has demonstrated that such is the case. The difficulty is that there is room for a difference of opinion as to the force of this "demonstration." This book would delight the soul of a biological De Morgan, if only he existed, and would make a "Budget of Biological Paradoxes."

The Little Brown Jug. By Meredith Nicholson. Indianapolis: Bobbs, Merrill & Co. $1.50.

It is said that after Mr. Nicholson wrote his first novel, "The Main Chance" (and still his best novel), he was shortly induced to migrate from his native State, Missouri, where the scenes were laid. He carried his pen and his comedy-making wit with him, and now we may hear that an injunction has been taken out to keep him from setting foot in either North or South Carolina; for his last story is a sort of summer opera in fiction written at the expense of the dignity of two of the most sensitive of the Southern commonwealths. Two Governors, one of North, the other of South Carolina, neither of whom dares take the personal and political risk of arresting a famous outlaw, who is dancing a sort of criminal jig on their borders, disappear to avoid the responsibility. Their daughters undertake to manage the affairs of state until they choose to come home. This is accomplished with ludicrous and exaggerated adventures, and thru the advice they get from two young men who are the heroes of the tale. One is an eminent jurist on a vacation, the other is a frivolous millionaire, whom the reader would naturally associate with the Biltmore estate in North Carolina. The "little brown jug" is simply a sign past about in the night, with a message, more or less sanguinary, tied up in the corncob stopper. When the wrong man gets the jug, the story begins in earnest and continues the reader's smile to the end. The author has incorporated with diabolical waggishness all the Southern airs and struts. And if he does not write after the manner of George Barr McCutcheon, he takes a certain whimsical quality of imagination from a very similar source.

Waldo Trench and Others. By Henry B. Fuller. New York: Charles Scribner's Sons. $1.50.

A collection of Mr. Fuller's Transatlantic tales, *Waldo Trench and Others,* has a double-edged effect upon the reader—it charms and it exasperates. The people of the American colonies in Rome, Florence, Venice and other Italian cities are apparently living in, yet not breathing, the air of Italy. It is not an atmosphere—it is a vacuum. There is a touch of humor in the sketches of intense young Americans who are "more cultivated than culture in culture's most cultivated moments," and who go about Italy in a state of strained and gasping adoration, and who are of a priggishness intolerable to endure. We would die of their society were it not for Madeline K. Pritchard, who "had been around the world twice, and seen everything." This delightful lady was "reverting," and was

tired of the past and wanted to live in the present," and so do we after some 300 pages of art-mad, antiquity-crazed folk. Yet, in spite of the humor, the technical skill in the manipulation of words and phrases (Mr. Fuller has not read his Henry James in vain), we are left cold and critical. The author can do better work than this; he has done it. There was red blood in "The Cliff Dwellers" and "With the Procession," published several years ago, and we wish Mr. Fuller would return to America, even to Chicago, in his next book. Waldo Trench and the other Americans of these tales are not at home and ill at ease in Italy, let him write of them never so cleverly.

And So They Were Married. By Florence Morse Kingsley. New York: Dodd, Mead & Co. $1.00.

This little volume is a sermon against the extravagance of brides and young wives written in the form of a love story. And in the story the young wife comes to her senses in time to save her husband from bankruptcy, but in real life too many of them never do. For the average woman "society" is as good an attraction as "Congress" is to the mediocre politician. They both live and strive and ruin themselves under a delusion. The woman wants to get into "society" because she thinks it is the "higher order," and the politician will barter his honor as a citizen to get into Congress because he thinks Congress has something to do with governing the country. What both need is not exhortation, but enlightenment.

Shakespeare—Life and Work. By F. J. Furnivall and John Munro. 18mo, pp. 279. New York: Cassell & Co.

This charming little book is sold in England at the ridiculously low price of ninepence. No man knows his Shakespeare better than Furnivall, and a lively, picturesque story he has made of the early life of the great dramatist, the conditions about him, followed by a careful exposition of his successive plays. A better manual for Shakespeare classes or for private reading cannot be found. One thing is noticeable; that this is the first literary volume that we know of published in England which uses to a considerable extent the simplified spellings. On one page we see *spannd, reckond, culld, flowd, opend, lovd,* and on others *thru* (but *though*), *curteous, humor* (but *neighbouring* and *honourd*), *fixt, notist, motly* (but also *motley*), *kist, past* (the preterit). If these are oversights, like that which puts *"Shakespeare"* on the title page, while it is consistently *"Shakspere"* in the text, that may be pardoned as an oversight to a man in his eighty-fourth year, but who is yet able to row, with streaming white hair, a party on the Thames.

Old Andover Days: Memories of a Puritan Childhood. By Sarah Stuart Robbins. 16mo, pp. xi, 189. Boston: The Pilgrim Press. $1.00.

Mrs. Robbins lingers in her ninth decade, a daughter of the famous Andover scholar, Moses Stuart. He was an extraordinary man, one who had the flavor of heresy, who was of the first to introduce German learning, was yet the strongest defender of the faith against the rising Unitarians. More than one of his children and grandchildren have achieved distinction. Mrs. Robbins's delightful reminiscences cover mainly the period before the reign of Professor Park and Professor Phelps, who married Professor Stuart's "Sunny Side" daughter, whose daughter, in turn, was the author of "Gates Ajar." Professor Stuart died in 1852, and it is the men and women of the two decades before that whom Mrs. Robbins recalls. Dr. Woods, Dr. Murdock, Dr. Porter, Dr. Codman and many other ministers, merchants and gracious women. It is a quaint picture —sternness and smiles, catechism and cakes. No one who has learned the fascination of Andover Hill and the Indian Ridge and Pomp's Pond can lay it down unfinished. Mrs. Robbins's practised pen has found a dear subject. We only regret that her memory of the Shorter Catechism is faulty. Exactness was the merit in those days, and she quotes three answers, and two of them wrong. Why did not the proofreader for the religious Pilgrim Press correct her slips? Ah! we see—the presswork was done in Cambridge.

Literary Notes

....Dr. John Finley, president of the College of the City of New York, has in preparation an authorized "Life of Grover Cleveland." He has appealed to persons having letters or pertinent documents in this regard for data. The volume will be issued thru the Houghton Publishing Company.

....An epic poem on Lincoln entitled *The Burden Bearer,* by Francis Howard Williams, in book form, is announced by George W. Jacobs & Co., of Philadelphia. The edition is limited to three hundred numbered copies. The text is printed on hand-made deckle-edge paper, with an artistic *format,* and is bound in half vellum, stamped in gold. The approaching centennial anniversary of Lincoln's birth makes the appearance of this book exceedingly timely. (Price, $2.50.)

....Webster's International Dictionary is a book that contains within its pages the substance of all books. That is to say, by taking of its word units and combining them the words of any and all other books may be duplicated. Such a book is a constant source of knowledge. It makes a very acceptable gift book, and one in which the substance never grows old. In spite of the other dictionaries that have been published in recent years, Webster's continues to be standard. (G. & C. Merriam Co., Springfield, Mass.)

....Notwithstanding the fact that Secretary Garfield has approved the application of San Francisco for a reservoir in the Yosemite National Park to furnish the water supply of that city, the Sierra Club of California is keeping up its fight against the project. Our readers who have become interested in the protection of the Hetch Hetchy Valley thru the article by Dr. Wm. F. Badé, published in our issue of May 14th, will find a more detailed discussion of the question in the two latest numbers of the *Sierra Club Bulletin,* San Francisco.

....One of the incidents of the political campaign just closed was the publication of a biography of Candidate Debs, together with some appreciations of him. The book was bound in color conformity with the "red special" used by Eugene V. in campaigning. It was entitled *Debs: His Life, Writings and Speeches,* and was duly authorized. It contains a photogravure of Mr. Debs as a frontispiece. The volume bears the following copyright note, viz.: "Copyright protection is taken upon this volume for the sole purpose of protecting the work of Comrade Debs from prejudicial misuse by pirate Capitalist publishers, and will not be invoked against Socialist and Labor publications and Comrade publishers, they giving us notice." (*Appeal to Reason,* Girard, Kan.)

....There is a movement now on foot to honor the memory of Whistler. This will probably lead to the establishment of a Whistler memorial at the painter-author's birthplace in Lowell, Mass. The Whistler home has been acquired by the Lowell Art Association and the house will be made an art center and a memorial worthy of the distinguished artist. The people of Lowell have already given a generous sum, but efforts are now being put forth to increase the memorial fund by $10,000. The Whistler memorial matter is in charge of the following committee, viz.: Joseph A. Nesmith, president, 229 Andover street; Charles T. Billings, vice-president, 73 Mansur street; Mrs. Frederick A. Wood, secretary, 295 Pawtucket street; Arthur T. Safford, treasurer, 30 Talbot street, Lowell, Mass., to whom contributions and communications relative to this memorial may be sent.

Pebbles

"FIFTH grade next year, Johnny?" "Yes, sir." "Ah, you'll be in fractions or decimals then, no doubt?" "No, sir; I'll be in beadwork and perforated squares."—*Pittsburgh Post.*

"So he praised my singing, did he?" "Yes, he said it was heavenly." "Did he really say that?" "Well, not exactly; but he probably meant that. He said it was unearthly."—*Melbourne Weekly Times.*

A CONVENTION of crooks is to be held in New York, according to a news dispatch. They will need to keep their eyes open or the natives will have their pocket-books.—*Rochester Democrat and Chronicle.*

AN Irish tenant who had just bought under the purchase act boasted to the agent that his landlord was now "God Almighty" and that he need fear nothing.

"Don't you be too sure, Pat," was the reply. "Remember God Almighty evicted his first two tenants."—*The Christian Advocate.*

APROPOS of vanity, Secretary Root told at Yale about a politician who, the day before he was to make a certain speech, sent a forty-one page report of it to all the papers. On page 20 appeared this paragraph: "But the hour grows late, and I must close. ('No, no! Go on! Go on!')"—*Argonaut.*

THE brave ship was wallowing in the waves that threatened to engulf her at any moment.

Hastily the captain ordered a box of rockets and flares brought to the rail, and with his own hands ignited a number of them in the hope that they would be seen and the passengers and crew rescued.

'Mid the rockets' red glare, a tall, thin, austere individual found his way with difficulty to the rail and spoke to the captain.

"Captain," he said, "I must protest against this dare-devilishness. We are now facing death. This is no time for a celebration."—*Success Magazine.*

THE following was written to a Tokyo business man by one of his clerks requesting a few more days' holiday because of sickness:

Honored Sir—Having been amputated from my family for several months, and as I have complaints of the abdomen, coupled with great conflagration of the internals, with entire prostration from all desire to work, I beg to be excused from orderly work for ten or nine more days, and in duty bound I will pray for the salubrity of your temper and the enlargement of your family.

The Independent

Entered at New York Post Office as Second Class Matter

Publisher, Clarence W. Bowen

130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

By-Products of the Campaign

In things minor, as in things major, a political campaign makes changes in the life of a people that may be of more than passing importance. While the fight is on we think of great issues of policy that seem to be involved and of the personal fitness of candidates. After it is all over we do well to look back upon it and to interpret it by the philosophy of Æsop's fable of the orchard in which was hidden the treasure that at last was discovered in the fertility which persistent digging for it drew forth.

The campaign just ended has been, we think, highly productive of moral values. Things have been brought to light which, we rejoice to believe, have caused the popular conscience to recoil. Our readers do not need to be told that we have loyally supported the administration of President Roosevelt, and have been foremost in our praise of the brave and excellent things he has done to defend the rights of the people against unscrupulous aggression. We have not on that account, however, refrained from dissent and criticism, and we do not refrain now. Therefore, we have no hesitation in expressing the hope that certain things which have played a large part in the political strife of the last three months will not again be resorted to.

To speak quite frankly, we believe that a finer moral sense will govern political conduct four years and eight years from now, just as it has, in the eight years now past into history, prohibited some things that were tolerated a generation ago. The President of the United States is the minister and representative of an entire people, and not of a party, or of a faction. On what ground, then, can he or his supporters justify strenuous partisan activity by the Administration? Even if constitutionally justified, it lacks seemliness.

For the first time in our history a real check has been put upon the secret and unscrupulous collection and expenditure of enormous campaign funds. A beginning only has been made, but even a beginning is an enormous moral gain. Best of all is the certainty that the people are thoroly aroused upon the imperative necessity of this reform. They will insist upon going forward, and, with more definite legislation and severer penalties to aid them, they will vigilantly guard their liberties from that most base of all attacks, the offer of purchase—the mess of pottage in exchange for a birthright.

A sure indication of sound moral feeling in the nation was the impression made by the publication of the Archbold letters. Usually, such an episode in a political campaign would have amounted only to a bitter controversy over the actual facts. Were the letters genuine? If genuine, were they stolen or obtained by treachery? Was the purpose of their writer actually accomplished? Were legislatures and courts corrupted? Did they actually deliver the goods which corruptionists stood ready to pay for? These are the questions which, ordinarily, would have been asked, and, one way or another, answered with much heat of passion. But to these details the public gave curiously little heed. The attitude of the popular mind seemed to be: "What is the difference? We know that such things have been done. Whether these

particular things were done or not we do not care. Our present determination is to put an end to them from this time forth. We propose to have in this country a government by ourselves, the people. And hereafter things will happen to men and interests that venture to assail the national life by such means as these letters represent." This way of looking at the whole subject is the only healthy one, the only practical one, and it contains the promise and potency of cleaner political conduct.

Finally, the attitude of both parties, provoked by Mr. Rockefeller's declaration of political intentions, was the natural and proper resentment of a sane and healthy minded public. Republicans instantly construed the declaration as a sly and cunning attempt to defeat Mr. Taft. Democrats as promptly repudiated the Republican contention. These were moves in the game of politics, of course, and in themselves of no moral value. But they made known the conviction of the politicians that the American people has made up its mind to put an end to government, political and economic, by privileged and unscrupulous corporate power. And what a spectacle, what a text for the moralist was the man who put both parties to embarrassment! He was not merely the prostrate Cæsar, whom none was poor enough to honor; he was the unwelcome political guest, to whom both political parties would have denied the elemental American right of admission, if they could have done so.

The Standard Oil Letters

THERE is a real art in the way the stolen Archbold letters are doled out to the public. The previous batch was concerned with the effort to secure the appointment of such Supreme Court judges in Pennsylvania as would be satisfactory to the Standard Oil Trust, a matter regarded as important because the oil is produced in that State. Whatever has been said or may be said in defense or avoidance, declaring that the letters were only a few among letters written by a multitude of men interested, and that never, never has the Standard Oil tried to bring the least influence to bear on the courts, the correspondence yet remains very suspicious.

John P. Elkin, justice of the Supreme Court of Pennsylvania, admits that in 1900, when he was Attorney-General of that State, he received $15,000 from Vice-President Archbold, of the Standard Oil Company, in response to his request forwarded by telegraph. Both of these gentlemen have attempted to explain this transaction. Mr. Archbold said on the 26th ult.:

"My letters to General Elkin referring to accompanying drafts related entirely to contributions to the Republican State Committee, then engaged in the campaign preliminary to the renomination of Mr. McKinley."

It was in February and March, 1900, that the money was paid. It could not have been needed for the expenses of a "campaign preliminary to the renomination of Mr. McKinley." There was no such campaign in Pennsylvania. The renomination of Mr. McKinley was not opposed there. Not a cent of this $15,000 could have been used in promoting the election of delegates who would vote for that renomination, or in preventing the election of delegates who would vote against it.

Justice Elkin knew that such an explanation would not be accepted by the public. He had another one. On the same day he said in a signed statement:

"While the drafts mentioned were forwarded to me, they were not intended for my use. They were contributions for political purposes, and were by me immediately turned into the campaign fund. The money was principlly used in helping to liquidate the indebtedness of the State Committee incurred in prior campaigns."

The two explanations do not agree. Mr. Archbold, who gave the money, understood that it was to be used by the committee in the work of promoting the renomination of Mr. McKinley. That appears to have been his understanding of the matter for a little more than eight years. Now he is told by Justice Elkin that it was expended in paying debts incurred by the committee "in prior campaigns." Much larger sums might conveniently be accounted for in this way. The word "prior" covers a considerable lapse of time. Did Justice Elkin, then Attorney-General, tell Mr. Archbold that the money was needed and would be used in promoting the renomination of Mr.

McKinley? Did he thus obtain the money by false pretenses? Was there not at the time "a preliminary campaign" for the election of legislators who would vote for Senator Quay? Is Justice Elkin sure that no part of the money was used in Quay's interest? Will Mr. Archbold, upon reflection, say that he paid the money with the understanding that it was to be used to procure McKinley delegates?

Mr. Elkin is a justice of the highest court of a great State. He was chairman of the committee. If the money was expended in paying old debts, he can easily produce the record evidence that it was so used under his direction. He should now lay this proof before the public or resign from the bench.

When letters were read showing that Mr. Archbold had urged Governor Stone to appoint Thomas A. Morrison to the place on the bench made vacant by the death of Judge Mitchell, Mr. Archbold said on October 26th:

"I am sure that until Hearst read the letters neither Judge Morrison nor Judge Henderson had any knowledge of my having written Governor Stone in their behalf."

On the preceding day, Judge Morrison (who received the desired appointment in 1902, three weeks after the date of Mr. Archbold's urgent recommendation) was equally confident about this. He said:

"I never knew that Mr. Archbold wrote such a letter or that he favored my appointment. I have not seen him in thirty-five years. I knew him as a boy, but I have not seen him since or had any dealings with him."

But Mr. Hearst read, at a meeting last Saturday night, a letter in which Mr. Archbold, writing to Morrison, acknowledged the receipt of his request for his (Archbold's) influence, and said that he had asked Senators Quay and Penrose to help him. He also read Mr. Archbold's letters to the two Senators. It may be inferred that Morrison, in his letter, had suggested that the Standard Oil vice-president should thus address these gentlemen. Further remarks from Judge Morrison are now in order. His memory appears to be defective.

The latest exposure of the means used to secure desired influence is less startling in its nature than that of the attack on the judiciary, but yet illuminating. Every one knows that newspapers and other journals are established or bought or subsidized to represent certain principles or interests. That may be perfectly right. THE INDEPENDENT has its views and principles. It was established to represent those principles, and it still represents them in religion and the rights of men; and it has added some things to them, as the rights of women. But THE INDEPENDENT has never been secretly subsidized by outside parties so as to support editorially their financial interests. This is what has been done by the Standard Oil in the case of several journals as shown by these letters. A letter previously published showed how fifty thousand dollars was sent to Senator Foraker by the Standard Oil to help him get the control of a paper in his interests, the purpose and result of which aid must have been to secure the support of that paper for that corporation. The deal did not go thru and the money was returned, but the Senator asked for it and the money was sent, and the purpose is clear. Now the public journals are the main source thru which the public and the voters are instructed as to what they ought to know and to do. If a financial interest secretly buys the silence or support of the papers against the interests of the people, and thus by deception secures, or tries to secure, selfish interests instead of the interests of the people, it is not only a sad condition, but also a dangerous one. It is bribery and treason against the State.

Now something like this is shown in the letters last published. *The Manufacturers' Record,* of Baltimore, is supposed to represent manufacturers' interests, particularly in the South. John D. Archbold does not want it to be criticising his company, but would rather purchase its defense. Accordingly, he sends a certificate of deposit to Mr. R. H. Edmonds, its editor and general manager, "for $3,000, covering a year's subscription to *The Manufacturers' Record.*" That is a generous yearly subscription price. But we presume it was good policy, if not good morals, for it was intended to head off criticisms in the South.

Then comes another subscription, this time of $5,000 a year, to *The Southern*

Farm Magazine, and the letter accompanying the payment ends with this courteous statement:

"We do not doubt but that the influence of your publications thruout the South is of the most helpful character."

We do not doubt that the Standard Oil would find their influence helpful.

Then here is another, *Gunton's Magazine*, published in Washington and edited by George Gunton. It is devoted to the defense of the industries protected by the tariff. The uninitiated reader supposes that it is supported by its ordinary subscribers. Not at all; it is supported by its extraordinary subscriptions; for here is the letter to Professor Gunton which says, in reply to a request:

"Responding to your favor, it gives me pleasure to enclose you herewith certificate of deposit to your favor for $5,000 as an additional contribution to that agreed upon, and to aid you in your most excellent work. I most earnestly hope that the way will open for an enlarged scope as you anticipate."

After reading of this "additional contribution" we should hesitate to accept on its face value any good word that journal might have to say in praise of the Standard Oil. We should consider it as an advertisement paid for at high rate as "reading notice."

One more letter contains a subscription "as per understanding" to W. A. Magee, of the *Pittsburgh Times,* which we will only mention, for nothing is said as to the purpose of the grant. We can only guess from the other cases, and it is in line with other letters written to Mr. Archbold. Congressman Sibley, of Pennsylvania, writes, under date of March 7th, 1905, to tell him that he ought to get "a healthy and permanent control of the Associated Press and kindred avenues." To do this will, he says, "cost money, but it will be the cheapest in the end." What he wanted was, to smother the press and thus deceive the people. This, we repeat, is in essence both bribery and treason. Nevertheless it cannot succeed. A great corporation can do much, but it cannot control the appointment of the judiciary of the country, nor can it buy the independent press with all its money.

And there is Mr. Archbold himself. He sees no impropriety in such acts of his as are revealed by these letters. But are they approved by the directors and stockholders of his great company? Suppose that these were the letters of the president of a great bank. Would he be permitted to retain his office? But, so far as we know, the directors of Mr. Archbold's company have not censured him or even exprest the opinion that he has been indiscreet. Is it because they are all of his type and see no impropriety where he sees none?

Cruelty to Candidates

Mr. Taft began by planning a front porch campaign. He was to remain in dignified composure at his brother's house in Cincinnati, and await the visit of deputations and make to them careful and statesmanlike speeches, to be read rather than heard. There was a stately, self-respecting reserve in that policy. It did not smack of too great eagerness for office. He would be called as Cincinnatus from his plow, in this case his parlor and porch, but would do no whirlwind solicitation of voters.

We wish it might have been so, but it was impossible. The old order has past away. To think of George Washington or John Adams or even Abraham Lincoln as tied to the tail-end of a whizzing railroad train and shouting hoarse urgency to successive crowds as the train whizzes by the serial stations is past one's picturing.

But it had to be done, for there was Bryan! He is the practised magic speaker. It is his profession. He has vocal cords that pulsate sweet music. His glottis and epiglottis are resonant with melodious vibrations. His throat has been toughened to the consistency of whitleather. His sentences flow in capturing cadence, and so seductive are his siren songs that Ulysses himself would have bound himself again to the mast to escape the thrall. The crowds follow him as the children followed the Pied Piper of Hamelin. Something had to be done.

So, to save the situation, Mr. Taft was required to sacrifice his dignity and his ease. There was no escape. It would not do to let the election go by default and be lost. To be sure, Mr. Taft had not a larynx of leather; he had

been exercising his cerebral tissue, and had not annealed his throat. But go he must; he must be seen, and, if possible, heard, to break the spell of the Orpheus who had enchanted the Democratic ass and was drawing after him the elephant of the Grand Old Party. So, with lesser larynx, if larger brain; with ruder music, if better experience and wisdom; with splendid presence and frazzled voice, he flung himself into the campaign, Roosevelt and the rest of his managers hoping that if enchantment failed, by the rout and hideous roar of his *entourage* the wiles of the Orphean charmer might be broken and those that were following might be delivered from the witless fascination. It could not be helped; it had to be done.

But it is cruelty to candidates—not cruelty to Mr. Bryan, for that is his art, his profession, his support, his joy. He can't be blamed for using his chief asset. Yet is it really so that there was no escape? Governor Brown has been chosen to succeed the eloquent Governor Hoke Smith in Georgia, and he made not a speech, but wrote multitudinous letters from his secluded home. Cannot a President be chosen in that way? The wise men thought not.

Yet it is fearfully hard on other candidates than a professional talker, who can no more be worn out than can the flare of a trumpet. Fortunately for the next campaigners, Mr. Bryan can hardly run a fourth time, and it is possible that a gentlemen's agreement may, four years hence, be entered into by the leading candidates, under which they may be able to save their strength for the duties of office, and not wear themselves out, and blunt the edge of their modesty, by flying indecorously all over the country begging dullards to wake up and vote for them. To be sure, that is too much to ask of the minor candidates, who cannot be elected, and who need to practise no verecund reserve, and whose only business is to educate the people; but let us spare our dignified old men. They don't like it; they are often not fitted for it. Let them settle down on the front porch, and let the torchlight clubs that love to march and spend the campaign funds go and visit them.

The Kaiser's Indiscretion

We credit Kaiser William with nothing else than a good purpose in the interview which he allowed to be publisht in an English journal, but the result is quite other than he expected. It must humiliate him that, with all his goodwill, his judgment has proved so faulty, and that he has utterly failed in his purpose to secure the kindly response he wished from Great Britain, and has at the same time raised a storm of protest at home. He must have learnt this time that, however good his heart may be, his head cannot be trusted.

We wonder that the Englishman who put the substance of various free interviews together could have failed to see how indiscreet it was to publish them. No one could have read it, we should think, without seeing what an absurd and impertinent thing it was, how indecent under the circumstances, for him to send on to London a carefully worked out plan for the campaign against the Boers. With that he, as ruler of Germany, had no right to meddle. To have not only meddled, but to have told of it years afterward, is almost incredible. The Englishman who advised so foolish an act must be greatly mortified by the result.

Still more mortified than he, tho less than the Emperor, must be his chief adviser, Von Buelow, whom it has driven to present his resignation. This is meant to emphasize the fact that, while he did not know what was done till after the event, he was responsible, for he ought to have known. For, if the explanation given is true, he was given the opportunity to know. The Kaiser sent it to Von Buelow for his approval, but quite as likely with the statement that he intended to give it out and wanted to be assured simply that the facts were correct. Then Von Buelow, or his secretary, sent it to the Foreign Office, where it was read by another clerk, who declared the statements true. Probably none there dared to criticise it. Then it came back, and as a matter of routine was initialed as all right, and returned to Emperor William, while Von Buelow had never seen it. So goes the story,

and Von Buelow resigns, and the Kaiser refuses to accept the resignation.

William has proved himself the most impulsive of men. He must be a great trial to his Prime Minister. This William, who was sending a draft for a campaign to London, is the same William who had sent a cable message of encouragement to the Transvaal. He was equally sincere in both. Just now he is friendly to England and anxious to have the English people know it; but at other times he has spoken just as strongly against England. It is his nature to be frank and extreme, but not to be self-restrained, prudent or consistent.

His purpose to placate England is a complete failure. England is more suspicious than ever. She does not forget the telegram to Oom Paul. She observes his admission that the German people as a whole are hostile to England. If so, England will build more ships. And France likes it no better, while Russia asks if the Kaiser will claim to have sent also to Japan a plan of campaign for the late war in the East. The triple alliance is the stronger for this monumental and inexplicable blunder. The suspicious ones are asking what astute purpose is hidden behind this utterance. We think there is none; that it is simply the expression of the feeling of the day.

What we most fear is that it will exasperate the feeling of both Germany and Great Britain against each other, while meant to conciliate. Each country will build more battleships, strengthen its army and be ready for war. But it will all expend itself in noise less noxious than cordite, and in the waste of revenues and the increase of already intolerable taxation, something that Germany, at least, will find it not easy to endure. The only benefit from the *faux pas* that we have observed is that it has been proved that it is not an impossible *lèse majeste* for the German press roundly to criticise their Emperor.

The British Amazons

SCHOLARS doubt the derivation of the name of the old Amazons. The Greek writers declare that it means *without breasts,* and that these feminine warriors used to cut off the right breast that they might the better draw the bow. They were the first suffragets, man-fighters, tho so beautiful that Achilles fell in love with Penthesilea after he had wounded her in battle, and Theseus won Antiope to be his bride. German scholars reject the derivation, and suggest that the name comes from their neglect of the wifely duty to knead bread. We choose the former derivation, as its more pronounced unfemininity better befits the British Amazon.

We believe in female suffrage, and it may be that half our intelligent women believe in it; but they are disgusted and ashamed at the performances of these militant suffragets. Thank Heaven, we have had nothing like them here in this country. They are little less than an abortion, an abomination, a gross parody on womanhood and disgusting to manhood. Think what they do, and all in the interest of woman! They announce that they will burst on the streets, and they call for the assistance of the "unemployed," which in this case means the rowdy boys and the street loafers. They get thus a crowd of hooligans, and then they try, by physical violence, to rush the police. They besiege the House of Parliament, trying to burst upon the floor, and when they succeed, they scream a demand for women's suffrage under the Speaker's face, while the members look on in horrified amazement, and they are carried out struggling and bawling. They get admittance behind the screen where women visitors are allowed, and then begin to scream their demands, interrupting the orderly proceedings, and when the officers try to remove them, they are found to have chained their waists to the grill, so that it has to be broken to remove them, thus anticipating the balls and chains of a prison cell. The Amazon Hippolyte, whose girdle Hercules captured, was not so strongly cinctured. They stoned the Premier's house and broke his windows, and when they had done all this for the sake of being arrested they went to prison for from ten days to three months rather than pay a fine, and much good may it do the Pankhursts and all their tribe. Their crazy blood needs the cool quiet of solitude.

Their insanity is only another illustration of the mob infection. What no one would do by herself the conflux in-

spired each to do. Weak men or women, who have no power to look beyond the thing presented, will catch any distempered fancy that is authoritatively prest upon them. Hence crazes in religion and reform, no matter how extreme and ridiculous, and hence riots and lynching.

But seldom has a good cause suffered such wrong as these ladies—supposed otherwise ladies, now made termagants—have inflicted on the cause of the political rights of women. The best known parallel in history is the Mænads, respectable Greek matrons all the year till the annual Bacchanalia crazed them to delirium with cries of "Io Bacche." Wo, then, whether to Orpheus or Asquith that crosses their path!

We sincerely hope that the infection may not cross the Atlantic. We had in the seventies a little bevy of extreme women, Pantarchian rebels against marriage law, whom the Boston school of women's rights, led by Lucy Stone, rejected, and who were hardly allowed by the New York school, led by Mrs. Stanton and Miss Anthony, but even to them it never occurred to constitute a mob and smash windows and invade Congress as a means of conciliating the public. These are English ladies, if ladies they are, for their conduct better befits the lower cockney type represented by the woman who went to a London hospital to be treated for a bite on her arm. "It does not look like the bite of a dog," said one doctor to another. "No, nor like the bite of a cat," was the reply. She looked up contemptuously: "No; 'twas another *lydy.*"

Are We Socially Decadent?

In the *Hibbert Journal,* which represents advanced thinking, a French writer of distinction asserts with a profusion of argument that we are passing into an age of intellectual mediocrity and moral decadence. He thinks that utilitarianism has become the gospel of the world; that for the crowd the idea of happiness never extends beyond a limited circle of immediate and tangible satisfaction, purchasable with money. Success, of a brutal sort, purchasable with money again, is the exclusive object of modern endeavor. In fact, utilitarianism has become a sort of moral dogma. It rules in politics and in society, in family and in private life. He thinks that the lowering of the better class of society to a level with all the rest is only the more palpable aspect of affairs; and according to this writer there always should be an aristocracy, a governing force in the community, whose sole superiority to the masses is something entirely apart from money.

Mr. Gerard, for that is his name, recalls with vividness many of the Federal writers of the early part of the nineteenth century in this country. The leaders of the Republic in those days were very far from being levelers. They believed with all their might in a government of the better class; and it was no light struggle by which Jefferson and his followers overthrew this English inheritance, and created a government of the people by the people and for the people. Mr. Gerard bemoans that education, having become the property of all ranks, has ceased to be a weapon in the daily struggle for existence. In other words education has no longer for its main object the production of a learned class.

This is true emphatically in America, that our colleges and universities have gone over to the populace; and what of it? The contention which we have is not so much with the facts as with the conclusions. We do not believe that either Europe or America is showing at the present day any signs of intellectual or moral enfeeblement. The evolution of conscience thru the nineteenth century was the one characteristic that will forever mark that century in history. At its beginning England was practically a member of the Holy Alliance and submissive to the restoration of Bourbonism. Twenty-five years later, thru Canning, the Monroe Doctrine was proclaimed in America, and in England it was announced by the great Minister that English institutions are based on the great principle that "all power belongs with and originates in the people." In 1835 Asa Mahan, at Oberlin, gave us the first collegiate advantages for women as well as men, and for black as well as white. In 1854 the law of conscience was proclaimed by Seward as higher than the Constitution—higher than all statute. American conscience was grappling with

duelism and slavery and the respectability of drunkenness.

War of today is not the war of one hundred years ago, and we have a Hague Conference, which is a long stride toward universal peace. The Book of Instructions of the United States Army tells us that "men who take up arms against one another in public war do not cease on this account to be moral beings, responsible to one another and to God." Prisoners are no longer shut up in prison ships or treated with vindictive atrocity. In the case of war private property is exempt from capture on the high seas. In fact the oceans of the world, instead of being a vast area of piracy and slaughter, are governed by an international constitution of good-will. Emperor William is quite right in saying that the consciences of civilized nations are growing very pronounced in their demand for peace.

Corrupt legislation, political plunder and commercial warfare survive in force, but by no means with the same power that they exercised one hundred years ago. In the eighteenth century tables were set in public, in England, with the price for voters openly displayed. The Sedition Act of 1798, imprisoned twelve editors for criticizing the President and Congress. There is not a public man of character today who would pen or publish such a lampoon of scurrility as that with which Hamilton attacked President Adams. There is a deal of conscience getting behind the enormous presses that turn in paper pulp and turn out a printed newspaper.

Equally remarkable is the development of the social conscience. The air is full of the conviction that we must learn to co-operate more fully for the common good. It is beginning to cover the art of distribution as well as the science of production. This is Christianity of the right sort, and not decadence at all. "No man lives to himself and no man dies to himself"—a maxim of the Golden Rule sort. The problem now is how to conserve to the full individualism, while developing a social fellowship. Religion has been compelled to open its creed wider than mere God worship. Jesus lives today because he had a world-soul. He began with "Thou shalt love God with all thy heart"; but He saw farther, "Thou shalt also love thy neighbor as thyself." Our politics begins to apprehend and apply the Golden Rule socially and politically as well as piously. The platforms ring with a spirit of better humanity.

Our new conscience insists also that a few shall not accumulate for their own sole use the means that nature intended for the comfort of the many. Cooperative industries and old-age pensions are typical of English life today, and American life is turning on a struggle with corporate greed. In France, Colonel Esterhazy testified in court that "a soldier should place his conscience, as well as his sword, at the disposal of his superior officers." France has been doing her best to erase these principles not only from her army life, but from her social life everywhere. Europe altogether presents a frontage of higher purposing and humaner instincts than ever before. Not until recently has any large portion of Christendom reached a moral development whose equation is international good-will. There is no evident reason for asserting that utilitarianism has become our gospel or that money has any more power than formerly. It does not rule either in public life or in private life with anything like the vicious arrogance shown even fifty years ago. Intellectually and morally the world is palpably progressing. However, we must expect a periodic revival of pessimistic despair of the world.

The New Farm

THE INDEPENDENT has before called attention to the fact that the centralization of our population has been changed, so that not over one-third of the increase drops into congested city life. We doubt, however, if any one has placed sufficient emphasis on the fact that the new drift toward country life has temporarily affected the country home inharmoniously. Suburbanism has drawn, up to the present time, at least nine parts of well-to-do people, and as a consequence it has increased largely the demand for labor while it has not increased the supply, the relative supply being greatly decreased,

and wages have gone up to the city level. These wages a farmer cannot pay, and, as a consequence, there is a great deal of defective work done by the cheapest and poorest sort of hired help.

This is, of course, a temporary difficulty, and we call attention to it because in several ways it is productive of positive good. It is driving the farmer to a more thoro study, not only of production, but of mechanics. He is devising and using more machinery of a labor-saving sort. Among these are the milking machine and the gasoline engine. The repair shop is becoming quite as essential as the stable and the barn. The time is not far off when work will be so in hand—or you might say, so in machine—that but one laborer will be needed in the place of four or five. This is no novelty, because at the present time one man in the field is doing what used to require from five to ten men in the days when grain was reaped with the sickle and cradle. This alliance between mechanics and agriculture is in every way beneficial. It broadens home life and makes the farm able to retain those boys—and girls, as well—who have a natural taste for machinery. As a matter of economy there is a great saving, both in the construction of tools and in the repair. The saving in time and money is equally valuable.

Quite as important is the influence on our schools, an influence that has grown so strong that it cannot be resisted. The demand has become imperative that the school shall not turn the boys and girls away from the farm, but that it shall positively fit them for the country home. Notwithstanding the outcry of a few classicists, the schools are steadily becoming industrialized. Superintendent Draper, of New York State, voices the drift of the times when he says that we must expect "a new sort of school." The intellectual problems connected with agriculture are such that they must be systematically handled. Study will hereafter consist very much less in memorizing and very much more in investigating. The practical side of knowledge is coming to the front; that is, we no longer believe in mere erudition, but in that sort of knowledge which can be applied to the betterment of our conditions.

This is bringing about a new way of looking at some of our statutes which seemed to be entirely beneficent. Legislation should be very carefully considered that decrees an eight-hour day for the mechanic while the farmer positively requires ten or twelve. The logic may be good that shows how, even then, the farm boy has the advantage, because of his sanitary surroundings and the open book of Nature for a study. But this logic cannot tell very strongly on the young people until the schools themselves have completely faced nature study. To industrialize education, while it disburdens toil and broadens life, will open to the pupil a new sort of existence—teaching sonship with the Creator. To some extent this is being done. The farm is becoming idealized and farm life filled with enthusiasm. We owe such men as Burbank national thanks, not so much for their new plums and vegetables and grapes as for the fact that we can use their work as an illustration of the charms of the new agriculture.

The change is overwhelming. The farmer of today is a new sort of man; a creator instead of a destroyer. It has dawned upon him, with astounding emphasis, that he can obliterate all the forests of a continent inside a hundred years; can exhaust the oil wells and the coal mines; can not only make a garden of a desert but turn a garden into a desert; can even use up the nitrogen of the air. The new agriculture teaches him that he has all this to reverse, and that reverse it he can. The future farmer will subirrigate his land, and defy drought as well as floods. He will become a scientific forester, and every farm will produce wood and lumber as well as wheat and apples. A single acre will produce what ten acres yield now. Women will work out of doors as heartily as men; in fact, they will be the horticulturists and the truck gardeners. There will be a closer relation between the producer and the consumer, ignoring a horde of middlemen who frequently waste more than is destroyed by ignorant help and insect foes combined. Under the alliance with the school the farm will be valued not only for its gross weight of products, but for its poems and its education. As our schools become

places for applying as well as acquiring knowledge, our farm homes will become integral parts of the garden school and the school farm. The alliance between the home and the school will become very close. A valley full of farms is already the nearest to Paradise that we have, but the future will ten-fold its wealth and one hundred-fold its delights.

Even the name should be changed from agriculture to aericulture, for in reality it is the air that we are cultivating today far more than it is the soil. If you plant a tree in a pot, and grow it there until it weighs fifty pounds, you may weigh the soil and find that it has been reduced only by a few ounces. The tree has derived its body and its strength from the air. Farming for the future will consist in devising some better method for stealing fertility from the atmosphere, and embodying it in the soil and the plant. The future great wheat and corn and fruit crops of the world are blown about our ears today by the winds. Only recently the farmer has learned that the leguminous plants alone can extract these aerial elements, as they are needed; and he has learned to plow these legumes into his soil. He must call down the nitrogen and catch the winged phosphates, and turn them into food. In other words the farmer has come to a day when he must be a scientist. With all the rest he must be a biologist. The red letter day in American history was when the American Congress decreed the agricultural college.

Mr. Rockefeller's Bomb

Mr. John D. Rockefeller's announcement that he favored the election of Mr. Taft is a joke or a blow. He must have known, for he has not been thought a fool, that this announcement would be a serious damage to Taft, and why he made it we do not see, unless, as Secretary Bonaparte and others have declared, it was an effort to beat Taft and help Bryan. Yet what advantage he could get from Bryan's election is not clear, unless, as has been suggested, by having a deadlock between a Democratic President and a Republican Congress he could hope to block unfavorable legislation which might be enacted if both President and Congress were of one party. This declaration came at the right time to do damage just before election; as Dr. Burchard's alliterative "Rum, Romanism and Rebellion" in an address of ministers in the presence of Mr. Blaine just before the election killed his chance. Mr. Blaine did not happen to be listening and did not disclaim the attack on his Irish supporters, who fled from him in a flock. Mr. Rockefeller's pronouncement for Mr. Taft is of the same injurious, if not hostile, nature, and it is very hard to meet. It seems almost past credibility that Mr. Rockefeller should desire the election of the candidate who represents the policy which has attacked and seriously restrained and fined the companies which he represents.

A Quiet Campaign

Of course, it has been on the whole a quiet campaign, because neither party had any great amount of money to spend. The noisy enthusiasm costs money. It is made by torchlight processions, paid clubs of voters, who repay in noise the cost of their banners and beer, and purchased halls and back rooms of saloons, and armies of unnecessary spellbinders. All this display of manufactured enthusiasm has been conspicuously absent in this campaign, much to the advantage of the morals of the people, and to the impoverishment of grafters. For this the laws forbidding political gifts by corporations and requiring the publication of receipts is in part responsible, and the credit must go to the party which has enacted such laws. Partly the credit belongs to Mr. Bryan, who challenged the Republicans to publish their subscriptions before election, which was not accepted. These enormous expenditures, with all the corruption involved, began with the second election of President Lincoln, and have been continued up to 1904. After this we may hope that by laws against corrupt acts, forbidding subscriptions by corporations, requiring publication, and limiting expenses, we may have more serious and honest and less noisy elections. We may well consider President Roosevelt's suggestion that the Government, State or national, should pay all necessary expenses of the campaign as well as of the elections. In the matter of the expenses of referendums some Western States of-

fer suggestions that may be of value if carried into elections.

Civil Service in Philadelphia

As a result of the upheaval in 1905 a splendid civil service law was put on the statute books, and, under Mayor Weaver, it was well executed, but under the present administration the attempt has been made to circumvent it. For example, one of the commissioners was asked by a political leader for a set of the questions in advance, so that his applicants might study and pass a good examination. According to the secretary of the Civil Service Reform Association the members and secretary of the commission have been utterly inefficient and unsympathetic. The Chief Examiner, Mr. William D. Earnest, has fought to prevent the lowering of the standards, but he has been removed. The secretary of the Civil Service Reform Association further declares that the commissioners themselves deliberately raised the marks of those taking the examination, in some cases of applicants whose marks were too low for admission. Now that Mr. Earnest has been removed the commissioners will find it easier to get "proper" ratings. Nevertheless it is quite likely that thru the efforts of the Civil Service Reform Association these efforts to beat the law will not be finally successful.

Independent Journalism

That the Protestant Episcopal press in this country is free from Episcopal dictation appears from the successive issues of *The Churchman* criticising the Pastoral Letter and Syllabus of Resolutions adopted by the great Lambeth Conference. They are sharply, and we must admit justly, charged with weakness and unwisdom. As an example take this action of the Conference:

> "In the judgment of the Conference it is our duty as Christians to make it clear to the world that purely secular systems of education are educationally as well as morally unsound."

In England the expression "purely secular systems of education" is used to apply to such a system of free public undenominational education as prevails in this country. It is incredible, says the editor, that the American bishops should have given their consent to such a dictum. A "purely secular" education by the State does not forbid purely religious education by the Church, nor does it forbid all the education in good morals which the State may wish to give. What our system provides is what all agree is necessary, education in secular learning and in morals. In religion our citizens cannot agree, and they will not consent that any one set of believers shall dictate what religion shall be taught at public expense. We are glad that *The Churchman,* which talks so independently, is edited by a layman, Mr. McBee, and not by any ecclesiastical board. We regret the growing tendency to ecclesiastical ownership of religious papers. We observe that in one week it has been announced that Catholic papers in Boston and Newark, N. J., have past into the ownership of the bishops.

Fonctionnaires and Clergy

A French *petit seminaire* is a school in which boys destined by their parents to be priests are put at the age of twelve, and are trained apart from the world thru their studies until they graduate as priests from the *grand seminaire.* The number of pupils is gravely diminishing. A superior of two *seminaires* that existed ten years ago in a very religious diocese says that then there were 350 pupils, while now there are in the one that is left but 135. In another Breton diocese the number is only one-third of what it was. The reason is in good part the fact that since the separation of Church and State the priest has ceased to be a *fonctionnaire,* entitled to a steady support from the public funds. The priesthood has been recruited almost wholly from the peasant class, who were glad to have an assured, tho modest, support for one of their sons. The boy's will was not considered, it was simply a matter of a career. Now that this is cut off, parents are less willing to subject their sons to a doubtful career. Even the *grands seminaires* have felt the blow. In one Breton diocese, out of thirteen seminarists who were on the point of entering for their final examination for the subdiaconate no fewer than ten departed to take up lay callings. At present the more intelligent and serious of the older candidates are held back also by the extreme ultramontane policy of the present Pope, with its policy of espionage

and informings. The recent condemnation, not only of so advanced a man as the Abbé Loisy, but of such "moderates" as Professor Menocchi, Professor Ehrhardt, Mgr. Battifol, M. Dimnet, M. Paul Burean, M. Brugerette, M. Naudet and M. Dabry, do not encourage vocations.

National Differences

The Japanese have the good rule that all diplomats sent to represent the Empire abroad shall speak the language of the country to which they go. We have not reached that degree of culture; but Japan is civilized. A curious incident illustrates another difference between the two countries, perhaps in our favor. Prof. H. T. Terry, of Tokio University, having reached his sixtieth birthday, his colleagues and students gave an entertainment in his honor. A Japanese paper, not having a reporter present, represented the professor, in replying to words of praise, as speaking of himself in terms of extreme depreciation. "Mr. Terry in replying," its readers were told, "declared that he was altogether unworthy of such a distinction, and that he felt ashamed rather than gratified when he looked back to his comparatively useless career. He said that, having now reached his sixtieth year, he was legally entitled to retire. But he had no intention of doing so. He hoped, on the contrary, by his labors in the future, to atone in some degree for his defects in the past." Now, that is about what Japanese courtesy would have required, but it did not please Professor Terry, for even modest Westerners do not talk so about themselves. So when he saw this quoted from a Japanese paper into a paper in the English language he repudiated it, saying that he hoped he was reasonably modest, but to use such extravagant self-depreciation would be ridiculous:

"I did not even go so far as to say that I was unworthy of the distinction. Whether I was or not is for others to judge; I exprest no opinion. Certainly I have neither thought nor said that I looked back upon my career at the University with shame or any feeling resembling shame, or that it was 'useless,' or even 'comparatively useless.'"

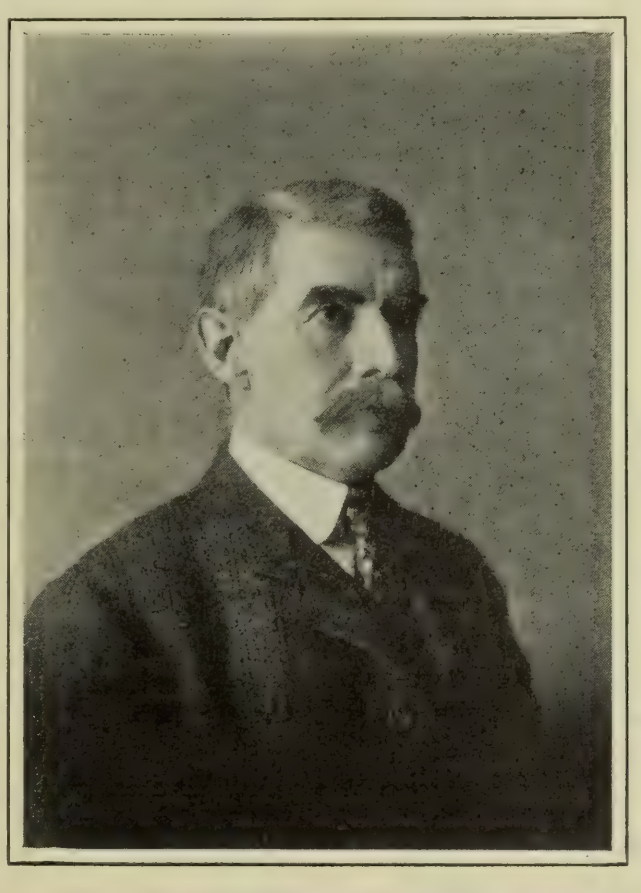
The better way is to know and accept one's merits and successes as well as one's faults and failures, and extreme depreciation is rather a mark of pretense and conceit.

We have been called in question for a few words in our comment on the North Carolina Armament and Arbitration program in our issue of October 8th. It appeared to us that the purpose of the Peace and Arbitration League was to promote a big navy more than arbitration and peace, the navy being the club to ensure peace, and we called it "a suspicious program," and we said:

"It would almost seem as tho this movement for 'adequate armament' and 'effective arbitration' is a scheme to pull the wool over the eyes of peace-workers."

This language has given offense; and we are glad to say that we believe a man may honestly and without fraud believe and urge both a big navy and arbitration, and that it is not dishonest to press the combination with a view to meet and defeat those of us who hold that a big navy is provocative of war more than of peace. Of the officers of the Peace and Arbitration League we give Mr. Hayne Davis full credit for his labors for peace, and Captain Hobson for a vast navy ready for war.

The General Council of Isère, to whom was confiscated the world-renowned Carthusian Monastery near Grenoble, France, has turned the estate into a school, in which State teachers will train the youth into the secret of making appetizing cheese from the milk furnished by the cows upon the place. The vote was unanimous in favor of the school, which will prove a great help to the people of the neighborhood. The clericals alone regret that milk will now flow where formerly monks distilled the yellow and green cordial known as Chartreuse.



The number of Catholics in this country is going up fast. Archbishop Ireland, in a late address in St. Louis, said there are seventeen million of them, about five millions more than we have ever before heard of, unless by counting in our new possessions.

Mahomet's coffin was suspended between heaven and earth. We go to press just at that time when the campaign is over and the result of the election not yet announced. Our readers will all know the result while this issue is in the mails.

Insurance

The Massachusetts Mutual's New Officers

At a meeting of the board of directors of the Massachusetts Mutual Life Insurance Company, of Springfield, Mass., held last week, Mr. William W. McClench, second vice-president and general counsel for the company, was elected president, succeeding the late John A. Hall, who died suddenly at the Hotel Victoria in London on September 3d last. Mr. McClench was born in Chicopee, Mass., in 1854. He attended Tufts College, from which institution he was graduated with honors in 1875. From the time of his graduation until 1878 he was engaged in teaching school, meanwhile studying law in his leisure moments. He was admitted to the bar in 1878, and engaged at once in general law practice in Springfield and vicinity. In 1893 he became associated with the Massachusetts Mutual Life Insurance Company as associate counsel. In 1898 he became general counsel of the company, succeeding Judge Gideon Wells in the office. He was elected a director of the company in the following year. Early in January, 1905, the office of second vice-president was created, and Mr. McClench, having been the unanimous choice of the board of directors, took on the duties of the office in addition to those of counsel. His experience as a member of the finance committee and the close intimacy which his position as counsel necessarily signified in regard to the company's finances and investments has been an excellent equipment for him by way of preparation for the duties of president. Mr. McClench is popular with the agencies and has a very pronounced personal following in the field. His relations with the home office employees are cordial, and with his mastery of life insurance law, investment and of other insurance technique, gained from some fifteen years of service in the home office, and from a close study of the technical sides of life insurance, he enters upon the presidency with every prospect of success. In addition to his qualifications as an executive, he is a scholar in taste, and he has been a very wide and careful reader in many fields. He is an accomplished public speaker, and his ease as an after-dinner speaker will make him in much requisition with the insurance fraternity at social gatherings. Under the leadership of William Wallace McClench it can reasonably be expected that the excellent traditions of John A. Hall will be preserved and the company will continue to be the same progressive and growing concern that it has so long been. The other new officers elected simultaneously with Mr. McClench are as follows:

WILLIAM W. McCLENCH.

William H. Sargeant, second vice-president and director. Mr. Sargeant was born in Springfield in 1868, and after a public school education entered the service of the company in June, 1884. He has been particularly connected with the policy, death claim and supply de-

(*Continued on next page.*)

Financial

Steel Corporation's Report

A DECIDED and encouraging gain is shown by the report of the United States Steel Corporation for the quarter ending on September 30th. Net earnings were $27,106,274. There has been a steady rise since the beginning of the year, but while the June quarter's earnings exceeded those of the March quarter by only $2,000,000, the increase for the September quarter over the June quarter was nearly $7,000,000. The tonnage of unfilled orders on hand is but slightly enlarged, but the increase is the first since December, 1906, and marks the turning of a corner. There has been a considerable addition since September 30th. Net earnings and unfilled order tonnage for a series of quarters are shown below:

	Unfilled orders.	Net earnings.
Sept. 30, 1908.....	3,421,977	$27,106,274
June 30, 1908.....	3,313,876	20,265,756
March 31, 1908.....	3,765,343	18,220,005
Dec. 31, 1907.....	4,642,553	32,553,995
Sept. 30, 1907.....	6,425,008	43,804,285
June 30, 1907.....	7,603,878	45,503,705

In the June quarter of 1907 the highest point for net earnings was reached. During the reaction of 1904 the September quarter's net earnings were only $18,773,932, and those in the March quarter were less than $14,000,000. Additional evidence of steady progress toward recovery during the recent quarter is seen in the growth of earnings by months, as follows: July, $8,599,630; August, $9,152,311; September, $9,354,333.

Business Improvement

LAST week's reports of gross and net earnings for the Union Pacific and Southern Pacific in September were quite acceptable to those looking for evidence of improvement in business conditions. The Union Pacific's net was larger than in any other month of the company's history, and its gross had been exceeded only once. Comparisons with September, 1907 (a month not affected by the panic) show very large gains for both roads. The increases are due mainly to greater activity in the movement of grain and ore. The number of idle freight cars in the country has fallen from more than 400,000 in May, and 250,000 in August, to about 100,000 at the present time. There has been an increase in the number of new companies formed. In January the number was about 30 per cent. of what is expected under normal business conditions. Recovery has now brought up the number for September and October to about 80 per cent. *Dun's Review* said on Saturday last:

"Decided improvement is noted in most trade reports this week, especially in respect to distributive departments. Orders have come to manufacturers more freely, in many cases accompanied by requests for immediate or very early delivery. Evidences of increased confidences are numerous, and prices are more firmly held where concessions have been offered recently without attracting buyers. Many mills have resumed after months of idleness, sufficient orders having accumulated to assure active capacity during the balance of the year."

On the same day, the Government's report as to imports of manufacturers' materials in September indicated greater activity, the figures showing large increases in the receipts of hides, crude rubber, tin and fibres.

partments. He was inspector of agencies and risks in 1900, and past successively thru the offices of assistant secretary and secretary, and was in thoro contact with the field for many years. His knowledge of policy contracts and field conditions is exceptional, and he stands as a rigid adherent of the best things in life insurance. Mr. Wheeler H. Hall, the new secretary, was born in Bridgeport, Conn., in 1866. His education was also obtained in the public schools of his native town. His first service to the company in 1886 was as clerk in the actuary department. He was then transferred to the bookkeeping department in 1890, and was appointed chief accountant in 1900. In 1903 he was elected assistant secretary, from which office he now becomes secretary. He is a master of home office detail, and for the last five years has been intimately connected with the mortgage loan investments of the company.

VOL. LXV NEW YORK, THURSDAY, NOVEMBER 12, 1908 No. 3128

Survey of the World

Election of Judge Taft

At the national election on the 3d inst. the Republican party carried States which will give William Howard Taft 321 electoral votes, or almost as many as were won for Mr. Roosevelt four years ago. There are left for William Jennings Bryan 162 electoral votes. He had 176 in 1896 and 155 in 1900. Only 140 were cast for Judge Parker in 1904. For some days the result in Missouri and Maryland was in doubt. Maryland's electoral vote is divided, as it was four years ago. The following table shows where the States stand, and also the pluralities as nearly as they can now be ascertained:

FOR TAFT.

	Electoral votes.	Pluralities.
California	10	75,000
Connecticut	7	44,500
Delaware	3	2,500
Idaho	3	15,00
Illinois	27	162,000
Indiana	15	10,000
Iowa	13	61,500
Kansas	10	28,000
Maine	6	31,500
Maryland	2	600
Massachusetts	16	101,500
Michigan	14	144,000
Minnesota	11	100,000
Missouri	18	4,000
Montana	3	7,000
New Hampshire	4	19,500
New Jersey	12	78,000
New York	39	203,000
North Dakota	4	30,000
Ohio	23	75,000
Oregon	4	30,000
Pennsylvania	34	290,000
Rhode Island	4	19,000
South Dakota	4	20,000
Utah	3	10,000
Vermont	4	28,000
Washington	5	65,000
West Virginia	7	25,000
Wisconsin	13	80,000
Wyoming	3	3,000
Total	321	

FOR BRYAN.

Alabama	11	55,000
Arkansas	9	50,000
Colorado	5	5,500
Florida	5	21,000
Georgia	13	31,000
Kentucky	13	10,000
Louisiana	9	50,000
Maryland	6	
Mississippi	10	40,000
Nebraska	8	4,500
Nevada	3	1,500
North Carolina	12	30,000
Oklahoma	7	16,000
South Carolina	9	50,000
Tennessee	12	26,000
Texas	18	100,000
Virginia	12	30,000
Total	162	

In Maryland, Taft's plurality, on the highest vote for a Republican elector, was 613, but there was a difference of more than 3,000 between that vote and the lowest vote for an elector on the Republican ticket. So it comes about that Taft has only two of the State's electoral votes, and Bryan has the remaining six. It is alleged that this result was due to the use of what are called trick ballots and that these were designed to confuse illiterate Republicans. It was at first believed that Bryan had carried Missouri, altho there was no doubt about the election of Attorney-General Herbert S. Hadley (prosecutor of Trusts), the Republican candidate for Governor. The latter's plurality exceeds Taft's by about 12,000.

Results in the States

Judge Taft carried the State of New York by a plurality of 203,000, and Governor Hughes's plurality was about 70,000. Even in the great city Taft's plurality exceeded 15,000, altho Hughes's competitor, Chanler, was in the lead there by

60,000. In the Legislature (which will elect Senator Platt's successor) there is an increased Republican majority. Of the eight Republican Senators who opposed the Governor's bills for the suppression of race-track gambling, five were not renominated, one was defeated at the polls, and two were re-elected. Senator Foelker, who left his sick bed to give the Governor the vote that was needed, has been sent to Congress. Minnesota, Ohio and Indiana, while standing for Taft, elected Democratic Governors. In Minnesota, a Taft plurality of 100,000 is seen beside a plurality of about 30,000 for Governor Johnson, the Democrat who competed with Bryan for the presidential nomination. Ohio elects by 25,000 Judson Harmon, formerly Attorney-General in a Democratic Cabinet. His campaign was made on the issue of reform in the administration of the State government. Indiana's new Governor is Thomas R. Marshall, whose victory is said to be due mainly to local feeling concerning liquor legislation. A Legislature having a Democratic majority of twelve will elect Senator Hemenway's successor. Ohio has a Republican Legislature, and Senator Foraker will be a candidate for re-election. In Indiana, several Republican candidates for State offices appear to be elected. California voted by a large majority for a direct primary amendment and re-elected Judge Dunne, before whom Schmitz was tried. He was opposed by the influence of those in sympathy with the bribers and the bribed. In Denver, Judge Lindsey, known far and wide in connection with the Juvenile Court, won a notable victory over the machine politicians who opposed his re-election. Charles J. Hughes, Jr., (Democrat) will succeed Senator Teller. In Connecticut, Lilley, for Governor, ran far behind his ticket. There are large Republican gains in the Legislature. Delaware elects one Democratic State officer, the son of Judge Gray. He will be Attorney-General. Duncan U. Fletcher will be sent to the Senate from Florida. In Georgia the Republican vote was increased by more than 50 per cent. Illinois voted for an issue of $20,000,000 in bonds to assist in the construction of a canal from the Lakes to the Gulf. Governor Cummins will be Senator from Iowa. His majority over Lacey was 42,000. Kansas will send Joseph L. Bristow to the Senate, altho the Democrats made gains in the Legislature. In Missouri, where the Legislature is Democratic by six votes, Senator Stone, as a candidate for re-election, defeated Governor Folk by 18,000. Nevada will re-elect Senator Newlands. New Hampshire gave Taft a plurality of 19,500, but Quinby, for Governor, won by only 1,086. It was alleged that he was a railroad candidate. Everett Colby, advocate of reform in politics and candidate for the State Senate in the Newark district of New Jersey, was defeated by 659 votes, owing to local machine bargains. Senator Gore will be re-elected in Oklahoma, where the Socialist vote (now 22,700) was largely increased. In South Dakota the proposition for an increase of the divorce residence term to one year was carried. The anti-Mormon vote in Salt Lake City was reduced. Senator Smoot will be re-elected. Washington will elect Wesley C. Jones to succeed Senator Ankeny.——Full reports of the votes cast for candidates of the minor parties are not yet available. In some places there were Socialist gains; in others there were losses, notably in Chicago. Probably the entire Socialist vote will not exceed that of 1904 (432,000) by more than 50 per cent. The Prohibition total appears to show little growth, if any. The vote for the candidates of Mr. Hearst's new party was unexpectedly light.

The House of Representatives

In the national House of Representatives the Republican majority is now 57. This will be reduced to 45. The most notable Democratic gains were in Indiana, Ohio and Nebraska. On the other hand, the Republicans elected three members in North Carolina (where there is a normal Democratic majority of at least 30,000) and two in Virginia, where several Democrats retained their seats only by narrow margins. These changes in the South are said to be due to a preference for the protective policy in tariff legislation. Among the Republicans defeated were W. P. Hepburn (Iowa), chairman of the Interstate Commerce Committee, whose

name was attached to the Railroad Rate bill; Jesse Overstreet (Indiana), chairman of the Post Office Committee, and C. B. Landis (Indiana), brother of the judge who imposed the fine of $29,240,000 upon the Standard Oil Company. Speaker Cannon, despite much opposition, was re-elected by a comfortable majority. In New York, M. F. Conry succeeds Bourke Cockran, who lost favor with Tammany. Among the other new members for that State are Otto G. Foelker (already mentioned) and Hamilton Fish, recently at the head of the Subtreasury in New York City. Representative Fowler, of New Jersey, chairman of the Banking and Currency Committee, is a candidate for Speaker. He asks for support upon a platform providing that the House shall elect a board of seven managers, "which shall be charged with that direction of legislation which the Speaker now assumes."

Statements from the Leaders

At the White House, on the day following the election, President Roosevelt pointed to the result as proof that he had correctly described the situation a few days earlier, when he said, "We have them beaten to a frazzle." Producing a copy of a letter sent to Senator Lodge on the 26th ult., he showed that his prediction as to State votes had been remarkably accurate. He also dictated the following statement:

"This Administration has meant a steady effort and progress, which should never be allowed to deviate into an unwise radicalism on the one hand, nor into an unwise conservatism on the other. The nomination of Mr. Taft was a triumph over reactionary conservatism, and his election a triumph over unwise and improper radicalism."

Judge Taft was the guest of honor on the 5th, at a dinner given by the Cincinnati Commercial Club. Responding to a toast, he said he hoped he could have been a good loser and also hoped to be a reasonable and sensible winner:

"I am very hopeful that the predictions made by me in my canvass in regard to the business future of the country may come true. I am hopeful that the business future has been more or less determined and made certain by the result, and that with such certainty investors may feel justified in investing capital and in putting out funds for railroad construction and for projecting and carrying on great business enterprises. I feel that this is entirely consistent with the maintaining and clinching of the Roosevelt policies as I understand them and as you understand them; that is, that the laws are to be enforced and that business men are to be shown the lines of legality. No favors are to be expected from the next Administration by men who break the law. Every business man who is obeying the law may go ahead with all the energy in his possession; every enterprise which is within the statutes may proceed without fear of interference from the Administration when acting legally; but all interests within the jurisdiction of the Federal government may expect a rigid enforcement of the laws against dishonest methods. Men who conduct a legitimate business may understand that the Government is back of them, and does not intend to do anything to interfere with their legitimate advancement. It is only a question of the definite knowledge of the statutes and of their clear understanding which shall make the honest progress of our business possible. And that, in my belief, is all that is necessary to make that progress substantial and enduring."

Two or three days later he exprest great satisfaction because his election would enable him to assist the Filipinos, and said that the free importation of Philippine sugar and tobacco, within certain limits, would not be injurious to industries in the States. In a letter to an officer of a labor union he said:

"It is a peculiar gratification to me to note the independence and courage of the intelligent wage earners of this country in refusing to be delivered to one party or the other, and I look forward with pleasure to rendering such assistance as may be in my power to furthering the cause of the wage earners of the country in all legislation calculated to furnish to them greater equality of opportunity in this land of ours. I shall welcome suggestions from all leaders of labor to this end."

On the 5th, Mr. Bryan gave to the public a statement. Having said that the election had "gone against us by a decisive majority," he continued:

"We made our fight upon a platform which embodied what we believed to be good for the American people, but it is for the people themselves to decide what laws they desire and what methods of government they prefer. I have faith that the publicity which we asked for will yet commend itself to the American people, that the election of Senators by the people will be secured, that the iniquities of the Trusts will arouse an opposition that will result in the elimination of the principle of private monopoly. I am confident that the people will see the necessity for the labor legislation and the tariff reduction which our platform demanded. I am confident, too, that the educational work done in this campaign will result in securing greater protection to bank depos-

itors. The above are the most prominent reforms for which we labored, and I believe that these reforms will yet come, together with more effective regulation of railroads and independence for the Filipinos."

Commending the work of his national committee, he remarked that his nomination had come from the hands of the voters, whose command he obeyed. Words could not express his gratitude for the devotion shown by millions of Democrats during the last twelve years:

"If I could regard the defeat as purely a personal one, I would consider it a blessing rather than a misfortune, for I am relieved of the burdens and responsibilities of an office that is attractive only in proportion as it gives an opportunity to render a larger public service. But I shall serve as willingly in a private capacity as in a public one. God does not require great things of us. He only requires that we improve the opportunities that are presented, and I shall be glad to improve the opportunities for service presented by private life."

In Nebraska, he said, in conclusion, the Democrats would be able to put into practice so much of the Denver platform as related to State legislation, and he trusted that the State would set an example that would be "an influence for good in the nation."——It is reported that the President would be glad to see Secretary Root elected to succeed Senator Platt. Mr. Roosevelt himself, it is understood, is not inclined to be a candidate for the place. His friends say, however, that he may be willing, two years hence, to become the successor of Senator Depew.

Mr. Roosevelt on Bigotry in Politics

President Roosevelt, on the 9th, publisht a long letter denouncing religious intolerance in American politics. It was written in reply to one from J. C. Martin, of Dayton, Ohio, who had inquired as to the religious belief of Judge Taft and had said that it was "constantly urged as a reason for not voting for Taft that he is an infidel (Unitarian), and his wife and brother are Roman Catholics." The mass of the voters who are not Catholics, he added, would not support for any office, especially for President, a man who is a Catholic. If Taft were an infidel, that would mean defeat; and he would be beaten if his sympathies were with the Roman Catholic Church on account of his wife and brother. Replying, Mr. Roosevelt said he had received many similar letters, but had not answered them during the campaign, because he regarded it as an outrage "even to agitate such a question with the purpose of influencing a political election." Mr. Martin had asked that Taft should "let the world know what his religious belief is":

"This is purely his own private concern; and it is a matter between him and his Maker, a matter for his own conscience; and to require it to be made public under penalty of political discrimination is to negative the first principles of our Government, which guarantees complete religious liberty and the right to each man to act in religious affairs as his own conscience dictates."

The demand for such a statement meant discrimination for or against the candidate. Discrimination against the holder of one faith meant retaliatory discrimination against men of other faiths; the result would be a reversion to the dreadful conditions of religious dissension which in so many lands had been fatal to liberty:

"To discriminate against a thoroly upright citizen because he belongs to some particular Church, or because, like Abraham Lincoln, he has not avowed his allegiance to any Church, is an outrage against that liberty of conscience which is one of the foundations of American life. You are entitled to know whether a man seeking your suffrage is a man of clean and upright life, honorable in all his dealings with his fellows, and fit by qualification and purpose to do well in the great office for which he is a candidate; but you are not entitled to know matters which lie purely between himself and his Maker."

In the course of his argument Mr. Roosevelt spoke of two Unitarians—John Quincy Adams and Edward Everett Hale, the present chaplain of the Senate. Mr. Taft's wife and brother were not Roman Catholics, he continued, "but if they were, or if he himself were a Roman Catholic, it ought not to affect in the slightest degree any man's supporting him for President." Mr. Martin, in his remarks about "voters who are not Catholics," had foully slandered his fellow countrymen. Mr. Roosevelt did not believe that any considerable number could be "influenced by such narrow bigotry." In several States a majority of the people were Catholics. He should severely reprobate those Catholics if they refused to vote for the most fit man because he happened to be a Protestant. He had known many men elected and re-elected

in districts where a great majority of their constituents were of a different religious belief—Catholics who represented constituencies mainly Protestant, and Protestants representing constituencies mainly Catholic, and one Jew representing a district in which there were hardly any Jews. These men refuted Mr. Martin's "slander":

"I believe that this Republic will endure for many centuries. If so, there will doubtless be among its Presidents Protestants and Catholics, and, very probably at some time, Jews. I have consistently tried, while President, to act in relation to my fellow-Americans of Catholic faith as I hope that any future President who happens to be a Catholic will act toward his fellow-Americans of Protestant faith. Had I followed any other course I should have felt that I was unfit to represent the American people.

"In my Cabinet at the present moment there sit side by side Catholic and Protestant, Christian and Jew, each man chosen because in my belief he is peculiarly fit to exercise on behalf of all our people the duties of the office to which I have appointed him. In no case does the man's religious belief in any way influence his discharge of his duties, save as it makes him more eager to act justly and uprightly in his relations to all men. The same principles that have obtained in appointing the members of my Cabinet, the highest officials under me, the officials to whom is intrusted the work of carrying out all the important policies of my Administration, are the principles upon which all good Americans should act in choosing, whether by election or appointment, the men to fill any office, from the highest to the lowest in the land."

Germany and France

The week's excitement in Europe has been over the Casablanca difficulty between Germany and France. It arose out of the desertion of French soldiers in Morocco who, not being French by birth, fled to the German Consulate and were being taken to Tangier by an official of the Consulate. On the way they were captured by a French Detachment. Thereupon the German Government demanded apology and redress, which was refused. Conditions looked very threatening for a time. Germany proposed arbitration by the Hague Court, which France refused to accept unless all questions of both law and fact were included. It was currently believed that Germany had created a serious difficulty, so as to distract attention from the excitement over the Emperor's unfortunate interview. It is likely that there will be no danger of war, for both parties desire peace, and the German Government has issued the following statement:

"It is untrue that Germany asked France to punish the officers and subordinates for their conduct at Casablanca. It is equally untrue that Germany demanded satisfaction and an apology to the German consulate authorities at Casablanca. The truth is that Germany required of France a short expression of regret that the French military authorities had interfered with German consular privileges at Casablanca."

The statement added that there was nothing unreasonable in this demand, which is quite customary in such cases. All governments make such a demand as a matter of course. The Government would not hesitate a moment to express regret if German soldiers had interfered with the rights of a foreign Power, reserving detail for further discussion. Before the French Chamber of Deputies, Premier Clemenceau was upheld in his firm attitude, and he said:

"No aggravation of the present conflict with Germany is expected in official circles, where a settlement honorable to both countries is hoped for if the disposition of the German Government is as conciliatory as that of France. An understanding could be reached by which the two countries, with mutual expressions of regret over the Casablanca incident, could refer the whole affair to arbitration. But it is evident that this is the only concession France can make, and the refusal of the Cabinet to censure the officers and soldiers concerned must be considered as definite."

The reasons why Germany should not risk war are plainly set forth by the Paris *Temps,* which says that it would be a crowning imprudence for Prince Bülow to risk a war when Austria-Hungary is absorbed in the Near East, when the Balkan states are ready to close the German roads to the eastward, and when Russia, aroused by the wave of Slavism, is prepared to seek a national revenge. France, morally and from a military point of view, is capable of defending her dignity, Great Britain is indisputably supreme at sea, and Italy is less and less disposed to sacrifice herself in the cause of another state.——With the tense Casablanca situation, the popular fury against the Kaiser and Von Bülow has subsided, and nothing seems likely to be done. Von Bülow has avoided being questioned on the matter in the Reichstag. Only the

Socialists are excited over the indiscretion of the interview in *The Telegraph*, and they demand that the Emperor be required to limit his political activity.——The cost of the German army and navy has caused a heavy deficit in this bad financial year, and a bill has been introduced to increase taxes by the amount of $118,750,000. It is proposed to lay the additional taxes mainly on liquors and tobacco, and also on death duties, advertisements, and gas and electricity. The opposition, especially to the tax on light, has been very pronounced, and the bill may be modified.——Extraordinary earthquakes have occurred in Saxony, accompanied with thunderous noises; also in Italy and Sicily, and it is supposed that there has been a severe earthquake somewhere in the region of New Guinea.——Dr. Felix Adler, representing Columbia University, and Prof. W. M. Davis, of Harvard University, exchange professors in Berlin, have been most cordially received at their opening addresses in Berlin. Professor Davis read a laudatory letter on Germany and the Emperor received from President Roosevelt.——The German Emperor has paid a visit of courtesy to the Emperor of Austria. At the same time he visited Baron von Aehrenthal, the Austrian Minister of Foreign Affairs, who has been the principal agent in the annexation of Bosnia and Herzegovina, so that it is probable that a full understanding was made with him. On his return the Kaiser was met by Count Zeppelin, who, with the Kaiser's son, was sailing in the air in his dirigible balloon, and the son dropt a note down to his father.——As the result entirely of prolonged troubles between the Germans and Czechs in Bohemia, leading to riots at Prague and elsewhere, Baron von Beck, President of the Austrian Council of Ministers, has resigned.

The Balkan Conditions

Things continue comparatively quiet, awaiting the action of the Powers, which are still in conference. The likelihood of a meeting of the Powers in conference is not improved. Russia's proposals are less acceptable to Austria than Great Britain's, for they include the cession of Bosnia and Herzegovina, but do not make it final. Accordingly Austria refuses. Bulgaria having withdrawn her armed forces from the Turkish frontier has complained to the Powers that Turkey has not done the same, and Turkey replies that these are only reservists, whose service is only for a fortnight. Servia is still much disturbed, but no act of war is anticipated. The gathering of war material goes on, the army is being drilled, and, inasmuch as Belgrade would be in immediate danger in case of war, the national bank and the military stores are being moved to a safer center. Sixteen thousand soldiers occupy the hights around Belgrade. Servia has much difficulty in securing the consignments of military stores purchased, as not only has Austria refused to allow them to pass thru her territory, but the Orient Railway refused to carry stores from the port of Salonika, but at last 110 carloads were sent on.——The reform committee in charge at Constantinople is continuing the transfer of the palace guards to other places and replacing them with more trustworthy troops.——It is reported that Bosnian malcontents have blown up the barracks in the interior of Bosnia and killed 120 Austrian soldiers.——The delay on the part of Germany in giving its assent to the proposed agreement between the two Powers causes much dissatisfaction in France. Von Buelow was expected to make a statement to the Reichstag on Tuesday of this week, using it to divert attention from the popular demand that the Emperor withdraw his interference with international concerns. The departure from Berlin of Herr von Schoen, the Minister of Foreign Affairs, and the Kaiser's absence, are given as reasons for delay.

In China

Amalgamation and trusts are proceeding in China along approved lines. Three companies, one smelting, another coal, and an iron mine, have been amalgamated with a capital of $20,000,000, and will employ 20,000 men. It is wholly owned and managed by Chinese. It is an example of what Chinese initiative can do, and is a promise of the future industrial development of China.——The Chinese Board of Education has memorialized the Throne urging the necessity of establishing a first class university, after Western methods, in Peking. It should contain, the memorialists state, eight colleges, viz.:

Foreign languages, Chinese literature, science, commerce, agriculture, law, medicine and engineering. High salaries will be paid for educated and experienced teachers from the Western countries. The Chinese Government has allocated 2,000,000 taels (about $1,400,000) to meet initial expenses. Large tracts of land have been purchased in Peking on which to build premises in modern style. ——Several deputations, says the *Chinese Recorder,* have been sent to Peking from the provinces to urge upon the central Government the importance of fixing definitely upon the date for the establishment of the promised parliament. Memorials have been sent from the gentry, literati and people of Kiangsu, Chekiang and of Fokien provinces praying for an early granting of a parliament. These memorials are, according to the fixt custom, presented to the Censorate. It is said that the President of the Censorate is unfavorable to the movement and consequently the deputations and the memorialists have not yet accomplished their design. The provincial assemblies are to be established within one year from date. There will be twenty-two assemblies in all; the largest being Chihli with 140 members. The total membership in all the assemblies will be 1,677. One new scheme determined upon is the establishing in Peking of a school for the study of constitutionalism. The purpose is to train, from among the sons of imperial clansmen, a group of young men who understand the problem of government.——Peking has had great troubles with its unwelcome visitor, the Dalai Lama of Tibet. The Government has decorated him, given him an annual salary of about $7,500 and ordered him to return to Tibet and give obedience to the throne. He has been absent from Lhassa for four years, since the capture of Lhassa by the British.——The anti-Japanese boycott in China has culminated in a riot in Hongkong, in which a large number of Chinese shops were looted where Japanese goods were sold.

In England

The British Parliament has been occupied with the bill for the licensing of public houses selling liquors, the object being to reduce the number. The Government has withdrawn, in view of the opposition, those provisions from the bill which make it apply to bona fide restaurants selling liquor with meals, so that they are not limited to three hours on Sunday. It has also withdrawn the provision forbidding the employment of barmaids.——When asked if the records in the War Office contained the plan of campaign sent by the Kaiser for ending the Boer War, Lord Haldane declared that no such paper had ever been received there or had ever come into possession of any one connected with the War Office. When asked if he would make inquiries in other departments to learn if it was elsewhere, Lord Haldane replied that he had responsibility enough in looking after affairs in the War Office without going outside. He made no answer when asked if he had knowledge that such a document existed.——The great cotton strike and lockout in Lancashire has been settled after seven weeks of closure, which shut out 140,000 operatives and caused a loss to employers of $5,000,000. The employers consented to postpone the proposed 5 per cent. reduction in wages from January 1st to March 1st. The copartnership offer of the shipbuilding firm of Furness, Withy & Co. made to the workmen has been accepted and will be tried for a year. ——The British Colonial Office recently extended to President Roosevelt the free privileges of the Government shooting preserves in Africa, but he declined them, saying that he wished to be treated like any other private citizen. The rule limits to a single animal the shooting of the more important game.——The decision of the Court of Arches has been nullified and rejected by his rector and bishop in the case of Mr. Alan Banister, who had married his deceased wife's sister. The Court of Arches, following the law past by Parliament legalizing such marriages, decided that those who contract such marriages are not to be treated as violating any canonical law. But Canon Thompson has again refused the sacrament to Mr. Banister and his wife, and the Bishop of Norwich has absolutely refused to allow any of his clergy to administer Holy Communion to them. Mr. Banister would have been perfectly willing to attend some other church in Norwich, but the bishop's action prevents.

The Dirigible vs. the Aeroplane

BY AUGUSTUS POST

Secretary of the Aero Club of America.

THE great question that is of absorbing interest in aeronautics just at the present moment is the consideration of the relative merits of the dirigible balloon and the aeroplane when each is examined as to relative size. From a military, naval, sporting and commercial point of view this question is one that brings the whole subject of aeronautics into review, its history as well as its future. Every great development is usually invented in peace and tried in war, to be ultimately perfected after its weak points have been found out by the hardest use possible. It is difficult to tell whether the perfection of the rifle was due more to its use in war or to its use in sporting and hunting. It will also be hard to determine whether the governments, thru their army and navy officers, will do more to perfect the art of aerial navigation than private individuals for their own personal pleasure and scientific interest, or hope of ultimately making money. To my mind, the clearest way to express the relative efficiency of the dirigible or motor balloon, which is lighter than air, and the aeroplane or flying machine, which is heavier than air, is to compare the former with the automobile and the latter with the motor-cycle. The air ship can be made large, as Count Zeppelin has so clearly proven, and can be made much larger still. Calculations exist, and have lately been shown, for airships from two to four thousand feet in length, with proportionate diameters and speeds of great rapidity. Such great ships as these would carry wheat from out West to Europe without transfer from car to boat and from steamer to car again, for it would have over the destination and discharge the cargo by gravity, simply opening the bottom hatches and letting the contents of the hold run out thru pipes into bins prepared for the purpose. Such large dimensions as these are probably more the result of mathematical calculations than any practical experience, but we must credit the largest ideas possible when investigating the limits of any subject in any one direction. As the volume of the gas holding envelope increases as the cube, while the surface increases only as the square, the air ship becomes much more efficient as its size increases; the step from the "Robert Fulton" to the "Mauretania" ("Archaic," "Titanic," new ships of the White Star) is probably no greater and more probably not nearly as great as will be taken in the same period of time in the development of this form of navigation, and we will compare the Santos Dumont with the "Cosmos" or the "Jupiter," "Mars," or any of the large air ships of the future which will sail around the terrestrial sphere like satellites.

On the other hand, let us see what the future of the aeroplane will be. It would seem to go quite in the other direction, from the large size machine built by Sir Hiram Maxim, of 360 horsepower and correspondingly large wing surfaces and great weight. Mr. Langley's machine had only 52 horsepower, and the French machines are built with hardly as much, while in this country the "June Bug," built at Hammondsport, had less than 40, and the most successful machine yet built by the Wright brothers has a maximum of only 32 horsepower, not all of which is necessary to fly, and their early machine had a maximum of only 22 and used in flight little more than 16. The surfaces of their machine are 40 feet wide and 6 feet deep, and the machine carries two persons, while the latest type of machine, not yet given to the public, as it is stated by Mr. Herring, its builder, is still smaller, being only 20 feet from tip to tip, and with narrow surfaces only 3 feet deep, altho the engines are more powerful, consisting of two of 20 horsepower each. The machine is made so it can be operated and kept in a very small space. Going one step farther in this direction, to the machine which is the limit of power flight, or consists of only the propeller and engine, or direct lift machine, called in scientific terms "helicoptere," we shall probably find it the smallest of them all, as the structure and weight must be con-

centrated in the motor in order for it to have sufficient power to directly lift itself and operator into the air, and proceed just as the small beating-wing birds do, by their strength, in contrast to the larger soaring and flapping-wing birds.

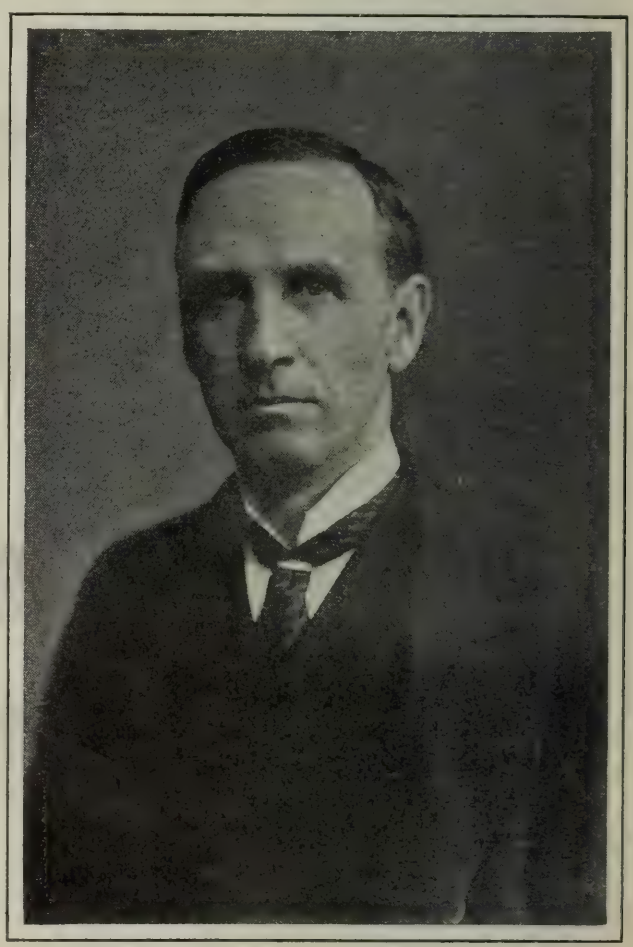
This seems clear, that the dirigible is drifting toward large sizes with large carrying capacity, and even robbing the aeroplane field, because all must use plane surfaces for rudders and to assist in keeping them from pitching when high speed is to be obtained; while the aeroplane is being made as small as possible, altho speedy, and they probably will exist in very great numbers. If many persons are to be carried they will be accommodated by individual machines or several of those which may be arranged to carry only a few each.

From the military and naval point of view the two forms complement each other most perfectly. The dirigible is admirable for frontier defense and is best suited to operate from a fixed station, with an extensive radius of action, in the largest sizes equalling the steaming radius of battleships. On account of its ability to drop explosives on vessels and to detect submarines and mines and operate over the water, it has great value in co-operation with naval vessels and fleets. The aeroplanes will be most useful in a scouting capacity, and easily transported to the vicinity of the enemy or the country to be surveyed; they can rise and skim close to the ground, giving every facility to the officers in command to examine and ascertain where roads exist and what other natural conditions may be seen, while from a greater hight the enemy's camps may be observed, with their formation and resources. If they are equally equipt with aerial machines, a battle may be fought in the air, altho these excursions would probably take place unawares, and it would result in a mutual desire to escape attack, as is the case with troops of cavalry which are sent out to feel the enemy's position. The great speed of the aeroplane and its ability to go in an air line without reference to roads will make it unexcelled for carrying dispatches, and it was suggested by Colonel Templar, formerly head of the Aeronautical Corps of the British Army, that the commanding officer might even lead his troops from a superior position in an aeroplane. No doubt the side which will have such an instrument will have a most decided advantage.

The outlook from the side of sport and commercial interest is more distant, altho many sportsmen and amateurs are looking with longing eyes, and wishing for the time when they may enter the "motorists' paradise"—the realm of the air—where there are no speed limits nor obstacles, no narrow or crowded roads, and no dust; he will have to be very quick to run down birds or other flying things, altho Mr. Wright said that they often would run down and pass over meadow larks which were startled and tried to fly away from them while they were making their early tests at Dayton, Ohio. The extent of the thrills and the perfection of artistic operation possible, especially with the aeroplane, may be suggested when it is considered as possible for an aeroplane to loop the loop successfully, and turn in any direction, and attain speeds of over one hundred miles an hour with little difficulty. The dirigible will, no doubt, come into the hands of the amateur first, altho there are many aeroplanes even now abroad operated by sportsmen, and even built for the sporting and scientific interest alone, which is sufficient reward in itself for solving the problems which come up. It will be necessary to have club grounds or to obtain the use of public places to make trials in, as a large level space is required, and facilities for keeping the crowds in check, whose interests are so strong that they often do not realize the necessity of allowing the aviator freedom to land without fear of injuring any of the spectators. The ease with which the officers who were taught to operate the Baldwin dirigible at Fort Myer this summer learned their lesson speaks well for the simplicity of the construction of that type of air ship, and when refinements and comforts can be added, so that men of wealth may enjoy the pleasures of sailing thru the air at will, they will not be slow to avail themselves of the equipment necessary for this most delightful of sports and inspiring occupation.

As wireless telegraphy has made its place among the methods of communicating thought, and can do some things which no other methods can do, namely, reach ships at sea without competing with

other ordinary commercial methods of transportation, aerial navigation is sure to make its place for the special purposes for which it is peculiarly fitted, such as preliminary survey for routes of travel, exploring inaccessible places, mountain passes, etc., carrying messages swiftly and directly to their destination, carrying lines across chasms and to stranded vessels, sounding the upper air to tell us what the weather may be, and to ride ahead of storms, giving warning of their approach, for traveling in the air in the direction of the wind, the speed of the wind must be added to that of the air craft, just as a boat is borne by the current. The pure, fresh air and the stimulating activity must cause good health and increased mental powers, while the engineering principles worked out in this field, especially for propellers in air, will help in designing efficient propellers for water navigation, and the laws of planes may be of great help in developing hydroplanes and high-speed boats.



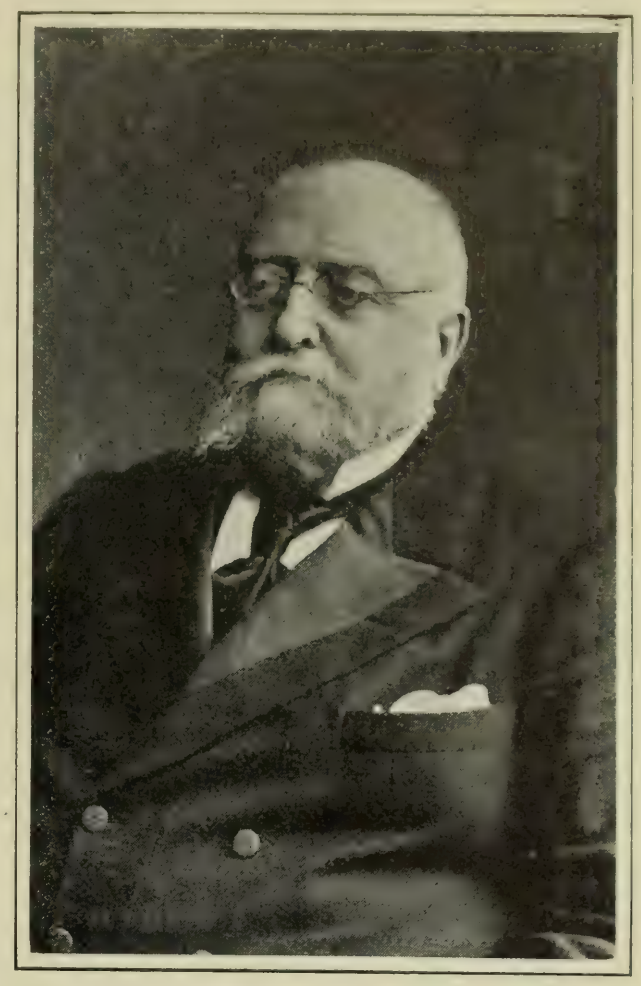
NEW YORK CITY.

Reassembling of Parliament in London

BY JUSTIN McCARTHY

LONDON is now enlivened once again by the reopening of Parliament, by the somewhat peculiar conditions of its reopening, and by the sure promise that it gives of an important and an exciting time during a great part of the coming winter. I may fairly describe the winter as only "coming," for altho in England we usually consider ourselves in winter after the first fortnight of October has past, yet in this present year we have had a positive revival of the summer during the last four weeks, and of a very charming summer, too, except for the shortening of the days.

Our legislators have now assembled in Westminster Palace, not for the opening of a new session, but to continue the work of a session which was adjourned until last Monday. On Monday, therefore, we had no speech from the throne and no address in reply to that speech, but merely the formal resumption of the business of Parliament. Seldom, indeed, has there been a meeting of Parliament which seemed to promise more serious, more critical, and more important work. The licensing measure is certain to bring about a most severe and exhaustive struggle. We are destined to see yet another great contest between the hereditary chamber and the elected chamber, which must have a most important effect on our future constitutional condition. Then the great social, or rather socialistic, questions which are calling more and more loudly with every day for an immediate



THE RIGHT HON. JOHN MORLEY,
Whom Andrew Carnegie has at last induced to visit the United States.

settlement, or at least for legislation promising to bring about a speedy settlement, will have to be dealt with earnestly and bravely during this adjourned session.

I have already more than once endeavored to set before my American readers the principal characteristics of that most important and most impressive movement which insists that our legislators shall turn their attention much more to the condition of the unemployed and the poverty-stricken in these islands than to the policy of continental states and to the magnifying of our army and navy in order to prepare against the dangers of imaginary invasions. Here again we have the fresh Continental alarm which threatens to give new impulse and new force to those among our legislators who are always only too ready to seize every opportunity for diverting public attention from the condition of our own unemployed and our own poor to the supposed necessity of preparing to hold our own in an immediate coming war. The sudden creation of a new Turkey, a Turkey with an accepted system of free constitutional government, an event which most Englishmen have regarded with welcome and hope, has led to Bulgaria's declaration of independence and filled alarmists here with the idea that a great struggle is coming thruout Eastern Europe, in which Austria and even Russia are to take part against Turkey, and that England, therefore, ought to prepare instantly to stand in arms by Turkey's side.

HELEN MATHERS.
(Mrs. Helen Reeves.)

THE LATE SIR HENRY DRUMMOND WOLFF.

The House of Commons was in full expectation of having its attention brought very directly and emphatically to bear on the really great question concerning our unemployed operatives. A vast meeting of the unemployed was summoned to be held in Trafalgar Square on the first day of the adjourned Parliament. The police authorities, however, interfered in order to prevent the meeting from drawing together crowds large enough to interfere with the public traffic

and, above all, to interfere with the free access of members to the House of Lords and the House of Commons. The meeting was therefore somewhat restricted in its demonstration, but it represents a great and a pressing cause with which the Government must deal and are indeed resolved to deal on the earliest possible opportunity.

The proceedings of the House of Commons in particular were threatened with a very different sort of demonstration, or even I might say invasion, on the second day of meeting, by the irrepressible Suffragettes, who had made proclamation everywhere by printed placards of their resolve to "rush the House of Commons" on behalf of woman's right to vote at parliamentary elections. The "rush," however, did not come to much, but it certainly accomplished one feat of invasion never known before in the history of the elective chamber. The invasion, however, was only realized by the act of one enterprising and ingenious lady. This fair—or, perhaps, as she might well be called with regard to her action, unfair—Suffragette adopted a stratagem wholly unexpected by the assembled Commons. She had obtained from a member, who was himself an advocate of woman's suffrage, an order of admission to the Ladies' Gallery, but she also induced him to give her a preliminary look-in at the parliamentary chamber thru the panes of one of the windows standing at either side of the doors which open into the House. Any member of the House is authorized to conduct personally a lady to one of these windows, and the member who was helping the Suffragette to gratify her curiosity had no hesitation in conducting her to the nearest window. But, to his utter amazement, she had no sooner reached the window that she sprang away from him, flung open the doors of the House, and rushed into the House itself, calling in shrieking tones to the assembled Commons to desist from their present deliberations and carry a measure giving votes to women. The House was crowded and the assembled members were for a time somewhat bewildered, but the sergeant-at-arms and his attendant did not lose their heads even at the sight of this unexpected apparition, and the lady was soon captured and carried out of the House and sent forthwith into the streets, the Speaker at the same time issuing an order that she must never again be allowed to enter the inner lobby, even with the escort of a member. Several other Suffragettes were arrested for causing disturbance in the streets, but this one, whose demonstration I have described, was the only heroine who illustrated by her personal action the resolve to "rush the House of Commons." For myself, I greatly regret that what seems to me a really good cause should be brought into ridicule and discredit by such absurdities.

The death of Sir Henry Drummond Wolff was not an unexpected event, for he had long been in a most feeble condition of health. None the less, however, it came with a heavy shock to his family and his friends and to all who knew anything of his public career and his personal character. I was one of those who had the honor of knowing Sir Henry during many years. Our acquaintanceship began with the forming of that famous fourth party of which Wolff was the originator and to which Lord Randolph Churchill, Arthur James Balfour and Sir John Gorst became adherents. There had been previously three parties in the House—the Liberals, the Conservatives and the Irish National party, of which I was one. Sir Henry Wolff conceived the idea of creating a fourth party, which should consist of independent Conservatives who did not pledge themselves to obey all the dictates of any Conservative Government, no matter what those dictates might be. Our Irish National party sat for a long time on that side of the House where the fourth party had its seats, and we had, therefore, many opportunities of close intercourse with its members. Thus it was that I first came to know Sir Henry Wolff, and the acquaintance grew into a friendship only interrupted by his death.

He was a man of very high intellectual gifts, of extensive and varied reading, a lover of literature and art, one who had traveled much and learned something everywhere, a most delightful talker and fascinating humorist. With his wife also my family and I had most friendly intercourse during many years, and saw in her the heaven-sent companion and partner of her gifted husband. Of late years

the weakness of his health, brought on, I should assume, by his incessant over-exertion during his parliamentary career, had compelled him to give up work of all kind, and even to confine his out-of-door movements for the most part to excursions in a carriage, or, more commonly, in a bath-chair. Sir Henry often visited me in his bath-chair at a time when we were both invalids, and during all that time I never could observe any signs of depression or despondency in him. He had still the same vivid spirit, the same keen sense of humor, the same sparkling wit and the same genial enjoyment of all that life allowed him to enjoy. Lately I had not seen him for a considerable time, but I knew that the end was coming, and my friendship with him is a possession which will ever live with me.

Much and melancholy interest has been created here, and will be created in the United States, by the publication of "Gay Lawless," the work of Helen Mathers, and by the conditions under which this, her latest novel, has come to be publisht. My American readers will know that Helen Mathers is the maiden name and the literary name of Mrs. Helen Reeves, who has won for herself a wide popularity and a distinct celebrity among novel-readers everywhere. This new novel is dedicated by its author to her son Philip, who helped her, as she tells us, with the sporting part of it. Before the work was concluded Philip Reeves died in England while still but a young man. Philip Reeves had been a lieutenant in the British army, had served all thru the South African war, and afterward served in India and in Sierra Leone. These years of campaigning thru most trying climates had no doubt a prematurely exhausting effect on the physical conditions of the young man, and when he returned to England he began to sink more and more into a state of decaying health. He died just a year ago, aged only twenty-nine. I had the pleasure of meeting him often since his return to England, and was greatly imprest by his literary capacity, his bright humor and his devotion to his mother.

Philip Reeves became well known in this country as an amateur steeplechaser, and this latest novel of his mother's, in the production of which he helped her greatly, is partly about steeplechasing, but chiefly about trotting, a pastime better known, or at all events more widely practised, in the United States than here in England. Two of Mrs. Reeves's novels, "Tally Ho!" and "Pigskin and Petticoat," were written by the authoress in actual collaboration with her son, and she tells us herself that in this, her latest novel, he helped her with all the sporting part of it. Sad memories, indeed, too sad to be exprest in words, must have filled the loving heart of my friend, Mrs. Reeves, as she penned this dedication of her new novel to that loved and loving son.

The American public will, I am sure, be glad to hear that a cheap and popular edition of Morley's "Life of Gladstone" is about to be issued immediately. This new edition is to be in two volumes and is to be brought out in excellent style, alike as regards the portraits and the printing, at a very cheap rate, which will make it accessible to all admirers of the great statesman and of the gifted author and parliamentary companion whose names come together on the title page of each volume. This new edition has been arranged for and is brought out mainly under the influence of the *Daily Chronicle,* one of our leading London newspapers. I need not here say anything as to the surpassing claims which the life of Gladstone, by John Morley, now Lord Viscount Morley, has upon public interest in every civilized country. The original edition had, however, to be brought out in costly form, with valuable portraits, and therefore at a price which made it all but inaccessible to the vast majority of the reading public. It was indeed in every sense a book not merely to be borrowed from a lending library where such institutions existed, but to be bought and kept by all classes of readers who could appreciate its worth. This, I need hardly say, could not have been done in the case of the original edition, but the book is now to be brought well within the reach of the great majority of readers. No man is better qualified to write the life of Gladstone than John Morley. Gladstone and Morley were colleagues and comrades in parliamentary and political life, and Morley was not merely an official supporter of his great leader, but was in thoro companionship

and sympathy with him in his splendid domestic reforms and in his enlightened foreign policy. Viscount Morley of Blackburn, to give him his full title, is still in active political life as Secretary of State for India, and altho the heavy and continuous work of his most important office compelled him lately to withdraw from the incessant pressure of parliamentary duties in the House of Commons, he still attends closely and carefully to all the complex duties of the India Office. Not often has it occurred in our political history that the life of an illustrious statesman should come to be thus set out in description for the world's reading by an intimate political associate and close personal friend, as John Morley was to William Ewart Gladstone. The cheap edition will probably have an almost simultaneous reception, and I am sure an equally cordial reception, in England and in the United States.

LONDON, ENGLAND.

In the Old Days

BY REBECCA HARDING DAVIS

I AM going to tell you a true love story of the days when I was young, in order to show you a curious difference betwen that time and this. It seems to me that love and marriage counted for more in the life of Americans in those days than they do now.

In the early part of last century nothing concerned a young man or woman so much as that mysterious, sudden heat in the blood which drew them together. Why should one blue-eyed, freckled girl, after an hour's talk, matter more to John than all the other women on the earth? He did not know. But he knew that she did, and he thrust all the other business of life aside until he had made her his own. Questions of income, of position, or of fitness were not allowed to interfere in the matter then as they do now. The whole success or ruin of a man's life often depended on the outcome of this mysterious fit of fever in his blood. The novels of that day will show you how incurable that fever was held to be and how it absorbed the whole life of its victim. Then, in the opinion of the public, the history of men and women ended, as they did in those novels, with the wedding day.

But now the graduates of Bryn Mawr or of Harvard thrust aside the consideration of love and marriage until a dozen more important questions in their lives have been settled. The success of Jenny's picture in the spring exhibition, the kind of assignments which Jim is given by the city editor, the hospital into which Bob shall make his way as interne—these things weigh much in the game of life, while the sudden thrill of rapture in the souls of Jenny and Bob when they meet is promptly smothered out.

Neither of them has a marrying income and they know it. Enough. The matter is postponed indefinitely. No hearts are broken.

The marrying age is set backward from the teens to the thirties. No doubt love nowadays, when it is allowed to live, is as strong and lasting as in the old time. But surely it is more sane and more cautious than in the days of our grandfathers, more anxious to wear clothes of a fashionable cut and to be secure in the foundation of a good bank account.

This little true story of the doings of a pair of lovers long ago will perhaps show you the difference between then and now.

* * * * * * *

As you remember, at the close of the Revolutionary War, two of the Orleans princes came to this country on an exploring tour. They crossed the Alleghanies, with an escort of hunters and servants on pack mules, stopping at the houses of the squatters in the wilderness and bearing themselves like hearty good fellows out for a lark, the elder dubbing himself Philippe Egalité. But the poor farmers regarded them with breathless awe. Princes were unknown factors in

the brand-new republic. To this day the descendants of the squatters boast of the feasts set by their grandfathers for these royal guests.

Now, it chanced that the cavalcade once stopt over night at the house of a farmer in the mountains. The only child in the family was a little girl of twelve. The princes noticed her pretty face and played with her. When they were going away she followed them and stood shyly leaning against the gate.

Philippe Egalité gaily doffed his cap. "Ah! stay there, my child, and wait until I come back to make thee a princess!" he called, and rode down the hill, laughing.

The story was told all over the hills and made little Lotty famous. But apparently she had good sense as well as good looks, and did not let her dream of a crown blind her to more practical chances. In a few years she married a miller named Hogue and settled down to the cooking, washing and scrubbing which made up a woman's life in the mountains. But it chanced that her daughter Pauline was one of those women who come into the world with a strange charm—the Lauras, the Beatrices, the Mary Stuarts—who have maddened the minds of men. As the child grew to womanhood she was fully aware of the difference between her and other women, and of her powers over the honest farmers in the neighborhood. The promise of the prince to her mother had been the only bit of romance known to her childhood. Philippe Egalité was dead. But no doubt there were hundreds of kings yonder beyond the sea, who any day might come over hunting a bride. She early set herself apart for this royal lover who some day would come riding up out of the woods. She had a few offers of marriage, but men, for the most part, were shy of this idle, exquisite creature who could not make soft soap nor dip candles.

Rob Wickley, the blacksmith's son, told the child one day that he would marry her some time.

"You!" Pauline shrieked. "Do you think I will marry a man with a mole on his chin and a club foot? You—cripple!"

"I!" Bob said. "Cripple?"

He went home and looked in the glass, gaping stupidly. He never had seen the mole on his chin before nor noticed that he walked differently from other boys. He stared in the mirror at the ugly face covered with soot. "But I will marry her some day!" he said, doggedly, as he stumped back to the forge.

In that day, in the working class, a boy's labor belonged to his father until he was eighteen, in order to recoup him for the money spent on the boy in his childhood. Bob began now to work far into the night to pay this debt to his father in advance. He was years in doing it. On the day he had cleared off the last dollar he washed away every sooty trace of the forge for the last time, put on a new jeans suit, and going to the miller's in broad daylight, asked for Pauline. In all of these years he never had gone to the house.

But a young man from Pittsburgh with "capital," who had opened what he called an omnivarious store in the mountains, had gone often to the miller's, and had just asked Pauline to marry him. She was glowing now with the triumph of her refusal, and the nameless prince who tarried so long on his way was more real to her than ever.

But Rob, now that the grime of the forge was gone, suddenly came out a big and handsome man, and there was a certain power in his dark blue eyes that frightened her.

"You are going away?" she faltered.

"I am going down into the world to find my fortune," he said. (He had said the words over to himself every day for years.) "And I am coming back to ask you to marry me."

"My plans are different from yours, then," Pauline giggled.

The women of the village always said that the girl's character was as weak and sour as buttermilk. But Rob knew nothing of that.

He stood dumb and pale, looking at her. He knew it would be years before he would see her again. The cold sweat stood over his face, but still he had no words. He took up her hand and held it to his lips, then laid it down as if it had been a sacred thing, and, turning, went down the hill, not once looking back.

* * * * * * *

Rob went to a village on the Ohio, in Virginia, the terminus of the great na-

tional road, where all the freight sent between the South and the North was exchanged and reshipped on boats or wagons. He learned this business thoroly. Then he begged for commissions. When he got one he himself drove the dray loaded with the cotton bales from the boat to the wagons, and then went with the wagons across the mountains. In a year or two he had a small warehouse of his own.

At night he studied with the old parson Latin and Greek, geography—everything, in short, that the old man could teach. "I must be a gentleman," he told himself, incessantly, "She never must be ashamed of her husband."

With the first money he could save he bought a hill tract overlooking the town. "She is used to the hights," he thought. He planted there an orchard and garden, and with his own hands dug deep cellars for the house.

From time to time, too, he sent Pauline gifts. They cost so much and the money was so hard to get that they seemed quite royal to the boy. One was an album, purple and gold on the cover—the poems inside encircled with painted wreaths. Rob wrote a song to Pauline on the front page. It took him months to compose it, but it seemed to him quite as fine as any of Moore's or Scott's songs when it was done.

He sent her, too, a work-box with ivory fittings, and a vase of wax flowers, and a gold locket and chain. "Some day she will put my picture in that," he muttered, his face turning scarlet at the thought.

The last gift was a hymn book. Both he and Pauline were Baptists. "When I give her a Bible"—he thought—"it will be a big, gilt-clasped one, on our wedding day, with a Family Record in it, and on the Marriage page just two lines"—— The man's eyes filled with tears and he did not finish the sentence.

He stole a week from work and took the book up to her. Pauline dimpled and blushed over it. Secretly she thought his gifts very splendid. "But, you know," she cooed, "I must give them all back to you when the prince comes."

"All right," said Rob. "Princes don't scare me." He said little, being a dumb fellow by nature, but his eyes did not meet her face. She had always been a kind of miracle—the whitest, purest, of living things—to him. Presently he took up her little, blue-veined hand and held it in his big, scarred palm for a minute. He said nothing, but he trembled and the blood went out of his face. Pauline giggled.

"But a gentleman's hand should be white, too," she chirped. Rob drew his yellow fist away, and after that tried to keep it out of her sight. Indeed, the poor cripple used to feel that he should keep himself altogether out of her sight, he was made of such coarse, common stuff.

It was about this time that Pauline's uncle was elected to Congress, and he and his wife took the girl to Washington for two years. They drest her gorgeously, according to their ideas. She met politicians, diplomats, barons, and now and then, perhaps, a stray prince. They danced, chatted, flirted with her. But they did not ask her to marry them. Rob heard of her far-off triumphs. The man grew lean, grave and silent. "She never will stoop to me," he told himself. "But her house shall be ready for her just the same." So he built it with pillars in front, like a Greek temple, a fashion much admired then. When it was finished, the last carpet laid and mirror hung, he locked it up and took the stage coach for the East. It was whispered that he had gone to Washington and would soon bring his bride to her fine home.

Two months later Wickley came back, alone. He gave no explanation and nobody dared ask for one. He closed his house, placed his business in the hands of an agent, and took the boat for New Orleans. For two years he was not seen. Then reports drifted back of his success. Success was a matter of course for Rob. He was a shrewd speculator and had won in a few large ventures. He was young, handsome and magnetic, and he had made a host of friends. The names of the two foremost belles in New Orleans of that day were in turn coupled with his. But, in fact, Wickley was a cold and rather harsh critic where women were concerned. At the end of the two years he came home. He was received as a conquering hero. The town rose at him. Energy and marked success were rare

things in those days. Councils gave him a banquet; there were supper parties every night. One old friend asked him plainly when he would bring home his bride from the South and open his mansion. Rob made a joking reply, but never looked up at the dusty, pillared house.

One day on the street he met Pomeroy, the postmaster from his old home in the mountains, who poured out the news.

"And the—the Hogues?" Rob said, when Pomeroy stopt for breath.

"Hogue! Didn't you know? Mill burned down a year ago; house, too—all gone. No insurance. Cleaned Hogue out to the last dollar. That girl of his, Pauline——"

"Pauline—yes!" Rob stood still in the street, his face drawn and pinched.

"She was hurt in the fire. Leg broken—she goes lame now. Face scorched. I'll say for the girl she's not so worthless as she used to be. She works hard for the old man. Started a store and getting herself out of debt in it, hand over hand."

Wickley left Pomeroy with a stammered excuse and in a few minutes was on his way to the mountains.

* * * * * * *

It was near nightfall on the third day when he reached the little store in the village. She was tying up a package for a child and did not see him. She dragged one leg after her as she walked, and her face was drawn and scarred. But she was still the whitest, cleanest thing on earth to Rob.

"Like the angels of God!" he sobbed, choking when he tried to speak.

When she saw him the poor face grew ashen, but she came limping out at once, controlled and smiling.

"Robert! I never thought I would see you again! So kind in you to come back to the old place. Help me to shut up the shop and go down with me to supper. You must be hungry."

Rob said loudly that he was famished and would she give him an old-time supper, and——. He did not know what he said as he ran about closing the miserable little shop and looking at her. He thought that she stood in the light purposely, wanting him to see how much she limped and how horribly she was scarred. They walked down the hill together. It seemed to Rob that with all the horror of her crippled body and branded face there was some intangible thing about her which never had been there before. It had nothing to do with the angels of God—it was foolish, womanish, dear—it made him want to pick her up and carry her out and hide her from the sight of men. He went to the house, ate supper and talked to her father. At last he could bear it no longer.

"Pauline," he said, "let us go out and watch the moon come up behind the peak."

When they were outside he caught her hand, wrenching it fiercely.

"This has to end. I have waited all my life. And you—all these years looking for a prince who never was born!"

She drew her hand away and stood apart from him. "Don't tell me that I have been an idiot, Rob. I know it." She laughed. I know now what you are. And—I know what I am."

"You are what you always have been to me," he cried. "The one woman on God's earth."

"Why, look at me!" She turned her scarred face up to the light.

"What is that? When you were a tottering baby you were the only thing alive that I cared for. You will be that as long as you have breath in your body. There's no use of any more talk," he said, trying to speak in his ordinary, cheerful voice. "I have come for you. I am going to take you home with me. If you do not love me now I will make you do it some day. But—Pauline!"—he held out his arms with a hoarse cry—"I've waited for you all my life. Have you nothing to give me? Can't you understand?"

"Yes, I understand." She came up to him and took both his hands in a friendly grasp. "Don't let us talk of love. I can never leave father. Don't you see? God has given me this thing to do—God. I must stay here and do it."

Rob laughed. "Your father? That is nothing. Why, your house has been waiting for you for years. There's room in it for a dozen fathers. I'll take care of him——"

Pauline looked up with a sudden twin-

kle of fun in her eyes. The miller was known thruout the county as the most cantankerous man in it.

"No, Rob," she said; "he would not take help from you."

Rob wrenched the thin little hands in his. "What does he matter? It is you——have you no word for me after all these years of waiting? If you had ever said once that you loved me——"

There was a heavy step behind them and the miller came down the path.

"Pauline! I thought this was coming!" he said. "This is the end of your great marriage? The prince is Rob Wickley! This fellow! Why, nobody knows anything of him since he hid away in New Orleans. A river gambler, I reckon. And he's goin' to take me home with him on charity? Not if I know it. I'm poor, God knows. But I'll not beg my bread from old blacksmith Wickley's son!" He talked long. Rob could not squabble with him and was silent; he never could remember what the old man said.

But the night remained with him all of his life. In it he knew he had been thrown into the gutter and fought with beasts. Always before that night his love had seemed to him one of the divine, mysterious things in the world, like the song of birds, or the beckoning of stars, or the thought of God himself. But now the old man had dragged it into the slime —he loathed the thought of it.

As he went down the mountain, leaving them behind, he told himself that he never would return. The woman herself suddenly became abhorrent to him. He had given her his life. What had she ever given in return? She was petty, mean, cruel. He never would see her again.

Out of the window of the miserable house a woman was leaning watching him go.

"Good-bye, Rob! Rob, good-bye!" she cried, and wrung her hands.

* * * * * * *

For five days Rob went about his business, telling himself incessantly that this chapter of his life was ended. On the sixth he went back to the mountains. The shop was closed, the dust lay thick on the steps. The neighbors told him that the miller had sold his stock and with his daughter had gone away at night, nobody knew where.

It was easy for any man to lose himself in this country then, when there were no railways, no telegraphs, no daily papers. For two years Wickley searched the great wilderness from New England to the Gulf of Mexico to no purpose. The miller had lost himself effectually.

Then he went back to his work in New Orleans. His disappointment had not embittered him. He was for years the most popular Congressman sent to Washington from the Gulf States. Men trusted him, all children loved him. There were, too, good and fair women whose hearts beat faster at the sound of his voice, but they did not count for as much to him as did his favorite dogs.

He was once sent as our Minister to France. When his term of office expired he remained on the Continent for several years.

One day, in Paris, he met, in a café in the Bois, Jem Stewart, a neighbor in his old home in the mountains. They dined together. Now, the story of Rob and Pauline had always been known to Stewart. During the meal he watched his host furtively. Presently turning his head carefully, that he might not see Rob's face, he said: "Did you hear that the miller and his daughter had been found?"

Rob sprang to his feet.

"Yes," Stewart hurried on, not looking at him. "Or, I should say, Pauline. Her father is gone. He had taken her to the Far West and died there. She made her way back, and, I heard, was living in Pittsburgh. She has grown old and she has lost her voice. Why Rob—Mr. Wickley—you surely don't care? She never was fit for you, and now—she's an old, battered wreck——"

"Silence! If there is enough of her body left to hold her soul I will claim it and thank God." He checked himself and took leave of his guest courteously. Stewart looked for him at his lodgings the next day, but they were closed and he was gone.

Rob found her in a miserable hut in an alley in Pittsburgh. She was earning her living by dyeing old clothes for the work people about her. The purple stain of the dye was on her face and hands. Her hair

was gray. She spoke in a hoarse whisper.

"No, no," she cried, when he stood beside her, dumb, panting. "It can't be you. I'm an old cripple. I'm worn out. I'm going to die soon——"

He held out his arms. "Oh, God, give her to me!" he said. "I've waited so long!"

* * * * * * *

When I was a child I once saw Robert Wickley and his wife. He then was counted one of the great political leaders of the State. Their love story was whispered about thru the mountains. His long tenderness and care had returned much of the beauty of her youth to the woman, tho she was undoubtedly old and crippled. She was always richly drest, in pearl and dove colors; her voice was an appealing whisper, and a great peace and tenderness looked out of her eyes, which still held the singular charm of her youth. Her husband always adored her and believed that her virtues were more than human.

But every woman who came near them felt that it was he who had climbed into the high places of life, and with difficulty dragged his wife with him.

PHILADELPHIA, PA.

Prejudice Against Jews in the United States

BY CHARLES S. BERNHEIMER, PH.D.

[This and another article to be published shortly have been called out by unreasonable and often vicious expressions of prejudice against Jews in this country. Mr. Bernheimer, himself a Jew, fairly expresses their views, or their resentment, at such treatment. It is not easy to find those who will defend before the public, and with their names, this prejudice. Mr. Sydney Reid, who has compiled the promised article, could not interview any responsible persons who were willing that their names should be given; but they were quite willing to speak under the veil of anonymity. The very arguments they give show that it is prejudice rather than reason which controls them.—EDITOR.]

WHY does hatred of the Jews persist? Prejudice against him is a sort of chameleon ever crouching within his wake, changing color under the several circumstances under which it meets him. But it is more harmful and insidious than this reptile. In Germany it is called anti-Semitism; an attempt is made to give it a scientific significance by designating Jews as Semites and pointing out that assimilation and amalgamation between Semitic and Aryan peoples is impossible. In parts of Eastern Europe it takes the form of the "Blood Accusation," by which peasants are deluded into believing that Jews have kidnapped a missing child for the purpose of using its blood in the preparation of the Passover bread. In Russia there is opposition based on various motives. It has brought about more serious results than in any other country. There have been riot and bloodshed, numberless restrictions and persistent persecution, abetted by the Government, so that hundreds of thousands of Jews have felt compelled to leave the country.

In the United States the prejudice is milder than on the Continent, but it is nevertheless keenly felt in greater or lesser degree by the Jewish population. It assumes the guise chiefly of social ostracism. This does not imply, however, that its origin may not be traced to the same religious antagonism which has been the historical reason for ill-treatment of the Jews thruout the ages.

Prejudice against Jews may be religious, racial, or social, or all three of these; that is to say, it may be caused by the sense of opposition of one Church against another, by the feeling of alienation between two races or peoples, or by class hatred and antagonism.

Race prejudice has not shown itself in the same way in this country as in Europe. It is more prevalent toward recent immigrants among the Jews than

toward native born and those of longer residence, itself an indication that it is not based entirely on real racial antipathy.

The most offensive manifestation of class antagonism toward Jews in the United States is shown in the refusal of some hotels, especially at summer resorts, to accept Jews; in the non-admission of Jews in social clubs and college fraternities, and in the barring out of Jewish children from some so-called exclusive private schools.

On account of the prominence of the persons involved, the refusal of the Grand Union Hotel, at Saratoga, to receive Mr. Joseph Seligman still lingers in the memory of many people, altho it occurred over thirty years ago—in June, 1877. Mr. Seligman was informed that the proprietor, Judge Henry Hilton, had given instructions that no Israelites should be permitted to stop at the hotel. The ground of exclusion was that a certain class of Jews were obnoxious in manners and conduct. Henry Ward Beecher, in a sermon at the time, decried such action, and extolled the particular family for its culture and refinement.

Since the incident, exclusion in the United States has continued on one pretext or another. The following phrases have appeared in connection with advertisements of summer resort hotels: "We prefer not to entertain Hebrews or persons suffering from pulmonary trouble." "Patronage of Jews is declined." "No Hebrews." One of these appeared in a prominent periodical this year. Rev. Dr. Stephen S. Wise, rabbi of the Free Synagogue, protested to the publishers against its publication, and they replied that "Race prejudice is thoroly bad from every point of view," but they did not see how they could decline to accept an advertisement if a place determined to announce that it would not deal with Hebrews. "We should feel compelled to accept a similar advertisement from a Hebrew who publicly announced that he would not deal with a Christian."

Dr. Wise's answer indicates the only self-respecting attitude of the Jew: "It is a studied, public, cruel insult to a people. As far as it can, it indicts a whole people. Its direct and unmistakable implication is that all Jews are objectionable."

A lawyer representing a client who refused to allow a Jew to occupy an apartment in a New York hotel, last year, had the temerity to state in his brief:

> "The Court will take judicial notice of the fact that among the Christian element in the community there is a prejudice against living in community with Hebrews, and that in recognition of this prejudice owners of hotels and apartment houses thruout the country in many instances decline to extend their accommodations to persons of this race.

Municipal Justice Lynn, however, said this statement was "obnoxious to law and contrary to fact." "While the prejudice may exist among ignorant, illiterate and irreligious people, it certainly cannot be said to exist among the genuine 'Christian element in the community,' nor could it find lodgment in the mind of any self-respecting American citizen."

According to this dictum there must be a number of American citizens who are regarded with respect by their neighbors, but who are not self-respecting. Nor is it true that only the "ignorant, illiterate and irreligious" are prejudiced. There are persons presumably educated, and others formally religious, who show the same antipathy. It is an inheritance of the attitude of the Church toward non-believers, and it has not been rooted out. In a symposium publisht by the *American Hebrew*, April 4th, 1890, on the subject, "Prejudice Against Jews," participated in by a number of well-known individuals, not Jews, Margaret Deland said: "I am inclined to think that the teaching of the Church and Sunday school is largely responsible, but only among the uneducated classes." Altho the majority of the contributors to the symposium, particularly the clergymen, denied this or were unwilling to admit it, I, too, am inclined to regard Christian Church and Sunday school teaching as measurably responsible. The story of two little playmates is *apropos*. Becky and Irene were friends. But one day Irene said to Becky, "I shan't play with you any more." In answer to Becky's indignant request for a reason, Irene answered, "Because you killed my Christ."

The prejudice against Jews is an unreasoning dislike, an opposition, an antipathy, the result of a number of points of difference between them and non-Jews, and exercised against them indi-

vidually when on some occasions they seek to mingle in close communion with other elements of the population. It is true that in some circles they are welcomed, but it is equally true that in some they are merely tolerated, and in others absolutely excluded. We find that the places of exclusion are summer resorts, clubs and fraternities, where an arbitrary social standard is erected with reference to the admission of members or guests. in more than one such place all Jews, without distinction, are put in the class excluded. The Jew cannot be admitted on his individual qualities. He is peremptorily shut out because he is a Jew. It is not because of his residence, or his occupation, or his pedigree, but because he is a Jew. I recognize that class distinctions are sometimes made with reference to other elements of the community. They are frequently foolish and absurd; they are objectionable. But the most damnable and inexcusable is that which stigmatizes a whole people, and that is done wherever the only basis is being a Jew. The individual Jew may be most exemplary, but he cannot be admitted into certain places of honor, preferment or habitation simply because of his Jewish origin.

In politics, especially in New York, where the Jews are an important factor numerically, consideration is given to Jewish candidates by the several political parties. In a number of scientific societies, where merit is the only requirement, Jews are absolutely on a footing of equality with others. But wherever latent prejudice gets the upper hand, in other fields of activity, the Jew finds himself barred. He is locked out or kept from advancement as a teacher in schools, colleges and universities. These institutions do not put out any signs, "The number of Jews is limited," or "No Jews admitted," but it is well recognized that a very small proportion of Jews can gain entrance to any of the faculties, and in many an instance they are not admitted at all. In business positions many a time a person is kept out because he is a Jew. There are ostensible explanations, but at the bottom there is an unreasonable prejudice, which objects to the Jew because the objector has had a bringing up that cannot regard him with the same consideration as the non-Jew. He is mentally blacklisted, and the result is an attitude which continually prevents an unbiased judgment. Other individuals may have distinctive traits, but if a Jew shows them, not only is he often out of the running, but all Jews as well. The uncultivated man who calls the Jew a "sheeny" is in the same class as the educated man who doesn't want a Jew as a next-door neighbor or as a fellow worker. There is the excuse that one Jew brings many, but that again shows the general prejudice, for it assumes that even if there is an unobjectionable Jew, he will be responsible for others who are objectionable. Why should there be any fear of a number coming from one class called Jews unless it is assumed that the class is undesirable? It comes back to the fundamental opposition, which segregates the Jew and applies a separate standard to his conduct. In the appointment of Jews to places in professions, the theory of possible overcrowding cannot hold, because each one may be chosen on his individual merit. Summed up, the reasoning is thus: The Jews are a people. The habits and manners of some are objectionable. Therefore, all Jews are objectionable. The absurdity of this so-called reasoning is apparent. There are objectionable Americans, objectionable Irish, objectionable Catholics, objectionable Protestants, objectionable members of the "best" social sets. But they are not held up to ridicule and calumny by public advertisements, by public ostracism, by insulting epithets, by insinuating stigmatism, by a thousand and one open or covert efforts to discredit them. Summing up again, we find there is but one basis on the part of those who object to Jews, and that is, "We don't like Jews."

If an individual is disliked and excluded because of something offensive, that is a matter to be settled between the individual and his critics. But if the finger of scorn is pointed at him because he belongs to a certain class, then surely the class must take notice if it is self-respecting. If the world is to hold the entire class responsible for the appearance, the conduct, and the opinions of all its individual members, the self-consciousness of the class is roused, and as it grows in power of expression and

action, it surely must give voice and force to its disapproval of the calumniation of the class.

Jews claim the right of equality of opportunity. They may have peculiarities as a people and as individuals, but, mingling with the life of the community, working for its civic and social progress, they feel that they are entitled to impartial consideration.

Self-respecting Jews will not enter hotels, apartments, clubs, fraternities and schools where they are not wanted. But they should have opportunities to participate in professions and business, in art and science, irrespective of faith or nationality. Let us hope that democratic America will become sufficiently enlightened in the course of time that this class distinction will be eliminated.

New York City.

Unemployment in England

BY EDMUND KELLY, M.A., LL.B.

[Mr. Kelly, who has spent much of his life abroad, is now in this country devoting his attention largely to social reform. He is a Chevalier de la Legion L'Honneur, was a member of the faculty of Political Science at Columbia University from '95 to '99 and is the author of "Evolution and Effort," "Government or Human Evolution," "Practical Program for Workingmen," "The French Law of Marriage," etc.—Editor.]

THE mail has just brought us the details of what Mr. Asquith proposed to do with the unemployed, and the occasion seems to be opportune for comparing the question of unemployment in England and America.

In England the normal percentage of organized labor unemployed is between 3 and 3½ per cent. If the last report of the Federated Unions is correct there is for every unemployed trade unionist two non-trade unionists unemployed. A percentge of 3½ of trade union labor means, therefore, probably over 5 per cent. of labor, organized and unorganized. This may seem a very large per cent. and a very heavy burden upon the community, but it must be remembered that of this 5 per cent. a large number are members of trade unions and are practically supported out of trade union funds. . The rest are largely supported by private charity. It is probable, however, that many of them are continuously driven to drink, vagrancy and crime.

So long, however, as the trade unions report no more than 3½ per cent. of unemployed, the country does not deem itself bound to take any extraordinary steps in the way of relief.

A few years ago the percentage rose slightly above 3½ per cent.. and a departmental committee undertook to study the question of vagrancy, which always assumes alarming proportions when its ranks are swelled by a considerable number of unemployed. The departmental committee, after an investigation which extended all over the Continent of Europe, and after taking testimony the publication of which constitutes today the most exhaustive document on the subject, reported unanimously in favor of the adoption in England of the farm colony system. Unfortunately, the opposition of John Burns, the President of the Local Government Board, has, up to the present time, sufficed to prevent the recommendation of this committee being adopted.

About the time the departmental committee publisht its report, the trade unions reported a rise in the percentage of its unemployed from 3½ to 7 per cent. This gave rise to considerable agitation thruout the country. The Queen appealed to the public for subscriptions, and headed the list with a large sum from her private purse, and a bill was pushed thru Parliament empowering the local authorities to borrow funds to be applied to the relief of the unemployed, provided they secured the approval of the Government Board. A large sum was subscribed thru the initiative of the Queen and the Lord Mayor of London. A large

sum was also voted by local authorities for the purpose of furnishing emergency work.

Unfortunately industrial conditions failed to improve and the percentage now reported by trade unions is 9.4 per cent. This state of things has thrown England into convulsions. The unemployed have mobbed the streets of every city and manufacturing center of the country. A man called Gray has led a mob of "Hunger Marchers" to London, and the Socialist member, Grayson, having insisted in the House that all business be suspended in order to give precedence to the question of unemployment and, upon being ruled out of order and having refused to resume his seat, was expelled from the House.

A similar scene was enacted in the London County Council when Mr. Frank Smith took the same attitude as Mr. Grayson, and his eviction from the Council was prevented only by the physical resistance of those that crowded round to protect him. The majority of the London County Council today is Conservative, and they meet every effort made to pass resolutions in favor of giving work to the unemployed by the standard resolution to the effect "That the Council, having considered the policy and action of various committees, is satisfied that all proper measures are being taken by the Council in view of the existing want of unemployed." (*Daily News,* October 21st.) Nevertheless, the agitation in the city has assumed such alarming proportions that the Prime Minister, under the pressure not only of public opinion outside the House, but of the Labor party within the House, presented on the 21st of October a plan for their relief:

The War Office is authorized to make a special expenditure of £200,000 to permit of the enlistment of 24,000 special reservists.

A sum of £2,500,000 is to be spent on naval constructions and 2,100 men are to be employed at dockyard repairs.

One million five hundred thousand pounds is to be loaned to local authorities in order to provide work for the unemployed, and the central fund applicable to the same purposes is to be doubled and certain restrictions as to the application of this fund removed.

It is, of course, to be regretted that the unemployed, who ought to be instructed in the arts of peace, should on the contrary be set to work at the art of war. Mr. Asquith, however, prefaced his statement by observing that the measures proposed were essentially emergency measures and were not to prevent the dealing next session "with the permanent causes and conditions of unemployment."

Tho Mr. Asquith did not say so on this occasion, it has been previously stated that these measures for dealing with permanent causes of unemployment are to be for the further prohibition of child labor, the regulation of sweated trades and compulsory insurance.

It is difficult to believe that so well informed a man as Mr. Asquith really thinks he can put an end to unemployment by any such superficial measures as these. They are all excellent in themselves. They will trim the luxuriance of the evil and possibly to the same extent strengthen its growth. But English statesmen have always had a genius for never seeing further than the ends of their noses and yet always working in the right direction. By an instinct at once stupid and divine they proceed step by step toward a goal which they profess not to see; and, if accused of seeing it, they are wont to protest indignantly. The prohibition of child labor and compulsory insurance, while admirable in themselves, will tend toward the creation of an aristocracy of labor, which like the guilds of the Middle Ages only serve to swell everywhere the ranks of the unemployed, and so the condition of unemployment in England is today being used by the Government to increase the army and navy by purely emergency methods, while the only method that would affect any permanent relief, namely, the farm labor colony system, is strictly tabooed.

Conditions in England present in some respects considerable similarity with conditions in America, whereas in other respects they are startlingly different. For example, till Parliament past the bill authorizing local governments to make local grants for the unemployed, England shared with us the sinister distinction of being the only nations of the civilized world which had done nothing for the unemployed, and even today it can be said that nothing permanent has been done

even in England. It is true, an experiment in the shape of a farm colony has been begun upon a very small scale at Hollesley Bay, and considering the fact that the Hollesley Bay plan is in many essential details defective, it is encouraging that it is admitted by all to have produced excellent results. When, however, we compare conditions in England and America on the one hand with conditions in such countries as Germany, Belgium, Holland, France and Switzerland on the other, we have to admit that, so far as the unemployed are concerned, we Anglo-Saxons rank with Russia, Spain, Tibet and the interior of Africa. What has been accomplished in this respect in the countries above mentioned is so elaborate that it can find no room in this article. Moreover, it has been fully written up elsewhere.

Again, the London County Council has approved and voted millions to public works which would give employment to thousands of unemployed if it would only take the last step necessary, namely, put the work in execution. New York City finds itself in exactly the same predicament. The Comptroller's report, publisht in November, 1907, pages 5 and 6, shows that the city has not only voted but appropriated over $195,000,000 to public works. Of this much is urgently needed, especially in the Department of Charities; and yet we are told that owing to constitutional limitations the city cannot borrow the money to do this work and so we must do without buildings that are indispensable, and hundreds of thousands of men must remain unemployed.

In other respects, however, the conditions in England strangely differ from conditions in America: In England the official returns of the trade unions show today only 9.4 per cent. of unemployed, whereas the official returns made to our New York Labor Department show a percentage of unemployed amounting to no less than 34.7 per cent. These figures are drawn only from the reports of trade unions. Only about one-fifth of the labor population is organized into trade unions, and there is a very much larger percentage of unemployed in unorganized than in organized labor. It is probable, therefore, that the percentage of workingmen, organized and unorganized, at present unemployed is much nearer 50 than 34 per cent.; and yet, altho the evil of unemployment is in this country four times greater than in England, nevertheless not a thing has been done in this city by way of either permanent or temporary relief; and altho in England delegations of the unemployed have been received by the city councils of the English municipalities with the utmost courtesy, the Council sometimes rising in their seats to receive them, in New York all the efforts of the unemployed to reach the authorities have failed and all the efforts to reach the public have met with no more sympathetic response than the policeman's club.

We were told in October, 1907, that the unemployment was temporary and that it would disappear. A year has elapsed since that time and unemployment is not only as bad but worse than then. For since October $25,000,000 has been withdrawn from the savings banks by workingmen and trade unions; and the unemployed, therefore, are not only more numerous than they were in October, but they have spent the savings they had put aside to face this very emergency.

Again, conditions in America appear to be permanently far worse than they are in England. The report of the Commissioner of Labor of New York State shows that even during periods of prosperity the average amount of unemployment in the trade unions was 16.1 per cent.; so that in New York we carry even during prosperous years a permanent army of unemployed five times larger than the corresponding quota of unemployed in England under similar conditions. From this point of view, therefore, the necessity of taking permanent measures to relieve unemployment seems far more imperative upon us than upon our English cousins, and if the English Departmental Committee reported unanimously in favor of the farm colony plan, it seems reasonable to suppose that it is certainly entitled to some study and consideration over here.

New York City.

MUSIC ART AND DRAMA

Manhattan Opera House

The opera season begins this week, and Mr. Hammerstein has set a pace in it which, if kept up and equaled at the Metropolitan, will make this the most memorable operatic winter on record. On the opening night there was Puccini's "Tosca," with Zenatello, Renaud and the new Italian prima donna, the Countess Maria Labia, who helped D'Albert's "Tiefland" to a run of over a hundred nights in Berlin. That opera is to be given here too, but at the other house, so we shall, unfortunately, have no opportunity to hear this singer in it. Mary Garden appears as Thais in Massenet's opera, to be followed at once by the first scenic production of Saint-Saëns's "Samson et Dalila," which is one of the most popular works in the repertory of the Paris Opera. On Saturday afternoon "Tosca" is to be repeated, and in the evening Tetrazzini will appear here for the first time as Rosina in "The Barber of Seville."

MARIA LABIA
In "Carmen."

Mr. Hammerstein is obviously playing his cards well. He discovered last year that the New York public does not care for the cheap Saturday night performances, with second-rate singers in most of the *rôles,* so he throws down one of his big trumps to indicate that hereafter Saturday night will be a $5 night, like all the others. He is playing them well, inasmuch as he is continuing the policy which won him success last year. That policy consists in the producing of new operas, especially of the French school. Last year, apart from Tetrazzini's appearances, his most profitable evenings were those on which he produced modern French operas—Charpentier's "Louise," Debussy's "Pelléas et Mélisande" and Offenbach's "Les Contes d'Hoffmann." His Italian novelties, "Andrea Chenier" and "Siberia," were less successful, and it was therefore to be expected that he would continue his importation and revival of French operas. His list for the winter includes Massenet's "Le Jongleur de Nôtre Dame" and "Griselidis," as well as "Manon," Bizet's "Les Pecheurs de Perles" and the Saint-Saëns opera already referred to. He will also produce an opera named "La Princesse d'Auberge," by a Belgian composer, who is afflicted with the un-

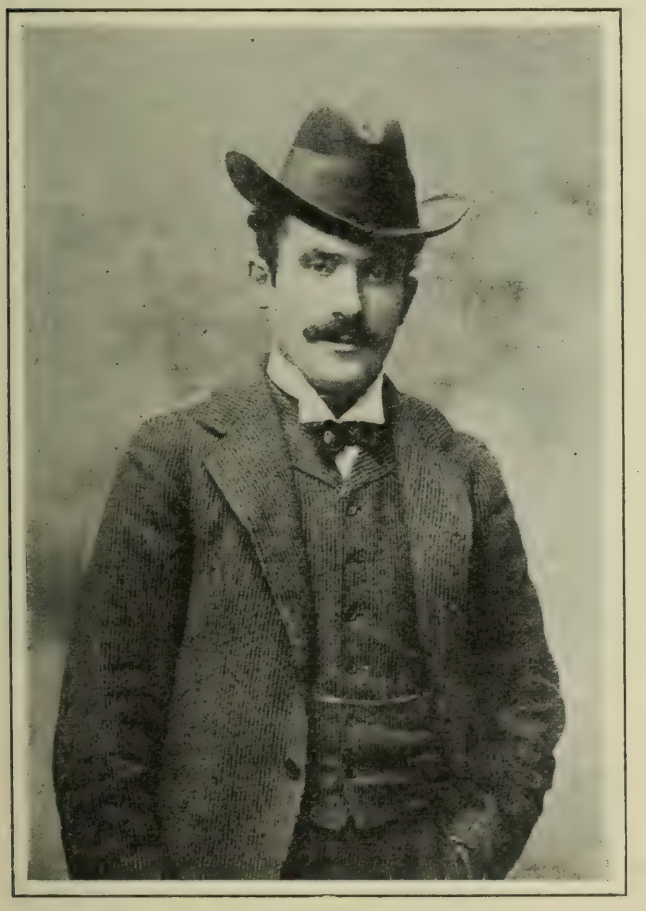
GIULIS GATTI-CASAZZA,
General manager, Metropolitan Opera Company.

musical name of Jan Blockx, and "Dolores," by a Spaniard named Breton.

The music of these two men will be entirely new to American audiences. Lovers of the best in art will appreciate the revival of Verdi's "Otello" and "Falstaff." What the public's attitude will be toward the production at the Manhattan of Strauss's "Salome," which was taken off the Metropolitan stage in response to a general protest, remains to be seen. It is possible to make this opera less offensive to healthy minds by modifying the last scene. Mary Garden has studied the title *rôle* with the composer, and she is to do the dance herself. The other famous artists on whom Mr. Hammerstein will rely this season are Melba, Tetrazzini, Labia, Gerville-Reache, Dalmores (who has been winning laurels in Bayreuth and other German cities since last spring), Renaud, Sammarco, Dufranne. Cleofonte Campanini, who has been the Manhattan's central pillar for two years, is back, as a matter of course, but for the Philadelphia branch of the Hammerstein Opera a new conductor has been engaged, also a separate chorus. It is also proposed to produce some opera pantomimes, or spectacular ballets, to follow the short operas.

Metropolitan Opera House

When the Metropolitan Opera House was built, Colonel Mapleson discontinued his opera at the Academy of Music because, as he said, he "could not fight Wall Street." Mr. Hammerstein has been fighting these millionaires for two years and has at last aroused them to a supreme effort to make his light seem like a tallow candle compared to their electric chandelier. They have given the new managers, Gatti-Casazza and Dippel, permission to engage the best there is of anything, anywhere, regardless of cost, and the consequence will be a season which will doubtless contrast most favorably in not a few respects with previous ones. New operas are to be not only promised, but actually produced, among them being works from nearly every musical country in Europe—Germany, Italy, France, Russia, Bohemia. Germany will be represented by D'Albert's "Tiefland," the most successful German opera since Humperdinck's "Hänsel and Gretel." Humperdinck himself will probably come over to conduct the first performance anywhere of his new opera, "Königskinder." France will be represented by Laparra's "La Habanera," Russia by Tschaikowsky's "Pique Dame," Bohemia by Smetana's "The Bartered Bride," Italy by Puccini's early work, "Le Villi," and Catalani's "La Wally." It is also probable that an American opera will be sung in English, and the work chosen is "The Pipe of Desire," by Professor Converse, of Harvard University.



The two least satisfactory aspects of the Metropolitan, apart from the stale repertory, have long been the scenery and the chorus. In both of these departments a sweeping reform is to be effected. Mr. Gatti-Casazza's productions in Milan were noted throughout Europe for their scenic splendor and realism, and with the aid of Wall Street he is about to make the Metropolitan a rival in this respect of La Scala. It is related of him that when he produced "Cristoforo Colombo" he sent his artists to Genoa to

copy one of the caravels that brought Columbus to America.

As for the choral forces, they will be divided, one half of them singing the Italian and French operas, the others the German and American. Mr. Dippel made a special tour of Germany to pick out the best chorus singers in the various opera houses. When the choir was completed a concert was given at Bremen, and it was agreed that such choral singing could not be heard anywhere except at Bayreuth. This improvement will redound to the advantage especially of "Lohengrin," "Die Meistersinger" and "Parsifal," which is to be restored to the list.

Among the new singers to be heard at the Metropolitan—and there are many—four are specially prominent: Miss Destinn, whose war with Geraldine Farrar keeps the cables busy, and who shared the honors of the last London season equally with Melba and Tetrazzini; Maria Gay, who has created a sensation in Carmen, a part which she is said to act even more realistically and capriciously than Calvé; Schmedes, one of the leading German tenors; and Feinhals, of Munich, who, judging by all accounts, is a German baritone of the very first rank; here he takes the place of Van Rooy. Among the favorites re-engaged from last year are Eames, Farrar, Fremstad, Gadski, Homer, Morena, Sembrich, Bonci, Burgstaller, Burrian, Reiss, Campanari, Goritz, Scotti, and, of course, Caruso, without whom the Metropolitan would not be itself. He is becoming more industrious and will be heard in some new *rôles*.

One of the most interesting things to look forward to is the interpretation of some of Wagner's operas by Toscanini, Italy's greatest conductor. He is much more eager to conduct these than the operas of his countryman, Puccini, only two of which he has claimed for himself. With Toscanini, Mahler and Hertz, the Metropolitan can defy comparison with any opera house in the world. Even *blasé* opera-goers are on the tip-toe of expectation.

ARTURO TOSCANINI,
New conductor, Metropolitan Opera Company.

October Concerts

Confronted by the specter of two grand opera companies containing most of the world's leading singers, the concert givers have been at a loss what to do. Not only does the general public prefer opera to concerts, but many connoisseurs are of the same mind. Consequently, while the opera lasts—and it lasts nearly thruout the musical season—there is little room for concerts. An attempt was made this year to crowd a considerable number of them into the month of October, which by tacit consent had been dropped from the list of musical months, but the financial results have been such that the experiment is not likely to be repeated. Oysters are considered good during the eight months which have an R in them, but music is relished—or at any rate supported—only from the first of November to the last of April—just one-half the year.

There have been a few exceptions, notably the recital of Madame Chaminade, which attracted a crowded audience to Carnegie Hall and attested the extraordinary popularity of this French com-

poser. Madame Chaminade is to be commended for having refused to become a disciple of the Parisian cacophonists who cultivate ugliness for its own sake; her ideals are Schumann in Germany, Saint-Saëns in France. Her weakness is suggested by the statement that she has penned over five hundred compositions. That means a fatal dilution of her ideas—ideas which were in no case particularly creamy. However, for those who find cream too rich—and most people drink milk—Chaminade is a good caterer. Her short American tour is an assured success. If her concert in Carnegie Hall did not arouse a great deal of applause, that was due partly to the fact that she is by no means a perfect player of her own pieces, while her vocal aids were no better.

Hermann Klein's series of Sunday afternoon concerts at the new German Theater would probably have drawn larger audiences had not the October weather been so suggestive of the preferableness of being out of doors. A number of artists have been heard at these entertainments, which are to be continued thruout the season. They occur at the same hours as the Carnegie Hall concerts of Walter Damrosch and his Symphony Orchestra, which began last Sunday, with Josef Lhévinne as soloist. Mr. Lhévinne also appeared in a recital, at which he gave much pleasure, particularly by his virile performance of Liszt's sonata, which is steadily gaining in favor. Another prominent pianist who chose an October date for his reappearance in America was Prof. Emil Sauer, who, when he was first in this country, a decade ago, was called the "pianissimist." He has got over his tendency to exaggerate to the point of inaudibleness, but the light, airy, dainty, graceful in music are still more in his line than are depth and grandeur. His own compositions did not add much to the agreeableness of his programs.

Notwithstanding the strong operatic competition, there will be as many concerts this season as usual. Of orchestral entertainments—including Sunday concerts at the opera houses—there will be over 150, and the list of visiting pianists, violinists, and concert singers is quite as long as usual. Most of these make an appeal for metropolitan approval, but their earnings, as a rule, are greater in other cities, where the opera does not absorb so much money—money amounting on some Saturdays, for the two houses combined, to over $50,000.

Art Notes of the Month

The New York Water Color Club is first in the field of exhibiting societies with its nineteenth annual exhibition at the American Fine Arts Building, 215 West Fifty-seventh street. The exhibition will remain open until the 22d of November.

This is not a remarkable exhibition, but there are several instances in which artists have drawn upon their imagination and instilled into their pictures something more than bare facts.

John C. Huffington has made us feel what he felt in "The Mystery of the Falling Snow." The snow slowly sifts down thru his landscape and rests ever so lightly on tree and brush and roadway. In "Once There Was a King in Thule" Robert Burns Williams has pictured the fabled city with thought and evident pleasure. We go with him.

Israel Doskow has made a decorative composition which he calls "Decadence." Having chosen his subject, he has treated it cleverly and with restraint. About the center of his picture is seated a huge figure. The hands and feet are enormous, the head small in comparison. The face repulsively bearded, the lips loose, the eyes small, the brain pan small. His hands and feet seem useless to him; not an idea can travel thru that brain; the whole figure slumps and is hopeless. The sides of the picture are supported by straight trees, across which and behind the figure a tree with more abundant foliage is falling. Beyond the horizon—seen between the trees—is the setting sun.

Four little landscapes by George Koch show beautiful selection and fine composition in line and tone.

Adelaide Deming is the winner of the "Beal Prize" with "Moon Shadows." The picture lives up to the title.

Thomas P. Anschutz has three pastels. Solid workmanship, but the figures are unpleasantly posed.

Well selected, decorative in color and composition, is Charles L. A. Smith's "In the Golden Pasadena Valley," while Colin Campbell Cooper treats us to another glimpse of New York and several brilliant little landscapes.

The New York art dealers are getting ready exhibitions after their kind. At Durand Ruel's there will be paintings of the French school.

The Macbeth and Montross Galleries, pictures of American artists; later there will be special exhibitions of the work of individual artists and groups of artists at these galleries.

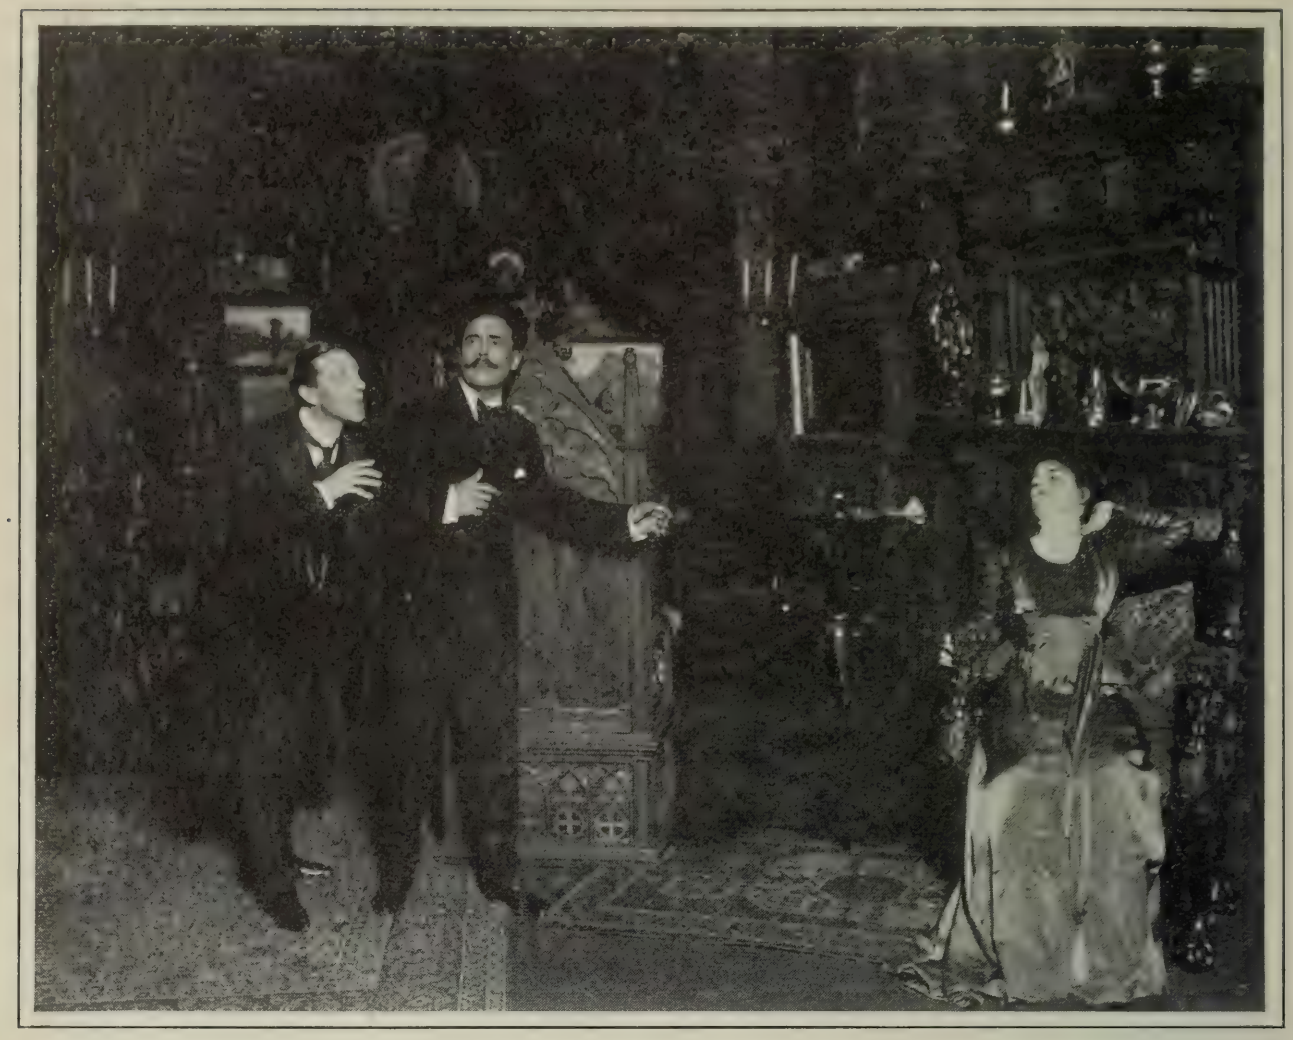
At Ehrich's, exhibitions of old masters. The last named gallery is showing just now some Dutch and English masters. Among these are two beautiful little pictures, one by Constable, the other by George Moreland. These pictures present the same subject, "At the Ford," after the special vision of each artist. The Moreland makes the most of the horse with the boy on its back, with again special attention to the gray horse drinking thirstily. The whole picture is a beautiful harmony in grays. The Constable includes water, earth, trees, sky and boy with horses standing in the water, in one big, comprehensive grip, and you enjoy each part for itself, and the whole as a loving picture of a humble happening, in this beautiful world of ours.

The annual winter exhibition of paintings and sculpture of the National Academy of Design will be held at 215 West Fifty-seventh street, as usual. Exhibits received only November 23d and 24th. The Academy's declared intention of giving more room to sculpture will be splendidly carried out, owing to the fact that Mr. Frank Gould will loan his riding ring, adjoining the Fine Arts Building, for the purpose.

William Ordway Partridge, in a letter to the *American Art News* concerning the decision to erect a replica of Rodin's memorial to Whistler at Lowell, Mass., has gone into the merits of both sculptor and painter. His conclusion seems to be that Whistler is not worthy of a memorial, and that Rodin's work has done untold harm and should not be encouraged.

Mr. Partridge apparently objects to the erection of a memorial by a foreign artist in this country to a man whom he considers was not a true American. He thinks there are plenty of true Americans who deserve memorials, and plenty of really talented young men ready to make them.

These young men are unemployed because people will buy their art abroad for the sake of a name. We think that as long as Whistler's work survives he will not require a memorial at any man's hands to keep his memory green.



The people at Lowell evidently wish to honor Whistler.

Rodin has been chosen to make the memorial to Whistler for London, in the belief that he is the greatest sculptor abroad.

St. Gaudens, for the same reason and for the same cause, was chosen in America.

With these facts in view it does not seem to us strange that the people of Lowell may consider it both interesting and instructive to Americans to possess a replica of the thought of a man occupying such a position as Rodin's. A great artist has a message to all who may read, irrespective of nationality. Shakespeare, Goethe and a few others have appealed to the human race, not simply the English or German race. We think that whatever Rodin may do it will be interesting from some point of view, which cannot always be said of some home products in sculpture.

A very interesting exhibition of engraved portraits, by Robert Nanteuil (1630-1678) was held at the gallery of Frederick Keppell & Co., from October 14th to November 2d. Forty-seven examples of the work of this great portrait engraver were massed in the exhibition. The numbers include a representative showing of this artist's work, characterized as it is by great simplicity and straightforwardness. The famous portrait of Nicolas Fouquet was included in the exhibition. There was also an example of Pompone de Bellièvre, from the painting by Le Brun. This was followed by a showing of prints by Albrecht Dürer,

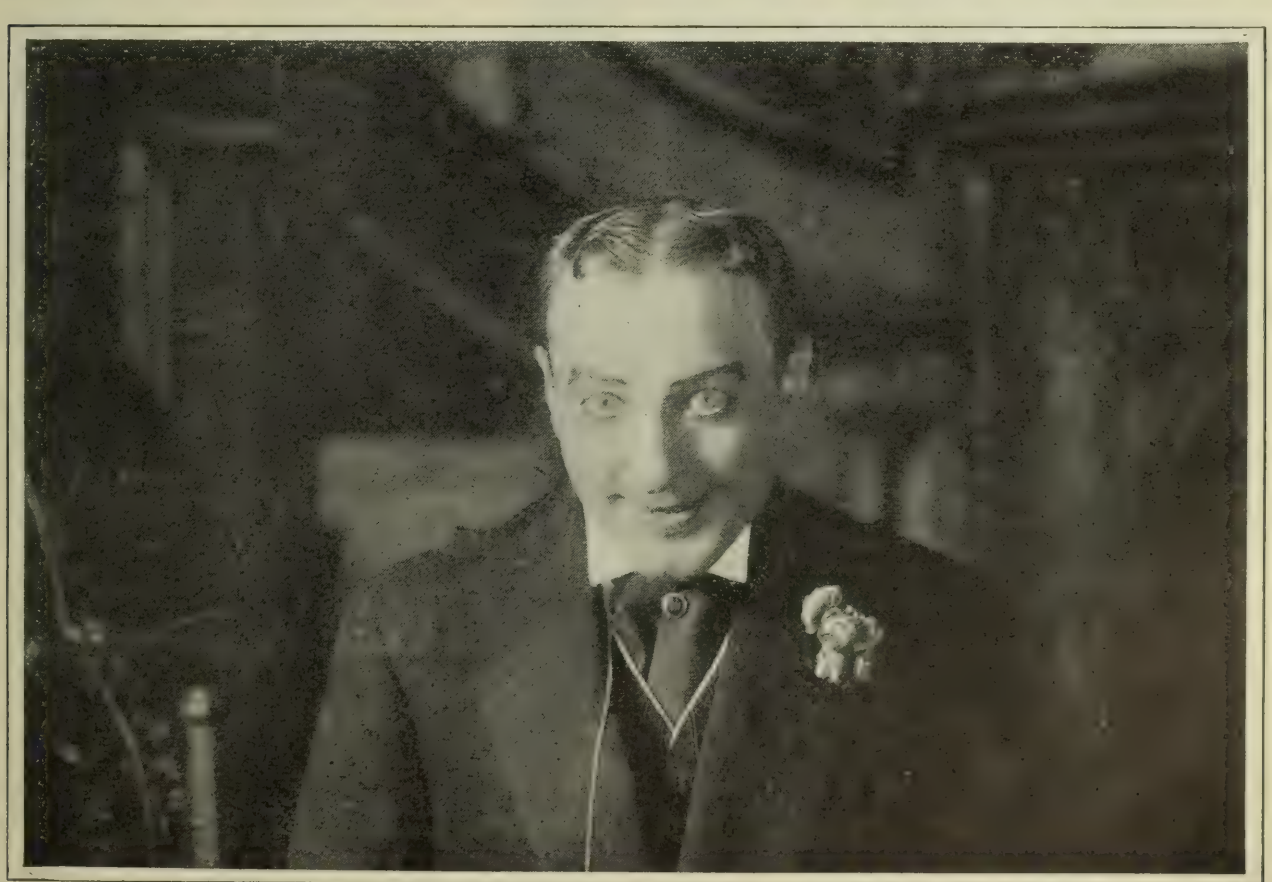
GEORGE ARLISS AS "THE DEVIL."

which will continue until November 30th. An exhibition of original etchings by William Walker, Lester G. Hornby, Eugene Béjot, D. Y. Cameron, Andrew F. Affleck, Frank Short, F. Burridge and Charles J. Watson is now on at Wunderlich's.

Alice Boughton had an exhibition of her photographs at Pratt Institute, Brooklyn, which exhibition was followed by a collection of some fifty paintings and illustrations by Howard Pyle. The Members' Fall Sketch Exhibition, at the National Arts Club, began on October 21st and continued until November 7th. The exhibition included one hundred and seventeen paintings, nineteen examples of sculpture work, and twelve miscellaneous objects that were loaned to the club for exhibition. The Grolier Club opened its series of fall exhibitions with one dealing with the work of Joseph Pennell, which will continue until November 21st.

Drama

The drama runs to extremes. Last year "The Servant in the House," in which Christ was portrayed on the stage, was the success of the season, and now "The Devil" is all the rage. He began his career in New York by stirring up mischief. In Europe the play has made a great sensation, bringing profit to its author, Ference Molnar, a Hungarian, and attracting the notice of two American theatrical managers, Henry W. Savage and Harrison Grey Fiske. These gentlemen each returned to New York with an idea that he alone had the authorized version, and each, in secret manner, began preparations for the production. The outcome was simultaneous opening nights and a lawsuit. The court proceedings do not concern the theatergoer; for him, "the play's the thing."



"The Devil" is not a great drama; it has the usual triangular plot, and the frock-coated Satan symbolizes a state of

mind. As a psychological study, "The Devil" is somewhat unique, but its distinction rests wholly in the acting, on whatever subtlety is infused into the part by the actor. Deprive "The Devil" of this characteristic, and as a play it does not rise above the ordinary. The hero and heroine are obviously quite competent to tempt each other.

There are two ways of playing "The Devil." He may either be crafty, witty, subtle, always the tempter, yet apparently the gentleman; or he may be the theatrical red devil of the bill posters—melodramatic, tricky, and too evidently cloven-hoofed. The first way is in keeping with Molnar's conception, and Mr. George Arliss, of the Fiske company, admirably grasps that fact. The second way takes from the one strong feature of the piece; Mr. Edwin Stevens, of the Savage company, has unfortunately adopted that idea. Even Mr. Henry E. Dixey, who lately replaced Mr. Stevens, retains some of the forked tail, but he is not so boldly apparent in his diabolical actions.

Undoubtedly, the theater attempts to regard the element of timeliness in its transactions; its tendencies are more likely to be imitations, as when "The Wolf" was followed by "The Royal Mounted," that by "The Call of the North," and that in turn by "Pierre of the Plains," all of them Canadian in environment. The dangers of dramatization were avoided by Mr. Edgar Selwyn when he turned Sir Gilbert Parker's "Pierre and His People" into a play. He simply took the essential outlines and dealt freely with his story. Pierre, the Canadian gambler, may have been a terrible character, but only the sweeter sides are shown on the stage, those that suggest courage, fortitude, friendship, and the strength to stand defeat in love. He is a true example of the old adage about success at cards. Mr. Selwyn's acting was refreshing, and he was ably supported by Miss Ferguson, who, as the heroine, Jan Galbraith, made a pretty picture of youthful adventure. "Pierre of the Plains" is by no means exceptional, but it is wholesome and interesting.

Perhaps the closest adherence to timeliness is found in "The Traveling Salesman," who reached New York at the same period that buyers and sellers were crowding the streets from all parts of

MR. HENRY E. DIXEY, WHO IMPERSONATES "THE DEVIL."

the Union. Mr. Forbes, author of "The Chorus Lady," has in "The Traveling Salesman" been genial, direct in his humor, commonplace in his story, yet with a popular appeal to the average theatergoer. The hero is distinctly an American product; so is the heroine, a station mistress who shares with him her Christmas dinner; so are the drummers who gather round his table for an excellently played game of cards.

Whether or not the element of timeliness prompted Mr. Belasco to accept William J. Hurlburt's "The Fighting Hope" is harder to determine. "The Lion and the Mouse" has been exceptional in its success, and there is little doubt that an American play is not as hazardous a commercial proposition for the theater as the managers used to believe. "The Fighting Hope" is instinct with newspaper interest; by the pronounced excellence of the acting done by Miss Blanche Bates, Mr. Charles Richman and Mr. John W. Cope, an ordinary story is raised to compelling strength. Laid within the shadow of Sing Sing prison, it deals with a thoroly honest millionaire, who, under suspicion, finds it difficult to clear himself *because* he is a millionaire; it deals with a woman whose husband is in prison in default of this other man, and who determines herself to become secretary to the rich banker, and thus to gain evidence which will clear her husband. But after she has conclusive proofs of the millionaire's honesty, there follows the close of motives and—glaring melodrama. The play, none the less, possesses excellencies.

MR. JOHN DREW
In the title role of W. Somerset Maugham's comedy, "Jack Straw."

"The Gentleman from Mississippi" is an example of a play made to order—cut after the pattern of a former success, "The Man of the Hour," and to fit Mr. Thomas A. Wise and Mr. Douglas Fairbanks. The dialog has much local appeal, and the main lines of the drama follow vital American ideas and ideals of honesty in politics, but the construction is hasty and crude. There is red blood in the plot that tells how a good-natured old Southern Senator, new to the job, and his hustling young secretary outwit a clique of grafters; but where we have strength of motive, the case demands strength of workmanship. In spirit the play is good-humored and bright, but the humanity is only half sketched. The co-stars act with zest, and Miss Lola May exhibits an unusual amount of charm.

A jumble of action around serious topics is to be deplored. This latter tone marks the whole of Mr. J. E. Goodman's "The Man Who Stood Still." Whether by coincidence or not, the play attempts much the same problem actuating Mr. Zangwill's new drama, "The Melting Pot." "The Man Who Stood Still" is an orthodox Hebrew jeweler, whose daughter runs away with a Christian; the theme is supposed to deal poignantly with progressive ideas, but Mr. Goodman's lack of restraint throws him into absurdities which call for noisy acting. The young playwright was evidently in earnest; beneath the excesses may be detected sincere effort, but the effort is weak, even in the hands of such a competent artist as Mr. Louis Mann. On the whole, the character action in "The Man Who Stood Still" would be condemned by the serious inhabitants of the East Side.

A different phase of East Side life prompted the dramatization of "Regeneration," from Mr. Owen Kildare's novel, "My Mamie Rose." In the story, the development of the Irish tough was truly a regeneration, but in the play the regen-

eration is spoiled by an anti-climax. That was due to the bungling of dramatization, for Mr. Daly had an excellent conception of a Bowery tough succumbing to the refining touch of a woman, and the company gathered around him was one of the best seen so far this season. "My Mamie Rose" could have been made a play of some large value; but, as it is, it was hardly saved, even by the commendable efforts of a strong cast. The impression left was vague; the hero stood midway between regeneration and degeneration.

Mr. Zangwill has also, it seems, touched upon another subject in his "Melting Pot," which constitutes the timely theme of "The Man from Home,"

MISS BLANCHE BATES
In "The Fighting Hope."

joint product of Booth Tarkington and Harry Leon Wilson. In the latter piece, international marriage is treated in a way to please the most ardent American; everything is done to place the little English fortune hunter in an absurd position; he is even given a conventional lack of humor. Such a personage finds it difficult to cope with the Gentleman from Indiana, who thwarts him at every turn. To make the atmosphere, the complications in plot are furthered by a Russian archduke and a Russian revolutionist. "The Man from Home" is interesting, well staged, and acted in accordance with popular demands.

We Americans must dispense with the

MR. EDGAR SELWYN
As Pierre in "Pierre of the Plains," a dramatization of Sir Gilbert Parker's "Pierre and His People."

idea that the English humor is blunt, however. Take "The Mollusc" as an example of clean and clever comedy; it would be difficult to excel it in the matter of poignancy and delicate irony. Its wit is something more than English. This is because Hubert Henry Davies directs his shafts, not at English feminine foibles and weaknesses, but at human foibles in general. Its motives apply to every one. The heroine is of the order called *Mollusca*—not, according to our American slang, a "clam"—but a beautiful woman of indolent disposition, who exacts that every one around her encourage her graceful passivity and consent to wait on her. The play has four parts, well handled by an English company, with Miss Alexandra Carlisle and Mr. Joseph Coyne in the lead. Without being deep, without even being popularly romantic,

the dialog is marked by a delightful *verve* that is refreshing.

The other English importation, "Jack Straw," in which Mr. John Drew appears, is from the pen of the much-talked-of W. Somerset Maugham; it is perhaps too thoroly English for American taste. In this country, our ill-breeding is not quite so middle-class as that of the family whose feminine lead is cleverly and coarsely played by Rose Coghlan, and who ogles and bows down before Jack Straw, the waiter, when she hears of his noble lineage. Then these social climbers abuse him when they are led to doubt this nobility, only to find in the end that, despite their lack of decency, he has captured the daughter's love and has only been a waiter for the fun of the adventure. Mr. Drew moves thru his part unerringly, but with no distinctive effort. There is no artistic demand to be had from a plot which at best is only an adventure, and which is lacking in spontaneous human wit.

The importations from France have not been fortunate. "Love Watches" serves as a shallow vehicle for Miss Billie Burke, who at best is only a slight and pretty comedienne, and who here has a rôle to fill of a torturing young wife, whose jealous love for her husband leads to temporary separation. Then there is a new play by Henri Bernstein, whose "The Wife" was such a success last year. Mr. William Gillette has translated "Samson," and in his delineation of the central character he struggles to read into the part a consistent psychological development. The play is one of the usual French intrigue, written *up* to one or two special situations; its characterization is wholly wanting in telling quality. Mr. Gillette himself is often obliged, in his acting, to relinquish one of the chief charms of his former work—his apparent calm and quiet tone.

Altogether, the dramatic season's beginning has not been propitious; unsuccessful plays in number have disappeared as quietly as they have been greeted. We would say they died in a good cause if, thru their lack of appeal, the managers could be made to profit by their loss.

MR. WILLIAM GILLETTE IN HIS OWN TRANSLATION OF HENRI BERNSTEIN'S "SAMSON."

Literature

Appalachian Fiction

THE Appalachian system breaks up toward the South into the Cumberland Mountain range between Kentucky and Tennessee; the Alleghany, that fades into the Great Smokies of Tennessee, and the Blue Ridge, that has its foothills in North Georgia. Three popular Southern novelists have laid the scenes of their stories this year in these three sky neighborhoods of Nature. John Fox finds the trail of the Lonesome Pine[1] high up among the Cumberlands and follows it into an idyllic love story, as well as into a thrilling demonstration of the way civilization in the forms of law and order is advancing up the mountain sides to the fastnesses of medieval humanity still to be found there. Alice MacGowan calls her buxom heroine "Judith of the Cumberlands,"[2] probably because she did not know for certain whether Miss Murphy would not place the scene of her annual novel among the Great Smokies, upon which we all feel that she has a kind of literary lien. But Judith is really Judith of the Smokies; and this is all right. There is no danger of her mountain tilted horoscope conflicting with that of Miss Murphy's heroine this year, who is a rich, dashing young widow, living thru her second love season in the Mississippi swamps. Harbin finds his characters[3] as usual in and about a little North Georgia village. And without knowing what the others were doing, the three together have written a curiously interesting and romantic anthology of Southern mountain folk. They do not agree, to be sure, but Nature herself does not agree with Nature in some other place. So there is more wit and philosophy among Harbin's people than among those who fight and "layway" one another in Fox's novel. And while Miss MacGowan's story is superficial as compared with either of the other's, from the standpoint of mere literary photography it surpasses both.

Mr. Fox's story is of love, of a feud between the Falins and the Tollivers, two mountain tribes, and of the law and order guard at the Gap, which, under the leadership of John Hale, brings to the mountaineer his first conception of impartial and invincible justice. Jane Tolliver, the little heroine, is a wild flower of womanhood which Hale discovers somewhere along the trail by the Lonesome Pine, and which he nurtures into a splendidly cultivated young woman.

The author presents very admirably the poetic side of mountain life, even lifting the spirit of its feuds into something like rude knight errantry. He thinks these people are still cotemporary with our pioneer forefathers, that they have not changed with the passing of a hundred years over their mountains because they have been lost out of our times. The spirit of the twentieth century has not yet reached them, hidden away in the green coves, and among the spurs of that upper world where the earth rises upon its elbows into the heaven of heavens. The story progresses with that fascinating interest we always take in the fiercely truthful lives of primitive folk when adequately portrayed. And presently we realize that while the Cumberland mountaineers may not be civilized to any very high degree, they have sensibilities, and their own deeper delicacies of mind more highly developed along the lines of gravity and personal pride than we shall find in certain cultured circles of society.

Ths is one of the features that distinguishes Mr. Fox's story from Miss MacGowan's novel. There is no philosophy of life in the latter, beyond one or two newspaper paragraphs about bringing a knowledge of law to the mountaineers, who never get it till too late, when they have been handcuffed by it. Her book is simply a rude, unvarnished picture of mountain folk drawn with a cool literalness which brings into the foreground all

[1] THE TRAIL OF THE LONESOME PINE. *By John Fox, Jr.* New York: Charles Scribner's Son. $1.50.
[2] JUDITH OF THE CUMBERLANDS. *By Alice MacGowan.* New York: G. P. Putnam's Sons. $1.50.
[3] GILBERT NEAL. *By Will N. Harbin.* New York: Harper Bros. $1.50.

their coarseness, with little of the finer touches of intelligence to soften it. Judith's animal-like hunt for a lover in the first chapter is set forth with a kind of offensive relish by the author which really caricatures the girl, and must surely misrepresent the womanhood of the mountains in that Miss MacGowan appears to have left out something which would have made Judith's forward manner naïve rather than deliberately immodest. Her silence and withdrawal from the man-chase later scarcely atones for that first offense. But, however we may object to this dramatic ruthlessness at the expense of maidenhood, Miss MacGowan shows a more intimate acquaintance than does Mr. Fox with the social mannerisms and speech of the mountaineers. And both are to be congratulated upon the reality, freshness and charm of their natural scenery.

Will Harbin's last book may well have silenced his most ardent admirers. From the critic's point of view, we cannot deny that it is one of his best stories. The characters in it are as real as the earth. (Somehow Harbin has always managed to get beyond romantic hearsay in his fiction, and what he writes is so literal of life that many readers miss the fact that this is the very virtue of his art.) And he has not failed to underscore a moral in the tale, as homely as righteousness usually is when it has been bred in the simple hearts of a few decent but unfashionable folk. Yet it is impossible to give the reader an inkling of the most interesting features of the story, because they are so scandalously improper. If the author had clothed the effort of the preacher to seduce the girl, or the village "fast lady's" effort to seduce the go-go-ood hero with the moral phrasing used by the most advanced writers of indecent fiction, we might have managed to discuss the delicate details of the sin in the story, but he has written it all out with a kind of staring simplicity, as if he had just seen right and wrong turned out of the Garden of Eden without wearing apparel.

One naturally associates Harbin with pastoral views of life, but there is not a man in the country who can show with such diabolical accuracy how animal ecstasy may be mistaken for spiritual enthusiasm, not one who can so completely divest both worldly and religious cynicism of its fashion, and present it unadorned from the lips of old earth-hardened humanity. We do not recommend the book, but it is a good one. And marked copies might be sent with excellent moral effect to that really small number of superficially eloquent but morally idiotic young preachers. When a man cannot detect the difference between a hymn-tune and his own procreating instinct he is in danger of hell fire and ought to know it, even if he has to be told.

Channing's American History

Professor Channing's second volume* opens with the English restoration of 1660, and the return of king and courtiers, "poorer in purse even than they were in morals," and carries the story to the eve of the revolution when the colonists, "in all that constitutes nationality," were quite a separate nation from "that empire from which they had sprung." It not only covers the hundred years between 1660 and 1760, but it shows as no other history from a single hand has done how the great transformation came about which split the course of imperial development and started the portentous deviation. The difference grew naturally, inevitably, and almost unnoticed on either side, until at the close of the French wars the alienation in government and interest was complete.

The difficulties of this second volume have been greater than any the author will encounter again. The period of beginnings — of spectacular Plymouth Rocks and one-legged (if, indeed, he was one-legged) Stuyvesants—was well over before 1760, while the dramatic interests of the revolution did not fill the stage until after this date. The century has been the stumbling block of historians generally. Either they have jumped boldly over it or else they have floundered in the intricacies of its thirteen-fold constitutional development. More than this, the genius of Parkman has over-developed a single side of its history. The French and Indian wars were indeed of

*A History of the United States. *By Edward Channing.* Volume II, A Century of Colonial History, 1660-1760. New York: The Macmillan Co. Price $2.50.

consequence in the century before the Revolution, but they were not its whole, or its chief history. Other writers have been content to make this period a century of wars because of Parkman's ready guidance. Professor Channing's work is startling in that he cuts down his French wars to their fair proportion in one-eighth of the volume, and devotes the space thus rescued to the institutional growth of the colonies.

Not infrequently the bickerings between Governors and Legislatures and popular factions, in which American liberties found their birth, are tedious in the reading, but the author has done the best that can be done with a difficult job. His style is always clear and precise. The same conscious authority which marked his first volume is here, too. The hand of the master is imprest on every page.

Occasionally, gleams of luminous humor lighten the traveler thru the dark century. George Fox, for instance, turbulent, overbearing, deadly in earnest, marches up and down the streets shouting "'Woe to the bloody city of Litchfield.' He went to the market place with the same cry and marveled that no man laid hands on him—and so do we." William Penn and his father, with their mutual dislikes appear. But when the son defends himself in court the old fighting Admiral begins to understand him. "He paid his son's fine, welcomed him to the side of his deathbed, and then past away to that part of the unseen world which was appropriated for the eternal residence of the second Charles and his companions."

This second volume continues the impression of the first. We have still what promises to be the most important history of the United States since George Bancroft's. By co-operation other hands have covered the field. Other scholarship has illuminated portions of it. But no other scholar has had at once the attainment with which to carry thru a complete history, and the courage to attempt it.

The Principles of Anthropology and Sociology in Their Relations to Criminal Procedure. By Maurice Parmelee. New York: The Macmillan Co. $1.25.

Mr. Parmelee strikes for advance ground in the treatment of the criminal. His work is not original, but it is useful in furnishing us in English, in digested form, the theories of "the three founders of the new science of criminology"—Lombroso, Ferri and Garofalo. In the new criminal procedure, "moral responsibility should be abolished as a fundamental criterion of criminality," and the dangerousness of the criminal to society should be the basis. The author points out that the reforms which have been adopted in this country have not been grounded on a scientific study of the criminal so much as on a reformation of the criminal by empirical methods. Such have been the juvenile court, probation and the indeterminate sentence. The dissemination of such ideas as are contained in this volume will tend to modify our conceptions as to the responsibility of criminals, so that in course of time they will be treated more as diseased members of society. The inability to realize the ideal method is recognized by the author in his quotation from Maurice de Fleury ("The Soul of the Criminal"):

> "At the present time, if the tribunal and courts of assizes dared to show themselves gentle, to put a criminal in the hospital as a sick person, and if they refused to administer to him social vengeance, punishment, the people would not understand, and far from having recourse to them, would take justice into their own hands."

Tho American judges and lawyers may look with cynicism and skepticism on such a volume, students of sociology will find it helpful in working toward a loftier basis of treatment for the criminal.

A Grand Army Man. By Harvey J. O'Higgins. [Founded on the play by David Belasco, Pauline Phelps, and Marion Short.] Century Co. $1.50.

It was only David Warfield's characterization of Wes Bigelow, and the superlative management of David Belasco, that saved the rather trite play, "A Grand Army Man"; as a theatrical venture it failed to make large appeal, altho the possibilities bound up in the subject were infinite. As a prose writer, Mr. O'Higgins not only possesses temperament, but keen insight; therefore his selection as the one to turn the play into a novel meant that he would do something more than novelize the piece; he has accomplished his task in as agreeable a manner as the process will allow. He has not depended slavishly upon the Belasco text, altho the story is substantially the same. But he has poured his own

originality into the work, rounding out in word pictures that which Mr. Warfield so adequately brought out in his acting. Mr. O'Higgins has touched the rôle of Wes Bigelow with a rich humanity that points to his full understanding of the type over and above his familiarity with the Belasco play. In *format*, the book is attractive, with the excellent drawings by Martin Justice.

Poems. By Charles Sprague Smith. New York: A. Wessels Co.

A. Wessels Co., New York, issues *Poems* by Charles Sprague Smith, whose work is in the education of the people thru the People's Institute of this city, but who, like many others, has felt the lure of melody. This little volume opens with his college poems; then follow verses written during a succeeding period of several years in Europe, and it concludes with the more serious aspiration of purposeful manhood. We thus pass from "The Hills of Amherst" to "Liberty" and "Fraternity" and the voices of the people:

"One struggle more, supreme endeavor,
Then peace, not war, shall rule the earth;
For brotherhood shall come to birth
And every chain be loosed forever."

The thoughts exprest are inspiring and the feeling sympathetic.

The World I Live In. By Helen Keller. The Century Co. $1.20.

Miss Helen Keller exemplifies the existence of a *seventh* sense. Her blindness is not a deprivation; in a certain way, it constitutes a peculiar acquisition. Thruout her small volume of essays a new world is opened up for our consideration, a new standard of physical and spiritual values is formulated. The sense of touch is raised in dignity to that plane where its mere physical, muscular usefulness becomes endowed with deeper, more permanent interpretative qualities. The sense of smell, which Miss Keller claims the world has looked upon as the "fallen angel" among sensations, brings to her varied subtle qualities born of the very fact that she is blind. Perhaps the mystic atmosphere which permeates *The World I Live In* is well exemplified in such a sentence as this, in her seventh essay, "Relative Values of the Senses":

"The loss of smell for a few days gave me a clearer idea than I had ever had what it is to be blinded suddenly, helplessly."

This imaginative instinct, which, to judge by this volume, is wonderfully cultivated, brings her in finer contact with the world of light, and illumines her world of darkness. As a writer Miss Keller's optimism is the product of a wholesome philosophy; she has humor, as her preface will show, and even tho some would like her to write of herself self-consciously, she happily escapes that error; tho the essays are filled with the personal value, their meaning has wide and valuable application. Her optimism is not the result of mere acceptance, for her sight has grown beyond the necessity for eyes. There is something psychic, something mystical, yet at the same time something sane about her contact with the world.

Other Days. Being Chronicles and Memories of the Stage. By William Winter. Moffat, Yard & Co. $3.00.

There is no one living who has better perspective of the American stage than Mr. William Winter, veteran critic of the New York *Tribune*. When he writes of *Other Days*, the reminiscent touch is fraught with a quality of sadness that betokens him as one of the last of a rare old order. Mr. Winter has seen Booth, Jefferson, Forrest, Brougham, Boucicault, Sothern, and others of a brilliant galaxy pass away; with them all he has spent days of intimacy, and the consequence is, his book of recollections carries with its genial manner a certain tone of authority. A man who lives in *Other Days* can hardly be said to view the present from its vital angle. Mr. Winter, therefore, as a professional critic, is antagonistic to the so-called modern note in drama. The only mention he makes of Ibsen in his *Other Days*, occurs in his chapter on John McCullough, where he writes that in those times

"There was no thought of devoting the theater to the exposition of physical disease, or to the analysis of morbid emotion and degenerate physical propensities. His [McCullough's] breezy laugh would have blown the Ibsen bubble from the stage. He would have set the heel of amused contempt on all such sickly humbugs as Maeterlinck, Sudermann and Shaw."

In this manner he disposes of the realistic, symbolistic and satiric dramatists of our time. Yet in all he writes Mr. Winter exhibits a grace that is possest by few living critics of the theater. His book is in-

dicative of his rich experience, and has a certain permanent worth as an addition to the literature of the American stage. Its narrative quality is balanced by a critical and literary side that is as agreeable, even if it is not quite as classic, as Elia's opinions concerning the actors and the dramas of his day.

Realities and Ideals. By Frederick Harrison. New York: Macmillan Co., 1908. $1.75.

The essential characteristic of Mr. Harrison's writing is always earnestness, tho he often buries it in bland humor or carries it home with stinging wit. He writes because he has something that he feels ought to be said. Such a man is apt to be controversial, and Mr. Harrison often holds a brief, and tho he enjoys the arts of peace, he clearly takes delight in war. There is much that is retrospective and personal in the present volume of forty-four selected essays on social, political, literary and artistic topics, essays that span a period of over forty years. Those on Canon Liddon, his college neighbor, Sir James Knowles, Sir Charles Cookson and Ruskin have this quality, and those on Paris share it. Discriminating estimates of Sir Leslie Stephen and Francis Newman are given; the latter is particularly welcome, for the Newmans always had the fascination of mystery, while Stephen's personality seems never to have really gone beyond his immediate acquaintance. The author's position as a Positivist is frequently in evidence, and Herbert Spencer comes in for a posthumous reminder of old misdeeds, in the midst of a generous estimate of him as "the most prominent English philosopher of the nineteenth century." The subject blends, as it should, in the timely discussions of civil and religious marriage, and in several of the essays on governmental topics. The group of essays on woman, her future, her realm and her work is of current and lasting value, for they forcibly, and with a good degree of reverence, meet the revolutionary criticism of the day with such a statement of the grounds of the orthodox or tried beliefs of Christendom on woman's sphere as must be reckoned with:

"No thoughtful man or woman denies that the cry of 'Votes for Women' cannot be separated from the entire consensus of the domestic, social and spiritual existence of woman as a sex distinct from man. Education, manners, social philosophy, religion, are all essentially involved in the change. It is no mere affair of constituencies and House of Commons. It affects life on a thousand sides."

An extended philosophic review of the relations of "England and France," having in view the peace of Europe, closes with this forgivable note of triumph: "After forty-four years I reissue it [the Essay] in the year of European *entientes* to which I looked forward not in vain." Let us hope Mr. Harrison may live to add such a note to the scheme he outlines here for a representative House of Lords or Senate in England.

The Lay of the Land. By Dallas Lore Sharp. With Drawings by Elizabeth Myers Snagg. Boston and New York: Houghton, Mifflin Co. $1.25.

Fifteen brief talks on the small neighbors that share our home fields—the muskrat, the buzzard, the owl, the woodchuck, the hundred other small and large, but always busy, souls that have bodies to feed and must feed them chiefly when we are not looking—that is, not looking closely. But Mr. Dallas Sharp looks closely and makes us in love with that kind of keen, searching, successful use of our senses. He is a born naturalist, a true lover of Nature, and has the art which is not easily acquired —the art of Thoreau, of John Burroughs, of Gilbert White, of Selborne— of making interest where we poor, sightless creatures make a dead loss of our time. He *sees,* where we only *oversee.* On a dozen or more acres near Boston— whether they are imaginary acres or not we have not taken the trouble to inquire —he raises turnips and chickens and other New England comestibles. But he raises better things—the fox, from his rocky den; the muskrat, from his house, his *solida domus* of mud-and-reed mortar; the woodchuck, from his winter cavern below the roots, five feet under ground; and, withal, he inspires the reader with the charm of barnyard philosophy, and so raises our spirits, as we read, that for a little while we forget railroad rebates and the cares of bank stock. This is just now the great and

desirable "raising," and he who can do it as well as Mr. Sharp does it should be a companion in every man's library.

Literary Notes

....Margaret Cameron's diverting little story of *The Bachelor and the Baby* has been put into book form by the Harpers. It is just the right size to slip into the pocket when going on a short trip and you want something to read other than a newspaper. (50 cents.)

....Small, Maynard & Co., of Boston, Mass., have utilized the postal card idea for the exploitation of their publication *The Letters of Jennie Allen to Her Friend, Miss Musgrove,* by Grace Donworth. They will send the set of sixteen cards they issue in this regard to any one on application. The following lines from one of these postal cards are indicative of sad experience on the part of the author—or some one else, viz.: "It ain't an easy jorb to be an insurance agent and poke yourself into shops and offisses where you ain't wanted and take sass and sometimes hinted you had better leave." Realism can go no further.

....*The Housekeeper's Week,* by Marion Harland, is a very helpful volume for the housewife. Many wives come to their housekeeping with a woeful lack of preparation for the business, for such it is, and results are in consequence often disastrous. Husbands are driven to seek solace in the flowing bowl and other sad things arise that could easily be avoided if the wives concerned would only read, ponder and inwardly digest *The Housekeeper's Week.* The book is a compendium of information that will appeal not only to the young and inexperienced housekeeper, but also to her of longer and wider experience. The chapter on Domestic Materia Medica alone is worth the price of the entire book. (Bobbs-Merrill, $1.50.)

....Mr. Augustus Thomas has taken his successful play, "The Witching Hour," and turned it into a novel for the Harpers ($1.50). It is not surprising to find a dramatist in these days thus forsaking his medium. Miss Margaret Mayo has made a story out of her "Polly of the Circus," and every popular stage production finds itself novelized on the morrow. Not many years ago we were deluged with the dramatized novel; now we have the novelized drama. The process of transformation is one of filling up the dialogue of the play with descriptive passages which might be taken as very extensive stage directions. In Mr. Thomas' play, the subject of telepathy lends itself readily to such a process of filling, and he has done it very cleverly. Novel writing of this order is more or less mechanical, but the framework of "The Witching Hour" is sufficiently effective to make a story of considerable interest. The illustrations consist of scenes from the stage production.

....*The Standard Domestic Science Cook Book* as compiled and arranged by William H. Lee and Jennie A. Hansey (author of the "Century Cook Book") contains some fourteen hundred famous recipes adapted for homes, hotels, restaurants, boarding houses, picnics and entertainments. The volume is well classified and the housewife wishing to find a method of cooking a given dish can easily find the department in which the receipt is given. In the department of menus there appears a wide range and she is a very difficult housekeeper who cannot find something that will suit therein. If all the ideas in the book could be carried out everything would run on ball bearings in the household, but to accomplish all this there are some difficulties to be overcome. This fact, however, does not detract from the value of the *Domestic Science Cook Book.* The color plates are not much, but they are illuminating. The patent thumb index to departments is good. (Chicago: Laird & Lee, $2.50).

Pebbles

SENIOR TO PHOTOGRAPHER—Which way shall I turn my eye?

Photographer—Toward that sign, please. (Sign reads)—"Terms cash."—*Cornell Widow.*

MASTER—What is the date of the battle of Waterloo?

Pupil—I don't know, sir.

Master—It is a simple matter, if you haven't a good memory, to employ some mechanical method to aid you. In this case, for instance, take the twelve apostles and the half of their number, which makes eighteen. Multiply them by 100; that makes 1800. Now, take the twelve apostles again and add a quarter to their number, which makes fifteen. Add it all up together, which makes 1815, the date you want. Quite simple, you see, and you can always remember dates by using that system.—*Psychological Review.*

WE come upon the auto standing upon the brow of the hill.

"Hello," he says to the chauffeur. "Broken down?"

"No, sir," he responds.

"Out of gasoline?"

"No, sir. We have plenty."

"Tire punctured?"

"No, sir. The tires are in perfect condition."

"Lost your way?"

"No, sir. The country hereabouts is very familiar."

"Dropt something from the auto?"

"No, sir. Nothing of the sort."

"Then why are you standing here? Why are you not shooting down the hill and across the level at a terrific speed?"

"I do not care to do that," says the owner of the machine, who has been silent until this moment. "I had my auto stopt here so that I might enjoy the magnificent view from this elevation."

With a frightened glance at him, we turn and hasten to the nearest town, to warn the officials that an evidently insane person is at large in an automobile.—*Kansas City Independent.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The Elections

THE Presidential election has concluded much as has been anticipated from the beginning; Mr. Taft has been elected. To an intelligent man the conclusion was settled by the nomination of Mr. Bryan as the Democratic candidate. Governor Johnson, or almost any other man, would have been a stronger candidate. But the nomination of Mr. Bryan was fated, fixt, imposed on the party, by his own assurance of it, and the folly of a band of his obsessed followers. Twice was not enough to convince them. Now they have had a third lesson, and that ends him as national leader, and gives some chance for the reorganization of the Democratic party, if it is not quite too late. It may be nearly time for the radical element in the Democratic party which has followed him, and the smaller radical parties, and the discontented of all parties, to join forces and give us a semi-socialist party against which will be gathered the more conservative Democrats and Republicans. We shall see.

Mr. Bryan gets, practically, only the solid South. Even Missouri goes against him, and so does West Virginia, while his vote in other Southern States is reduced. But multitudes voted for him out of fealty to their party who are quite content that he is defeated. The slender but persistent Democratic vote in those Gulf States is one of the comedies of American politics.

There are facts in this election that give occasion for serious concern, and chiefly, the fact that the people who chose Mr. Taft for President chose either Democratic Governors or gave Republican Governors a very much smaller vote. Thus Ohio gave Taft about 75,000 majority, but gave Harmon, Democrat, 25,000 majority. There is a difference of 100,000 votes. It needs explanation. Is Ohio normally a Democratic State? Of course, in this case, there were local issues involved, particularly the temperance issue, but this does not fully explain it. In New York Taft had a majority of 200,000, but Hughes's majority was only 70,000. Minnesota gave Taft 90,000 majority, but gave Johnson, Democrat, 25,000 majority; but that is an old story and stands by itself. How are these discrepancies to be explained?

Partly, as in Ohio and Indiana, by local conditions. State questions are quite apart from national questions, and partisanship ought not to count so much locally. But that is not all. We doubt not that a very large number of Democrats voted for Taft, and that because they were influenced by business interests. Particularly during the last two or three weeks of the campaign a strong drift settled in toward the Republican candidate. Voters, and chiefly artisans and workingmen, wanted their jobs, and they feared that the election of Bryan would prolong the business depression, and that Taft's election would tend to resumption of work and business prosperity. The workingmen were urged by Mr. Gompers to vote for Bryan, and doubtless Bryan and Gompers are tremendously disappointed that they did not respond. They accepted Roosevelt's assurance rather than that of Gompers or Debs, for they valued their jobs more than they did the injunction promise. They wanted good times to come back, and they rightly believed that this meant Taft.

Connected with this is another very serious drift which the political journals do not seem to notice, but which the impartial observer discovers. The Catholic vote, and particularly the Democratic Irish vote, was turned to Taft. This is not exactly in addition to the labor vote, for this Irish Catholic vote is mainly composed of laborers. With them the two influences combined to transfer their normal ballots from Bryan to Taft. None of the Catholic journals had anything to say against Taft; they praised him. They remembered that he went to Rome to settle the Friar question; that as Governor of the Philippines, and as Secretary of War in control of the Philippines, of Porto Rico and Cuba, he has dealt full justice to the Catholics, while Catholic governments have been hostile. Accordingly, Archbishop Harty wrote from Manila the expression of his confidence in and admiration for Mr. Taft; and after the election the Pope cabled his congratulations. There are hundreds of thousands of these Democratic Catholics who have voted for Taft, multitudes of whom voted for Roosevelt four years ago, and for the same reason. It is also to be observed that other causes are breaking up the clannish Irish solidarity. The younger generation mingle more freely with the native citizenship and are affected thereby. Also a multitude of them are offended by the alliance of the saloon with the Democratic party. The most effective temperance societies are with Catholic churches, and the bishops and priests are very emphatic on the subject. Social relations also have their influence, and in the North social influence goes with the Republican party, as in the South with the Democratic. It is a very important political problem whether this detachable Catholic, and particularly Irish Catholic, vote can be kept for the Republican party. We believe a large part of it will be, but not the saloon vote. It may be otherwise with the German vote, whether Catholic or Irish, for that is not yet divorced from its beer.

Certain journals have much abused Mr. Roosevelt for his pronunciamentos in the few weeks before the election, but they have had great influence. He has shown great political quickness in all this. When Mr. Hearst produced his first batch of letters, Mr. Roosevelt turned them instantly not only against Bryan, but in favor of Taft. These letters compelled Haskell's withdrawal as treasurer of the Democratic campaign, and Roosevelt asked what confidence the people could have in a candidate who chose Haskell as his nearest friend and adviser. Hearst's Foraker letters exposed a Republican, but Roosevelt instantly publisht a letter showing that Taft had months before repudiated Foraker, because he did not represent the principles for which he was pledged, and for that reason he would enter into no agreement with him; and this at a time when it would seem as if all political sagacity urged him to make peace with his Ohio rival. Mr. Roosevelt used this greatly to Mr. Taft's advantage, and his succeeding proclamations on business prosperity were very effective.

And Mr. Taft's own speeches helped him. It was wise, with such an antagonist, that Mr. Taft should show himself to the people. His addresses were excellent, plain, courageous and effective. They appealed to the workingmen, even when he stoutly defended his injunction decisions. He gave the impression of a judicious man, of known great experience, who had been successful in every task he had undertaken, and who could be matched favorably with an orator of multitudinous schemes, but utterly without practical experience in government.

It is to be observed that the people took seriously only the two main candidates. The Socialists hoped to capture the workingmen's votes, and claimed that their 400,000 votes of four years ago would swell to 1,000,000. It is doubtful if they have increased by 50 per cent. Socialism does not seem practical in this country. In Europe it is devoted largely to reforms which here are considered within the old parties, so that a Socialist party is not so much needed. The Hearst party—for it is his private amusement—and the Prohibition party, and all the rest, are negligible quantities, and have no use and no future. Of these the Prohibition party's aim is far better achieved thru the old parties, and it is strange that the managers do not see it. They are as blind as the Garrisonian Abolitionists, who kept

WILLIAM H. TAFT CASTING HIS BALLOT, NOVEMBER THIRD.
Photograph by Underwood & Underwood.

on denouncing political parties while they were left behind, a mere remnant, and a political party carried on the purpose they had in view.

The Rockefeller incident had no effect. It startled and frightened the Republicans for a day, but the President, who was every minute on deck, instantly turned it aside, as did Mr. Taft. His declaration for Taft did not hurt him at all. It only proved the suspicion of the people for the doings of the Standard Oil and its two representatives. It was not easy to believe that Mr. Rockefeller was really a friend of Taft, any more than Mr. Archbold.

Of the State elections, the most important and interesting was that in New York, and Mr. Hughes's election by 70,000 majority was a magnificent tribute not only to him, but also to the electorate. Taft actually carried Greater New York, which is Tammany's own possession, and Hughes had a splendid vote. Against him were all the Devil's forces, all graft and gambling and whisky. For him were the decent, law-abiding citizens. It was really a fight between the Churches and what they represent, and the Saloon and what it represents. Mr. Hughes made a magnificent campaign. Apart from Taft he was the greatest force, as proved by his admirable addresses, when he left his own fight

at home to help that of his party in the country. He returned with a big task before him, went over the State, fought the machine, captured the people simply by his straightforward honesty and brave simplicity, and the people not only gave him a triumphant election, but they buried the racetrack Senators who had opposed him. If he can now carry his program for direct primaries and a reformed ballot law thru the Legislature, he will be a principal national character in the future. Meanwhile, Tammany does not care very much for national issues; it is more Tammany than Democrat, interested only in its own gold mine at home, and disturbed only by factional fights within itself. Boss Murphy may have to go.

Congress will still be Republican, but by a slightly smaller majority. Cannon will be Speaker. Taft will call a special session of Congress to consider tariff reform, and Roosevelt will go to Africa and leave the new President to run the country, content with such a successor. Will he return to enter the Senate? Why not?

Morse and the Panic

It is something more than a matter of merely local interest that Charles W. Morse has been convicted in New York and sentenced to be imprisoned for fifteen years. Morse was one of a small group of speculators and financial tricksters who precipitated the panic—if, indeed, they did not actually cause it—by violations of law in connection with national banks which they controlled. Morse, Heinze and the Thomases were not bankers. They had obtained control of banks in order that they might use the deposits of other people's money in speculation, in the promotion of such concerns as Morse's Ice Trust and the obscure copper company which so embarrassed Heinze that the Mercantile National Bank was forced to ask the Clearing House Association for help.

That appeal, in the middle of October a year ago, opened the door for panic, for it was followed by the forced withdrawal of all these tricksters from their banks. This alarmed the public. Fright caused demand for deposited money, runs on banks and trust companies in New York, then similar runs elsewhere, the locking up and hoarding of funds, a paralysis of industry, and much misery throughout the country. The institutions and bankers with whom these speculators had been intimately or even casually associated suffered first of all and most severely by reason of the manifestation of public distrust. Barney, the head of the great Knickerbocker Trust Company, who soon afterward committed suicide, was one who had been associated to some extent with Morse. Everybody knows the experience of his company. These were the beginnings of our great panic disturbance, and they were confined to New York. Presently distrust was excited elsewhere, and from the country's money center the panic movement was transmitted even to the Pacific Coast.

We recall briefly these facts to show why every one who has suffered on account of the panic may reasonably feel an interest in the case of Morse. Heinze is soon to be tried. If the sequence of panic events had governed the action of the courts, he would have been the first to go before a jury.

Morse is to be punished for violating the banking laws, and not for precipitating a panic which has caused so much loss and suffering. Considered only as a penalty for breaking these laws, his sentence of fifteen years is a just one. It is necessary that such a criminal misuse of bank funds as was disclosed by the evidence should be effectually discouraged. As we have said, he obtained control of banks, a chain of them, not as a banker, but as a speculator whose purpose was to use their funds unlawfully in operations on the Stock Exchange and elsewhere. By the use of one bank's stock he bought control of another, and so on through a series of similar purchases. One bank he was able to buy with its own money. From these institutions he drew great sums by the use of "dummies," one of them being his stenographer. With funds so procured he manipulated on the Stock Exchange the securities of his outside companies, his purpose being to unload upon the public at high and virtually fictitious prices, or to work prices up and down, taking profits coming and going. Of his repeated and shameless violation of the laws there was abundant proof, and it was clear also that he had been continually imperil-

ing the interests of the banks and their depositors, to say nothing of what took place when the panic came. No one can say that his punishment is greater than he deserves, or that it is too heavy a penalty for the offenses with which he was charged. Those who bear in mind the deplorable effect of the causes to which he contributed will be inclined to say that he should be punished more severely.

Morse and the other members of his group of panic breeders were promptly constrained by the Clearing House authorities to give up their official positions in the banks when the appeal for help was made. It was unfortunate, as we said at the time, that such persons had been permitted to obtain control of national banks. They could have been discouraged and excluded by the disapproval of the conservative banking interests of New York. Thanks to Governor Hughes, the recommendations of his commission, and the excellent work of Superintendent Williams, such a handling of banking institutions chartered by the State of New York has now been made very difficult, if not wholly prevented, by new laws. If for the protection of national banks we must look only to statutes and the enforcement of them, the Morse case shows that some additional legislation is needed.

President of All the People

We often hear it said that the President of the United States is President of all its people; and one and another conclusion is drawn from it as to his proper conduct. It is true, he is President of all the people; but let us distinguish, let us define.

The President is chosen to execute the laws which Congress has enacted. Those laws are obligatory on all the people. It is the duty of the President, as President of all the people, to execute those laws impartially, universally, with no favoritism for one section, or one party, or one class, as against any other. He must, for all the people, treat Republicans, Democrats, Socialists, Northerners, Southerners, millionaires, workingmen, paupers, just alike, must equally execute the law for or against them; for he is President of all the people.

But as President he has another function besides that of executing laws. It is also his duty to advise Congress what laws it should enact, and he is a partner with Congress in legislative functions. That a law may become operative he signs it, and if he disapproves it he can refuse to sign it. He forbids it to become a law, he vetoes it. With the right to advise Congress goes the right, which he also has as citizen, to advise the people. To advise Congress is to advise the people. He has just the same right as a Congressman has, and can exercise it just as freely.

As an executive enforcing the laws, he is President of all the people; but as a lawmaker he represents not all the people, but that section of the people which has put him in office. He is put in office not to be silent and indifferent, but to represent and accomplish a policy. That policy may have to do with a national bank, or a tariff, or secession; whatever it may be, he has been chosen to represent that policy and secure its success. Multitudes of citizens oppose that policy; perhaps a large section opposes it, as when Abraham Lincoln was elected President. In enforcing his policy Abraham Lincoln was not President of the whole country, but of the ruling majority of it. To be sure, it was ultimately in the interest of the whole country, and Abraham Lincoln so believed; but so far as the popular will and judgment and action were concerned, he represented the majority of one section, and did not represent the majority of the other.

Now, equally, President Roosevelt, or any other President, has the right to urge and support, in any legal way that is open to any other citizen, and by major right to himself, that policy which the majority of the people have elected him to support, and, further, any other policy which may come up and which he believes to be right and wise for the country as a whole, even if the majority of the people have not uttered their voice upon it. The fact that the Constitution assigns him the extraordinary power to help make any new legislation whatever, or to veto it, gives him this pre-eminent right to address Congress or address the people on the subject.

Now, let us apply this principle and this distinction to Mr. Roosevelt's conduct in relation to the late campaign. He

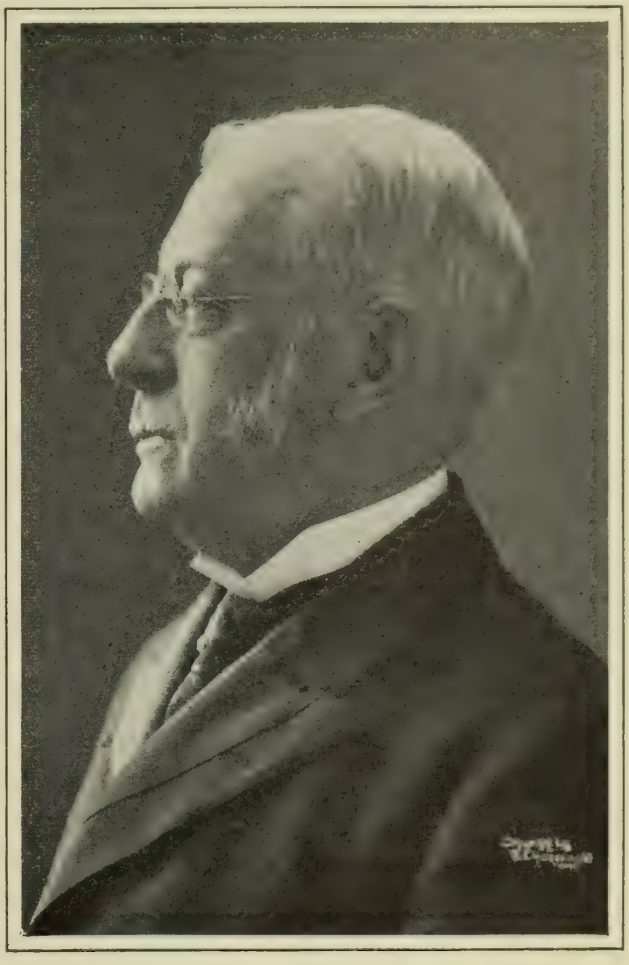
is a conscientious man. He wants to do his full duty as citizen and as President. He believed that the policies he has urged were and are for the welfare of the country. He believed that the best man to cary them on as his successor was William H. Taft. He also knew that the people trusted him and that his recommendations would have great weight. We can see no reason why he should be blamed, or why he was not justified in thinking it his right and duty to urge Mr. Taft's nomination with all emphasis. It would not have been right for him to punish officials under him if they worked for Hughes, or Knox, or Cannon, or Fairbanks, or Foraker. We have not heard that he did so. He only did what any citizen had the right to do, and pre-eminently President Roosevelt. There is no political ethics which forbids a President to recommend his successor. It is mere advice, and the people will take it only if they trust his honesty and wisdom. So the President has not been slow in urging the people, particularly in these last few weeks, to vote for Mr. Taft. It may be a question whether he has overdone the matter, and we think his forwardness has been unseemly; but that is a question simply of measure and seemliness, not of essential impropriety. If he, as a matter of conscience, believed that there was danger of the people making a very great mistake in the election, one that would be a misfortune to the country, and if he further knew that his word would have great influence, we cannot see but he was justified in speaking freely, and he would have felt himself at fault if he had not thus spoken. It was a matter of conscience with him; he felt that he had no right to keep silent and let the country go wrong, when the people, or many of them, trusted him and looked to him for light. "President of the whole people?" Yes, and for the whole people, but not so President of the whole people that he could not give advice that would offend a great many people. He did not do it as any part of his impartial executive functions.

But we are told that there is such a thing as "pernicious political activity," and that officials under him are forbidden to do what he has done. Certainly, and rightly so. Officially, a postmaster's duty is wholly executive and he must be impartial. He is paid to give his time wholly and equally to the people of every political stripe. He has no legislative duties, no duties to one party or one section of the people as against another. His only function is to serve the interests of all and to promote the policies of none. That is not the position of the President and equally not of his political as well as executive advisers in his Cabinet. They are required to do party service which the people have set them to do; the postmaster is not.

This does not mean that the President should not use moderation and judgment in this as in all his other duties. Of course he should. We only wish to make clear that he is elected as the political adviser for the majority of the people, and is not to be blamed if he does this duty.

President Eliot's Resignation

BEYOND all question, President Eliot has been for some years the most commanding educational influence in the country. He withdraws at the age of seventy-five not because he feels unable to carry on the duties of his office, but because he knows that at his age it is likely to be feared that he will lack the energy and force of a younger man. It is in the order of nature that old men should give place to the younger, and they should not resent being displaced. A wise man keeps himself ready to make way. He keeps his resignation, as it were, ever in the hands of those he serves. In an address to the students President Eliot quoted Arnold, of Rugby, as saying that a man at the head of a school should resign when no longer able to run upstairs two steps at a time. President Eliot says he can still do it. We remember seeing President Woolsey, after his resignation for old age at Yale, running up a flight of stairs two steps at a time, to introduce a much younger man to the father of Yale's present president.



It is too soon to write President Eliot's biography. He may have many more years of useful work, but without the tasks of administration. If he cares for retrospection he could give fine memories of an active life. But that looks too

much like retiring from the fray and the joy of commanding the future.

Mr. Eliot was the first president of Harvard who was not a special representative of the Humanities. A graduate of Harvard in 1853, he was professor of chemistry and author of textbooks on chemistry. But at the same time he was a student of the history of education at home and abroad, and the new trend demanded a man who, tho devoted to physical science, had a larger outlook on universal knowledge than comes to the lot of most representatives of the older or the newer studies. So Harvard has become a real university during the forty years which will have elapsed when he lays down his office. This will be his challenge to fame. He has been a great executive. He has been able to scan the whole wide field of knowledge, the new science as well as the old, and to find teachers who can not only teach undergraduates, but who can inspire postgraduates, and themselves be ever adding to the sum of human attainments. That has been the great movement in education during this last generation. We have created universities that have the right to stand by the side of those of Germany, France and Great Britain.

And yet there is another influence which President Eliot has exerted of which we speak with less assured confidence of its value; we mean that which has given us the elective system. The older system of education laid down a definite, fixt curriculum, which all college students were expected to follow, and which should give a broad culture—some Latin and Greek and German or French, some mathematics, some science, some history and philosophy—and whose aims should not be professional, but for general culture. It supposed that, after this period of general culture, the young man would be prepared to choose wisely his special purpose in life, and then enter on his professional studies. The elective system supposes that the boy entering college, or at least when he has been two years there, will be competent to select what studies as may please him, either for their value or their ease, or which may be in the line of his future work, and then devote himself to these, omitting the others. Thus, as the system is now being developed, the college ends with the two first years, and the two last years run into the university or professional course. Indeed, President Eliot would reduce the four college years to three, if the student chooses. One aim seems to be to get the student thru the university at an earlier age.

Of course, the elective system has been often sadly abused and has been applied too early in the course. It accommodates lazy students, who can pick out easy courses and easy professors. If electives

PRESIDENT ELIOT.
Copyright, E. Chickering & Co., Boston.

are not allowed too early and are not too numerous, they may be useful for ambitious young men. But they often allow students to learn next to nothing of great branches of human knowledge. We would have the Grecian know some chemistry and the chemist know some Greek. The system at its best makes good specialists, but not wide scholars. We question the wisdom of hurrying men into the bread-and-butter business; it is better to lengthen rather than shorten the period of preparation. In these days, when there is so much to be learned, it

seems a pity to reduce the years given to broadening one's intelligence. We doubt very much whether the current notion that the modern college is two or three years in advance of that of forty or fifty years ago is justified.

Whatever the extent to which the elective system shall finally be approved, one cannot undervalue President Eliot's influence in secondary education. He has been the leader of those who have sought to co-ordinate it with the higher education in this country; and our high schools and academies will long feel his influence, as well as our universities.

And yet it is as the man, the noble citizen, as one of those to whom the country has looked for right direction on many a question of public interest; the strong, wise, four-square, manly man, and not merely as president of Harvard University and leader of all educational movements, that President Eliot is honored. He is one of our country's great men. We do not look on him as venerable, for that term seems to connote the peaceful inaction of age. We see him still able to lead us, one of those men Cicero admired, whose years still retain their youthful energy. Long may he advise, even tho he ceases to direct, the progress of Harvard University, and for many years may his ripe wisdom lead to right conclusions the various policies of our nation.

Ex-President Roosevelt as Editor

The Outlook announces that, after his retirement from the Presidency, Mr. Roosevelt will accept a position on its editorial staff, and that, on his return from Africa, he will hold a desk in the office and will write exclusively for that magazine on political and social topics. We heartily congratulate our contemporary on its enterprise and success.

It is proper that an ex-President should do something. It is not creditable to him that he should settle down into innocuous and inutile desuetude of service. It has sometimes been thought that any lower position is unworthy of one who has held so exalted a station. It is not so. The man who can work, but will not, out of vulgar pride, is most unworthy. Such a man was not John Quincy Adams, whom, on retiring from the Presidency, Massachusetts did not send to the Senate, but whom his Congressional district gladly made its representative, and kept the Old Man Eloquent in his seat from 1831 till the day he died in 1848, stricken by paralysis, in the Speaker's room in the Capitol, saying, "I am content." Very proud was his district of their Congressman, whose best and bravest work was done in Congress, in defense of liberty and in defiance of slavery. Perhaps the State of New York may honor itself by sending Roosevelt to the Senate, or his district may send him to the House of Representatives. Even so, he may retain editorial relations, as other editors have done. It may come his turn again to be President.

The position of an editor is a fascinating and influential one. He speaks to the people as no other man can do. A Congressman speaks seldom and he votes silently; the editor speaks in every issue, and can say what he pleases to an army of willing readers. During his two terms Mr. Roosevelt has been almost an editor in the freedom and frequency with which he has addrest the people, as no other President has done, for he has the editorial instinct of direct utterance and appeal to the people at large.

We are pleased that in joining the staff of our valued neighbor Mr. Roosevelt has shown his sense of the importance of the weekly journal. So Mr. Bryan has made a weekly paper his organ. Had he been elected it would have been as editor by profession that he went to the White House, as now Mr. Roosevelt will go from the White House to the editor's desk. In the weeklies the people expect well-considered views of public affairs. In our hasty days these hebdomadals are not losing influence. They can circulate over the whole country, while the daily is local. They are left for a week on the table at home and are read leisurely, while the daily paper is thrown away on the train, or tost into the waste basket at night.

We could have expected nothing else of Mr. Rooseevlt than that he should, on retiring, enter on some useful calling. When he went to Washington as Vice-President, against his will, and in stern obedience to the call of duty, he believed

that his term of office would end his public career; for, with his self-confidence, he is characterized by a peculiar self-depreciation. He believed that no place would be open to him, and that he should have to begin life over again, and so he began the study of law, that he might enter actively on its profession. It turned out otherwise. Now he will begin again, as it were, a new career, which he will honor; but we believe the people will yet find more public service which they will demand of him, and which he will feel compelled to accept. He cannot disobey his country's command, whatever that command may be and in whatever sphere of influence. He did not wish to be Vice-President, but he obeyed. Governor Hughes did not wish to be renominated, but he obeyed, and is again Governor. The country is fortunate that can call such servants.

We repeat our congratulations to *The Outlook,* our good wishes to its prospective editor, and our growing sense of the importance of the profession which has attracted him.

God's Business and Ours

THEOLOGY is a science. It is not like physical sciences, except that, like all sciences, it begins with assumptions. Chemistry assumes matter and then seeks its qualities and relations; theology assumes God and man, and asks what are their nature and their relations.

Theology is a science, a sort of knowledge; it is not religion. Theology has to do with facts, religion with duties. But theology, in its search for facts, finds that duties are facts, and considers them. So theology can be divided into two sections, one that which considers our duties as facts, and is thus ethical; and the other that which searches for facts which are non-ethical or super-ethical, and so are of curious or interesting importance, but are no part of obligation.

For example, obedience to God is a religious duty. The fact that it is such brings it within the purview of theology. Love of our fellow-man is a primary duty, and when commanded by God becomes also a religious duty. As a fact of religious ethics it comes within the scope of theology. But the inner constitution of Deity, whether triple or single, has nothing to do with our duty. It belongs to God's knowledge and concerns us only as we are more or less clearly informed on the subject. Regeneration, considered as God's act, belongs to Him alone; it is no part of our duty; our duty is with repentance for sin, not with God's activity. So redemption and forgiveness, in whatever way they may be granted, belong to God only, not to us. We can argue about them, guess about them, but as we have nothing to do with them, no duty in the matter, as they are portions of God's knowledge and duty, not ours, we can leave them to him. They are theoretical, not practical; interesting, but it is not vitally important that we should understand them correctly.

We are led to these distinctions by reading a series of articles in *The British Congregationalist,* by Principal Forsyth, of Hackney Theological College, who with dolorous emphasis complains of the flabbiness of British theology. The substance of his doctrinal statement about salvation is thus exprest:

> "No man is saved, no Church is saved, the world can never be saved by any -ology as such—not by a Christology, nor even by a Soteriology, but only by a Savior who is a real Redeemer of the world, and not a prophet, genius, or consummate spiritual influence."

"No man is saved"—what does that mean? He is a theologian—he must use the term technically—he means saved from eternal death. "Only by a Savior who is a real Redeemer of the world," more than "prophet" or "genius"; that is, who is God; the Second Person in the Trinity. The words mean no less. And they mean, saved by believing that such a divine Savior is his Redeemer. But what is his authority for asserting that? Noah was not so saved, nor Abraham, nor the worthies of the eleventh of Hebrews in that way. They believed simply in God, not in Jesus Christ. And multitudes of pious Jews and of pious pagans have thus been saved in all the ages. Or, if Dr. Forsyth means that in his eternal counsels God will need and make use of the redemption of Christ to save those who are saved out of every nation, then that is God's business, perhaps his secret; at any rate, good Christians are not agreed on the subject of what Christ's relations are to the salvation of men, and

Principal Forsyth has no right to impose God's business on us. Secret things belong to the Lord our God.

He goes on to say that "without a theology of that Redemption no Church can remain saved, or become a power in history." He says so, but we are not obliged to believe him. Even the word *redemption* is only one of the figures under which God's forgiveness of sin is exprest in the Bible, not the exclusive one to be selected out as explaining forgiveness. There is no "redemption" in the parable of the Prodigal Son. Redemption is not our work nor our business. It is God's work, and so his business. Man's business—important, essential business—is with repentance for sin, trust in the forgiving love of God, and then doing duty of love as taught by Jesus Christ. We shall be saved if we do our part; and how and why God will then save us it is not essential for us to know. We can leave that to God. We can speculate about it, study the Bible for light, put it in our personal body of theology, if we care to, but that is not what will save the Church or bring us the Kingdom of God. Our duty may be imposed on us, not God's duty, nor any view as to His nature or action. We may guess, speculate and argue all we choose.

To the best of our information, Principal Forsyth is unduly disturbed about the decadence of the English Churches. They are, we believe, with all their hazy, and probably often erroneous or weak theology, doing their duty, serving their generation, loving God and man, as well as they have ever done in their history, even if they raise more questions of doctrine. They are no less disciples of Him who went about doing good, and who left it as his chief word that the substance of religion is to love God and man. He thus taught our business, not God's business.

President Eliot on Alcohol

Little attention could be diverted this past week from the political campaign to other topics, but President Eliot's address at the meeting of the Boston No-License League deserves attention. He said he had all his life been a "moderate drinker," had used wine and beer on occasions, not habitually, and had never experienced any ill effects. Yet he recognized the Bible saying that wine "maketh glad the heart of man," and doubted whether the heart of man should be made glad in that way. Said he:

> "The dinner at which we are now seated has a cheerful aspect, but for hilarity, jollity and boisterousness it cannot be compared for a moment to one of the dinners of the Ancient and Honorable Artillery Company. I have recognized the fact that alcoholic drinks have a tendency to cheer the people up and make them jolly and noisy, but the question of expediency of that kind of elevation has gained on me as the years have gone on. It seems to me that the recent researches in physiology and medicine tend very strongly to show that the moderate drinking of alcohol is inexpedient.
>
> "As a result of experience it is a fact that men who are to be exposed to cold or heat or hardships of any sort are not prepared or braced for such encounters by any form of alcohol. It is so in regard to most intellectual labors. It is well known that alcohol, even if moderately used, does not quicken the action of the mind or enable one to support mental labor."

President Eliot then referred to investigations in American and German physiological laboratories, all of which show that the use of alcohol is not beneficial. So he concludes:

> "You see, ladies and gentlemen, that I have had some reasons that I can state for changing my mind on the subject of no license, and I would like to state them here in order that they may perhaps fall under the eyes of my many friends who have not yet changed their minds on no license. There are a good many of them. There are a good many moderate drinkers whose support for no license is still essential to the success of that policy. The no-license policy of Cambridge was at first effected and has been long sustained by the votes of men who are moderate drinkers. It is just so today. It is probably so in almost all no-license towns and cities of this Commonwealth. Still I believe that it is desirable to carry these men further, just as I have been carried further, and to procure from them a downright genuine support of no license for its own sake; that is, for the good it does to all the men, women and children."

Such a statement is much to his honor and ought to be of influence. A Western statesman was arguing to a company of farmers against prohibition, and he told the immense amount of corn, rye and barley used for liquors, and asked: "What would you farmers do if you did not have all that market?" A farmer interrupted to ask: "Do you want an answer to that question? We would raise more hogs and less hell."

International Comity

The spirit of internationalism is in the air. Here is the record for last week: A Scandinavian society was organized to promote the interchange of American professors with those of Norway, Sweden, Denmark and Finland; the Kaiser Wilhelm professor from Germany began his lectures at Columbia, and Dr. Felix Adler his in Berlin; the Japanese Consul-General at New York gave a reception to a distinguished host of Americans and Japanese in honor of the Mikado's birthday, whom many speakers united in acclaiming the greatest of modern rulers; the American fleet was given an enthusiastic greeting in China, and the California business men an equally enthusiastic one at Tokio; the Balkan jingoes were still unable to get up a war, and the Presbyterian Synod of California adopted the following resolutions:

"Resolved, That the Synod of California desires to give its moral support to the Government of the United States in respecting the spirit of its treaties with the great nations of the Orient and in extending to the strangers, who come to us from any and all lands, that treatment which is due from a Christian people to all with whom it has to do; insisting that the factors of a just discrimination are intelligence, character and conduct, and not complexion, antecedents or nationality."

An Explanation

An intelligent correspondent gives an explanation of the announcement by Mr. Rockefeller that he would vote for Mr. Taft that does not wholly lack plausibility. He says:

I think more has been made of Mr. Rockefeller's pre-election anouncement of intention to vote for Taft than the facts warrant. That he has been a far-sighted business man all will admit. The Standard Oil Company does not benefit by the tariff except as the whole country is made more prosperous by its operation. But Rockefeller clearly saw that business will be better under a Republican than under a Democratic administration, and so benefit the Standard Oil Company, and I believe that, notwithstanding the Landis $29,000,000 fine, he proposed to show that he intended to vote in line with his business judgment and believed that his anouncement would help Taft in its probability of turning the thousands of Standard Oil employees in the same direction.

Fifty Years of British India

It is just half a century since the government of India was transferred from the India Office to the Crown, and Victoria became Empress of India. The changes for the better since that time have been marvelous; and, contrary to the assertions of political agitators, the condition of the people has been greatly improved. The accessions of territory have been enormous, including Upper Burma, Baluchistan and the Dooars. The population now includes 294,500,000, or a fifth of the population of the globe. Fifty years ago John Bright said there were more travelable roads in one English county than in all India. Then there were scarce 300 miles of railway; now there are 30,287 miles of railway, and about 200,000 miles of roads are maintained. Then a million and a half of acres were irrigated by the company; now Government irrigates nearly 23 millions, besides 26 millions irrigated by private works. The exports in this time have been quadrupled and the imports multiplied by nearly eight. Then there was no factory system; now 700,000 persons are employed in factories. In 1858 there were few scholars, and the expenditure for education was but $1,970,000; now it is annually $18,750,000, and 4,750,000 males and 623,000 females are in schools. But the number of British soldiers has fallen from 93,000 to 76,000, while the native troops have fallen from 213,000 to 149,000. If British India rests on bayonets, they are not very numerous. The civil and criminal laws have been codified, the forests conserved, and a wonderful system of famine relief created. Natives have been brought into important positions of power, and new measures are proposed for further self-government. Already there are 700 municipalities, with 17,000,000 people, which control their own local affairs, besides over 1,000 district and local boards. With all this have grown political aspirations, unavoidable and sometimes militant. England has taught India to look outward, and to seek a larger measure of self-government. New reforms are sure to be allowed and are now promised. The next half century is sure to see a vastly more intelligent and free India, but there is no evidence that it will sever itself from the British Empire.

The growth of the Young Men's Christian Association in foreign lands is extraordinary. In Manila a building for

the Association is being erected, to cost $156,000. The International Committee has seventy-two secretaries employed in foreign lands, not including our non-contiguous possessions. But no one achievement of late will be more notable than the act of its secretary in Calcutta, who, at the risk of life, saved Sir Andrew Fraser, Lieutenant-Governor of Bengal, who was attacked in the Association Hall by an assassin. Professor Burton, of Chicago University, was the lecturer of the occasion, and a Bengali attempted to shoot Sir Andrew, when Secretary Barber seized him and was himself severely beaten on the head with the pistol, which the assassin could not discharge.

In an admirable letter by President Roosevelt to a man who had asked about Mr. Taft's religious beliefs, and who had said that many citizens would not vote for a Unitarian nor for one who favored the Catholics, Mr. Roosevelt makes the statement that there are several States in the Union where the majority of the people are now Catholics. It would be interesting to learn what those States are, as the fact has not been generally known. Perhaps one referred to is Rhode Island, but we await the publication of the religious census now being prepared. What is the second?

By an overwhelming referendum majority South Dakota has ended the divorce industry in that State, and at the same time proved that its citizens care more for its good fame than for the $600,000 which divorces of outside parties brought to Sioux Falls. Hitherto those seeking divorces could go to South Dakota, live there three months, get a secret hearing, and be separated. Now they must have resided a year in the State and the hearings will be public. This is in part the result of the general movement all over the country for uniform divorce laws.

We cannot believe that the Rev. William B. Hale withdrew his article containing an interview with the Emperor William from *The Century*, and that *The Century* consented to destroy the edition in which it was to appear, except on the supposition, not admitted or denied, that a request came from Berlin. The reason given is, that in the condition of the public mind following the indiscretion of the *Telegraph* interview, a further publication, reported to be "frank," might cause further resentment. Doubtless the Kaiser has been plainly warned to practise more reticence.

An admirable illustration of student government lately occurred at the University of Michigan, where a jury of twelve students found a student guilty of cheating at examinations, and requested him to absent himself from the university during the remainder of the year, after which he could return in consideration of his previous good character. His name was properly withheld. That is an example to other colleges, for student government to be successful must be strict and impartial.

It is simply ridiculous that the will of the people should be so vitiated as it has been a second time by the trick ballots of Maryland. A majority of the voters meant to vote for the Taft electors, but by failing to cross every name and crossing only the top name, their votes for the uncrost names were invalid, and Maryland returns two Taft and six Bryan electors. The next legislature ought to amend the ballot law.

Now Missouri has adopted the initiative and referendum and takes her place with Oregon, South Dakota, Illinois, Montana, Oklahoma and Maine. The argument against direct legislation is only valid on the assumption that the people are incompetent to decide what is best for them.

The Vatican authorities have decided that Christian burial shall be refused to Catholics who are married to non-Catholics by non-Catholic clergymen. That will hardly affect the soul's salvation, nor can it even prevent Christian burial.

The declaration of the Shah that he will abolish the Persian constitution may have the effect of abolishing him. Asia is moving very fast. Even Persia must feel the effect of the constitution proclaimed in Turkey.

Insurance

The Mutual's Educational Fund Policy

THE Mutual Life Insurance Company has worked out a new application of the insurance principle in what the company has happily called its educational fund policy. For a small yearly payment or premium, a man may, thru this form of policy, provide for the education of his children in case he does not live to personally meet the expense this signifies. The educational fund policy will appeal strongly to men who wish to make sure that their children may have a proper educational equipment with which to make their way in the world. Under such a policy a certain stipulated annual sum is paid by the Mutual Life for the benefit of the child beneficiary from the time of the death of the father until the child attains its majority.

The child may in this way secure a thoro education. The insured parent has the option of deciding, when he takes out the policy, as to the age of his son or daughter when the annual payments shall cease. The merit of such a policy requires no argument, and in these extravagant days, when so many persons live up to their incomes and frequently beyond, such a policy of insurance will solve one of the problems of our complex modern life. The cost of a policy of this kind is not excessive. Again, the premiums paid because of such insurance, except in rare cases, grow less every year as the children grow older. An example of how such insurance works out is furnished by the Mutual as follows:

Suppose a man is thirty-five years old and has a boy five years old. His income is sufficient to educate the boy, and he is planning to send him thru school and college, and possibly allow him to study one of the professions. He has every expectation of earning enough while he lives to carry out this plan, but he does not know at what hour or day death may come to him and his plans come to naught. He has enough laid by and carries enough insurance on his life to keep his family from want; still he realizes that his widow would not be able to give the boy all the educational advantages which he himself plans to give him. He takes out an educational fund policy with the Mutual Life, by which the company agrees to pay to his estate $1,000 every year from the time he dies until his son is twenty-five years old. The $1,000 a year is designed to maintain the boy and send him thru school and college and enable him to get a little start in life, and from this yearly $1,000 he will probably be able to save a little each year, so that, when he is twenty-five, he will have some capital to start with. If the child should die after the father and before he has reached the age of twenty-five, the annual payments will still be made by the company, for the remainder of the term, to the father's estate. If the child dies first, the father will have the privilege of continuing the policy for the same benefits to some one else, or of changing it to a life, limited payment life, or an endowment policy, without medical examination, or he may allow the policy to expire.

For this privilege—the privilege of feeling absolutely sure of his son's welfare, so far as his opportunity for an education is concerned—the man pays, for the first year, a premium which, when compared with that for other forms of insurance, is exceedingly low. The next year he pays less, and each successive year he pays a decreasing amount till the policy expires. The exact figures, which depend upon the age of the parent and of the child, will be furnished by the agent. The policy may be for the benefit of a girl, the premium being the same as for a boy of the same age. By this new form of insurance the man is instantly relieved from worry as to danger of his cherished plans for the education of his boy miscarrying because of his death.

Educational fund policies may be arranged for an annual income of any amount over $500. If it is wished to provide for several children, a separate policy would be required for each. An annual income of $500 would be sufficient, due economy being practised, to pay a boy's expenses thru school and college.

This new and practical form of life insurance fills a place entirely its own and one which has hitherto been neglected, and it should meet with a warm reception from all men who are fathers and who feel the responsibilities of fatherhood.

THE Association of Life Insurance Presidents has just taken steps looking toward the reduction of the growing burdens of taxation as regards insurance companies. A "taxation conference" has been determined upon and the executive officers of all life insurance companies will foregather in this city on December 4th and 5th, when this matter of taxation will have full consideration.

Financial

The Trade Revival

THERE is abundant evidence that the election of Judge Taft has had a stimulating and highly beneficial effect upon business interests. This evidence is seen in the reports, filling several columns daily in the newspapers, of resumption of work in factories heretofore idle, lengthening of work time schedules, the employment of additional hands, the placing of large new orders, etc. The condition of the market for securities is an indication of this renewal of activity. The advance of prices on the Stock Exchange is based upon the industrial reports and warranted by them. On Wednesday, a net advance of from 2 to 4 points in active stocks was accompanied by large transactions (1,350,545 shares) and by bond sales which broke the record for three years. On Friday, with still heavier sales of bonds, the stock market broadened, with a further advance (notably in industrials and standard railway securities), and the transactions (1,550,000 shares) were the largest for a year and a half. Several high records were made on Saturday. A review of the week shows increases, generally well sustained, ranging from 4 to 10 points in active stocks. Among the net gains were the following: New York Central, 10½; New Haven, 10¾; Steel common, 7¾; Steel preferred, 4⅛; Pennsylvania, 4½; Western Union, 4¼; Reading, 6; Union Pacific, 7⅛; Northern Pacific, 6⅞; American Locomotive, 8½; American Smelting, 7⅜; Amalgamated Copper, 8½; Baltimore & Ohio, 7⅛; St. Paul, 5¼; General Electric, 10¾; Lackawanna, 23¼.

It is true that manufacturers had orders contingent upon the election of Taft. This was not politics, but common sense. Other orders had been withheld until his election should be beyond a doubt. A friend of Vice-President Brown, of the New York Central, asserts (without contradiction) that this officer after the election released such delayed orders amounting to $31,000,000 and said that to his knowledge other similar orders from railways, amounting to more than $200,000,000, had been released or would be within a few days. There are plain signs of preparation at the steel factories, blast furnaces and coke ovens for such work as these orders require, with a coincident advance in the securities of steel companies. Large orders for electrical work have stimulated trade in copper, the most notable of these orders being one placed (on the day before election, it should be said) with the Westinghouse Company, for the electrification of the Pennsylvania road's new terminals in and near New York. This alone is a matter of $5,000,000.

Current press dispatches show a quick growth of confidence in many branches of industry, with the employment of additional workmen. In the manufacture of pottery, glass, tin plate, thread, pumps, clocks, brass goods, textiles and cars, in the Southern lumber industry, and in ship building on the Lakes this prompt improvement is seen. Upon reports received from more than 1,000 of its members, and many of these reports are published, the National Association of Manufacturers estimates that within a few months the manufacturers of the country will add more than 500,000 men to their working forces. There is good reason to expect now a steady and strong upward movement that will restore in 1909 the favorable business conditions which prevailed before the panic.

....Henry Clews, the well-known banker, who in an advisory capacity assisted in the formulation of Japan's present money system, has received from the Emperor of Japan a miniature of the insignia of the Order of the Rising Sun, which was conferred upon him a few months ago. K. Washio, a young Japanese, of Yokohama, who intends to engage in banking in Japan, has become an employee of the firm of Henry Clews & Co., desiring in this way to fit himself for the business he has chosen.

The Independent

VOL. LXV. NEW YORK, THURSDAY, NOVEMBER 19, 1908 No. 3129

Survey of the World

Echoes of the Election

Judge Taft has been resting at Hot Springs, Va., but is unable there to avoid conferences with visiting politicians. On the 14th, in Brooklyn, N. Y., he delivered a long address, mainly historical, at the dedication of the monument erected to the memory of the prison-ship martyrs of the war of the Revolution. Beginning in December he will reside for a time in Augusta, Ga. Chairman Hitchcock assures him that during the campaign no promise or pledge was given by the national committee to any one in exchange for contributions or personal service.——It is not yet known how many votes were cast for Mr. Debs, the Socialist candidate, but the total was estimated last week by a Socialist leader in New York to have been 614,000. In 1904 it was 402,283. ——Among the returns of election expenses made by candidates are the following: Governor Hughes, $369; Mr. Chanler, his Democratic opponent, $7,-305; A. H. Robertson, Democratic candidate for Governor in Connecticut, $33,-587.——In Denver, Judge Lindsey, of the Juvenile Court, to whom neither party would give a renomination, was elected as an independent candidate and 29,000 votes were cast for him. Each of his two opponents (Democratic and Republican) received about 17,000.—— Mr. Bryan has published another long statement concerning the election. The policies for which his party contended, he says, are not dead. "A good proposition is not made bad by rejection at the polls; a needed reform is not made unnecessary by an adverse vote":

"Does any one believe that the American people will permanently permit secrecy as to campaign contributions? Does any one believe that the American people will permanently permit the will of the voters to be thwarted, as it is now, by the election of Senators through Legislatures? Does any one believe that the Trusts will be permitted to permanently exploit the masses? Does any one believe that the consumer will permanently permit the tariff to be written by the beneficiaries of that tariff? Does any one believe that the public will permanently tolerate estrangement between labor and capital? Does any one believe that the fifteen millions of depositors will forever permit their savings to be jeopardized as at present? Does any one believe that the extravagance of the Government will go on forever unchecked? Does an one believe that our republic will permanently consent to a colonial policy, with its humiliations and financial burdens? There must be a party representing the people's protest against wrong in high places, against corruption in politics and against the oppression of the struggling masses; and the Democratic party must continue its fight or dissolve. It could not exist as a plutocratic party."

He asserts that the Democratic party during the last twelve years has, altho out of power, accomplished more than the Republican party in office. This, he says, is a sufficient reward for those who support a righteous cause. It would have been pleasant to be able to reward worthy Democrats with offices. The most worthy Democrats, however, are not looking for official positions, but are laboring unselfishly for good government. They will be neither dismayed nor discouraged by defeat:

"As for myself, let no one worry about my future. The holding of office is a mere incident in the life of those who are devoted to reforms. The reform is the essential thing. If one can advance reforms by holding office, then the holding of office is justifiable; if one can best advance reforms as a private citizen, then the holding of office is undesirable. The world owes me nothing; I have been abundantly compensated for what I have been able to do. My life will not be long enough to repay the people for their support and for the

confidence which they have exprest. My gratitude to those with whom I have labored surpasses language and the days of the future will be devoted to work in the interest of the people as I understand that interest, and in behalf of those reforms which seem to me to be the best."

Speaking of the election as "the mystery of 1908," he has started an inquiry to ascertain why he was defeated:

"How did it happen that the result was so wholly at variance with the hopes of one party, with the fears of the other, and with the general opinion among men accustomed to the study of political conditions and public sentiment?"

An open letter to Mr. Bryan from the Rev. French E. Oliver, who has been conducting religious revival services, was published last week. He urges Mr. Bryan to become an evangelist:

"Twelve years ago I wrote you a letter, in which I stated my conviction that you should preach the gospel, and added the statement that if you would consecrate your wonderful talents to God as an evangelist, the Bryan of the twentieth century would equal the Paul of the first century, as a champion of the cause of Christ. Personally, your three defeats have been three sources of sorrow to me, as I have hoped to see you elected to the Presidency. Who knows? Perhaps God has withheld the Presidency from you in order that you may become more to your country than President. I am firmly convinced that one ambassador of Christ of your caliber is worth more to this nation than 10,000 Presidents."

Judge Taft and the Catholic Church

There was published on the 15th a letter sent to Judge Taft on September 26th by the Rev. Magnus Larson, pastor of the Swedish Baptist Church in St. Paul, Minn., together with Judge Taft's reply, dated October 9th, which was withheld from the public for a time by Mr. Larson in order that it might not become a campaign document. The St. Paul pastor, who said he was an admirer of President Roosevelt, asked the following questions about Judge Taft's attitude toward the Catholic Church in the Philippines:

"Was it upon your recommendation that $7,000,000 were paid to the Catholic Church out of the United States Treasury, and that the Pope was consulted regarding this deal? Did such a deal voice the sentiment of the Filipinos? Was the uprising in the Philippines mostly against the Spanish Government, or against the Catholic friars? In a speech in New York some time ago you made a plea for the Roman Catholic Church in the Philippines, making the statement that the Church was very poor. Is it not true that half the population, or three million people, are not Roman Catholics? I understand that the present Governor is a Catholic. Are you aware of the attitude he is taking against Protestants, especially the teachers of the public schools, who are forbidden to take any interest in any Protestant work, such as teaching in Sunday school or taking part in religious services? Have not thousands of dollars been paid to friars for libraries they have claimed to have been burned? Is it your conviction and policy that Catholic dignitaries and the Catholic Church should have greater consideration from a public official, and especially from the Chief Executive of our nation, than any other recognized religious body?"

Replying to the first question, Judge Taft said that the $7,000,000 had not been paid on his recommendation. The friars' agricultural lands were purchased from the corporation which the three orders had formed, and the money was paid by means of bonds issued by the Philippine Government, under the authority of Congress. The purchase was approved by the Filipinos, and the sum was a charge upon the Islands. Continuing, he said that the uprising had been against the Spanish Government and the Spanish friars, "whom the Spanish Government used as policemen to stamp out sedition and political discussion among the Filipinos." In the speech at New York he had said that the influence of all the churches in the Philippines was needed for the uplifting of the people. Therefore the prosperity of all the churches should be desired. As the Catholic Church had the largest following, all should desire its prosperity. It was then in a deplorable condition, owing to the change from a situation in which the Government had paid its expenses to one in which it must look for support to its parishioners, who had been accustomed to receive from it and not to give to it. So far as he could recollect, no money had been paid for friars' libraries said to have been burned. Money had been paid for the use and the injury of convents and rectories by our soldiers. The purchase of the friars' lands had been a political one. There were 60,000 tenants who refused to recognize the friars' title. This title was good and it warranted 60,000 eviction suits in our courts. Such proceedings would have caused a second revolution, and the purchase of the lands

was an absolute political necessity. It was not true that 3,000,000, or half the population, were not Catholics. Many of those drawn away by the Aglipay schism were returning to the Catholic Church and others were becoming Protestants:

"The present Governor is a Roman Catholic, but he is one of the most careful men in maintaining an impartial attitude between Catholics and Protestants that we could possibly have. He does not forbid teachers to take an interest in Protestant Sunday school work, or to attend Protestant churches. Only by law there is enjoined upon teachers the non-teaching of religious matters in public schools.

"I do not think that Catholic dignitaries in the Catholic churches should have greater consideration from a public official than any other regularly organized religious body. It has happened, by reason of the fact that the Philippine government under Spain was inextricably united with the Catholic Church, that this union had to be severed and property and other interests had to be assigned to the Church or to the State. I had much to do with the hierarchy of the Catholic Church, and visited Rome in order to bring about a settlement. The settlement has been brought about, and in my judgment it is fair and just to all parties.

"I am not a Catholic, and have not been affiliated with the Catholic Church. All I have attempted to do was to do justice to that Church and to the Filipino people. I have treated that Church exactly as I would have treated any other church had it been in a similar position to that of the Catholic Church."

Prosecutor Heney Shot in Court

Francis J. Heney, chief prosecutor in the San Francisco bribery cases, was shot in a courtroom in that city on the 13th by Morris Haas, who committed suicide on the following day while confined in jail. According to the latest reports, Mr. Heney will recover, altho it was thought at first that he must die of his injuries. He was engaged in the third trial of Abraham Ruef, and was seated at a table (during a brief recess), conversing with a witness, when Haas came up behind him and shot him in the head before the prosecutor's bodyguard could interfere. The bullet entered at a point half an inch in front of the right ear, ranged downward, and lodged in the left jaw. While on the operating table, an hour or two later, Heney said: "I will live to prosecute both Haas and Ruef." Haas was quickly taken to a jail in the outskirts of the city, and Ruef was ordered into custody by the presiding judge, mainly for his own safety, altho there was no evidence to connect him with the crime. Ruef had been at liberty under bail amounting to $1,560,000, which held him to answer seventy-eight indictments. Haas, a native of Germany, forty-eight years old, was convicted ten years ago of embezzlement. He served two years in prison and afterward kept a saloon. At the second trial of Ruef, after he had been accepted as a juror, his prison record was exposed by Heney and he was removed from the panel. This appears to have been the cause of his subsequent failure in business. He brooded over his condition, for which he held Heney responsible. Recently he had been practising with a revolver in the basement of his house. After his arrest he said, "I did it to get even with him for humiliating me." He was willing, he added, to be hanged. In his cell, on the night of the 14th, he shot himself, discharging a small pistol under the blankets which covered him as he was lying on a cot. It is said that he had been carrying this pistol in one of his shoes. Some think it was given to him after he entered the cell. Up to the present time there appears to be no evidence that he was an agent of any of the defendants whom Heney was prosecuting. The prosecution will not be interrupted. Three prominent lawyers have volunteered to act in Heney's place without pay, and their services have been accepted. President Roosevelt, in a telegram to Mrs. Heney, exprest his sympathy and also said:

"Like every good American, I hold your husband in peculiar regard for the absolutely fearless way in which he has attacked and exposed corruption without any regard to the political or social prominence of the offender or to the dangerous character of the work. Your husband has taken his life in his hands in doing this great task for our people, and he is entitled to the credit and esteem and, above all, to the heartiest support of all good citizens. The infamous character of the man who has assaulted him should add not only to the horror and detestation felt for the deed, but to the determination of all decent citizens to stamp out the power of all men of his kind."

To Rudolph Spreckels, who has given the prosecution powerful support, he sent a similar message. Attorney-General Bonaparte said that Mr. Heney's services had been of great value to the Depart-

ment of Justice, and added the following tribute:

"His talents and courage made him a terror to evildoers, so that it is not really surprising if an attempt has been made to take his life. I know of no one who has shown more hatred to iniquity or done more effective work in making the way of the transgressor hard. American society sorely needs more men of his type and can ill afford to lose one like him."

Ex-Senator Carmack Killed in a Street Duel

Edward W. Carmack, United States Senator from 1901 to 1907, was shot and killed in the street at Nashville on the afternoon of the 9th, by Robin J. Cooper, the son of Col. Duncan B. Cooper. Mr. Carmack was returning to his home from his office and was not far from the State Capitol when he lost his life. He was greeting a lady when Colonel Cooper and his son approached him. The testimony of eye-witnesses tends to show that young Cooper attacked Mr. Carmack and fired the first shot. The ex-Senator also fired and young Cooper has a bullet wound in his shoulder. Three bullets were found in Mr. Carmack's body. Colonel Cooper's pistol was not discharged. Mr. Carmack was the editor of the Nashville *Tennesseean,* and at the recent primary contest for the nomination for Governor he was defeated by Governor Patterson. He had stood for State wide prohibition, and Colonel Cooper had been the leader of the forces arrayed against him. Mr. Carmack had a sharp pen, and he had recently annoyed Colonel Cooper by editorial articles ridiculing his political work. There came to his office warnings that if he should continue these attacks, Colonel Cooper would shoot him on sight. Because of these warnings, Mr. Carmack was induced to carry a pistol. Another editorial article offensive to Colonel Cooper was published on the morning of the 9th, and in the afternoon the editor was killed. The two Coopers have been indicted, and with them John D. Sharpe, formerly sheriff of the county, who is charged with having been an accessory. The crime has caused much excitement in Tennessee. Thousands of people attended the funeral of Mr. Carmack, in Columbia, on the 11th, and on Sunday there were memorial services in all the cities of the State.

Gomez Elected in Cuba

At the national election in Cuba on the 14th, a majority of about 60,000 was given to General José Miguel Gomez and Alfredo Zayas, candidates of the Liberal party for President and Vice-President. In opposition the Conservative party had nominated General Mario Menocal and Dr. Rafael Montoro. Some time ago the two factions of the Liberal party (the Miguelistas and the Zayistas) united, and ex-Senator Zayas was placed on the ticket with General Gomez. The latter (formerly Governor of Santa Clara Province) was nominated in May, 1905, for President, by the National Liberals. He withdrew, alleging that because of the interference of the Palma Government and the United States there could not be a fair election. After the ensuing election there was an uprising which caused intervention by the United States. Last week's election was an orderly and peaceful one. Rural Guards were on duty at places where there were no police, but their services were not needed. On the night of the 14th Governor Magoon said:

"I cannot express too highly my appreciation of the enthusiasm and perfect regard for order with which the Cuban people have conducted this most important contest. I am absolutely certain that they will loyally abide by the result, establishing to my complete satisfaction their fitness to be intrusted with the government of the republic."

He also sent telegrams to all the provincial Governors, congratulating them and the people upon "the excellent manner" in which the elections had been conducted, and adding:

"You have demonstrated to the world that the Cuban people can hold honest elections and abide by the result. This is a great day for Cuba, because you have won a victory for the future prosperity and happiness of your country."

General Menocal, the defeated candidate, says the Conservative party will loyally support the new Government because it is the choice of the Cuban people. It was decided some time ago that the United States forces should be withdrawn on January 28th next, the anniversary of the birth of José Marti, the Cuban patriot.——At the recent election in Porto Rico, the Unionist party was successful everywhere, and the Republicans will have no representative in the House of

Delegates. The Unionists advocated independence for the island.

Germany and Its Kaiser

The week has been given to what is likely to prove a peaceful revolution in Germany, by which the autocracy of the Emperor in directing foreign affairs will be curbed, and he required to submit to a constitutional control, and the responsibility of the Chancellor and Cabinet to the Reichstag instead of to the Emperor. The indignation of the German people and press of all parties at the interview in *The Telegraph* culminated in two days of debate in the Reichstag on Wednesday and Thursday of last week. Chancellor Von Buelow had consented to listen and reply on Wednesday to interpellations from representatives of the various parties. The Chancellor had previously given his resignation to the Emperor and it had been refused. He was very unwilling to remain in office, but felt it his duty to take the responsibility for the Emperor's blunder, as he had failed to see the text of the interview when it had been sent to him. It is not known what he said to the Emperor, but he must have spoken with some frankness. At the session of the Reichstag all the speakers were agreed in condemning the Emperor, and declaring that he must be required to restrain his meddling with foreign affairs, and Paul Singer, the Socialist leader, declared that he ought to be tried for treason, and this was received with cheers by the Radical groups. Meanwhile neither on this nor the succeeding day was any one called to order for his severe language, and the Chancellor sat with head bowed as if he were accepting a humiliating rebuke for himself and the Emperor. At last, after the interpellations, he rose and spoke but twenty minutes and with the greatest deliberation, saying he must weigh every word. He said he believed if each point of the interview were known as the Kaiser had said it the whole interview would not have caused the sensation it had. The statement that a plan of ending the campaign against the Boers had been worked out by the Kaiser and submitted to the General Staff of the War Office was correct. But only purely academic axioms concerning the war in general were sent to Queen Victoria privately, and they had no influence on the conduct or issue of the war. He declared next, in the name of the whole House and the German people, that he desired only peaceable and friendly relations with England, and he rejoiced that all the speakers to the interpellations had spoken in this sense. He denied that Germany had any aggressive intentions. He denied also that the German fleet was aimed at any vital interests of England. He then uttered the most important passage in the speech, as follows:

GRAND DUKE ALEXIS (UNCLE OF THE CZAR), who died last week.. He visited this country in 1871. Photograph copyrighted by Brady, Washington, 1871.

"The discovery that the publication of the interview had not had the intended effect in England and had caused deep anxiety in Germany will, I feel persuaded, lead the Kaiser to observe in the future that reserve in his conversations which is necessary for a consistent imperial policy and the authority of the crown. Were it not so neither I nor my successors could accept responsibility therefor."

This statement was taken to be a virtual promise by the Kaiser to the Reichstag, and as such was warmly welcomed. He closed by saying that the withdrawal of

his resignation was one of the most difficult and painful moments of his political life. On the second day the criticisms continued. The Kaiser's injurious impulsiveness was the theme of all the speakers of every party. Additional themes were the Kaiser's personal rule and the Chancellor's failure to reply to some of the points raised in the interpellations. They complained that the Emperor's advisers had not dared to tell him the truth. There were expressions of dissatisfaction that the Chamber had no definite assurance that the Emperor would be restrained in future, only the hope that he might restrain himself. Among the criticisms was that of the action of the Emperor in objecting to Ambassador Hill because he was not rich. During all this debate the Chancellor sat unmoved and said not a word in defense of the Emperor or of himself. A proposition was made to send an address to the Emperor calling attention to the danger of his personal intervention in foreign politics, but this was voted down. The Acting Foreign Secretary tried to defend the Foreign Office, declaring that it was overworked, but his defense of it was received with shouts of derision. A full stenographic report was sent to the Emperor, who was blamed for being far off watching Count Zeppelin's flights and hunting.

The German Feeling

Following the debate in the Reichstag the German press supported the criticisms and complained that it had secured no guarantee that the Kaiser's personal *régime* should cease. It is believed that there is a decided coolness between the Kaiser and Chancellor Von Buelow, and that he will not remain long in office. His wife is Italian, and he has purchased an Italian residence and wishes to retire to it and rest. It is doubted if he conferred with the Emperor before speaking in the Reichstag. He seems to have waited for the Emperor's anger to cool before going to report and consult with him early this week, when it will be settled whether he will remain in office, and whether the Emperor will give any guarantee. On Friday representatives both of the Center and of the Social Democrats introduced motions for improved relations. That of the Center asked the Federal Government to lay before the Reichstag a bill definitely defining the responsibility of the Chancellor, together with provisions to make that definition effectual. The motion introduced by the Social Democrats is in the form of a bill providing that the Chancellor shall be responsible for all the acts and omissions of the Kaiser. There is the important addition that the Chancellor must resign whenever the Reichstag so demands. Meanwhile the Foreign Affairs Committee of the Bundesrath, or Federal Council of the Empire, has met in extraordinary and unusual session, called by Bavaria, whose Prince Regent, Luitpold, is said to be greatly exasperated by the Emperor's excursions into foreign politics. This committee consists of five members, who are the Premiers of Prussia, Bavaria, Saxony, Wurtemberg and Baden, and has not before met for years. Von Buelow presented to them the facts in the case, and it is reported that when he sees the Emperor he will set forth the feeling of the country as follows:

"First, that the Foreign Affairs Committee of the Bundesrath, or Federal Council, is firm in the opinion formulated at the meeting held yesterday that it would be wiser for the Emperor not to express views affecting the relations of the empire with other countries except through his responsible ministers. This expression derives weight from the fact that the Governments of Bavaria Wurtemberg and Saxony were represented on the committee.

"Second, that the entire Reichstag assented to the declarations made by the speakers on Tuesday that the Emperor had exceeded his constitutional prerogatives in private discussion with foreigners concerning Germany's attitude on controverted questions.

"Third, that the feeling of the people at large on this matter was accurately indicated by the press of the country."

On the result of the interview between the Emperor and Von Buelow much depends for Germany and for the Emperor himself. He is said to have been greatly enraged that the Chancellor did not defend him on the second day; but he had consulted with his colleagues and was advised not to do so, but to remain satisfied with what he had said on the first day. Much depends on the Committee on Foreign Affairs of the Federal Council. The authorities of Bavaria, Saxony, Wurtemburg and Baden are sternly opposed to the Emperor's autocratic Prussian policy, and had already determined to curb, if

possible, the Kaiser's activities, and their powers in this direction are considerable. It is their intention especially to insist that the Emperor shall no longer dictate the foreign policy of the empire. They may succeed in accomplishing this without going so far as demanding a change in the constitution. It simply needs that the Reichstag should assume authority and the change might be made with no formal change, just as in Great Britain the Parliament curbed the King. Meanwhile there are published in Holland extracts from the memoirs of an unnamed diplomat who declares that during the Russo-Japanese War the Emperor William wrote to Queen Wilhelmina threatening to occupy the Dutch ports unless Holland should immediately put herself in a state of defense against Great Britain, another case of extraordinary indiscretion.——The American Ambassador at Berlin has moved from the flat which he at first occupied and has taken a large square mansion on the Thiergarten, where it will be proper for the Emperor to visit him.

In Great Britain

Premier Asquith appears greatly to have pleased the British public by his address at the Lord Mayor's banquet, in which he prophesied peace, declared that people should not speak of isolation or rivalries of the Powers, that the German flurry and the storms that had threatened Europe would probably pass without danger, and then turned to the maintenance of British supremacy at sea. He declared that it was the duty of Great Britain to maintain the standard of naval strength which would give her that of any two other Powers combined, with 10 per cent. margin. He did not limit to European navies, and it is remarked that this would mean a strength superior to that of Germany and the United States combined. Under this rule eight improved Dreadnoughts are now being laid down, and the additional expense for the navy above former appropriations will be twenty-five or thirty million dollars annually.——John Henniker Heaton, the distinguished advocate of cheap postage, has launched a campaign for a 2-cent-a-word international cable rate. He declares that the cable companies ought to be bought out by the public, and that they are keeping the rates unreasonably high, and could do twelve times as much business as they do, and they unscrupulously keep the cables idle most of the time. In a letter to the London *Times,* which, with quotations from correspondents of his, fills a whole page, he says:

"What I propose to do is to secure for my countrymen the cheapest possible electrical communication with all parts of the world. The cables of the world are now in the hands of monopolists or cable rings. We ask that they be bought up at the market price by the governments of the civilized world. The cable companies have lamentably failed to fulfil their high mission. They keep the majority of the cables to America idle in order to maintain the shilling rate."

In conclusion, Mr. Heaton intimates that the first step toward reform will be to call a conference of postmasters-general for the establishment of a 2-cent-a-word rate thruout Europe.——The London suffragets are provoking the main bodies of women devoted to suffrage, who are called the *suffragists,* as against the *suffragets.* The suffragets made a great disturbance on Thursday at a meeting in the City Temple, now the Rev. R. J. Campbell's church, at a meeting to support the separation of Church and State, at which Mr. Birrell, the Chief Secretary for Ireland, was to speak. It seems that the suffragets are agreed to break up any meeting at which any of the members of the Cabinet are billed to speak. With Mr. Birrell's first words a woman began screaming for "Votes for Women!" She was immediately put out. Then another and another interrupted, until thirteen women and three men, one after another, had been ejected, and Mr. Birrell's speech was quite ruined. In some cases the women fought with all their might. Mr. Campbell declared that Mr. Birrell was in sympathy with the cause and begged for quiet, but it did no good. At a meeting of the London Suffrage Society the militant members who tried to capture the organization were completely outvoted and only those favoring constitutional methods were elected. The National Union of Woman Suffrage Societies, in an appeal addressed to every member of Parliament for support at the next session, states that it strongly objects to the methods, the disturbance, the

THE LADIES OF THE IMPERIAL CHINESE COURT.
The Dowager Empress, who died last week, is in the center, and the present Dowager Empress next on the right.

protest and advertisement in the press by the noisy wing.

Emperor and Empress Dowager of China

It is now officially declared that the feeble Emperor of China is dead. He was at first on his accession captured by the liberal wing in China, but was immediately silenced and really confined by the Empress Dowager, who took the rule and left him to his mechanical toys, particularly to taking apart and putting together of a great variety of clocks. During his sickness he has refused foreign medical aid. On the next day the Empress Dowager died. Announcement has been made that the successor to the imperial throne is Pu-wei, a very young child of Prince Chun, who is made Regent of the Empire. Prince Chun is a brother of the late Emperor, and in 1891 visited Germany as special commissioner of the throne to atone for the murder of the German Minister at the time of the Boxer risings. The death of the Empress Dowager, Tsi An, is ascribed to collapse and anxiety over the death of the Emperor. There had been some talk of foul play, but no evidence of it. All is quiet, and Japan has given notice that she will maintain absolute quiet in the crisis, and act only in agreement with the Powers. —— Judge L. E. Wilfley, Judge of the United States Extraterritorial Court at Shanghai, against whom charges were made which were dismissed as unfounded when brought before the Senate, brought suit in the British court for libel against the *China Gazette*. It attracted great attention and was decided by a verdict of guilty, and the editor was sentenced to two months imprisonment.

Various Items

Lieutenant-General Frederick W. Kitchener, brother of the commander in chief in India, has been made Governor of Bermuda. —— Wilbur Wright has been making further successful flights in France, and has discarded his machine for starting, and now rises from the ground. He has won the prize for the first one making a high flight. ——Mr. Fisher, a Radical labor leader, has been chosen as Premier in Australia, defeating the Premier, Alfred Deakin, in a division in the Australian Parliament.

*Ainsworth Rand Spofford: A Librarian Past

BY HERBERT PUTNAM

LIBRARIAN OF CONGRESS.

THIS number of THE INDEPENDENT is concerned particularly with the books of the day, and thus with the contemporary traits of which they are the reflection. It may be wholesome to contrast an expression of the past. Such an expression one may find in an ancient edifice, but also in books, and here and there personified in some individual, who remains to us as a relic of an earlier time, a memorial of different ways. It is of such a one that I offer these partial notes.

To those who visited the old Library of Congress at the Capitol (and during the latter half of the nineteenth century they numbered thousands) he will always be associated with it—a long, lean figure, in scrupulous frock, erect at a standing desk, and intent upon its littered burden, while the masses of material surged incoherently about him. From time to time—an inquiry interrupting—a swift, decisive turn, an agile stride, a nervous burrow in some apparently futile heap, and a return triumphant, yet staidly triumphant, with the required volume. Then again absorption: in other volumes already subjugated, in auction catalogues, in copyright certificates, in correspondence (invariably autograph), in notes for editorial use, in the countless minutiæ of insistent, direct, undelegated labor. A figure of absorption and of labor, consonant with the collections as they then existed: quaint indeed in mode and expression, yet efficient; immersed in the trivial, yet himself by no means trivial, imparting to it the dignity that comes of intense seriousness and complete sincerity. Grave in the task of infinite detail upon a mass of infinite dimension: grave, but never dour. Cheerful rather, even buoyant. Disdaining the frivolous as a waste of time; yet appreciating humor, and even responsive to accredited jest: altho the response might concede no more than an "It pleases you to be facetious!" A lover of Nature, too, as booklovers often are: and pursuing her on occasions with deep breath and long stride. Granting himself, nevertheless, few vacations, and generally ignoring even the "annual leave" so scrupulously observed by most Government em-

*Born at Gilmanton, N. H., September 12th, 1825; died at Holderness, N. H., August 11th, 1908, in his eighty-third year of age and forty-eighth of Government service. Prepared under private tutors and at Williston Seminary for the course at Amherst College, but prevented from this by threatened weakness of eyes and lungs. (An honorary LL.D. of Amherst in 1882.) Removing at nineteen to Cincinnati, where he spent the succeeding fifteen years (1845-1860) as clerk in a bookstore, as bookseller and publisher, and (from 1859) as associate editor of the *Cincinnati Commercial*. Despatched by this to report the battle of Bull Run, he was, on his return through Washington, offered, and accepted, a position as first assistant in the Library of Congress. In 1864 appointed, by President Lincoln, librarian-in-chief. In 1897, on the removal of the library to the new building, resigning this to become chief assistant librarian, in which office he continued until his death.

(In 1861 the collections of the library numbered 63,000 items; in 1897, 1,006,055 items; in 1908, 1,534,346 books and pamphlets and (*circa*) 900,000 miscellaneous items. From 1870 it was also the Copyright Office. The entries for copyright from 1870 to 1897 numbered 1,200,000.)

One of the founders of the Literary Society of Cincinnati—an organization still flourishing. A member of the leading learned societies at Washington. Editor of voluminous reference books and compilations and a constant contributor to cyclopedias and reviews.

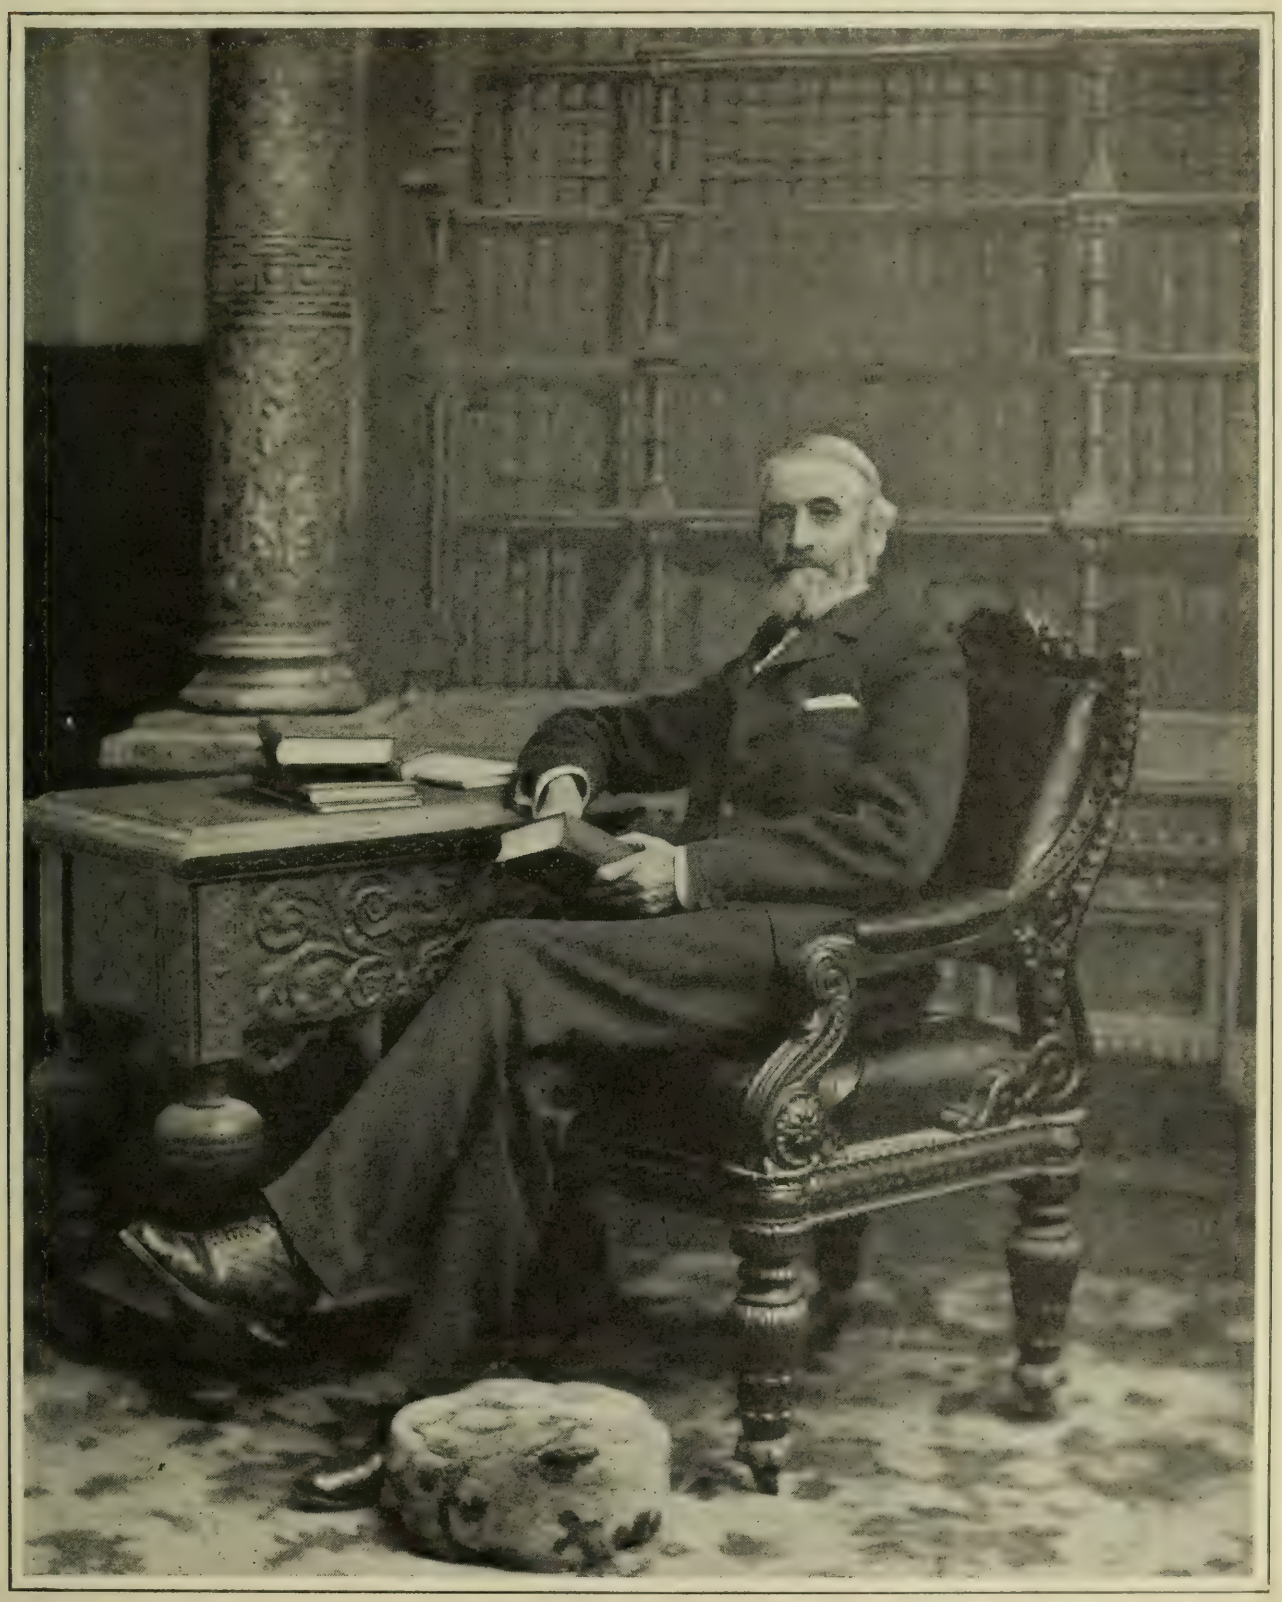
At his death, and for years preceding, the Dean of American Librarians.

ployees. Glorying, rather, in the assiduity which his hardy, if attenuated, frame permitted: for the weakness of the lungs survived only in a mechanical cough, and the weakness of the eyes was remedied so completely that in his eighty-second year he resisted a prescription for glasses as premature and derogatory. A circulation free and abundant; the palate of a child; and a digestion unafraid.

Few knew him in all these phases or fully understood him in any; yet many saw him in the one hour of recreation that he allowed himself out of the twenty-four: on horseback, ambling thru the streets of Washington or over neighboring roads—the tails of the still tenacious frock flapping behind him, untethered trousers rising toward the knee, an umbrella, if the sun beat hot, in his rein hand, and possibly an auction catalog in the other—unless, indeed, history (in his friend Bancroft) supplied him livelier companionship and converse.

I have said "ambled"; but this is not the word if it imply a slow jog, for his temperament, patience itself in matters of labor, became impatience itself in modes of motion. Especially did this show when during the heated spells he substituted a carryall for the saddle—urging the horse with whip and slapping rein in the one hand, the invariable catalog still in the other. No mere jog for him, but a smart trot, always verging on a canter, and without abatement for curve or corner. Then indeed would the passerby marvel, and the passenger (I write from experience) grip the seat and thank his stars that there is a special Providence for the confiding and the reckless. Once a too narrow yet customary "shave" of a lamp-post ripped off the top of the carryall; but as a whole the temerity went unscathed.

The rides continued long after Dr. Bancroft had ceased to companion them, and, indeed, till after Dr. Spofford's eightieth year. If they were discontinued then it was not from failing zest, but from impaired ability. For one day, while standing as usual at the center desk in the great rotunda, which now took the place of his narrow upright at the Capitol, intent as usual upon an accumulated mass before him, the sustaining muscles of his left side suddenly gave way, and he crumbled to the floor. He was lifted—laughing and expostulating—protesting also that it was "nothing"—yes, that he *would* go home, but would certainly "be back again in a day or two." He was—in six weeks; but with his left arm fastened inert across his chest, and his left leg faltering.



But not his courage, nor his zeal, his enthusiasm, or his industry. The nervous vigor, before expressed in all his members, became now concentrated in his right hand. With this alone to take the instructions of his eager mind, he continued, tho no longer erect or in public view, to pursue elusive titles thru trade catalogs and bibliographies and trays of cards—managing even folios with dexterity and uncomplaining patience. An old man now for the first time; but resisting doughtily the inabilities as he resisted the insignia of old age; and ever, and until the last inability of all, the simple, arduous servant of his office and his duty.

His life was for the most part concentrated upon a single interest, yet it touched many men and women having varied interests. It was not, in comparison with some others, a life extensive in its own movement or experience. Its geographical compass was indeed very limited—a boyhood past, as other boyhoods pass, in a small New England town, a brief period of youth in the chief city of New England, a few years of early manhood in a city of the Middle West, and the entire remainder at the national capital. It was deprived, thru ill health, of the maturing influences and the invigorating associations afforded by a college career. It was not, on the other hand, in the ordinary sense a life of affairs. Its vocation, except for brief trials in business and in journalism, was a single one; the material of this not men, but books; its concern not achievement, but the record of achievement; its main purpose not to produce or to express, but to aid others in producing or expressing: for such is the vocation of the librarian.

But such a life is not thus merely intensive, still less is it narrow or merely local. A life among books is a life of manifold and matchless experiences—tho they stop with yesterday. In a sense indeed it is not even geographically limited.

"Ah, master, master," says the ex-sailor host in "Joseph Andrews," "if you had traveled as far as I have, and conversed with the many nations where I have traded!" "Master of mine," retorts the parson, "perhaps I have traveled a great deal farther than you without the assistance of a ship. Do you imagine sailing by different cities or countries is traveling?

'Cœlum non animum mutant qui trans mare currunt.'

DR. SPOFFORD IN THE (OLD) LIBRARY OF CONGRESS, WASHINGTON, D. C.

I can go farther in an afternoon than you in a twelvemonth. What, I suppose *you* have seen the Pillars of Hercules, and perhaps the walls of Carthage. Nay, you

have heard Scylla and seen Charybdis. You have entered the closet where Archimedes was found at the taking of Syracuse. I suppose *you* have sailed among the Cyclades, and passed the famous straits which take their name from the unfortunate Helle; . . . you have passed the very spot, I conceive, where Dædalus fell into that sea; . . . you have traversed the Euxine . . . I make no doubt—nay, you may have been on the banks of the Caspian, and 'called at Colchis to see if there is ever another Golden fleece." . . .

"Not I truly, master," answers the host; "I never touched at any of these places."

"But *I* have been at all these," continues Adams. . . . "Nay, since thou art so dull to misunderstand me still . . . I will inform thee the traveling I mean is in books, the only way of traveling by which any knowledge is to be acquired."

So Dr. Spofford, persistent resident of Washington, visiting Europe only once and for a brief few weeks until his seventy-fifth year, was day by day thruout his career a busy and ardent traveler in every quarter of the globe, as he was also an enthusiastic comrade of the choice spirits of all time. On occasions, as in his "Book for All Readers," he would describe these travels and these majestic intimacies in terms which in another would have been pompous, but in him represented an actual and experienced exultation. To him the book was the thing; Homer, Dante, Milton and Shakespeare active associates; the past of infinite interest, the dicta of the poets and sages enduringly fresh. That to him they could never be trite, the walls and ceilings of this building bear ample witness.

As a journalist he must of course have had to deal with the motives and movements of his time. And the pamphlet, remarkable for his years, which in 1851 he put forth in appeal to the Higher Law against a law of Congress, is evidence of not merely a vigorous but a fiery interest in a burning question of the moment, as it is also of that rotund style, from which he never lapsed even in correspondence. But with his entrance upon librarianship he put away the merely contemporary, and from that moment no one could find him partisan upon a current issue, nor, except after insistent effort, could discover his opinion upon it.

His indifference to such would have sufficiently accounted for that abstraction of manner which became characteristic, and was so often misconstrued—except that he has himself furnished us a different explanation. It was his recipe against bores. He writes:

"The bore is commonly one who, having little or nothing to do, inflicts himself upon the busy persons of his acquaintance, and especially upon the ones whom he credits with knowing the most—to wit, the librarians. Receive him courteously, but keep on steadily at the work you are doing when he enters. If you are skilful, you can easily do two things at once; for example, answer your idler friend or your bore, and revise title cards, or mark a catalog, or collate a book, or look up a quotation, or write a letter, at the same time. Never lose your good humor, never say that your time is valuable, or that you are very busy; never hint at his going away, but never quit your work; answer questions cheerfully, and keep on, allowing nothing to take your eyes off your business. By and by he will take the hint, if not wholly pachydermatous, and go away of his own accord. By pursuing this course I have saved infinite time, and got rid of infinite bores, by one and the same process."

According to his own testimony, his abstraction of manner was thus on occasions a deliberate and cultivated one. But its habitual cause was absorption elsewhere. As the years advanced this absorption grew. In his latter days it seemed at times to draw him completely from us, while sitting in our midst. We could more than forgive him; he was in better company!

A soul aloof, in a world ideal—the world of books. To him it was only

"the thoughts and the facts that are garnered up in books [that] are endowed with a life that is perennial. Men may die, and legislators may perish, and librarians are mortal; but libraries and literature are immortal. Even tho the ever-gnawing tooth of time should one day undermine this beautiful structure, and its granite walls should crumble to decay—yet thru the ever-living power of the magic art of printing, books will survive, and the thoughts of the mind will far outlast towers of granite, and monuments of marble."

So, in a latter year, he spoke at Concord. And what he felt of the structure and its contents there he lived here. The

physique about him was of small concern —the mere apparatus of life, even contemptible. *Why* apparatus, when the contact could be immediate? Why *system,* when the motive was pure? Hence his complacency—quite incorrigible—in disorder about him; a complacency as delightful to me personally as it was, at times, perplexing officially. He had, in fact, *an* order always in view; but it was an ultimate and ideal order, not a present and adjacent one. The things about him were merely things—external, temporal; he was engaged with the truths and beauties that are inner and eternal.

In matters of mere business, indifference to conventional order entails disaster; and it did with him. But never to a doubt of his unselfishness, of his honesty of purpose, or of his profound personal integrity.

His own contributions to literature, apart from reviews and the "Book for All Readers" (1904), were chiefly compilations: The "American Almanac" during a series of years (1878-89); "A Manual of Parliamentary Rules" (1884); the "Library of Choice Literature," ten volumes (1881-88); the "Library of Wit and Humor," five volumes (1884); the "Library of Historic Characters and Famous Events," ten volumes, (1894-1905); these latter, subscription books of the type with which our country has been flooded during the past quarter century, and not necessarily to its disadvantage, in spite of the contempt in which they are held by the connoisseur, who disdains literature in fragments, tho approving "bits" of nature, and of art, and of human society, when the whole is beyond one's reach. But as a member of three societies in Washington—the Literary, the Historical and the Anthropological—Dr. Spofford was a contributor of historical, of descriptive and of critical papers, which were always notable for their fullness of detail, their vigor, and their admirably measured, if somewhat formal, style. No one can remember him dull on such occasions, nor could any utterance of his be trite which came from a personality so convincing. One of his latest such contributions was to the Historical Society, in his last and crippled year. And no member of the Literary will forget the latest of all, at a meeting only a few months before his death, when, with eloquent indignation and a wealth of resource, he delivered Shakespeare from those who would dispossess him in favor of Bacon or some other.

His literary taste, if conventional, was exact in its perspective. When, however, the matter was not of a choice of literature, but of books, he became the antiquarian. Not the future, but the past of a book interested him. And the values of the past were equal. He had indeed a dominant ambition for the Library—to see it rich in "Americana." He could not bear the thought that precious original imprints should be lacking in it, tho found in the Lenox or the Carter Brown. It was no consolation to him that we had the text itself in some other form, even in *facsimile;* and he was obviously anguished when we decided against the expenditure for some such imprint, because we had to decide in favor of some text in itself indispensable to research. Yet his enthusiasm would seem just as keen for some item of an interest purely particular and in no sense bibliographic, but (as his ardent blue pencil would proclaim against it) "long sought."

If, however, his sense of values seemed to lack proportion, it was explicable in as it was cultivated by the method which for nearly forty years he had followed in the development of the collections. There are two methods practicable; one is by systematic selection in accordance with a scheme of organic development; the other is by the immediate acquisition of any proffered items within the general field. The former ensures a collection at each stage symmetrical. The latter does not; which is not to say that it may not result in such a collection if pursued far enough.

Under certain conditions it may seem the only method. It seemed so in the old Library during the period when, with an unlimited field, it had but meager purchasing funds. Then the only course seemed to be to buy here and there, chiefly from auction catalogs, individual items as such. Had the other method—that of systematic selection—been followed, the collection would doubtless at the time of its transfer have

been more nearly organic, but it would have missed for years and perhaps permanently many an item of extraordinary interest, which the course pursued secured to it—secured thru Dr. Spofford's prodigious industry in scanning catalogs and the unwilling frugality with which he shaped his bids; this very frugality, by eluding the vigilance of competitors, often proving the finest craft and the salvation of the item.

The subjective effect of this method is the habit of regarding *any* lacking item offered as of the most urgent importance. Its relation to the subject matter, or to any theoretic scheme, is lost sight of in its relation to the market. It becomes an *"occasion,"* to be coveted and seized for its own sake.

The enlarged duties and resources of the Library have brought to us different and perhaps more scientific criteria of selection. If, however, in contrast to these, Dr. Spofford's habitual ones seemed somewhat whimsical in their emphasis, I always called halt to any disrespect by the reflection that it was precisely such that had formed great and efficient collections all over the world; and had indeed brought into the Library of Congress itself material of a value incredible in proportion to the outlay; by the observation also that many an item in such a collection, at its acquisition apparently trivial and for long years dormant, is by some unexpected occasion awakened to sudden life and utility.

The press notices concerning him have unformly dwelt upon the marvels of his memory. In reading them one might be reading the record of a Magliabecchi. It was indeed, of all librarians, Magliabecchi whom, in this respect and some others, he perhaps most nearly resembled, except that he would not, I think, have been willing to claim the learning that tradition ascribes to the famous Italian. It was the books that he knew; not, except in certain fields, the subject matters. He was not, for instance, a classical scholar nor a thoro linguist. He had not, on the other hand, special knowledge of nor interest in any branch of science or the arts. He was indeed reader rather than scholar. But he was a notable proof of what may be accomplished by the mere reader, intent, absorbed, with a definite purpose and an indefinite capacity. Genius may, as claimed, be the habit of infinite pains; with him, in reading, it was the habit of absolute attention. The memory of the thing read followed as of course. So he himself explained it.

The extent and precision of his own were unexampled among American librarians. They were impressive, brilliant. Combining with the wonderfully responsive agility of his mind, the service that they enabled him to render during the half century when, but for them, the library was a chaos, was an indispensable service which gave life to the collections and ensured their future. It is doubtless by it that the public will chiefly remember him.

It was due to it, also, combined with his indomitable industry and his equally indomitable optimism, that the collections signified what they did when they were moved over from the Capitol. For only those qualities could have enabled him, without complete catalogs, without proper bibliographic apparatus, with an inadequate staff and a but trivial purchasing fund (which never exceeded $10,000 a year); only those qualities, I say, could have enabled him to gather into the collections the mass of invaluable material which they then represented.

But to us, his associates, it was not his memory, but certain traits, which signified; the former was a phenomenon of curious interest, the latter were qualities personally affecting. I need only name them: his ardor, his devotion, his patience, his steady fortitude, his essential sweetness, his fundamental simplicity. The severe trial of these in his latter years left them undiminished. They continued even thru the closing months, when activity must have meant effort, and effort, pain. Never once within my remembrance did he utter an expression that rendered our recent tasks more difficult, altho the purpose of these must have been to him in many respects indifferent, and altho they necessarily involved some temporary neglect of considerations as to the development of the collections which he held sacred.

To give over to another the accustomed reins of authority is at no time easy; to give them over at the moment when the institution is emerging from a

pinched and narrow to a spacious and glorious life; from the life which has been a struggle to the opportunities for which one has struggled; to give them over then, and with them the prestige and the privilege of the office; such a surrender is hard indeed. The man who, like Dr. Spofford, can make it without a murmur, before or after, is of incredible rarity. The man of his years who, having for two generations been chief executive, cannot merely subordinate, but endear himself to his successor, and never waver in fidelity to the institution nor in enthusiasm for its interests—such a man has achieved a feat beside which mere feats of memory are of trivial moment.

With him, however, this was not a feat, but nature; the ordinary expression of a nature absolutely loyal, consistently unselfish, enduringly childlike. It will be a sad day for any profession when such a nature is referred to as merely "quaint," as if an anachronism. Particularly will it be a sad day for our profession, with its present stress upon system and mechanism. The age, indeed—our calculating age—requires these; the masses of material to be dealt with, the number and variety of needs to be met, the demand that they be met with promptness and precision. System and mechanism are now necessary auxiliaries, but they cannot be substitutes. And I, associated with them, under duty to promote them, shall not cease to be grateful for the nine years which have given me near contact with one who signified so much and so deeply without regard to them. To me, indeed, Ainsworth Spofford was more than an individual; he was an institution. And with him the continuity has been broken, an order has past, for which no "new order," however efficient, can compensate.

His thirty-six years in the old Library were an incessant and arduous struggle of lofty aims against adverse conditions. One may rejoice that the final decade brought to these aims at least, if not to himself personally, just fruition; the building which he had appealed, argued and prayed for, completed in amplitude and magnificence even beyond his dreams, provision ensured for the development of the collections in accordance with the theory upon which he had ever insisted—that the Library was not a merely legislative library, but the National Library of the United States—and himself, if no longer in chief control, at least free to devote himself to the increment of them which had been his pride and his passion. That last decade was, I think, to him a period of cheerful contentment, as it was a period of still useful and active service. And if its close involved any struggle, it was a struggle with inabilities merely physical. In the "Ars Moriendi" the dying man is harassed by five temptations: "Unbelief, despair, impatience under suffering, vainglory, avarice." Fashion the converse of these and you have the spirits which, not as assailants, but as sustaining attendants, ensured serenity to Dr. Spofford's closing days as they had buoyancy to his entire life.

WASHINGTON, D. C.

Have the United States Judges Adequate Salaries?

BY JOHN W. GRIGGS

MEMBER HAGUE COURT, EX-ATTORNEY-GENERAL OF THE UNITED STATES, EX-GOVERNOR OF NEW JERSEY.

THERE are very strong reasons for answering this question in the negative. It is proposed in this article to suggest some of the considerations which should impel Congress to increase the compensation paid to the Federal judges to a figure that is commensurate with the dignity of the judicial office, the value of the services rendered, and with the importance of securing none

except those of the very highest character and legal ability for seats on the Federal bench.

At the present time the annual salary of the Chief Justice of the Supreme Court of the United States is $13,000, and that of the eight Associate Justices is $12,500. The judges of the United States Circuit Courts are allowed a salary of $7,000 a year, and the judges of the United States District Courts a salary of $6,000 a year.

The members of the bench of the Supreme Court of the United States stand in a class by themselves. They compose the highest judicial tribunal in the world, and are vested with judicial power in excess of that accorded by any other country to its judiciary. Universal public sentiment demands that the members of this court should be men of the highest character, experience and capacity attainable, and such has always been the quality of the justices composing this great court. They are required by the conditions of their service to reside in Washington. In all social and official functions they rank next to the heads of the Government and to the representatives of foreign Powers. It is an inexorable requirement of the present times that they should participate largely in the social functions of official life in Washington. Not to do so would detract from the dignity of their position and impair in a measure the respect and importance with which they are regarded, both by the representatives of foreign governments and by our own people.

There is a tradition that John Marshall, while Chief Justice, was accustomed in the early morning to take his market basket on his arm and go out afoot thru the streets of Washington to do the daily marketing for his household, carrying home his purchases in his basket. The difference in the whole style and method of domestic life in our capital city as it exists now and as it was in the days of Chief Justice Marshall is just as great as the present method of conducting the marketing of the household differs from the simple way in which the great Chief Justice made his household purchases. To state the fact plainly, a salary of $12,500 is insufficient to maintain at Washington at the present day a house and family in a manner commensurate with the dignity and requirements of the judicial position, not to mention the other expenditures that are required from the head of a family in the way of educating children, making provision for the marriage of daughters, and laying aside a sum for the maintenance of dependent ones after the death of the family's head. It may be the case, and it is the case, that gentlemen appointed to the Supreme Bench have families of young children needing to be maintained, educated and started in life. The salary allowed by Congress is entirely insufficient to permit the usual expenditures for these purposes, and, as a matter of fact, for many years some of the justices have resorted to their private fortunes to supply the deficiency in their ordinary household expenditures and in the maintenance and education of their children. Those that have been without private fortunes have been compelled to economize and curtail expenditures in a manner that ought to be a cause of mortification to the people of the country. It is not edifying or complimentary to the good judgment and spirit of fairness on the part of our Federal legislators to see hard-worked justices compelled to eke out their salaries by lecturing in law schools, contributing to periodicals or delivering miscellaneous addresses before Chautauqua assemblies.

The Lord Chancellor of Great Britain is paid an annual salary of $50,000; the Master of the Rolls, $30,000; the Justices of the King's Bench and the Justices of Probate and Admiralty, $25,000 each. The United States are quite as able as is Great Britain to compensate justly the members of their judiciary. A salary of $25,000 a year to each of the Justices of the United States Supreme Court would not be in excess of the fair and just requirements of the position or beyond the measure of adequate compensation for services rendered.

It is always the case when the question of salaries for the Federal judges is under consideration that one is met with comparisons between the judicial salaries and salaries paid to other officials, as well as to members of the courts of the various States. These comparisons are very often misleading, and in very few instances are they of any value as guides. There are elements entering into the problem with respect to the Federal judges which are absent in the case of

State judges and of miscellaneous officers under the Federal Government. Judges of the United States courts have no fixed term; they are appointed during good behavior, which practically means for life. When a lawyer leaves his practice and goes upon the Federal bench it is expected, and with propriety, that he will abandon all other means of livelihood, forswear engaging in business enterprises, and devote himself exclusively to the duties of the judicial office. In accepting such a place the lawyer abandons all hope of the great emoluments of the bar, all opportunity for engaging in ordinary business affairs, and, unless he has an accumulated fortune beforehand, must be contented to abandon all hope of ever acquiring one. On the other hand, almost universally, State judges are elected or appointed for a fixed term. If they live in States having an elective judiciary, their tenure is subject to renomination and public approval at a subsequent election, so that acceptance of a judicial position in the States does not require an everlasting abandonment of the practice of the legal profession. As a matter of fact, many State judges, after serving one or two terms upon the bench, resume the practice of law with an increased prestige and with a large earning capacity. All this is denied to the Federal judge.

It is not just, therefore, to compare the salaries of United States Circuit and District Court judges with the salaries of State judges in those of the Southern or Southwestern States, where the compensation of State judges is less than that allowed to members of the Federal bench. On the other hand, there is a contrast and comparison which *is* of some value in the discussion to be found in places like New York City, where the judges of the State Supreme Court receive $17,500 a year, and the judges of the United States Circuit Court but $7,000 a year.

If a comparison can be made between State and Federal jurisdiction, it is fair to say that the importance of the questions involved in cases that come before the Federal courts is greater than in those that come before the State courts. The peculiar and exclusive jurisdiction of the Federal courts over cases involving questions arising under the Constitution, laws and treaties of the United States affects the whole extent of the nation, while the decisions of the State courts are binding only on the inhabitants of the particular State in which the case is decided. The duty of construing with finality the Constitution, laws of the United States and the treaties made with foreign Powers is one of more responsibility and difficulty, and demands the very highest qualifications of learning and juridical sense. Any lawyer who is familiar with the daily work of a United States Circuit judge in New York City, like Judge Lacombe, perceiving the heavy pressure of arguments, motions and trials, and the responsibility of administration in great receiverships like that of the Metropolitan Traction Company, cannot but feel that a grave injustice is done by allowing as a life provision an annuity of only $7,000 a year to the Federal judge.

One detrimental result of the payment of inadequate salaries is the inability of the Government to get lawyers of the highest ability to abandon the lucrative practice which they command in order to accept the small compensation paid for judicial services. It is often argued by those who object to an increase of salaries that hitherto the Government has not failed on this account to secure judges eminently qualified both as to character and attainments. This is freely and gladly conceded. Probably a majority of Federal judges accept and hold their positions because of the dignity and honor that attach to the office. The same argument, however, could be carried far enough to justify the Government in making payment entirely in honor and nothing in money. What a judge is entitled to is just compensation under all the circumstances, taking into account the experience and attainments that are necessary, the difficulty and importance of the duties to be performed, the dignity of the position, and the fact that when a lawyer ascends the Federal bench he abandons forever the practice of his profession and the chance of earning anything in any way beyond the amount of salary allowed him by his Government. It is rather a mean suggestion and a poor justification to argue that a low salary is made up by the honor which a possession of the office carries with it.

There are other positions under the Federal Government whose incumbents

are inadequately compensated, but these are not life positions; and with respect to such there may be some justice in arguing that the consideration of honor conferred by the holding of the office may be taken into account. For instance, a Cabinet position, where the salary is the same as that of the Justices of the United States Supreme Court, is held only for a few years, and is sought largely for the influence and honor that go with it.

If the Government is to continue paying to its judges only such meager salaries as are now allowed, two results will follow—the best lawyers, who can command great fees at the bar, will not accept the position, or the choice of justices will be confined to those who have sufficient money to render them indifferent as to the amount of the salary.

The salaries paid to the judges of the highest courts of the various States are, as a general rule, below the amount which ought to be expected to secure, with any degree of permanency, the best judicial talent. The States that pay the highest salaries are California, Massachusetts, New Jersey, Pennsylvania and New York. In these States the judges have a much longer tenure of office than in the States where the salary is less. I believe that an increase of compensation for State judges, and greater permanency in tenure, would secure an abler bench and better judicial administration. The courts of the States above mentioned, where the highest salaries are paid to the State judges, are those whose decisions thruout the Union are held in the highest respect and cited most frequently as authority. Without any disrespect to other States, and judging entirely by the reputation in which the decisions of the various State courts are held by the bench and bar, it is a just deduction that the better the pay the better the court.

The people of the United States are not mean about this, and there is every reason to believe that an increase of salaries to our Federal judges to an amount double that now paid would be received with general approval.

New York City.

Christ of Great Power

BY THOMAS WALSH

From San Lorenzo's Church they bear it out,
Montañes' work, "The Christ del Gran Poder,"
At twilight while the myriad tapers gleam
Adown the squares and streets. Thru all Seville
The chant of litanies, the solemn tread
Of black-robed confraternities are heard.
While to the dirge and toll of bells, the cars
That bear the sacred effigies toil by
On sweating shoulders down Sierpes' street
Past the Giralda to San Salvador.
Then lo, it comes, "The Christ del Gran Poder,"
At whose rich shrine no prayer goes up in vain;
It comes in glory on its gilded float,
Hemmed round by suppliants. Bearing His cross
Bedecked with gold, the world's great Victim comes
In velvets stiff with bullion broideries.
But on the face beneath the crushing thorns
Is woe so mighty all must weep who see,
And as it moves above the waiting throngs
There breathes a sigh across Seville, a wave
Of pity sweeping every balcony
And peopled roof-top; and our hearts exclaim:

"Thou of Great Power! faint'st Thou upon the way
Beneath a tinseled cross to Golgotha?
Thou who didst bear the burden of man's sins,
Lord, is it heavier woe that weights Thee now?
Thy mocking crown of thorns more grievous grown,
In days when Greed itself would lay its cloak
Upon the shoulders of Divinity?
Yea, may these golden trappings laid on Thee
Bespeak Thy newer anguish! Be Thy cross
More crushing now when zealots would belie
Thy heavenly poverty! Christ of Great Power,
Lord, are we worthy Thou shouldst lay aside
Earth's tinsel cross and crown, and stand revealed
In primal majesty of joy and love
As they on Tabor saw, and he again
On high La Verna? Or dost see that weak
And wandering are our hearts, and still wouldst veil
Thy love for us in clouds of sovereignty?"

JOHN MILTON.
From Vertue's Famous Engravings of Distinguished Englishmen. 1741.

John Milton

BY WILLIAM HAYES WARD

[John Milton was born December 9, 1608. In this, our Book Number, we anticipate the celebration in his honor by the English-speaking world.—EDITOR.]

MILTON'S tercentenary is celebrated with peculiar honor not simply because he is, next to Shakespeare, the greatest of English-speaking poets, but because of all our

JOHN MILTON, AGED 21.
From the portrait at Nuneham.

poets he was the greatest man. Indeed, it would be difficult, if not impossible, among all the world's poets, to find one whose great manhood surpast or equaled his. By common consent Shakespeare stands first among English poets, being the "myriad-minded," but as a man we know very little of him, and that little not much to his credit. He had no purpose, and so little ambition to do anything great that he was content, when scarce past middle age, to retire to the life of a country squire and let literature alone. It is so inexplicable that such a man should have done supreme things that it is not strange that intelligent people have believed it impossible, and should have conjectured and tried to prove that Bacon wrote his plays. But nobody could doubt that Milton wrote "Lycidas" and "Paradise Lost." He was just the kind of man to write them—scholar, dreamer, patriot, Puritan, fighter for liberty and worshiper of God; at the same time statesman and poet.

But it is not as Cromwell's secretary nor as the Commonwealth's champion that we recall him now. Political conditions and even revolutions pass into the mists of history, but poetry lasts supreme and immortal; and Milton's poems have long taken rank as the unquestioned norm and standard of verse. His "Lycidas" is the poets' poem, the test by which we judge whether one has the true love

of poetry. There one sees the closest marriage of sentiment and art, of splendor of thought and felicity of diction, the

thin classic mask not concealing the Christian soul. Twice the poet slipt aside the mask—once when he turned from the judgment of man to the judgment of God:

"Fame is no plant that grows on mortal soil,
Nor in the glistering foil
Set off to the world, not in broad rumor lies,
But lives and spreads aloft by those pure eyes,
And perfect witness of all-judging Jove,
As he pronounces lastly on each deed,
Of so much fame in Heaven expect thy meed!"

For that diversion beyond the lower levels of Theocritus and Virgil he apologized:

"O fountain Arethuse, and thou honored flood,
Smooth-sliding Mincius crown'd with vocal reeds,
That strain I heard was of a higher mood."

And again, when in pastoral song he had dared to summon "the Pilot of the Galilean lake"; and he of the golden and the iron key had denounced the "blind mouths" of false shepherds and warned them that

"that two-handed engine at the door
Stands ready to smite once, and smite no more,"

he was forced to beg pardon once more of his classic muse:

"Return, Alpheus, the dread voice is past
That shrunk thy streams; return Sicilian Muse,
And call the vales, and bid them hither cast
Their bells and flowerets of a thousand hues."

But once more Sion's muse would capture the strain, and the poet tost aside his transparent mask of fables, and with face unveiled and unshamed burst into an ecstacy of hope for the shepherd of souls:

"There entertain him all the saints above,
In solemn troops and sweet societies
That sing, and singing in their glory move,
And wipe the tears forever from his eyes."

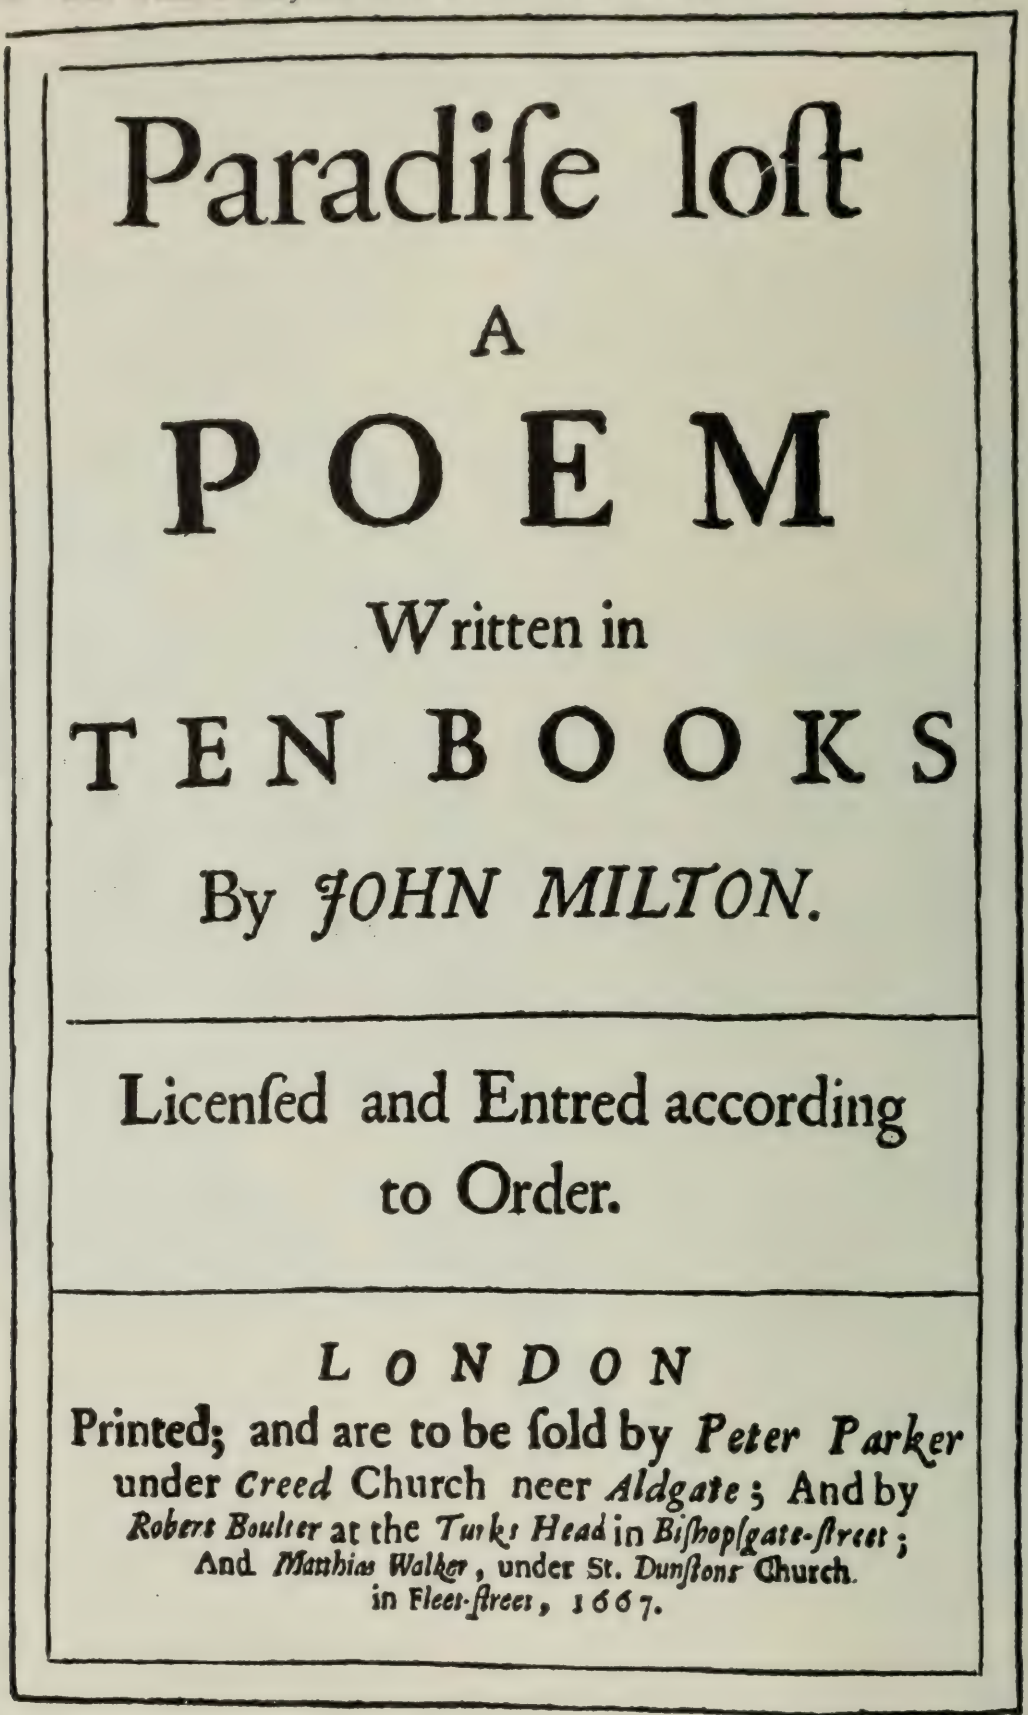
The bonds of pagan form were burst like tow before the flame of Christian faith.

And when we think only of the music of words, what is there more mellifluous:

"Thee, shepherd, thee the woods and desert caves,
With wild thyme and the gadding vine o'ergrown,
And all their echoes, mourn.
The willows and the hazel copses green
Shall now no more be seen
Fanning their joyous leaves to thy soft lays."

Or this, which the marvelous boy wrote in his teens, the unequaled "Hymn to the Nativity":

The lonely mountains o'er,
And the resounding shore
A voice of weeping heard and loud lament;



JOHN MILTON.

TITLE PAGE OF THE FIRST COLLECTIVE EDITION OF MILTON'S MINOR POEMS, With the very rare portrait by Marshall, 1645.

Smit with the love of sacred song. But chief,
Thee, Sion, and the flowery brooks beneath
That wash thy hallowed feet, and warbling flow,
Nightly I visit."

Other poets seem pigmies beside John Milton, not merely because he was master of verse, but because he put purpose, manhood, into both his verse and his life. When he touched the sonnet in spare moments of intense public life, fighting for freedom against the world,

"The thing became a trumpet whence he blew
Soul-animating blasts, alas, too few."

The loss of sight could not dampen his courage. Not even the loss of liberty. For "no handful of silver," no "ribband to stick in his coat," would he bow the knee to the lords of the Restoration. Then he, whose active manhood had wasted his eyes in manful service of the Commonwealth against the tyranny of kings, and who had "lost them overplied in liberty's defense," sat down to dictate to another's hand the grandest epic ever written, for no lesser purpose than "to justify the ways of God to man," and, when completed, to give it, not to the printer for less than half a handful of silver, but to the custody of the generations who "would not willingly let it die." Thus, to serve the generations was the ambition of his youth; his virile strength stood by the side of the Lord Protector

"Till Truth and Right from violence be freed,
And public faith cleared from the shameful brand
Of public fraud";

hurling defiance in round Latin against the Continental champion of royal right, "*si non lubeat rumpatur*," and, at home, in such form as the language had never heard before, in support of "ancient liberty" daring

"the barbarous noise
Of owls and cuckoos, asses, apes and dogs";

till at last liberty was suppfest for a century, and in secret, blind privacy he ended his days, telling, for the later ages, how revolt was quelled in Heaven, how Paradise was lost and found on earth, and how blind Samson's death bought liberty for Israel. In rough sonnet Matthew Arnold wrote to his friend:

"What props, thou ask'st in these dark days my mind";

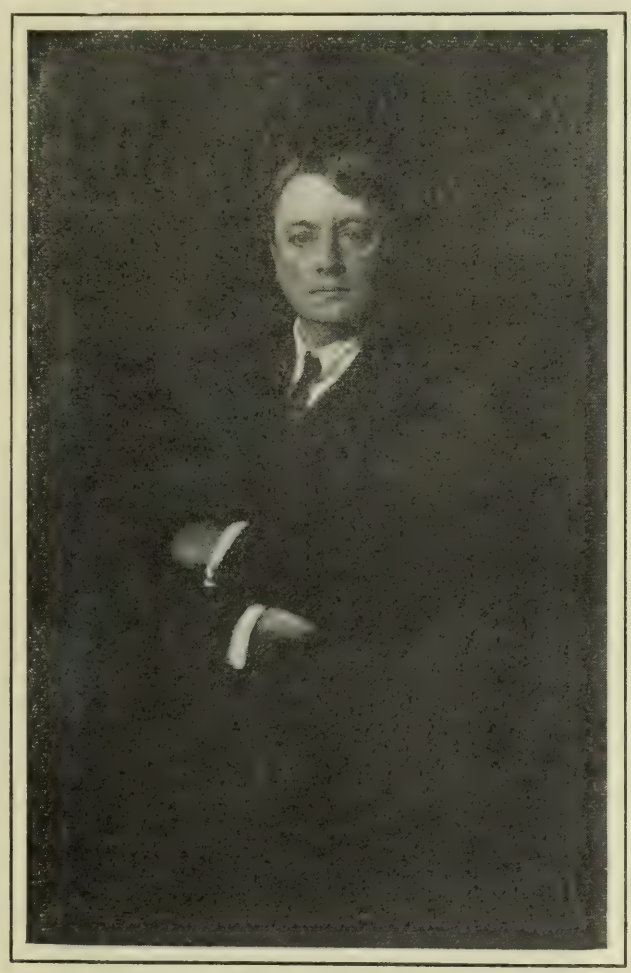
and answered nothing better than the reading of old Epictetus; John Milton, in his blind age, forsaken of powerful friends and popular applause, bated no jot of heart or hope, but steered right onward, fed on thoughts that voluntary moved harmonious numbers, listened to the Heavenly Muse, while the Celestial Light that shone inward purged from thence the earthy mists that he might

"see and tell
Of things invisible to mortal sight."

The craze of bibliomaniacs makes the first and second editions of "Paradise Lost" and the first editions of his minor poems very costly. The first edition of "Paradise Lost" was in ten books, and varying title-pages of eight separate bindings delight the collector. The book went so slowly that it was seven years before the second edition, in twelve books, was called for. But recognition, if it came late, came in full measure. Even the famous Greek critic, Richard Bentley, sixty years later, edited a magnificent quarto of "Paradise Lost," in which he attempted to show that the poet's amanuenses corrupted his text with their blunders, which he removed, and restored the better reading. For

"the secret top
Of Oreb or of Sinai"

he read "the *sacred* top"; for who, said he, ever heard of the *secret* top of a high mountain. In 1828 William Pickering put the poem into that minutest form which required minuscule types and a microscope to read. Over and over again it has been illustrated and annotated and expounded, and translated into a score of tongues. John Milton remains, after three centuries, by the side of Dante, the world's great, serious, lofty, purposeful poet. He remains also the prophet of liberty, the pure and courageous Sir Galahad of both literature and human rights. To the lover of the beautiful in poetic art I would say, commit to memory the "Hymn to the Nativity" and "Lycidas"; while to the lover of the rights of man, the believer that truth can be trusted in the freest fight with error, I would say, read the "Defense of Unlicensed Printing" once a year, the most eloquent argument for liberty ever written; and add to it the "Letter to Master Hartlib," the most suggestive and inspiring treatise on education in all the history of pedagogics, just as one reads over and over again Plato's "Apology of Socrates" as, next to the four Gospels, the dearest story of all the ages, telling how the whip and the gadfly of duty may drive a man willingly, triumphantly, after teaching a reluctant generation, whether to the cross or the hemlock, "content with death and shame."



Newark, N. J.

The Future of Magazines

BY LORD NORTHCLIFFE

[Lord Northcliffe probably owns more magazines and newspapers than any one else in the world, and consequently this brief article given in an interview to a representative of THE INDEPENDENT should be of wide interest. Lord Northcliffe has just arrived in this country to watch the election.—EDITOR.]

THE magazine in Great Britain has had its day and it is going out. It is ponderous, slow, costly, and the purpose that it served is being better served now by newer agencies. The great quarterlies cost half a crown, and when you go into the literary market you see many things more attractive than the quarterlies. Cheap books have multiplied and improved immensely, the very best books for a penny, threepence, sixpence—clearly printed on good paper—what possible magazine could stand such competition? A novel of Hardy's for threepence—where else can one get like value?

PORTRAIT OF LORD NORTHCLIFFE,

By Phillip Laslo, who recently painted the portrait of President Roosevelt. Strictly copyright. Copyright owned by Mr. Laslo.

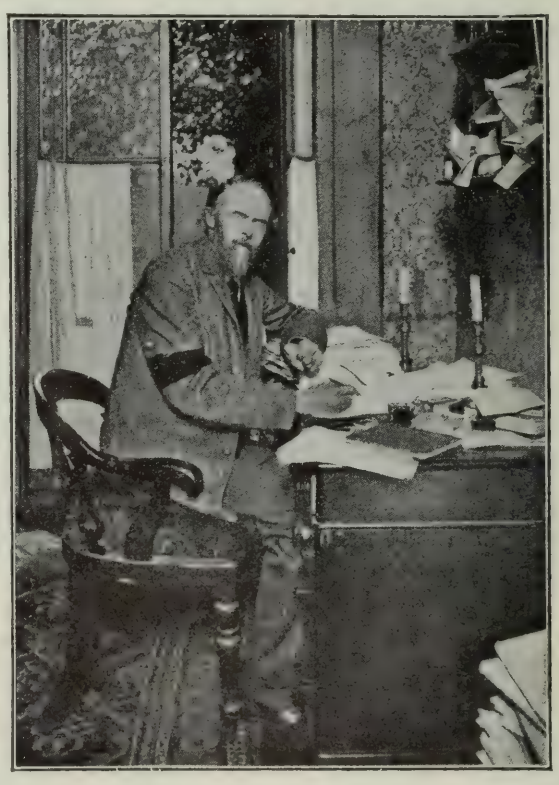
England has a dense population packed in a small area. The remotest parts of the country now are reached in twenty-four hours, and everywhere goes this new, beautiful, cheap literature, and with it the clever, alert, up-to-date weeklies, with the greatest and most interesting subjects presented by the pens of the greatest writers, and all for the cost of a small fraction of the price of the old-fashioned magazine.

In America the case is different. There are here many millions of people who live far from great centers, where they would have access to the library and the museum. To them the magazines of this country bring inspiration and information, keeping them in touch with the progress of the world, with art, with beauty. And the magazines here are infinitely better than those of England, tho one does not find among them the quarterlies or the Blackwoods.

What we publishers are all striving for now is the adequate development of adequate and truthful reproduction of nature photographs in colors. We can get the colored photographs — the flowers, the landscapes, the trees, the water, even the changing sunset. We can even catch the sunset in the moving picture machine. But when we go to reproduce what we have caught in printed form—ah! there's the difficulty that balks us all. The man who could do that would at once go to the front among us. Perhaps it will be done. But not yet.

The French lead all just now. Their genius is so bright, so alert. Nothing else in the world today compares with the work in this particular field done by *L'Illustration,* of Paris. But French genius seems to tire. Somehow it seldom completes, and we people of slower races take up the work where they leave

off and plod along to completion. French genius cannot plod. It must fly. I saw a trolley car running in France long before it was known here. French genius made it, played with it, tired and threw it aside. The Americans picked it up, perfected it, made it practicable—a commercial success—and in its new shape reintroduced it into France.



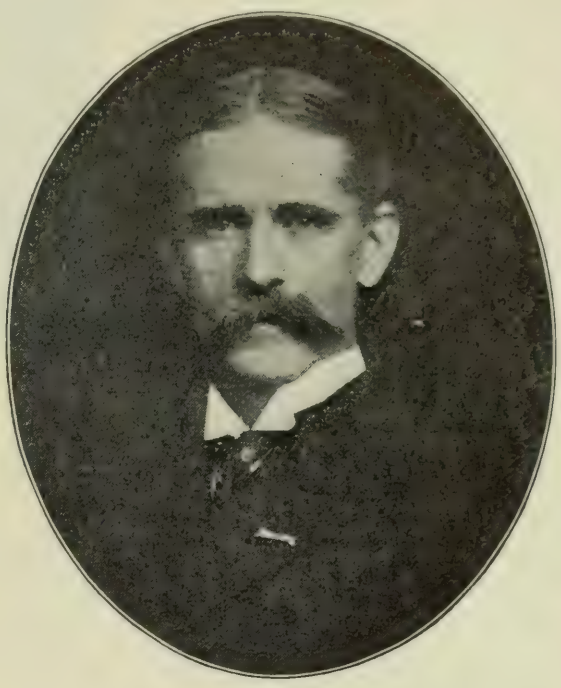
In this country many are striving to advance the printing of nature photographs in colors. The *New York Times*, in its illustrated supplement, is preparing to give us something good, and Mr. Doubleday, of the *World's Work*, is making a great effort to render the Christmas number of that periodical notable by means of colored nature photographs, showing a distinct advance in the art of reproducing their beauties by means of printing.

NEW YORK CITY.

The Advance of Civilization in Fiction

BY MRS. L. H. HARRIS

WE have always had a few decent, plodding, law-abiding novelists who could lay their scenes without involving the heavens and earth in a row about the weather, and could "make love" without disgracing the leading characters. However, these are not what we call "popular," they merely become the standard novelists. But of late even the popular novelists appear to be settling down and doing better. There are fewer honorable thieves and noble murderers in this year's fiction, and not so many other heroes and heroines in it that ought to be in the penitentiary. A few virtues borrowed and exploited by the worst class of social criminals have been returned and now repose beneath the homely, ill-fitting, tight-waisted bodices of good women. (If you have ever thought about it, virtues do not demand nearly so much "style" upon the person they inhabit as vice does!). Even the socialistic, muck-raking novelists, those unfortunate writers obsessed with the vice-vision of life, are either getting beyond the bleareyed, sensational manner of expression in fiction, or, not so many of them are writing it. Probably the latter is the true explanation. They are passing out of this primary stage of developing their theories. Their dramatic instinct belongs to the underworld, anyhow, and they think they are reformers only because they cannot think clearly. They are really scandal-dramatists who would be idiots if all abuses and indecencies were removed from life. They would have nothing to think, no atmosphere for their lurid minds. This accounts for the gradual passing of the socialist out of fiction who was the most prominent figure in it two or three years ago, when his language still had the monkey hair on it. He was a strange animal at the time. Now he isn't. He is being digested by the industrial and political diplomats and economists, his theories are being rejected or



WILLIAM DE MORGAN,
Author of "Somehow Good." Holt.

assimilated according to the prevailing sense of honesty and propriety. He is simply the political bell of discontent now, and a very good institution for this purpose. But he will not last anywhere. His method is wrong. And when the method is wrong, the institution will fail. During his recent romantic period the literary means to his end employed by the socialist-novelist were neither enlightened nor proper. He was too much like his downtrodden thieves and noble murderers in his unscrupulous method of collecting material. Take Upton Sinclair for example. He is a good man, a righteous man, so far as socialism can produce either, and his sincerity of purpose is tragic in its intensity, but he lacks that delicacy, commonly known as self-respect, which, if gossip is true, permitted him to play butler behind a rich man's chair in order to eavesdrop from him material for his last novel. The trouble with such men is that they are a reversion to the type produced by the abuses of our time and they have lost certain qualities in the backward fling. Not one of them, therefore, realizes that it is immoral to get copy like a thief. The padlock of civilization has been broken in him and he became a conscientious marauder while condemning the legalized thieving in the rest of us further advanced in the proprieties of civilization.

Now here is the conclusion: never in real life when we come in contact with these people do we feel as if we were associating with our own kind; they are different, you know, with a slight, shocking scent of the aboriginal about them. And when they first appeared in fiction they had the advantage of seeming unreal to us, and therefore not dangerous. But of late, merely as a matter of taste, we are rejecting them there also. We admit their buzzard genius, and we even admit the need of such geniuses, but for the sake of our literary stomachs we prefer that they would do what is native to them somewhere else than in fiction. Their most characteristic work is an inspired insult to a very fine art that has never been treated with the respect it deserves.

Besides the passing of the muck-raking novelists there are other signs of better conditions. It is significant that the list of her works on the title page of Anne Douglas Sedgwick's new novel does not include the ablest book she has ever written. Now, "The Shadow of Life," the name of the omitted novel, was a brilliant as well as a profound

HENRY VAN DYKE.

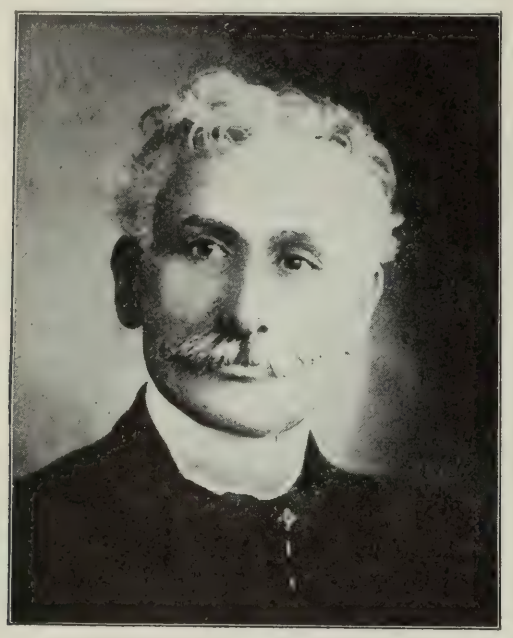
study of life, but it was one of the most disillusionizing, depressing stories to be found in modern literature. And the inference is that the author has sacrificed her claims to this splendid book because it does not add to a writer's popularity, nor insure the sale of her new story, to be recognized as the author of a convincing horror. The world is accustomed to its own hand-made horrors, and even takes a morbid interest in seeing them dramatized, but when it comes to accepting the proof that every man has as good reason as a tortured beast for killing himself, the world draws back, pinches itself to make sure of its old, hardened reality, and says: "None of that for me! I may commit my sins and go astray in my night-times, but I am still too decent to deprive the future of its only virtue—Hope." The diverting thing is that one who could dramatize so well the futility of all human desires should seem to hide it, out of what appears to be a financial regard for her own future.

So soon as we pay more attention to the art of performance than we do to the moral of it, decadence has set in. Refined, it may be, but decadence none the

less. But decadence leads to depravity. It may lead elegantly, but that is the direction in which its weak, high-bred face is turned. And when we get to depravity, it is the same thing, whether we find it in a novel, or in a savage, or in ourselves. Here is a story just out, where all the social vices of our times are showed in hypersensitive, refined natures. And the publisher advertises that the author handles the climax with "exquisite" art. So she does, but that does not recommend the book. "Exquisite" is only a thin, fine word without moral meaning that may be applied like rouge to the face of either wickedness or goodness. The point I hope to prove is that such "exquisite" books have not been so popular this year. There are two or three out quite as bad as "Three Weeks," but they do not create such a sensation. Neither is the horror-novel so much in vogue. There is Mr. Robert Hichens's new story, for instance. He is a writer of poignant romances, determined to produce the last pang from every situation. He has a torture-gifted imagination and must do his characters to death, even if it takes two volumes. In this last book he portrays that peculiar Neapolitan gaiety which is without humor or friendliness with the same limpid phrasing that makes Fogazzaro's work wonderful. There is no depth to the performance. It is tragedy and death lifted up and painted upon the wings of a butterfly. And with the same magic of words he can deplete the life even of Nature in a sentence: "It is as if Nature were under the influence of a drug, and had fallen into a morbid dream with eyes wide open, and pale, inert and with folded hands," is his description of a summer day on the Bay of Naples. He is an artist with a desert soul whose religion is a heathen motto. The question is how long such a writer will be encouraged to propagate himself in the world of ideas thru the minds of his readers. The answer is that while his last book is far superior to "The Call of the Blood," both in interest and art, it is not so popular.

JOHN FOX.

The average reader has not yet put his morals and mind together as a reader. He has not learned to articulate what he wants. He is as stupid as an emigrant when it comes to selecting his fiction—buys it humbly on hearsay. But so soon as he does learn to know and demand what he wants, there will be a surprise in store for the "popular novelist." For he is going to demand enchantment, and less discouraging representations of reality. He is going to insist upon more *enchantment,* not so much disillusionment. *Enchantment,* and all the lovely, right things that go with it. He can make his own wrong things. This is why De Morgan's last story is so much more popular than a long-drawn-out novel usually is. It has the right power of enchantment, and it is curious to note how so many critics missed the explanation of the charm of this book in their efforts to trace the resemblance between Mr. De Morgan's literary style and that of Dickens. The title — "Somehow Good" — is the most significant and encouraging title of a story that has appeared in years. It is the proclamation of how much goodness we can acquire over and above the badness. Now, this is a distinct advance in the civiliation of the imagination (the least civilized of all a man's faculties if he is a genius!) and in the mathematics of morality, when an author can so com-



ROBERT HICHENS.

pute human nature thru all its long additions and subtractions of life as to prove that the remainder is "somehow good," especially when the rule in fiction has been that the remainder is a "deficit," or somehow bad.

The novelist is the parent of his book in the sense that no other writer is. The historian does not produce history, he records it. The poet does not even produce poetry, he is merely the inspired medium thru which we receive a strange message. And no man could be regarded as the father of an essay. The proper temperament of an essay is impersonal, if not academic. On the other hand, the novelist is not merely the creator of heroes and heroines, but they are infinitely related to him and to other men and women. The fact that they do not move in actual life is no evidence that they are not a very important part of modern society, people with whom we live no less than our neighbors. The only difference is that there is less versatility of humanity in fiction than in real life. The scamp, the hero, the good or the bad woman are really very much alike at bottom in everybody's novel. It is really an event when an author creates a character, new in the sense that, while belonging to life, it has not before been produced in fiction. The writer recalls but one in this year's novels. In the hero of "Mr. Crew's Career," Mr. Churchill has, for the first time, created the character of what may be called the "political bounder"—the young American millionaire who enters politics to get a national pedestal for himself, just as he would enter an expensive yacht race to get the "cup." He is essentially a fool, as all bounders are, of the kind made obtuse by the conscious power of wealth, who never will "play the game" because he lacks the integrity of the true sportsman's instinct, and because he knows he can buy his way. Just the rich man squeezed down to nothing but wealth, insolence, selfishness and the determination to have what he wants if he sacrifices every conviction of honest manhood and pays a double price for it besides. America is full of this kind of indecent human blubber, but to Mr. Churchill belongs the distinction of having applied literary caustic to the type in politics, and of having drawn a picture of it that will last long after the type itself has past. But the historical novelist is not the ancestor of his book, to continue the parental figure of speech, in the sense that other writers are. Mrs. Humphry Ward, for example, is merely the literary stepmother of a number of famous men and women who have figured during the last two centuries in French and English history. This may explain the reason why she never really gets the use of her characters. She finds them, adopts them into the plot with much literary delicacy and good breeding, but from start to finish she never really gets beyond blue book descriptions of them. She is not closely enough related to them to engage in the intimacy of interpretation. Anthony Hope is the man who has made the most remarkable advance in historical fiction this year. Usually the author who deals in historical personages is careful to preserve the time and conditions in which they lived, even the scenes in which they performed their part in the play of life. And generally it has been by these external evidences that we have been able to recognize them. When the hero of an English novel appears disguised in a woman's petticoat, when he drinks and kisses indiscriminately and is forever on the verge of flight, we know that this is Prince Charlie, whether the author choose to represent him as dark or fair. And when a man appears in an American novel inspired by brilliant but unlawful schemes, and he makes himself hypnotically fascinating to innocent ladies, we say, "It's Aaron Burr again!" But until now no one has thought to take the limits of time and place from a great historical character, reproduce it in modern life and deduce the tale accordingly. Gladstone, for example, has never figured as the shoemaker in a Southern village. Yet the *rôle* would not have been an ignoble one, or one unfaithful to the best elements in his nature if properly handled. Now, this is what Mr. Hope has accomplished in his story. He has reduced the great Queen Elizabeth to just woman—the kind the Queen was—instilled the character into the person of his heroine, and he has presented to us the greatest woman that has figured for years in fiction. The splendor of it is not that of mere royalty, but of a great na-

ture, holding within it the good and evil of a tremendous consciousness.

Brudno's story of the young Jewish poet and the misery of his connection with Gentiles sustains the same relation to literature that Du Bois's "Souls of the Black Folk" sustains. But it will not attract so much attention, because the Jews have either passed, or they have never come in for their share of the ethical sentimentality that has been so freely expended upon the negro. Still, the book is of value in understanding the Jews, if any one wishes to understand them. Hereafter we may all be forced to admit that Nature knew what she was about when she separated the different races by geographical barriers, by physical traits, and by instincts of deep aversion toward each other. Until then the weaker races must suffer and develop the depressed nerve-madness of the stinging, sensitive

WILL HARBEN.

Jews, who are the only ones who have endured it so far long enough to show what happens and what does not happen. Meanwhile, the less fastidious, the least moral, the most broad minded of each of these races may begin to mix and marry for the production of that great mongrel race, in the excellent qualities of which some intelligent people entertain high hopes. But for me, I have called attention to Brudno's novel because it indicates so plainly the place in fiction and in real life where civilization makes no advance. There has never been a time in this country, North or South, where more bitterness existed between races that are trying to "mix," and the verb offers the explanation.

And there are other departments in fiction where we find no improvement, no advance of the mind toward the meaning of life. The religious novel is as much a failure this year as it usually is. Eden Phillpotts writes convincing Old Testament fiction. He invariably dramatizes life among the tors and barrens of Dartmoor according to the severities of Moses and the prophets. But the only author this writer now recalls who can produce a Christian romance glowing with that strange, stern, tender spiritual effulgence of the Great Nazarene is Quiller-Couch, and no one thinks of setting him down as a religious novelist. Ralph Conner and his ilk, and even Dr. Henry Van Dyke, are at bottom mere sentimentalists catering too much to the world's demands in their representations of Christian character. One of Norman Duncan's short stories of the Newfoundland fisherman is worth all they have ever written. They strive invariably to demonstrate the fact that a man who lives the perpendicular life—the pious, God-fearing hero—is a man for all that. And the usual triumph of the tale is when they make him prove his manhood with his fists. This putting in of the fists popularizes the story and it is the religious novelist's contemptible concession to the world's savage taste for brutal courage. And it is a literary cowardice he is guilty of toward Christ. Ralph Conner has a novel in nearly all the Sunday school libraries in this country in which the Christian hero lays his enemy across his knees and slowly, torturously *breaks his back!*

The great reproach of your religious novelist is that he permitted the socialists to discover and exploit what he should have discovered and exploited himself in the name of God and mercy. The material used by the socialistic muck-raking writers should have been the foundations of a great body of Christian literature. But while Ralph Conner was snooping around in the logging camps and Dr. Henry Van Dyke was fishing and picking his frail literary bluebells in Canada, a set of fierce-eyed, sincere and dangerous fanatics has taken possession of the miseries,

the very real problems of our times, and they are exploiting them with the Church and the preachers left out—which some think is no more than the Church and the preachers deserve.

Another bad symptom in the year's fiction is, that what we have always considered a good thing is represented as a bad thing—that is to say, marriage, and the married people are giving all the trouble. The only place now for a wedding in a novel is in the last pages. For if the story progresses beyond the "honeymoon" the happy pair are sure to "part." The trouble is that too many people in fiction and out of it are worrying over the husband's rights and the wife's wrongs, and not enough attention is given to the psychic nature of the law that binds married people to each other, *for better or for worse.* Some old preacher may have compounded that phrase, but it is an exact description of the law. Only the most selfish men and women ever manage to preserve all their rights. And the meanest ones in this world are they who are forever snatching and scratching for what they call justice. Justice is not good for many people. It's apt to make an ass of a righteous man and a demon of a bad one. But to bear some injustice, even much injustice, from the person to whom you are married, does not usually injure the moral character; the reverse is the rule. And this is what marriage is for—to continue the race under decent conditions, and to produce by means of tribulations, if it so happens, one patient composite character enriched by the natures of two people, a man and a woman—not to furnish disgraceful material for writers of fiction whose literary instincts have gone wrong. If a law could be passed, especially in the Northern and Eastern States, where most of the divorce-writing novelists live, by which they might be indicted and punished for fictitious desertion, adultery or bigamy, much would be accomplished toward purifying literature.

We have no stories of importance from the West. And there has been no advance made in Southern fiction. Harbin has written as truthfully as usual, but not of what is good or lasting among us. Fox has written as romantically and botanically as usual, but Fox is only a mountain novelist. He is not Southern. No Southern author has produced a really notable story of Southern life as it is. And we cannot hope for such a book soon for several reasons. First, we have not the free mind in the South. We are fairly intelligent, we have splendid dramatic material, and we are brave enough to

MRS. HUMPHRY WARD,
Author of "The Testing of Diana Mallory."
Harper's.

fight, right or wrong, but *nothing* will induce us to tell the truth about ourselves that is not complimentary, no matter how thrilling it should prove to be. We are the victims of prejudice from within and without. They who love us and they who hate us write about us, but the man with the wide, free vision, who could see us in perspective, and in relation to the whole, has never written a word in fiction about Southerners, unless, possibly, it is Owen Wister, who did well as far as he went. Also, we are the victims of the student man now. We are being studied like a foreign ant-hill by goggle-eyed historians and economists, but we have no interpreter big enough to tell where we are in the order of things. And one reason for this may be that we have no philosophy of life in the South, and therefore no order. We did have the gentlest, laziest, most genial and unselfish of all philosophies, but we lost it, and our Order of the Garter, too, with the blood we shed upon many battlefields

during the Civil War. And we have nothing now by which to measure this new changing life. This is why Thackeray's and Scott's are standard novels. They were dramas of social conditions long fixed and recognized. We have no such conditions here yet.

But probably the most discouraging feature in the whole situation is the lack of an enlightened intelligence in the readers of Southern fiction. Here in the South we lost the leisure and peace of mind after the war which makes novel readers. Therefore our authors must look to the North and East for purchasers of their books. And only a fool can write the kind of stories of the South that Northern and Eastern readers demand. How many have read the "Arkinsaw Cousins"? The book contains remarkably sympathetic and wittily drawn portraits of Southern types. But the Northern reader has little or no faculty for appreciating the peculiar humor and sweetness and tragedy of such people. Yet he will devour with avidity all the inanities that Mr. Somebody writes about Virginia ladies and gentlemen and satin-tail horses! The Northern and Eastern man is not nearly so intelligent as he has reputation for being, anyhow. His flinty faculties have developed very little since abolition days. They have simply been indented with a great deal of useful information by an educational system too strong to resist. But it is many a day since one of them could venture to form an independent judgment of his own without consulting his "authorities." If half a dozen of the ablest men and women in New England were stranded on a desert island, they could not begin a civilization till they wrote a book about how to do it—for "reference." This is why they do not and never did understand or appreciate the South. They have written their own books of reference, or demanded them according to their own indentation of ideas, without regard for the truth.

But with all these drawbacks and many others that have not been mentioned, civilization is advancing in that most uncertain and iconoclastic of all regions—the region of fiction. The agitation in regard to the "great white plague" and measures for its suppression is sure to report itself in next year's stories. Some of the realists and other small tick novelists will write tubercular romances. But this will be more than counterbalanced by the infusion of health and earth-sanity from the civil engineers and forest keepers. Mr. F. Hopkinson Smith presents one of the most admirable heroes of the year in a young man who gets his training for living while digging a railroad tunnel. Nobody has given us the Panama Canal novel yet, but it ought to be a good one, with plenty of hard work in it. That is what we need in fiction—more manual labor and less indecent mental dexterity.

NASHVILLE, TENN.

The Season's Important Books

FOR many years it has been our custom to devote THE INDEPENDENT'S Annual Book Number to a recapitulation and comparative estimate of the most important books publisht during the year. The custom had numerous advantages, but one great demerit, that of necessitating a renewed discussion of many books fully reviewed in earlier issues, and thus made familiar to our readers.

This year we have decided to make a change—to look forward, not backward. The following pages are, therefore, devoted to a general survey of the fall offerings of our publishers, with, it is true, still an occasional backward glance at their activities since the beginning of the autumn season, but mainly looking forward to the end of the year. No attempt is made to give extended critical verdicts; these will follow in course of

time, as the books announced fall from the presses. The aim has rather been to acquaint the reader in advance with the coming of such works as promise to be

LADY RANDOLPH CHURCHILL.

of more than average interest, and to give a preliminary outline of the contents and merits of such as have already appeared. To use a now familiar term, the pages that follow are concerned with "books as news."

The essayists first. There are so few of them nowadays really worth reading that one cherishes them all the more. First of all, here is the ever-delightful Mr. Crothers, with a new volume of those charming, humorous, observant papers

of his, which often lead one nowhere in particular, but benefit him none the less all the way. *By the Christmas Fire*[1] he calls this book, and our word for it, he sticks to his text in the cheeriest of Christian and Christmas spirits. Miss Agnes Repplier, another ever-welcome visitor in this field—gently, delicately humorous, too—makes us a Christmas present worth having in her collected essays on the fads and fancies of our grandparents, who, according to her as well as to themselves, lived in *A Happy Half-Century.*[2] A third book from Boston, and typically of Boston most of the way, is Bliss Perry's *Park-Street Papers,*[3] containing his talks from the Editor's Easy Chair of the *Atlantic* to its readers.

Mr. H. M. Alden's *Magazine Writing and the New Literature*[4] has already begun to receive the attention which it deserves. It formulates a theory that arrests the attention. Mr. Edward Sandford Martin's *In a New Century*[5] contains a score of papers and two on current topics, grave and light, mostly of a social nature. What he says is always worth reading, and he always says it felicitously.

Always and delightfully bookish, Mr. Austin Dobson has collected a number of his fugitive contributions in prose and verse to the English periodical press, and given the volume, which rambles far afield, the title of *De Libris: Prose and Verse.*[6] He is not at his best in it, but even so he is worth reading. From England, also, we have two new volumes by that versatile gentleman, Mr. Gilbert K. Chesterton, *All Things Considered*[7] and *Orthodoxy;*[8] still another book of essays, *At Large*[9], by Mr. A. C. Benson, whose industry apparently does not affect the leisurely quality of his writing; and a collection of *Blackstick Papers*[10] on various subjects by Lady Ritchie.

In the field of poetry the new editions lead in importance, as is all too often the case nowadays. Of new verse we are to have *Herakles,*[11] by George Cabot Lodge —dramatic poetry this, like his earlier "Cain"; another dramatic poem, *King Alfred's Jewel,*[12] by the anonymous author of "Mors et Victoria," who aims at proving to us that, poetically, Alfred is fully as romantic as King Arthur; and *Apollo and the Seaman, and Other Poems,*[13] by Arthur Trench, which has received extraordinarily high praise in England. A collection of the unpublisht French-Canadian poems and sketches of the late William Henry Drummond, made by his widow, and prefaced by her with a biographical sketch, will be welcome to the many readers, on both sides of the line, of "The Habitant" and "Johnnie Courteau." The book is called *The Great Fight.*[14]

The departure of his older contemporaries has placed Mr. Richard Watson Gilder rather prematurely (he is only sixty-four years old) in the position of the Nestor of our singers. It is fit, therefore, that a collected edition of his verse containing, besides the nine volumes already publisht, a tenth volume of his latest work, is added this year to the well-known *Household Edition of the Poets.*[15] The volume is provided with a frontispiece portrait of the author. The late Louise Chandler Moulton's three volumes of verse have been gathered in a single volume under the title of *Poems and Sonnets,*[16] with an appreciation by Harriet Prescott Spofford.

With the ever-growing popularity of fiction it was to be expected that the number of books devoted to its study should rapidly increase. The last decade has seen several such works of importance and value, and now there is to be added to their numbers a study of *The English Novel in the Nineteenth Century,*[17] by Prof. Richard Burton, who, of course, opens his book with a survey of eighteenth-century "beginnings," to trace the continuity of evolution. A final chapter is devoted to the cis-Atlantic branch of the art—to Hawthorne, Poe, Henry James and Howells. Prof. Prosser Hall Frye's *Literary Reviews and Criticisms*[18] we reserve for future comment, probably for hearty praise and disagreement both.

Last, but not least, we reserve Mr. Swinburne's *The Age of Shakespeare*[19] for review in the near future. The greatness of the poet is apt to carry away the reader of Swinburne the critic, with his indiscriminating admirations and his bitter literary animosities. Suffice it, then, to say here and now that his book has appeared, with all his critical faults and virtues thick upon it.

Autobiographies, biographies and books of memoirs of the first rank are as rare as the men and women whose personality or achievements give them the right to be made their subjects, or enable them to write them. It is not every season that one can expect a life of a Gladstone by a Morley, the memoirs of a Bismarck or a Grant. If, in the world of high pol-

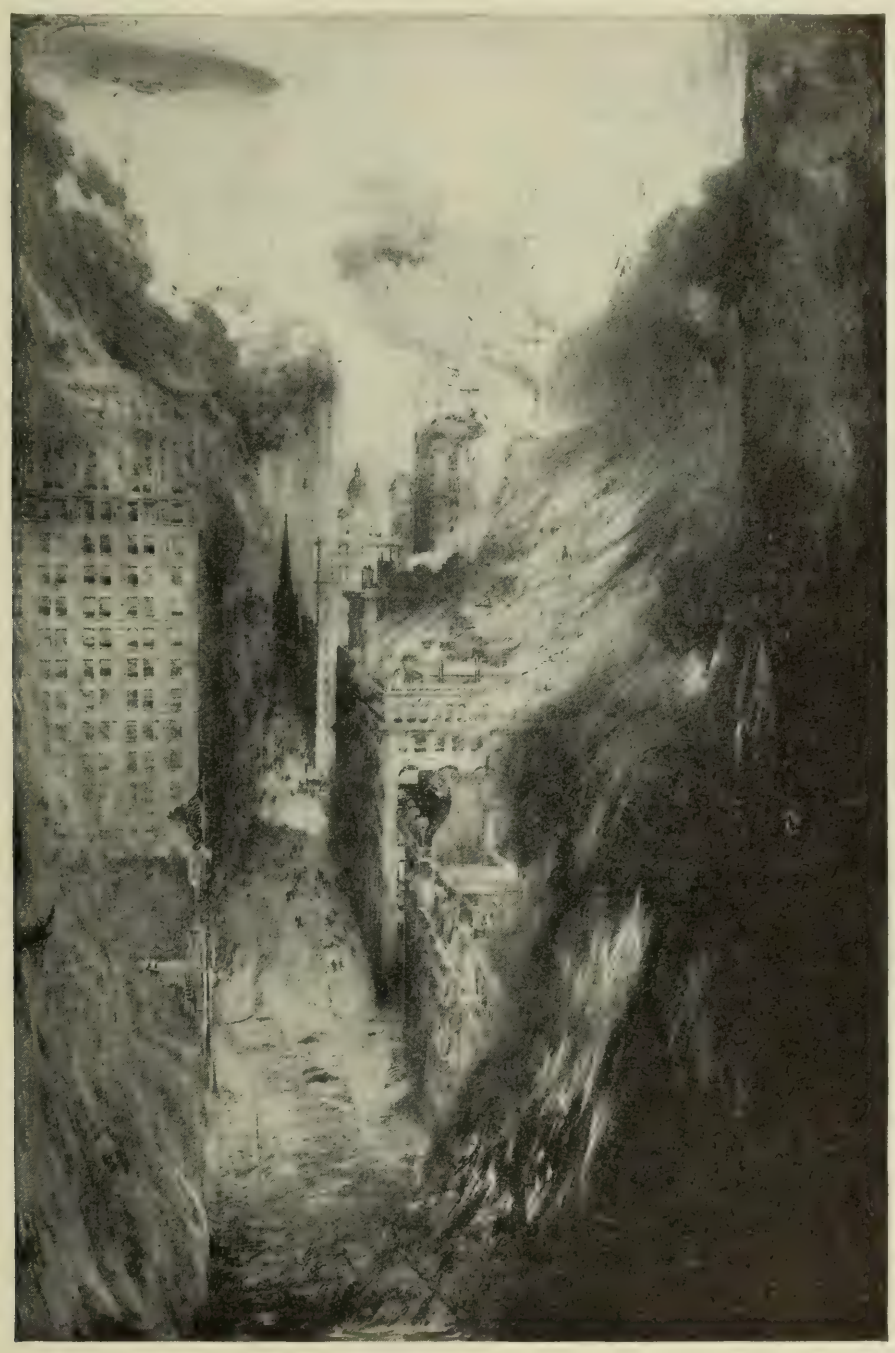

ILLUSTRATION FROM WELLS'S "WAR IN THE AIR."

itics and war, the present season offers nothing of lasting value to the student of history, it compensates us in a measure with several minor books worth reading in other and less portentous fields of human activity.

The Reminiscences of Lady Randolph Churchill,[1] clever, interesting, lively, contributes nothing to our knowledge of the political history of England during the period with which her husband was so meteorically identified, but is full of brief jottings, bits of personal description and opinion, anecdotes and comment that make it lively reading. The author's reminiscences span the period from the last years of the Third Empire to the close of the Boer War, and cover memories of the courts of Alexander III, the first and the third of the German Em-

Mary Johnston

perors, *the* Faubourg in its retirement under the republic, and of English society. It is, indeed, in its chronicling, here and there, of the changes that have come over that society since the late 70's that the book is most interesting. Lady Randolph Churchill is a true woman in that her point of view is always the personal one, which gives an original tang to her anecdotes of great personages, English and foreign.

Mr. William Winter's *Other Days*[2] was reviewed in these pages only the other day. The stage is much to the fore this season, in the biographical field, Mr. Austin Brereton's *Life of Sir Henry Irving*[3] leading the procession in two worthy tomes. The author, as happens all too often in modern biography, is not impartial in his attitude toward his subject, indiscriminating admiration being its keynote, hightened here and there by what may be called "biographical window dressing," if the mixt metaphor be permissible. But as the historic chronicle of a great career the work is unexceptionable in its accuracy and fullness. Detailed comment must be deferred to a later date.

Mr. Winter informs us in his memoirs that he is engaged upon a work on "The Life and Art of Richard Mansfield," undertaken with the dead actor's sanction. Another biography of this actor, whose struggle for recognition and the measure of whose ultimate success are second only in interest to those of his countryman, comes to us in *Richard Mansfield: The Man and the Actor,*[4] written with the assistance of Mrs. Mansfield, by Mr. Paul Wilstach, who was for ten years associated with Mansfield's management and enjoyed his friendship. The personal note is consequently struck constantly in these pages. From Richard Mansfield to Boutet de Monvel's *Beau Brummel and His Times*[5] is but a step. The Frenchman draws a vivid picture of his hero, and of the society that made him possible, yet leaves unanswered in the end the question so often asked, "What was the secret of Beau Brummel's success? What lay behind the audacious, whimsical pose?"

The *Recollections of a Varied Career*[6] of Gen. William F. Draper might well be rechristened "Recollections of an American Career," they are so typically representative of the American of the middle of the last century. General Draper won success in business, served thru our war and won his rank, represented his State (Massachusetts) in Congress, was mentioned for the Senate, and was sent abroad as Ambassador to Rome. A representative record of a successful American's life, indeed.

The late Josiah Flynt's fragmentary *My Life*[7] is interesting reading, perhaps

just because it brings us no nearer to an understanding of the mental make-up and the attitude towards life of this lover—it were more exact to say this slave—of "the Road." Such impressions as the book leaves, however, strengthened by those who have contributed to it—Arthur Symons, Alfred Hodder, Emily M. Burbank, and Bannister Merwin—lead one to grope blindly for some psychological resemblance between him and the late Lafcadio Hearn.

One welcomes with delight, at this late day, so truly important an addition to Wagner literature as Angelo Neumann's *Personal Recollections of Wagner.*[8] Here is material worth preserving and giving to the world, a valuable chapter added to the definitive life of Wagner and to the history of his music.

Mr. and Mrs. Joseph Pennell's *Life of James McNeill Whistler*[9] and Otto Bacher's *Whistler in Venice,*[10] both elaborately illustrated, are among the important publications of the season reserved for later discussion.

This record of new biographical literature would be incomplete without a mention of the third and closing volume of Carl Schurz's *Reminiscences,*[11] and of Ellen Terry's long-delayed *Recollections and Reflections.*[12]

[16]Roman Life and Manners under the Early Empire. *By Ludwig Friedlaender.* Translated by Leonard A. Magnus, LL.B. E. P. Dutton & Co. 12mo. $1.50 net.

The coming great historian, who is sorely needed if the story of the world's modern era be ever to be rewritten in its proper perspective, arriveth not, but the preparation of material without end to be placed at his service when at last he does

AUTHOR OF "THE MARTYRDOM OF AN EMPRESS,"
Who has written a new novel, "The Cradle of the Rose." Harper's.

arrive proceeds with undiminished industry. This season there is to be chronicled nothing of the first importance in the field, at home and abroad. The larger histories, American and foreign, begun in earlier seasons, are progressing toward completion, and their successive volumes will be noticed in these pages as they appear. For the rest, there is at hand a mass of monographs and histories of localities, periods, personages and movements, an ever-proceeding filling in of details.

No publishing season without its Napoleon literature—that goes without saying. This year there present themselves three new tomes for admission to the already swollen Bonaparte library. It may be as well to dispose of them here, before proceeding to take a further look around.

Napoleon and the Archduke Charles,

by L. F. Petre,[1] a study of the Danube Valley campaign of 1809, is of particular interest because it illustrates the beginning of the decline of Napoleon's military genius, a subject so thoroly and ably discussed in Colonel Dodge's monumental work in the "Great Captains" series. The indefatigable Mr. H. Noel Williams contributes a study of *The Women Bonapartes,*[2] the title referring to Madame Mère and her three daughters, and the parts they played in the rise, the glory and the fall of the Man of Destiny. The *Memoirs of Comte de Rambuteau,*[3] who was his Chamberlain, give a good picture of the court that was created around him out of the most heterogeneous material, with the assistance of this member of the old nobility. If he does not show us a Napoleon *intime,* he at least gives us glimpses of the warrior at leisure, and of the ways in which he spent it. Mr. Thomas E. Watson's picturesque pen gives a highly dramatic account of *Waterloo*[4] in a small volume that worthily serves as an epilog to his life of Napoleon.

In American history we have a new edition of Henry William Elson's *History of the United States of America,*[5] in five volumes, which may for the moment be past over with a simple mention of its appearance. A study of *The Justice of the Mexican War,*[6] by Mr. Charles H. Owen, M. A., LL. B., will set at rest many an uneasy historical conscience. According to Mr. Owen, this war was unavoidable as part of the enforcement of the Monroe doctrine. The evidence against the United States, he holds, is entirely insufficient to convict; opinion and inference have been confused with evidence. Students of the history of the Constitution will find a full discussion of the measure of the contribution of Charles Pinckney toward its framing in *The Mystery of the Pinckney Draught,*[7] by the Hon. Charles C. Nott, formerly Chief Justice of the United States Court of Claims. Two new volumes in the well-edited series of "American Crisis Biographies" are announced by its publishers, *Stonewall Jackson,*[8] and *John C. Calhoun.*[9] To the "American Commonwealth Series" are added, this season, volumes on *Wisconsin*[10] and *Minnesota.*[11]

The two sizable volumes devoted by Mr. James Gairdner to a study of *Lollardy and the Reformation in England*[12] demand a much more detailed and lengthy notice than can be spared them in this general survey of the season's books. This is not Mr. Gairdner's first book on the subject; indeed, the present elaborate work is the outcome of his researches for a briefer volume, publisht some years ago. In the present study he goes far more deeply into the predisposing causes that begot Wycliff's teachings and Lollardy, and, at the end, into subsequent developments. A work that is still to come is Frank Basil Tracy's *Tercentenary History of Canada,* from Champlain to Laurier.[13]

The publication of Pompeo Molmenti's elaborate history of *Venice,*[14] from its earliest beginnings to the fall of the republic, reaches its completion with the appearance of the fifth and sixth volumes, on "The Decadence." History, in its wider sense, here gives place to a large extent to the study of manners and culture, of social conditions, dress, fashions, etc. Like the earlier volumes, these are notably well illustrated. Another notable Italian contribution to history, Guglielmo Ferrero's *The Greatness and Decline of Rome,*[15] reaches its third volume in "The Fall of an Aristocracy," from the death of Cæsar to 37 B. C. A third historical work in translation is Ludwig Friedlaender's *Roman Life and Manners under the Early Empire,*[16] a book packed with information attractively presented.

Dramatic Literature

[1]Faust. *By Stephen Phillips and J. Comyns Carr.* Macmillan Co. 12mo. $1.25

[2]Hero and Leander. *By Martin Schuetze.* Henry Holt & Co. 12mo. $1.25 net.

[3]Mater. *By Percy Mackaye.* Macmillan Co. 12mo. $1.25.

[4]The House of Rimmon. *By Henry Van Dyke.* Charles Scribner's Sons. 12mo. $1.00.

[5]Works of Henrik Ibsen. Edited, with Introductions by William Archer, and Edmund Gosse's "Life of Ibsen." Pocket Edition. Charles Scribner's Sons. 12 vols. $1.25 each.

[6]John the Baptist. *By Hermann Sudermann.* John Lane Co. 8vo. $1.50 net.

[8]Pelleas and Melisande. *By Maurice Maeterlinck.* Introduction by Montrose J. Moses. Illustrated. T. Y. Crowell & Co. 8vo. $1.50 net.

[9]The American Stage of Today. *By Walter Prichard Eaton.* Small, Maynard & Co. 12mo. $1.50 net.

[10]The History of the Boston Theatre. *By Eugene Tompkins* and *Quincy Kilby.* Illustrated. Houghton, Mifflin & Co. Royal, 8vo. $5.00 net.

Poetry lies dormant another season. There is much good verse, but no new wings are unfolded in the bolder flight, except in the domain of the poetic drama, where, indeed, the promise of the poet is great, even tho the response of the public be discouraging. In this field Mr. Stephen Phillips still stands first of his contemporaries. He may not have fulfilled the great expectations aroused by his earlier work, but he still remains a poet to be reckoned with in richness of fancy and mastery of his craft. His *Faust,*[1] freely adapted from Goethe's tragedy, with the assistance of that practised old theatrical hand, Mr. J. Comyns Carr, is worth reading for its own sake and for the sake of the comparison that it invites with the huge masterpiece on which it is based.

One is tempted to throw to the winds the caution taught by much experience, after reading Prof. Martin Schuetze's poetic tragedy of *Hero and Leander,*[2] and to speak of it enthusiastically. Here is, indeed, a beautiful talent of the greatest promise, a soaring fancy, poesy of thought and imagination as well as of form, and sound classic scholarship.

Mr. Percy Mackaye's *Mater,*[3] which is not poetry, but certainly is literature, was reviewed in these pages two weeks ago, together with Dr. Van Dyke's *The House of Rimmon.*[4] Mention is made of them here again merely for the sake of the record.

It will suffice, also, to indicate the publication of a pocket edition of Ibsen[5] with a mere word. One is delighted, however, to find the Norwegian master sufficiently advanced among us, after twenty years of propaganda, to make this edition possible. Sudermann's *John the Baptist*[6] is offered to us in an English version by Beatrice Marshall. None will say that it is not timely today with us, even tho the sensation of its suppression in Berlin ten years ago, and of the Kaiser's intercession, has long since died out. A monograph on *The German Drama of the Nineteenth Century,* by George Witkowski,[7] which has had considerable success on the Continent, appears in an English dress this month. The author furnishes the necessary transition from the end of the eighteenth century, and reviews progress since then to the days of Ludwig Fulda, Hauptmann, Sudermann and Max Halbe.

A translation of Maeterlinck's *Pelléas et Mélisande,*[8] done painstakingly, but losing much, of course, of the quality of the original, is adorned with pictures of Miss Garden in the part.

Mr. Walter P. Eaton's *The American Stage of Today*[9] consists mainly of discussions of the plays produced in New York during the season of 1907-08, including its many failures, with excursions into the wider field of the contemporary American stage and drama. Mr. Eaton prides himself upon his inconsistency, but it never rises to the level of an interesting subjectivity. Rather does it seem to be due to critical haziness. If not of any importance or weight, the book is certainly readable.

Of far wider than merely local interest is the announcement of *The History of the Boston Theatre,*[10] by its former manager, Mr. Tompkins. The history ranges from grand opera stars to minstrels, from statesmen and clergymen to pugilists. The illustrations promise to be in keeping with the possibilities of the book.

Travel in Many Lands

[1]A Motor Flight Through France. *By Edith Wharton.* Illustrated. Charles Scribner's Sons. 8vo. $2.00 net.

[2]Roman Holidays. *By William Dean Howells.* Illustrated. Harper & Bros. 8vo. $3.00 net.

[3]The Other Americans. *By Arthur Ruhl.* Illustrated. Charles Scribner's Sons. 8vo. $2.00.

[4]Untrodden English Ways. *By Henry C. Shelley.* Illustrated. Little, Brown & Co. 8vo. $3.00 net.

[5]Isle of Wight. Painted by A. Heaton Cooper. Described by A. R. Hope Moncrief. Macmillan Co. 8vo. $2.50.

[6]Lisbon and Cintra. *By A. C. Inchbold.* Illustrated. Duffield & Co. 8vo. $2.50.

[7]Hungary and the Hungarians. *By W. B. Forster Bovill.* Illustrated. McClure Co. 8vo. $2.00 net.

[8]The Pacific Coast. *By Clifton Johnson.* Illustrated. Macmillan Co. 8vo. $2.00 net.

[9]From the North Foreland to Penzance. *By Clive Holland.* Illustrated. Duffield & Co. 8vo. $3.50.

[10]The Jungle Folk of Africa. *By Robert H. Milligan.* Illustrated. Fleming H. Revell Co. 8vo. $1.50 net.

[11]Out-of-Doors in the Holy Land. *By Henry Van Dyke.* Illustrated. Charles Scribner's Sons. 12mo. $1.50 net.

It is perhaps fortunate for the leisurely tourist in an armchair that the Near East did not begin anew to loom large and dark upon the political horizon until the publishers of this country and England had completed their preparations for the autumn publishing season. Thus do they

escape a possible monotony of interest in at least one department of literature—a department, be it added, to which America contributes this year most worthily. All countries, all climes, all peoples are represented, and all, the evidence shows, are being drawn ever more closely within the circle of a uniform civilization that, with all its merits, threatens to become monotonous on the surface.

Whether she dissects the souls of her fictional characters, reveals the secret of the charm of Italian gardens, or journeys thru France in a motor car, Mrs. Edith Wharton invariably gives to her work an intellectual distinction that outweighs all its other qualities.

A Motor Flight Through France[1] is rich with the delicate observation of a keen, well-stored mind, eager for new impressions, for additional knowledge, understanding and interpretation, alive with an interest that embraces nature and man and his works, social phenomena, architecture, literature, rich with all that makes travel profitable and beautifying, the reading of its chronicles a delight. Mrs. Wharton traveled in the out-of-the-way places which the automobile has made accessible. The many illustrations of her book are excellent and interesting, because many of them are new.

Another American traveler with a richly stored mind and keen eyes, but with a more humanly sympathetic, less distantly intellectual attitude, Mr. William Dean Howells, contributes this year, as he did last year and the year before that, a welcome volume to our library of travel, as remarkable as Mrs. Wharton's for the grace and yet the complete mastery of its author's literary equipment. *Roman Holidays*[2] Mr. Howells calls his book; in reality it was one long holiday, this second visit to his loved and unforgotten Italy after forty years. And yet, tho Italy be the country of Mr. Howells's love, one reflects, while reading him, that England is most potently the country of his racial allegiance.

Books such as these reveal to the American the lack of the "patina of time" in his own country. Books such as these cannot be written about these United States for a century to come and more, not even by an Edith Wharton or a Howells. The best this continent can do is to put forward its southern hemisphere, with its closer allegiance to European origins.

Mr. Arthur Ruhl's *The Other Americans,*[3] which deals with the cities, the countries, and especially the people of South America, serves well a useful purpose.

A great amount of enthusiasm, reverence and love is bottled up in Mr. Henry C. Shelley's *Untrodden English Ways,*[4] the product of a mind well filled with literary lore. The title is apt, even tho the author includes in his table of contents chapters on Madame Tussaud's and the Poets' Corner; the illustrations are worth while. *Isle of Wight*[5] is one of those books that leaves one in doubt as to whether the text has been written to carry Mr. A. Heaton Cooper's paintings, artistically reproduced in colors, or the pictures painted to accompany the text. From either point of view the book is satisfactory.

To a large extent topographical, with many excursions into history, A. C. Inchbold's *Lisbon and Cintra*[6] is a welcome book, which is made ornamental by Stanley Inchbold's colored illustrations, revealing beauties all too little known in a country far too much neglected by globe-trotters. Mr. W. B. Forster Bovill. with all his liking for the Hungarians, is not blind to their faults, least of all to their entirely disproportionate idea of their international importance. This self-sufficiency is found in nearly all the smaller nationalities, but whereas the others assert their fancied superiority, the Hungarian condescendingly admits it. Mr. Bovill has written a readable, and, above all, an informing book on *Hungary and the Hungarians,*[7] their past, present and probable future, their daily life. characteristics and country.

And now, since this is a survey of the autumn books, a brief mention of a host of others. Mr. Clifton Johnson adds to his growing "American Highways and Byways" series *The Pacific Coast,*[8] with, of course, his own illustrations. That experienced traveler and interesting writer, Mr. Clive Holland, takes us a-visiting the historic south coast of England, *From the North Foreland to Penzance,*[9] with many a tale of war, wrecking and smuggling, Mr. Maurice

Randall furnishing the colored illustrations. Mr. Robert H. Milligan's *The Jungle Folk of Africa*[10] is as readable and interesting a book of travel as one can wish for. The author is a missionary who has lived for seven years in Africa, and writes only of that part of the continent and its inhabitants with which he is familiar. He seeks the human brother under the black skin and finds him.

Dr. Henry Van Dyke's *Out-of-Doors in the Holy Land*[11] describes his wanderings, with three companions, away from the beaten track, the association of his surroundings with the Bible being never far from his mind.

On the eve of its appearance in this country, as this issue of THE INDEPENDENT goes to press, the narrative of the latest exploit of the Duke of the Abruzzi—Luigi the Explorer he may well be called, as centuries ago another royal prince received the epithet of the Navigator — deserves inclusion here (E. P. Dutton & Co.). This is, to give its title in full, *Ruwenzori: An Account of the Expedition of H. R. H. Prince Luigi Amadeo of Savoy, Duke of the Abruzzi, to the Snow Ranges Situated between the Equatorial Lakes of Central Africa.* The Duke is not an author: he leaves the chronicling of his exploits to other hands. This book is the work of Cavaliere Filippo de Filippi, F. R. G. S., who, it will be remembered, rendered the same service in the case of the report of one of the Duke's earlier expeditions. The translation, it may be added here, has been made by Caroline de Filippi, *née* Fitzgerald. The Duke adds, however, a preface. The interesting illustrations have been reproduced from photographs by Mr. Vittorio Stella, a member of the expedition.

Ruwenzori, so we are informed in an appendix by Luigi Hugues, may now be accepted without further doubt as the mysterious "Mountains of the Moon" of Ptolemy's Geography. The Duke himself is convinced that he has solved the problem of the relation of the range to the sources of the Nile.

These mountains long defied exploration, protected against conquest by the difficulties attending a venture into their vastnesses. Sir Samuel Baker, who saw them in 1864 from afar, called them "the Blue Mountains," but it was not until Stanley suggested the importance of a thoro knowledge of these ranges that the attention of African travelers was turned fully upon them. Emin Pasha did part of the work, and so did Sir Harry Johnston, but both left unfinished the great work which has now been carried out.

The cartographer will hereafter have to add to his maps a number of new names of mountain peaks, worthily bestowed, of Mount Stanley, first of all, the king of these ranges, and of Peaks Margherita and Alexandra, the highest on that mountain, named in honor of the queens of Italy and England. The English Royal Geographical Society has made one single change in the names bestowed upon these towering, snow-capped masses by their conqueror. It has rebaptized the Mount Thomson of the Duke's naming Mount Luigi di Savoia, a distinction gallantly earned and gracefully bestowed.

A more extended notice of this contribution to what might be called the secondary exploration—the filling in of the details of regions known only in their general outline—of the Dark Continent, will follow in due course of time. Only a general outline of its contents can be given here and now. Suffice it to say, however, that the translation is satisfactory, and that the illustrations fully deserve this second mention in so brief and general a notice as the present one. And, of course, as before in the case of the records of this traveler's expeditions, the mechanical parts of the work—type, paper, printing and binding—leave nothing to be desired.

Autumn Fiction

[1]THE TESTING OF DIANA MALLORY. *By Mrs. Humphry Ward.* Harper & Bros. 12mo. $1.50.

[2]LEWIS RAND. By Mary Johnston. Houghton, Mifflin & Co. 12mo. $1.50.

[3]THE IMMORTAL MOMENT. *By May Sinclair.* Doubleday, Page & Co. 12mo. $1.50.

[4]THE FLY ON THE WHEEL. *By Katherine Cecil Thurston.* Dodd, Mead & Co. 12mo. $1.50.

[5]HELIANTHUS. *By Ouida.* Macmillan Co. 12mo. $1.50.

[6]THE WORKS OF ANATOLE FRANCE. Complete Limited Edition in English. John Lane Co. 8vo. $2.00 per volume.

[7]THE TRAIL OF THE LONESOME PINE. *By John Fox Jr.* Charles Scribner's Sons. 12mo. $1.50.

[8]THE GREAT MISS DRIVER. *By Anthony Hope.* McClure Co. 12mo. $1.50.

[9]THE DIVA'S RUBY. *By Marion Crawford.* Macmillan Co. 12mo. $1.50.

[10]THE VIRGIN IN JUDGMENT. *By Eden Phillpotts.* Moffat, Yard & Co. 12mo. $1.50.

[11]AN IMMORTAL SOUL. *By W. H. Mallock.* Harper & Bros. 12mo. $1.50.

[12]THE WAR IN THE AIR. *By H. G. Wells.* Macmillan Co. 12mo. $1.50.

[13]The Devil's Pulpit. *By H. B. Marriott Watson.* Dodd, Mead & Co. 12mo. $1.50.
[14]Angel Esquire. *By Edgar Wallace.* Henry Holt & Co. 12mo. $1.50.
[15]The Long Arm of Mannister. *By E. Phillips Oppenheim.* Little, Brown & Co. 12mo. $1.50.
[16]The Red City. *By Dr. S. Weir Mitchell.* Century Co. 12mo. $1.50.
[17]I and My True Love. *By H. A. Mitchell Keays.* Small, Maynard & Co. 12mo. $1.50.
[18]Interplay. *By Beatrice Harraden.* F. A. Stokes Co. 12mo. $1.50.
[19]A Woman at Bay. *By Sibilla Alaramo.* Authorized translation from the Italian by Maria H. Lansdale. G. P. Putnam's Sons. $1.50.
[20]The Cradle of the Rose. Harper & Bros. 8vo. $1.50 net.
[21]The Shadow World. *By Hamlin Garland.* Harper & Bros. 12mo. $1.50.

No decided trend is perceptible in the season's fiction, so far as it has been published. There is no pronounced fashion, historical, romantic, adventurous, psychological, sociological, or economic, such as has distinguished the output of several former years. There is a little of everything, of the historical novel, even, in this day of its eclipse, but not enough of any one thing to fasten upon as a point of departure. The short story in book-form shines by its absence, which is but natural, for, unless it were of surpassing merit, it would be drowned by the unending twaddle-stream in the magazines.

Place aux dames, then. Mrs. Humphry Ward's *Testing of Diana Mallory*[1] is entitled to the place of honor, on account of her enduring popularity with American women, if for no other reason —a popularity, be it observed, that is always restricted to her latest book. Her earlier ones, once read, are forgotten, except by the reviewers, for the sake of comparison. Next to her, one is glad to place an American woman, Miss Mary Johnston, whose *Lewis Rand*[2] is far and away the best work she has yet done, made notable by a sudden maturing of its author's power to portray the depths of character. Miss May Sinclair's *The Immortal Moment*[3] rehabilitates the Camille motif by the sterling art of its treatment. Of Katherine Cecil Thurston's new book, *The Fly on the Wheel,*[4] it may be said that it is the best work she has done thus far.

Ouida's last novel, practically finished, since the possible endings are sufficiently foreshadowed to enable the reader to make his choice, resembles her earlier books in many of its flamboyant qualities, its exaggeration, but also in its revelation of the continued power of a beautiful talent. *Helianthus*[5] is a satire, with an Italian setting, on the *droit divin* and its militarism, on alliances and their cost, and a cry of revolt against conditions that be, in which the rulers of today figure but thinly disguised.

ILLUSTRATION FROM WHARTON'S "MOTOR FLIGHT THROUGH FRANCE."

Here we pause a moment to wish well to the complete edition of the works of Anatole France in English.[6] It has begun with his least significant book—*The Red Lily*—it will progress to *L'Ombre du Mail, L'Agneau d'Améthyste* and *Le Mannequin d'Ozier,* pictures of contemporary French life that are fully appreciated only by those who, knowing that life thoroughly, will most likely not require translations of the pictures. But it is well to have this master of gentle irony, of majestically aloof scepticism, accessible in English, if only as a lesson in art.

Of Mr. John Fox, Jr.'s, *The Trail of the Lonesome Pine*[7] it may be said that it deserves the success it has already com-

manded. Anthony Hope, taking his cue from Mrs. Ward, has improved upon her example by attempting to place the greatest of historic Englishwomen in a contemporary setting in *The Great Miss Driver.*[8] And now the new novels be upon us in their serried ranks.

Marion Crawford proves triumphantly that a sequel may sometimes be as good, and even better, than its predecessor in *The Diva's Ruby,*[9] which is far and away the most readable of the three books devoted to the lady. In *The Virgin in Judgment*[10] Eden Phillpotts gives the inevitable tragedy of his fiction dignity and pathos and the customary scenic setting, painted with a hand that practice has made perfect. Returning to the field of fiction after his long excursion into more serious realms, Mr. W. H. Mallock deals in *An Immortal Soul*[11] with a subject that ceased to be novel long ago—duality of personality. The wonderful recent developments in the science of aeronautics bring Mr. H. G. Wells's *The War in the Air*[12] well within the range of future possibilities. Mr. Wells combines a daringly imaginative story with a tract against war, a thing that often is not favorable to the quality of the fiction.

Still another variant, and a very complicated one of the "Treasure Island" class of fiction, will be found in H. B. Marriott Watson's *The Devil's Pulpit,*[13] a tale of incessant action and adventure at the service of those who like it. With this may be classed *Angel Esquire,*[14] by Edgar Wallace, a detective story with some novel turns, which can be safely recommended to connoisseurs. E. Phillips Oppenheim is not at his best in *The Long Arm of Mannister.*[15] It consists of what are really connected short stories, in each of which Mannister takes revenge on one of his enemies.

Dr. S. Weir Mitchell's *The Red City,*[16] tho complete in itself, is to some extent a sequel to "Hugh Wynne." It deals with the second administration of Washington, its animosities and divided counsels, with the pro-French and pro-British policies of the period, but also with its social life. In the method of its telling it resembles closely its predecessor.

Once more the lady novelists. Three of them deal with the subject of marriage and divorce—one of them, and her story is the best, with the problem of the remarriage of the divorced couple after the years have brought experience, understanding and knowledge of self. H. A. Mitchell Keays is a thoughtful writer, and in *I and My True Love*[17] she has written a clever book with a perspective of real life. The problem confronting the divorced couple in this book is that of the future of their daughter, who has reached the marriageable age. Miss Beatrice Harraden's *Interplay*[18] is a mild tale of the right of the woman with a past to the love and the name of another man, a subject upon which, in exceptional cases, at least, the world is pretty well agreed by now. Few are the English women novelists who can keep the suffragette out of their books nowadays. Miss Harraden is not of their number. Sibilla Alaramo's *A Woman at Bay*[19] is an unpleasant story, whose problem is international, but whose setting and atmosphere are decidedly alien to us. *The Cradle of the Rose,*[20] by the lady who, after many books, still calls herself "the author of 'The Martyrdom of an Empress,'" tells a romantic tale of the conflict between Church and State in France, and of an imaginary Royalist rising in Brittany. Hamlin Garland returns to the subject of "metapsychics" in *The Shadow World.*[21] He has investigated once more the spiritualistic wonders that have been investigated before, and tells of them in story form. Mr. Garland is quite convinced of the truth of what he has seen. He will hardly convince the sceptics.

"Modernism," Roman Catholic and Protestant

[1] MEDIEVALISM: A REPLY TO CARDINAL MERCIER. *By George Tyrrell.* Longmans, Green & Co. 12mo.
[2] MIND, RELIGION AND HEALTH.. *By Robert MacDonald.* Funk & Wagnalls Co. 12mo. $1.30 net.
[3] HEALTH AND HAPPINESS; OR, RELIGIOUS THERAPEUTICS AND RIGHT LIVING. *By the Rt. Rev. Samuel Fallows, D.D., LL.D.* A. C. McClurg & Co. 12mo. $1.50 net.

The publication of devotional books, volumes of sermons, and the like, naturally groups itself around the two great festival seasons of Christmas and Easter; consequently, the new announcements do not call for comment here and now.

In the broader field of religious literature there are two topics that are apparently destined to claim an ever-increasing

share of our attention—the modern revival of the age-old belief in the close relation existing between religious faith and physical healing, and the movement that has come to be known as Modernism.

There have been many Protestant Modernisms in the past, there may be many still before us in the future, but the word has at present a narrower meaning, as applying exclusively to the struggle going on within the Roman Catholic Church, whose attitude of absolute authority lacks the flexibility which enables the younger churches to adapt themselves readily and with sound reason to the progress of human thought. This "Modernism" promises to become a historic term, overshadowing in importance the significance of a once familiar word of foreign coinage, *Culturkampf*.

The latest contribution to the discussion furnishes us, in its title, with still another label that is likely to be widely adopted, it is so felicitous a find. Mr. George Tyrrell's *Medievalism*[1] is a reply to Cardinal Mercier, Archbishop of Malines and Primate of Belgium, who, in his Lenten Pastoral of the present year, mentioned Mr. Tyrrell, a convert to Roman Catholicism, and a suspended priest, by name as the typical embodiment of Modernism. The Pastoral is printed in full at the beginning of the book, whose author devotes 166 of its pages to a refutation of the Belgian prelate's strictures. According to him, the principle that divides "Mediaevalism" from "Modernism" is at the root moral rather than intellectual; a question less of truth than of truthfulness, of respect for the liberty of other minds, of a veracity that refuses to compromise where authority, edification and revealed truth are concerned—of honesty with oneself.

In his long introduction to *Mind, Religion and Health*[2], which is practically an appreciation of the Emmanuel Church experiment, the Rev. Robert MacDonald travels far afield, finding ultimately in this very movement the latest of Protestantism's "modernisms." An echo of the Boston experiment will be found in Bishop Fallows's *Health and Happiness*[3], which explains his own system of cures by prayer and faith as practised at St. Paul's Church, Chicago. Bishop Fallows invites those who come to him for treatment to bring with them "a diagnosis as accurate as the skill of the neurologist can make it." Mr. MacDonald depends most of all upon a psychological science that is not nearly so far advanced in knowledge as it will be some day, and foresees as a result of the religious healing movement a universal church, the "Christian." Dr. Fallows preaches faith as a dynamic force, chiefly for the cure of overtaxed nerves. He is for co-operation with the neuropath.

The movement is as yet but in its beginning. Whither it will lead, none can tell. It may be worth while to observe, however, that to this new Protestant "modernism," a reaction, according to Mr. MacDonald, from materialism, a free field has already been conceded, whereas the other has a long struggle still before it.

Miscellaneous

[1] STUDIES IN THE AMERICAN RACE PROBLEM. *By Alfred Holt Stone.* Doubleday, Page & Co. 8vo. $2.00 net.

[2] FOLLOWING THE COLOR LINE. *By Ray Stannard Baker.* Illustrated. Doubleday, Page & Co. 8vo. $2.00 net.

[3] THE WORLD'S GOLD. By L. de Launay. Translated by Orlando C. Williams. Introduction by Charles A. Conant. The Science Series. G. P. Putnam's Sons. 8vo. $1.75 net.

[4] OUR IRRATIONAL DISTRIBUTION OF WEALTH. *By Byron C. Mathews.* G. P. Putnam's Sons. 12mo. $1.25.

[5] NAVAL ADMINISTRATION AND WARFARE. *By Capt. A. T. Mahan, U. S. N.* Little, Brown & Co. 12mo. $1.50 net.

A number of new books on various subjects remain to be noticed. The range is wide, but it appears that the literature already extant in certain branches of human activity, thought and achievement has been judged to be sufficiently up-to-date to render further additions unnecessary at present.

A subject whose discussion promises to be perennial, perhaps because it moves of necessity as yet in a vicious circle, is that of the "race problem." The world has always had its vexing puzzles of this kind; of late they have taken a new lease of life in Europe, but the race problem *par excellence* for the American remains the negro. He may give the admixture of many nationalities from abroad an occasional thought; it is only this one that really preoccupies him. A contribution to its discussion that is really worth while is Mr. Alfred Holt Stone's *Studies in the American Race Problem*,[1] with statistical additions by Prof. Walter F. Wilcox. Both are scientifically impartial,

and if neither brings us nearer to a solution (which it is not their aim to do), both add vastly to our knowledge and understanding of the question that is to be solved. With this book comes Mr. Ray Stannard Baker's *Following the Color Line*,[2] a presentment of current conditions and facts, North and South. It furnishes many a text to be read into Mr. Stone's more general discussion.

A work devoted entirely to gold as the money metal of civilized nations, Mr. L. de Launay's *The World's Gold*[3] has been translated from the French and is offered to us at the right moment, when the gold standard battle has been fought once for all. The French writer deals with his subject in its four chief aspects—its geology, its geographical distribution, its extraction and "dressing," and its economics. The introduction to this translation has been written by no less an authority than Mr. Charles A. Conant. Mr. Byron C. Mathews's *Our Irrational Distribution of Wealth*[4] is still another plea for public ownership.

Captain Mahan has collected a number of his contributions to various American and English periodicals and publisht them under the title of *Naval Administration and Warfare*.[5] Their subjects vary greatly, those on American naval matters, including the cruise of the fleet, being of most direct importance, because in them the writer attempts to provide public opinion with some general principles for its guidance.

Music and Art

[1]Aspects of Modern Opera. *By Lawrence Gilman.* John Lane Co. 16mo. $1.25 net.

[2]Richard Strauss. *By Ernest Newman.* John Lane Co. 12mo. $1.00 net.

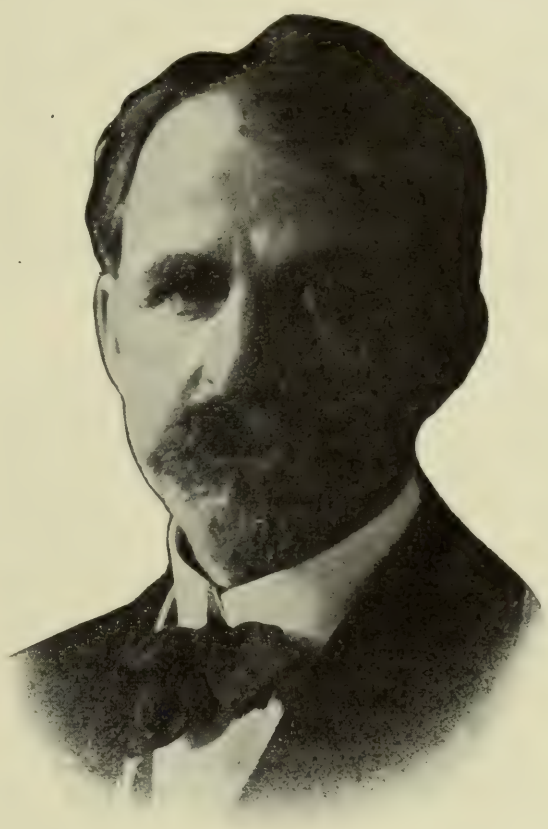
[10]The Development of Modern Art: A Comparative Study of the Formative Arts, Being a Contribution to a New System of Æsthetics. *By Julius Meier-Graefe.* From the German by Florence Simmonds. Illustrated. G. P. Putnam's Sons. 2 vols. Large 8vo. $1.50 net.

[11]A History of English Furniture. *By Percy Macquoid.* Vol. IV: The Composite Age, from the Beginning of Tudor Times Down to the Last of the Georges. With 1,000 Illustrations. G. P. Putnam's Sons. $15.00 net.



[12]Chats on Miniatures. *By J. J. Foster, F.S.A.* Illustrated. F. A. Stokes Co. 8vo. $2.00 net.

[13]A Short History of Engraving and Etching. *By A. M. Hind.* Illustrated. Houghton, Mifflin & Co. 8vo. $5.00 net.

[14]How to Appreciate Prints. *By Frank Weitenkampf.* Illustrated. Moffat, Yard & Co. $1.50 net.

[15]The Higher Life in Art. *By John J. La Farge.* McClure Co. $2.50 net.

There be those who complain that our musical enthusiasms of the last five years or so are but opera madness, and the scant allowance of time given for concerts, in New York at least, would appear

NEW PORTRAIT OF HAMLIN GARLAND,
Author of "The Shadow World." Harper's.

to justify this pessimistic verdict. It is certain that the opera is generously represented in the new books of the season devoted to things musical.

Mr. Lawrence Gilman, an able writer on absolute music when he chooses, and a modern of the moderns, leads with his *Aspects of Modern Opera*,[1] an extremely timely book, and useful. "After Wagner, What?" asked Mr. James Huneker, some years ago. Here's the answer, at least in part. Mr. Gilman furnishes us with appreciative and discriminating reviews of the development of operatic music

since Wagner, analyzing the different schools that have since sprung up under the leadership of such men as Debussy, Strauss and Puccini. A little perverse, perhaps, at times, in its bestowal of praise and stricture, Mr. Ernest Newman's *Richard Strauss*[2] is yet one of the most interesting volumes publisht thus far in the "Living Masters of Music" series of monographs.

On account of its potential importance, Sir Hubert Parry's *Life of John Sebastian Bach* is included here, tho the Messrs. Putnam will not publish it until after the first of next year. In the presence of an enthusiasm that has the hearty, if not perhaps the altogether understanding or discriminating support of New York society, it behooves us to wait a little for the perspective of time in order to reach soundly, sanely critical conclusions concerning MacDowell, whose reputation needs no bolstering up. Perhaps Mr. Gilman will mark the beginning of that period in his *Edward A. MacDowell,*[3] which is to appear next month.

Mr. Coerne's *Evolution of Modern Orchestration*[4] is reserved for future review. *Stokes' Encyclopedia of Music and Musicians,*[5] which had not yet come to hand at the time this was written, is, according to its publishers, "a record of facts, not of opinion"—a reference book, therefore, one of whose merits is said to lie in the fullness of its treatment of the most recent musical events, institutions and personages.

Pictorial art books and books about the pictorial arts, even the most serious ones, have become the Christmas gift books *par excellence.* It will suffice, therefore, to announce here the coming of some of the most important ones, reserving their discussion for the proper moment before the approaching holidays. Such books as the two on Whistler, referred to in the survey of the new biographical works, come, of course, under this head on account of their illustrations, and so do many of the books of travel and description, first among them Robert Hichens's *Egypt and Its Monuments,*[6] with its colored illustrations from paintings by Jules Guérin.

An "Art History of the World" is an important undertaking begun this season with *The Story of English Art,*[7] by Sir W. Armstrong. Each country will have its separate volume, written by an authority, and each volume will contain between five and six hundred illustrations, and exhaustive bibliographies. An account and record of noteworthy buildings erected in Vienna at the end of the seventeenth and the beginning of the eighteenth centuries, elaborately illustrated, will be found in *The Baroque Style of Architecture.*[8]

Three "special extra" and extra numbers of the *International Studio,* abundantly illustrated in colors, deserve attention.[9]

A German critic, Dr. Julius Meier-Graefe, is the author of a sizable contribution to the history of æsthetics in *The Development of Modern Art,*[10] which, accepting Rubens as the source, traces the main currents that have flown from him in all countries, stress being laid, however, on France as the center of modern artistic activities. A monumental undertaking, Mr. Percy Macquoid's *History of English Furniture*[11] reaches its completion with the fourth volume. Lovers of the reviving art of miniature painting will be interested in an authority's book on the subject, Mr. J. J. Foster's *Chats on Miniatures,*[12] which contains a great amount of interesting information in a small space.

Mr. A. M. Hind, of the Department of Engravings of the British Museum, has written *A Short History of Engraving and Etching,*[13] from the earliest times to the present day, his publishers furnishing over a hundred reproductions of famous specimens of the art. The arrangement of the book has been carefully planned for the convenience of collectors and students, and there is an admirable working apparatus of bibliographies, catalogs, tables, etc. Mr. Hind's colleague, the Curator of Prints of the New York Public Library, furnishes us with a helpful handbook in *How to Appreciate Prints.*[14]

And now, at the end, a bare mention (comment is for the moment unnecessary) of a new book by an American artist: John La Farge's *The Higher Life in Art,*[15] dealing with the lives and works of the Barbizon artists.

Literary Notes

....*The Whistle,* by Benjamin Franklin, has been reprinted again. This time it appears in a little booklet issued as a product of the L. H. Starkey Company, printers (125 Worth street). It has lost nothing by the present reissue.

....We are glad to print the following letter:

The notice of "The Little Brown Jug at Kildare," by Mr. Meredith Nicholson, which appears in the current issue of THE INDEPENDENT, excites our admiration and calls forth our gratitude.

We hasten, however, to call to your attention the fact that the author does not hail from Missouri. He is one of the genuine Hoosier authors than whom there are no than-whomer.

Yours very truly,
THE BOBBS-MERRILL COMPANY.
Indianapolis, Ind.

....All roads of adventure now lead to Africa. Many will wish to know more of the Dark Continent, now that Roosevelt is so soon to explore that region and hunt under his recently procured license. A ray of light is shed on Africa in *The Realm of Light,* by Frank Hatfield, in which the adventures and experiences of two Chicago business men in the heart of Africa are thrillingly set forth. Boston, Mass.: Reid Publishing Co. $1.50.

....Ernest Dressel North, the bibliophile and bookseller, has secured from the literary executors of James A. McNeill Whistler permission to reprint Mr. Whistler's *"Ten O'Clock."* The brochure has been executed at the Marion Press, Jamaica, and is a very creditable piece of work. The original has long been O. P. and the reprint, which is limited to 1,000 copies, is bound to be popular in the growing school of Whistlerites. (Ernest Dressel North. $1.00.)

....Great is the modern press agent. Thanks to some of his fine work a supposed unpublished poem of the late lamented Lord Byron has recently been found and rescued from the oblivion that would otherwise have engulfed it. The poem was found in an old album full of curious interleaved and antique wood cuts, a most appropriate background, by the way. The album was once owned by the grandmother of Arthur Ellsworth, Lady Harbury. In it Lord Byron, apparently one of her admirers, had written the following lines:

LOVE.

Art thou not dear unto my heart?
Oh, search that place and see,
And from that bosom tear that part
That does not beat for thee.

Yes, thou art dear unto my heart,
As dear as tongue can tell.
And if I'm guilty of a fault
'Tis loving thee too well.

—*Byron.*

The whole incident boils with realism and is an important (?) contribution to Byroniana.

....Henry W. Poor has long been one of the most discriminating book collectors of the day. He has kept alive the traditions of the oldtime book collectors that Burton writes about. His library has grown rich in the masterpieces of printing, in illuminated and other manuscrifts, in illustrated books, in Americana and especially in artistic bookbindings. Something of the richness of the Poor library was set forth at some length in *American Bookbindings in the Library of Henry W. Poor,* issue in 1903. And now this delightful library is being dispersed. Book lovers will lament the breaking up of such a library, except that thru the sale those with long purses may be able to buy one or more of these treasures at Anderson's.

Pebbles

"I AM introducing," the peddler began, "a patent electric hair brush——"

"What do I want with a hair brush?" growled the business man. "Can't you see I'm bald?"

"Your lady, perhaps——"

"Bald, too, except when she's dressed up."

"Yes, sir. But you may have at home a little child——"

"We have. It's one month old and quite bald."

"Of course, at that age," said the peddler. "But," he persisted, "maybe you keep a dog?"

"We do," said the business man. "A hairless Chinese dog."

The peddler dived into another pocket.

"Allow me," he said, "to show you the latest thing in flypaper."—*The American Grocer.*

THE FIRST CHAPTER.

(President Roosevelt will get a dollar a word.)

We saw (two plunks) a buck (that's four)
And then (six dollars, please)
I fired (that's eight) a shot (two more)
And brought him to his knees.
The hunting scene (that makes nineteen)
Is something really fine;
The jungle's all a vivid green.
(I think that's twenty-nine.)

Tonight we lie beneath the sky,
(One, two, three, four, five, six;)
It's great (seven, eight), the moon is high,
The woods full of big sticks!
So what we do (that's twenty-two)
Let's do with all our might.
(Come, Kermit, count, whate'er you do!
Yes, twenty-eight is right!)

It is great sport, (my words are short,
But why should I waste ink?)
I thought I heard a rhino snort
In coming down to drink.
I'm on his track; (Kermit, go back
And count those words again.)
The night is still and raven black!
(Loeb, come and hold my pen.)

Bang! Bang! Bang! Bang! (They'll hate to pay
For four bangs in a row,
A dollar each, but that's the way
The contract reads, I know!)
(Loeb, skin the rhino while I add
These words.) What heavenly breeze!
We're off to bed! (And Kermit, lad
Mail this first chapter, please!)

—J. W. Foley, in *New York Times.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

In our sixtieth anniversary number, which will be that of December 10th, we wish to print the names of any subscribers who have been readers of THE INDEPENDENT from the beginning. This list will include those whose parents were subscribers, and we desire that the names be sent as soon as possible.

The Soul of the Nations

FOR two thousand years or more, from Menes to Necho, the world's highest civilization was possest by the mixt people who lived on the Nile. They looked with contempt on the tribes outside of the narrow valley which reached back into Ethiopia. To them only their little riband of Africa was humanized; all else was rude and savage.

But meanwhile the country we now call Asiatic Turkey was developing its own civilization in the wider valley of the twin rivers, the Euphrates and the Tigris. There arose another chief culture, with its learning and its armies—Babylonian, Assyrian, Persian—and their pride was prouder than that of Egypt. To them the nations about were the dust of their feet, whose people were only fit to be captive slaves.

Then, on the shores of this same Asiatic Turkey, and the neighboring islands and coasts, arose a new and yet higher civilization—Ionian and then Greek. Its perfect flower was in Athens, and while its wise men still went to Egypt or to Persia to learn wisdom of the masters, all the wild tribes about were embraced under that insulting designation of *barbarians*. But the old lands of culture—Egypt, Asia Minor, Mesopotamia, Persia—were embraced in the civilization, as in the extended sway and language, of Alexander.

Then Rome became mistress of culture and laws. She recognized the old homes of civilization, but she sent her armies into the wilder tracts of Europe, hitherto fossilized in barbarism, whose people were past civilizing, were fit only to be sold in Roman markets. What was thought of the clans of France and Germany and Russia and Great Britain may be read in the annals of Cæsar and Tacitus. They could fight as wild beasts, and when caught could be bidden to slay each other in the Circus; but that they could be worthy men, who could create states and empires, would have seemed incomprehensible. So degraded were the Sarmatians that they did not even feel the need to pray. The Suevi were the most considerable of the German tribes, but they were wild nomads, living on milk and flesh, clad in skins, and given to war and hunting. The Britons "paint themselves with woad"; "ten or twelve of them live together, having their wives in common"; they "go clad in skins." Such were the outer barbarians, unfit to associate with civilized people, fit only to be made slaves.

But in these lands, for centuries and chiliads barren, the seeds of civilization took root and grew, cultivated by the Christian religion. Now the people of these very lands, whose ancestors burned their captives in wicker cages, who had less culture than the tribes of Central Africa, claim the proudest civilization in the world, and we look with contempt on the yellow races, on the black peoples, on the red Indians. We have said that they have slept long; they cannot awake.

But they are awaking—and rude is the Japanese awakening. Japan has proved that, once inoculated with the bacteria of civilization, with all that knowledge has achieved open to them, they can learn it in fifty years.

Now, is there not a lesson in this history? Do we not see that the fact that a people have been savage or half civilized since human existence began is no proof that they may not start up and bloom, when their time comes, like the century-plant? The Egyptians did it, the Babylonians did it, the Persians, the Greeks, the Romans, the French, the Germans, the English, the Japanese. Every one of them rose out of thousands of years of barbarism, only waiting the sowing of the seed. One of those great regenerations we have seen in our day, and our children will see it in the case of China, and perhaps their children in the Kongo.

And do we not see it coming in Turkey, in Persia and in India? Is not the ferment all thru the Asiatic East? We must revise our conclusions, taught us by Treitschke and Freeman, that the nature of the East forbids rich culture; that the Turk cannot assimilate modern free institutions; that Islam cannot accept them. Why not? Only because it has not; that is all. It is only the same reason which made the old Romans think Britain hopelessly barbarian.

We must learn that human nature is one. We must conquer our Anglo-Saxon contempt for the belated races. Englishmen must no longer kick the Hindu aside as he would a dog. The Europeans in Hong-Kong and Amoy should learn to treat a Chinese merchant as they would any European gentleman, or in a few years they will be invited to withdraw from the foreign concessions. The nations may very likely cease, because they must, to divide up the Turkish Empire, which has in past times been the seat of the world's best civilization, and will be again. The time will come when the Africander will treat the Zulu as he wishes to be treated himself, for Africa will belong to the Africans; and without war, under the insistent demand of righteousness, the yellow man in our land will not be denied citizenship, and the Jim Crow laws will be repealed. Why? Because to show contempt for other races will not always be safe, and because these races will prove their rights to be treated a full equals.

The Democratic Party

Mr. Bryan has started an inquiry to ascertain why the Democratic national candidates were defeated. He should begin his investigation in Ohio, Indiana and Minnesota, where Democratic Governors were elected on the day when large majorities were given to Judge Taft. He then might turn to the figures which show how far he fell behind the nominees of his party for local offices in many other States. The fact that his party increased the number of its representatives in Congress should also engage his attention. Then, if he recalls the small number of his electoral votes in 1896 and 1900, and compares the figures of those years with the almost exactly two-to-one defeat of 1908, he may be constrained to admit that his party blundered when it nominated him at Denver.

We do not say that with another presidential candidate his party could have been successful, altho Governor Johnson would have made a better showing in the electoral college. But with Mr. Bryan at the head of its ticket, the Democratic party's defeat was assured. The Southern States, to which the party looks with perfect confidence for a large majority of its electoral votes, should have prevented his nomination. They consented to it. We have reason to believe that when his success in the convention was seen to be impending, support was given by some Democrats from other parts of the country who were convinced that this nomination ought not to be made. We have been told that they, clearly foreseeing failure at the polls, felt that a third defeat would remove Mr. Bryan from the field and leave the party free to build itself up under new leadership.

That defeat is now a matter of history. What is to become of the Democratic party? Some of its thoughtless opponents have said that it is dead. This is nonsense. A party that elects Governors in three great Northern States in the face of large majorities there for the Republican Presidential candidate, and that also at the same time reduces the Repub-

lican majority in the House, is very much alive.

Some say it needs to be reorganized. What it needs is new leadership. It must put Mr. Bryan aside. If we look forward as far as 1912, it will need a new and a good candidate for the Presidency, and in the coming four years its thoughtful and sane politicians should be preparing to satisfy that need. But the party's opportunity for recuperation and for constructive effort will come at an earlier date. Its next attempt to gain power will be made in the Congressional elections of 1910. Its first opening will probably be in the approaching tariff debate. For that contest there should be careful preparation. The Republican position with respect to the tariff is clearly a vulnerable one. The tendency of the Republican legislators in dealing with this question will invite the restraint of an intelligent Opposition. But if the Democrats in Congress shall insist upon a tariff for revenue only, or upon a revenue tariff with such incidental protection as may accompany it, they will gain nothing with the American people. We are not now considering the merits of either method of taxation, but only the political aspect of the case. Much can be accomplished for the Democratic party if its representatives in Congress will firmly and reasonably oppose the excesses of the Republican majority in the work of tariff revision. In all probability they will not be able to prevent the enactment of a law in which many of those excesses will be embodied, but they can make a record upon which they can appeal forcibly to the people in the campaign of 1910.

Remembering the blight which has afflicted their party since the adoption of its free silver doctrines in 1896, they should strive to place it definitely upon the side of a sound and civilized currency. They should accept the situation in the Philippine Islands, and in advocating a policy for the ultimate settlement of questions relating to those islands they should avoid that which will tend to excite unrest among the Filipinos and to prevent a just and orderly administration of affairs for the proper safeguarding and development of the natives' interests. The future welfare of their party will also be affected by their attitude toward other problems. It would be unwise for them to assume, as Mr. Bryan does in his latest review, that their party is the only one that is not plutocratic, the only one that "represents the people's protest against wrong in high places, against corruption in politics, against the oppression of the struggling masses." Many of the intelligent and independent voters whose support they desire will not believe it. These may ask why so many important measures enacted by a Republican majority have had the support of the Democratic minority.

There will be abundant opportunity for the rehabilitation and upbuilding of the party, and for making it a formidable and even victorious Opposition. But the work should be taken up with deliberation and should be entrusted to the party's most competent men. They will find it advisable, we think, to cut away and lay aside much that has been a dragging weight upon the party during the last twelve years.

On Being Inadequate

INADEQUATE men and women commonly know that they are, but do not know that their friends know it. They play the game of life as if it were a hand of poker, and they depend largely on bluff. The expert can read the bluffer, and the adequate man, by an unfailing index, measures the deficiency of the inadequate.

The index is the attitude which a man assumes toward his supposed superiors, equals and inferiors. We mean his real, not his profest or proclaimed attitude. One may call himself a democrat and be a monarchist at heart. The inadequate man is always a monarchist at heart.

The Tory in Mr. G. Lowes Dickinson's "Modern Symposium" cannot see why men should wish to be equal. He rejoices that he likes to feel his superiority to farm laborers and tradespeople, and likes quite as much to feel the superiority of a monarch to himself. This ripe product of ancient privilege might not admit that his sense of personal inadequacy underlay his reverence for the king, and his respect for institutions designed to secure deference and quarterly rents to legitimate heirs of landed estates. Nevertheless, if he felt his competence to plunge into the struggle for existence on equal terms with his best-equipt fellow men,

he would chafe under the restriction which confined him to the House of Lords and forbade him to "stand" for the Commons. The war horse that sniffs battle does not seek the box stall.

Whether, then, it is the flunkey who likes better to open a door for a master than to turn a furrow on his own land, or a weakling who wants a leader to tell him what to do, or a franchise owner who wants the "existing social order" to stand undisturbed lest he have to prove his contention that he makes money by what Mr. Mallock calls "ability," a sense of inadequacy underlies the attitude and the choice. Men who know that in actual natural ability they are equal to the best do not enjoy the homage of inferiors, and they resent an instituted superiority of hereditary rank or of legally created power. They prefer a society of their peers. They are by nature democrats in the best sense of the word. A man like Mr. Charles W. Eliot, for example, does not discourse in the language or the tones of Mr. Chancellor Day.

Weakness and ignorance clamor for the strong hand and the clever brain, and if it is true that the people of the United States are more eager than the fathers were for masterful leadership in politics and in business, it means that in proportion to the tasks to be achieved they feel themselves less adequate. Absolutely they may be as strong and as alert as the men of former days, but absolute standards have no significance in this affair. If the multitude distrusts its ability to cope with the problems that confront it now, it avails nothing that it could have handled easily the simpler problems of yesterday. If the multitude is more and more looking to its great men to lead the way, the character of our national life is undergoing a profound change, and ultimately our institutions must change as well.

This is the real question underlying most of our political and economic issues. The demand of the multitude is for a more democratic political system, including a flexible or easily amended Constitution, the popular election of Senators, the direct nomination of candidates for office, the initiative and the referendum. Conservative minds meet this demand with the argument that such changes would destroy the republic; that they would give over the land to the fickle rule of the mob; that they would undermine property and confidence. Far better it were, the cautious citizen says, to put up with cumbersome political usages than be deprived of competent leadership. Statecraft is of all arts the most difficult, and we can better afford to be in a measure exploited by a class than see the fabric of our society disintegrated by reckless experimentation.

It all depends. The argument of the conservative rests on the assumption that the multitude is politically incompetent. The demand of the multitude rests on the assumption that the multitude can manage its own affairs better than any privileged minority can regulate them. But the validity of the democratic argument is not to be determined by the self-confidence of the demos. It can be determined only by observing the real altitude of the demos toward men and things, as distinguished from its protestations. If it turns to boss domination and blindly accepts dictation from its own self-constituted leaders, it betrays its own profound sense of inadequacy and confirms the conservative position.

Democracy is an idle experiment if it does not rest on popular adequacy, and popular adequacy must give proof of itself not in clamor and demand, but in demonstration that the instinct of the multitude has ceased to be subservient. Democracy must show that in the labor movement, in local political organization, in party activity, and in all other co-operative activity, minor and major, it is able to proceed by conference, by discussion, by intelligent and intelligible agreements among equals, and is no longer dependent upon an unquestioning obedience rendered to a boss.

A New Field for Writers of Fiction

In her article, "The Advance of Civilization in Fiction," that appears elsewhere in this issue, Mrs. L. H. Harris records some literary prophecies, but she has failed to call attention to the advance of the novelist into the shadow-world of spiritualism. If he does put out his light, dim himself and take to writing spirit-rapping romances, Hamlin Garland and John Corbin should be held responsible

for this literary evolution of his astral shape. Until recently the "mediums" of "spiritual" phenomena have had little means of communication with sane, earth-noveled people. The record of their psychic experiments have appeared, with the few exceptions where men like W. T. Stead, Sir Oliver Lodge or Sir William Crookes became interested, in quack journals that do not circulate far beyond their own hypnotized circles. But now Hamlin Garland has written a record of his Amateur Society for Psychic Research which reads more like fiction than any other book of the year. And he and the "spirits" have a department in *Everybody's Magazine,* where the editorial lamp is removed and the most astounding things happen.

Meanwhile, Mr. John Corbin is describing the same kind of phenomena in the *Ladies' Home Journal.* What Mr. Bok can be thinking of to allow such *séances* there it is hard to say. All women are more or less spook-spirited, anyhow, disposed by nature to look under the bed out of all reasonable conjecture for they know not what. And to have their native telepathic fears confirmed by Mr. Corbin will go very hard with many of them!

However, it is the purpose of both these writers to make the "farce" which Mr. Corbin calls "telepathy" and Mr. Garland calls "spiritualism" respectable from the intellectual point of view. The latter is the more serious of the two, claiming that once the "farce" is demonstrated and accepted, it will revolutionize the laws governing matter. And it undoubtedly would, for no law could govern matter once the premises of the spiritualists are admitted. But without disturbing the foundations to this extent, he has really opened a new field of imagination for writers of fiction. If they take their cue from these recent disturbances in the astral regions, we shall have a return of the ghost in fiction; not the old-fashioned "haunt," who was evolved from our superstitions about the uneasiness of the dead. This kind of ghost, made famous by Dickens and others, cannot now exist in our stories. De Morgan is the only living writer who dares introduce him without accounting for him in the end upon a purely rational basis. But this modern spook will be a medium-drawn spirit. Mr. Howells, in fact, has already suggested him in his "Apparitions." None of these ever left their tracks in the dust upon the stairs, after the approved manner of spooks in the stories of an elder day.

But Mr. Howells was only dimly groping in the dark. He has not gone so far as Mr. Garland and showed phenomena which prove that any living man may be his *own ghost* if he can quake his spirit far enough out of his body. This is to be the distinguishing characteristic of the up-to-date ghost henceforth—that he is not the spirit-remnant of an otherwise dead man, but he may be, as Mr. Park Benjamin has shown our readers, the disembodied spirit of a living person.

The novelist should not be slow to grasp the gruesome advantages of this psychic discovery, especially in these days, when the horror motive in music, art and literature is becoming popular. Suppose, for example, that the hero of a next year's novel should have an astral body which escaped when he dozed or fell into a brown study. Or what if the mystic hyphen between the heroine and her astral body should be so stretched, say, by a medium, that she loved one lover and her astral self another? What a tale of mystery could be evolved if some fat old gentleman in it should suddenly be disturbed and finally terrified by "rappings" and intimate noises, only to discover that these proceed from himself spiritualized and warning him of snares and dangers which in his normal state he does not apprehend.

Mr. Corbin is not so insistent upon creepy situations as is Mr. Garland. Neither does he frighten the reader with the logical deductions from such experiments, but his contention that one individual may have as many as four distinct personalities is suggestive of ways and means for creating a fascinating confusion in a story.

The attraction of all such phenomena is based upon the fact that man has never found a satisfactory dwelling place in his own body for all that he is. This is how he evolved a religion. All the gods might have remained in their respective god-altitudes forever without hearing a single prayer but for the gadabout nature

of the soul of man. It is more fastidious than he is, and no sooner does he begin to do deeds after the manner of his flesh than it breaks bounds in prayers, philosophies and *séances*. Absolutely the only thing ever known to keep it at home in the body from start to finish is a successful career on the stock exchange or some other financial whirlwind. And even in such instances Mr. Garland would lead us to believe that there is a kind of blind, peg-legged spirit surviving in such a man which might be wheedled forth by a very strong "medium" and made to snuffle feebly after the infinite. Not that he actually holds out such a hope; one may only infer as much from the other marvels he records. Indeed, one of the peculiarities of the medium-drawn ghost is that it is out of the body but not out of this present world in mind or meaning. Apparently, it is the hypnotized fabrication of certain decadent spiritual faculties which are no longer religious in aspiration, but merely maverick-minded. It is to be hoped that such phenomena as Mr. Garland describes will find their proper place in fiction, if they must be exploited at all, and that his theories may never be widely tested in real life. For, when the time comes in which any man of good or evil intentions can develop in himself enough of this psychic force to say to the Flat-Iron Building, "Go and fall into the sea!" and she goeth, we shall have something worse than anarchy with which to contend. And this is the logic of Mr. Garland's position. If a table can be made to move an inch without the use of physical force, simply by the will of a medium, by developing the same power the mountains may be made to skip like rams, and nothing that is will be lasting, or beyond the awful power of mind to destroy.

Bitting an Emperor

THIS is an *annus mirabilis*. Persia gets a constitution; then Turkey; Russia maintains a Duma; Bulgaria and Crete become independent; and Germany puts a bit in her Emperor's mouth; and the year is not over yet, and the death of the rulers of China may confirm a beneficent revolution.

Of all these hardly Turkey's peaceful revolution is more startling and unexpected than the humiliation of the Emperor of Germany. For two days Premier von Buelow sat in the Reichstag and listened, with head bowed, to the unanimous demand that the Kaiser must act as a constitutional monarch, guided by the Cabinet, and must restrain his exuberant independence. And now the Council of the Empire is called for the first time since William was crowned, to curb his rash intermeddling with what ought to be the business of the Chancellor or the Reichstag.

But for the humiliation of the Emperor, for scenes like those for two days in the Reichstag, when no voice of all the parties was raised to defend him, when words were freely uttered that might have sent men to prison and no one called to order, when even von Buelow was mute, or rose but to say that if the Emperor did not restrain his utterances on foreign affairs neither he nor any other Chancellor could consent to hold office—for all this the constitution of the German Empire, created by Bismarck with the Empire at Versailles in April, 1871, is to blame; for the Emperor, under that constitution, is not responsible to the Chancellor, nor the Chancellor to the Reichstag and the people. The one restraint put on the acts of the Emperor is that all his acts in foreign affairs must be countersigned by the Chancellor. But the Chancellor is not elected by the Reichstag, nor is he responsible to it. He is appointed by the Emperor, serves at his will, and if the Reichstag should vote lack of confidence in him, that would make no difference so long as he carries out the will of the Emperor. He would not resign. If the Reichstag should refuse to vote money for the army, as has sometimes been the case, then the Reichstag is dissolved, and a more pliable one is elected. The constitution allowed by Bismarck is infinitely below the demands made by the people in 1848, and they have waited sixty years to be ready to get the substance, if not the form, of what they sought in the revolutions of that date.

Now, the publication of the interview in *The Telegraph* was an international act. It was not countersigned by the Chancellor. It was a public proclamation

of international policy, supported by historical evidence, the purpose being to placate the British people. The Emperor had no business to make such a statement in the form of an interview. It should, if made, have been a formal proclamation, first carefully considered by the Cabinet, and then have Von Buelow's signature as well as that of the Emperor. What the German people fear is that their impulsive Emperor may have made a multitude of such interviews unpublisht, which are in the archives of foreign chancelleries, and that he might make as many more, thus in a way committing the Empire to assurances for which it could not be responsible.

So the Emperor has been roundly reproved by the whole nation, and is to be restrained in future. It has amazed him, and he is silent for once in his life. He had thought that the royal prerogative was final; he learns it is not, that the times have changed, and that the people will rule, not the Emperor. He can only administer, henceforth, what the people's will has declared. This lesson he must learn; he cannot help himself. From this time forth, in fact if not in letter, Germany will possess a fully constitutional government, and the Chancellor will be responsible to the Reichstag.

We await the concurrent action of the Federal Council. Its meeting is an extraordinary event. It meets only in case of some special crisis, and it has now been called. It represents the governments of the constituent states of the Empire, and so corresponds to the American Senate, except that its members are not elected by the people, but appointed by the governments. Of its 58 members 17 belong to Prussia, and 14 would be enough to defeat any amendment to the constitution, so that Prussia, under the more direct influence of the Emperor, who is always the King of Prussia, can defeat any amendment, no matter by how large a majority the Reichstag, elected by popular suffrage, might desire it. Possibly it is for considering an amendment to the constitution that the committee of the Council met, for it would seem that no more favorable sign could be found for affirming ministerial responsibility than now, when all parties are agreed that the Emperor's power must be curbed.

One cannot but feel a sympathy for the Emperor, who is so much admired, and partly for the very freedom with which he has exprest himself, and always with the desire for the honor and power of Germany. He and Roosevelt have often been compared for their common impulsiveness and for the breadth of their interest in public and private affairs. But our President has had the fortune to hold the admiration and confidence of the people. He leaves the Presidential chair after seven years of notable service with the respect of the people, and even of those who most disapprove some of his policies. No one complains of him if he speaks freely on every subject, but we believe that on international matters he has always been careful to act with his constitutional advisers, even in such a case as that of Santo Domingo, when the Senate declared that its prerogatives had been infringed.

The Emperor will learn his lesson, and Germany, by this peaceful revolution, will gain a government truly constitutional.

The Republican Party in the South

It is a matter of common knowledge that the South has warmed a good deal to Mr. Taft. Delaware, Maryland, West Virginia and Missouri have chosen Taft electors, and the Republican vote is heavy in Kentucky, Tennessee and North Carolina, and is considerable even in the Gulf States. Its possible future growth is thus admitted by the Charleston *News and Courier:*

"The day is probably more than four years distant when the Republican candidate will gain the electoral votes of Southern States that are not border States, but the coming into being of a Republican party, including representative men of character and intelligence in such States as South Carolina, Georgia, Alabama and Louisiana would be an event of much greater significance and one by no means out of the pale of reasonable calculation. The time has come when many worthy Southern men who stand for something in their communities have ceased to look upon a Republican President with repugnance because he is a Republican, and there are influential groups of Southern men here and there in sympathy

with Republican policies who are now bold enough to speak their opinions openly. That the county in South Carolina containing by far the largest number of white voters, and that is also the most important manufacturing county in the South, was one of the smallest contributors of the forty-two South Carolina counties to the Bryan campaign fund, is a small circumstance, but it could not have been wholly accidental. The reception accorded Judge Taft in Richmond was full of meaning, and it is the simple truth that in every part of the South Judge Taft has admirers and friends."

What says another influential Southern Democratic paper, the Atlanta *Constitution:*

"In Tuesday's election the Southern States began the writing of their political declaration of independence.

"The result means that the time has passed when a resident of one of these States must buy his social security, often, perhaps, at the price of his political convictions.

"Many business men, the South over, most of them adherents of the Democracy all their lives, dared to support hopefully and openly the candidates of the Republican party, because their conviction led them that way. . . .

"That Southern vote which, in firm belief, wrenched itself away from sectional, political tradition—and it was a large one—was significant.

"It means that the South is no longer to be kept as a voting machine; as a slice of country to be depended on to go solidly Democratic tho the heavens fall; as a mere tail to what by itself would be an unflyable Northern Democratic kite.

"It means that the time has come when the voter of the South is going to demonstrate his faith by works and not let conviction wait upon a cobwebbed tradition which a new nationalism has decreed must be brought up to date, to stand the test of the reason of the hour, or fall if it fails to do so. . . .

"What the South needs is a few doubtful States; then it will be in position to demand and get something."

Such lurking sympathy as is here exprest is partly explained by a silent animosity for Bryan. But such sympathy as there is is directed to a lily-white Republicanism, not one that pays any respect to equal negro rights, civil and political. Of course, Mr. Taft will desire to develop a Republican party in the South, and we hope he will do it, along the industrial policies common to the South and to the party. But it is much to be hoped that he will not forget his inherited respect for equal human rights. We would have him make it clear that he does not approve laws made to exclude negroes from the polls. It is not necessary to get the support of progressive Southern men that he should cater to the prejudices of the retrogressives whose anxiety it is to make the negro "know his place." Doubtless offices in the South should go chiefly to white men, but not wholly. The negroes should be fairly treated as to offices, but it is important that such offices should go to competent and worthy men, and not to place-hunters. The negroes are not unreasonable. Their leaders are not politicians. They ask for justice and sympathy and real recognition.

This need not be given in such a way as to offend the progressive white men, those that really wish to see the negro rise to the best that is possible to him. It is to such men, a growing and noble body, that the Republican party should appeal. It is such white men that should be called to be leaders. There are not many negro voters in those States, and the white Republicans ought to be willing and glad to accept their aid, and cultivate, within the party, a fellowship of political service. We trust that Mr. Taft will wisely and firmly and yet graciously manage his political relations in the South so as to secure harmony instead of that distrust which has there existed, and which has led Mr. Roosevelt to give the best offices to excellent Democrats.

We have the following interesting letter from a colored subscriber:

It was largely by your effort that the colored people remained true to the Republican ticket. They had confidence in you. As we voted for Mr. Taft largely at your request, I hope, as many do, that now after the election you will not forget us. You said Mr. Taft was all right; now let him prove it.

We believe he will.

European Universities

According to latest reports the twenty-one universities of Germany have now an enrollment of 47,471 matriculated students, the report a twelvemonth ago being 45,136. Since the winter semester of 1877, with a contingent of 17,534, the student body has increased numerically two and three-quarter times, vastly in excess of the increase in population, thus only making worse the "learned proletariat" problem, or the increase of university graduates far beyond the professional needs of the State and Church, in which Bismarck already saw a productive

source of rampant social democracy. Only recently the National Medical Association of Germany published a warning to the graduates of the secondary schools urging them not to study medicine; and recently one of the German governments, that of Mecklenburg, officially advised these graduates not to enter the law department. Only Protestant theology has not a surplus of technically educated men far beyond present needs.

Berlin is fast becoming for Germany what Paris is for France, the overwhelming center of university life. In addition to its 8,220 matriculated students, about seven thousand others are permitted to attend lectures, making a total of only a thousand less than the reports claim for Paris. In general the universities in the large centers of population increasingly attract the greatest number of students in Germany. Munich has now 5,943 full students, Leipsic 4,341, Bonn 3,209, while the smaller university towns report no corresponding growth.

Even greater is the growth of the technological institutes. There are ten of these in Germany, with a total enrollment of 15,790 matriculated students. Thru the influence of the Kaiser these schools have now been placed on an equality with the universities.

The woman contingent is now 2,824 in the universities, of whom 320 are matriculated. In 1900 the number was only 664. Naturally, Berlin leads with 771; but no Prussian university will matriculate a woman or admit her to examinations. This right she has in all other schools except Rostock in Mecklenburg.

The number of students in the Italian universities, according to late statistics, is 27,100, while in 1893 it was only 21,870, so that there are now eighty students to every 100,000 inhabitants. The greatest increase is in the law department, from 5,690 in 1894 to 9,424, while rather remarkably the medical department has gone back from 6,521 to 4,731 during these years. According to an extensive review of the educational world of Europe, published recently in the *Revue Scientifique*, Europe has now 125 universities, with a total student body of 228,721. Next to Paris and Berlin come in point of attendance Budapest (6,551), Vienna (6,205), Moscow (5,860), Madrid (5,196), Naples (4,918), St. Petersburg (4,652). The cost of maintaining the nine universities of Prussia has increased from 1860 to 1906 from $9,850,000 to $40,080,000, or an increase of 313 per cent. for regular expenses. In addition, new buildings and the like have cost a further $24,020,000, Berlin alone requiring nearly $7,500,000.

Cultivated Sensitiveness

Why was ex-Senator Carmack murdered? Simply because Colonel Cooper had cultivated a morbid sensitiveness. One would expect a politician of long experience, like him, to be case-hardened so that no shaft of ridicule could pierce his armor of indifference. Indeed such would be the natural effect in other sections of the country. Hereabouts public men who are the objects of abuse and lampoons collect the comic cartoons from the papers and put them in albums for an agreeable relief of their vacant moments and the amusement of their families. But it is not so in the States where the duel is the proper method of settling social slights and insults has comparatively lately gone out of vogue. A representative of the old *régime* writes us, with reference to this Carmack tragedy: "The South is a very deadly place to live in, if you don't live according to the prevailing mind." Nothing severer have we heard from the Northern visitors who are shocked to find living in security in a Southern town of but a few thousand people two of those who have killed their man and suffered no punishment for it. An editor's life seems to be particularly in danger in a community that indulges in unmeasured sensitiveness. We recall several other editors that have been murdered in these last few years, two of them in South Carolina; but none of these assassins seems to have been curst with such a hypersensitive nature as Colonel Cooper. The worst of the utterances Mr. Carmack had made on him is the following:

"To Major Duncan Brown Cooper, who wrought the great coalition; who achieved the harmonious confluence of incompatible elements; who welded the pewter handle to the wooden spoon; who grafted the dead bough to the living tree and made it bloom and burgeon and blend with golden fruit; who made playmates of the lamb and the leopard and boon

companions of the spider and the fly; who made soda and vinegar dwell placidly in the same bottle, and who taught oil and water how they might agree—to Major Duncan Brown Cooper, the great diplomat of the political Zweibund, be all honor and glory forever."

Now that is only amusing, not scurrilous. A man is to be pitied who takes mortal offense at such satire. If he is so thin-skinned as to shoot the satirist he is too dangerous to be allowed to live in a peaceable community.

The Berea Decision

We have no right to believe that the decision of the Supreme Court, affirming the constitutional right of the State of Kentucky to pass a law forbidding white and colored youth to be taught in the same school, particularly as applied to Berea College, is wrong in point of law. But the law is execrable just the same, and the spirit which enacted it is unchristian. Berea College, with white and colored students together, was a noble example and influence; and no work of Berea in enlarging the teaching by establishing a negro branch somewhere else can be sufficient atonement for the wrong and insult. We shall make, in time, a successful appeal from Kentucky cruel to Kentucky Christian, for the right will prevail in the end. In a future generation how men will wonder at this caste rule, even as we stand already in amaze that slavery was a hallowed institution, the basis of a proud social state, for whose maintenance men fought and died.

No Safe Seminary

While we would not say one word in disparagement of the intensity of conviction which animates the six hundred ministers of the Cumberland Presbyterian Church, largely in Kentucky, Tennessee, Arkansas, Oklahoma and Texas, who refused to join, with their brethren, the Northern Presbyterian Church, we yet regret that they have so little confidence in the soundness of the religious faith of all Christians except themselves. The question came up at their last General Assembly where they should educate their candidates for the ministry, as their one theological seminary had gone into the union movement and was lost. This is the action taken:

"We cannot afford as a Church to send probationers to schools manned and taught by professors whose theological tenets and doctrines are diametrically opposed to the doctrines of the Cumberland Presbyterian Church, as presented in our Confession of Faith. . . . Our young men had better study theology as they ride the circuit with Bible in hand, as did the early fathers of our beloved Church. . . . There are no seminaries to which we would be willing to recommend our probationers who are now coming into the ministry."

No seminary of their own; no seminary anywhere else where young men can safely be trained! Surely they and the whole Christian Church are in a sad plight. They did the best they could; they asked the board of trustees of Bethel College to do the best they can to find a man competent to teach the English Bible, the Confession of Faith and Church history. We sympathize with them in their loneliness, but we cannot desire that the number of such distrustful Christians should increase.

An "Endless Prayer-Chain"

Bishop Lawrence, of the Episcopal diocese of Massachusetts, has for a long time been persecuted by an endless prayer-chain, which asks the receiver to offer a prayer recommended by him, and then send a copy to nine others. Two in our own office have lately received copies, one for the second time in two years. Bishop Lawrence writes us:

That prayer-chain has been running for two years and a half. I have disowned any connection with it thru the Associated Press twice; have answered every inquiry in the negative—and sometimes I have had a half dozen inquiries in a day; and have done everything in my power to stop it, and disclaim any responsibility for it. But as long as people are superstitious or foolish enough to keep passing the absurd thing along, it will continue; for it is, of course, impossible to trace it to its source, and it multiplies of its own weight. I have received inquiries from Australia to Russia. If you can, thru your paper, do anything to stop it, or to point out the absurdity of thinking that a bishop would get out such a thing, I should be glad of it. It is surprising to me how many excellent and intelligent people would rather multiply the nuisance than destroy the letter.

The Chinese Situation

The simultaneous deaths of the Emperor and the Empress-Dowager of China is not likely to make any serious change in conditions in that Empire. A weakling has been Emperor, and his

death is of no account. The death of the Empress-Dowager is a more serious matter, but of late years she has been under wise advice, or experienced a change of heart when driven from Peking by the allies who captured the city at the time of the Boxer rising. She has chosen an admirable adviser in the person of Yuan Shih Kai, who is the leading statesman of China. She has seen that China can become strong and respected only as she takes Western civilization, and she has established foreign schools, forbidden opium, and created an army. The new Emperor is a child of five years, and a long regency is assured. The only danger is in the possible effort in some provinces to overthrow the Manchu dynasty and replace it by a dynasty supposed to be more patriotically Chinese. But the well drilled army controlled by Yuan Shih Kai ought to be able to conquer any undisciplined force that might arise. The extension of railroads makes this now easier to accomplish. China needs peace, and we may hope that the new *régime* will only confirm the direction in which China has of late been moving.

Three sensational attempts at the murder of public men attracted much notice last week. One was the unsuccessful attempt of an insane man to kill Postmaster Morgan, of this city; another, that of Assistant District-Attorney Heney, the prosecutor of Ruef, in San Francisco; the third, the killing of ex-Senator Carmack, of Tennessee, by a man and his son. In the first case, the murderer, tho insane, had sense and grace enough to kill himself immediately, thus so far as he could expiating his crime; while in the last case the two sane men showed less sanity than the madman. If we could have it the rule that messieurs the murderers would relieve the State of a trial, the public would accept the fact in mitigation of the crime.

This discussion whether a man should be regarded as ineligible for public office because he is a Unitarian or Roman Catholic is tiresome at its best. It is belated, where the opposition on such grounds is not bigoted. Here are some Lutherans replying to the President and declaring that a Catholic should not be a voter because the Catholic Church in Rome has repeatedly opposed the separation of Church and State and so does not stand for perfect religious liberty. Well, suppose it has done so; it does not do so in this country. And if it did the union of Church and State is not forbidden by our Constitution. A number of States had an established religion long after the Constitution was adopted. A citizen may hold that view and many other foolish or erroneous ones.

Laws against speeding automobiles seem to be made to be disobeyed. A multitude of owners delight to run as fast as they can and risk arrest. We suggest a law which shall forbid the use of the public streets to any automobile which is not gauged to run at most fifteen miles an hour. That is as fast as it is possible to go and enjoy the scenery or to keep the roads from being ruined.

New York could not find a more competent successor to Mr. Platt in the Senate than Secretary Root. He stands the best chance to be chosen, and he will make an ideal Senator if he gives the same loyal service to the country as he has given while Secretary, and as he has given to his powerful clients.

We like the companions the President will take with him on his African trip. They are zoologists and ornithologists, and this is evidence enough, apart from his refusal to accept special privileges in shooting, that his purpose is not slaughter, but pleasure in the pursuit of science. To kill game for pleasure is a low ambition and a cruel one.

A committee has been formed, with ex-Senator Dryden as chairman, to raise $100,000 to erect a memorial to Grover Cleveland at Princeton, N. J. The State of New Jersey can well be proud of her illustrious native son; and it is fitting that each one of the twenty-one counties of the State will be expected to contribute an assigned amount to the fund.

Insurance

The History of the Metropolitan Life Insurance Company

THE Metropolitan Life Insurance Company, of which John R. Hegeman is president, and Haley Fiske, George H. Gaston, George B. Woodward and Frank O. Ayres are vice-presidents, celebrated the fortieth anniversary of its establishment as a business enterprise by the publication of an artistically printed brochure, which contains a complete history of the company. When the organization of the company was first discussed its success seemed problematical. It was a hazard of a new enterprise, but the energy and enthusiasm of its officers carried it past the experimental stage and made it possible for those now in control to look back in retrospect and smile at the early difficulties that beset the company, as difficulties are bound to beset all new enterprises. The present book does not say anything about this feature of the company, but some of us know of the long hours spent by Mr. Hegeman and his associates, who worked while others slept, and who now have the satisfaction of beholding the results of their earnest work and of realizing that it was good. The company found a place for itself in the world, and, thru it, industrial insurance has come to have a most important part in the world's progress. Thanks to the Metropolitan Life Insurance Company, and other institutions that have come into existence since along similar lines, thousands and thousands of the poorer people have kept the wolf from the door. They have suffered less, with industrial insurance, than would have been the case with out it, and the memorial volume issued by the Metropolitan Life is one in which that company may well take a just pride. The record of the Metropolitan Life has been one of continual progress from 1879, when it wrote its first industrial policy, even until now, with the certain prospect that the future holds much more of possible progress than ever before. More than 2,000,000 policyholders now have protection thru the agency of the Metropolitan Life in its industrial department. Space alone forbids making liberal extracts from the volume illustrative of what is here but briefly set forth, but the following figures will perhaps give some idea of the company's progress, viz.:

Year.	Assets.	Surplus.	Total Claims paid.
1870.....	$833,914.19	$105,946.72	$56,770.00
1875.....	1,954,275.99	232,484.06	288,556.18
1880.....	1,947,821.79	359,434.46	285,368.53
1885.....	2,784,954.01	706,382.41	1,287,765.13
1890.....	10,781,173.01	2,117,029.11	3,751,522.38
1895.....	25,592,003.78	4,477,030.71	6,580,389.84
1900.....	62,158,034.33	8,744,027.91	9,799,124.21
1905.....151,663,477.29		16,190,245.96	15,395,043.43
*1907....198,320,463.23		†13,951,899.14	18,233,369.58

*The official report for 1907 will not be available for some months.

†The decrease in surplus at the end of 1907 was caused by the temporary depreciation in the market value of stocks and bonds shown by the quotations on the last day of the year, custom having established that day's quotations as the basis of valuation of the assets of insurance companies.

Mr. Rockefeller and the Insurance Company

IT is most interesting to read of the struggles and difficulties of the men who have achieved and who have come to serve as commercial landmarks. Such things read like romances, and it is quite true that truth is stranger than fiction. The Rockefeller random reminiscences of men and events, now running in *The World's Work,* is a case in point. From this story we learn something of the many difficulties encountered and overcome by the man who made the Standard Oil group. Once, according to the narrative, the Liverpool, London and Globe Insurance Company loomed large in the commercial life of Mr. Rockefeller. This happened when Mr. Rockefeller's oil warehouses and refinery burned to the ground in a few hours—literally went up in smoke. To use Mr. Rockefeller's words, "they were absolutely annihilated!" The owners of the burned warehouses were worried, as well they might have been, as the loss was heavy, but, the story reads, "as it turned out, we received the check of the Liverpool, London and Globe Insurance Company for the full amount before the builders required the payment."

Financial

The Stock Market

GREAT speculative activity was seen last week in transactions on the New York Stock Exchange. Net advances (ranging from 1 to 3 points for leading securities) were not equal to those of the week preceding, but the market was much broader. Sales for the week were 8,437,600 shares (an increase of more than 50 per cent. over the preceding week), and the daily average for the five full days was nearly 1,600,000. Undoubtedly, what brokers call "the public" has entered the market. This "public" is made up almost wholly of margin speculators residing outside of New York, whose orders are transmitted by wire. Trading with this "public" are the expert manipulators.

Up to the end of last week there had been, since the election, an average advance of about 7 points for the active railway shares. The average addition for leading industrials had been a little less. Such business improvement as has been shown since the election of Judge Taft, while it is decidedly encouraging, does not warrant a sudden and wild increase of Stock Exchange prices. The character of a considerable part of the present movement is indicated by the rise of Steel common shares (paying 2 per cent.) to $58\frac{3}{4}$, the highest price at which they have ever been sold. These figures were not reached even in the years when the dividend was 4 per cent. Transactions in Steel common were 308,000 shares on Friday and furnished nearly one-seventh of the total for the week. Buyers probably expect an increase of the dividend rate. While the great company's business is improving, its reports for the first nine months of 1908 do not indicate that such an increase can soon be made. Still, it is quite probable that the company's profits will be much enlarged in 1909. The course of this stock is mentioned because it tends to show that the market is not strictly in accord with a conservative view of conditions. The speculative "public" assumes more than the situation warrants. Manipulators cheerfully and profitably encourage both the assumption and the action which it suggests.

....Gould interests in the Colorado Fuel and Iron Company have been largely reduced and the Rockefeller influence has been greatly strengthened. This is shown by the action taken at the recent annual meeting, when, in place of five directors heretofore regarded as Gould representatives, were chosen Frederick T. Gates, J. Starr Murphy and three others known as representatives of John D. Rockefeller.

....The directors of the Knickerbocker Trust Company, of which Charles H. Keep is president, have decided to anticipate at once the next five payments of 5 per cent. each to depositors. These payments call for $6,250,000, and they provide for all the company's obligations to depositors up to the spring of 1910; but it is probable that the remainder due will be paid within a few months. Notwithstanding the large payments to depositors, the company's deposits have continued to exceed $36,000,000.

....After its successful experiment last year the Y. M. C. A. of this city has engaged nineteen experts to give a course of lectures again this winter on banking, finance and investment. The course is under the management of John Moody, the founder of *Moody's Manual,* and is intended primarily to fit young men for positions in the financial field. The comprehensiveness of the course and the eminence of the speakers was seen in the following lectures, which are typical of all: "Savings Banks," by Henry A. Schenck, president Bowery Savings Bank; "Government Bonds and the National Banks," by Frank A. Vanderlip, vice-president National City Bank; "The Mechanism of a Bank," by James G. Cannon, vice-president of Fourth National Bank; "Growth of Banking in New York," by William A. Nash, president Corn Exchange Bank; "Preparing Securities for the Market," by Harvey Fisk, of Fisk & Robinson, and "Lights and Shadows of Wall Street," by William M. Kingsley, vice-president of United States Trust Company.

The Independent

VOL. LXV NEW YORK, THURSDAY, NOVEMBER 26, 1908 No. 3130

Survey of the World

National Politics

Mr. Bryan was asked in San Antonio, Tex., last week, whether he would be a candidate for the Presidency in 1912. He replied that he would be "if the Democratic party and the contingencies" should demand it. Answering the question whether he would accept an election to the Senate from Nebraska two years hence, he said "If the Legislature of Nebraska should elect me, I would accept. I consider the position of United States Senator next to that of the Presidency." He added the following, in a brief statement for publication:

"I should much prefer to retire to private life and I hope that four years hence circumstances will not be such as to force me into the campaign. But if circumstances should force me to battle, battle I will. The burden carried by the candidate is heavy, but no heavier than that carried by an officeholder. I do not desire to ever be a candidate for office again, but it is a difficult matter to make a rule for the future. What the plans will be four years from now I am unable to say. The newspapers are the ones making the plans, but whether or not they will be accepted by the Democratic party is a matter of conjecture. The Democratic party is very much alive and will be in the fight at the next Presidential election. Further than this I do not care to say more on the subect of politics at this time."

On the following day, at Corpus Christi, he said that if the party should nominate him again "in four, eight or twenty years," he was willing to make any sacrifice. In his weekly paper he has attacked the Tammany Democrats of New York in a satirical article. Mr. Murphy, he remarks at the beginning, says that Tammany did the best it could for the national ticket:

"There's the rub If Tammany had been treacherous it might promise to be faithful next time, but as it 'did the best it could' what hope is there next time? . . . Is there a Democracy in New York outside of Tammany that must be consulted? If Tammany did its best then either Tammany could not bring Tammany to support the ticket or there is a Democracy outside of Tammany that thwarts Tammany's efforts when Tammany does its best. And if there is a Democracy outside of Tammany that must be reckoned with is it not time for that Democracy to organize itself and make itself known, so that the national Democracy will have something to co-operate with. In the late campaign Tammany was recognized as the local Democratic organization, and yet, according to Mr. Murphy, in spite of the efforts of Tammany the national ticket lost the City of New York. It will be remembered that even four years ago Tammany was not able to roll up a very big majority for the national ticket, altho Tammany doubtless did its best. That year Tammany helped to nominate the ticket and helped to write the platform, and it was understood that both the ticket and the platform suited Tammany. Up the State the Republicans tried to create hostility to the ticket this year by charging that Tammany was supporting the ticket, and outside of New York the support of Tammany was used as an argument against the ticket. Is the national party to have Tammany used as an argument against it, and when Tammany is powerless to help the national party even when it does its best? It will be interesting to Democrats outside to know how the situation is to remedied. Will Tammany explain?"

This is resented by prominent Tammany men, who assert that their organization was loyal, but could not overcome the opposition of many of its voters to Mr. Bryan himself. They ask Mr. Bryan to explain why he ran so far behind the party's candidates for the office of Governor in Ohio, Indiana, Minnesota and elsewhere.——Judge Taft's plurality in Missouri was 1,026, and that of H. S. Hadley, Republican candidate for Governor, was 14,808. The vote for Lieu-

tenant-Governor was very close, and it is not yet known who was elected. The successful candidate's plurality will not exceed 100.——Final returns give the Republicans a majority of 47 in the national House of Representatives. In the Senate there will probably be 60 Republicans and 32 Democrats.——Mr. Roosevelt has recently said, so it is asserted by Georgia's Commissioner of Agriculture, that if he had been the Republican candidate he would have carried Georgia.——The Union Republican Club, which is the most influential organization of its kind in Oregon, formally supports the movement in that State to relieve Republican members of the Legislature of their recorded promise to vote for Governor Chamberlain, Democrat, who was nominated for Senator by popular vote at the primaries.——Secretary Elihu Root has published the following statement:

"I am not seeking the office of Senator; I do not think that great office ought to be given to any one because he wants it; but if the Legislature of New York, representing the people of the State, feel that I can render useful service to the State and the country in the Senate, and call upon me to render that service, I shall respond to their call and accept the office."

It is generally expected that Mr. Root will be elected to succeed Senator Platt. ——There are some indications that Judge Taft is not in favor of the re-election of Mr. Cannon to the office of Speaker.——Senator Foraker, in connection with an announcement of his candidacy for re-election, has published a long letter from Virgil P. Kline, attorney for the Standard Oil Company in Ohio, confirming his own previous statement as to his employment as counsel by that company.——The statement filed at Albany on the 23d by Treasurer Sheldon, of the Republican National Committee, shows that the contributions to the campaign fund, 12,330 in number, amounted to $1,665,518. At the head of the list are the following individual contributors: C. P. Taft, $110,000; Lars Anderson, $25,000; Andrew Carnegie, $20,000; J. P. Morgan, $20,000; William Nelson Cromwell, $15,000; Whitelaw Reid, $10,000; Jacob H. Schiff, $10,000. A statement filed by the treasurer of the Democratic Committee shows that the sum received was $620,644.

Railway Freight Rates

It was decided some months ago at conferences of prominent railroad officers that the proposed increase of freight rates (vigorously opposed by associations of shippers) should be deferred until after the election. There was a difference of opinion as to the expediency of making an increase, but it was understood that a large majority in the conferences were in favor of adding about 10 per cent. The alternative was said to be a reduction of wages. Altho no general increase has been ordered, rates have been raised in the Southeast and Southwest since those conferences were held, and protests against these changes are pending before the Interstate Commerce Commission. It is now reported that a general advance is to be ordered, to take effect about January 1st, but that it will not be 10 per cent. Vice-President Brown, of the New York Central, a leader in the movement for higher rates, said on the 17th to the chairman of the shippers' associations that the roads had agreed upon 3 per cent. as a sufficient increase. Conferences of traffic managers were held in New York last week, and there were rumors that the increase would be considerably in excess of 3 per cent. It was said that the present rates on coal, coke, ore and limestone would not be changed.——The railroad companies having lines in the vicinity of New York City have discontinued the sale of tickets at special rates to minors residing in the suburban towns and attending school in the city. This change, which largely increases the cost of daily transportation for thousands of pupils, is said to have been made under a ruling of the Commission to the effect that the practice was discrimination forbidden by law.

Mayor Johnson's Fortune Lost

A few days ago the traction company in Cleveland, Ohio, with which Mayor Tom L. Johnson had been intimately connected by reason of his labors for three-cent fares, went into the hands of receivers. Now Mayor Johnson says to the public that he has lost his fortune and is a poor man. He must give up his fine mansion, he adds, and

his automobiles, and must live in a cottage. His fortune was estimated some time ago to be $5,000,000. It appears that his losses were due not to investments in the Cleveland trolleys, nor to the condition of the traction company, but to his attempts to protect the estate of his brother, Alfred (who died in 1901), and to neglect of his own financial interests because of his devotion to the three-cent fare project. His brother had large holdings in a combination of trolley, lighting and power companies doing business in the vicinity of Allentown, Pa., and the task of protecting them for the benefit of the widow and orphaned children exhausted the Mayor's resources, which had also been reduced by heavy losses in connection with enterprises of his own at Lorain, Ohio, and elsewhere. The duties of his office and the demands of the trolley situation in Cleveland prevented him from giving to these enterprises the attention which was needed. "If I had run away from the fight here," he says, "I could have saved my fortune." Referring to the opposition of enemies, he remarks that there are a thousand fights left in him and that he will be a candidate for another term in the Mayor's office. The Depositors' Savings and Trust Company, of which he was the founder and president, was taken over last week by two prominent Cleveland banking institutions. Their officers say it was in good financial condition. Since the loss of his fortune became known, Mayor Johnson has received many telegrams of sympathy and encouragement and many offers of financial aid.

The San Francisco Bribery Cases

Mr. Heney, chief prosecutor in the San Francisco bribery cases, was reported at the beginning of the present week to be out of danger. The bullet had been removed from his jaw. There is some controversy about the pistol with which Haas committed suicide. Some representatives of the prosecution believe that it was handed to him after he had been placed in prison. If he had it concealed in his clothing, they say, the search made after his arrest would have disclosed its presence. It is now asserted that he was to receive $4,000 for service on the jury at the second trial of Ruef, and that his hatred of Heney was due mainly to the fact that Heney's successful demand for his exclusion from that jury deprived him of this money. He had recently been associated with employees of Ruef. The latter's trial was resumed last week. Motions of his counsel for a change of venue, for a delay of thirty days, and for the dismissal of the jury (all based upon an allegation of prejudice due to the shooting of Heney in court) were denied by the presiding judge. Mass meetings have been held in the city, and these have indicated the renewed determination of the people to support the prosecution. Before the assault upon Heney, the Mayor, at the request of the Citizens' League of Justice, appointed a committee to make an inquiry as to the course of the prosecution and to report to the public. The seven members are Dr. Henry Gibbon, dean of Cooper Medical College; Alexander Goldstein, president of the Phœnix Seeding and Packing Company; Rev. Father D. O. Crowley; Rev. William K. Guthrie, pastor of the First Presbyterian Church; William J. French, editor of the *Labor Clarion;* William Denman, attorney, and William Kent, the capitalist who gave Muir Wood to the Government for a park. It is understood that this committee was appointed because of misrepresentations published in certain local newspapers said to be controlled by the defendants.——John Krause committed suicide on board the steamship "Adriatic" near Queenstown, on the 10th. He had been an employee of the Pacific States Telephone and Telegraph Company and was a witness for the prosecution at the trial which ended in the conviction of Louis Glass. He was also to be a witness against Theodore V. Halsey, of the same company, and was under surveillance, but he eluded his guards and went abroad.

Mr. Rockefeller's Testimony

John D. Rockefeller testified at length last week in New York as a witness for the defense in the suit of the Government against the Standard

Oil Company for violation of the Sherman act. His testimony related mainly to the early history of the corporation, or of the firms and companies which preceded it. An interesting question is presented by his appearance on the witness stand. It is claimed by his counsel that he has gained immunity, so far as criminal prosecution is concerned, owing to the character of the cross-examination. He appeared voluntarily, of course, as a witness for the defense. When counsel for the Government, in cross-examination, began to touch upon ground and acts which had not been covered in the direct examination, the company's counsel asserted that Mr. Rockefeller had been made a witness for the Government. It is admitted that this claim was advanced with the purpose of securing immunity if the Government should hereafter decide to bring criminal suits against the company's officers. Attorneys for the Government say that immunity cannot be obtained upon such a plea.——The Government has sued the Sugar Trust to recover $3,624,121, alleged to be due in duties and forfeitures because of frauds in weighing on the Trust's docks. It is charged that the scales were adjusted to give false weights. This is emphatically denied by the defendants.

Countries South of Us

Miguel de la Torre, for twenty-five years treasurer of the fiscal zone of Havana, has stolen $195,000 of the funds placed in his care by the courts that had received them in lieu of bonds in pending cases. He admits his guilt.——The cigarmakers who went on strike at San Juan (Porto Rico) seven weeks ago for higher wages have been successful, their employers consenting to pay $1.50 more per thousand.——In Mexico the bill to compel the incorporation of all mining companies under Mexican laws has been defeated. It is said that $700,000,000 of foreign capital is invested in Mexican mines and smelting works.——Colonel Goethals, who has charge of work on the Panama Canal, has assured the President that the canal will be completed and open for traffic on January 1st, 1915.——Several recent arrests in Costa Rica are said to have been due to an attempt to start a revolution in the interest of ex-President Iglesias. The news causes surprise, because for a long time Costa Rica, unlike the other Central American republics, has not been disturbed by revolutionists.——Reports from Mexico say another revolution is threatened in Honduras, in the interest of General Polycarpo Bonilla.

Insurrection in Hayti

The supremacy of President Nord Alexis in Hayti is menaced by a revolutionary movement under the direction of Gen. Antoine Simon. At last accounts the disturbance was confined to the southern part of the republic, where Simon has been in command of the military forces for many years as the local representative of the President. Gen. Turenne Jean Gilles holds a similar post in the northern department, and it is said that the aged President desires that Gilles shall be made his successor at the coming election. Simon would like to hold the office. A few days ago he was asked by the President to visit the capital for a conference on the political situation. He declined the invitation, whereupon his appointment to the office of "southern delegate" was revoked. Then Simon started an insurrection and seized Aux Cayes, the capital of his department. There his forces have been surrounded by the Government troops. It is reported that on the 19th President Alexis read to some of his supporters a letter just received from the Haytian Minister at Washington, who exprest the opinion that Judge Taft was not a man who would tolerate a civil war in Hayti, and urged the Haytian people to refrain from revolutionary uprisings in the election season. It is expected that the political exiles in Jamaica and St. Thomas will return to assist Simon.

The Liberal Victory in Cuba

Nearly two-thirds of the votes at the recent election in Cuba were those of the Liberal party, and the majority for General Gomez was about 70,000. The Liberals carried every province. They will have the entire Senate (except two or three Conservatives who hold over) and

five-eighths of the House. The President-elect has expressed the gratitude of the people and of himself "to the great country of Washington and Roosevelt" for insuring a free and fair election. He has also commended the integrity and ability of Governor Magoon. "Be assured," he says in a letter to the Governor, "that in performing the duties of the high office to which my fellow-citizens have raised me I shall always be inspired, as you have been, by a sense of justice and impartiality." President Roosevelt sent to him a message of congratulation, in which he said:

"I rejoice at the orderly and law-abiding manner in which the election was carried on, the rigid observance by all officers, not merely of the law, but the demands of propriety, and the loyal acceptance of the result by the people of Cuba. The conduct of this election shows in an impressive fashion the seriousness with which the Cuban people have prepared themselves once more to assume the duties of a free and independent republic. In two months from this date your government will assume complete control. The United States authorities will once more turn over to the representatives of the Cuban people the beautiful and fertile island you are so justly proud of. I most earnestly wish you and your colleagues in the government the greatest measure of success and assure you of the genuine and lasting friendship of the United States."

The Kaiser's Surrender

The interview between the Kaiser and Premier Von Buelow took place on Tuesday of last week at Potsdam. There was an audience of two hours, in which Von Buelow with great plainness informed the Emperor of the feeling of the people, and of the attitude of the Reichstag and Bundesrath as to his indiscreet interference with international affairs. After the interview the following official report was made:

"During today's audience granted to the Imperial Chancellor, his Majesty the Emperor and King listened for several hours to a report by Prince van Bülow. The Imperial Chancellor described the feeling and its causes among the German people in connection with the article published in the *Daily Telegraph*. He also explained the position he had taken during the course of the debates and interpellations on this subject in the Reichstag. His Majesty the Emperor received the statements and explanations with great earnestness, and then expressed his will as follows:

"'Heedless of the exaggerations of public criticism, which are regarded by him as incorrect, His Majesty perceives that his principal imperial task is to insure the stability of the policies of the empire, under the guardianship of constitutional responsibilities. In conformity therewith, his Majesty, the Emperor, approves the Chancellor's utterances in the Reichstag and assures Prince von Bülow of his continued confidence.'"

Prince Von Buelow had determined upon handing in his resignation if the Emperor had not met the country's demands, but as such a situation did not arise the audience ended with the Emperor saying to the Imperial Chancellor that he reposed full confidence in his wisdom. On going to the interview Von Buelow had no idea how he would be received. He told the Emperor that his general position was contained in the manifesto of the Conservative party, which represented the most loyal section of the German people, issued on November 6th. This declaration exprest serious concern "that not infrequently the utterances of His Majesty bring our foreign politics into a difficult situation," and added:

"In order that the Emperor's reputation may be preserved from criticism and discussion, and the German Empire and people from complications and harm, we express the reverential wish that greater reserve be displayed in future in making such utterances."

Prince Von Buelow bore, he said, the mandate of the rulers of Bavaria, Würtemberg, Saxony and Baden, the four most powerful States in the Empire outside of Prussia, to communicate to His Majesty their collective hope that he would be more reticent in the future. The Chancellor submitted authorization from the whole Prussian Cabinet to express their agreement with him as Minister-President in his council. He bore equally the mandate of the Reichstag without distinction of party. The Kaiser was compelled to accept with great seriousness this report. The people generally accept this as a concession, but not as a definite acceptance of any constitutional change. He will be more careful, but he does not definitely yield any of his rights. Before this full change to responsibility of the Emperor and his Cabinet to the Reichstag there will have to be further action following long discussion. At most his present submission is not regarded as a humiliation or defeat, but as a victory of the Kaiser over himself. We are told:

"There is nothing said in it about constitutional guarantees or administrative changes, because such were not demanded of him by the Chancellor. Changes it may be will be made if necessary in the parts of the Constitution dealing with the Kaiser's public acts and responsibilities as defined in the Constitution, but it is evident no guarantees can be asked or given regarding his private conduct or conversation."

Since this interview the Emperor has been careful not to give offense. He has excused himself from several public functions which he has usually attended. In the single one he has attended, instead of speaking orally he read his address, as it was presented to him by the Chancellor.——At the meeting of the Reichstag on Thursday Von Buelow introduced the new financial bills requiring increased taxation, in which he declared that parvenus are not popular anywhere, and Germany was regarded as a parvenu among nations. He said the proposals were for the removal of taxation from the lower classes, and the increase for the middle and wealthier classes, who were unwilling to pay the taxes that properly fell to them.——A census of the unemployed in Berlin and its suburbs shows 40,124, of whom only 1,716 were women. The small number of women is due to the demand for domestic servants.

Temperance Legislation in England

The Liberal Government has achieved a great victory in England by carrying its licensing bill thru the House of Commons by an overwhelming majority, that of 350 to 113. It had the support of the Laborites and of not a few Conservatives. Mr. Asquith shows great ability in making such compromises as will secure a certain measure of reform, even if not all that he desired. Thus, this bill, as presented, was what would be called very drastic in England, but very mild in this country. It would have been defeated in the House of Lords if it had not been modified in various respects. Thus, under the original bill compensation was paid to the public houses suppressed at the rate of fourteen years' value; now this is increased to seventeen years, under the charge of "robbery," for in Great Britain a saloon is supposed to have a sort of franchise right to exist, and to suppress it outright as we do is thought an injustice. By another amendment, instead of a bare majority of votes in any district securing the prohibition or reduction of licenses (at the end of the time limit) there must be a two-thirds majority of the votes polled. London public houses are brought within the Sunday closing clause, but may be open four hours, as against three hours in the Provinces; restaurants where meals are taken exempt from this restriction. The original bill gave magistrates the power to forbid the employment of barmaids in public houses; this is withdrawn. Children are not to be employed in public houses under the age of fourteen; the bill left the age at the discretion of local magistrates. There are special rules as to the licensing of clubs, and they can be inspected by the police only on written order from a magistrate, and not on the authority of the chief constable. The important feature of the act is that it allows the magistrates in their judgment to suppress too numerous public houses, by paying them a compensation equal to seventeen years' value from this date. Thus those closed now will receive their full value; those next year sixteen years' value, and so on. At the end of seventeen years all right of compensation ceases.

The Education Bill

Now that the licensing bill is out of the way the British House of Commons can undertake the passage of the Education bill, which is the other chief task of this session. It will be remembered that the House of Lords rejected a previous bill past by the Commons, and that there followed a cry to mend or end the House of Lords. Now the attempt has been to secure the passage of a compromise bill which may be accepted by the less extreme members of both great parties. Scarce any one in Great Britain, where a system of Church domination of the schools has been in vogue, dares to suggest the American system of free public schools in which no religious teaching shall be admitted. The chief question involved now is as to the specially Church schools which have been supported by the rates, or taxes. The bill has long been in the committee stage, and the Government has, for the purpose of compromise, accepted a number of

amendments which are not acceptable to the more extreme men of the dissenting Churches. Before the Government was to bring the bill back to the House from the committee stage, and decide in just what form to present it, Mr. Runciman, who had charge of it for the Government, held a council with all the Dissenting members of Parliament and presented the draft of the bill to them, saying that he would not offer it unless assured of their acceptance. He had previously consulted with the Archbishop of Canterbury and other Anglican bishops, and had obtained from these less *intransigeant* ecclesiastics their extreme concession. The Dissenting members, with a few exceptions of those not voting, accepted the draft, which seems to assure its passage by the House and probably by the Upper House. On Saturday the Government presented the bill. The purpose of the bill is to secure popular control and freedom from all religious tests. All schools receiving rate aid pass completely under control of the local educational authorities. No teacher employed or seeking employment is required to subscribe to any specified religious denomination or to attend or abstain from attending any place of religious worship. Neither shall he be required to give any religious instruction. This involves a sacrifice on the part of the Church, in compensation for which she gets "the right of entry." This takes the form of a provision that if any parent desires it denominational religious instruction may be given his children two mornings a week between 9 and 9:45 o'clock. To reconcile the passive kickers who object to denominational teaching being paid for out of the taxes it is provided that the denomination concerned shall defray the expenses of religious instructions by providing teachers, or if they accept an assistant teacher, who may "volunteer," they must refund a proportionate share of his salary to the local authorities. The bill also provides for all schools the undenominational religious instruction, under the "Cowper Temple" plan of 45 minutes a day. The "right of entry" has been much objected to by Nonconformists, but they will yield this in all probability. Certain denominational schools, such as the Catholic, who will not yield, are, on certain conditions, to receive Parliamentary aid, but not from the rates. The Catholic Archbishop of Westminster says it is imperative that their schools shall have teachers who are "genuine Catholics." If this bill shall pass, after the passing of the licensing bill, and that of old age pensions at the previous session, it will be a great victory for the Government.

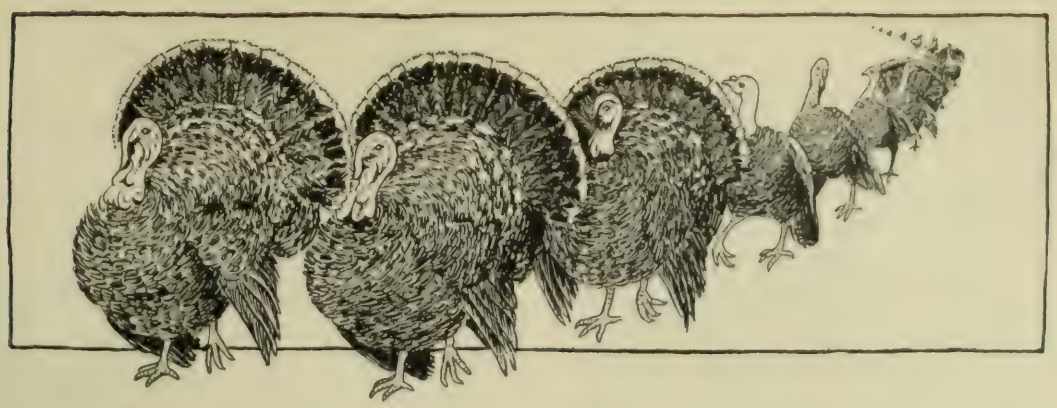
Turkey and Its Neighbors

The elections for the Turkish Parliament have been going on, but no results have yet been tabulated. In Constantinople there are about 830 Second Degree Electors chosen, and they will elect ten Deputies to the Parliament, five Mussulmans, two Greeks, two Armenians and one Jew; and a similar apportionment is made elsewhere. In Macedonia the declaration of Bulgarian independence has adversely affected the Bulgarian candidates, only four having been chosen where twelve or fifteen were expected. The Porte has sent to other governments concerned its proposals for a conference of the Powers. The principal points are the tributes and shares of the Turkish debt to be assumed by Bulgaria; also the relation of Bosnia and Herzegovina; but no mention is made of compensation or debt, as that might seem to be accepting their annexation by Austria as final. It is declared that no compensation to Servia or Montenegro should be at the expense of Turkey. Another point of discussion is a modification of the capitulations, especially in reference to foreign post offices in Turkey, while still another is an increase of the Turkish import duties.——The news this week is somewhat less favorable to peace, as Austria, Servia and Montenegro are strengthening their frontiers and complaints are made on both sides, and large military stores are being collected. The Servian Government has sent a note to the Powers, in which it makes the complaint that it is difficult to persuade the people that Austria's acts are not provocative.——Meanwhile reports come of much Slav dissatisfaction of Austria's rule in Bosnia and Herzegovina. It is declared that the repression of the people and the muzzling of the press are worse than in Russia. It

looks as if the recognition of Crete as wholly dissevered from Turkey were likely to be accepted. Kinge George of Greece has been making the rounds of the European capitals. He was favorably received in Berlin and Vienna, and declares that the Greek aspirations of the Cretans will be allowed by Germany and Austria. At last accounts he was in Italy, where he had an audience with King Victor Emmanuel, and he asked him to intercede with Great Britain not to oppose the annexation of Crete to Greece. ——There is as yet no concluded peace in Persia. The Shah declares he will not call the Mejliss, or Parliament, as he had promised. He is said to propose in place of the Mejliss a Council of State of about forty members elected on limited suffrage, but without executive powers. The Moslem religion, he says, forbids a Parliament. Meanwhile we hear that the Porte at Constantinople has opened formal negotiations with the revolutionary organization at Tabriz, and Turkish officers are helping the forces there to fortify the city against those of the Shah. Russia appears to have been keeping her agreement in the treaty with Great Britain, and to have refrained from taking advantage of the insurrection, and this is taken as an evidence of the wisdom of the British Government in making a convention with Russia as to their respective spheres of influence in Persia.

In China

So far as known the deaths of the Emperor and Empress Dowager have been followed by no popular disturbance. It is not generally believed that their deaths were due to violence. Prince Chun, the Regent, is taking things in his own hands, and seems to pay no attention to the new Dowager Empress, who is not a woman of any strength of character. He has published the following edits:



"All imperial clansmen are ordered to give a greater degree of obdience than others; this is for the effect of the example. Disobeying princes and officials will be dealt with without leniency. Our purpose in this is to fulfill the command of the late Dowager Empress and to satisfy the people."

"It is a fact that lawless conspirators recently have tried to invade the interior. These men must be severely dealt with, and all officials are hereby ordered to arrest and summarily behead them wherever found. These officials will be properly rewarded."

The latter edict puzzles people, as no report has come of disturbances. It is believed that there will be no halting in the progress of reform. The last edict of the Empress Dowager was directed to her successors, that they should carry on this work faithfully.

Minor Items

On account of the extension in this country of the foot and mouth disease Great Britain has forbidden the importation of cattle from Pennsylvania and New York.——The British House of Lords has allowed the claim of Albert Kirby Fairfax, of the Virginia Fairfaxes, to the title of Lord. His father, Dr. John Contee Fairfax, of Baltimore, consistently declined to claim the title which he had inherited, saying that American citizenship was good enough for him.——The Pope celebrated his Jubilee mass in St. Peter's, and nearly 70,000 persons were gathered about the basilica. There were present thirty-four cardinals, 400 bishops and several thousand pilgrims. The Pope was greatly cheered by their enthusiastic loyalty. ——The funeral of the Russian Grand Duke Alexis was conducted with great pomp on Saturday, and the Czar walked in the procession, thus for the first time for several years presenting himself to the public. The streets were lined with troops. At the same time the Czar pardoned the Grand Duke Cyril, who had been banished for three years on account of his marriage to his divorced cousin against the Czar's command and the law of the Church.——A bitter fight between German and Italian students occurred on Monday at the University of Vienna. It began with an Italian demonstration in favor of an Italian university at Trieste, and 1,200 men were involved. At last pistols were drawn, and fifteen students were wounded by shots, and sixty arrests were made.——The Russian Duma has refused to appropriate $5,000,000 for battleships until the Ministry of Marine has been reorganized on a satisfactory basis. But $2,000,000 was voted for torpedo boats.

The Moral Aspect of the Protective Tariff

BY DAVID STARR JORDAN, LL.D.

[The following article, by the president of Leland Stanford, Jr., University, was read at the Economic Congress in London last Au gust. Now that the election is over it remains to be seen what the Republicans will do about revision.—EDITOR.]

EVERY argument for and against the protective tariff has been stated a thousand times. There is nothing new to be said. But at the bottom of every argument remains the necessary recognition of its primal iniquity. The fundamental idea in American polity is that of a square deal to all men, each standing on his own feet, with exclusive privileges or governmental aid to no man and to no class of men. Inequality before the law, entail, primogeniture, church control of state, state control of church, class consciousness and class legislation were evils in English polity which our fathers would not tolerate. On account of these they left England. They chose the hardships of Plymouth Rock and later the hazards of war rather than to put up with any of them. If there is one American idea or ideal to be segregated from the rest it is this of equality before the law. And it is this ideal which is violated absolutely and continuously in the theory and in the practice of the protective tariff.

The protective tariff is a device for enhancing the home price of the articles it covers by a tax on commerce, by forcing the body of citizens to pay tribute to producers at home. To these the State in futile fashion tries to guarantee "a reasonable profit." These producers may be capitalists or directors of industry, or they may be the laborers who contribute effort only, without responsibility for the way in which effort may be applied. It matters not whether capitalists or laborers, either or both actually profit at your expense or mine or that of foreign producers. The protective tariff intends that they should thus profit, at least to a reasonable degree. But in the theory of our republic it is no part of the State to guarantee to any one "a reasonable profit," nor to protect any one from a reasonable loss. Its function is to see fair play and freedom of operation. It is a breach of the principle of equality before the law that the State should do anything more. To guarantee any one a reasonable profit is to do so at the expense of the rest. The theory is one of injustice, whatever its result in practice. In practice, whatever is gained on the one hand is lost on the other. Even if we could force foreigners to pay the tariff taxes, which is sometimes possible, their capacity as buyers is correspondingly decreased. International trade is barter, and every burden it carries works a corresponding loss to both parties in the transaction. Moreover, as a matter of fact, the protective tariff yields little gain to the laborer, because continued immigration brings him new competitors and because he is in his turn one of the general public who suffer from the commerce tax. If wages are raised by the tariff, so is the cost of living, and the cost of living comes first. For the director or em-

ployer of labor, the case is, on the whole, not much better, because the cost of his product is enhanced by the tariff taxes on everything which enters into his process of manufacture. In so far as a tariff is successful in gaining profit, it is so because it is virtually prohibitory. That the evils of prohibitory tariffs are so little felt by us is due to the fact that our country is a world in itself, with untaxed trade thruout a district comprising nearly a third of the specialized production area of the globe. Yet within this favored area, with all its vast range in competition, it is possible sometimes to monopolize production in some particular direction. Such a monopoly we now call a trust. To the development of such monopolies the tariff naturally lends itself, tho it would be unfair to declare it to be the parent of all trusts. It is enough to recognize that its general purpose is the same—the development thru legal means of industrial and economic monopoly, of the enrichment of a class or of a group of classes at the expense of the citizens at large. This is theoretically contrary to American polity. If the principles of our republic in regard to "equal justice to all, exclusive privileges to none," are right, then the theory and the practice of the protective tariff are wrong. That it works thru the method of indirect taxation disguises but does not justify its injustice.

The prohibitory tax on importable products is said to have brought its justification in the ultimate lowering of price of the articles concerned. The same claim is made in behalf of the trusts, and much evidence is brought forward in both cases to justify this claim. But the real cause of the reduction in price is seldom traceable to the trust or the tariff. Doubtless, for example, iron is cheaper in this country under a high tariff than it once was without the tariff. But the cheapening of all metals, protected and unprotected, is held to depend on the advance of the science and the arts of metallurgy. The cheapening of gold, a metal out of the range of tariff, is due to improved processes of contraction, and the change threatens to subvert the monetary basis of the world's credit and trade. Metals which have been cheapened in the United States have been similarly affected in England. It is not clear that the tariff in this matter holds any important relation of cause to effect. Nor would the general policy of taxing one group of men, or even one generation for the benefit of the next, be justified if it were so.

The tariff is defended on the ground of the value to the growing nation of the advancement of infant industries—of the development of diversified economies. We may not deny the importance of such development. We may admit that at many places and for definite periods there has been a financial gain to the community at large, thru taxing the farmer to build up the manufacturer. We may admit that nation building has been hastened by it. But for all that it is not politically right nor just to do this, for the gain to one has gone with loss to others. The policy in practice assumes the form of a vested right which becomes in time a vested wrong. But even if we admit the past value of protection, the greater evil comes when we cannot let go. Around these vested rights other conditions grow up, and a change of any sort works havoc with related or associated interests. Justice to the new interests becomes possible only by the perpetration of varied forms of injustice. To touch the tariff in any way now sends a shock thru the financial world, throuout the body politic. Tariff revision in our day is therefore an operation which can be based on no principles. It is a blind rush among various choices of evils. To put revision in the hands of friends of the tariff means still suppression of reform, the further extension of the evil itself. To put revision into other hands means a commercial crisis. And sooner or later commercial crisis must come. The only permanence lies in making tariff taxation like other taxation, a non-respecter of persons, its sole function that of raising revenue. Justice is always blind, knowing nothing of indirect or ulterior advantages.

Historically, the theory of the infant industry has proved fallacious. There are in America today no infant industries. These infants have grown more rapidly than the nation has. Our huge industrial combinations overshadow the world. Just as in their alliance they dominate us, in similar degree they have

the whip hand over other nations. If anything American can take care of itself, it is our infant industries. Yet these organizations demand the tariff as a necessity of existence as insistently as ever they did. They exact tribute from all of us, because they can get it. The lull in the self-assertion just at present is due to the handwriting on the wall, not to any lessening desire to be fed at the public expense.

The actual injury to American prosperity traceable to the tariff may not be enormously great. It has doubtless been exaggerated. It lends itself to exaggeration. It makes us angry when we think of it, and wrath carries always a magnifying glass. Its greatest evil is moral, not economic. It lies in the perversion of our theories of government, the introduction of the idea of class enrichment thru legislation.

Doubtless much of the prosperity of the United States is due to the protective tariff—the prosperity of some of us. But in like degree the non-prosperity of some of us, some of the very same persons, for that matter, is due to the same national meddling with individual rights. The apparent prosperity of any community could be greatly enhanced by taking property away from half the people to put it into the hands of the others who know better how to use it. Some of this sort has lain at the foundation of British polity. It is the theory by which nobility and aristocracy justify themselves. It is not the theory of democracy. It is not the principle on which our nation was founded. Thus, behind all discussion of sources and means of prosperity the fact remains that democratic justice, that fundamental equity between man and man, can never be realized in America so long as any trace of the protective tariff remains on our statute books. It is another illustration of the truth that "they enslave their children's children who make compromise with sin." This law applies to economic lapses, to time-serving legislation, as well as to moral sins.

PALO ALTO, CAL.

A Thankful Land

BY EDITH VIRGINIA BRADT

Look to the North, set like a gem
Upon the bosom of her hills;
Look to the South, whose blood-stained soil
The patriots' soul with fervor thrills.

Look to the East, where pilgrim bands
Found refuge from the oppressor's hate;
Look to the West, whose treasure stores
Stand guarded by her "Golden Gate."

Aye, look again beyond the seas,
And catch the gleam in isles afar
Of Stars and Stripes in fluttering folds,
Afloat where our possessions are.

Where'er that sacred emblem flies,
Or North or South, or East or West,
Behold the free man's natal land!
Behold America, the blest!

Then at this glad Thanksgiving time
Rejoice! and once again rejoice!
And for this goodly heritage
Praise ye the Lord with heart and voice.

WASHINGTON, D. C.

"Because You're a Jew"

BY SYDNEY REID

[Accompanying an article by Mr. C. S. Bernheimer in our issue of November 12th we promised an article this week which should indicate the excuses given for prejudice against the Jews.—EDITOR.]

SOME little time ago a very bright Southern lady, writing in the columns of THE INDEPENDENT, twitted us of the North because, while we held up our hands in horror at evidences of what we called race prejudice, displayed by Southern folks against the negroes, we ourselves were entertaining what, she insisted, was quite as virulent and much more absurd race prejudice against highly intellectual, highly polished and entirely harmless people called Jews.

Now, then, is the lady's charge true? Do we intelligent, or more or less intelligent Gentiles of the North really cherish such a prejudice?

That leads us to the examination of the word prejudice, which means a conclusion arrived at without the aid of testimony or evidence. Gentiles deny that they have any prejudice, and usually, for purposes of publication, deny that they have any anti-Jewish feeling. But any one who makes a careful investigation, such as the writer has just concluded, among prominent Jews and Gentiles, must arrive at the knowledge that there really is such an anti-Jewish feeling, that it is strong and widespread, and that it is increasing rather than diminishing.

Listen to the voice of a leading rabbi of Brooklyn, who has made a study of anti-Jewish feeling among Gentiles:

"In spite of the fact that many of the great department stores are owned by Hebrews and patronized chiefly by Gentiles, I hear that there is a little commercial prejudice against Jews — that many Gentiles say, 'We won't go to a Jew store.' But the leading manifestations of anti-Judaism are social—the fraternal societies particularly — societies whose very foundation sentiment is the promotion of universal brotherhood, make use of all sorts of excuses to keep out Jews. Most Masonic lodges keep out Jews, tho there are some lodges that are almost entirely composed of our people, thus segregating them from the general brotherhood of Masons. So it is thruout the other fraternities, and tho we have fraternities of our own, we find it mortifying and humiliating that we are excluded from the general social body.

"Jews are admitted into the great colleges and universities of the country. In fact, so far as the authorities are concerned—the faculties and university officials—I never heard of a case of discrimination. They set a good example of liberality. But among the students it is different. They draw aloof from their Jewish comrade, and, to a greater or less extent, send him to Coventry. He finds he can't get into the fraternities. He finds he can't get on the athletic teams, no matter how competent an athlete. He doesn't like that at all, for he has the same social instincts as others. But if he inquires why, and manages to secure from any quarter an honest answer, it is

" 'Because you're a Jew.'

"Many of the leading private schools refuse outright to receive young Jews as pupils, and others again will take them if their names are not 'too Jewy.' For instance, I hear that the Hotchkiss School, of Connecticut, which had two or three Jews among the pupils, refused a boy named *Cohen* because *Cohen* would look bad in the catalog; sensitive Gentiles would lift their noses at the sight and say: 'The Hotchkiss School takes Jews; I will remove my children.' The school would admit any young Jews whose names might be Gentile German, or Russian, or English, but not a *Levi,* a *Cohen,* a *Moses* or a *Solomon.*

"And the hotels. The great hotels of New York, as a rule, do not discriminate against Jews, yet I have heard that some show they have no love for us.

"For instance, a young woman belonging to one of the most prominent Hebrew families in the city desired to give an

entertainment to her friends, and selected the Plaza Hotel as the scene of the festivities. When she went to make the arrangements for the room she was asked for references. She gave leading merchants and bankers. 'Oh,' said the hotel official who questioned her, 'we did not want financial but social references.' She was not of the Four Hundred, so the Plaza was beyond her reach.

"Whatever joys the Four Hundred may have, we are altogether cut off from them.

"But the great hotels, at least, do not exclude Jews from among their guests as do so many of the summer hotels—the resorts at seaside and mountain. All thru the Adirondacks you will find anti-Jewish prejudice rampant. Many of the hotel circulars and advertisements announce frankly if not brutally that no 'consumptives, Jews or dogs' are taken—pleasant classification for us.

"At one of these Adirondack hotels a young Hebrew lady with small children was recently refused shelter for the night tho the wilderness was around. She could not buy even a glass of milk for the children.

"Every one knows about the prejudice exhibited against Jews by the management of the Manhattan Beach and Oriental Hotels. This has extended over many years and has led to the exclusion of some of the most cultured Hebrew families in the country with no other reason than:

" 'Because you're a Jew,' exprest quite plainly enough to be unmistakable.

"I have heard lately that some Jews were taken at the Oriental Hotel last season, so, maybe, there has been a change of policy there.

"Most people will remember the case of the Hotel Renaissance, of New York, how the tenant wanted to transfer the lease to one John Doe and the proprietor found out that John Doe was a Jew and refused his consent—the anti-Jew prejudice is widespread among the apartment houses.

"Then in the clubs we are met by the same prejudice. We find ourselves excluded, for instance, from the University and Union League Clubs; even the Crescent Club, of Brooklyn, draws the line against Jews.

"And the same in society. Our young people make progress for a time and then there falls a sudden chill and they find themselves exposed to slights and even insults. The Gentiles have discovered that they are Jews.

"True we could have our own summer resorts, our own hotels, our own society, our own fraternities, and, to a greater or less extent, we do so; but is it right, or just, or healthy for the country that we should thus be held off at arm's length from the general body—not to speak of the teachings of Christianity on the subject of human brotherhood?

"I wonder, if Christ, a Jew, were to return here among us how many Christians would pay heed to him and his teachings."

"Rabbi," I asked, "What is the reason why Gentiles do not like Jews?"

"I judge that it is a part of the general and world-old prejudice against strangers. Some of the same prejudice exists between people of different nationalities and different religions. We find prejudices between Protestants and Catholics, even between various denominations of Protestants. The prejudice against the Jew is stronger because he is more completely alien in race, in customs and in religion."

"What do you think of Mr. Zangwill's 'Melting Pot' idea, that the Jews should give up their separateness and unite with the general body?"

"Mr. Zangwill himself married a Gentile and that may have affected his manner of looking at the matter. I see no reason to believe that any large number of our people are ready to desert their trust. There are many indifferentists who have lost touch with the synagogs and there are many Reformed Jews who have cast off old customs, but few have turned to Christianity and the main body still plods faithfully along the old path.

"Even the few individuals who have turned to Christianity are not sure of escaping the anti-Jewish prejudice. One man, who married a Christian woman and turned Christian himself, found out later on that he had not by those means escaped the prejudice, for when his daughter was old enough to go to a certain high class school she found herself

excluded on account of her father's Jewish name. So then the family changed their name and probably completed the melting process.

"But to the religious Jew such an escape from uncomfortable conditions is quite impossible. He believes that God Almighty has intrusted his people with a Message and a Mission and that come what may and suffer what he must among the nations he must be true to that Message and that Mission."

So said the Rabbi, and the writer felt that he spoke truth; but did he tell all the truth? Was he mistaken in part? Was there really nothing in this dislike of Jews by Gentiles except what could be accounted for on the ground that the Jews were looked upon as aliens and strangers?

It was not easy to get frank testimony. Merchants, officials, hotel men, did not care to speak out. When they spoke at all they stipulated that their names should not be mentioned. It was only by putting many testimonies together that one was enabled to get the Gentile side of the case, which may be fairly presented in this manner:

"We have no prejudice against the Jews. We do dislike them but it is dislike based on knowledge and evidence which is so widespread and so general that it has resulted in an instinctive dislike. It is because of qualities which are manifested by Jews. The dishonest among them are out of all proportion to their numbers. No other people so persistently, shrewdly, cunningly, constantly, skim the very verge of crime, and many go over the verge.

"Police Commissioner Bingham was right in his idea about the large proportion of Jewish criminals, but wrong in the specific charge that he made. He did not mean misdemeanors, as his Hebrew assailants pretend. He meant felonies. In certain crimes where cunning is especially needed the Jews furnish most of the criminals, altho they are only about one-quarter of the population of New York. Take arson, for instance, arson committed, not by a crazy firebug—some degenerate boy whose insane fancy is pleased by the sight of flames—but arson committed by a cunning shopkeeper who wants to collect insurance on the building and on stock that most likely he has secretly carried away and hidden on the premises of a fellow plotter. That is a typical Jew's crime, and so common among that people that quite recently a number of the insurance companies declared that they would no longer take risks on property owned by men whose names ended in 'ski' or 'sky.' But that was an easy problem for the would be criminals to solve—they simply took other names.

"Take fraudulent bankruptcies accompanied by all sorts of swindling and perjuries. That is another crime in which Jews are pre-eminent.

"Every railroad claim department has its pack of Jewish wolves following it up with swindling claims put forth by Jewish lawyers for Jewish clients, and bolstered up by false affidavits of Jewish pretended witnesses. There are plenty of Gentile swindlers here, too, but they are not so numerous, so well organized, so clever, so unscrupulous, so well equipt with trained, perjured witnesses.

"Jewish pickpockets, too, are numerous out of all proportion to the number of their race in comparison with the rest of the community. The prisoners tried in the Night Court are mostly Jews.

"All the officials who have to do with crime know these things but they dare not proclaim them because they fear the Jewish vote. They are like tight-rope walkers. A slight push would upset their balance, turn them out of power and put in the other political party. And Jews can give a big push.

"It was only a little while ago that we saw the Jews beat Tammany Hall and put the Republicans in power.

"We all felt that the Jews were right in that particular fight. They cast their votes to do away with conditions that were spreading vice thru tenement houses and corrupting their own young people. Yet the exhibition of their strength certainly did not tend to allay the feeling against them.

"We felt their solidarity. They could throw their strength on one side or the other as they chose, and could hold the balance of power. Both parties had to placate them and have since had to pretend love for them.

"We don't care a pin about their re-

ligion; we don't believe that they have any religion that counts. Go into one of their quarters and look about you at the people and see if you believe that they are practising their religion. It calls for many ablutions, but men, women and children show plainly that they don't wash. Most look as tho they had not washed for years. They are known to their neighbors as 'The dirty Jews,' and their habits give the Health Department officials infinite trouble.

"Look at them and the surroundings that they make and see if it is possible to believe that these are a chosen people—a people with a Mission and a Message. If they have a living religion how comes it that they have so much swindling, so much arson, so much perjury, so much fraudulent bankruptcy?

"There is another thing against the Jews. They are too prosperous. Where they contest they win. Five or six years ago, after the French Ball, there was a fight and the victor stood over the body of his antagonist and proudly proclaimed: 'The Jew is always on top.' The fact that the man whom he had defeated was also a Jew did not affect the truth he had uttered. The Jew is winning everywhere. By fair means or by foul means he wins. He has the commerce of the city in his hands now, and the signs on Broadway make one think of the main street in New Jerusalem and make Gentiles curse Titus and wish that he had never been born. Why couldn't he leave them alone in Judea? Perhaps they might have stayed there? As to the possibility of a great Zionist movement, it's too good to be true!

"One tentacle of the Hebrew octopus has caught our newspapers now, and we also see Jews running our theaters and giving us a drama that never before was so low. We see the Hebrew octopus seizing one enterprise after the other, and we can't stop it. They are beating us.

"They beat us in the schools, in the colleges, in business—everywhere, and we are not used to being beaten and don't like it. We Aryans of the European races have been conquerors for twenty centuries. Coming to this country of America we have, by various means, induced the original inhabitants to retire or oblige us by dying. Then we have thrown it open, calling upon the opprest of all lands to come to us and enjoy freedom. And the opprest have come in immense numbers and we have been able to assimilate all—all except these Semites, who have been under the heels of our forefathers for twenty centuries and who now, given entire freedom by us, and equipt with knowledge by our schools and colleges, are showing that they have the stuff in them to conquer the conquerors.

"Jews are not liked socially because of their qualities. They do not respect reticence and reserve; they do not regard the conventions. Admit a Jew to your acquaintance and he instantly becomes intimate and familiar. He will poke into your private affairs, he will read a private letter over your shoulder. If you leave him alone in your office for a minute you cannot be quite sure that he will not rummage your desk. Introduce him to some great man and he will immediately find some other Jews to introduce to that great man so as to show them that he is on terms with him. He loves the limelight and will push any one aside in order that he may stand in it. He is both conceited and vain and will spend money in order to secure applause—as Kipling has said: 'Like a young Jew trying to appear white.'

"Two or three Jews at a summer resort utterly spoil the place for the Gentiles. The first thing that the Jew does when he gets in a hotel is to bribe the head waiter. He must have the best steak, the best of everything, and be served first, and he is so persistent, so acute, so eager and so willing to resort to anything to get his way that he does get his way and makes every less strenuous person about him so uncomfortable that they'd sooner leave the place than contend. If he sits at a table near you and you have secured something especially good, his greedy eyes boring into you utterly spoil your repast. If you give your children new toys and send them out to play you will find in half an hour that the Jew children have the new toys while your youngsters are looking on. The young Jews are not violent, but they get what they want by reason of their greater appetite for it. They're insatiable and can only be represt by force.

"Admit Jews into your club or fraternity and you find that they are not content with a modest place. They must lead. They push their way forward indefatigably, and if repulsed or rebuffed cry out, 'Race prejudice! We are persecuted on account of our Religion.' Very recently, when the public ownership movement began, some people who went into that movement in good faith found that a young Jew had pushed himself to the front as president. He was very restless, very crude, very presumptuous, but he spent more money than any others, held the meetings at his house, and was active in affairs. When the Independence League started up he attempted to deliver all his comrades to it, with officers dictated by its leaders. Evidently he was a decoy duck financed by the Independence League people. Some of the solid men of the Public Ownership organization asked the calm, observant district leader: 'How did you come to put such a fellow as that in as president?' and he answered: 'Can you tell me how it was possible to keep him out?'

"Admit Jews into society and you find you have added some very charming, highly cultured people. Lovely young ladies, intellectual young men. All goes well maybe until some Gentile young man falls in love with the Rose of Sharon and proposes to marry her. The Gentiles may have some misgivings, but they would give way and let the wedding proceed; not so the Jews. All the synagogs turn out to assail the would-be bridegroom with strange cries and gesticulations and stranger weapons, till one is reminded of the story of the Jew who in a secluded street was so attracted by the fragrance of bacon that, after a hasty glance around to assure himself that the coast was clear, he dived into a little restaurant and regaled himself in a manner forbidden by his law. When he issued forth again he found a fearful thunderstorm raging. The lightning flashed, the thunder rolled, and the Jew, looking up at the sky, half in terror, half in reproach, exclaimed: 'Oh, vot a row, vat a row dot iss to make apout such a liddle piece of pork!'

"The man who proposes to marry a Jewish woman feels at once the full bitterness of the hatred which Jews cherish for Gentiles, and finds that every Jew makes it his business to throw every possible obstacle in the way of the marriage. The would-be bridegroom finds that he is not marrying the girl alone, but her whole tribe, and that he must give up all to them. And there is an equal Jewish outburst against the Hebrew man who marries a Christian woman. She cannot hope to be received as his wife by his relatives and friends. In their midst she is still a Strange woman.

"How foolish, then, to associate with these people when there can by no means be any real assimilation."

That is the way the matter looks to intelligent Gentiles. As to the ignorant among them, the words of the poem set forth his feeling:

> "I do not like you, Dr. Fell,
> The reason why I cannot tell;
> But only this I know right well
> I do not like you, Dr. Fell."

They tell a story about a Tammany captain who heard that one of his retainers was going to vote the Republican ticket because the candidate for judge was a Jew. The captain cornered the culprit in a saloon and began on him:

"What's this I hear about you, Muldoon—you're going to vote against Tammany Hall?"

"I won't vote for a Jew."

"Who got you your job, Muldoon? Your makin' three dollars a day thru longshorin'."

"You did. I remimber all that, but I'll not vote for a Jew. An' me sons won't vote for a Jew."

"Who was it that saved your son from jail?"

"You did, but all the same I won't vote for a Jew."

"And who got your girl the job in the public schools?"

"You did, but I won't vote for a Jew."

"Now, Muldoon, you're a sensible man—just listen to reason. Wasn't Jesus Christ himself a Jew, an' didn't he turn Christian, an' mayn't this man turn Christian, too, if he gets a job from Tammany Hall?"

The chronicle goes no further.

"But," somebody asks, "where is the proof of all this—for instance, of the undue prevalence of crime among Hebrews?"

Dear sir, there isn't any. No officials

of the health department, fire department, police department or the courts or insurance companies dare give out figures that reflect on the Jews. They would lose their jobs if they did. The insurance companies deny, for the purposes of publication, that they discriminate against Jews, but in confidence they admit that they look the man who wants the risk over, and if he looks as if his name ought to end in "ski" or "sky" they investigate him closely and probably refuse. The fact that he looks like a Jew arouses all their fears.

The trepidation displayed by officials whom the writer approached when he asked them for Jewish crime statistics was ludicrous. For publication they had only words of praise for the Israelites; in confidence their tone was entirely different.

They don't tabulate such statistics. They remember the poetic production of the bard of Tammany hall when he found what had happened to the Democratic party of New York City after the Hebrew uprising aforementioned:

"He who abuses
The Jewses
Allus loses!"

NEW YORK CITY.

The Sailors' Snug Harbor at Staten Island

BY GARDNER RICHARDSON

THERE is one institution in this country that can weather the severest financial panic without anxiety, and altho a charitable organization, it never has to appeal for contributions. There is more cause for worrying over a legitimate means of spending the income. This enviable condition of affairs is found at the Sailors' Snug Harbor, on Staten Island, New York. It has been the policy of the trustees to keep from the public, as far as possible, the knowledge of the inner workings of the institution, and especially all financial details. It is estimated, however, that their property amounts to about $80,000,000, and as visitors are admitted, under certain restrictions, those that have eyes and ears may discover things of considerable interest. Besides, old sailors are sometimes garrulous.

The idea of founding an institution of this character is credited to Alexander Hamilton. A wealthy shipowner, Captain Robert Randall, in making his will, sought Alexander Hamilton's advice.

"I am thinking," said Captain Randall, who was a bachelor with no near kin, "of how I can dispose of my property to the best advantage."

"How did you accumulate the fortune you possess?" asked Alexander Hamilton.

"It was made for me by my father, and at his death I became his sole heir."

"How did he acquire it?"

"By honest privateering."

Alexander Hamilton then suggested that it would be most appropriate to found a home for the benefit of unfortunate and disabled seamen.

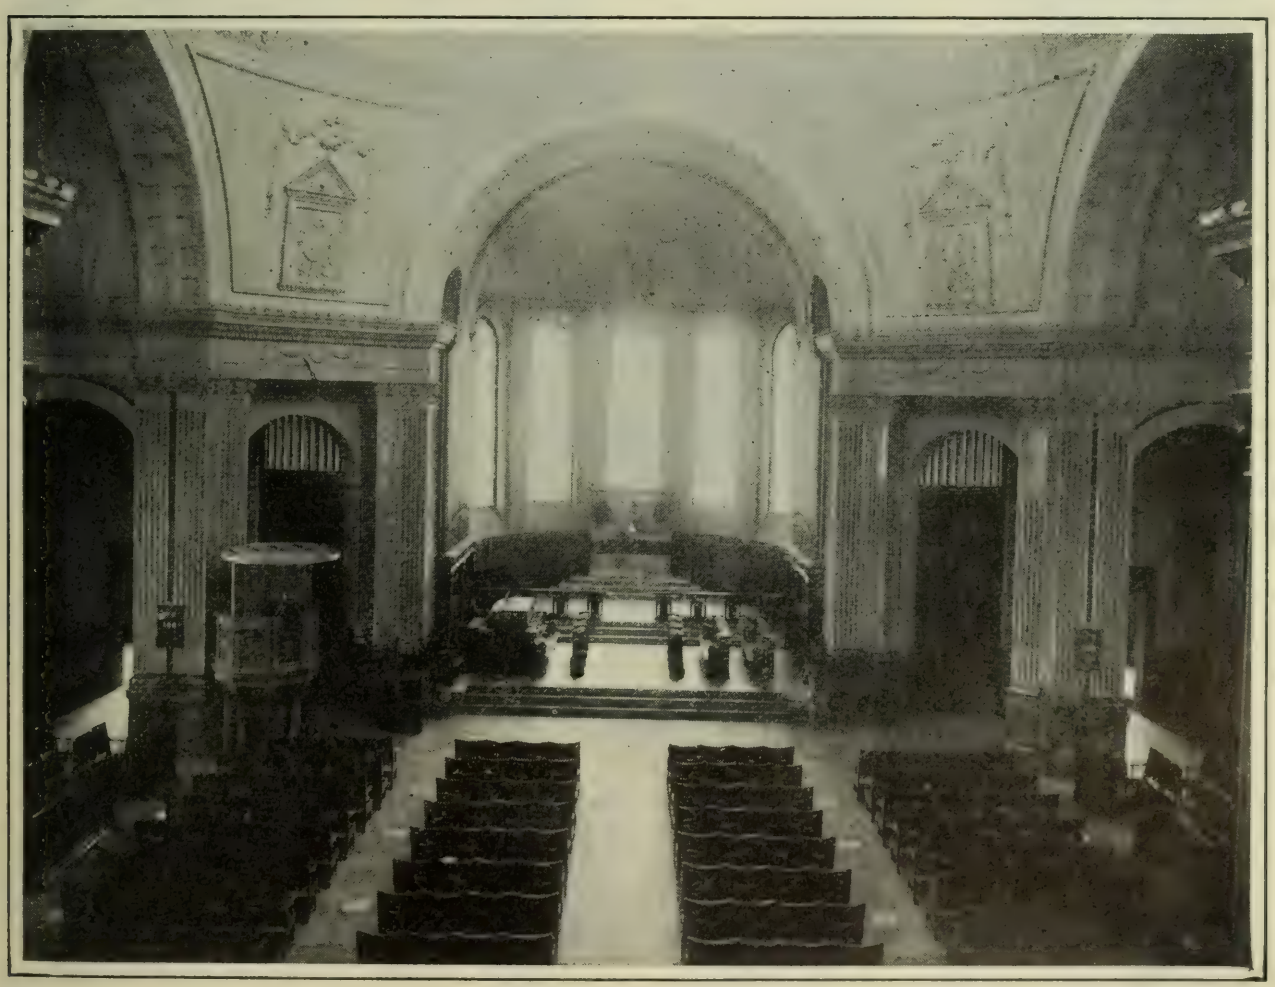
The will was drawn up in 1801, and the property, which consisted of a farm in what is now the heart of New York City, was made over in perpetuity to the sailors of the United States. At first the few inmates were quartered in a large house in the center of the farm, but the city grew so rapidly that streets were laid all around the farm, and petitions came from the city to have the land cut up. In 1831 the old house was torn down, and the sailors were removed to Staten Island. In that year a tract of 160 acres had been purchased for $16,000. The whole of Staten Island had been purchased from the Indians in 1657 for ten shirts, thirty pairs of socks, twelve coats, and an assortment of knives and hatchets.

At the time of the bequest the farm in

THE SAILORS' SNUG HARBOR AT STATEN ISLAND.
General view of the buildings. Taken from the street.

Manhattan was of little value, but as the city grew it was found that the land included the valuable property on both sides of Broadway, and was bounded principally between Fourth and Fifth avenues, Tenth street and Waverley place. The great marble store built by A. T. Stewart and now occupied by John Wanamaker is located on this farm. The land is not sold, but under ninety-nine year leases, with the privilege of renewal. The Wanamaker store pays a rental of $45,000 a year for the use of the land. The trustees have removed all trace of their holdings from the city registry office, have refused to issue maps or reports of any kind, and have entered on a policy of silence which from time to time creates a period of comment. They have ceased to attempt to spend the income on the actual maintenance of the sailors, and are enabled to improve their New York property and make expensive additions to their buildings on Staten Island.

To be entitled to the privileges of the institution a sailor must have served ten years under the American flag and must be sixty years of age, unless disabled. If physically unfit, thru accident or sickness, to pursue his calling, he may be admitted much earlier, some men of thirty being found among the inmates. The sailors receive every comfort possible. Their rooms are large and pleasantly furnished. They are allowed three suits of clothes a year and a pound of tobacco a month. Three meals a day are served—at 7, 12 and 6. In addition, coffee and crackers are issued at 9 and 2, so that none need hunger. A man at sea does not linger over his meals, and these sailors are accustomed to waste no time over such matters. By the time the gong rings the men are all assembled in the hall, and they march quickly to their places, where the food is all laid out before them. In ten minutes, and, at most, twelve, the sailors have done their duty and the hall is deserted.



No work is required of the sailors except to make their own beds and keep a certain portion of the house in order.

They are privileged to work on the grounds, for which they receive five dollars a month spending money. The only rules to be observed are the regulations against gambling and drinking, and the requirement to be in by nine o'clock, unless out by special permission. The men have access to a library of 4,000 volumes and a reading room in which all the current magazines and newspapers are on file. Church services are held on Sunday, but the men are not required to attend. It is interesting to note that about ninety, or less than 10 per cent., avail themselves of the privilege. At the new music hall, entertainments are given every two weeks during the winter, consisting of singing, lectures, plays and burlesques.

There are at present 950 inmates, of whom 150 are in the hospital. There is an element of pathos in the inevitable course of a sailor's voyage after he reaches this final port. The first few years are spent in pleasant idleness and rest, but as the time passes by and he becomes weaker and feebler, he is removed to the hospital and later from there to the graveyard on the hill. The age of the men is so advanced on reaching Staten Island that the annual death roll of 50 is not as startling as it first appears. Several of the inmates are over ninety. Most of the sailors are Americans, but there are a few Scotch, Irish and Germans. The foreign nations are not as strongly represented as might be expected, for sailors try to spend their declining years in their native country, if possible.

The community is almost entirely independent and self-supporting. They have their own power plant, which furnishes them with electric lights and high pressure. They have their own fire department, with a weekly fire drill. A laundry, a blacksmith shop and a fully equipt carpenter shop are also found. All the vegetables are raised on the ground, and the live stock includes a herd of cows, a flock of sheep and twelve horses.

The buildings are very imposing and costly. It is by this outlet alone that the trustees are enabled to spend their large

THE NEW CHURCH.

The old church was partially destroyed by fire in 1906, and has been replaced by this expensive edifice.

income. Were the sailors to breakfast on plover's eggs and terrapin, lunch on paté de foie gras, and dine on canvas-back duck, with dry champagne and sparkling Burgundy thrown in, and if they were to smoke the most expensive cigars, and dress in silk and broadcloth, they could not spend a quarter of the income of the estate. It is by means of this ever-ready surplus that the magnificent buildings shown in the accompanying illustrations are constructed. All the buildings are elaborately decorated, and the interior walls are hung with portraits of the early governors and with paintings of famous sailing ships.

To walk along the paths and see the gray-haired sailors puffing at their pipes, and seemingly absorbed in thought, stirs the imagination. What tales of shipwreck, of battling with the seas, of long night watches and of strange lands could they not tell?

My guide was an old sea captain who had sailed around the Horn from New York to San Francisco for eight years. The outgoing cargo was of manufactured goods, and the return shipment consisted of guano picked up from some Pacific island. He had been shipwrecked several times, had been attacked by South Sea Islanders, had experienced the smashing under his feet of a whaleboat in a battle with a harpooned monster, and had ended up by falling out of a buggy in front of the country store and breaking his arm. Like most sailors, he had accumulated no savings and had made no provision for his old age. Poverty, doctors' bills, inadequate treatment and loneliness stared him in the face, until the Sailors' Snug Harbor opened its wide doors and received him to its comforts and shelter, as it had so many other distrest and worthy mariners. His arm soon mended, and now he has many years of pleasant rest after his turbulent life.

THE WELL-KEPT GROUNDS AND MAIN BUILDINGS.
These buildings face toward the Kill van Kull and New York Harbor.

Sailors' Snug Harbor is beautifully situated on the green slopes of Staten Island overlooking New York Bay, where

the ships of all nations pass by in daily parade. On any pleasant day you can pass that way and see several hundred sailors sunning themselves on the terrace and discussing perhaps the lines of some passing schooner, comparing her unfavorably to some of their old clipper ships. Most of them are in groups of two and three, but here and there is a man alone, and if he knew a little poetry, which he doubtless does not, he might appropriately say:

"O, rest ye, brother mariners, we will not wander more."

NEW YORK CITY.

Have You Paid Your Board?

BY CHARLOTTE PERKINS GILMAN

AUTHOR OF "WOMAN AND ECONOMICS," "THE HOME," ETC.

If Society (not the Dancing Class, but the People of the World) presented you with your board bill to date—could you pay it? Or, better still, have you paid it and can you show the receipt therefor?

You have been consuming, since you were born, taking from others the fruit of their labor and ingenuity. Has your fruit, given to them, been equal to what you received? Have you produced as much as you have consumed?

In terms of money, the life of one pauper in England is estimated to cost the community $6,000. That sounds big, doesn't it? But suppose the pauper to live sixty years, which is not unusual; it is only $100 a year, which does not seem so expensive. That is about $2 a week, about 30 cents a day; and this is not extremely high for food, lodging, clothes and—whatever else a pauper gets.

If an English pauper costs the community $6,000, the average American citizen and citizeness costs considerably more. From the doctor's bill when you were born to the undertaker's bill when you die; from house rent to a plot in the graveyard; from the sterilized milk of infancy to the more expensive drinks of mature life; from baby linen at 15 cents a yard to ready-made suits from $15 to $50—we do use up a vast deal of material, demand much service, and certainly spend more than $100 a year.

If we include in our average the wealthy consumer, it would lift it to something like ten times the pauper's cost, say sixty thousand, instead of six. Sixty thousand dollars may sound like a large sum; but that is only a thousand a year for those sixty years—for everything, remember. A carpenter at $3 a day gets nearly that. In the average living of our readers this is a fair enough assumption—you have, if you are sixty years old, cost the world $60,000. Have you earned it? Have you put into the world sixty thousand dollars' worth of labor?

Most of us can say, Yes. Even that pauper, if he has worked, has paid and more than paid his board, for a day's labor, of the feeblest, is worth more than thirty cents. Our common workmen everywhere have paid their board and more. Their labor is worth more than the sum they are paid for it, else no one would employ them. They benefit the world directly and indispensably by their labor; they are paid less than its equivalent, and with that sum they must pay for not only their own living, but the livings of wives and children. Our more specialized workers have paid their board also; dentist and doctor, tailor, teacher, architect and engineer. They put into the world services we could not do without and the world pays them little enough.

When we rise above these into the ranks of arts and sciences, and some professions, it is not so easy to establish fair return for value received. We can-

not so easily measure the social necessity of the pictures of Whistler, the songs of Caruso, the sermons of Talmage; but since some persons are willing to pay highly for them, the performer has presumably paid his board to those persons, and they in turn have served the community enough to afford to maintain the performer. This is as tho in a small, limited, economic group, the services of ten out of a hundred were so valuable as to warrant giving them more than "their keep"; out of their surplus they were free to main two out of the hundred to teach them Sanskrit, let us say—a service which did not appeal to the majority. Others may say that the service of the artist of any sort is of special and peculiar value, and worth more than the artist ever gets. On either ground we will consider that the artist has paid his board; that some artists indeed are social benefactors past accounting.

Are there any persons left against whom society has still a charge? Are there individuals or classes who consume without producing anything?

There are many lines of what is called "business" in which it would be hard indeed to prove any social value in the activities of the participants. I once met a millionaire, a "self-made man," very proud of having now a great fortune, whereas he had come to the town without a cent.

"Where was this money before it came into your hands?" I asked him. "On trees? In the grass? Or in the possession of other persons?"

"In other persons' possession, of course," he answered.

"And now it is in yours. What have you given them in exchange for it?"

"Brains and energy, ma'am!" he blustered. "You've no idea the amount of brains and energy required to accumulate a fortune like mine."

"Yes," said I. "I understand perfectly that you have expended brains and energy—but is it an exchange? You have their money—have they your brains and energy?"

What the gentleman had done with his brains and energy was mainly in the line of bonding lumber—helping the formation of great lumber companies, which devastated the forests of the State, lowered the water supply, promoted floods in spring and droughts in summer, wasted the soil, wasted the trees, injured the whole community. This was not service. He had the money, his supply of the world's materials and labor, his "board"—but he had not paid for it. What he gave for his money was not of social value; quite the contrary.

We are apt to be confused by the vigorous display of "brains and energy" on the part of many prominent business men today. We respect their ability, recognize their generalship, call them Captains of Industry, and never stop to analyze the nature of their services. Is the work they do useful to the world? Do they give us value equivalent to the vast sums we give them? Their wages are enormous—what is their work?

It required a considerable outlay of mental power no doubt for Jay Gould to wreck railroads—but is wrecking railroads social service? A man may plot like a Medicean prince, and sweat like a horse, in wrecking a railroad train—but then the damage is visible, the pain immediate and distinctly traceable to the efforts of the wrecker; and any claim he might offer of profound ingenuity and herculean strength is not held to offset his criminality.

Outlay of force is not proof of service. When a man has a million or ten million or a hundred million dollars of "earnings," the point to establish is not the skill and ability he used in acquiring them, but the social value of his accomplishment. The mental acumen and physical agility of a successful housebreaker may be far and away beyond those of my gardener. The gardener's "board" is fifteen a week perhaps—the burglar's fifty. But has the burglar paid for it?

There is another class besides our questionable financier of whom we may ask the same question. That is the woman who consumes goods beyond those to be paid for out of housekeeper's wages. The working housewife is unquestionably entitled to a good deal more than she ever gets; for in a family at that grade of labor the man does not receive enough to give his wife the salary she earns. But in higher grades, when we reach the woman who spends five hundred dollars a year on her clothes, and so on up to five thousand and fifty

thousand—what do these women give the world in return for what the world gives them?

"I don't do business with the world," replies the woman haughtily; "my husband is able to support me!"

Very well. What does the woman give her husband that is equivalent to the amount of goods she consumes?

Then we hear grave talk of the value of motherhood. Yes. And is the woman paid in proportion to her motherhood? Do these wasters of the world's wealth bear the most children? There is a strange lack of proportion between the number of children a woman has and the amount of money she spends. It is not by bearing children that she pays her board—even if she were willing to make a commodity of motherhood; it is not even by rearing them; for the man who pays so highly for his wife gives also good wages to nurse and governess; it is certainly not for any form of industry that he pays. What is it that a much-spending woman does in return for all this comfort, luxury and beauty that she gets?

She, too, may put forth "brains and energy" of sorts, but are they used to any good purpose? Is it not time that honest and honorable human beings should recognize that all they eat and wear and use and live in is made for them by human labor, large and small; and that to "board" on this earth and not pay your bill is on the same level as that of the man with an old valise with bricks in it, who enjoys his hotel and leaves without settling the account!

Our useful invention of money, while facilitating exchange of service and of goods, has wrought to blind us in our sense of values. If we eliminated it from our thoughts and were forced to consider, not the cash a man was willing to pay for what he wanted, but whether his proposed service had an equal value, we could see more clearly. Every social advantage has its accompanying possibility of mischief; and this beautiful and necessary step in progress, the use of money, has brought with it the blurring of values here complained of.

The awakening social consciousness of the community is now becoming able to oversee the whole great field of distribution; and we can mark already the dawning of a high sense of social morality. When that is established we shall scorn to live on the world, blindly sucking and helpless, like some vermiform parasite; and every one of us will be able to show clearly that we have produced far more than we have consumed.

NEW YORK CITY.

The Poet Vagrant

BY IVAN SWIFT

WERE I to die this hour or some near day—
Be stricken quick upon the way I've trod,
Say not "'Tis sad the youth has past away,
So reft of fortune and so far from God."

Say not in pity that I might have had
The gift and favor of the rich and great—
But that mischosen insolence forbade
My fellows' warning of a hapless fate.

Grieve not that I have spent my years in dream,
And drifted listless as the vagrant brook;—
Have sought me substance in the things that seem,
And left to earth the semblance of a book.

What tho I have not where to lay my head,
Nor marble weight upon my body's grave;
Of this I shall not know when I am dead,
And you possess the worth I failed to save.

So be it I am soon forgot of men,
And laid in alien soil by stranger hands;
The pines above my head will mourn me then,
And waves intone my requiem on the sands.

Say, rather, this: "He chose to make his friends
In wood and field, with bird and flower and tree;
Began his labor where our labor ends,
And saved—the faith in immortality."

The Emanuel Movement and the Church

BY THE REV. GEORGE B. CUTTEN, Ph.D.

[Dr. Cutten has recently been giving a course of lectures on "Mental Healing," before the Yale Divinity School and is the author of "The Psychology of Alcoholism" and "The Psychological Phenomena of Christianity."—EDITOR.]

THE publicity given to the "Emanuel Movement" has stirred up the pastors. Some want to study it, some wish to adopt it, and others are anxiously asking concerning the responsibility and opportunity of the modern pastor in regard to it. Among those who ignorantly consider psycho-therapeutics a modern discovery, and among those who think of its connection with the Church as a nineteenth or twentieth century innovation, not a little excitement has been generated, and great things are predicated of this movement in giving the long-sought impetus to the Church of which so many have felt the need.

A more deliberate consideration is needed, so that the first wave of enthusiasm will not take us off our feet, and it behooves us to ask the question, Shall psycho-therapeutics be adopted by the Church? After not a little thought and a longer experience than that furnished by the "Emanuel Movement," I believe that psycho-therapeutics, as such, will not become a regular part of Church work.

All students of the subject must recognize (as I do most freely and fully) that there is no doubt about the efficacy of this treatment in functional diseases, principally of a nervous character. This is true regardless of the form in which the suggestion is presented. Relics, shrines, healers, patent medicines, Christian Science, hypnotism, placebos, or a combination of these have been successful in curing diseases. This is conceded. Further, we deplore the fact that practitioners of psycho-therapeutics are not more widely available in our country, for, in truth, they are much needed. Is it the Church which shall supply the need?

Let one read for himself that most interesting and most valuable book written by directors of the "Emanuel Movement," entitled "Religion and Medicine." In the first place, he will notice that the title is a misnomer; in order to be descriptive it should be something like "Psycho-therapeutics and Religion as an Aid." Less than one hundred pages out of more than four hundred are concerned with religion at all, and I am not sure but that the value of the book is augmented by this fact, for the non-religious parts are by far the stronger.

In the second place, one can see that, in order to have a pastor carry out the work as there suggested, special preparation is needed. Not every town has an alienist, and there are not sufficient in the city to supply the need. Not every church finds it easy to pay its pastor's salary, and the salary of an alienist added to the staff would be a burden which few churches could undertake, for we cannot assume that for long or in many cases neurologists can afford to serve without remuneration. The work, of course, will fall on the pastor, so, as soon as he completes his seminary course, he must take four years in the medical school, two years in post-graduate study in psychology, and at least one year in clinical

work. If this is done, whence will the churches procure the young ministers for whom they are clamoring?

In the third place, it is evident that when the pastor embarks on this work in the church, this phase must occupy his whole time, for he will not have time for anything else. To treat a patient psychologically is very different from common medical practice. He cannot be dismissed with a few pills at the rate of ten patients an hour, but one hour and in some cases more must be devoted to each patient, so that five or six is the limit in numbers for a day. When some of these have to be treated three or four times a week, from twelve to twenty are all one practitioner can handle in a week, giving all his time to it.

The history of the "Emanuel Movement" reveals the fact that it grew out of the Tuberculosis Class conducted by this same Church. If there is to be a mental healing class, which, from the nature of the case, ministers principally to nervous diseases, there is as much demand on the Church for a continuation of the Tuberculosis Class, and the addition of the Cancer Class, the Bright's Disease Class, the Whooping Cough Class, and so on *ad infinitum*.

To say that the Church should be interested in healing the sick is true; it should be interested in the cure of all diseases, and not only nervous diseases. It should also be interested in keeping the healthy well. It should also be interested in all forms of education, in eliminating poverty and crime, in the advancement of commercial and industrial affairs, in the crops, in good roads—in fact, the Church is waking up to the realization that everything that is of interest to man is of interest to God, and everything which ministers to the physical, intellectual or moral well-being of man is of vital interest to the Church. The Church has eliminated the distinction between sacred and secular, and recognizes that all things are sacred. The life cannot be divided up and a fraction dedicated to God, but all must be given to Him; hence God and His Church are concerned with all human experience. That does not mean, however, that the Church must do all these things directly. It cannot. Its work is inspirational, and it delegates to its members—all its members—certain factors of general progress, and retains for its direct work the moral and religious development of mankind. This is the dynamic of the inspiration which incites to the proper accomplishment of the world's work. The factor which it retains as its direct work is so comprehensive that it touches all others.

The "Emanuel Movement," like Christian Science, will not be without its value, for it will stimulate the physicians to take up psycho-therapeutics openly, which heretofore they have not had the courage to do. The physicians have not been ignorant of the value of mental healing, but it has been practised so much by quacks and imposters, and hypnotism has had such a bad name, that any physician who let it be known that he used hypnotism or suggestive treatment of any kind would lose his reputation and his practice. He investigated it so little that he ignorantly feared it would interfere with his drugs, whereas he should know that it simply supplements his drugs. It needs a few brave physicians to step forward, remove the stigma from this branch of therapeutics, and placing it upon a scientific basis, deliver it to the service of mankind.

When the physicians do their part, the supplementary work of the clergyman will not be onerous. The really religious part of the treatment, the part which must be demanded of the clergyman, could readily be taught in a course which should be furnished by every theological seminary, and could be provided by him without a too serious tax on his time. The inspiration of religious hope, the trust and faith of prayer, the rectification of morals, and a quiet, peaceful, religious life should be the result of the minister's work. This would provide the general healthful bodily tone, as well as the mental attitude for specific cures, and there is no real physician who would not welcome this co-operation in his work.

Of course, we know that the Churches in America are very different from the Church in Athens in being attracted by "some new thing." Churches will adopt mental healing because they think it is new. Clergymen will be attracted to it; and it must be admitted that to the pastor who toils all night and catches nothing,

to see immediate results and to have numbers flocking to him is really stimulating, even if it is not directly in connection with part of the work which the Church has specifically chosen. In some rare cases there will be both churches and pastors which should take this up as a part of the institutional church work. In the main, however, I believe, after the excitement and novelty have evaporated, and the physicians have taken up all the work which legitimately belongs to them, the Church will decide that, altho it is interested and ready to contribute its part, it is satisfied to delegate the therapeutic art, as such, to its members, the physicians.

COLUMBUS, OHIO.

Painting An's Portrait

BY KATHARINE A. CARL

[Miss Carl is one of the few Americans who were admitted to the confidence of the late Dowager Empress of China. She was commissioned to paint a portrait of Her Imperial Majesty for the Louisiana Purchase Exposition, at St. Louis, Mo., and by the favor of the Empress, from August, 1903, to the early spring of 1904, she lived in a residence that had belonged to the Emperor's father, with a large number of servants at her disposal. In each of the palaces in which the Dowager Empress was residing a studio was set up for the American artist. She painted, in all, four portraits, the third of which was chosen for the Exposition, and has since been presented to the United States Government. It now hangs in the Corcoran Gallery at Washington. The following article is from an interview for THE INDEPENDENT.—EDITOR.]

THE idea of painting the portrait of Her Imperial Majesty the Empress Dowager of China originated with Mrs. Conger, the American Minister's wife, who was anxious that some likeness of the Empress Dowager should be sent out to the exposition to correct false impressions that had gone abroad regarding her Majesty's personality. I had gone out to China to visit my brother, Francis A. Carl, who is a Mandarin of the second degree, in the employ of the Chinese Government. Mrs. Conger made the preliminary arrangements, and presented me to the Dowager Empress. The day that I was presented was the day on which I was to begin the portrait.

In this article I wish to correct statements that have been made concerning Her Majesty, some of which were wrongly credited to me, that Her Majesty was "shrewd and tempestuous" and had "the soul of a tiger in the body of a woman." Her Majesty was always very considerate, and tried to help me in every way. She was herself very artistic, and understood the requirements of my work. The Empress had a charming expression, and had wonderful dignity and grace. The real charm of her face depended upon her expression. Her smile was brilliant and absolutely fascinating. I have never seen a face more changed than hers when illumined by this wonderful smile.

In China for every undertaking the calendars and almanacs are studied as to what time is propitious. After careful consideration of this sort, it was decided that August 5th, 1903, was the most auspicious day for beginning the portrait. The auspicious hour was also chosen—eleven o'clock in the morning. And so I began my work. This was the first of four pictures. The one which was finally chosen, the third in the order in which it was executed, was commenced in January, 1904.

Those who have seen the portrait will remember that it shows no lines in the face. This is absolutely true to life, altho her Majesty was seventy years old at that time. Her Majesty had a particularly clear, fine, magnolia-like olive complexion. She never painted her face nor used cosmetics, observing this rule because she was a widow. The beautiful skin of the Chinese women generally is the more remarkable when one remembers that they never wear any hats when they go out nor any gloves. Their faces

and hands are always exposed to the weather; yet I really think they have the finest texture of skin of any women in the world. Never does one see pimples on a Chinese woman's face; her complexion is always exquisitely satiny.

Her Majesty had very piercing eyes, and they were not slanting. Her eye was full, with a tight lid, as it might be called, but set perfectly straight. Not a gray hair appeared in the full suit, all her own, which was drawn out in a wing-like construction over a support. The dress that she wore was her imperial "Winter Gown," of very heavy satin, stiffly embroidered and lined with fur. The round character "sho," which means longevity, appeared everywhere in the decoration, as her Majesty was very fond of this character, and had it over the palace everywhere. Her Majesty was particular also to have a pyramid of apples appear in the picture, for the apple means "peace and prosperity." For the perfume as well she loved the apples, some of the apples of the Chinese being much more highly odorous than any that America possesses. Pearls were a favorite jewel of the Empress. She had her pearl mantle, in which each gem is worth almost a fortune, remodeled for the portrait. About the foot of the dress which she wore was a real pearl fringe, intermingled with amethysts and rubies.

I was sorry in the picture that I had so little liberty in the way of shadows and of posing the figure. The face had to be painted as a single mass of color. If I had not been compelled to observe Chinese conventions so closely, the picture would have shown a finer-looking woman, and it would have been more like her. Yet it is a good likeness, as I saw when I had it photographed, very much smaller, for the copyright. Among the multitude of details were the long finger nails of her Majesty, which I tried faithfully to portray. The long finger nail, of course, is a mark of rank in China. No one else except ladies of high rank can let the nails grow in this way. They cultivate the third and fourth fingers particularly, and wear jeweled shields of jade or gold over them. Before the Boxer troubles, Her Majesty's nails were much longer than they ever became afterward. In her hasty departure from Pekin after the allies came in her nails were so injured that they had to be cut. Their length at the time of the picture was only about three inches.

The picture was considered sacred from the time it was begun. Whenever I was not at work on it, it was covered with a yellow screen and put reverently away. If any of the eunuchs past thru the room while I was painting, they never failed to make obeisance to the portrait, as they would have done to the Empress herself. They told me, too, that they felt the same awe when they stood before the picture that they would have felt in her presence.

The portrait was interrupted by many festivals and ceremonies, so that the work was greatly lengthened. For the Chinese New Year I had to stop for two weeks. But I never had more consideration shown to me by any one whose portrait I have painted, and my recollections of the hours spent with this wise and great ruler will be among the happiest memories of my life.

New York City.

Will It Pay?

BY S. A. THOMPSON

[The author of the following article is Field Secretary of the National Rivers and Harbors Congress, whose official letter head states that it is "second in importance only to the Congress of the United States." Now that the campaign is past and Congress will soon assemble, the improvement of our waterways will surely receive wide discussion. There is certainly no more important question before our people and we commend this article to their serious attention.—EDITOR.]

THE remarkable revival of interest in waterways constitutes one of the most striking and significant of recent developments in the United States. Conventions have been held by the score, in every part of the country except the arid regions, to demand the deepening of harbors, the improvement of rivers and the construction of canals. And at the great convention of the National Rivers and Harbors Congress which assembled at Washington in December last—a convention attended by two thousand delegates coming from thirty-seven States and two Territories—all the voices which had been raised in behalf of different national policy of waterway improvements.

The resolutions adopted by this convention call for an annual river and harbor bill, instead of the triennial appropriation which has been the rule in recent years, and an increase in the amount appropriated for the purpose to an average of fifty millions of dollars a year, for at least the next ten years, until the projects which have already been surveyed, examined and approved shall have been completed. This of itself constitutes rather a large program, and other great projects, like that for an inland waterway along the Atlantic Coast, are press-

ONE OF THE NEWEST AND LARGEST CARGO CARRIERS ON THE GREAT LAKES.
Will carry 12,000 tons with a draft of 20 feet.

individual projects were blended into one great chorus, demanding the adoption by the Congress of the United States of a broad, comprehensive, progressive, truly ing for recognition. When the nation is asked to adopt a policy which necessarily involves the expenditure of a vast amount of money, it is pertinent to ask

what return may be expected therefor. In the terse phrase of everyday business, "Will it pay?"

That the experience of the past constitutes the surest and safest guide for the future is a saying as true as it is trite. As the first step, therefore, toward finding an answer to the question, "Will it pay?" let us ask the further question, "Has it paid?" It may turn out that the facts which are found in a study of the latter question will furnish an answer not only to that, but to the former one as well.

OHIO AND MISSISSIPPI TOWBOAT "SPRAGUE."
Has transported a tow of coal barges containing 62,000 tons of coal down the Ohio and Mississippi Rivers to New Orleans, La. The largest amount of freight tons ever handled in the world by one steamer.

The greatest waterway in the United States, by far the greatest inland waterway in the world, is that composed of Lakes Superior, Michigan, Huron and Erie, with their connecting channels, Lake Ontario, for reasons which will appear later, having participated but slightly in the marvelous development which has taken place on the four lakes which lie above Niagara Falls. Up to the close of 1907 there had been expended by the Government of the United States upon the harbors and connecting channels of these lakes $85,000,000, in round numbers. This is an expenditure worthy of consideration even in this day of large things. What return has been received therefrom? Has it paid? And how much?

Proof that it has paid, and paid largely, is abundant, easily found, indisputable, overwhelming. But to ascertain fully and accurately how much it has paid is not so easy. One way of getting at the benefits of waterway improvements is by comparing the relative costs of rail and water transportation. From the records kept at St. Mary's Falls—commonly called "The Soo"—it appears that during the season of navigation of

1907 (April 22d—December 15th) there were carried into and out of Lake Superior 58,217,214 tons of freight. This was carried an average distance of 828.3 miles at a cost of $38,457,345, which makes the average charge per ton per mile eight-tenths (0.8) of one mill. Suppose that this tonnage, instead of being shipped by water, had been sent an equal distance by rail, how much more would its transportation have cost?

According to Poor's Manual the average freight rate received by the railroads of the United States in 1907 was seven and eighty-two one-hundredths (7.82) mills per ton per mile. 58,217,214 × 828.3 × .00782 = 377,090,709; and $377,090,709 — $38,467,345 = $338,633,364. *That is to say, the direct saving, thru decreased cost of transportation, on the business of one year, amounts to over $338,500,000, or nearly four times the total governmental expenditure on all the lakes since their improvement was begun.*

Apparently it has paid! But the saving for a single year constitutes only the merest indication of how much it has paid. Let us look further.

The American canal at "The Soo" past into the control of the National Government in 1881. From the opening of navigation in that year to its close in 1907 there have been carried into and out of Lake Superior 496,323,813 tons of freight. Calculated by the same method as that used above, the direct saving thereon, due to the lower cost of water transportation, amounts to $2,918,000,000. But the tale of Lake Superior's commerce is not yet fully told, for between its opening in 1855 and its transfer to the United States in 1881 there were carried thru the "Soo" canal 12,162,320 tons of freight, making a total, up to the close of 1907, of 508,486,133 tons. There are no data available from which to calculate the exact saving in the cost of transportation on the tonnage of those earlier years, but it was undoubtedly enough to bring the total up to a round $3,000,000,000.

Thus far we have dealt only with the traffic of Lake Superior. Unfortunately, it is not possible to ascertain the tonnage of all the lakes with anything like the same accuracy. Most of the port statistics publisht give the net registered tonnage of vessels. Net registered tonnage is purely a matter of measurement, and tells very little as to how much a vessel can carry, and absolutely nothing as to how much it does carry. But it is of interest to note in passing that the registered tonnage of the vessels entered at the ports of the Great Lakes, American and Canadian, which amounted to 115,000,000 tons in 1907, exceeds the combined entries of the principal ports of Great Britain, Germany, France, Holland, Belgium and all the ocean ports of the United States.

Official reports place the domestic shipments from American ports during 1907 at 83,498,171 tons. This is known to be below the truth, for the reason that the law requires no report as to freight carried between ports in the same customs district. When to this we add the freight carried between Canadian and American ports and between the ports of the Dominion, it is safe to say that the total amount of freight transported on the lakes in 1907 was at least 100,000,000 tons.

It is easy to write down figures, but difficult to comprehend what they mean. If this vast amount of freight were to be carried by rail it would fill 3,333,333 standard 30-ton freight cars, which is nearly a million and a half more than the total number of freight cars in the United States. Allowing a locomotive to every thirty cars, this would make a solid train long enough to reach around the world at the equator, with enough left over to extend from New York to Omaha, and which, moving at an average speed of 16 miles an hour, day and night, without stopping, would take sixty-eight days to pass a given point.

While the direct saving on the commerce of all the lakes cannot be exactly calculated, the data being incomplete, a very conservative estimate makes the saving for 1907 no less than $550,000,000, and for the whole period $5,000,000,000. Even if we cut this amount in half, to satisfy some ultra-conservative mind, $2,500,000,000 would seem to be a fair dividend on an investment of $85,000,000. Besides, the improvements are still in existence, and, with the further development of commerce, will pay continu-

ally increasing dividends for no one knows how many years to come. For, as Hon. Joseph E. Ransdell, member of Congress from Louisiana and President of the National Rivers and Harbors Congress, said in a recent speech:

"Most of the great annual expenditures of our Government are like the rain falling on the parched sands of the desert, only to disappear and leave no trace behind. But waterway improvements are investments which will last forever."

THE "LUSITANIA" OF THE CUNARD S. S. CO.
One of the newest, most modern and fastest of our transatlantic passenger vessels.

The direct saving, due to the lower cost of transportation, on freight actually carried by water, great as it is, is only the first item of the manifold benefits derived from the improvement of the lakes. Waterways not only carry far more cheaply than railways, deriving a large profit from rates which are below the actual cost of railway operation, but they bring about an enormous indirect saving thru the lower rates of railway transportation which the competition of the waterway compels. Before the lock was built at The Cascades, on the Columbia River, the railway rate from Portland on nails and goods of that class was $6.40 per ton. On the day the lock was opened, so that steamboats could go thru, the railway rate dropped to $2 per ton. Scores of similar instances could be adduced if they were needed, but we have the testimony of prominent railroad men to prove that the competitive influence of the lakes modifies railway rates over a large part of the continent. Because of the enormous volume of railway traffic

thus affected, it follows that *the indirect saving, thru the decrease in railway rates produced by the competition of the lake route, is probably as great as the direct saving on the tonnage actually transported by water.*

Senator Knox, of Pennsylvania, in a recent address at Pittsburg, makes a most interesting and suggestive comparison of the growth of the eight leading cities on the Lakes with that of the eight leading cities of the Mississippi Basin betwen 1870 and 1900. In 1870 the combined population of the eight river cities exceeded that of the lake cities by 218,000; in 1900 the lake cities exceeded the river cities by 1,334,000. The increase in the population of the river cities was 824,062; that of the lake cities was 2,526,375. The ratio of growth in the river cities was 89 per cent.; in the lake cities it was 354 per cent.

Since the average per capita contribution of the people of the States in which these cities are located to the revenues of the United States was $8 during the two decades prior to 1900, "it appears," said the Senator, "that the gain to national revenue, by reason of the exceptional increase in those eight cities alone, is $13,668,000. That annual revenue will pay interest and sinking funds to retire in fifty years a bond issue of $389,000,000, over seven times the cost of the improvements. Putting the whole cost of lake improvements, excluding Lake Ontario, at $53,000,000 prior to 1900, and ignoring the fact that a large part of this was for minor ports—and some of it wasted—the growth of these cities alone has repaid that cost with interest, and has for years been yielding a clear profit to the Government."

Iron ore constitutes by far the largest single item in the commerce of the lakes, the shipments for last year being 42,243,406 net tons, and the total amount mined and shipped from the Lake Superior region down to the close of 1907 reaching the enormous total of 426,067,135 net tons. The United States holds the undisputed leadership of the world in the manufacture of iron and steel, its production during recent years being greater than that of any other two nations combined, and promising to presently exceed that of all the rest put together. This position of proud pre-eminence in the fundamental industry of modern civilization has been attained primarily because of the quantity and quality of the Lake Superior ores.

Let the reader imagine, if he can, the marvelous changes, transformations and developments which have been brought about by the mining, smelting and manufacture of these 426,000,000 tons of ore.

Wrought into an endless variety of forms—ranging from sky-scrapers to road-scrapers, from steel rails to carpet tacks, from the fleet of battleships now carrying our flag around the world to the chain that fastens the watchdog in the back yard—they have influenced almost every phase of our national life. The difference between present conditions and those which would have resulted if these ores had been out of reach is so vast that it is simply inconceivable. But it is certain that the entire industrial development of the country would have been radically different; perhaps the very course of history would have been changed. And without the cheap transportation furnished by the lakes these ores could not have been used, for the cost of railway transportation over so great a distance would have been absolutely prohibitive.

Improved waterways not only effect a vast saving in the cost of transportation, both directly and indirectly, but also produce a positive and tremendous development of industrial activity and of the agencies of transportation. Did not the inexorable limits of the allotted space forbid, it could be proved beyond dispute that because of the lake route the farmers of the West, both Canadian and American, receive more for every bushel of grain they sell, and consumers in the manufacturing centers of the East and in Europe pay less for every barrel of flour they buy.

The change that has taken place in the ships that sail the lakes—from the wooden schooner carrying 500 tons to the leviathan of steel which carries 15,000—and the development of the colossal appliances for the trans-shipment of freight, which enable the ports on the lakes to give quicker despatch than any others on earth, are worthy of an article, but can be

given a bare mention. The modern lake fleet, with the docks, terminals and transfer machinery by which it is supplemented, represents an investment of not less than $250,000,000.

Strange as it may seem at first thought, it is none the less true that no other interest has been more largely benefited by Governmental expenditures upon the lakes than the railways themselves. The fundamental reason for this paradoxical result is that the essential function of the waterway is the carriage of those commodities in which weight and bulk are large in proportion to value, and which must, therefore, be moved cheaply if moved at all. The development of manufactures which follows an abundant supply of cheap raw materials furnishes to the railway a traffic which demands greater speed of movement, which is of much greater value in proportion to weight, and which, therefore, is able to bear higher charges for its transportation. Out of the 58,000,000 tons of freight carried thru "The Soo" in 1907, 51,000,000 was made up of iron ore and coal. Nine-tenths of the traffic handled on the lakes consists of raw materials. *The value to the nation of the development based upon the raw materials so carried defies both computation and comprehension.*

It would not be surprising if the reader who has followed the argument thus far should find a question rising in his mind. It has been claimed that the expenditure of $85,000,000 upon the lakes has produced enormous savings in the cost of transportation, both directly and indirectly; that it has not only furnished effective competition for the railroads on the one hand, but has increased their traffic and their revenues upon the other; that it has at one and the same time raised the price of wheat to the farmers of the West and lowered the price of flour to consumers in the East and in Europe; that it has transformed the lake fleet, promoted the growth of lake cities and increased the revenues of the Government; and that it has given to the United States the primacy of the world in the manufacture of iron and steel.

These are magnificent and far-reaching results, and the reader has a right to ask whether it is claimed that all the credit therefor should be given to the work done by the Government upon the lakes. Nothing of the kind is claimed. The lakes were there to begin with—placed where they are by the hand of the Creator. But while the shallowest of the lakes is deeper than the largest ship that was ever built, or that ever will be, the value of the lakes as a commercial highway is determined not by the greatest depths of their open waters, but by the least depth to be found in their harbors and channels; and before the work of improvement was started by the Government, navigation was impossible for boats drawing over eight feet—and was difficult and dangerous for those of that draft.

No argument is needed to show that the modern lake fleet, modern facilities for transfer, the present huge volume of lake traffic and the present low cost of lake transportation would all alike have been impossible but for the deepening of lake channels and harbors from eight feet to twenty, which has been done by the Government. Into the developments of fleets and docks, of commerce and industry, of cities and commonwealths, have been put the brain and the brawn, the inventive genius and the executive ability, the capital and the labor of a multitude of men. To each one of these some credit is due; to all of them together a credit far greater than the writer can express. But their work has been the building of the superstructure; the work of the Government was the laying of the foundation *without which the superstructure could not have been reared.*

It is believed that ample proofs have now been submitted to sustain the claim that the expenditures already made upon the lakes have "paid" and to justify the conclusion that further expenditures upon them will "pay." Evidently the Congress of the United States is of that opinion, for in the River and Harbor Act of 1907—the largest one ever passed—$22,000,000, nearly one-fourth of the entire amount appropriated, was given to the lakes.

But the policy advocated by the National Rivers and Harbors Congress is not limited to the continuation of work on the lakes and on seaboard harbors, but includes the improvement of all the rivers

of the country which are navigable, or can reasonably be made navigable, and the ultimate construction of canals which will unite the navigable waters of the United States into one complete, connected system. It is, therefore, essential to determine whether the improvement of waterways of this character will make adequate returns for the expenditure involved.

Most of the benefits produced by waterways arise from the cheap transportation furnished thereby, and in the matter of cheapness even the lakes must yield the palm to the Ohio and Mississippi rivers. Coal is carried from Buffalo to Duluth-Superior for three-tenths (0.3) of a mill per ton-mile. But this rate is made in connection with return cargoes of ore or grain, which pay a higher rate, and during the present season vessel owners have tied their boats up rather than carry coal at this rate, returning light. Whenever there is a sufficient stage of water on the rivers mentioned, however, coal is carried from Pittsburg to New Orleans for one-third (1/3) of a mill per ton-mile, which price includes the return of the empty barges 2,000 miles up stream.

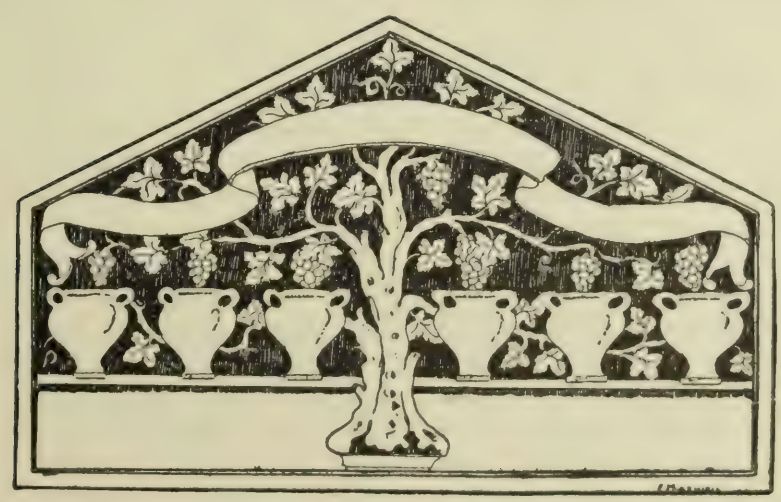
Another important advantage of the waterway over the railway is in the volume of freight which can be moved at one time, and here again the lakes must take second place to the rivers. For the steamer "Sprague" has carried from Cairo to New Orleans a tow of barges containing 57,500 tons of coal—which is believed to be the greatest cargo ever moved at one time in the history of the world.

It may be asked why, if such results can be attained by the rivers in their present condition, the demand for their improvement is so strong. The answer is that these results are attained only when there is a boating stage of water, and boating stages are as uncertain as the winds of heaven. On one occasion, some ten or twelve years ago, the interval from one boating stage on the Ohio to the next was eleven months. This makes plain the underlying reason for the difference in the relative growth of the lake cities and the river cities mentioned by Senator Knox. The improved lake waterway has a depth which can be depended upon; on the unimproved rivers the only thing certain is—uncertainty.

The approved project for the improvement of the Ohio River calls for the construction of fifty-four locks and movable dams, giving slack water navigation over the entire distance from Pittsburg to Cairo, at an estimated cost of $63,713,000 in addition to appropriations already made. The project is meant to give a minimum depth of nine feet at low water. As this is only a trifle more than the original depth in the lake channels, and the most of the benefits derived from the lake waterway have been attributed to the increase of available depth from eight to twenty feet, it may be asked why a depth of nine feet in the Ohio River is expected to produce valuable results. The answer is that the conditions are radically different. Vessels which undertake to navigate the Great Lakes must be built practically as strong as ocean craft in order to safely meet the great storms which sometimes sweep over their waters. On the river, wave action is not encountered. On the lakes, as on the ocean, the most economical transportation is effected by single vessels of deep draft. On the quieter waters of the river the same cargo carrying capacity can be obtained, at far less expense, by lashing together a large number of barges drawing only eight or eight and a half feet.

The United States Army engineers estimate that freight can be transported on the Ohio River thus improved at an average rate of one-half (½) mill per ton-mile. This is undoubtedly conservative, for open river navigation would be available as often as it is now, up-stream movement would be more economical on the slack-watered river, and there would be no interruption of navigation by low water. But this estimate of the army engineers gives an average rate on the improved river which is 38 per cent. below the average rate on the traffic thru the "Soo" Canals in 1907. There is then no escape from the conclusion that the improvement of the Ohio would result in just such a development of commerce and manufactures, just such a growth of population and prosperity in the valley of the river, as has resulted in the lake region from the improvement of lake channels and harbors. And exactly the same thing

would be true of the Mississippi, the Missouri, the Columbia, and in greater or less degree of every other river in the United States.



It is not necessary to assume that such results would follow from an improved river. Germany has several such, of which the Rhine is the most notable example. Germany has literally poured millions of dollars into the improvement of this stream and, as a consequence, the Rhine Valley has been converted into one vast workshop. Mannheim, more than 300 miles from the sea, has a dredged harbor of 550 acres, three miles of docks, and nine miles of improved shore. The equipment includes 129 cranes, 16 grain and 26 coal elevators, 110 storehouses and 17 petroleum tanks. Fifteen million dollars has been spent on this single harbor since 1886, and similar sums on some twenty other harbors from 100 to 350 miles from the ocean. Hochfeld-Duisberg-Ruhrort, 100 miles up the Rhine, is one of the great harbors of the world, its tonnage having increased from 2,900,000 tons in 1875 to 13,000,000 in 1900. The tonnage passing Emmerich, on the Dutch-German frontier, amounted to 21,000,000 tons in 1905. Does any one doubt that similar results would follow the improvement of American rivers? Or believe that the river cities of the United States, Pittsburg, for instance, would fail to provide a harbor equipment adequate to handle all the commerce an improved river would create?

This great work of waterway improvement must be done by the National Government, because the nation claims exclusive jurisdiction and exercises supreme control over navigable waterways. But with power goes responsibility. If the river cities have grown more slowly than the lake cities, it is because Congress has improved the lakes and left the rivers unimproved. If the commerce of Lake Ontario has failed to keep pace with that of the other lakes, it is because Congress has failed to furnish it as good a connecting channel as has been given them. If the United States cannot cope with Germany in the great battle for world commerce, it is because the Reichstag has developed German rivers and canals and our Congress has failed to develop American waterways.

The National Rivers and Harbors Congress demands that the policy of inaction be abandoned and a vigorous policy of progress be adopted; that appropriations for waterways be placed on the same footing as other appropriations and shall be made annually; that the amount shall be adequate to complete the needed works as rapidly as is consistent with thoro work; that, if necessary, funds shall be provided by a bond issue similar to that authorized for the Panama Canal; and that all needed Governmental agencies shall be provided to carry out the great policy thus briefly outlined.

Will it pay? Would its adoption be wise? Nay, rather, in the light of the facts which have been presented, failure to adopt it would be stupendous, immeasurable folly.

Sanitariums and Sanitarium Women

BY MRS. L. H. HARRIS

HOW is it that the sanitariums have escaped the muckrakers? They have been thru every department of the financial, industrial and social world. They have overhauled and outraged the sensibilities of that simple-hearted, sincere but unobservant old lady, the Church. And they have occasionally unearthed a scandal in a city hospital. But even the muckraker is shrewd enough to fight shy of a sanitarium. He knows that if he slipt in for the purposes of investigation he would probably fall under the conviction for his own symptoms and remain for treatment!

Besides, we must not confound the hospital, which is more or less a public institution, with the sanitarium. One difference is that the sanitarium is always private. Another is that the hospital patient recovers and is dismissed, or, does not recover and is dismissed for that reason. But one is rarely discharged in any such final manner from a certain class of sanitariums. If it is a woman—and all sanitariums are largely female institutions—she may go home on a furlough, or under the influence of an exhilarating massage, but it is very unusual for one in good enough financial circumstances to afford the extravagance ever to get so well of her ailment that she does not return again and again to have it "treated."

Now we have no reference to those institutions conducted honestly by efficient physicians and for the help of a very large class of genuine sufferers who may never recover and who need constant attention. But there are in the neighborhood or in the midst of every city numbers of so-called "sanitariums" conducted very quietly and profitably by ignorant charlatans in the medical profession. The physician or physicians in charge are usually not in good standing with the better class of doctors in the community. There is on the outskirts of a certain city a large sign in front of a very sedate looking private residence which designates it as a sanitarium. Nervous patients are taken here, and the physician in charge is a "corn doctor!" There is another where the physician in charge does not even hold the license required before he can legally practice medicine in that State, and where a case of walking typhoid was recently diagnosed as "tuberculosis" and the patient made to "take the fresh air," walking till he dropt. But "nervous" patients are a specialty with these institutions. This is the same class of men and women who formerly effected periodic cures for themselves with "patent medicines," and whose photos and testimonials graced so many bottle labels. Now they are equally enthusiastic in recommending their sanitariums and their doctors. Let one such institution secure but half a dozen thoroly developed cases of neurasthenia and its future is assured. For these patients will not only return from time to time, but they will bring and send others.

Many of these so-called sanitariums have become opulent and respectable upon the business of *confirming* the temporary invalidism of their patients. And now we have a regular sanitarium class of humanity just as distinct in their aims and thinking from normal people as idiots are from sane ones. Here is the temptation that makes them: When a nervous, ego-centric woman may secure the services of a nurse, the attention of a physician, and the sanitarium atmosphere in which it is so easy to realize and develop the consciousness of disease, for from fifteen to thirty dollars per week, why should she remain at home with her healthy, hard-hearted family, who never "rub" her, nor pet her, nor show the slightest interest in her most harrowing symptoms? She is *never* taught in sanitariums of the kind under discussion that her most dangerous symptom is a craving for sympathy rather than for health. She has made a medical romance of her pains, and learns to sit in quivering an-

ticipation of another pang. And she develops pangs as a story-writer would discover new and thrilling sensations in his tale. Also, she is in a hurry to impart it to the nurse and the doctor, whose business it is to listen. That is really what she pays them for, altho she is deluded into thinking that it is to make her well. Upon examination it will be found that there are hundreds of women in these places that converse with splendid pathological intelligence upon their diseases, but who are stupid and indifferent almost to the point of idiocy upon every other subject. And the sanitarium physician only mildly warns and teasingly reproaches them about this injurious use of their minds, because he knows if he peremptorily rebukes one of them for the weakness, he will "hurt her feelings" and lose a patient. Such women pride themselves upon the exceeding delicacy of their sensibilities, and they reap the reward of a selfish self-consciousness in that they really do suffer out of all reason from a noise, or a jar, or a "brutal" word, when they are not otherwise seriously ill. What they need, however, is an allopathic dose of "brutal words" three times a day till they come to their senses.

And it would not be so bad if they remained perpetually incarcerated in their sanitariums, but it is a part of the romantic movement in their diseased minds to reach, now and then, the climax of a momentary recovery. They return home, take a vacation from cultivating their physical weaknesses with "treatments," and enter society, and on a divan if it can be so arranged. For the regular sanitarium woman just will not remain alone, she has so many thrillingly interesting experiences to tell, you know, and she must tell them—or "relapse." This accounts for the spread of that innocuous form of insanity so prevalent now in feminine social circles. It is to be recognized by the victim's persistent references to her "operation," or her "digestion," or her "spine"—a sanitarium woman never mentions her back. That durable piece of human anatomy may do for a crude well one, but the professional invalid never has anything but a spine, which she invariably mentions with an air of pathos, as if it were a broken lute-string! In this interesting social way she effects an exchange of symptoms, recognizes the condition of her numerous female friends as being similar to her own—before she "went to the sanitarium"—or worse, and easily persuades them to go for "treatment" if they can afford it, and sometimes if they cannot. The curious thing is that they will be persuaded, in spite of the obvious condition of the sanitarium woman's darkened mind!

No one who lives in the full pressure of modern life can possibly be in perfect physical health. The sooner we realize this and lessen the pressure the better. Meanwhile the only decent thing to do is to grin and bear it. Do not add the "drug habit," or, what is very nearly as bad, the sanitarium habit, to your disabilities. If you must go to such a place, go with fear and trembling, get out at the earliest possible moment, and shake the sick dust of it from your feet. The thing to bear in mind with proper courage is that we all have our deadly disorder, closed up and folded away somewhere in the tissues of the body or in life. We cannot miss it any more than we can miss the grave, but we can win tolerably close to the latter in a fairly decent manner, and need not be trundled into it by a trained nurse and a doctor, disgustingly pale before our time.

NASHVILLE, TENN.

Literature

Herculaneum

It is singular that Herculaneum* should have waited until now to have its resurrection. It was, to be sure, one of the minor Greek cities of Italy, insignificant when compared with neighbors like Paestum. To excavate Herculaneum was indeed a herculean task. The eruption of Vesuvius in 79 A. D. covered both Herculaneum and Pompeii, but in a different manner. Pompeii was buried by ashes, but Herculaneum, on the lower slope of Vesuvius, was covered by a slowly moving stream of mud. It was this mud, and not lava, that covered the small city to a depth sometimes of more than sixty-five feet. It is true that when this mud hardened it was *very* hard, but it was not impossible to work upon it and tunnel under it, which would have been impossible had the slow-moving stream been lava. King Charles III of Naples made

DIONYSOS SEATED.
Marble relief from Herculaneum. Macmillan.

*Herculaneum: Past, Present and Future. *By Charles Waldstein, Litt. D.*, etc., and *Leonard Shoobridge, M. A.*, with Appendixes, Illustrated. New York: Macmillan & Co. $5.00.

important systematic excavations in 1738 with the assistance of military engineers.

"One villa yielded greater treasure in original ancient bronzes and ancient manuscripts than the excavations of Athens or Rome, Delphi or Olympia, Alexandria or Pergamon."

The bronze "Hermes," represented as resting on a rock after an arduous journey, found in almost perfect preservation in the "suburban villa," outweighs many a good copy. This statue may have come directly from the land of Lycippos, and even if it be a copy it is no unworthy representative of his art. Two youthful wrestlers belonging to the same school appear to be seeking to grapple. Of other bronzes, the "Sleeping Faun" and the "Drunken Satyr" are perhaps of the Pergamene school.

Six fine decorative bronze statues of the first half of the fifth century, called the "Dancing Maidens," from the same villa, now arrayed together on a long pedestal, form one of the choicest treasures of the Naples Museum. The pending systematic excavations will surely bring to light something still more precious.

It is no wonder that Waldstein has been fired by the hope, now swelling higher and higher, that Herculaneum is to be immediately excavated. He doubtless wished to have his name associated with the enterprise both in Europe and America. Who would wish to "spurn at noble praise."

Waldstein deals in grand projects; kings, queens and emperors are as pawns in his great game. He likes to move before the footlights of the stage. He would doubtless have been pleased to be the commanding figure in the international affair, but he will now be obliged to content himself with less than the whole. How like Cæsar he says:

"It would have identified the whole project too much with my own personality, a side on which I endeavored not to lay stress."

But Waldstein's personality will not hide itself. On pages 197, 204, 205, 207, he uses "I" thirteen, eleven, twenty-three and fourteen times. It seems also wide of the mark to call the excavations of Olympia and Delphi in "the bow and arrow phase." The corps was made up of distinguished and competent men.

Waldstein argues for "an actual cooperation of all nations with Italy in the sphere of pure science." The Italian Government has at last, after due deliberation, acted probably wisely in replying that it will undertake sole charge of the excavations. The "federation of the world," even if it is in the world of art, will remain for a long time a dream.

The letter to the *Times* by "Excavator" has put the case in a nutshell:

"Commendatore Boni is the person who really matters. If he has not time and energy to give to Dr. Waldstein's large scheme at present (and with the Forum and many other excavations on his hands, I doubt it), no working committee of experts—and, with all due respect, no ornamental committee of crowned heads and presidents—will bring it to pass."

A writer to the Wiener *Neuer Freie Presse* with a gentle sarcasm says:

"Professor Waldstein träumt den Traum des Jesaias, dass Lamm und Pardel auf derselben Weide weiden. Er sieht im Geiste eine Art wissenschaftlicher Kosmopolis errichtet und die ganze Welt nach Herculaneum hinströmen."

But Waldstein's well known energy and push has resulted in a victory. "Herculaneum is to be excavated," not by him, but by the Italian Government.

Books for Christmas Presents

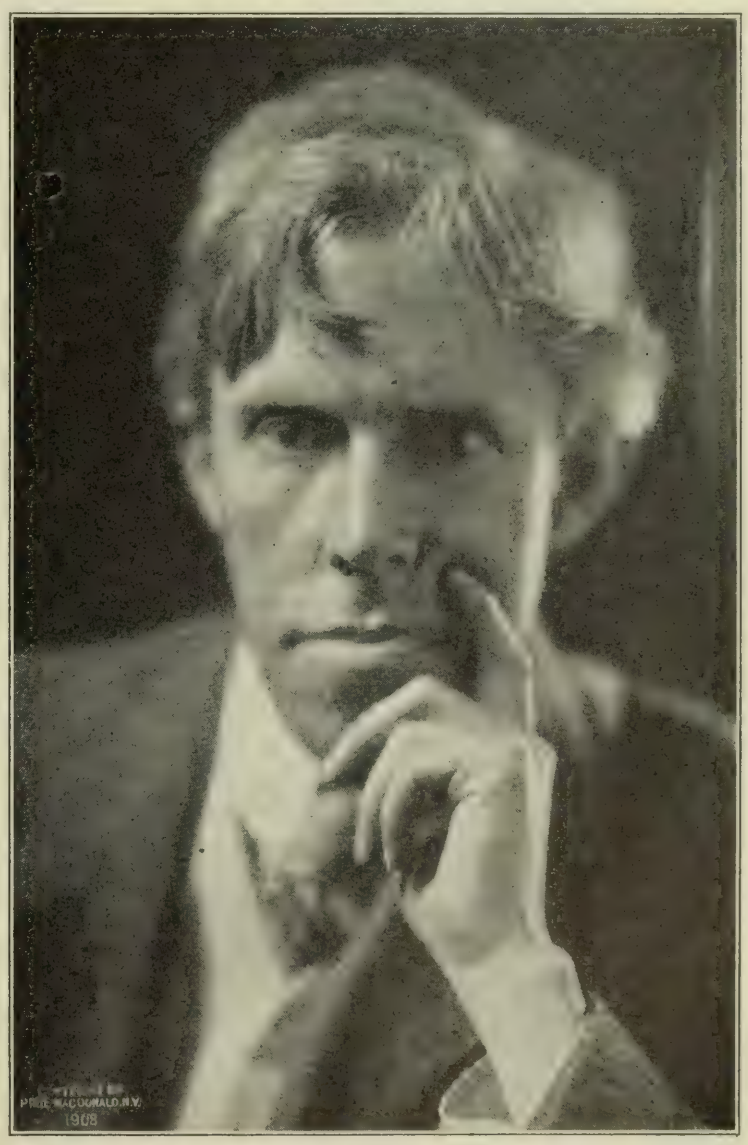
[1]The Knack of It. *By Charles Battell Loomis.* New York: Fleming H. Revell & Co. 75 cents.
[2]The Genial Idiot. *By John Kendrick Bangs.* New York: Harper Bros. $1.25.
[3]Pictures of Paris and Some Parisians. *By John Rapheal* and *Frank Reynolds.* London: Adam and Charles Black. $1.50.
[4]Park Place Papers. *By Bliss Perry.* New York and Boston: Houghton, Mifflin & Co. $1.25.
[5]Flower of the Dusk. *By Myrtle Reed.* New York: G. P. Putnam's Sons. $1.50.
[6]Sir Richard Escombe. *By Max Pemberton.* New York: Harper Bros. $1.50.
[7]The Shadow World. *By Hamlin Garland.* New York: Harper Bros. $1.50.

There is such a thing as nickel-in-the slot literature, whether we get it that cheap or not. And very many books meant to be especially appropriate for Christmas gifts belong to this class. Charles Battell Loomis has a little volume of "Essays in Optimism" that should be one of the first to drop out when the button is prest. There is something superficial about a profession of optimism in the face of things as we have awakened to see them in this world of misery just under that world in which Christmas presents are given. Any man ought to be ashamed to teach it, but if one wishes

MYRTLE REED,
Author of "Flower of the Dusk." Putnam's.

to pat himself or the selfishness of a friend on the back, for the price, there is no better book to offer than this thin tract upon happiness. It is written with that kind of artificial cheerfulness often observed in the professionally happy. But this should not discredit the performance, since nine-tenths of those who read it will never discover that what Mr. Loomis calls *The Knack of It* is really a jack-in-the-box performance at so much a jump. The irony of the gift custom at Christmas is that every man has at least one enemy who must be remembered even more carefully than his dearest friend—some one to whom he pays toll for social, politic or other reasons. No better choice can be made for this gift than *The Genial Idiot.* The mother of wit in John Kendrick Bangs is cynicism. He is repulsively smart and thoroly informed upon not the worst, but the meanest social evils of the times. The "Idiot's" humor is simply his literary tack hammer for calling a kind of futile, jeering attention to what is contemptible, ridiculous and least becoming in men and the order of things. On the other hand, John Rapheal's impressions of Paris and some Parisians would prove a gift with a smile in it. If drawings were made of any of us as we really are, they would surely have some of the lines of caricature in them, because it is only when we pose and become thoroly regardful of our effects that we produce the impression of entire rationality. When a man is released from this guardianship he acts whimsically, often with curious animal traits, always a trifle absurdly. And this little volume is illustrated with drawings of the Parisian, made when he thought no one was looking. The short sketches that accompany these drawings are no less enlightening, and the volume would serve almost as an initiation to an egregious American who contemplated a sojourn in "Gay Paree."

There is the spinster man as well as the bachelor maid. He may or may not be married, but anywhere you shall recognize him by his nose, his catlicking, fastidious manner, and his rarefied tastes. A pleasant Christmas gift for him will be Bliss Perry's *Park Place Papers.* This is not reflection upon Mr. Perry's essays; it is by way of indicating their impeccable, peculiar excellence in that they would please even the spinster man. It is really the autobiography of a magazine, or at least the biography in the sense that the author, for ten years editor of the *Atlantic Monthly,* tells more than any one ever knew or suspected of the reasons why the *Atlantic* is what it was and ever shall be. And those who read the sober little volume will feel nearer, kinder to that dignified periodical, just as they might feel more intimate with any other old *grande dame* after looking at her family album and the skeletons in her closet.



All of Myrtle Reed's books are twins, and the last one is not only a Siamese to her other stories, but, in one particular, it comes very near being a twin to one of Ellen Glasgow's novels as well. Both play a romantic trick on the blind. Some years ago Miss Glasgow deceived a blind old lady in her story into believing that she was still rich. Now Miss Reed adopts precisely the same method to deceive a blind old man. However, a difference of sex is a difference, of course, and as much as we should expect of ladies of somewhat similar mental fiber. If Miss Reed should be a trifle less felicitous in selecting sweet, garden-scented titles for her rearranged romantic material each year, and if Putnam's should cease to offer them for sale in delicate lavender-tinted boxes, her popularity would wane rapidly. As it is, no prettier gift can be chosen for a lady of

uncertain years or for a young girl who is to be kept in total ignorance of the love phenomenon, than Miss Reed's new novel. And an equally attractive novel for a youth who has begun to swear "by my halibut" because he has reached that kind of swearing in his high school course in English literature, is Max Pemberton's. This is an historical romance and has to do with the fortunes of a certain *Sir Richard Escombe.*

In conclusion, every man has a friend who is a crank, and for whom, on this account, it is more difficult to choose a gift than for any one else. No crank wants what he ought to have, or what a normal person would desire. Therefore, we should be especially grateful to Mr. Hamlin Garland for writing a book sure to prove attractive to every crank who is not violently cranked the other way. This is a record of the most startling psychic experiments made by the author himself and a few other friends. It is written in a solemn, matter-of-fact style that is a very good imitation of the scientific manner. The author is the only person actively engaged in the experiments who is not convinced of their supernatural nature. This is Mr. Garland's divertingly shrewd way of convincing as many of his readers as possible without laying himself open to the ridicule of being called a dupe of his "mediums" and their *séances.* And it is not absolutely essential that the crank for whom the book is intended as a Christmas gift should already believe in spiritualism. It is the nature of a crank to go off on any tangent, and Mr. Garland has offered the largest tangent ever provided for a soul-sniffing public.

Professor Frye's Criticisms

In Professor Frye's volume of reviews and criticisms* the readers of The Independent will find some old friends, and will be glad also to meet some most companionable additions. The critic in him, the admirer of style and of those comfortable additaments that make the form and color of literary work acceptable to the man of the chair of learning—this is Mr. Frye's strong point, and it is not to be wondered at therefore that he allows such ample space to Dryden and the critical canons of the eighteenth century, to George Sand, to Corneille, the new classic tragedy and the Greek, and to Saint Beuve. These are themes worthy of the classroom, where the nice shadings of style are to be considered, and a careful reading of these among the thirteen essays included in the volume will represent time well spent by the advanced student of English literature. Mr. Frye is at home in the intricacies of grammar, trope, metaphor, form, and the

CHARLES BATTELL LOOMIS,
Author of "The Knack of It." Revell Co.

*Literary Reviews and Criticisms. *By Prosser Hall Frye.* New York: G. P. Putnam's Sons. $1.25.

art necessary to make composition agreeable. He will not, however, find many to agree with him in his estimate of Balzac's art. He says of the great master of the modern French school:

"He never succeeded in mastering a style or acquiring a form. To the last his work is confused and amorphous, crammed with all sorts of irrelevant details, crowded with episodes, and distracted by pretentious rigmarole anent the nearest trifle, the placing of a patch on a woman's face, or the relative merit of round waists and flat. At most he learned to wreak his strength upon his readers, browbeating and domineering over them until they succumb at last to the imposition of that despotic personality.

Nor is it probable that the reader of Mary Wilkins Freeman's powerful delineation of some characteristics of the raw New England woman will agree with the critic when he speaks of "a public that delights in Mrs. Freeman's thin and washy sketches and mistakes them for a likeness of New England." Surely those thin and washy sketches are a most fit likeness of a certain kind of New England woman conditioned on the rocky pastures and still rockier pastors of that hardy people who sweeten the scant nibblings of their granite fields with grim pleasantries, where "good Queen Bess" would have blessed them with round raw English oaths. Mrs. Freeman serves the same climate that Hawthorne served. If her crops were homelier, if her cows kick the milk pail over, if her pumpkins lie yellow on the south side of the barn, the same table is served in the end, and the same grace is murmured over the viands that is due at the Salem board of the great romancer: "Let us be thankful, Lord, that we have inherited more than one kind of precious aliment from Thy pastures!" Abundant joy Professor Frye finds in Hawthorne, chiefly, perhaps, because the romancer's literary form is of the choicest, his shining word adding luster to his shining mintage. Hawthorne's inheritance fitted him to understand the Puritan whom he studies, and by nature, taste, and abundant training to follow up elusive leads into his land of enchantments. No better elucidation of Hawthorne's power as a romancer have we found than is Professor Frye's essay on the "supernaturalism" of his subject. This is the critic's highest level, where he discovers a comfortable and compatible union between matter and manner.

What a disappointment, then, is it to find him saying this of the man who has imprest himself more on the past and the present generation than any other man of thought or of letters—Emerson:

"For a great writer his phrase is always singularly cramped and scanty, and particularly lacking in that free discursive development which makes one of the characteristic excellences of prose, just as it is in the fervent concentration characteristic of poetry! He can hardly turn more than two or three sentences without a complete change of topic. . . . There is no diffusion about his thought; it refuses to flow or dilate."

Imagine Emerson trying "a free, discursive development" of an Emersonian thought! Is the critic not in deep water? we involuntarily ask ourselves. "Are we over one of them deep holes?" asks dear Mrs. Lecks, when she has cast loose from the sinking ship, and is thoughtfully oaring her way, as she treads water, in the open ocean. In common with a numerous school of our younger critics, our author rests his case on form. They are dazed by a certain formlessness in Emerson. To a reader of quick imagination, who is impatient of the expansion required in forensic utterance, or of the cumulative method in the essay that has a point to make, or of the easy automobiliary smoothness and speed of the historian, Emerson's form is "confusion worse confounded." But the Concord seer was not looking for the philosopher's stone. He was not on the smooth macadam of narrative. He had no novelist's aim of fixing a pretty face in a stylish hat. If he "hitched his wagon to a star," it was because the star was for the time the better guide to *his* end. In the case of two such wide-eyed geniuses as Mrs. Freeman and Emerson, is it not better to let them take their own way thru the wilderness of literary forms, and in respect to form at least, to judge them by the company they keep, by the sweet and high thinkers whom they entice to go with them?

Spinster Farm: By Helen M. Winslow. Boston: L. C. Page & Co. $1.50.

There never was anything like the American mind for expansion! It stretches all realities and does not hesitate to strain the improbable. An amusing illustration of the latter is the progress of women in fiction from horticulture to agriculture. A few years ago the garden novel appeared everywhere, little green books on romantic vegetable culture, with innumerable apostrophes to roses and every sort of annual. The heroine of the story was the girl who wore no petticoat under her top skirt and who picked worms off of every growing thing or dug at their innocent roots, while the hero hovered near to draw attention when she lifted her beautiful perspiring face from her earthy devotions. But presently the delighted reader discovered that it was only pen-gardening, or hair-pin gardening at best, and the horticulture novel past. Now comes the inevitable expansion. Did woman give up the adorable contrast between herself and the flowering earth that she had discovered and presented in these stories? Far from it. She merely abandoned the garden for the farm, the flower for the vegetable. And now we have "The Plow-woman" in the West and two or three prosperous authors developing abandoned farms in the East—in a purely literary way, of course. Zephine Humphrey gave her experiences, "Over Against Green Peak," early in the season, and now here is almost identically the same situation presented by Helen Winslow at *Spinster Farm*. This does not mean that either of these ladies has been cat-licking the other's literary material; it means that women in fiction have advanced from the garden to the larger, wider farm idea, and that they have a common mind on the subject. Having conceded that much, it is really diverting to see how nearly the life of the widow and her niece, who live in the old white house "over against Green Peak," is like the life of the old maid and her niece at Spinster Farm. Both "keep a horse"; both have similar experiences obtaining the same; both devote much description to the remodeling of the old houses—to their neighbors, to the garden and orchard. And each book is delightful—the more so, because there is no real farming in either one of them, a mere contest now and then with weeds. The difference is that Miss Humphrey has the finer literary sense of field and house and orchard nature. Very often Miss Winslow appears to spread her words like dead prest roses upon the page. They are pretty, with a faint intimation of the life that was in them somewhere else, but they have not that freshening literal-

"HE FELT THAT GENEVA WAS STILL LOOKING INTO HIS EYES."
Cartoon from "The Man from Brodney's."
Dodd, Mead.

ness of the earth that Miss Humphrey's words have, as if she had plucked them like flowers from the grass.

The Man From Brodney's. By George Barr McCutcheon. New York: Dodd, Mead & Co. $1.50.

Mr. McCutcheon has his usual success in writing an interesting story, and in making the impossible plausible. A "real princess," an American Consul at Rapp-Thorberg; a queer will inviting the legatees to spend six months on the island of Japat in the mysterious South Seas in order to discover whether they could love

each other enough to marry and inherit a good many millions from their eccentric grandfathers. As both young people are married already and not to each other, the reader immediately foresees some complicated interests. He is not disappointed. And as Mr. McCutcheon has had the good luck or the good sense to be illustrated by Harrison Fisher, his various heroines are as pretty to the eye as to the imagination. It is impossible to feel very sentimental over the fact that the princess, during a siege, saved her cigarets for her lover; a piece of self-denial of which the author makes so much, that it moves a non-smoker to mirth, rather than to admiration.

The New Things of God. By Henry A. Stimson. Fleming H. Revell Co. $1.25.

Dr. Stimson has collected twenty-one addresses, under the title, *The New Things of God*, which are characterized by several qualities most sermons lack: clearness, sanity and practicality. The quiet good sense of the chapters on "Healing the Sick" and "Achieving the Impossible," is in bracing contrast to the many unreasoned psycho-therapeutic theories of the day. Dr. Stimson preaches the old faith in new words, nor do we ever feel that it is an outworn creed, but a belief which is vital and necessary to the fullest human life.

Friendship Village. By Zona Gale. New York: The Macmillan Co. $1.50.

In a series of pleasant sketches Miss Zona Gale adds another little town to the agreeable villages of fiction. It is interesting to remember that *Friendship Village* treats of the same sort of territory which Ed. Howe, wears ago, shadowed with the gloom of his "Story of a Country Town." So much depends upon the way in which we look at places! Perhaps no two of us live in the same town, after all, altho we may occupy the same dwelling. We would rather live in Friendship Village than in Cranford, for instance, or in Wolfville. There may be a faint touch of caricature, but it is so tender as to be negligible; and the stern, little moral code the village holds is apt to be softened into mercy in individual instances. Many of the citizens of Friendship serve God according to the "dictates of their own notions," but they do serve Him with a wholeheartedness and a native wisdom matching their zeal. We close the book, lingeringly, just as we should leave so friendly a town, with the feeling that America is sound at the core, while it is possible to recognize the truth of such affectionate portraiture. It is good to love those we live with in little, sequestered places; to have some pleasant neighbors at hand in books like *Friendship Village.*

The Call of the City. By Charles Mulford Robinson. San Francisco and New York: Paul Elder & Co. $1.25.

Mr. Robinson celebrates the charms of the city somewhat after the manner, but not in the precise mood, of Walt Whitman. Indeed, there is just now what might be called a "boom" in the Whitmanesque shading of literary expression. When the city sat for its portrait to Whitman it was for the "altogether." With Mr. Robinson there is a less omnivorous taste; yet the town is dear to him—dearer than it is to most of us. He takes it in all weathers; loves all its moods. The charms of the country he disparages. From his account of the hills, the roadside beauty, the summers and winters in rural seclusions, he would rather accept the conclusion of a certain German who said he could always have the advantages of a seaside villa or a farm boarding-house by turning off the gas in his city house, locking up the bathroom and removing his bed to the garret. Mr. Robinson takes the cheerful side of the city street. It has its fascinations, not to be dreamed of in the country. There may be objections, he admits, to stony pavements, "where the murmuring stream at the edge is known as the gutter." There are the beautiful flowers in the country, but are there not blossoms in town far more beautiful? Cannot a young man, thinking, perhaps, of his "best girl," step into a shop anywhere, even in the busy commercial quarter—even in Wall Street—and, without removing his gloves, receive a delicate bunch of the rarest violets, rolled up in tissue paper, shining with its metallic protection against moisture? Ah, what a thing it is, Mr. Robin-

son, to feel the spring of youth in the city! But, verily,

"A ray of fancy still survives,
Her sunshine plays upon thee."

Poem Outlines. By Sidney Lanier. New York: Charles Scribner's Sons. $1.00.

The world likes to see a carpenter in his workshop, a blacksmith shaping a shoe, a novelist, like Hawthorne in his "Dr. Grimshawe's Secret," laying the lines of a great romance, and so it will welcome a little book of poetic outlines that lets it into some of the vagrant moods of one of the most sensitive and sweet-spirited singers of our Southland. Here are a hundred and twenty poems suggested—some merely suggested in a central thought or a mellifluous line, some half worked out, but not filled, some taking the beauty of a word-picture, and there's an end. Here, for instance, is a picture:

"The feverish heaven, with a stitch in its side,
Of lightning."

It would be difficult for the perfect artist in verse to expand this without spoiling it. It is a whole poem in itself. Here again is the full argument of a poem:

"We know more than we know.
That the Lord is all, I know;
That I am part, I know.
But how shall we settle our provinces and diplomacies and boundaries, the Lord and I?
Let us talk of this matter, dear Lord, I talking in silence."

The mood of the poet is in all of these pretty outlines, and doubtless, in a flash, the whole poem was in his mind—the poem, but not the words thereof.

Racial Contrasts.. Distinguishing Traits of the Græco-Latins and Teutons. By Albert Gehring. New York: G. P. Putnam's Sons. $1.50.

Starting out with the idea of a fundamental difference between the Græco-Latin and Teuton, which is obvious enough, the writer undertakes, with some ingenuity, to show that Græco-Latin art works tend toward clearness and simplicity; Germanic ones, to complexity; that the effectiveness of the former depends more than that of the latter "on the materials and objects directly presented, while that of Germanic productions rests more largely on the affiliations and irradiations of the same—on the connections or relations between that which is immediately given and that which is not. These connections are based on association, suggestion and comparison, and may involve different parts of the same work, recollected experiences of percipient, or extraneous matter." From this original difference he deduces a conclusion respecting the mental nature of the races, exprest in terms of the mind and its "fringes"—using the term "fringe" somewhat as Prof. William James defines it. The German mind thus grasps more objects than the Græco-Latin mind; that is, it has a richer "fringe." It "delights in the unresolved, mysterious residues of experience, in the buzzing backgrounds, the contrapuntal play of side theme and pedal point." And here we lose him, until he emerges in "all the arts"—painting, sculpture, poetry, etc., and finally mental and emotional characteristics in general. Those who are interested in the "buzzing backgrounds" of Wagner's music will be interested to follow the author into similar buzzing backgrounds, assonant or dissonant, in every part of the German life and sound, while those who take the simpler side of Italian melodic utterance will rest there in sunny Italy. We leave the world its choice.

The Revolt of Anne Royle. By Helen R. Martin. New York: The Century Co. $1.50.

If the reader can conceive of a story that combines the old-fashioned charm of the "Wide, Wide World" and "Jane Eyre" with the fresher interest of a modern romance, he will have some idea of the fascination of this remarkable book. The persecutions of Anne Royle resemble those of the "Mennonite Maid," about which the author told us several years ago, but the story of her "revolt" is even more admirably told. One must doubt if there are any girls so harshly and well brought up in these days, but if there are, Miss Martin's book will soon put an end to such training. She dramatizes its effects upon character too well.

Three Centuries of Southern Poetry. By Carl Holliday. Nashville and Dallas: Methodist Publishing House. $1.50.

Probably one of the dullest books published last year upon any subject was Mr. Holliday's "History of Southern Literature," and now we have another obituary volume from him about Southern poetry. He has given samples from fifty-five poets beginning with P. Rich, in 1607, and ending with those who are supposed to be poets in 1907. And while the book gives the impression of being a careful selection, those who know the South will question the author's choice—the poets included, and even some of those who are excluded. At best it can only be a second rate reference book that will probably not contain the name of the author for which you are looking. And if it does, Mr. Holliday's ironed out one-sentence literary obituaries which head each selection will not be very helpful. And his selection of plantation melodies is really absurd, not to say injurious, for many of the versions he prints are not the ones sung by negroes which are far more musical if not less nonsensical. In short, Mr. Holliday appears to have the snuffling, rudimentary grubbing instinct of the scholar, without the scholar's power of discrimination and appreciation. He may be able to catalog names, copy selections, but not wisely. He may find things, but he cannot say anything. His words are made entirely of ink.

The Story of a Border City During the Civil War. By Galusha Anderson, S. T. D., LL. D. Resident in St. Louis, 1858-1886. Boston: Little, Brown & Co. $1.50.

It has seemed that nearly all the participants in the Civil War have had their say. Here comes, late upon the scene, a man of peace who tells in a modest way how Missouri was held in the Union by the patient labor of those who loved it. The Germans here deserve especial praise. One man stands out above Fremont and Halleck, the incapables and the martinets. Lyon it was who, by his example and heroic death, held the State in the Union. At the battle of Wilson's Creek Lyon freely gave up his life as an example. It is true that a large part of Missouri was ready to secede, but St. Louis overbalanced it. But the country was to be reckoned with, and the fight was bitter. A reign of terror prevailed. The "bushwhackers" spared no Union soldier or suspect. A leader named Anderson, says the writer, "found twenty-two unarmed United States soldiers who, on account of sickness, had been furloughed. He ordered them all out, robbed them, stood them up in a row and shot them." A few days later he was recognized by General Price as a Confederate captain. Can these horrors have really happened! Schofield, afterward Lieutenant-General, in 1862 was assigned to duty at St. Louis. Rosecrans, whose nerves were unstrung before and at Chickamauga, followed him. But he always bore the marks of sorrow for that order withdrawing Wood from the line, which allowed Longstreet to push in and win a great battle and send thousands to Andersonville. Lincoln found General Curtis, at the head of the department, and Governor Gamble, quarreling. "I felt it my duty," he wrote to Schofield, "to break it up somehow; and as I could not remove Governor Gamble, I had to remove General Curtis. If both factions, or neither, shall abuse you, you will probably be about right. Beware of being assailed by one and praised by the other."

Light on Dark Places at Panama. By An Isthmian Stenographer. New York: Broadway Publishing Co. $1.50.

The attention of the country will be centered on Panama for the next ten years, and, altho other topics of interest will wax and wane, the Transisthmian Canal will hold the interest of the reading public until it is completed. Many histories of the work and scientific discussions of the problems encountered have been published. The present volume gives us the details of every-day life on the Canal Zone, as seen by a stenographer and written home to her friends. Aside from the novelty of her experiences, there is considerable startling evidence of endless red tape and incompetence. Where the United States Government goes vouchers, requisitions and affidavits follow, that take an army of clerks to handle. The author worked on the Isthmus sixteen months, and includes in her narrative the account of a short stay in California and a subsequent trip to Costa Rica. The book makes a good gift to a friend about to start for Panama.

The Independent

Entered at New York Post Office as Second Class Matter

Publisher, Clarence W. Bowen

130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Giving Thanks

THERE is nothing finer under the sun than our harvest fields in autumn, when the corn is in the husking and the apples are hanging ruddy and golden for the pickers; 1908 has had a harvest as perfect as ever greeted the morning, and grew sweeter and richer with every sunset. It has not been larger in quantity, but in quality, combined with quantity, it surpasses every harvest that the American people has ever garnered. Wheat is not only a bumper crop, but the price is good enough to satisfy the greediest grower. There is hay enough in our barns, and of the finest quality to feed our stock; and in spite of the drought the potato crop will more than meet the home market demand. At one dollar a bushel they gladden the Maine farmer. The apple crop is lean taking the country thru; and the dairyman has suffered in the shrinkage of milk, while the rise in the prices of butter and milk laid heavy on the helpless crowds of our cities. But there is, on the whole, a marvelously good material harvest to be credited to 1908.

In the social field we have won mightily, for we have not only held our Hague Conference, but there has not been one stroke of war anywhere about the horizon, nor any grumblings louder than those of Castro and Holland, with the Atlantic between them to hold the peace. The threatened clash in the Balkans illustrated admirably the growing power of amity over hate. War is growing less and less possible. Better yet has been the opening of the great International Institute at Rome, for the development of agriculture. There, where the world religion established its headquarters, internationalism once more throws the doors open to all peoples; "Modernism" in the fullest sense of the word.

It was a fortunate allocation that set our national election before our national Thanksgiving; for we voters can do something, if we will, to be glad of and to be grateful for. On the whole, the American people has made no blunder, from George Washington to the present incumbent. It has come along the road of Jefferson, Madison, Adams, Lincoln, Hayes, Cleveland, McKinley, Roosevelt and Taft. No such list of rulers (leaders rather) has the world ever known elsewhere. At the same time the people has turned down a conspicuous list of adventurers in politics. What our fate would have been had we elected Burr, or Crawford, or a half dozen others, now forgotten, we need not imagine. It was settled by the nominating conventions of 1908 that whichever party should count most votes in November, the country would have progressive and honest administration for the next four years. No one has been disheartened but the machine politician. There has been less buying and selling of manhood than at any previous election; we wish we could say none at all.

The year has been notable for congresses, for all of which we may be grateful. The two held at Washington marked new outlooks in American history. That of the Governors of all the States was a breach with tradition that promises to become historic. Such a session, representing local self-government, as well as the federated union, might well be held once a year. Still more grateful has been the national

movement for improved health. It is full time that we took a life or death hold with the ghastly diseases which stalk thru our towns and blast the peace of our country hillsides. The congress to consider extirpation of tuberculosis places man on a level with the animals, as Darwin suggested, for we have held national councils to conserve our bovine stock.

The Playground Congress of New York was hardly less important as marking a new stage of social sentiment. Nearly every city of size in the United States has established parks or other provisions for play, or will within the immediate future. There is no longer any room anywhere in our social ordering for troubles and poverty. Education is taking on the larger meaning of care for the body as well as the mind, while provision for old age is already becoming an international sentiment. The conference at Chicago to consider improved internal waterways brought into closer fraternity not only all the States from Duluth to New Orleans, but illustrated the community of interests between the East and the West. We are well on the way to strike hands with Canada to supplement the railroads as carriers. This enterprise will not only improve our commercial conditions, but our social fellowship.

In one direction we are still left to look with anxiety and pain. In 1908 the destruction of our forests by fires has been enormous and probably more ruthless than during any previous year. If these fires cannot be checked our hardwood lumber will not last even the quarter of a century forecasted by the Government. As for the lighter wood, the recklessness of turpentine tappers in the South, combining with the forest fires in the Northwest, will make seven years a liberal allowance for its survival. Fortunately our pines very readily reseed themselves, and if not disturbed by fires are of quick growth. We can be grateful that the people are thoroly awake to this problem. It is not likely that the conditions will again be as favorable for vast forest fires until the whole matter is well in the hands of scientific commissions.

Look where we will we have cause for thanksgiving greater than ever before. Our barns and cellars are full, and there is a big surplus to give us a balance of trade as large as is wholesome. We are learning how to grow twice as much to the acre, and to do it with less wear to the toiler. Our schools are becoming linked to labor, and that knowledge is most highly esteemed which can be applied to remedial measures for the human race. This does not imply that we are materialized. In no demonstrable way are the common folk degenerating. On this beautiful national holiday we can look up with thanks to Him whose life of love is permeating the life of the American people.

Is It Progress?

Signor Ferrero has not been long a guest of the American republic, but the questions that he has asked about it probe deep into our civilization. His impressions of us have the modestly tentative quality which was to be expected of a broad and scientifically trained mind, and because of the absence of all dogmatism in his judgment of us, his opinions will receive a thoughtful consideration that has not been accorded to the cock-sure utterances of some of our foreign critics, from Charles Dickens to Paul Bourget.

The America of today is no more the America of Washington and Franklin, "which so forcibly imprest all Europe with its marvelous simplicity and strength," than the Rome of the three bosses, which Ferrero's third volume on "The Greatness and Decline of Rome" describes, was the Rome of Cincinnatus. It is true that we have created an extreme concentration of wealth, and with it much poverty and a highly differentiated social structure. We have "acquired an unbounded taste for luxuries," and "the luxuries necessary to satisfy that taste."

This generalization is true at least as generalization. Viewing the nation as a whole, its urban and its rural population collectively, its multi-millionaires, its "plain people" and its wage-workers all together, we find it answering to the description. Still, we should not forget that the great middle class, "the plain

people," dwelling for the most part on farms and in rural villages, is not an absolutely, tho it may be a relatively, diminishing element. Gathered from the forty-six commonwealths and brought into the thirteen original States along the Atlantic seaboard, it would be a mighty folk, one of the great nations of the earth, prodigiously strong by comparison with the America of Washington and Franklin. In this element there persist the rugged virtues of industry and thrift. "The simple life, the Spartan life of America," is not so universal, so characteristic as it was, yet we can hardly say with rigorous truth that it "is a thing of the past."

Is the marvelous change that has taken place, then, progress or decadence? The optimist says that we have advanced rapidly in civilization; the pessimist can see only that "there was something inspiring in the original American ideal," and something sadly depressing "in the extremes of poverty and wealth existing in America today. Whether by temperament we incline to faith or to fear, we should find a genuine gratification of our sense of the excellence of intellectual poise when the philosophical historian says: "In this matter I am neither pessimist nor optimist."

Ferrero evenly weights the scales of his judgment by remembering, on the one hand, that the simple and easygoing habits of a century ago could not have supported a population of eighty million souls, with all their potentialities of worth and happiness; and, on the other hand, that "every problem today has its origin in money." The way to maintain life has been found. The earth can sustain a teeming multitude of human beings, to whom destiny offers the choice of nobility and beauty or sordidness and vanity. What choice are we making? Is not this our question of progress when reduced to its lowest terms? Are eighty millions of lives necessarily worth more than three millions? If it had been true, as Carlyle bitterly declared, that the English nation of his day was "thirty-seven millions, mostly fools," would it have been a state more great and glorious than the England, light-hearted and wayfaring, of Chaucer's generation?

Out of our seething industry and tumultuous life, our extremes of economic condition, our wonderful organization and our wherewithal to supply our "multifarious tastes and interests," shall we evolve not again the Spartan simplicity of other and bygone days, but, once more to quote Ferrero's words of inspiring insight, "other conflicts, other crises, other intellectual and moral martyrs"? Perhaps it is not given to any one living now to write the prophet's answer, but it is something to see clearly what the question itself portends.

The Critical Reader

THE readers of THE INDEPENDENT are not—thank Heaven—of the kind to whom we might say, "Gape, sinner, and swallow!" We are not looking for that kind of readers who will accept what we say as inspired gospel, to be taken without question. The reader we seek is the one who can judge of values, make up his own mind on evidence presented, have his own idea as to what is right or wrong, who will approve if, and only if, he finds good reason to, and who will condemn and answer back when he disapproves. We would lead men; we do not care to drive sheep.

So it is that we take especial satisfaction in the letters we receive from intelligent and positive subscribers who tell us they like the magazine much, and that they renew their subscription, but that this, or that, or the other part of our policy does not please them. "Why will you be so wrong on such a thing?" they ask.

Well, perhaps we are not wrong; perhaps we are. But we have an idea of what such a journal as this ought to be. It is not a bunch of posies, not even a bundle of herbs or a package of candy. Its purpose is not to be sweet and please everybody. We are not satisfied to amuse a passing idle hour with empty fragrances that will feed nobody and harden into no strength. Such a magazine may make money; what of that? Bonner's *Ledger* had its hundreds of thousands of readers for its stories, and it made Robert Bonner rich, but it never carried a feather's weight of influence. It could inspire no love.

What is it in a journal that holds the affections of its readers, that makes them take it year after year? It is not its miscellaneous interesting stories and things,

that are as timely a hundred years hence as now, "fillers" that can be put in one week as well as another, useful as they too are; nor is it the editorials which repeat in choice words goody-goody commonplaces on literature or religion, saying "an undisputed thing in such a solemn way." We knew an editor of a "safe" religious newspaper who was sick for six months, and he told us that he directed his printer to go back five years to the file and repeat in order the editorials which had before covered the space and left it no less empty than before. They had been words to disturb nobody. To our notion an intelligent reader wants to find something that has force, something that he is inclined either to clasp or to kick. A journal secures real lovers only as it presents a definite and strong editorial policy which on the whole commends itself to them. They will hold fast to it. We have subscribers who have read THE INDEPENDENT from the beginning. They have often differed from us, and we think no less of them for that. But we do not—we will not—try to please everybody. In that case we should please nobody, for we could only talk twaddle.

We want our fit audience, which is *not* few in such a country as ours. There are big subjects of tremendous importance before our people, and in not one of them do we mean to speak a halting word. We will urge our views, and take the risk of displeasing some. Of course we shall. A few will sometimes be so displeased as to withdraw their subscription. We can't help that. We are sorry, but let them go where they will be better pleased. There are good journals that will please them better, perhaps. But whatever view we might take positively —and positively we will speak—we should displease some, and they would "stop their paper." Here is one, a dozen, perhaps, who write declaring that we show a wrong spirit toward the South, and are always judging it harshly, the one thing they don't like in THE INDEPENDENT. Thank you for liking the rest; but it is no evidence of ill will to the South that we hold fast to equal treatment of white and black here on earth as in Heaven. Here are a few others who are offended—but they renew their subscription—because we are so unjust, they say, to the Catholic Church. We have a real admiration for that Church, especially in this country, but we are bound to say that, for all the Pope, the Church ought to be big enough to leave room for its Tyrrells and Loisys. On this subject we cannot be silent. That would be weakness. Our readers want us to speak out. Then there is the third great question of Labor, and there we can't please everybody, and we don't want to. It is enough for us to say with positiveness what we believe to be true, and if the reader does not like it and chooses to leave us, then we know that as many or more would leave if we defended the opposite side.

This is the point, a molycoddle makes no friends. A journal is endeared to its constituency only as it has and holds a positive, pronounced editorial policy of championship on the burning questions of the day. It is in behalf of readers who like, and we hope admire, such a policy that we are working to the best of our ability to give them strong and healthy meat—not dishwater, nor even Turkish paste and chocolate caramels.

Tariff Questions

AT one of the tariff hearings in Washington, last week, a manufacturer who asked for an increase of duty admitted that he sold his goods abroad at a price about 40 per cent. lower than the price he received in this country. Of course, when he sold abroad he overcame the competition of the foreign manufacturer without the aid of a protective duty. But he must have such a duty for his business in the United States. Why? Evidently in order that he may exact the higher price here. But he cannot exact that price unless competition in the United States has been suppressed. In his industry this suppression, it is asserted, has been accomplished. The company which he represents is a combination which enjoys a monopoly. It would like to be enabled by a higher protective duty to exact a still higher price from the American consumer.

The same manufacturer, attempting to show that his company deserved to be

protected by high duties because it paid higher wages than are paid in Europe and Australia, was constrained to admit that he sold his goods in both Australia and Europe, overcoming there the competition of the lower wages, altho burdened by the cost of carrying the goods thousands of miles.

This testimony before the Ways and Means Committee directs attention to the question whether greedy monopolistic combinations of manufacturers ought to be assisted and enriched (at the expense of American consumers) by high duties, and also to what is said in the Republican platform and elsewhere about imposing duties to compensate for the difference between the cost of production here and the cost of production abroad.

The question concerning the relation of the tariff to domestic combinations has become an important one within the last twenty-five years. It used to be said that if a high duty were imposed to create an industry here, or to encourage one in its infancy, competition in the home market among the protected manufacturers or producers would speedily reduce and so regulate the price that only a reasonable business profit could be obtained. But combinations grew and multiplied. At first there were loose agreements in certain industries, then associations with provision for the exaction of penalties, then actual combinations maintained by means of trust certificates, and at last combinations made firm and permanent by corporation charters. This presented a new problem to the makers of tariffs. It has not been solved by legislation in the public interest. The combinations which suppress competition in the home market (either by their own unaided force or with the assistance of a few so-called independent producers) have as much protection as was formerly given to competition in the same industries. As a rule, they have more. But consumers do not have the benefit of that competitive reduction of price which, the old argument said, the protective duty would surely cause.

It has been the aim of some combinations, if not all of them, to exact in this country a price as high as the tariff duty would permit, a price a little below the figures which would invite and cause the importation of goods from abroad. At the same time, many of the combinations have sold their goods in foreign countries at much lower rates. This has been done repeatedly, if not continually, by the manufacturers of steel rails, nails, ship plates, etc. There is abundant evidence of these sales by which our protected manufacturers have given to foreign buyers advantages which were denied to the Americans who had given them their protective duties.

It has been proposed that the products of monopolistic combinations should have no tariff protection whatever; or, at least, that protection should not be given to combinations that thus discriminate against American buyers. There are some combinations, probably, that upon a fair basis of capitalization do not need protective duties. To withdraw protection from others which do not by their own organizations completely control their branches of industry would not serve the public interest. Withdrawal would so embarrass the so-called independent minnority (sometimes associated with the dominant corporation by loose and temporary agreements) that they would fail or speedily be absorbed by the leading corporation.

Those duties of which combinations take advantage, however, should be much reduced. It is proved by the practice of the combinations themselves that they are too high. But they will not be reduced as a result of such hearings as are now in progress before the Ways and Means Committee. What is needed is an investigation by official and competent experts concerning the prices at home and for export, the capitalization, the cost of production, the suppression of home competition and other matters, to show whether these applicants for protection are really warranted in asking for it, and how much, if any, the conditions require. This investigation should deal also with the cost of production here and abroad. The difference in labor cost is not measured by the difference in wages per day.

If it be admitted that duties may justly be imposed for protection, and should be imposed to protect, then surely the rate should be determined by an impartial inquiry concerning the industry in question and not merely by the statements of in-

terested persons who seek the protection. And if a duty has been imposed for protection, those who have suppressed competition should not be permitted to use it for extortion.

The Cables for the People

It was in 1858, just fifty years ago, that Cyrus W. Field laid the first telegraphic cable across the Atlantic. Since that time cables have been laid even across the Pacific, and all principal ports in the world are connected by cable with foreign lands. This has been an unspeakable blessing to the world, to its peace and to its commerce. But do our people know how utterly the cable has failed to answer the full purpose of friendly communication? Sir J. Henniker Heaton has undertaken to enlighten the world, and particularly the British and American world, on the matter.

Practically the cable is used only by the newspaper syndicates and by rich merchants in their business. The world of people cannot afford to use it. In the case of death, or of extreme necessity, a private citizen seeks the cable, and pays a good price for it. The people now pay twenty or twenty-five millions annually for cabling, but only one per cent. of this is for social or family messages. What Sir Henniker Heaton proposes is that the governments of Great Britain, the United States and the rest buy the cables at a fair price, and reduce the rate to two cents a word.

He believes that would pay. Probably it would, for the British and Colonial governments now pay nearly $1,250,000 a year for official messages, which would go far to pay the interest on the bonds for the purchase of the cables. They are now in the hands of monopolists, or cable rings, and excessive prices are charged. The rates from London to the colonies run up some of them as high as $1.75 a word, which only the wealthiest merchants can pay; the ordinary citizen does not use the cable at all. The rate from this country to England is 25 cents a word, and in order to keep up the rate the majority of the cables are left idle.

It will be remembered that over most of the civilized world the telegraphs are public property. In Great Britain and all its colonies they are a part of the postal service. One can send a message three or four thousand miles in Australia, and even to Tasmania, for the uniform rate of one cent a word, just as one can send a letter anywhere in our possessions for two cents. But we are very slow here to add to our post office service advantages for the people which have long been added successfully in Europe. Why do we hang behind the world as to the postal telegraph, the postal bank, the postal package system? It is because vested interests, large corporations, desire to milk the people. We are forbidden by private banks, by express companies and telegraph companies to act for the public welfare. They are too strong for Congress, and the recommendations of successive Postmasters-General are tost aside with slack courtesy. Yet it may be that we shall be shamed by Great Britain and France and Germany into a plan for buying the cables, and giving their use to our citizens. The cables may come to us before the inland telegraph.

More than twenty years ago Sir Henniker Heaton said in Parliament:

> "Communication between our sundered kinsmen may be made as easy as speech, and as free as air."

To that we must come. That is the business of the cable, the telegraph and the telephone. No one else has done so much to achieve this end as Sir Henniker Heaton, who has given his life to cheap postage. The pages he contributes to the London *Times*, filled with brief expressions of approval by the most distinguished and competent men of public and private affairs, prophesy what may be expected; for the good thing that should be will be. What a pity that in these matters of public welfare the most lagging, dilatory and senseless of all nations should be the United States!

Criminal Journalism

There are crimes and crimes. Legally a crime is an offense of a serious grade, punishable by legal statute with special severity. But in the common parlance of common sense there are other crimes, not recognized by statute,

which are just as bad and deserve equal reprobation. Of one of these we have had an international example the last week, one that was calculated to result in war between nations, if the character of the offenders were not such as to rob them of credibility.

The Rev. William B. Hale, formerly Episcopal clergyman, now journalist, was allowed an interview with the Emperor William, and an account of what he said was accepted for publication by the *Century Magazine*. Then, after the disturbance over the "calculated indiscretion" of the *Telegraph* interview, Mr. Hale and *The Century* withdrew the article. That is all we know, except that it is declared that there was nothing in it of a bellicose nature.

That was the basis of fact, and all simple and creditable. Now for the offenses in which two sensational journals of this city take part.

First one of them claims to have received from London a full abstract of what the Emperor said to Mr. Hale, and it prints as such a most mischievous series of imperial views. How did it get them? Mr. Hale was in this country. Did he leave his original notes in London; or did he tell somebody in London, who reports it at second hand; or was the whole story concocted here in the editorial office? Let the reader guess. Mr. Hale denounced the whole thing as a fake.

But, assumed to be true, or well invented, it was a fine "beat" for journal No. one; and it was necessary for journal No. two to go it one better. So it set its equally veracious English correspondent at work, and it prints what it declares to be a genuine abstract of the Emperor's interview, not like that which Mr. Hale had denounced. But it is like it, only fuller, more mischievous and worse. It declares that it has been shown to Mr. Hale, and that he scratched out certain personal references to himself, but that otherwise the abstract is printed as received. It omits the fact, which we are not allowed to doubt, that Mr. Hale denounced this as he had the fake No. one.

In either or both forms the "abstract" was simply criminal. It was adapted to stir up war. As the story is developed, the Emperor William, after having dined and wined, burst out into angry denunciations of King Edward and Great Britain. He is said to have used expressions insulting to France and Russia; to have exprest the desire that a European war might soon come; to have declared the Anglo-Japanese alliance iniquitous and an act of treason to other Christian nations; that Japan was honeycombing India with spies and sedition; that there would be war in ten years between the United States and Japan unless the United States made an alliance with Germany; and that in the event of war Great Britain would lose many of her large colonies, particularly in the Pacific, while Germany would take Egypt and control Palestine. Now, all this is so utterly rash, so incredibly reckless, that it would seem impossible that any public man should say such things unless he were not himself. The interview declares that what Mr. Hale jotted down was shown to the Foreign Office in Berlin, and was there whittled down to comparative innocuousness, and in that reduced form was accepted by the *Century Magazine*, but that this is the real thing that the Emperor said. Whatever his indiscretions, it is incredible that he should have thus uttered to an unknown American journalist such supposed intimate and bellicose views, fitted to alarm every nation in the world. And this is printed as "absolutely accurate and authentic"!

Now, what is the duty of a journal when it comes across such an irresponsible and mischievous document as this, even if genuine and true in its facts, one that might do infinite harm? It should refuse to make it public. It does not come under the category of "all the news that is fit to print." Reputable journals frequently suppress mischievous stuff, tho true. Disreputable journals are glad to print such stuff, tho known to be false, and even to invent it.

We are not aware that there is any law which punishes as a crime such faked matter as these abstracts would appear to be. But we wish there were such a law, and then a society which made it its business to discover and convict all purposed journalistic deceptions as frauds upon the people. It is a crime to get money on false pretenses; it ought to be

a recognized crime wilfully to impose false beliefs on the people. It is an offense to corrupt one's views and judgments, and the public ought to be saved from such serious danger.

Our Charter Subscribers

On the occasion of our fiftieth anniversary we asked that any subscribers who had taken THE INDEPENDENT since the first number would send us their names. The following was the list, longer than we might have expected:

Abbott, Lyman, New York City; Andrews, Edwin Norton, Peshtigo, Wis.

Bulkley, W. L., Brooklyn, N. Y.; Blakeman, B., Rockford, Ill.; Bulkley, Helen M., Strawberry Point, Ia.; Bowen, Rev. William B., D. D., East Newark, N. J.; Bruce, H. M., Tallapoosa, Ga.

Catlin, Benj. H., Meriden, Conn.; Canfield, Joseph A., Elmira, N. Y.; Chapin, W. D., Chicopee, Mass.; Chipman, Isaac K., Sandwich, Mass.; Coburn, J. G.; Newton, Mass.; Comstock, Mrs. M. P., Hartford, Conn.; Conkling, H. C., Tecumseh, Mich.; Cooley, J. G., Norwich, Conn.; Crowda, John M., Platte Clove, N. Y.

Davies, Rev. L. J., Chinaufu, China; Davies, Evans Llewellyn, Lake Forest, Ill.; Davies, Charles S., Fairbury, Ill.; Davison, Mrs. A. L., Boston, Mass.

Eddy, John, Providence, R. I.; Emery Mrs. Caleb, Brookline, Mass.; Emery, Mr. and Mrs. S. H., Taunton, Mass.

Fairchild, Jas. H., Oberlin College, Ohio; Fairfield, Rev. M. W., Ypsilanti, Mich.; Farnham, Rev. Lucien, Batavia, Ill.; Fry, Mary Esther, Newtown, Ohio.

Gelston, Mills B., Ann Arbor, Mich.; Gold, G. S., West Cornwall, Conn.; Goodwin, W. W., Newburyport, Mass.; Granger, Rev. Calvin, East Poultney, Vt.; Green, F. M., LL. D., Kent, Ohio.

In the course of nature that list must be sadly shortened now. We much desire that such as are still with us will give us their names for our sixtieth anniversary number. And we extend this request to those also who as children of original subscribers have read THE INDEPENDENT from the beginning. We hold all such veterans of sixty years as our special and most honored adherents and friends.

International Education

Following the formation of the Japan Society to bring about closer relations between Japan and the United States, the American-Scandinavian Society was formally organized in this city last Saturday. It is a direct outgrowth of the recent lecture visits of Chancellor McCracken, of New York University, to the universities of Copenhagen, Christiania and Lund, and of President Butler, of Columbia University, to the University of Copenhagen. The society hopes to make permanent arrangements for an annual interchange of professors and students between American universities and those of Denmark, Norway, Sweden and Finland, and in other respects to bring about a cultural co-operation between the United States and Scandinavia. President Butler was elected president, and Prof. Carl Lorentzen, of New York University, secretary. The rest of the officers and directors include the principal American college presidents and the leading Danes, Swedes, Norwegians and Finns in this country. This society is only another of the many multiplying evidences of the advent of the new internationalism. In the educational world especially the advances along these lines have been remarkable. Since Cecil Rhodes, empire

builder, founded his Oxford scholarships to instill the culture of England upon the flower of American and colonial youth, Harvard has begun sending one of her professors every year to France, a famous French lecturer reciprocating in Cambridge; the Kaiser Wilhelm-Roosevelt professorships have been established between Germany and the United States; Professor Ladd has been inducing hundreds of Japanese students to come to Yale, and Professor Rowe is similarly bringing Latin-American students to the University of Pennsylvania. This week, Monday, Grand Chancellor Tang Shao Yi arrived in this country to express the Chinese Government's gratitude for our remitting the $14,000,000 overpayment on the Boxer indemnity, and also to arrange for the spending of this money in keeping 400 Chinese students in our schools and colleges for the next thirty years. Our secondary schools even have caught the spirit of fraternity, as is evidenced by the interchanging visits of the American and English teachers, thanks to the philanthropy of Mr. Mosely. This movement cannot logically end until enough new societies are organized to bring the culture of the United States to all the civilizations of the world and theirs back to us. Or, better still, why should not the American universities join together, as they have already done in supporting the American schools in Athens, Rome and Palestine, and arrange with the principal universities of Europe, Asia, Africa, South America and Australia for the interchange of professors and students. The cost of this would be little or nothing and its beneficent results immeasurable. Which American university will call the others together and start the movement?

Free Trade with Canada

James J. Hill has his own personal reasons for wishing free trade with Canada, for he is a Canadian born, and his two railroads run close to the Canadian border and have branches that cross the line. In his important Chamber of Commerce speech he urged absolute free trade with Canada, and reciprocity if we cannot have free trade. What happens to be his interest is for the interest of the whole country. The failure to maintain reciprocity was a serious loss of both good trade and good will. Of course it would affect some imports, but Canada has a high protective tariff of her own. Foreign goods imported into the United States by way of Canada would have to come in bond, and pay our rates on crossing the border. Canada is our next neighbor, and a very dear one. We have a larger trade with Canada than with any other country except Great Britain and France. Canada would then draw immense imports from this country which she now draws from Great Britain. Says Mr. Hill:

> "I do not believe there is any valid argument in favor of the system that makes an international boundary line bristle with customhouses, and forces every dollar's worth of trade between them to show its passport and pay its entrance fee."

The Canadian farmer would be benefited by the American market for eggs and wheat, and the American market needs the Canadian supply. The Canadian trade is more important than all the commerce that will go thru the Panama Canal, and the brotherly feeling with Canada is worth more than the trade.

The Campaign Funds

There has probably been far less political corruption in the last election than in any other since the Civil War. The Republican campaign funds of 1896, 1900 and 1904, respectively, are said to have been $7,000,000, $5,000,000 and $4,500,000; while those for this year were hardly $1,700,000. This allows very little margin for buying votes in "blocks of five." No one will find fault with Mr. Charles P. Taft for having contributed $110,000, or one-tenth of the whole, for the expenses of his brother's election, altho that should not be any argument for his election to the Senate from Ohio, rather the contrary, to avoid the appearance of evil. Nor can there be any criticism of the contribution of $1,000 by President Roosevelt. Andrew Carnegie and Mr. J. Pierpont Morgan are each credited with $20,000, which shows what business wants, even altho business made its criticisms of Mr. Roosevelt. Nevertheless, business men must believe that the business reforms which Mr. Roosevelt prest needed to be made and will be of advan-

tage to the country, however much they objected to the strenuous and startling way in which the task was done. After all, the way the smaller Democratic fund was secured is the better way. There was a direct appeal to the people, and the money was received in small sums. Somehow the necessary expenses of a campaign ought to be paid from the public funds, as the President has suggested.

Cuba

Thru the presence of United States soldiers the election in Cuba was peaceful, and the American army will be removed very soon after the inauguration of General Gomez. It is most sincerely to be hoped that when they are removed disorder will still be suprest, but there are influences that want disorder, and some that would create it for the very purpose of compelling this country to take possession of the island. We have kept our promise. We have reorganized the government and started Cuba on her way once more as an independent nation. If she cannot maintain order it will not be our fault if we have to take possession. There are dangerous elements, and one of them is the jealousy between the successful democratic party, which represents the colored working people, and the more aristocratic Spanish element, to which the late President Palma belonged. Then there are sugar planters, some of them Americans, who think American possession is the only hope of peace, and who might be willing to foment strife for the very purpose of renewing the American intervention. While our country would be willing to have Cuba as a possession of our own, we desire that she should have a fair chance to show what she can be, and we have a certain curiosity to see whether the more democratic party of the humbler people are competent to rule.

Simplified Spelling in France

They do these things better in France, as Laurence Sterne once remarked. There, and in Germany, when they feel the need of correcting lawless spelling the Government takes a hand and does it. The Chamber of Deputies the other day gave an hour or two to the subject, and the Minister of Public Instruction announced a project for orthographic simplification which has been worked out by the Academy to make a reform of some of the most lawless spellings. Among them is the escape from the terror of Greek derivations. Thus one will no longer be suspected of ignorance of Greek if he uses such spellings as *cronique, fénomène, rinocéros, téâtre* and *rétorique.* The most radical proposed change is that to give up the *y* for *i,* still the Greek letter. This is not very radical, and it may not please the classical men who often wish to remind themselves of their Greek learning; and it is really less serious than the circular of M. Bourgeois, when in office, who directed examiners to show indulgence to candidates and not too rigorously to condemn errors in spelling, on the ground that these are venial faults.

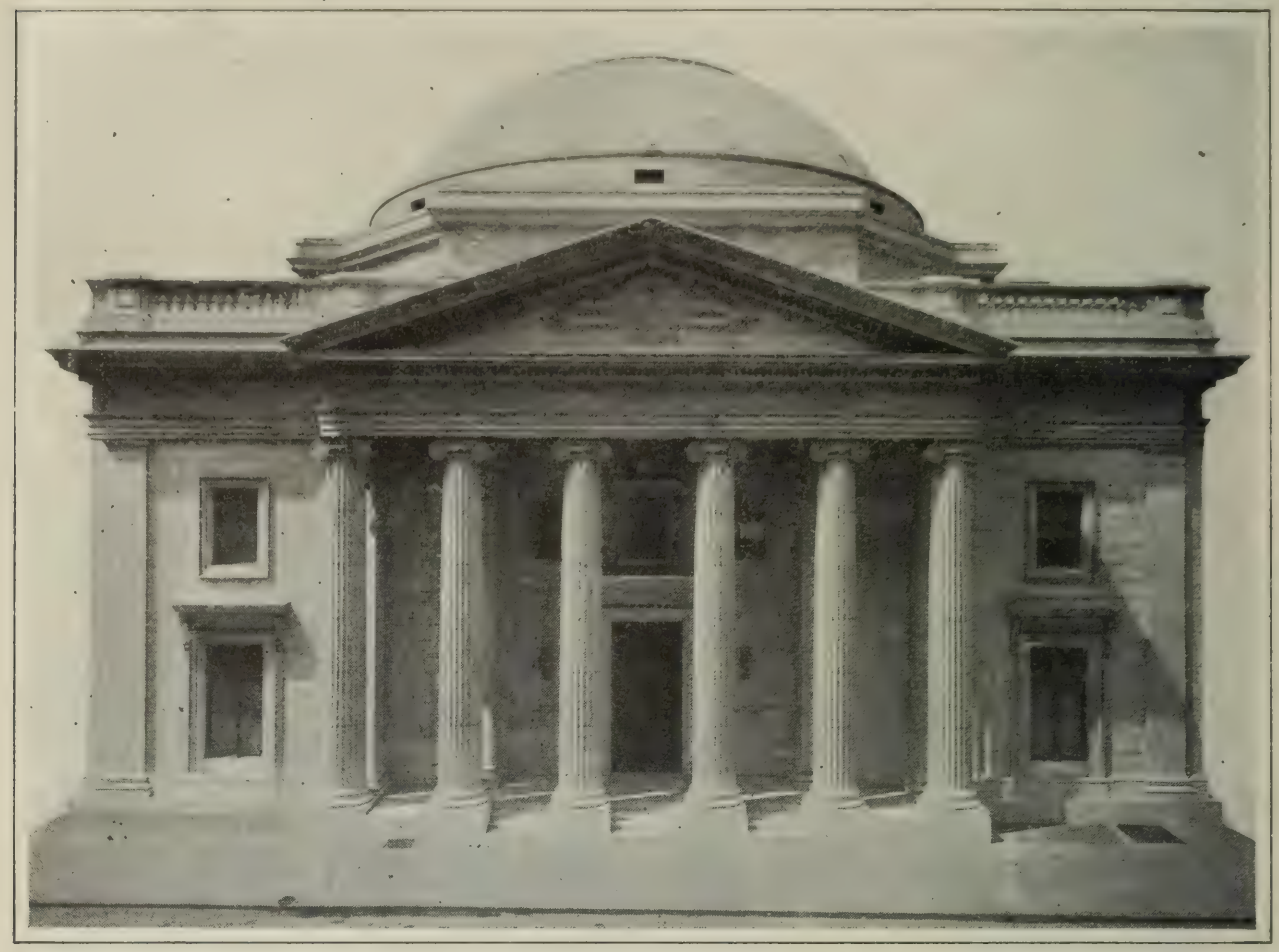
The Liberal Government in Great Britain under Mr. Asquith has gained an impressive victory in carrying thru the British House of Commons the licensing bill. It will shut up a multitude of public houses, but it recognizes their license as a sort of franchise which has a large value, which must be compensated for. The bill was past by a vote of 350 to 113, which proves that many not of the Liberal party voted for it. Indeed, the Church has not this time been unanimously on the side of the brewers. As the voting proceeded the opponents cried "Robbery!" and the Liberals replied "Property!" and the Laborites, who had joined the Liberals, cried "Snobbery!" This victory may be the turning point with the Liberals, who have been losing sadly in the by-elections. They will now enter with new courage on the effort to pass the Education bill, and the compromises made seem to show that it will be carried in such a form that the Lords will hesitate again to reject it.

In the wonderful collection of manuscripts belonging to J. Pierpont Morgan, and now on exhibition in the Columbia University Library, including the first book of "Paradise Lost," Keats's "Endymion," Thackeray's "Vanity Fair," Burns's "Cotter's Saturday Night," and a multitude of others of great interest, is one which shows that simplified spelling is no modern fad. It is Sir Isaac Newton's notebook, written when he was seventeen years old, mostly filled up with

algebraic and geometrical formulæ and figures, but including a series of rules for the simplification of English spelling. That was in 1659, 249 years ago, and only just now are we beginning to undertake the task which the young prophet than anticipated. The mathematics of the "Principia" got the better of his early philological instinct. The solution of the problem why the moon does not fly off on a tangent, or why the apple falls to the ground, interested him more than the more practical reform.

What does it mean? Here is the Ways and Means Committee holding sessions in Washington to consider how to revise the tariff, and those that attend it are asking not how to reduce it, but asking to have it increased. The manufacturers are there, but not the consumers. There is hardly an exception, except Mr. Spreckels, who, himself a refiner, declares that sugar needs no protection, and Mr. Charles Francis Adams, who divides the tariff protectionists into two classes, thieves, who want to grab for themselves what belongs to the people, and hogs, who squeal to get their noses into the trough. Was it a happy thing for the Republican party to change from the party of equal rights for all to a party for special favors for a class? Fortunately now it seeks revision by reduction.

Mr. Bryan is still in the hands of his friends. If the Democratic party wants him to be its candidate again he says he is willing, altho he does not now ask it. We cannot imagine he can possibly expect a fourth nomination. But that is hardly any more improbable than a third one was immediately after his second defeat. Three defeats is as much as a party can be expected to endure under one leader. In our Civil War when a general proved unsuccessful he was replaced by another, until Grant led the army to victory. He says he does not understand Tammany's failure to carry this city. But he may equally look to Iowa and Ohio and Indiana, where the Democratic candidate for Governor carried the State, but the Democratic candidate for President did not. He has had his turn for President; let him now try for the Senatorship.



Another victory of the Hague Tribunal is reported in the agreement of both France and Germany to refer to a commission of five judges of The Hague the long-standing dispute of the two countries over the Casablanca incident. It is thus becoming a common place of diplomacy that international disputes shall go to The Hague and not to the field of battle. But as yet only Mr. Stead suggests that the Balkan troubles be arbitrated by the Hague Tribunal. Yet they are to be settled by a conference of the Powers interested in the Treaty of Berlin, which is the next best thing; that is, if Servia does not get too much excited to act with prudence.

"Cowardly surrender," "piratical conspiracy," "deserters," "pious gang of pirates," "most degenerate type of cowardice and malignity," "snarl of the Union jackals"—these are the love-pats which one Christian editor gives the brethren who have joined another denomination. It is not necessary to mention the name of the paper or its denomination, but we commend the example of little birds in their nest and the prayerful consideration of the thirteenth chapter of I Corinthians.

There is something historic about the Church of the Pilgrims, in Brooklyn, which put a bit of Plymouth Rock in the outer wall of its edifice when built, and then for half a century kept Dr. Storrs as its pastor. Last week it installed as its pastor a young man whose scholarship and eloquence recall Dr. Storrs's youth, Prof. M. Le Roy Burton, of Yale University.

It is a veterinary college in Grand Rapids, Mich., whose Junior class rebelled and walked out because two negroes were allowed to recite with them. Harvard makes no objection to colored classmates, but these hopeful cow and pig doctors have a more delicate sensitive nature.

Financial

THE GIRARD TRUST COMPANY'S NEW BUILDING.

The Girard Trust Company's New Building

THE Girard Trust Company, of Philadelphia, which was chartered in 1836 and named after Stephen Girard, has recently moved into its new building on Broad street, between Chestnut and Market streets. The building is one of the most attractive banking houses in the country and is beautiful in design. The capital of the company is $2,500,000; surplus, $7,500,000; undivided profits, $1,399,846, and the total assets, $39,948,277. Effingham B. Morris, one of the directors of the Pennsylvania Railroad, well known in financial circles and highly respected as a citizen of Philadelphia, is the president. William Newbold Ely and Albert Atlee Jackson are the vice-presidents. The third vice-president and treasurer is Charles James Rhoads, and the secretary is Edw. Sydenham Page.

The Nassau Bank of New York

EDWARD EARL was last week unanimously elected president of the Nassau Bank of this city to fill the vacancy caused by the death of W. H. Rogers. Mr. Earl was born and educated in Elizabeth, N. J., and began as a bookkeeper in the Nassau Bank more than twenty years ago. In 1898 he was made assistant cashier and in 1907 cashier. During the long period of illness of the former president Mr. Earl attended to the affairs of the bank, and during the panic in 1907 succeeded in attracting an increase in deposits which has won for him the commendation of the directors and Mr. Earl's promotion to the presidency. When Mr. Earl was made cashier the Nassau Bank's deposits were $4,000,000. Today they are more than $6,250,000. The other officers are James C. Bell and John Munro, vice-presidents,

and W. B. Noble and H. P. Sturr, assistant cashiers. The directors include James C. Bell, Samuel R. Weed, Henry C. Miller, John Munro, Harry Bronner and Hon. Richard Young, Member of Congress. The Nassau Bank was established in 1852, and has a capital of $500,000 and surplus and undivided profits of $365,922.

Speculation and Trade

THE upward movement of prices on the Stock Exchange has been checked. In the first ten days following the election there was an average advance of about 7 points for the most active securities, and great speculative activity was shown in transactions amounting to 8,437,600 shares for the week ending on the 14th. Last week the total fell to 6,004,900, and prices declined, as a rule, altho there were some net advances. The general course of the market is shown in the following record of net changes for the eight most active stocks, which furnished 60 per cent. of the week's sales:

	Shares.	Net Change.
Union Pacific	846,850	— 1⅜
Reading	841,400	— 2⅝
Steel, common	706,100	— 2⅜
Southern Pacific	397,700	+ ⅞
St. Paul	264,600	— 2¾
Northern Pacific	239,000	— 1⅜
Amalgamated Copper	180,700	— 3⅛
American Smelting	139,075	— 2⅞

What is called the "outside public," composed mainly of speculators who buy for a rise and are very slow to take profits, had discounted too heavily the industrial improvement of which there have been many signs since the election. Other more expert traders have not only taken their profits, but have also sold for a fall, and many outside buyers with narrow margins have been forced to retire. This accounts in part for the fact that the week's transactions were less than those of the preceding week by nearly 30 per cent.

Commercial reports are decidedly favorable, mentioning with emphasis the revival of confidence. In the iron industry idle furnaces have been blown in, and idle men are resuming work. Several thousand of these will be taken back next week at the steel mills in South Chicago. There is a notable increase of activity in the textile district near Philadelphia. Following are extracts from the statements of the great commercial agencies:

Dun's Review.—Gains are now almost universal, each week surpassing its predecessor in volume of trade, while manufacturing plants increase active capacity and confidence is finding expression in extensive plans for the future. At many points seasonable weather has stimulated demand for winter goods and there is a gratifying change for the better in regard to the promptness of collections. It is especially encouraging that expansion of business is gradual, no excesses being attempted in commercial operations.

Bradstreet's.—Enlargement and expansion are still the dominating influences in trade and industry, and the volume of sales and of orders booked by wholesalers and manufacturers continues to show gains, particularly in the commercial and manufacturing centres of the North, East and West. Evidences that the improvement in trade, coupled with the recent activity in speculation, is beginning to affect the money market are found in the reports that commercial inqury for money accommodation is better and that rates are slightly firmer.

....The City and Suburban Homes Company, of which Isaac N. Seligman is treasurer, has declared a dividend of 2 per cent. out of the earnings for the past six months.

....Edward King, who died last week in his seventy-sixth year, had been for a long time prominent in the financial world. The son of James Gore King (a leading banker of his time) and a grandson of Rufus King, Minister to England, he was graduated at Harvard in 1853, was elected president of the New York Stock Exchange in 1872, and from 1873 until his death was president of the Union Trust Company. Owing to his eminence as a conservative financier his leadership was sought in times of disturbance. In October of last year, during the early days of the panic, he was made chairman of the committee of five (formed by the oldest and largest trust companies), whose service was of great value. In this important work he acted in concert with J. Pierpont Morgan. The members of his committee represented five institutions whose resources were $350,000,000.

Insurance

Our Tremendous Fire Losses Again

In our issue of September 17th we printed some figures regarding the fire losses in the United States as compared with similar losses abroad, wherein it appeared that our domestic showing was not as favorable as was the foreign. Mr. Ellis G. Richards, United States manager of the North British and Mercantile Insurance Company of London and Edinburgh, has lately been quoted along similar lines. Mr. Richards is one of the leading insurance men of the country. He has had wide experience in the insurance field, and as a result of this experience he believes that the time is at hand when America ought to take a leaf out of the European book in matters of fire and fire protection. He has declared that: "The art of prevention of fire has apparently advanced much less in the United States than the methods of discovery and extinguishment (abroad), but when here, as in many parts of Europe, the property owner is made severely responsible for any fires which occur on his own premises, one vital, perhaps pre-eminent, cause of our immense fire waste will be reached, because moral hazard and carelessness will be practically eliminated and a greater incentive will exist for better and safer buildings. This work cannot be accomplished by the insurance companies, however. The strong arm of the law is the only effective force to this end." "Personally," says Mr. Richards, "I favor and consider practicable the enactment of a law which would permit an insurer to collect from his insurers, in case of fire originating upon his own premises (except from known cause beyond his control), not more than fifty per centum of his loss; and if such fire extended to the property of others, whether tenants in the same building or property adjoining or exposed by his premises, only such proportion of his own loss as the amount of loss and damage to his own property bore to the loss upon all property involved. The law could permit certain exceptions: If, in the case of a mercantile house, manufacturer or other property owner, it could be shown to the authorities that larger protection from insurance was essential, exception in all or in part could be given by special authority, such exemption being listed, published and kept on file with the police and the fire marshal. The enforcement of some such law would reach the primary causes of the larger part of our annual fire loss." When it appears from the figures we printed on September 17th that the annual number of fires in American cities averages forty for each 10,000 of population, as compared with eight for each 10,000 of population in European cities, and that the annual per capita loss in Austria, Denmark, France, Germany, Italy and Switzerland varies from twelve cents in Italy to forty-nine cents in Germany, with an average of thirty-three cents as compared with $2.47 in the United States, it seems as if the time for some reformation was at hand and that perhaps Mr. Richards was quite right in his exprest opinions.

The Metropolitan Street Railway Precautions

If it were possible to eliminate the human element as a hazard the precautions against fires as compiled and issued by Adrian H. Joline and Douglas Robinson, receivers for the Metropolitan Street Railway Company, would make fires in the buildings controlled by the Metropolitan system quite impossible. A careful reading of their description of certain precautions against fire lends color to the idea that about every possible hazard has been provided against except the human one. It is all very well, for example, to rule that there shall be no smoking, but if a man says in his heart "I am going to smoke; there is no danger," that rule is useless. Then comes a fire. However, the receivers have taken very good precautions in any event. Their book makes good reading.

The Independent

VOL. LXV NEW YORK, THURSDAY, DECEMBER 3, 1908 No. 3131

Survey of the World

An Important Agreement with Japan

There was publisht on the 28th, by the Associated Press, an unofficial but apparently trustworthy statement as to an important agreement between the United States and Japan concerning the policies of the two nations in the Pacific, and with respect to China. This agreement, it was asserted, not only contains a mutual guarantee that each nation shall respect the other's territorial possessions in the Pacific, but also defines the attitude of each toward China, binding each to promote and defend by all peaceful means China's independence and integrity, and to support the principle of equal opportunity in the Chinese Empire for all nations. Moreover, it requires the United States and Japan, if complications should menace the *status quo,* to consult each other with a view to action in concert. The main body of the statement was as follows:

"The agreement has been drawn up in the form of a declaration, and consists of five articles, of which the following is an accurate and faithful description:

"The first article gives expression to the wish of the two governments to encourage the free and peaceful development of their commerce in the Pacific.

"The second is a mutual disclaimer of any aggressive design, and contains also a definition of the policy of each government, both as directed to the maintenance of the existing *status quo* in the Pacific and to the defense of the principle of equal opportunity for commerce and industry in China.

"The third article contains a statement of the consequent 'firm' reciprocal resolution of each government to respect the territorial possessions in the Pacific of the other.

"In the fourth article the United States and Japan express their determination, 'in the common interest of all the Powers' in China to support 'by all peaceful means at their disposal' the independence and integrity of China and the principle of equal commercial and industrial opportunity for all nations in the empire.

"The fifth article mutually pledges the two governments, in the case of 'the occurrence of any event threatening the status quo as above described, or the principle of equal opportunity, as above defined,' to communicate with each other for the purpose of arriving at a mutual understanding with regard to the measures they may consider it useful to take."

On the following day it was admitted at the State Department that an agreement of this nature had been completed, and that the American note awaited the signature of Secretary Root, who was absent from Washington. The agreement consists of a declaration by each Government, but it is understood that the two notes of declaration are substantially identical. Ratification by the Senate of an agreement in this form is not required. While such an agreement is nearly equivalent to a treaty, it does not impose the obligations of one, and it has no specified term. It is now known that an agreement of this kind was first suggested by Ambassador Aoki to President Roosevelt about a year ago, when the battleship fleet was preparing to sail for the Pacific, and there was much talk of war with Japan. He then suggested a formal exchange of notes defining the attitude of the two nations toward each other and toward the Pacific questions in which both were interested. But he did this without consulting the Japanese Premier and Foreign Minister. When he reported to them what he had said to the President and asked for authority to proceed, he got no answer. When he asked again the response was his recall. It was generally believed that this was punishment for some act of his. After his return to Japan he was in disfavor at the Foreign

Office, but not with the Emperor. Following the change of Government, when Katsura succeeded Saionji as Premier, the suggestion or proposition was renewed at Washington by Ambassador Takahira, and with due authority. It is interesting to observe that the initiative was taken in both instances by Japan. Our Government, it is understood, has ascertained the attitude of other Powers toward this agreement. The assertion is made that it has their approval. Unofficial reports say that official circles in Berlin regard it with the greatest satisfaction, as tending to dispose of all possible reasons for a conflict in the Pacific, to strengthen the policy of the open door for China, and to enable China to proceed with internal reforms undisturbed by fear of interference from abroad. Practically the same opinions are exprest in Paris and London.

Political Topics

Governor A. B. Cummins, of Iowa, was elected Senator, last week, to succeed the late Senator Allison. He has been the leader of the reform wing of his party in Iowa, and has criticised the tariff with much severity. In his address to the Legislature last week he said:

"I am deeply convinced of the justice and wisdom of the economic system which imposes protective duties upon imports, and with my voice and vote in the Senate of the United States I shall do everything in my power to preserve it. To me this established policy of the Republican party means duties upon competitive products high enough to fully protect the American producer in his home market against the unfair rivalry of other countries, but, upon the other hand, low enough to insure to the American consumer a fair American price. I am in absolute harmony with the definition announced in the most recent national Republican platform.

——In a New York paper there was recently published a long story, asserting that in 1904 Secretary Hitchcock reported against granting a franchise to the Prairie Oil Company (a Standard Oil subsidiary) in Oklahoma; that President Roosevelt overruled the report; that afterward the Standard contributed $100,000 to the campaign fund; and that the Secretary was virtually removed from office because his regulations concerning such franchises were offensive to the Standard. On the 24th the President published a statement saying that he had called for the official reports and had communicated with ex-Secretary Hitchcock, and that the story was "false in every particular from beginning to end."

——From Mexico, last week, Mr. Bryan sent for publication in this country the following explanation of his party's defeat:

"Our party has been at a disadvantage in several ways. In the first place, it has been divided. The money question was the surface question when that division occurred, altho the line of cleavage ran deeper than the money question. That division is practically healed and the Democratic party is now more united than has been the case since 1892. Then, the Republican party has had the advantage of having most of the large newspapers on its side. In fact, our party had very little support from the metropolitan press in the North. Third, the Republican party has had the support of big corporate interests who exert powerful influence over their employees. It has also had the advantage of having the Administration, with an army of officeholders, whose salaries come from the public treasury and who therefore can be active in politics without interfering with their business. Added to this, the Republican party being in power in nearly all the Northern States, the local officers, State, county and city, are nearly all enlisted in behalf of the Republican party."

The Democratic party, he added, would still urge reforms and would "continue to be an educational influence" until it became "strong enough to secure control of the offices." Replying in his paper to the open letter in which he was urged to become an evangelist, he says that his work "lies in another line." The war is not over, and he cannot desert with honor:

"Mr. Bryan believes that those in public life have had an opportunity to apply the fundamental principles of Christianity to present problems. Mr. Bryan is quite sure that his life work is in the study of the science of government and in the discussion of public questions from the standpoint of the interests of the common people as he understands those interests. This work he can do with tongue and with pen, and he finds an ample reward in the consciousness that he is serving his countrymen."

——Timothy L. Woodruff, chairman of the New York Republican Committee, who had some support in the party and the Legislature as a candidate for the Senate to succeed Senator Platt, has withdrawn from the field in favor of Secretary Root. At the request of Judge

Taft he went to Hot Springs last week. He learned there, he says, that Judge Taft was "very desirous" that his Administration should have "the benefit in the Senate of the exceptionally valuable assistance which Mr. Root can render by reason of his intimate knowledge of all the important matters with which the Government has been concerned both at home and abroad during the McKinley and Roosevelt administrations."

Campaign Fund Publicity

A statement filed at Albany shows that the campaign fund receipts of the national committee of the Independence party were $45,502, of which William R. Hearst contributed $42,295. The remaining $207 was obtained by the sale of souvenir medals. Concerning C. P. Taft's contribution of $110,000 to the Republican fund it is explained that it was made in several instalments and at times when there was no money in the committee's treasury. Lars Anderson, who contributed $25,000, says that he seeks no office and that it would be a sacrifice for him to accept one. He admires Judge Taft greatly, and his family is connected with Judge Taft's by marriage. At the end of the campaign, the Republican national committee had $18,500 left in bank, and the Democratic committee $1,234. Of the $1,655,512 received by the Republican committee, $528,000 was turned over to State committees and expended by them. Of the Democratic committee's $620,644, $142,537 was spent for documents and $33,786 for the speakers' bureau. The reports of the national committees do not, of course, include all the contributions made to State and county organizations. The Democratic State Committee of New York received $206,380, and it does not appear that any part of this sum came from the national committee. Contributions to the New York Republican committee were $392,318, and the national committee gave $255,000 of this total. The National Publicity Law Organization, of which Perry Belmont is president, gives notice that it will renew its efforts to secure the enactment of a Federal statute. It says, with special reference to recent experience under the New York law:

"All election laws and regulations are subject to evasions or violations, intentional or unintentional, but seldom has a first experience under a new statute or regulation resulted in such public benefit or been so indicative of ultimate success. A check has been put upon the large secret contributions by corporations and individuals with the understanding that political debts are thus incurred by party organizations. Stockholders and policyholders no longer helplessly witness the expenditure of corporate funds for political purposes. Corporations and candidates are protected against constantly increasing exactions. Enormous and unnecessary campaign expenditures, affording opportunity and encouragement to corruption, have been materially diminished. It is now the accepted opinion that a contribution to a political committee has no right to secrecy. It is now admitted that campaign fund publicity is not an unnecessary interference with alleged individual rights, and that publicity is essential in determining the propriety of motives prompting political contributions. Campaign money is now acknowledged to be public money."

Justice for the Negro

At the laying of the cornerstone of the new building of the colored Young Men's Christian Association, in Washington, last week, the principal speaker was President Roosevelt. In the building there will be a gymnasium, bowling alleys, swimming pools, reading rooms, etc., and Mr. Roosevelt remarked that "the religious people, those standing highest in the colored churches, now appreciate, as they did not a quarter of a century ago, that innocent sports and amusements should be encouraged." The building, he said, would be a tribute to the advancement of the colored race. White men should remember that justice to the colored man was demanded in the interest of all:

"What is known as the race problem is one of the most difficult; and it exists in the North as well as in the South. But of one thing we can rest assured, and that is that the only way in which to bring nearer the time when there shall be even an approximately fair solution of the problem is to treat each man on his merits as a man. He should not be treated badly because he happens to be of a given color, nor should be receive immunity for misconduct because he happens to be of a given color."

We should all strive, he continued, to secure equal opportunities and rewards for all deserving men, whatever may be their color. It was the duty of the white man to see that the colored man had the same justice he would receive if he were

white, and the duty of the colored man to make himself a useful citizen and so to behave as to win the respect of his white neighbor. "The performance of duty should be the test applied to white man and colored man alike":

"The first duty which each colored man owes both to himself and his race is to work for the betterment both of himself and his race; for its educational, but above all for its industrial and moral betterment. It is to the great interest of the white people no less than of the colored people that all possible educational facilities should be given the colored people; and it is of even greater interest to both races that the colored man should steadily strive for his own industrial and moral uplift."

In conclusion he spoke of Mound Bayou, in Mississippi, a thriving town of 2,000 people, which was founded a few years ago by negroes. All the residents are negroes, as are all who live in the neighboring country:

"There is not a saloon nor a vicious resort of any kind in the town. There are some 6,000 people on the tract of land of which the town is the center. This tract includes about forty square miles, all of it owned by the colored people themselves. Ten thousand acres of land are in a high state of cultivation. There is a big cotton crop, and in addition the colony produces four-fifths of the corn and hay it needs, with many hundreds of horses, mules, cattle, and hogs. In the town itself there are six churches and three schools. There is a bank with a capital stock of $10,000, which does a thriving business. There are saw mills, gins, blacksmith shops, bakeries; all without a white inhabitant in the neighborhood. The people are prosperous and singularly law abiding."

This, he said, was an object lesson full of hope for the colored people, and therefore full of hope for the white people, "for the white man is almost as much interested as the colored man in seeing that the latter rises instead of falls."

The Revolution in Hayti

The troops of the Haytian Government were routed by the rebel forces on the 28th ult., at Anse a Veau, which is 55 miles from Jeremie. They had been sent out under the command of General Cyriaque to attack the forces of General Simon. It is said that they left 300 dead on the field. President Alexis at once decided to send from Port au Prince a larger body of veteran soldiers. The revolutionary movement has spread northward from Aux Cayes, where it originated in the revolt of General Simon, who for many years had been military commander of the southern part of Hayti. At last accounts Aquin and Jeremie were in the hands of the rebels. There are said to be three movements, instead of one. Simon hopes to be President, and his operations are in his own interest; the uprising at Jeremie is in support of General Celestine Fouchard, now an exile in Jamaica, and the rebels in the neighborhood of Gonaives desire to promote the aspirations of General Firmin. It was reported on the 25th (and believed at the capital) that General Leconte, Minister of the Interior, had been captured by revolutionists at Jeremie and shot. He had gone to that port with a small force, had found the Haytian gunboat "Croyant" ashore there, had denounced her captain as a traitor and (it was asserted) had caused him to be executed at once. When the people protested against his attempt to procure recruits there, he had two prominent citizens shot. Then the people attacked him, made him a prisoner, and put him to death. All this was believed by the President, who appointed a Cabinet officer to fill the vacancy. But Leconte arrived at the capital two days later. He had been captured but, with four officers, had escaped in an open boat. In this they were at sea for two days without food. Leconte was responsible for the summary execution of eleven prominent Haytian politicians in March last. He denies that three men were executed by his order at Jeremie. The United States has protested against the decree in which President Alexis ordered a blockade of the ports held by revolutionists. Our Government will not recognize the blockade. Alexis admits that he cannot enforce his decree.——It became known on the 29th that the revolutionists were marching upon Port au Prince, and the government troops hastily prepared to defend the capital. Foreseeing its capture, the Cabinet sent the Foreign Minister to Mr. Furniss, the Minister from the United States, and asked him, as dean of the Diplomatic Corps, to present to President Alexis the Cabinet's request that he resign at once and con-

sent to the formation of a provisional government in which General Simon should be represented. They suggested that Simon should appoint two Cabinet officers, President Alexis two, and the Diplomatic Corps one. Mr. Furniss presented the request to Alexis, who promptly refused to resign, saying he would fight to a finish.

The British Parliament

The House of Lords, by the enormous vote of 272 against 96, has rejected the Licensing bill, which had past the House of Commons by an equally overwhelming vote. Every effort was made to make the majority against it in the House of Lords as large as possible. First the Conservatives met in the residence of Lord Lansdowne, leader of the Opposition, to the number of 200, and almost unanimously agreed to reject it. The resolution declared that, while the Unionists are desirous of promoting temperance, it is impossible for them to support a measure that violates the principles of equity. There were only eight dissenting votes. Not since the Lords mustered to throw out Mr. Gladstone's Home Rule bill have they gathered in such numbers. They were brought from the three kingdoms, those that had not attended for years. Two peers took the oath after many years' neglect in order to take their seats and vote against this "attack on property." Several others who hitherto have never entered their own chamber, wandered into the House of Commons. They gave the bill what Lord Fitzmaurice called a first class funeral. Fitzmaurice is a Liberal Cabinet Minister, and it was amusing to hear him gibing at his own brother, Lord Lansdowne, the Conservative leader in the House of Lords, for shepherding so many peers who rarely came near the House. It is now generally expected that the Chancellor of the Exchequer will take advantage of the rejection of the bill to raise at least a couple of million pounds by increased license duties. On the other hand, the Conservatives insist that this bill is the most unpopular measure with the country attempted in many years, and that the House of Lords in rejecting it has reflected public sentiment. They urge the Government to test the question by going before the country in a general election, but there is very little likelihood of this being done.——The House of Commons, by a vote of 233 to 48, has agreed to the first reading of the bill introduced by William Redmond to remove the existing Catholic disabilities. The bill has practically no chance of further consideration during the present session. ——A great deal of talk has arisen over the alarmist speech of Earl Roberts in the House of Lords on the unpreparedness of Great Britain to meet a possible invasion. Earl Roberts was formerly the Commander-in-Chief of the British Army. The danger, he said, was of a landing of an invading army in England in case of war. He had ascertained, he continued, that vessels capable of accommodating 200,000 men were always available in the northern ports of Germany, and that as a result of the new German service law 200,000 men could be collected in the districts of the nearest port without any trouble. The great German steamship lines were in constant practice in embarking and disembarking, and as the railroads were owned by the State, all preliminaries, up to the actual dispatch of troops, could be carried out with the utmost secrecy. Germany was perfectly aware, the Field Marshal went on, that it would be essential for her transports to evade the British fleet, and she could easily distract attention by small raids while the main disembarkation was proceeding undisturbed. He continued:

"It would be folly to shut our eyes to these possibilities, however much peace is desired. The startling events in the Near East have brought home to the most careless observer that nothing could save that country which is not prepared to protect itself. If Great Britain continues to neglect the most ordinary precautions, she may some day find herself in the hands of the invader and forced to submit to the most humiliating conditions.

"This danger is daily becoming more threatening. Within a decade Germany has created the greatest sea power that ever existed, except Great Britain's, and at the present moment it is formidable. Measures are being taken to increase that power. It is calculated that there are 80,000 Germans in employment in Great Britain. They are trained soldiers, and if a German force once landed on these shores they would be ready to help.

"My feeling of conviction in this matter is

strengthened by the grave events which at this very moment cloud the horizon of Eastern Europe with uncertainty, and it is my absolute belief that without a military organization more adequate to the certain perils of the future our empire will fall from us and our power pass away."

He set forth at length technical and other grounds for wholly disbelieving that War Secretary Haldane's new territorial army could be either large enough or efficient enough to repel invasion. There ought to be a citizen army, he said, of 1,000,000 instead of 200,000. No smaller force could hope to meet successfully 150,000 highly trained Continental soldiers and fulfil the other duties which would be concurrently demanded of it in the event of an invasion. The speech caused much sensation, and was followed by those of Lord Cromer and others in the main supporting him. The Earl of Crewe, representing the Government, intimated how unwise such a speech was by expressing the hope that it would not have regrettable consequences on the Continent. The following resolution, offered by Earl Roberts, was past by a vote of 74 to 32:

"*Resolved*, That the defense of the islands necessitates the immediate attention of the Government, to make provision for such a strong and efficient army that the most formidable foreign nation will hesitate before making an attempt at landing."

The speech has greatly interested Germany, and the journals declare that it indicates Great Britain's irreconcilable hostility to Germany, and is symptomatic of the general gloomy international outlook. Colonel Gaedke and Count Reventlow, respectively Germany's best known military and naval critics, see something comical in Lord Roberts's fears, and they set forth technical reasons to prove that his assumption of Great Britain's vulnerability is absurdly exaggerated.—— Some of the British journals object to the Government's making the rule include the United States, which requires that Great Britain's navy should equal the combined strength of any two other nations, those of Germany and the United States being the two largest. They cannot think of war with this country; and, besides, they remark that the United States has to keep two navies, one in the Atlantic and the other in the Pacific.——

A curious incident amuses the British public. There has lately been considerable rowdyism on the part of Oxford students, and there have been clashes with the police and some newspaper discussion. Some arrests have followed. The Rev. Lord William Cecil of Hatfield wrote to *The Times* arguing that the contact of "high-spirited young gentlemen" with "clumsy, lower-class policemen" was bad for the high ideals which the university imparts to its students. Lord William also protested against "innocent and pure youth being dragged into the police court, with all its concomitant degradation and publicity." Only a few days later Lord William Cecil's own son was expelled from Oxford, having been caught by the police throwing stones at the windows of Balliol College in the early morning. He was turned over by the police to the university proctors, with the result that he was "sent down," that is, expelled.——The Court of Appeal has given judgment against trade unionists in a case of great importance to them. A branch secretary of the Amalgamated Society of Railway Servants petitioned for an injunction to restrain the society from spending money for objects other than those mentioned in the trade unions act of 1876. The immediate object of the claim was to prevent the unions from spending money for election purposes and the support of Labor representatives in Parliament. The court has granted the injunction, and refused to suspend it awaiting an appeal to the House of Lords.

Austria and the Balkans

It has been a week of alarms. We have seen no approach to a settlement of the difficulty by any conference of the Powers. Austria will not yield, and Russia and Turkey refuse to accept the annexation of Bosnia and Herzegovina unless after a decision in a conference of the Powers. It is reported that the Emperor Francis Joseph of Austria is very feeble, and quite unable to attend to affairs of state, and that the Heir Apparent, the Archduke Francis Ferdinand, is performing all the functions of the Emperor, with the aid of the ambitious Baron von Aehrenthal, the Foreign Min-

ister. It is said that the Emperor would gladly abdicate, but is not allowed to do so. Two newspaper correspondents who have visited Bosnia declare that the people hate the Austrian rule, and are represt with great severity. The Austrian Ambassador, the Marquis Pallavocini, has been withdrawn from Constantinople. This has to do with the Turkish boycott of Austrian goods, which has cost Austrian trade $200,000,000. Protest to Turkey has resulted in orders to the customs officers to make no distinction against Austrian merchandise, and that the porters do not refuse to discharge Austrian cargoes. But it is quite impossible to force the people to buy Austrian goods when they do not wish to. Austria has asked France to use her good offices against the boycott, but France declines, saying that this is not a political but purely economical question, with which she could not meddle. Indeed, the boycott greatly helps French trade. The Austrian newspapers declare that Great Britain is fostering the boycott, but there is no evidence that this is true. In case of war it is feared that Turkey, Servia and Montenegro would be united against Austria. Troops appear to be already placed in advantageous positions on the frontiers. Bulgaria and Turkey appear to have settled their difficulties on the basis that Bulgaria shall pay Turkey from $12,000,000 to $14,000,000 on account of Rumelia and $10,000,000 on account of the railroad. The capitalization of the Rumelian tribute and the participation of Bulgaria in the Turkish debt is to be left to the International Conference. General Vukotitch, Montenegrin ex-Minister of War, has been to Constantinople on a mission, and M. Pasitch, who accompanied the Crown Prince to St. Petersburg, is also in that city; and they have had interviews with Kiamil Pasha, Turkish Prime Minister. Their presence adds confirmation to the report that an alliance is being formed between Turkey, Servia and Montenegro. A conversation is reported between Von Aehrenthal and the Turkish Chargé d'Affaires in Vienna, in the course of which the Austrian Foreign Minister said he had done all in his power to achieve a conciliatory settlement with the Sublime Porte, but, unfortunately, his efforts had been fruitless. Austria-Hungary wished, he said, according to this report, to be a friend to Turkey, but she could also be her enemy. If the Ottoman Government took up a hostile attitude toward Austria it would find itself always confronted by him. This gives force to the impression that the Austrian Government does not desire a settlement. King Peter of Servia is reported ill from a paralytic stroke. In the event of hostilities a Bulgarian Cabinet Minister has said that direct cooperation between Bulgaria and Austria is unthinkable, but that in such an event Bulgaria would be tempted to invade Macedonia, unless Turkey should give guarantees of equal political and civil rights to Bulgarians in Macedonia.

Italian Disturbances

There is much ill-will between Austria and Italy despite the triple alliance. It has always existed from before the war which resulted in the cession of Venetia to Italy. Of late it has been increased on account of the forcible annexation of Bosnia and Herzegovina by Austria, for it is resented in Italy, which has ambitions of her own, and is closely related to Montenegro. This resulted in a fight between students of the Vienna University. The Italian students were holding a meeting when they were attacked by the Austrian students and, after a severe conflict, were driven out, until the police and soldiers made arrests. This created great ill-will in Italy. A mob, mostly of students, attacked even the Austrian Embassy at Rome, destroyed the Austrian flag and hooted the Ambassador. The soldiers and police dispersed the mob, but some statements declare that the action of the officers was only half-hearted and dilatory. There were similar outbursts at Bologna, and meetings to protest against the treatment of Italian students were held in Naples, Florence, Genoa, Turin and elsewhere. At Milan 2,000 young men are said to have pledged themselves to help the Montenegrins and Servians when war breaks out. Members of the Italian Chamber of Deputies have been visiting Servia and Montenegro, and report the warlike feeling very strong. The con-

tinuance of the disturbances in Rome, with the necessity to hold a cordon of troops about the Embassy, caused the postponement of the meeting of the International Institute of Agriculture from Thursday till Monday. Again on Sunday 20,000 people joined in an anti-Austrian demonstration in Rome, where speeches were made, and the mob attempted to attack the Austrian Legation but were restrained by the soldiery.

German Affairs

An agreement between Germany and France was signed November 24th to refer to the permanent Court of Arbitration of The Hague the dispute over the forcible seizure by French officers of German deserters from the French Army. The Court will meet May 1st at The Hague. It will consist of five members, of whom two will represent each country, and the fifth will be a neutral, and it is suggested that he will be from the United States.——The Emperor has been ill with a cold which has confined him to his bed, but is now recovering. He has ordered that henceforth the daily bulletin from the palace shall contain only news of his official doings, and omit the more private personal affairs relating to him or his family. It is said that this is caused by the severe comments on his hunting banquets, and other trivial interests while the country was disturbed over his indiscretions.—— The Federal Council has accepted the Government military budget for 1909. It is $5,000,000 less than that for 1908. In the Reichstag Thursday of this week has been set for the motions to be introduced by the Radicals and Socialists to define more closely the Ministerial responsibilities as against the autocracy of the Kaiser. Various Chambers of Commerce in Germany are petitioning the Imperial Secretary of Posts to establish, in the interests of trade, a two-cent postal rate between Germany and the United States such as now exists between England and the United States. Business houses in Germany today send their packages for America by mail to England to be reposted there under the lower rate.——Ernst Heinrich Haeckel, the well known naturalist, who has been Professor of Zoölogy at the University of Jena since 1862, has decided to retire from his university duties on the occasion of his seventy-fifth birthday, on Februthy 16th.——There appeared last week further denials from Chancellor Von Buelow that there was any truth in the fabricated reports as to the substance of Mr. Hale's interview with Emperor William. It appears to have been concocted in London.

French Doings

France has been excited the past week over the sensational developments as to the murder on May 31st of the painter, Adolph Steinheil, and his mother-in-law. The widow has been arrested on the charge of guilty knowledge of the murders. She has told conflicting stories, and is said to be a neurasthenic, who is liable to imagine any absurd thing. The stories told involve the supposed murder by poison of President Faure ten years ago, who is said to have had intimate relations with Madame Steinheil.——Professor Metchnikoff, the Russian sub-director of the Pasteur Institute at Paris, who has received half of the Nobel Prize this year for medico-physiological research, says he will devote the $19,000 received to continuing the work for lengthening out human life. He regards seventy or eighty as comparative youth, and thinks men ought to live to one hundred and fifty years. He regards it as a matter of digestion.—— The sailing of President Castro, of Venezuela, for Bordeaux has quite excited the French newspapers. They ask what kind a reception he is to receive, in view of the fact that the French Government has broken off diplomatic relations owing to the treatment of French citizens in Venezuela. The Dutch Minister of Foreign Affairs has asked France what reception the Government expects to give Castro, as Holland is ready to associate herself therewith.——On Sunday elections were held for the Councils of Prudhommes, or boards of arbitration for labor disputes. Women are eligible for trades in which women are employed. and they are called Prudfemmes. Only one Prudfemme was elected.

The People's Victory in Denver

BY MAUCHLINE MUIR

[No more gratifying result of the last election to the friends of progress and good government occurred than the re-election of Judge Lindsey to the Juvenile Court of Denver against the regular Republican and Democratic tickets. Judge Lindsey is the father of the Juvenile Court idea in this country and has gained an international reputation for his work in juvenile delinquency. We asked the Judge to see that we had a good account of his victory and the following article is the reply.—EDITOR.]

THE story of Judge Lindsey's re-election to the Juvenile Court of Denver is the tale of a city's determination to save a good man's work in spite of strong and sinister influences that had condemned it. Ever since the father of the Juvenile Court system took office eight years ago he has attacked fearlessly the forces of evil which continually supplied the stream of little delinquents that poured into his court. The keepers of the wine rooms and the saloons, backed by the utility corporation forces in political alliance with them, long since determined to replace him with a ward-heeler who could be depended upon to be conveniently blind to the causes inducing youthful crime.

These plans slipt up four years ago owing to a storm of protest within the parties that necessitated his nomination on the part of both the Republicans and the Democrats. This year the convention machinery was under more perfect control and neither party put the name of Ben B. Lindsey upon its ticket.

Not without considerable hesitation did Judge Lindsey decide to make an independent race. Most of his best friends advised against it, taking the position that to run and be defeated meant that he was discredited. It was believed almost unanimously in Denver that at best he could poll a few thousand votes. In a Presidential year, with a State and county ticket also to be elected, nobody thought that a plurality of the voters could be induced to search for a single name on the immense ballot for the purpose of scratching. But the Judge felt that he owed it to the people who had always supported him so loyally to present his name to them. He did this as a matter of principle rather than with any real hope of winning.

The campaign lasted scarcely longer than a week. From first to last it was a triumph over difficulty. Originally without money, without organization, without any backing other than the vague support of well-wishers, all of these were secured readily from sources not usually considered in political campaigns. Sufficient money was raised among friends, one of whom, a woman not previously known to the Juvenile Judge, insisted on contributing the greater part for the sake of the cause. An organization was quickly effected, every precinct of every ward in the city being carefully covered. Around this organization rallied the supporters of "the kids' judge." A preliminary canvass showed that about twenty thousand voters were willing to pledge themselves to vote for him, but it was a question how many of these could be expected to take the trouble actually to vote their conviction regarding the Juvenile Court.

The professional friends of Judge Lindsey were willing to give him their vote, but not to work in what they considered a hopeless cause. Wherefore he went boldly direct to the common people. He knew *they knew* about his work from actual experience of themselves or their friends. By great good fortune he interested labor leaders and every night addrest one or more union meetings. During the week he spoke to thousands of workers and won them almost to a unit. Parlor meetings, as well as big rallies, fanned the growing enthusiasm. Some of the city pastors went stumping with the Judge. Others spoke for him from their pulpits. Others worked privately. The Christian Citizenship Union flooded the churches with literature showing what Judge Lindsey had accomplished in tangible figures during his incumbency. Figures could not show what a moral force he has been in the

community, but they could set forth some facts about the system he has inaugurated and the laws he has had past for the protection of the children. The result of this was that the Church and labor marched together to the unexpected victory.

It was to have been expected that women both as voters and workers would be strong for this man whom the enemies of society had marked for defeat. Many of them were tireless in the aid which they gave, and of these a large proportion were working women, a considerable percentage from the middle classes, and a very small minority from the clubs and the wealthier part of the city.

One unique phase of the campaign was the part taken in it by the boys themselves. Several of them—nearly all newsboys and court probationers—went on the stump for their friend, "de Judge." They spoke in parlor meetings, at labor assemblies, in the slums, and in the churches. Wherever they could get a hearing these little boys, running in age from thirteen to fifteen, went out into the highways and byways and preached the re-election of the man who had made the Juvenile Court. They did this without solicitation, just as they interrupted the other two candidates for the position when they were speaking to start cheers for Lindsey which drowned the oratory of the politicians.

Notwithstanding the evident strength of the movement and the hold it had taken on the people, the practical politicians gave it very slight consideration. They assumed that it was an impotent sentiment which would not outlast the wear and tear of Election Day. For any man to get 25,000 votes in Denver on scratched ballots at a Presidential election was considered humanly impossible.

But the very thoro organization which had been effected in so short a time was not relaxed at the critical hour. Every polling place in the city had its Lindsey watchers. These were both men and women, many of them striking railroad employees, some university students, a few children of the court playing truant from school to serve the cause they had at heart.

At no previous election had Denver ever had so many scratched ballots. The count had not progressed far on election night before it became evident that these very greatly outnumbered the straight tickets voted. By midnight it was known that Judge Lindsey was elected, tho it was not till next day that the magnitude of the victory was made clear. The people's candidate had obtained nearly as many votes as both the machine candidates together. He had polled over 32,000 votes. In addition to this several thousand persons had tried to vote for him and had lost their ballots thru incorrect marking.

Once more the machines have failed in their attempt to discredit this man whom they can neither buy nor intimidate.

DENVER, COLO.

The South's Way

BY MRS. L. H. HARRIS

[Mrs. Harris hardly felt inclined to follow the line of our request that she write on the Carmack tragedy, which occurred in the city of her residence. She has instead written the following article, which is something more than a discussion of Southern chivalry.—EDITOR.]

IN a certain sense the northern, eastern and western portions of this country have become one. The people in them do not think alike, but they think in the same general direction, with the same rewards in view of money and power. But the way of the South is different. Men here do not like money and power less, but they do not know how to secure either according to modern methods. The difference is not so much a difference of opinion as it is a difference of nature, of temperament. Given a section where every man lays more

stress upon his own individuality than upon the needs of the community, and where he cultivates a temperament besides, and you have a section that can only be changed by colonization. In other places, the emphasis is beginning to be placed upon the community rather than upon the individual, and in the East, for instance, only artists are supposed to have "temperament"; but down here the meanest man has his exaggerated sensibilities and shows them as quickly as if he were a petted prima donna.

There never were a people who have chosen so arbitrarily what they will be and what they will do, and who have accomplished their will with so much courage and so many absurdities, in the face of greater odds or more ridicule. This is their dominant characteristic and shows in the smallest details of life. In the North, for example, the worst people speak good English; here, the best ones do not. A wag once boasted that he could always tell when he crossed Mason and Dixon's line coming South because *biscuit* was immediately substituted for *baker's bread*. A quicker way would be to observe when the passengers begin to use two negatives in the same sentence. All possible pains may be taken in training a Southerner to speak correctly, even to forcing him into association with New England teachers who would rather commit suicide than to be guilty of a sin against syntax, but the moment he is free of restraint he will snap in the extra negative. I have sometimes thought it might be the language symbol of the elemental kicking sensation in every Southerner's mind against the other fellow's mind.

There is a difference also in what they mean when they speak. What people say in the North and East does not represent them, what they *are*, but what they think, or it may even be a clever representation of what some one else thinks. The fact that a man in New York lectures on ethics is no sign that he is not a scamp, nor must he be a civil engineer because he talks civil engineering. He may be an editor writing an article thru his hat on the Panama canal. They all have Burbank intelligences, curious, artificially grafted, variegated brains, and that kind of acquisitiveness which produces the hybrid mind but does not affect character. Now the Southerner's mind is identical with him. If he is a rascal, he talks like one. He is too honorable even then to talk ethics. And you never see him skipping the rope intellectually, just to see what and how far he can think in a given direction. He recognizes this as folly, no matter how grave it sounds in words. And all this explains why the Southern people are more truthful than the Northern people. They have not so much diabolical mental versatility for temptation. A Southern man only exaggerates, he does not lie. And he exaggerates for the noblest of reasons—the little of truth that he knows is too small for his great spirit. He stretches it therefore as a bird stretches its wings.

Also, it is a point of honor with him to proclaim his identity with his section. If, by any chance, a South Carolinian should win thru the gates of heaven, there is no doubt that his first request would be that he might be introduced to the Hosts as an humble sinner from the South! Recently this writer entered a Northern church while the minister was upon his knees, concealed by the pulpit, leading the prayer.

"That man who is praying is from the South."

"How do you know? By his pronunciation?" inquired my friend.

"No; by the eloquence of his humility, by the way he puts his best foot foremost before the Lord, by his courtier consciousness that he is engaged in a royal ceremony with the King of heaven, and by the elegance of his spiritual satisfaction in the performance."

"Absurd!" exclaimed my friend.

But when the man arose from his knees he proved to be an obscure, fiery-eyed little preacher from Georgia!

Now I do not know what a Yankee would do in heaven, and I have never heard but one get beyond the ceiling in prayer, but down here he very often wishes you to believe that he has almost ceased to be a Yankee. At a recent dinner, the person next me was a poetess from Massachusetts. By way of putting herself amiably within reach of us, she declared that she had nearly got all the "Yankee rubbed off!" But there never was a Southerner, I suppose, so mean,

so insincere, so lost to self-respect that he would wish to seem less a Southerner. When he travels out of his own section, in fact, it becomes his insufferable proclamation, often offensive to those who have not had the same advantages in the matter of nativity.

Very much more might be said of the Southerner's way socially, but now we come to his way financially. And that is deplorable. We have learned to work but not to save, not to look ahead and invest. We do not think definitely and altogether in any profitable direction. There is the "solid South" politically, of course, but we have had no protection out of that beyond self-protection from the Republican guardians of negro interests. We are not pragmatists, but idealists still. We have more imagination than enterprise. We are not nearly so lazy as we have the reputation for being, but we spend too much energy just hoping. We do not know how to pool our means, organize and work together. There is too little room for personal dignity in organization. About the town of R—— in North Georgia there are mountains of material out of which cement is made. With comparatively small capital a Northern company has bought these deposits, built a plant and is coining money. The villagers are the day laborers in the plant, where the dust produces galloping consumption. Meanwhile the slate quarries, owned by Southern capital, at the same place, are closed because the property has been tied up for years in a typical Southern law suit. The same conditions exist in hundreds of cotton factories all over the South. They are owned by Northern capital and operated by poor Southern whites, at the usual low wages. John W. Gates and other Northern speculators own most of the timber in the great pine belts. If things go on as they are going now, presently the Southerners will have nothing left but the bare ground. But that is the point. The order of events will be changed, and changed after the desperate manner of these people. And this brings me to consider a matter very much discussed from time to time—that is, lawlessness in the South.

There is more lawlessness everywhere else in this country than in the South. There is so little lawfulness in Chicago, for example, that even a novelist will not go there any longer to lay the scene of a story. And the whole country has been blushing for New York till it is almost apoplectic. The most brutal violence of the year has taken place in Ohio. But the reason why so much is said of Southern lawlessness is because it is different from that in any other part of the country. Even the high class criminality of this section is different from that practiced by the same kind of criminals elsewhere. In the North, when one prominent man kills another prominent man, it is nearly always about a woman, and not much of a woman at that. Most of the scandals published in the newspapers for years have been frightful expositions of social and domestic depravity among the wealthy people of the North and East, in which pistol shots have been exchanged. But down here, when one prominent man kills another, it is at least a distinctly masculine affair, usually political. And while it is easy to recall many such instances, this writer does not now remember one to have occurred for a number of years where the sex motive has entered into any of our distinguished men's murder cases. I am not intimating that murder, wherever committed, does not indicate moral degradation, but there are degrees even in degradation, and that of the North far surpasses that of the South in this particular. The motives for murder among the people there who are not supposed to be of the regular criminal class, but who belong to prominent families with wealth and social position, are as revolting as those which lead to murder in the lowest dives, and they are *not* down here. They may be quixotic, bad, the results of frightful passions, but they are not sexual.

However, the term lawlessness in the South was first applied after the Civil War to the Ku-Klux-Klan. To prevent negro supremacy forced upon us by the North, white men in disguise patrolled the country at night ordering and arranging matters satisfactorily with the negroes. It was not gently done, nor wisely, but it was done. Then the phrase had reference to mob violence in the South, but when the same mobs appeared

elsewhere, and for the same reasons, this violence ceased to be merely Southern. More recently lawlessness in the South has reference to the "night riders" in Kentucky, Tennessee, Georgia and other Southern States. But there is one kind of lawlessness in the South, and everywhere else in this country, which is the cause of all the other lawlessness—that is, the lawlessness of those whose duty it is to enforce law. There is a law against trusts, but the tobacco trust put the price of tobacco down so low that the tobacco growers of Kentucky and Tennessee could not earn a living. This is why the trust warehouses are being burned. The same thing is true of cotton in Georgia, and explains the burning of gin houses. Many poor men of large families lived by fishing in Reelfoot Lake in Tennessee until the lake was bought by a rich private corporation for a fashionable game preserve and the fishermen were forbidden to fish in it. This accounts for the Reelfoot Lake tragedy in which the night riders figured. It will account for the burning of the cotton factories and saw mill plants in the South later on. I am stating facts and making a prophecy. I am not defending the night riders. They must be put down, of course, but it just isn't in any kind of Southerner to stay down under too much pressure. He does not know how to organize and protect himself legally. He can hardly bear one boss, much less a labor union boss. Therefore the union system is not for him. And a strike does not give him sufficient freedom of action. Besides, he is a rural man; he does not live in a compact community where the strike method succeeds. If you push any kind of a Southerner too far he sheds civilization, arms himself with fire and sword and steps back into the middle centuries, where he feels more at home, anyhow. He goes mad quickly, and then the only thing left to do is to kill him, or imprison him for life—which, of course, must be done. But is it fair, in this age of enlightened humanity, when there is so much talk of "brotherhood" in the very region whence most of the oppression springs, to drive simple, helpless men to madness, and then make a legal virtue of killing them to protect society? To be sure, they become drunken, vicious. They have terrible memories and still more terrible grievances. Such things make brutes of men. We must punish them, but certainly we ought not to try to shine while we are doing it. To be obliged to hang a man because we have made him a murdering night rider ought to be a very chastening duty.

These are some of the ways of the South, the kind of high roads the people there make thru difficulties within and without themselves. They might be better, more grammatical, for example, more thrifty, but after all they could be worse. If the Southerner is bad, he is not mean; if he is improvident, he is not stingy; if he is insolent, he is not hypocritical; if he is sometimes a night rider, at least we may still be thankful that he is not a pharisee. And he is incapable of that self-assured superiority which inspires those otherwise highly civilized people of the North to nag and abuse an unfortunate people for forty years, never seeing their virtues, but keeping the spyglass of their minds turned always in the direction of their backdoor faults. To conquer your enemy in war, and then to spend the rest of your life picking at him has always seemed to me a curious but correct evidence of Northern nobility of spirit.

NASHVILLE, TENN.

Opportunities in Latin America

BY JOHN BARRETT

[This is the first of an important series of six articles on opportunities in Latin America. These American people have been singularly negligent in promoting closer relations, politically and commercially, with our Southern Sister Republics and it is hoped that this series will open the eyes of our people to the opportunities for solidifying the New World in bonds of friendship and commerce. The series will also be of especial interest to ambitious young men seeking opportunities for a career away from home. No one is better qualified to contribute to our columns this series than Mr. Barrett, who was formerly American Minister to Siam, Argentina, Panama and Colombia and is now the energetic and efficient Director of the International Bureau of American Republics. The Bureau is an official institution supported by the American Republics and devoted to the encouragement of Pan-American commerce, friendship and peace. The Bureau is in touch with all classes of men in all the twenty-one republics, and aims to develop by every means in its power the increasing interest in the different American nations, and to provide information about them. All communications in regard to any of the republics of this International Union or any questions raised by these articles should be addressed to The Director, Pan-American Bureau, Washington, D. C.—EDITOR.]

BRAZIL, before the end of the century, will be one of the greatest sources of food supply in the world. More than that, this republic of South America will be the home of an active, industrious race numbering 150,000,000, engaged in a productive energy equal to that of the United States today, but tempered by a Latinity that removes our restlessness from life, while leaving results that will show as sure a grasp of material and intellectual civilization.

This is a prophecy, but a careful examination of conditions as they exist today in the great republic of Brazil will prove that the prophecy is not unfounded, and that a trained imagination can foresee no future which does not carry a justification of it.

The area of Brazil is 3,218,130 square miles; larger, by the size of Germany, than the United States, exclusive of Alaska and the island possessions. The population is close to the 20,000,000 mark, more than had the United States at the beginning of this century. This territory can be divided into four parts, but the Brazilians themselves like to think of their country as composed by nature of three great subdivisions, considered rather as zones of distinctive products than as geographic entities. The first may be called the tropical zone; it embraces the drainage system of the mighty Amazon, twice that of the Mississippi, with affluents running from the Bolivian, Peruvian, Eucadorian and Colombian Andes; this region extends, also, to the southwest, embracing portions of the mysterious State of Matto Grosso, in the interior of the continent, and coalesces with the northern edge of the watershed of the River Plate. The second is both sub-tropical and temperate; it lies wholly above the Tropic of Capricorn and includes the States of Bahia, Rio de Janeiro and Sao Paulo on the coast, but also the interior plateaus of prosperous Minas Geraes with the less known but equally rich Goyaz, where the central capital of the republic may some day be located. The third is altogether temperate, and comprises the lower three States of Paraná, Santa Catharina and Rio Grande do Sul.

Now let us examine these great productive zones in detail. The first is the Amazon Valley. It must be granted that practically the whole area is a system of waterways, all tending toward the open mouth on the Equator. Yet it is by no means such an unexplored region as that of our own Western States one hundred years ago. Today oceangoing steamers pass regularly between New York and Manaos, 1,000 miles up the Amazon, and a few proceed further to the Peruvian port of Iquitos, 1,300 miles higher. Manaos is a city of 50,000, with trolley cars, electric lights and all the conveniences or luxuries of a European capital. It is, in fact, the center of a commerce stretching over 30,000 miles of inland water. Steamers make regular trips thru this vast interior, and

convey as busy a commerce as had the Mississippi fifty years ago. The ambition of modern pioneers is to extend still wider the possibilities of this commerce, so as to tap the west Andean region of Bolivia and Peru. Engineers have repeatedly made surveys of a railway to surround for 180 miles the falls of the Madeira River, and in the end they are sure to overcome all the obstacles nature can

JOHN BARRETT.

place in the course of man. The hidden wildernesses of tradition are melting away before the energy of modern industrial life, and one generation is scarcely necessary to make the Amazon as available for mankind as the northern boundary of the United States.

Two great factors are at work to stimulate human energy. One is climate. This is no inadvertent paradox. It is a decadent theory that the human race cannot thrive, physically or intellectually, within the tropics. We can learn to live in a hot climate quite as well as within a cold one, and heat is the only essential problem against which we must contend. Yet heat is not so destructive as cold, and its destructive consequences are more easily overcome. Science may devise some means besides coal to keep us warm, but it has not done so up to now. The coal famines in the Northwest merely hint at the probability at the end of fifty years. Iceland is becoming depopulated, while the Amazon offers the proper refuge. Tropic fevers are a bugaboo of the past. The experiences on the Panama Canal prove it; the decreasing mortality rate in Rio de Janeiro, Santos and Pará emphasize it. There is no denying that jungle fever attacks the explorer of today, but a modern colonizing scheme will dissipate the danger. The Madeira and Mamoré Railway is be-

SCHOOL IN PARANA, BRAZIL.

ginning its construction work by destroying the cause of infection—that is, by establishing means to secure thoroly hygienic surroundings for their employees. Other industrial enterprises can and will do the same, and thus the fear of disease will disappear. The other factor is the productive capacity of the region. Its natural resources are inexhaustible; the woods, the market vegetables and the fruits alone will be in great demand; sugar and tobacco find no better soil; in Matto Grosso, at the head waters of the River Paraguay, supplies of food can be sent out to cover half the continent. But the seemingly indigenous products of the region of the Amazon are rubber and cacao. The consuming world has not yet begun to realize how dependent we are upon two such staples to sustain industry and life. Without rubber the wheels of commerce could not revolve another hour; without rubber nine-tenths of the pleasure of the world would have to be diverted into different channels, and three-fourths of our rubber is obtained from Brazil; $70,000,000 worth of rubber was exported in 1907 from the Amazon country, of which the United States took over $33,000,000. The rubber industry is only beginning to be placed on a scientific basis, but when it is cultivated as successfully as is coffee, Brazil must still be the chief source of supply for the world's markets. This upper third of Brazil is also the world's leading purveyor of cacao; 60,000,000 pounds was the crop in 1907, valued at $10,000,000, of which the United States took almost $3,000,000, and yet the demand for chocolate and cocoa is ahead of the supply. I do not ignore the sugar output of northern Brazil, which is growing, but which is scarcely enough to meet local wants, nor the tobacco fields, which in 1907 exported $6,000,000 above the home demand, but these are crops that thrive elsewhere.

TRANSPORTING A LOG IN THE STATE OF SAO PAULO, BRAZIL.

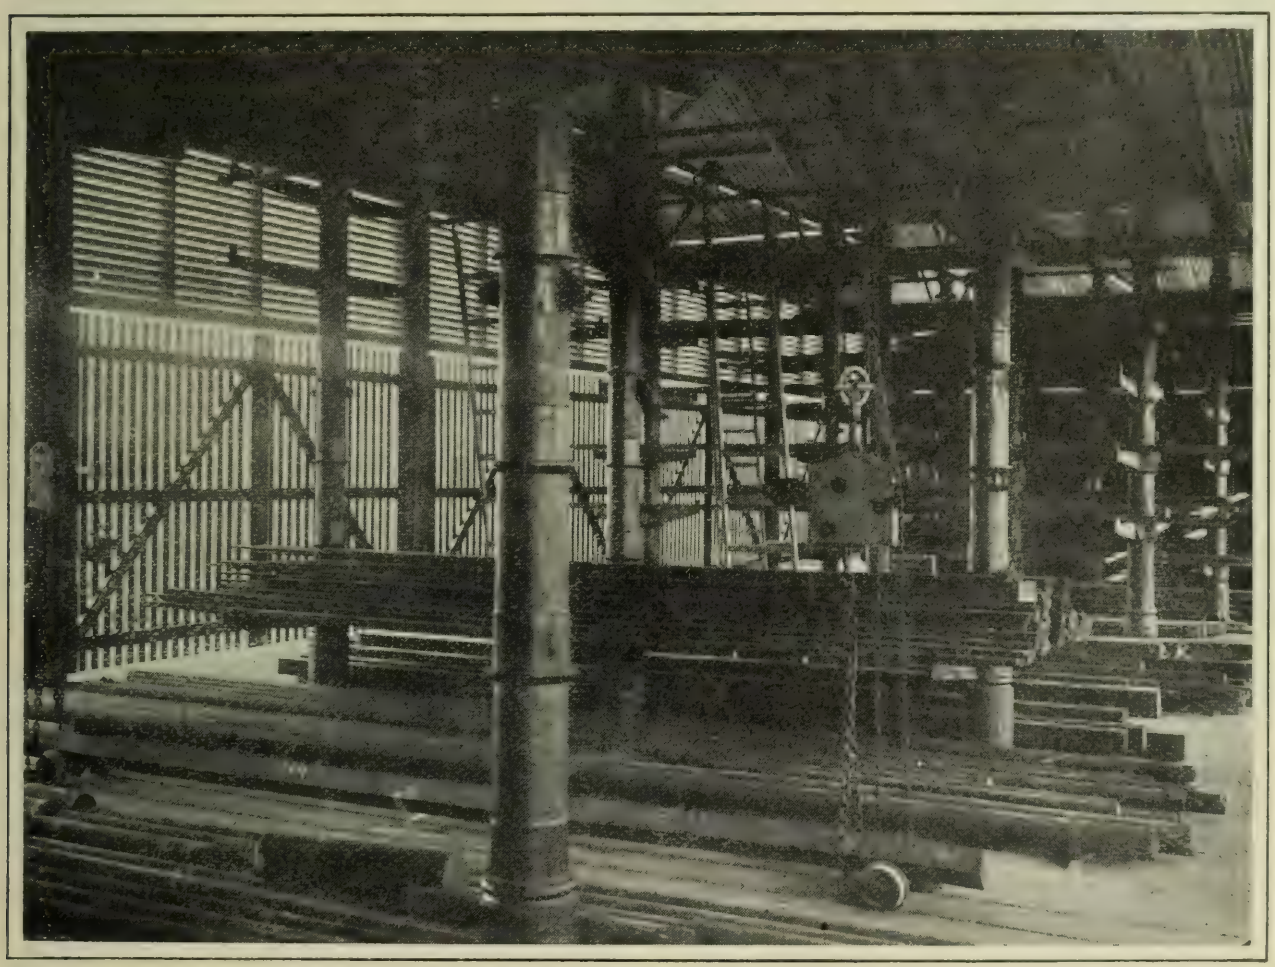
Take the great middle portion of Brazil. Broadly speaking, this extends from Bahia on the north to Santos on the south, and embraces the States of Espirito Santo, Rio de Janeiro, Sao Paulo and Minas Geraes, all noted for their coffee. Of the 15,000,000 bags of coffee forming the visible supply of the world for the present year, 11,000,000 bags come from Brazil, and today this represents undoubtedly that nation's greatest source of wealth, but it by no means indicates the possibilities of the whole area. In the interior of Sao Paulo, and over almost the whole of the enormous State of Minas Geraes, 221,894 square miles, but without a seaboard, lies a plateau containing some of the most fertile land of South America. It has been visited for three hundred years and surveyed by the empire and the republic, but its soil has scarce been stirred for the benefit of man. It has mighty rivers flowing in every direction, with water sufficient for all power and irrigation; it has highlands like the center of Mexico, but what feeble native race occupied it when the Europeans came has almost vanished away, and as yet no great influx of foreign industrialists has come to take its place. This is destined to become, in the language of Burton, "one of the world's great granaries, supporting untold millions." Cotton and tobacco can be grown over the lower areas, corn and even

MONROE PALACE, RIO DE JANEIRO, BRAZIL.

wheat on the highlands, while almost the whole extent of this interior is suitable for cattle.

The southernmost third is the smallest, including a portion of the State of Sao Paulo, all of Paraná, Santa Catharina and Rio Grande do Sul. At present its chief products are Paraguay tea, which may vie with coffee, tea and cacao in popular consumption, and cattle. Its possibilities, however, are comparable to those of the Carolinas, Kentucky and Tennessee.

A PRIVATE RESIDENCE IN BELLO HORIZONTE, BRAZIL.



The area of the United States of Brazil lies broadside to the Atlantic Ocean. Its coast line is almost as long as our own on both oceans. It is accessible to any person who is willing to spend a few days at sea. Regular steamers depart from New York and other ports for every well-known harbor. The interior is approachable from many of these harbors by railways that form avenues of traffic and travel all tending toward salt water, but between points in this interior the mule path or the stage coach road are still the only means of connection. Along the coast are cities as well built, as well provided with modern facilities for comfortable life and as ambitious as any of our own centers of American civilization, but the vast stretches of Goyaz, of Minas Geraes, of Paraná must be as newly planted, as our own great Southwest.

Possibilities here are illimitable. The soil promises to grow anything, when scientific agriculture is applied and when markets are within reach. There is scarcely a question about markets, because Brazil, tho essentially an agricultural country, is still an importer of foodstuffs to feed her growing population, but the consuming world of Europe is at her doors. The total foreign trade of Brazil has already in 1907 amounted to nearly $500,000,000, of which $202,000,000 were imports and $270,000,000 exports. Crops, therefore, will find a market when they are produced. These crops are at present coffee, $142,000,000; rubber, $70,000,000; cacao, $10,000,000; cotton, $8,500,000; yerba maté, $8,000,000; tobacco, $6,000,000. This leaves out of account the hides and dried meats of south Brazil, which, when not consumed within the country, are often unnoticed as

contributing to the meat products of contiguous Uruguay.

One feature of Brazilian natural resources deserves especial attention. That is the abundance of water in every part of the republic. Perhaps the southern extremity, in the State of Rio Grande do Sul, should be excepted from this generalization, but even here water is found so close to the surface that drought is rarely dreaded. Otherwise, however, the traveler thru the country is astonished at this great and inexhaustible resource. Water everywhere, from the oceanic masses of the Amazon, to the mighty Sao Francisco, running across Bahia and Minas Geraes, the Paraná on the western frontier, the Tieté in Sao Paulo, and innumerable others coursing thru the plateau. Many of these rivers have cataracts, like those of the Sao Francisco and Guaira, which rival, if they do not exceed, Niagara. All of them have rapids and volume of water enough to turn the wheels of industry that will offer employment and homes for millions of people yet to come.

Imagination can only be quickened by such a picture. It presents not alone possibility, but opportunity, for the man whose energy and ambition drive him into new endeavor. It is a field fascinating to the American, because it is a field over which only a republicanism of government, a democracy of effort, can hold sway. And the Brazilians are a kindly people. They have the heartiness, the sentiment of the Latin; their cordiality and hospitality are unsurpast, they welcome to their country, they accept with courtesy and openmindedness all who come to them with the sincere purpose of making, in every sense of the word, the best of things.

INTERIOR OF A RAILROAD SHOP AT SAO PAULO, BRAZIL.

Nevertheless, Brazil must not be considered a Mecca for the unemployed. The nation encourages immigration, but immigration there, as well as elsewhere in this busy world, means work, toil and difficulties. When the question of oppor-

tunity is raised, it must not be taken to imply that El Dorado lies only across "the Line." There are many conditions to be considered before material success can be attained. Let us see what the chances are for different classes of men, looking at life from various angles, or for different forces directed toward achievement.

At the outset, the traveler to Brazil should learn Portuguese. This is the language of the country and as much ingrained in them as English is in us. Imagine a foreigner coming to the United States ignorant of and unwilling to learn our daily speech! He is laughed at in the street, he seldom finds an interpreter in hotel or railway, and he can transact no business because he and his client have no common vernacular. Brazilians are too polite to laugh at the foreigner, but they appreciate very deeply an effort made to learn their language and their literature. In this and other respects they preserve their sentiment more than we do. The phrase "there is no sentiment in business" does not apply in Latin America. Sentiment, it may be asserted, controls business and other activities in life to a noticeable degree.

Brazil needs and encourages immigration. The immigration laws are liberal and intended to give the individual a free share of land, abundant time and opportunity to develop his chances, with a good promise for future improvement. The nation itself, however, does no more than invite the immigrant and secure for him safe landing and transportation to a selected locality; beyond this aid he is a ward of some particular State, Sao Paulo, for instance, or Minas Geraes, in which his future must be spent. Immigration, therefore, is more attractive to the South European than to the North American, who is accustomed to act in an individual way. Brazil wants labor, the workman is well treated there, but the individual is not so needed as labor in the mass. For that reason the policy of the republic has hitherto followed that of the empire and invited labor to enter in the form of colonies. The colonial system was successful so long as the immigrants had to remain isolated, but nowadays the railroad is bringing all the world closer together, and colonies are no longer necessary. It is only recently that railroads have begun to advance civilization; their policy, as in Europe, was merely to keep pace with it. A consequence was that land, a loadstone for the settler, was nearly unattainable. But the railroad is today pushing out beyond a narrow circumference; soon newer areas will open to settlement as we in the United States understand it, and railroads, just as they have here, will have land to sell in Brazil on favorable terms. Then a fresh immigration will be stimulated.

At present, however, the individual immigrant will be a little lonely. Perhaps ten, or even better, fifty, families can go as a body to Brazil for home seeking. If they are willing to put up with the troubles of a new soil, a new climate and unfamiliar surroundings, such a unit will find opportunity. They will meet German, Italian, Portuguese—few English speaking—neighbors, and ultimately their chance of winning success is bright.

If the individual home seeker must not expect to find his Paradise in Brazil, the same rule will apply to the individual who must earn his bread by daily or monthly wages. The man who can get a job at home should stick to it; the man who cannot get a job here will find scant encouragement there. The charities of American consular officers who befriend misguided wanderers after fortune are eloquent proof of this statement.

This is true also for the professional man, whether lawyer, physician or engineer. Native born graduates are able to fill, and fill worthily, many of the posts calling for the talent of the schools. They are as quick witted and as well educated as their Anglo-Saxon fellows, and have all the advantages of familiarity with the arena of their work. If the student of any scientific inclination desires the activity of foreign life, he should seek it, not as a money maker alone, but as an investigator ambitious to contribute to the knowledge of his generation. For botanists, zoölogists, etc., Brazil should be a Mecca. Its forests and river valleys are not half explored; its fauna and flora by no means classified, and the aboriginal races ought to be traced. Let our restless American

youths emulate the example of European explorers, who have made unique treks across Africa and Asia, and thereby discovered much of interest and value.

Now the man who can be sent into Brazil by employers abroad, or is called there for some special purpose, has a different outlook. This class of young wage earner, educated for technical work, has a career. With capital back of him there should be no question of his opportunity. There is another class, here, who will be well repaid for any outlay at the beginning. Agricultural implements, all forms of modern machinery, office and household furniture, special lines of foodstuffs, jewelry and dress goods, building and construction material, are sold today by European manufacturers; but there is room for us, too, in this growing trade. If, however, we are to extend our foreign commerce in this direction, acceptable methods must be employed. Brazilians are cordial, they

SALTO DE PIRACICABA, BRAZIL.

representing capital and home industry, who must no longer neglect the opportunities of Brazil. I refer to commercial travelers, those envoys of a nation's commercial life. Here again the advice of the resident American consular officers should be followed. American young men do not comprehend what they are missing by not boldly striking for these markets, fond of American goods, and thruout the country there are openings that would astonish merchants are not afraid of sentiment, and friendship with them carries a long way toward business. *Paciencia* is also a graceful habit to acquire. What in the United States is taken for push and hustle, may be mistaken for haste and carelessness in Brazil. Study the language, the people and the markets is a motto not to be disregarded.

There is a yet broader field for capital, when the future of Brazil is considered. Money is needed to develop her

resources and thereby to offer employment to the labor that is sure to be attracted thither. Look at the opportunity for the investment of capital! It is certain to be remunerative in the end. What a splendid field for the *young* man with money who likes to see things grow! New areas must be made accessible by railroads; ranches must be started for the growth of cattle and corn; rubber plantations developed and the fields of cotton and tobacco extended. Brazil has done wonders with her harbors; Rio, Bahia, Recife, Rio Grande do Sul have now under contract the construction of modern docks for deep-water vessels, so that they need no longer lie at anchor, but these are by no means the only harbors where foreign shipping demands entrance, and all of them require capital to carry the plans to completion. Then there are the cities themselves. Many need capital for electric light plants, for transportation lines, water service; the neighboring country needs factories, mills and industrial enterprises. All of these, if properly financed, pay, and the people, as well as the nation, will show their hospitality and gratitude for the confidence placed in them. England has invested millions in just such affairs, Germany and France are following her lead, but the work is not yet finished—it has scarcely begun, for Brazil is ambitious, she is neighborly, and her policy is a splendid one of progressive Americanism.

WASHINGTON, D. C.

The Song of the Gridiron

BY H. BEDFORD-JONES

Ho! for the steam of the crouching team, and the scent of the battered leather!
There's never a joy like the joy of fight, in the glint of sun and the flashing light!
Sweet is the sight of the pigskin's flight on the air like a wind-borne feather;
And the long, full cheer that the players hear when the half is done!

Chorus:
For it's "Rah!" for the way we work, my lads;
Lose or win, the rooting's the same;
And there's never a man to shirk, my lads,
When it's "Every one into the game!"

Ho! for the crash and the short, sharp dash as the weight of our full line smites them!
Slowly the stubborn fighters yield, and show us the long, brown, white-lined field;
Quick and high comes the rooters' cry, as the swift end run delights them;
But the bleachers ring to the songs they sing when the game is won!

Chorus:
For it's "Rah!" when the end is near, my lads;
Lose or win, the cheering's the same;
But there's never a cheer that's so rich and clear
As the songs at the end of the game!

PETOSKEY, MICH.

THE NEW GERMAN AMBASSADOR.

Count Johann Heinrich von Bernstorff, formerly Consul-General of Germany at Cairo, Egypt, has been appointed to succeed the late Baron Speck von Sternburg as German Ambassador at Washington. He is expected to reach his post some time before the close of the present year. He was born in 1862. His diplomatic career began in 1899, when he was made attaché at Constantinople. His subsequent service included posts at Berlin, Belgrade, Dresden, St. Petersburg and Munich. He has a reputation as a wit and an after dinner speaker.

The Tariff and Matrimony

BY A RECENT COLLEGE GRADUATE

[We knew the tariff has much to answer for, but it had not occurred to us to lay the blame on it for preventing young men like the author of the following article from taking wives.—EDITOR.]

MY grandfathers came out of the East with the sturdy pioneers who drove out the Canaanites and possessed the land. One was nineteen and the other twenty-one at the time of their coming, and each settled down in the center of his clearing, built a rude shack and married. Those seem to have been the three perfectly inevitable steps in those days. There were no bachelors; marriage followed the erection of a cabin as surely as the razor follows "long pants." In my father's case the incident of a college education intervened to raise the marriage age to twenty-three. I am enough older than that to have been out of college several years and marriage stands out on my horizon, small and indistinct—a far off divine event toward which my progress is measured in inches.

I make the proposition thus unpleasantly personal simply because I am in possession of all the facts in my own case, and because it seems to be typical rather than otherwise. The young fellows of my acquaintance are not less susceptible to the charms of women than their fathers were. They are not less courageous or willing to sacrifice for the sake of those they cherish. Yet for some reason or other they are not getting married. I notice it here in this big dormitory which we call a suburb, to which we come out at night to sleep. I notice it more particularly even at alumni dinners in the city. The unmarried men there are alarmingly numerous. Frequently they are among the brightest and handsomest men at the tables; almost always the best drest. My observation has progressed to the point where it begins to make me doubt whether the good old custom of matrimony, which has hung on so well, is not now finally falling into disuse.

There are a dozen or so of us who graduated together from the high school and have hung together pretty well since, tho separated for a while in different colleges. One is a lawyer, just admitted to the bar and living on the hope of future fees, two more are engineers, one is a newspaper man, another an insurance agent; and there are three more who are simply "in business," and a doctor recently made. The interesting thing about it is that not one of us is married, tho five years ago every one would have said he would be. In fact, the whole subject of matrimony has come to be rather a tabooed one among us—something in which the interest has very largely died out. Occasionally some one mentions the name of a particular girl and she is discussed in that unemotional, impersonal way in which we talk over the merits of an automobile. Something which we all admire but never expect to possess. It is for all the world as tho Moses and a few of his chums were sitting on the mountain and looking over into the promised land, knowing that they would never arrive.

The doctor is typical of the rest of us. His parents married in the year of their graduation from a lonesome little co-ed-

ucational college and settled down on a salary of $800 a year. The years of struggle which followed are sweet in their memory and they still maintain that they were richer in those eight hundred dollar days than they have ever been since. The son's income is probably $1000, possibly $1200 now, but he is strong in his conviction that the thing cannot be done at that price. And I rather think he is right.

Here is the problem then; what is the answer? Whose is the hand that is pushing the marriage age higher and higher every year, giving us bald-headed young fathers and childless or one-child families? To my mind it can be none other than the late Mr. Dingley. Ever since I was selected to defend free trade in a tariff debate in college and came out a free trader tho I had been a protectionist before, I have made it a study to reduce as many as possible of our national evils to a high tariff cause. And it is interesting to see how many of them reduce. The only wonder in my mind is that so many near-statesmen continue to bow down before their clay god. The President points to our wasted resources with one hand while writing an article in favor of protection with the other, and fails to see that it is because our tariff has forced us into an unnatural condition of industrial development that we have squandered our portion like the prodigal son. The panic was possible because our prosperity instead of being of the sturdy common or garden variety has grown up a tender tropical plant which the slightest breath of suspicion can shrivel. And it is the tariff no less before which marriage has fallen. The college-bred man as I know him graduates with the idea of marrying so young that his wife may sacrifice with him in the growth of his success, and may grow up with him into its fullness. And when he gets out and is settled at work, he finds he can't do it. He is making a whole lot more perhaps than his father ever did at his age, but the price of living is something that his father at his age never dreamed of. And so year by year he puts the thing off until the gray hairs begin to melt away, leaving the white spot showing underneath, and he has got beyond the time.

Occasionally one gets married, I know. I've been to their weddings and given them presents. But do they fall in love? I don't think so. Not as the lovers we read of in books do, at any rate. In them there bursts on the young man suddenly the glorious vision of the only woman who can ever make him happy. She may be a prince's daughter and he only a struggling clerk, but it makes no difference. He leaves all and pitching in, wins her regardless of every other consideration. Those of my acquaintances who have married have not done so. Rather they have set for themselves a certain income mark at which they believed that the thing could be done. And having reached that mark each of them has calmly and deliberately gone forth and selected a wife. To nearly every one of them she has come too late in aiding him to get established. He was already established. She has been rather a luxury which his hard work has at last enabled him to afford. Doubtless they are often very happy and useful to each other. But it isn't the sort of thing a man could dream much about.

So I am looking for the statesman to arise who will make his campaign squarely on the issue of tariff revision in the interests of matrimony. It will have to be a different kind of revision than the tariff has undergone recently at the hands of its loving friends. It will have to be radical and it will have to come soon. That is, if it is to be of any help to me.

CHICAGO, ILL.

THE NEW SECRETARY OF THE NAVY

By Willard French

During the Kaiser's visit to England, an enthusiastic German was dilating to an English prelate on the extraordinary qualities of his Emperor. He frequently interrupted himself with the sigh of admiration:

"Ah! but the Kaiser is great."

At last the wearied prelate replied:

"But God is greater."

"So He is," said the German. "But you must remember, the Kaiser is young, yet."

That is all that need be remembered about Truman H. Newberry, who on December 1st stepped from assistant into the position of Secretary of the Navy. He was born in Detroit, Mich., barely forty-four years ago. He is a Yale man, the proud possesor of a Yale Ph. B. (1885), and was an officer in the United States Navy, on the "Yosemite," during the Spanish War. History, "The Log of the U. S. Ship Yosemite," gives his experiences, and is well worth reading. Otherwise he has been a Michigan boy and a Detroit man pretty much all his life.

His father, Judge Newberry, was for many years the leading Admiralty lawyer of the Middle West, and from his earliest conception of things of interest the Secretary of the Navy devoted his recreation hours to picking up experience pertaining to ships and shipping. It was more than child's play, for before he was satisfied he had past the examinations and received a first class pilot's license for the Lakes and a master's certificate. I believe that he values them as highly as his Cabinet portfolio. Thru his service as Assistant Secretary they have been conspicuously on the wall of his office. With a contagious chuckle he tells of services rendered by that master's certificate when old sea-dogs, taking him for a land-lubber, have been handing him a wearisome lot of kindergarten advice about their specialty.

All of this, however, did not interfere with Newberry making his practical way in the practical world—in other words laying up fat millions thru his extensive and signally successful business operations in Michigan.

He comes to the head of the Navy Department thoroly conversant with the machinery, thru three years of energetic and highly satisfactory work as Assistant Secretary. He comes with an exceptionally complete education. He comes with a bank account indorsing his business ability and unusual capacity for the wise and skillful management of affairs. He comes with social prestige second to none and a charming wife—Miss Harriet Barnes, of Brooklyn—fully prepared to fill the constantly increasing demands of Washington society upon Cabinet ladies. And he comes—it is worthy of a large N. B., thru its phenomenal rarity in our Navy Department—he comes with a record of actual active service in the United States Navy, with a thoro, fundamental knowledge of ships and shipping and a vital and progressive interest in all matters maritime.

If a prize had been offered for the best conception of the ideal qualifications of the head of our Navy Department, it would have been awarded to a sketch closely portraying Secretary Newberry. It remains for him to make good, and that is, undoubtedly, his present intention.

As a man he is exceptionally agreeable, pleasant to meet and democratically cordial. Evidence of general satisfaction with life is in his comfortable—if not precisely portly—proportions and good-natured face. It is well guarded, however, by quick, keen eyes which warn one not to take liberties.

That Newberry is not afraid of work—of any kind of work which comes to hand—is indorsed by the fact that many who know him well believe a rattling good story which President Roosevelt tells, something like this: That when he was himself Assistant Secretary of the Navy, under John D. Long, during the rush of preparation for the Spanish War, he inspected the training ship "Michigan," where recruits were being polished up. A steamer hove in sight. The officer with Roosevelt trained his glass but could not make out the name. He asked a sailor, barefooted, flannel-shirted, who was superintending scrubbing the deck, if he knew of any steamer due.

"It's only a private steam yacht, sir," replied the sailor, giving her name.

"How can you tell her name, so far away?" Roosevelt asked.

"I know her well, sir," said the sailor.

"Whose yacht is she?" Roosevelt asked.

"Mine, sir," said sailor Newberry, and went on with his work.

Washington, D. C.

If the Kaiser Abdicated!

BY POULTNEY BIGELOW

Author of "History of the German Struggle for Liberty."

WHY not abdicate? comes clamorously to the Kaiser thru many channels which presume to speak for his people.

"Monarchy," answers the Kaiser, "is a divine institution—a sacred trust—a Hohenzollern burden of which I can no more divest myself than of my duty to wife, children, parents or God!"

The Kaiser knows his German history—he knows that his illustrious grandfather, the founder of the German empire, the man who three times during one lifetime marched with a victorious German army into Paris, was himself once so cordially hated by his own Prussians that he had to fly from Berlin and conceal himself in England.

His elder brother, who then sat on the throne of Prussia (Frederick William IV), had to bare his head to the Berlin mob and wear the cockade of the '48 revolution—yet his memory is today an asset of Prussian monarchy. He it was who, on the eve of that great upheaval, swore solemnly that no constitutional limitations should ever come between him and his people.

That man's father (the husband of Queen Luise), carried his personal views of government so far in 1813 that his outraged people organized a popular militia and marched against Napoleon not only without royal assistance but in open defiance of royal wishes; and more than one of his best generals incurred his displeasure for having helped to save their country at this moment when Prussia had sunk so low that it seemed to have only the alternative of being the vassal either of Russia or Napoleon.

Thruout the whole of the nineteenth century Prussia offers the curious object lesson of monarchy whose kings have, without exception, boasted of divine inspiration, and yet who have yielded at some time to popular clamor; and who have died respected, if not beloved, by their subjects.

The Emperor Frederick, who ruled but for 100 melancholy days (in 1888), appears to be an exception, for he inaugurated his accession by frankly avowing his sympathy with constitutional liberty. But many a prince has commenced in this generous fashion and altered his views under political pressure. The theory of the divine right of kings has been abundantly maintained by Hohenzollerns, but also abundantly violated for exceptional reasons—we might refer to the deposition of the King of Hanover in 1866 by his cousin of Prussia—one divinity disputing the divinity of another.

The Prussian monarchy is but a thing of yesterday—scarce more than two centuries—less in years than the organized civil governments of many of our States.

Who gave the first Prussian King his title?

He placed the crown himself upon his head and gave thanks to God—and to his trusty sword.

From that day to this Prussian history has been a curious picture of a kingdom won by the sword, governed by the sword, yet on the whole setting an example in most of the virtues which commend themselves to thrifty and law-abiding Germans.

Prussia was one of the first of Continental states to abolish personal favoritism in promoting officials in the public service or in the army. In days when most courts were hotbeds of personal intrigue, Prussian judges administered the law fairly between rich and poor, and men who entered upon a public career gave the best of their talents in the confidence that their positions were secure during good behavior.

Whence now this strange hold of the Prussian kings upon their people? Why did no revolution upset Prussia radically as it did so many neighboring states, commencing with the fall of the Bastille in 1789? Louis Phillippe never returned to France after his flight in 1848, nor did Ludwig I of Bavaria ever again sit

on his Munich throne after the shake which Lola Montez gave to his rule.

In Russia emperors have been removed by violent death more than once, yet in theory the constitution of Prussia is modeled after that of the Czar's dominions.

Let us for the moment forget the fulminations of a press which is not famed for fairness or accuracy; let us bear in mind that editors are not necessarily philanthropists—that they seek the sensational in their news columns, and don't wish to spoil a good story by questionings.

Our theory of government is based on the assumption that men with power are likely to abuse it. Hence we check our legislators and officials with so many hindrances to activity that we end by producing a machinery in which no one is able to accomplish anything good because all fear that he may do something wrong.

Without questioning the many instances where kings have shown indifference, cruelty, rapacity and folly, Prussia is worth raising into relief as one instance, at least, of a royal rule that has endeared itself to the people.

Monarchy may not be responsible for all of this, but every Prussian schoolboy believes that the throne of Prussia has been occupied for those many years by a line of monarchs who, on the whole, have set their people a good example in the way of thrift, hard work and national habits.

Is William II an exception to this rule?

He has been now twenty years King of Prussia and Emperor of Germany. In his domestic relations he has been a model husband and father. As an officer of the army and navy he may be regarded as a master in each profession—a conscientious officer eminently fitted to earn any salary connected with the position of chief admiral or field marshal. The tongue of his bitterest enemy has never yet been able to invent a story derogatory to his honor and love of truth, to his purity in domestic life or his courage in doing or saying publicly what he felt to be right.

During his reign German commerce has made immense progress, German welfare has been noticed by every traveler who is able to compare things past and present.

There is now scarce a port of the Far East where the German flag does not play a good second to that of England.

Today Germany scarcely knows such a thing as a slum in her cities or tramps on her highways; sanitary rules are enforced, to the great improvement of the public health.

The public service is honest. The idea that an official should make money out of his position is today scarce dreamed of in any German city.

In 1895 the Emperor opened the great canal between the Baltic and North Sea —eighty miles of difficult engineering.

There was not a penny of graft in the whole eighty miles; it was opened on the day promised; constructed in the most perfect manner.

Am I here to whitewash Emperor William? Far from it. He would not thank me for doing so, much less the editor of THE INDEPENDENT.

In 1896 Jameson invaded the Transvaal with a ridiculous band of adventurers, who surrendered with cartridges still in their belts. The Boers easily captured the whole body, and for one I assumed that Jameson would be hung for piracy and the whole matter settled on the spot.

But no! The Emperor saw fit to send to Paul Kruger a message whose wording gave in Pretoria the notion that William II was inclined to side with Boers *versus* Britons in a prospective war.

On the evening of the day when that famous despatch startled the cabinets of the world it happened that I was in Berlin at a big diplomatic dinner.

There were two German ministers at this dinner, and a German general who had been chief of the general staff.

After the ladies had left the room I turned upon the three Germans and said: "Well, what do you think of this message to Kruger?"

They threw their hands over their heads, as Germans do when the feeling uppermost is:

"My God, what madness!"

To my surprise, the German Parliament took no notice of this message. It is only today that they enter protest.

Prince Hohenlohe did not then offer to resign, neither did he show in any way that he resented the publication of an important state document without his countersignature.

That same year I was in South Africa, mingling freely with Boers of all parties; and I felt the evil wrought by this hasty message. The Boers felt much as did the Confederate States of this country when Napoleon III gave them indirect encouragement to continue the struggle.

On my return home I publisht my impressions frankly in a book on the subject and did not whitewash William II, much less his pliant old granny of a Prime Minister, who dared not protest to the Emperor's face at such a time.

These opinions of mine gave offense. Then came the Boer war in 1899.

President Steyn's most intimate friend and chief of his transport service, who was captured during the war and paroled, told me in Stuttgart (after the war) that an officer in German uniform, who claimed to speak for the German Emperor, urged the Boers to keep on fighting, assuring them that if they should win one or two victories the German Emperor would intervene in their favor. Possibly this officer exceeded instructions.

Admit now the Emperor's many lapses from politic caution; pile up the account against him; take this last interview with an English paper as a last straw—and what does it all amount to?

It amounts to this, that Germany is not ripe for government in the English sense.

Had any English sovereign, even a Stuart, done any one of the many things laid now to the Emperor's charge, there would have been such a storm out of doors as would have compelled him to give heed. But the German Parliament has spent the bulk of its time in quarrels of petty faction, in bringing parliamentary government into contempt rather than vindicating its right to be the legal mouthpiece of the whole people.

The popular clamor now going on has arrested the Emperor's attention, and it is well that the noise has been made. It shows us that when Parliament in Germany unites on any one subject the Emperor listens respectfully.

That he means to recede from his opinions regarding absolute government is not likely.

He himself does not believe in government by majorities, for to him the majority means the inefficient and inferior section of mankind; and this view is that of Germans in general. Germany has not grown powerful and prosperous under government by majorities. The example of the United States has ceased to exercise the same spell in that direction that it did in the days when Carl Schurz sought these shores in search of ideal political liberty.

Germany is today seriously irritated at its Emperor. He has made them look a little foolish in the limelight, he has talked too much without check, he has suffered thru the cowardice of his ministerial advisers, and most of all thru the flunkeyism of such men as the late Prince Hohenlohe and the present Buelow, who is of a family that never resigns and rarely dies.

When Germany produces a few modern Luthers, willing to speak frankly to the political Pope and suffer the consequences, then shall we see a new light about that throne. Otherwise Germany will go on illustrating the old saying that every nation has the Jews it deserves.

Some weeks ago Chancellor Buelow was cartooned in *Simplicissimus* as amusing his Emperor with a funny story, while the monarch laughed merrily.

"Buelow," quoth the monarch, "you are such a good fellow I propose to promote you to the position of court fool!"

"For God's sake," quoth the frightened Prime Minister, "anything but that. For as court fool I should have to tell you the *truth!*"

MALDEN-ON-HUDSON, N. Y.

Liberal Clergy and the Church

BY AUSTIN BIERBOWER, LL.D.

Author of "The Morals of Christ," "Thoughts for the Rich," Etc.

AT this time, when heresy is in the air in both the Catholic and Protestant churches, it may be well to consider the clergyman's attitude to the Church when he can no longer candidly preach all its doctrines.

The easiest opinion is that to be honest he must quit the ministry. But his obligation is not fixt by any such simple principle.

It is his duty, and should be his right, to preach the truth, and he should not have to leave the Church to do so. A Church is under as much obligation to have its doctrines true as he is to teach them; and when they are thought untrue, its clergy should have the task of correcting them; and that they may not be true all must sometimes suspect. They were formulated in times of great ignorance, when they got little attention from scholars, and many of them need revision. Modern thinkers cannot force their opinions into the forms anciently fixt. The whole Christian world is antagonistic to some of these doctrines, and it is dishonest to try to harmonize them with our present views. Untrue on their face, they can be accepted only by wresting language from its proper meaning. One's chief duty is to preach the truth, not the doctrines of the Church—to be correct, not merely regular. The clergy have the double duty of keeping themselves to the truth and keeping the Church to it.

For the clergy must keep the Church right. No other class is chargeable with this work; and if the clergy may not think and dispute on doubtful questions, the Church can never become better than now.

We cannot say that the Church is always right, and that the clergy need only learn its doctrines to preach the truth. There is no evidence of this; but much evidence that it has often erred and often changed. As we are getting much light on all subjects, the Church as well as the scientists should have this.

The Church should not be sensitive about heresy in its clergy when it is itself heretical from the viewpoint of all except its own adherents; for every denomination is heretical to all other denominations, so that the majority is evidently in error. Only a few Christians are thought by the majority to be orthodox. And since heresy is thus ascribed to the Church in general, each body should have patience with its clergy. They are guilty only of that of which it is itself guilty.

The Church should not emphasize doubtful doctrines, and so make it hard to enter its fold. It may not limit membership to those who believe a body of divinity, when its mission is to be universal. It should have the door wide open, not block it by improbable teachings. If one has no right to deny a doctrine he has no right to accept it. He should ask whether it is true, and he cannot learn this if he may not consider whether it is false. If one may accept but not reject he is in no condition to find the truth.

The doctrines of the Church are all matters of dispute, and received on faith. None are certainties, least of all the distinctive beliefs of any denomination; and there should always be liberty where matters are so doubtful. The people are trying to settle their doctrines, learning what is true and what not. In mathematics and some sciences there may be unanimity, but not where inadequate proof exists. The clergyman's attitude should be one of inquiry. No theological dogmas are verified except to illogical reasoning, and man should not be constrained to reason illogically. He should give due weight to every probability, and only due weight. There ought to be no place in the Church for prejudice. As its duty is to teach what is true and right it should not force anything arbitrary to be taken as such. Proceeding only on evidence, if it can establish little with certainty, little should be believed. What are enforced are matters which have never been proven; and

clergymen, like others, should have liberty to think on these; and, if they find them false, to attempt their correction. The Church should learn the truth as well as proclaim it, and correct its opinions when found wrong as well as enforce what it believes. It should always be ready to listen and do better than it has yet done, never being as rigid as if its doctrines were sure. Did they rest on adequate proofs there would be no need of unusual pressure to get them believed. The force of reason would itself suffice to propagate them. When men are very anxious to have certain teachings believed, and take violent measures to suppress difference of opinion on them, they are presumably false.

The creeds were made in ancient times when men were ignorant and could not adequately consider the subjects on which they formulated the doctrines.

They are all, moreover, compromises. Those who made them differed in opinion, and to get uniform action had to waive their individual views. They could declare only that on which all agreed, and so on what was satisfactory to none. All wanted something else than what they got, as they always do when many differing people are made to "agree." They agree on what they decide to ignore. If they exprest what they believed they would have to make many creeds instead of one. A single creed for differing people is shorn of nearly all meaning, as in political platforms.

The creeds, too, changed much in history. They were not thought as important in early times as now. Nearly every Church convention adopted one which was changed by the next convention; and nothing was more common than to modify creeds. In some of the earliest Church histories many creeds are given. Those who made them did not intend them to be permanent. Men occupied a changing attitude toward Christian truth. The same creed was rarely reaffirmed by a subsequent convention or council. The very early Church had no creed, the members not caring what one another believed. When they began to form creeds they began to make blunders, which they subsequently tried to correct. The creeds which we now have all went thru many forms before becoming permanent. Various attempts were made at the Nicene Creed before it was fixt in its present form. The Apostles' Creed past thru many changes, and it is not even now accepted in the same words by all Christians. It did not get the form generally used till the sixth century.

The ancient creeds were not meant for accurate expressions of Christian truth. Like our political platforms, they were intended to express generally the opinion of the convention which adopted them. As no Republican or Democrat must accept the whole platform to be a faithful member of his party, so the ancient Christians had not to accept the whole creed to be faithful Christians. The creed exprest merely a passing phase of thought, and that but approximately. It indicated *about* where the Christians stood; and, as they might change, they could change their creed without inconsistency. They might abandon it altogether and still be good Christians. A perfect creed has never been exprest. Only in modern times has the wording become rigid and petrified, so as not to be further changed. It is irrational to go back to times of ignorance, as modern theologians do, to find a creed for present uses. The farther back they go the more erroneous creeds are, as the subsequent changes in them indicate.

And when the early Christians did accept creeds they did not accept them entire. They rejected some of their declarations, thinking it enough if they believed the bulk of them. Where a dozen articles are given no man who thinks can believe them all; and it should be enough to believe most of them. People are sufficiently harmonious who can accept ten out of twelve points of faith. Greater unanimity cannot be had among intelligent people. If men's present faith were examined a still smaller proportion would be found accepted. So, if a clergyman denies one, or a few, of the teachings of his Church he should not be condemned. He preaches substantial Christianity when he preaches the bulk of the doctrines. No one believes all, if he thinks about it. In the secular world men get along well enough together who have not such unanimity. The political, scientific, educational and business enterprises are conducted by those who differ much, and

it should be so in religion. People should not be whipt into accepting every one of many opinions. To make them do so is to establish thoughtlessness among them; and to make them say so is to promote dishonesty. There may be a creedless Church. The Baptist is such, as was the Apostolic Church. The Jewish is such. There is no creed or standard which all must accept. And yet they get along as well as others. If men are not questioned on their views, their heresy is not known, and generally not developed. Heretical clergymen may preach for years and not disclose their heresy; and they might disclose it without its having any serious effect. It is unwise to call attention to unorthodox preaching. If men are sensitive about it they will get more heresy than by ignoring it. We should accustom ourselves to hearing dissenting views with indifference. We know that they exist, and their expression ought not to disturb us. We meet differing opinions in secular matters, and live harmoniously with men who have them. Unanimity is nowhere essential, and the Church should habituate itself to as much diversity as others have.

The Church's faith, moreover, is the faith of the members, not of creeds. It is what they believe, not what they adopt. Few believe much of anything taught as dogma. The majority do not think of the intricate questions of theology. There is no more faith than what actually passes in men's minds. Where many articles are formulated they are ignored. People do not know what they are, much less believe them. They are not the faith of the Church. Faith cannot be made by voting on expressions, much less the faith of those who do not participate in the vote. They are generally made by perhaps a dozen men, and the rest of the Church know nothing or little about them. They are at most the opinion of those dozen. What Christians actually believe differs from what is officially exprest.

One should be considered sufficiently correct in faith if he believes as most Christians do. It ought not to be necessary to believe also the formulas which a few of them consider. Orthodoxy is now measured by standards which are adopted but not believed. In no other department is such emphasis put upon official utterances.

Since it is the duty of every one, according to the teachings of the Church, to be identified with the Church, he ought to be candid in the Church, and not to have to go out of it to be conscientious. The authorities should give one the privilege of adjusting himself to the truth without declaring him heretical. If it is the duty of all to enter the Church, it is the duty of the Church to keep right. Some would make it a duty to join the Church, and then make it impossible to get in or to stay in. A truthful Church is possible only where much latitude is allowed for changes; and when one tries to get nearer the truth he should not be assailed because the Church does not do so.

Every clergyman and member, moreover, is one of the Church, and if he is heretical then the Church is heretical to that extent. If many share his opinion, then the Church is heretical to the extent of that number. If he accepts only a few of its teachings, then, to that extent, those few only are the teachings of the Church; and if many thus accept only a few of the teachings, then the Church doctrines are to that extent limited to those few. And since the majority reject many of its teachings, the majority is heretical, and it is only the minority that would call them to account; and the minority would then dictate to the majority. As we have said, none would believe all the doctrines of the Church if they thought about them, and probably none do believe them all; so that in strict parlance the whole membership is heretical, and no class of heretics should single out another class to persecute for heresy.

Furthermore, every clergyman has some rights in the Church, and if there is error in it that error should not keep him out. He loses no rights when he changes opinion. If he thinks the Church is wrong and should be set right, he cannot think he is wrong in holding that opinion. The wrong should be conceded to be in the Church, not in the one who has the truth. He ought not to have to get out of the Church because he is right. He should have a right to try to put the error out.

CHICAGO, ILL.

Social Democracy

BY JOHN BASCOM, LL.D.

PROFESSOR OF POLITICAL SCIENCE IN WILLIAMS COLLEGE AND EX-PRESIDENT OF THE UNIVERSITY OF WISCONSIN.

THE good things of the world, even when they are physical, are not attainable off-hand. We make them our own and enter into their uses by much painstaking and wisdom, and so come to understand them. This is especially conspicuous in spiritual gifts. We approach them in many ways on many sides before we come to master them. Democratic society is at once the best gift of God and the highest human attainment. We more frequently seem to reach it on the side of political institutions, but before we are well in possession it lifts, like a rare bird disturbed in its haunts, and only leaves behind the shadow of a liberty we have not attained.

Democratic society means a diffusion of powers; if it be complete democracy, a universal participation in the activities and enjoyments incident to human life. It means the winning by all, of every class, the blessings of existence; a sharing of all that life requires and bestows. This diffusion of power is as much a necessity for those who are guiding effort as for those who are simply partaking in effort. It means a free contact of mind with mind, all having something to give and something to receive in this extension of our thoughts, actions, feelings to the limits of the spiritual world. Races and classes as boundary lines are abolished, and the commerce of life goes on everywhere; everywhere as one wishes it and can profit by it. The South still bears the burden of slavery so far as it cannot rejoice in the welfare of the colored race, and the North still suffers from the indifference which estranges it from the races of mankind.

We believe in democratic society because of an antecedent belief in the inexhaustible capacity of the spirit, in its inheritance of the world as one immeasurable product; because of our belief that no good thing or form of life obstructs or burdens the world, but that all make the world better for themselves and for others; because of an abiding conviction that the spiritual world is as wide as and beneficent as the race of man, and is no better and can be no better than that race. The idea along which men travel into this fullness of spiritual experience is often exprest as an equality of rights, of opportunities, between men; and it is carped at under this form of expression as if equality contradicted all experience. It does contradict the experience in which the power, wealth, honor of the world are gathered in a few hands; it does not contradict that experience by which we approach the Kingdom of Heaven, a kingdom that takes all men into its embrace, blesses all and leaves no outcast, no alien, no disinherited one among the sons of men. The spirit of man is so true to itself as to return again and again to this notion of equality, no matter what absurdities and inadequacies may seem to inhere in it. Equal opportunities mean a free approach of all men to the blessings of life, blessings so varied and so expansive as to leave no man poor, no man robbed of good, no matter how small his present attainments or how great the attainments of others. These possibilities, into the midst of which every man is dropt, are the promised land into which he is simply to go up and possess it. If, in a place of exercise, apparatus stood ready, fitted to every man's strength, we could talk of the equality of opportunity, no matter how little or great one's present improvement might be. Such is the ideal that lies before democracy, participation in the world, under existing and growing capacity, for each man's benefit and for the benefit of all. Democratic society is such an extension of life that it becomes truly the commonwealth, not by division but by participation, under which every

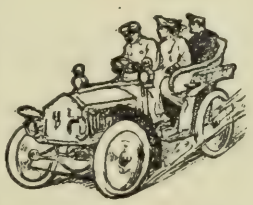
man reaches his own with no trespass on another; nay, by an addition to every other man's wealth.

Not only must something of this idea be present to the mind before we start in pursuit of democracy; it must be with us in every estimate of what constitutes democracy. Democracy rests on individual life. It has power according to the measure of that life. Wherever intelligence and self-guidance halt—there democracy halts. Every man must find a place, his own eligible place, in the community, and from that place must minister to the community, and in that place the community must minister to him. We need to understand that personal quality does not interfere with aidfulness and goodwill. Beneficence has its highest expression between active participants. The passive recipient receives and gives only half the benefit of a gift. True giving reaches the center of life, and thence extends itself to all enjoyments. A man must have his own position in which to receive and from which to return favor, as much as in the first instance to set it agoing. It is the distinctive idea of democracy that men in society are capable of this reciprocal intercourse and thrive under it. If we cherish this conception of the self-sustaining relation of men to each other, we must adapt our goodwill to it. We cannot feed a pauper merely as a pauper. We must convert him, if possible, into a man. Our fight is against pauperism, and involves the full supply of all a man's wants.

There are various forms of goodwill which come under the censure of democracy as hostile to it. Pensions for the old and needy may seem a most desirable benevolence, but they may tend to confirm rather than remove a great evil. Our true effort should be to enable the workman to provide for himself. It is far better to anticipate the evils of old age before they arrive than it is to relieve them when they have reached us. Preeminently is this true when the provision we make is relied on as a resource, and so encourages the improvidence on the one side and the hardness on the other out of which the destitution of old age arises. An extended and conclusive trial and failure of external aid are found in English history. For a considerable period the poor rates were made easily accessible to all forms of poverty. The result was that many, partially supported by these rates, were able to take and were given smaller wages than belonged to their work, and an unambitious and dependent class grew apace.

This principle of participation leads us to regard with suspicion the Carnegie fund in relief of college professors whose work has brought insufficient returns. The character of both parties to this provision being of the highest, may serve to give it a false color. Is it not better that each man, in the labor he has chosen, should accept the work and the pay of the work, bringing both, if need be, into more just consideration by the community to which they pertain, than that he should turn his life into a charity, taking it out of the ordinary conditions of toil. What the community truly needs is good work fittingly rewarded, and till this relation obtains among men democracy is not reached. This singling out the highest teachers for a charitable reward leaves the mass of teachers where they are, and helps to reduce the motives for general relief, if such relief is called for. I observe that a recent report of those who have in charge this Carnegie fund congratulates the public on the willingness with which men of eminence and ability have accepted this aid. Indeed, many colleges have made haste to discard any religious affiliations or special inabilities which might deprive their teaching corps of this gratuity.

All this is hostile to the true temper of democracy, to that cheerful acceptance of one's own lot in the community under the common laws of production. It may be doubted whether teachers as a class are more prest by inadequate wages than are the other classes from whose earnings they derive their pay. It is not a gain in democracy to throw any class either on the forced contribution or charity of any other class for support. Support is each man's problem, to be wrought out as he is best able under the common conditions of production. If it is true that teachers are relatively poorly paid, the correction should come under the laws of production applicable to all, and not as a charity to those, in the body



of teachers, who are best able to care for themselves. The liberality of Carnegie helps to cover up the undemocratic theory of protection under which this large wealth was obtained in so brief a period, and still farther disguises the false relation in which it puts those who are partakers in it to their own class and to the community at large. It was by the favoritism of law that this wealth was so quickly secured, and now it is expended in still farther establishing differences and dependences among citizens. The ease with which a good man accepts in his own behalf such discriminations is a cause of regret rather than of congratulation. It is not an expression of true democracy, but of a spurious, "Tory democracy"; a willingness to bestow and accept favors which find no place in the true order of society; an order in which dependence and independence hold each other in constant check. Justice must run all thru social relations. Every man's position and reward must arise under the general laws of distribution before we can either understand or enjoy democracy. All giving must come under that uniform providence which measures out its gifts in an unfailing proportion to the powers on which they are bestowed.

WILLIAMSTOWN, MASS.

Automobiles: The Other Side of the Shield

BY FREDERICK DWIGHT

EVERY new and popular device exercises more or less tyranny. The mob spirit is generated and people hasten to chant the praises of the idol for fear of being called "reactionaries," a curious class who are supposed to be capable of all sorts of contemptible acts. Yet merchants have to pause occasionally to "take stock" in order to find out just what their condition at the moment is, and there is nothing really eccentric in whispering a few doubts in the midst of a general chorus of adulation.

At the moment I am thinking of automobiles. The advertising columns of the papers contain daily hymns to them. The proceedings of motor clubs are set forth at length. Our magazines teem with "motor flights" and astonishing tours and articles upon the romance of motoring. All is harmony and enthusiasm. Only at rare intervals does some miserable "Pro Bono Publico" or "Indignant Citizen" raise an anonymous howl in the correspondence column of his favorite paper, cursing automobiles and wishing they had never been invented. A rather more comprehensive protest seems to have been made by citizens of Brussels, who are reported to have petitioned the authorities to assemble all the cars in the city and destroy them in one picturesque conflagration. But that was an isolated case.

Now it may be that a motor age, like a species of new Augustan Age, is about to dawn if aviation or some other novelty does not strangle it in its birth, and that it will be filled with blessings. But of course it does not follow that the period between the introduction and the complete development of automobiles is improved by them. At any rate, a reasonable counterblast to motor eulogies may not be out of place, and I propose to set down here some of the peculiar problems of the present time that have been produced by automobiles.

To begin with, altho they are performing work in fields of usefulness, they have not as yet proved their necessity. That is, commercially, they are still in the experimental stage—too costly and unreliable to supplant horse-drawn vehicles widely. They are regarded doubtfully by emergency services, such as the fire and ambulance, and as an adjunct to

armies have yet to demonstrate their value. The point I wish to make is obvious enough—that at the present time their conspicuous success has been achieved almost wholly as pleasure vehicles, so that their mention suggests to the average person only a new way of enjoying one's self.

The swiftness of their development to the present time has been astounding, and may be illustrated by a contrast or two which could be duplicated in the experience of almost every one. About six or seven years ago an acquaintance of mine, a young man of large means, informed me that he had imported a French car, and that it had cost him, duty paid, $4,000. He intended, I believe, to impress me by the amount of the investment, and succeeded in doing so. Four thousand dollars appeared a very great sum to expend for a rather uncertain machine. A few days ago a friend of limited resources said that as soon as he "could afford it" he intended to buy a certain "racing runabout." They were not very expensive, he added, "only $4,000." The figure then seemed moderate or at least not at all unusual.

The French car I have mentioned was, I think, of fifteen horse power, and its owner declared it would maintain easily a speed of twenty-five miles an hour. Today the advertising columns of papers and magazines are strewn with notices of "roadsters" and "road racers" guaranteed by their makers to develop sixty horse power or even higher, and to maintain a speed greater than a mile a minute.

In other words, an infancy of spindly, fragile "horseless carriages" has grown to a youth of mighty road engines continually increasing in size, in power, in cost of purchase and maintenance, and, naturally, in excellence of construction. One might think, too, that the rules of economics had been set at defiance, for the advance in outlay has been accompanied by a constantly broadening demand.

The reason, or at least one very conspicuous reason, for this excessive popularity is evident enough. It is the stimulation produced by motoring. Every rider knows the exultation arising from feeling the strength of the animal under him, and this sensation is reproduced and intensified in the easy and constant power of an automobile. But from the same circumstance arises its greatest menace. There is always a temptation to urge a fiery thorobred to the limit of his speed. A rider, however, must take into account the endurance of the horse, and finds a compensation for a moderate pace in the sense of companionship with a fine animal. Indeed, whether riding or driving a horse the fact that the motive power is a living thing has an interest of its own. There is an atmosphere about horses. But there is none surrounding an automobile. The occupant has a powerful mechanism which can be driven, like a horse, at top speed, and the motives for refraining do not exist. So naturally excessive speeding has become a matter of common occurrence.

This, of course, is the most conspicuous evil. Motorists have exhibited the one worse attitude than defiance of law —indifference to it. The usual answer to such a charge is that only a small minority disregard the law, and the majority should not be held responsible for their conduct. In the first place, however, there are probably far more offenders than devotees of the "sport" are willing to admit. At any rate, one railway company after investigation reported that over one-half of the machines that crossed their road at a certain point within the period of observation were maintaining a speed not only in excess of the legal limit, but so great that they could not have been stopped if a train had been passing. In the second place, there is practically no evidence that those who do keep within the law know or care what the provisions are. It is a matter of individual choice. They do not enjoy going at a reckless speed, that is all. Let them change their views, and is there the least assurance that the statutes would deter them? There are the familiar roadside signs: "Town limit. Motor vehicles limited to twelve miles an hour." Has any motor party ever taken such a warning seriously? The maximum placed by the inexperienced authorities is low, and no pretense of obeying is made.

And what if violators are arrested? Some inconvenience, a few dollars' fine —and that is all, as a rule. It is part of the game. Courts have not been able so

far to persuade themselves that "overspeeding" is an offense serious enough to warrant imprisonment, and confine themselves to fines and "reprimands." The prisoner looks contrite at the court's words, "peels off" the amount of the fine from a large roll of bills, and sallies forth to try for another record, laughingly telling the officer who made the arrest, as he passes, that next time he won't be caught so easily. In this there may be some exaggeration—but not very much. Only recently six men were arrested in New York after pursuit by a motor cycle policeman over the greater part of the island of Manhattan. The time was late night, a speed of forty miles an hour thru the city streets was attained (according to the papers), the offenders united in urging the pursuing officer to "come on," and they were stopped at last only by the runaway gates on an East River bridge. The court, when they were arraigned, allowed all but the man who had been driving to go with fines of $2 each!

This suggests an interesting reflection. It is the apparently singular inability of our legislatures and courts to respond to new requirements. Assume, for example, that a dozen different devices, all as dangerous and alluring as automobiles, were introduced at the same time. Unless our Solons grasped the situation far more quickly than has been the case with motor vehicles, years would pass, each one leaving a bloody trail of fatalities and mutilations, before an adequate policy were adopted.

The trouble seems to be that the legislators cling fondly to the idea that motor cars are still nothing but carriages without horses, to be dealt with in the same manner as the older vehicles. For instance, the authorities in general agree that upon public highways a speed greater than say twenty to twenty-five miles an hour is dangerous and should not be permitted. In order to achieve this result they resort to the time-honored methods of licensing cars and drivers, of requiring numbers, and finally of ordering the owners not to exceed the statutory limit. The inadequacy of such a policy appears to have been demonstrated. In spite of all the statutes, in Massachusetts within twelve months sixty-two persons were killed and 640 seriously injured in automobile accidents, while an insurance company has noted the killing, in a period of four weeks of the past summer, of twenty-six people and the injuring of seventy-four others in a similar manner. Indeed, punitive laws of the character are impossible of enforcement except within limited areas, because of the vast expense for police involved and the great difficulty of catching offenders or taking the numbers accurately. High powered cars might with greater logic be regarded as morphine and cocaine are. Possession and ability to use, when combined with an inborn passion, create a temptation that many are unable to resist. People are not permitted to procure or possess deadly drugs, unless competent physicians have certified that they require them. A parallel provision would seem to be that cars capable of a harmful speed should not be allowed except under special conditions—as, for example, upon highways devoted to them exclusively as are railway tracks to trains. It is certainly an absurd thing for the lawmakers to consume their gray matter in constructing statutes designed to prevent automobiles from going more than twenty miles an hour on the public roads, while at the same time and in the same jurisdiction manufacturers are permitted openly to urge every one to buy their cars, warranted to maintain a speed of sixty miles an hour on those very roads! A preventive is needed, and if public opinion be at last shocked into an aggressive attitude, it seems probable that gearing or automatic governors will be insisted upon, so that the power to transgress will be removed.

There are at least two other evils which have arisen and are more or less closely connected with overspeeding. Coachmen constitute a well-defined class, with rules of behavior and action resulting from long experience. Locomotive engineers are men of training and reliability. But the chauffeur is a new type. He has not been "standardized." He is of no particular race or years, and there are no traditions of his calling. Very probably he has not been in the personal service of another before, has an insufficient conception of disci-

pline, and has introduced a new and serious form of offense, for which at the present time there is no adequate remedy. It would be very unusual to see a coachman in his shirt sleeves driving his employer's horses and carriage at full speed around the neighborhood and so entertaining a wagonload of personal friends—also in shirt sleeves. But this seems to be an ordinary diversion of chauffeurs. They take the powerful cars which are in their custody, and without the owner's permission fill them with acquaintances as irresponsible as themselves and race over the country, occasionally killing or maiming innocent passersby, and then, too frequently, speeding away before they can be caught or their numbers taken. An Appellate Court in New York has decided that the owner of the machine is not responsible for the damage caused under such circumstances, and so his solicitude to see that the car is not taken out except upon his order is reduced to a minimum.

Then there is the destruction of roads. The macadam construction has done very well for horse-drawn vehicles. In fact, it is the best that is known, and the motor demands for smooth, hard surfaces have led communities at great expense to enlarge the macadamized areas. What are the results? First, the broad pad of the automobile tire destroys the surface rapidly and hurls clouds of dust over the houses and crops by the roadside, causing annoyance and at times seriously impairing rental values. Then, to meet these difficulties, the appearance of the highway is ruined by the application of a mixture of crude oil and tar, which is greasy and dingy and evil smelling. And it is also merely experimental. No one knows how much the dressing will really add to the highway's life under the strains of rushing cars.

These drawbacks and others that might be mentioned are those which communities as a whole sustain from the presence of automobiles. But there are some which are due to their demoralizing fascination. Thus a question that is frequently asked is, How can so many afford them? It is an ordinary thing to see a huge and expensive machine running smoothly along and crowded with men and women who look far from affluent. And many who never felt that they were in a position to purchase a horse and carriage at perhaps one thousand dollars, maintainable for eight hundred dollars a year, now indulge in automobiles costing several thousand dollars originally and eight hundred to operate for only two or three months.

A few sidelights of which I have been told may be cited here. They illumine in an interesting manner this apparently wonderful expansion of resources. A young clerk dependent upon a presumably small salary inherited $8,000. He spent $2,500 of it in the purchase of a car. A large employer of labor in one of our great cities had a clerk, a young married man, whose salary was less than $1,000 a year. One morning he appeared at the office in a handsome new automobile. My informant called him in, and in reply to questions he explained that the car was his; that he himself had no money outside of his salary, but his wife possessed a dot of about $12,000 and "they thought they would put $2,500 of it into an automobile!" A resident of Boston said a year or two ago that one would be astonished to know the number of second mortgages that had been placed upon houses in the vicinity of his city to enable the owners to procure cars, and a lawyer of New York is responsible for the statement that in his office during the past winter there have been over 200 foreclosures of New York mortgages which had been created with the same end in view. Such cases are probably not very exceptional, and require no comment beyond the remark that they indicate a reckless extravagance, which few, if any other, inventions have ever called forth.

In conclusion it is not unfair to refer to the appearance of the occupants. Commentators have declared that the tendency of our development is toward a colorless and uninteresting civilization, devoid of high lights or any element of the picturesque. The average motorist of today is an argument for the contention. During the reign of horse-drawn vehicles no costumes were too carefully designed. Under the new régime nothing is too ugly. Hatless and coatless or wrapt in linen dusters and huge veils, men and women are reduced to one un-

inspiring begoggled level. In place of the trim coachman, erect on his box, one sees a creature clad in dingy cap and cotton duster, sitting on the small of his back, and so sunken that the crown of his head is almost on a level with the shoulder of the person by his side.

All this may seem dyspeptic, but it is not so intended. The point simply is that, in spite of the assertions of enthusiasts, I think the time when motor vehicles are desirable assets to society at large is yet to come, and that at present a certain excess must be charged to them in the debit column. They have engendered a reckless personal extravagance that must bring remorse and suffering to many some day. They have produced a new contempt for authority and an unusually lawless and irresponsible class. Finally, with little or no compensating advantage to the communities thru which they hurry, they have caused the taxpayers heavy expense for roads, have almost driven the more leisurely from them, and have then proceeded to destroy the highways themselves. All of these things are doubtless curable and will be remedied in time. At present, however, they exist.

NEW YORK CITY.

Insignificance

BY HARRY H. KEMP

GOD made a million atoms, each by mortals called a "world";
Like dust-motes in a beam of light, they dartled, circled, whirled;
Yet all these million worlds, compared to all His Might did rule,
Were in the Universal Whole one tiny molecule.

The mortals on these shining specks spake of God's space as "far,"
And every bright companion-mote they hailed as "world" or "star."
(They should have known the Eternal Mind no need for measures hath:
God looketh down the Milky Way as down a garden path;
The distance from our outmost sun unto His throne, no doubt,
Is a handsbreadth in His seeing, or too small to measure out.)

These manikins then fought and died on many a shining mote—
For what they dubbed as "empires" swor ded one another's throat;
Each nation on its anthill swarmed and sang a patriot song,
And stormed another anthill to avenge an emmet wrong:
And thus they hated, loved and lived until the end of time,
While up the weary rounds of life a million worlds did climb.

Then flash! Two molecules collide and worlds exhale in mist,
And back into a fiery ring do melted empires twist,
And cities in solution hang and drop in fiery rain,
And the sinew of the tiger fuses with the poet's brain;
All back into one element trees, mountains, oceans, glide,
And not one life is left to strut and swell in pompous pride——

Then some far-worlded telescope which chance did thither turn
Beholds this starry funeral pyre minutely flame and burn.
"Lo!" thinks the awed astronomer, his star-map at his side,
"Upon yon utmost verge of night a star was born and died."

And so they numbered eons there, and cherished histories gray!
Oh, but they battled, loved and dreamed for a clock-tick in God's day!

LAWRENCE, KANSAS.

Literature

The Hague Conferences

THESE two volumes will be indispensable to all students of international law and the peace movement. With the exception of Frederick W. Holls' historical and philosophical volume on the First Hague Conference and Hayne Davis's brochure on the vital issues of the Second Conference, reprinted from THE INDEPENDENT, these are the first two volumes on the Hague conferences yet publisht by Americans. Dr. Scott, who, as United States technical delegate, rendered such indefatigable service on our delegation in the summer of 1907, has collected in full the texts of the First and Second conferences, printing the official French text in the left hand column of the page and an English translation on the right. To this he has added a brief and serviceable introduction, which has already appeared as a tract of the "International Conciliation" Society, and which is the best short summary of the Second Hague Conference publisht in English. A brief preface by Secretary Root, who alone deserves credit for conceiving the stupendous idea of the Court of Arbitral Justice, and by whose efforts last Christmas the Central American States were able to take the farthest step yet taken in internationalism, completes the volume, with the exception of some state papers and an admirable and complete index. The volume, therefore, is the code and constitution of the law of nations, and hence the bible of international law.

Professor Hull's volume is a detailed account of the history and results of each conference. All the topics discussed and all the acts passed are grouped together, the author showing first what was done in 1899 and then in 1907. Altho Mr. Holls and others have covered the First Conference more fully, no one has as yet so completely and adequately covered the Second Conference, and the volume is therefore the most complete account of the two Peace Congresses up to date. As Professor Hull is a historian rather than political philosopher or international lawyer, there is practically no discussion of the larger philosophy of the peace movement in the volume. As Professor Scott's book is the text of the conferences, so Professor Hull's is the commentary and summary. But the philosophy of the conferences, showing their place in history and the part they are to play in federating the world, is yet to be written.

Professor Hull has told the history and achievements of the Conference, however, with accuracy and a nice sense of proportion. The volume will become a standard work and will prove especially valuable to editors, librarians and students. We notice only a trifling error or two. There were not 256 delegates at the Second Conference. There were only 175 accredited to the Conference, and according to the printed lists given out at The Hague in July, only 246, including the secretaries, etc. On page 15, Triana, of Colombia, gets no place among the leaders of the Second Conference, and on page 4 the story of how the Interparliamentary Union became responsible for the calling of the First Conferense is apparently not fully known to the author.

One cannot read this book without feeling a great pride in the constructive and statesmanlike work of the American delegates at both conferences. Mr. Holls and Andrew D. White, at the First Conference, and General Porter, Mr. Choate and Professor Scott at the Second, performed especially brilliant service. Indeed, with the exception of Captain Mahan, at the First Conference, who usually took the unprogressive stand whenever a choice was possible, our delegates have one and all put our country and even the whole world in their debt. Professor Hull's book is adequate, able and interesting, and will give knowledge and inspiration to all workers for peace.

Two Notable Volumes of Short Stories

THE short story has fallen into disrepute, and justly so, for few of them are worth publishing in the magazines, much less being collected and republished in book form. But John Galsway[1] and Norman Duncan[2] have each written a series of stories recently that really deserve to be preserved because of their literary merit, and because of the curious light they shed upon the two natures of poverty. Galsway is taking the place Gissing had in English fiction, and wherever the scenes are laid, his stories are founded upon social abuses. He has chosen the London slums for this last series, but he shows his superior sense of the situation in that while the forlorn appearance of things is there, he does not lay stress upon this as the muckraking novelist is sure to do. He confines himself more particularly to quoting literally the confidences and half articulate philosophy of the poor. Each story gives the point of view of some man, beggar or thief, or lost dog in human society. He shows clearly that the real and greater grief of these people is not poverty, but it is the nature of it as thrust upon them by the more prosperous classes. He indicates how dumbly these victims of wealth recognize the impossibility of legislating for the thrifty and the unthrifty at the same time, because the will of the one is diametrically opposed to the needs of the other.

JOHN GALSWAY,
Author of "A Commentary." Putnam's.

NORMAN DUNCAN,
Author of "Every Man for Himself." Harper's.

On the other hand, Norman Duncan has laid the scenes of his stories along the coast of Newfoundland among the fisherfolk. Here the contrast is not drawn between the rich man and the poor man, as in Galsway's stories, but between the poor man and the sea. Life is a struggle against the wind above the waves, upon the barren shore, in which every man is for himself. The poverty far exceeds that of the London slums, the hardships endured are more terrible. But the fishermen do not in any way resemble the men of the slums. With them poverty is a natural condition. They are like men who have not changed in the great simplicities since God made them. They have no cunning, and their ferocity is as primitive as their gentleness. They have philosophy also, but it is different from the wisdom of despair in the slums. The deepest metaphysics of the year in fiction may be found in "Tumm's" talk in the two initial stories of this remarkable series. The reader may also find here deeds of heroism, of sacrifice, of pretty tenderness; but he will find no humor, no rabid wit. Everywhere is the gravity in character of men who are up against just God and the weather.

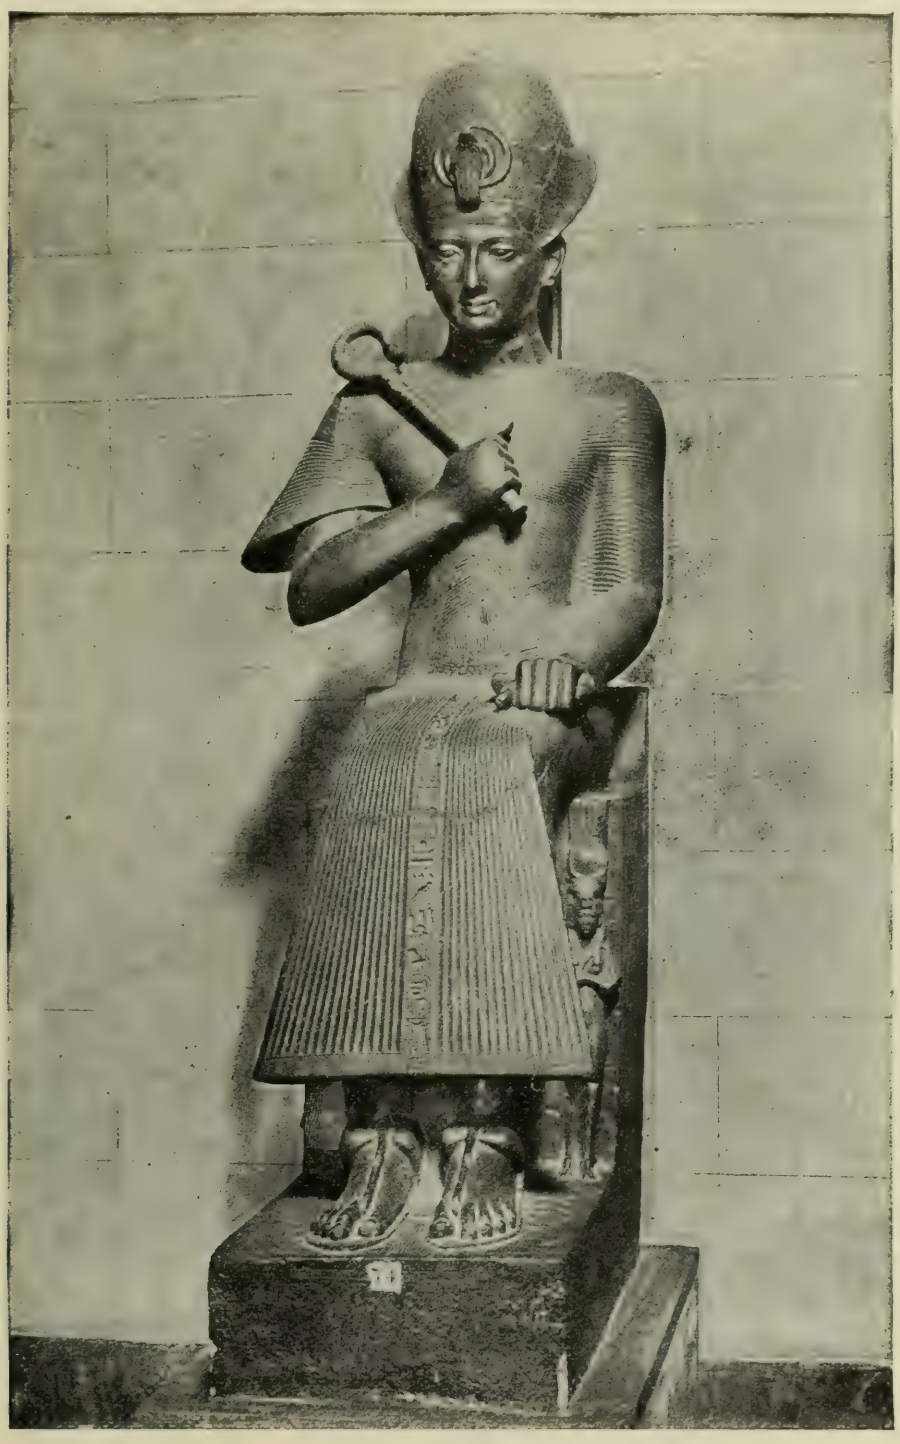
The conclusion is somewhat clearer than the average social economist makes it—that poverty imposed by society makes thieves, tramps, beggars. But poverty imposed by nature makes pioneers. It becomes the proper condition of the human. In it he cleaves closer to virtue, finds less that is evil and retains the

[1] A COMMENTARY *By John Galsway.* New York: G. P. Putnam's Sons. $1.50.
[2] EVERY MAN FOR HIMSELF. *By Norman Duncan.* New York: Harper Bros. $1.50.

doubtlesness of a very superior manhood. And between Galsway's representations and Duncan's evidence we may realize the absurdity of attempting to ameliorate poverty. It cannot be done. The great majority of people are made so that they must remain poor as the fishes must remain in the sea. And, after all, the weaklings among us are those who cannot undure the hardships of poverty. So the thing to do is to abolish wealth and the weaklings of wealth, and to secure the natural conditions of poverty for every man, which are decent and honorable.

The Story of the Pharaohs

WHAT a wonderful land is Egypt! That narrow strip of verdure winding here and there between high cliffs—mountains, we may say—and approaching this side or that as the capricious river will have it, has been fought for since the primeval man settled here. This land is the gift of the Nile, which brings down periodically tons of silt from Abyssinia and the Sudan, fertilizing the valley. Its course from Assuan, at the first cataract, down to Cairo, where the delta opens out toward the sea, is some five hundred miles thru an enchanted land. The charm of Egypt cannot be conveyed by description. One must be there, and those who visit Egypt are affected as the lotos-eaters. Egypt holds them.



It is now only three years since Breasted produced his "History of Egypt," a monumental work, with two hundred illustrations and maps. The book now before us contains not much more than half the contents of Breasted's. One is likely to say, "What can he do that cometh after the king?" But let that pass. Here is a book* that stands on its own merits. It would have been a calamity if the author had modestly suppressed his work because the ground was already well covered. Every statement that he makes is lucid and helpful. What a history is here unfolded! Long periods of decline are succeeded by sudden brilliancy. The once misty Menes is now made clear. The great fourth dynasty swims into our ken, with Cheops at its head. After certain misty dynasties, covering no one knows how many years, comes the great twelfth dynasty, in which the names of Amenemhat and Sesostris alternate. Sesostris III and Amenemhat were the greatest of all the kings of Egypt. Then we see weak dynasties come and go, and we find Hyksos kings, clearly invaders and probably Asiatics, submerging the ancient race. But the patient Egyptians bide their time, and the invaders melt away. The eighteenth dynasty took great pains to let Asia know of what caliber it was made. Thotmes I began the invasion, and his son Thotmes III followed it up, making seventeen campaigns into Syria. His mission was to harry and destroy. In contrast to this we find his sister, the high-minded Hatshepset, cultivating the arts of peace. Amenophis III, of the same dynasty, had little inclination to war. He was the Memnon of the Greeks. He loved to rule in splendor, and made foreign alliances in marriage, while danger threatened his kingdom. Instead of a strong hand, which was needed, he loved his ease. It was only too well advertised that his foreign wife was leading him; and it was well "that he was gathered to his fathers." His son, Amenophis IV, was the most singular man who ever sat on a throne—a religious fanatic, "guided by his wife," some would say. But it is sure that he entered heart and soul into the project of a new religion. It was "too hot" for him to remain in Thebes, where the priesthood dogged his steps and "scowled upon him in the streets. Living in Thebes under such circumstances must have been almost as pleasant as for a murderer to live in the same room with the dead body of his victim." Six years he faced the situation, and then "carried into execution another radical change. He shifted the capital of the empire bodily three hundred miles away from the city which had become hateful to him." The priests of Amen, left without funds, for the lay officers took up their cue and followed "where thrift might follow fawning," were at their wits' ends.

The King made for himself a most beautiful home, as the remains at Tel-el-

Amarna bear witness. That he was supremely happy, whatever became of the state, is sure. He loved his wife to distraction. He is represented in the act of kissing her on a chariot. That he was "amiable visionary," rejoicing in his six daughters, was frittering away his crown and making poetry while the barbarian was at the gates.

Egypt was peculiar in this, that it

not merely weak and uxorious is shown by some of the highest strains of his sacred poetry, that equal the best of the Davidic Psalms, which are far later. But that he could not control an empire was patent to the surrounding nations. The could be crushed and rebound. Seti and Rameses (an arch braggart), especially the latter, made some headway in regaining the lost ground in Syria. But at last the Assyrian came down, and Egypt was no longer a nation to be reckoned with,

Sermons and Addresses

Dr. Watkinson has been called by no less an authority than Dr. James Stalker "the prince of preachers in Great Britain." He is essentially a modern preacher in the best sense of the phrase. His sermons are as fresh as a June morning. The doctrine is sound, but he knows how to make it seem inevitable to the man of today, and his statement of it is wonderfully felicitous besides. His illustrations show prodigious reading or else betray a well-kept commonplace book—probably the former, as they are too natural and apt to be machine made. His scientific illustrations are most effective. Who would, for instance, have thought of pointing his warning against sins of pride, insincerity and indifference in worship by the illustration of bacteria in the sacramental cup. This volume of short addresses[1] will make new friends for the author and will not disappoint the old.

A new book on the divinity of Christ. Not a book to read carelessly. Not a book of hastily collected and badly co-ordinated sermons. But a book that has taken years to write and one that a man might read four times a year for ten years and not exhaust its message. We envy the congregation which enjoys such preaching as steady diet. There is little dogmatic statement—no quarreling with dissenting views, but the faithful portraiture by a patient student of the facts he has found and the vision he has seen. No such rich and stimulating study of the person of Christ has appeared in recent years.

The president of McCormick Theological Seminary is a man much sought after as a college preacher. He has collected eight sermons delivered before the students of as many universities of the East and Middle West and has given them a serial cast by the use of the common adjective "supreme" in the titles. The "supreme virtue," for instance, is reverence; "The Supreme Art" is the title of a sermon on making the most of opportunity; the "supreme temper" is soberminded-ness. The titles lose force by this artificial uniformity, but the sermons are better than their titles and are adapted to the peculiar problems of educated young men and women.

The blind preacher of Edinburgh so recently called to look upon the King in His beauty has helped thousands of us by his devotional tenderness in biblical exposition. Lacking sight, he had what is better—insight. His last book[4] is a collection of "sermonets"—the editor's word—which have recently appeared serially in one of the magazines. It is enough that it is of the same character as much of his other writing.

It is rare that a company of men gathered from many professions can discuss off-hand large philosophical topics without prolixity and dullness. Here is a book of such discussion[5], transcribed—not rewritten—we are told, from the conversations of fifteen men of different callings. The contributions are distinguished by consistent pertinence and not infrequently by real profundity of thought. The subject of discussion is fundamental religion, and is thoroly characteristic of the modern spirit. Experience and not revelation is the watchword of these men in seeking for religious sanctions, and they state their views and hopes with all the brilliancy and fascinating cleverness which distinguish the religious thought of today. It is a highly stimulating book. Encouraging, too, that such men are giving their best thought to the fundamentals of religion.

Twenty Years in Persia. By John G. Wishard, M. D. New York: Fleming H. Revell Co. $1.50.

Several books relating to Persia have recently been published. Professor Jackson's "Persia, Past and Present" is the work of a scholar especially interested in the Zoroastrians; M. Anet's story of an attempt to conquer Pran in a motor is amusing in misadventure, thorolyGallic in humor and style, and shows unusually keen powers of observation; Mr. Crerson's "Persia, the Awakening East,"

FIVE THOUSAND PRIESTS, MERCHANTS, AND ARTISANS MARCHING TO THE BRITISH LEGATION, TEHERAN, FOR REFUGE AT THE BEGINNING OF PERSIA'S POLITICAL TROUBLES, IN 1906.

From "Twenty Years in Persia," by John G. Wishard, M. D.

American hospital in Teheran, is the author of a volume published by the Fleming H. Revell Co., *Twenty Years in Persia,* which, by reason of the author's long residence in the country, is a valuable contribution to our knowledge of things Persian. Connected on the medical side with missions, Dr. Wishard's point of view naturally involves an account of the work done in North Persia by the Presbyterian Board, but it would be a mistake to suppose this volume exclusively devoted to the history of missionary labor. On the contrary, while not pretending to the encyclopedic character of Curzon's work, it supplements the latter by a vast amount of detail descriptive of the intimate life of the Persian of every class, and in this respect,

for accuracy and just observation, far surpasses in interest the records of the casual traveler. The reviewer can testify from his own personal knowledge to the splendid character of the work done in the hospital at Teheran. Dr. Wishard has not overstated its value, and deserves the praise which he modestly accords his co-laborers. America has been signally fortunate in the men selected for this post. Their tact, prudence and unselfishness have been the admiration of European residents, and have won the confidence and esteem even of the Mohammedan community. Not only in the relief of suffering, but in the changes wrought in the barbarous and superstitious methods of Persian medical and surgical practice, the success achieved in Teheran makes it doubtful whether any equal expenditure of personal service and money has elsewhere produced greater net results. The author's profession, as well as long residence, has afforded him the opportunity to portray the private life of all classes in a particularly truthful manner, but the chapters on Commerce, Industries and Laws, on the Government and Reform Movement, are equally authoritative and illuminating. It is, above all, refreshing to find a book on Persia free from the flippant criticism so often chargeable to Western authors, whose eyes are out of focus in the East and who have no serious interest in the struggle for reform which has just been inaugurated.

The Age of Shakespeare. By Algernon Charles Swinburne. New York: Harpers. $2.00.

The fact that Mr. Swinburne is one of the greatest of living poets does not prevent him from being one of the worst of living critics. Dryden must have had a prophetic eye when he wrote:

"Railing and praising were his usual themes,
And both, to show his judgment, in extremes:
So over violent or over civil
That every man with him was god or devil."

The volume before us, which consists of essays on the contemporaries of Shakespeare, is a geyser of adjectives. Mr. Swinburne does not seem to admire the play "Histriomastix," for he says:

"This abortion of letters is such a very moon-calf, begotten by malice on idiocy, that no human creature above the intellectual level of its author will ever dream of attempting to decipher the insignificant significance which may possibly—tho improbably—lie latent under the opaque veil of its inarticulate virulence."

On the other hand, Cyril Tourneur's merits do not seem to be underestimated, for we read:

"It is a certainty indisputable except by the blatant audacity of immedicable ignorance that the only poet to whose manner and style the style and manner of Cyril Tourneur can reasonably be said to bear any considerable resemblance is William Shakespeare."

In admiration or in denunciation Mr. Swinburne is always fortissimo. Age has not abated the fervor of his worship of Victor Hugo nor his contempt for Byron. In this volume, for purposes of illustration, Hugo is always God, and Byron is always Devil. "There are passages," says Mr. Swinburne, "in which this poet's verse sinks well-nigh to the tragic level of a Killigrew's, a Shadwell's, or a Byron's." The book is, of course, interesting as showing what a man of genius thinks, or, rather, what he feels, about some of his great predecessors in English poetry; but as a critical work, it cannot be taken seriously.

Victor Hugo's Dramatic Characters. By James D. Bruner, Professor of the Romance Languages in the University of North Carolina. With an Introduction by Richard Green Moulton. Boston: Ginn & Co. $1.00.

This book is an excellent example of the evil done by a good man. We have always thought that the real reason why Mr. Moulton is so admirable a critic and so charming a lecturer lies in his personality. He cannot discuss any subject without saying something suggestive and illuminating. But unfortunately Mr. Moulton would have us believe that all his success is due to his method—that there is such a thing as "scientific" criticism, and that all one has to do to become a good critic is to follow the system. Now Professor Bruner has unquestionably done this; and the result is that he has written a book that purports to be literary criticism. It must be scientific literary criticism, for it betrays no sign of literary taste, no insight, no humor, and no charm. The author follows what he calls the method of "inductive" criticism; that is, in separate chapters on Victor Hugo's dramatic characters, he

studies each part of the play in which the character appears; studies it with a microscope; observes each emotion that the character shows, then enumerates and classifies; and on this collection of emotions, attempts to arrive at a just appraisal of the character's real nature. For example, we are told that Hernani is "melancholy, pessimistic, purposeless, vacillating, sarcastic, distrustful, jealous, hateful, revengeful, impulsive, magnanimous, chivalrous, possessed of a high sense of honor, heroic, lover-like, sentimental, poetic, fatal, a man of night, a wanderer on the face of the earth, *une force qui va.*"

This in one sentence. Then these qualities are taken up separately, and scientifically proved to be correct by references to individual scenes. There is madness in this method, for it leads to absurdities like the following, which, if Professor Bruner had not been absorbed in induction, he must have perceived. An "important characteristic" of Ruy Blas is his "religious nature," which is proved by "his disposition to offer prayers to God on all occasions, whether appropriate or inappropriate. He often addresses God as 'O God!' 'O my God!' 'Just God!' 'Great God!' 'Good God!' Time and again he assumes the romantic attitude of rolling his eyes or raising them toward heaven." The only value of this book is in its possible service as a fatal illustration of scientific criticism; but the dreadful thought occurs to us that it is possibly intended for use as a textbook. We see in imagination students assigned lessons in it, and then in the next recitation enumerating the different qualities in each important character. Is this the criticism of the future? and is this the way to understand the poetry of Victor Hugo?

The Victor. By Richard S. Holmes. New York: Fleming H. Revell Co. $1.50.

Dr. Holmes's first novel, "The Maid of Honor," published last year, had a wholesome out-of-door atmosphere, and it appealed to all sportsmen by the exploits of its incomparable angler, Henderson. All the world loves a man who does things splendidly; and as we were entranced by the lightning flash of sword play by the heroes of fiction from Vulcan to Vtolodyovski, so we are enchanted by the rod of the wizard fishermen in the books of Dr. Van Dyke and Dr. Holmes. We hoped for camp fire and forest in *The Victor,* and the opening scene at the cross roads store appeared to promise fresh pleasures along fern-fringed pathways; an expectation disappointed by a very ordinary tale of love, murder and expiation. Dr. Holmes should return to his earlier manner. It is a pity that a successful book should spur authors and publishers to follow it with hasty and therefore inferior work. A lumberman by the name of Hickory Stumpp tries to enliven the tale by a curious use of four negatives; and it ends happily. "Weel, Weelyum's got the lass, an' she's bonnie, an' he's strang," which is perhaps not the worst way to end a story!

The Making of Personality. By Bliss Carman, author of "Pipes of Pan," "Sappho," "The Kinship of Nature," "The Friendship of Art," "The Poetry of Life," etc. Boston: L. C. Page & Co. 1908.

The Making of Personality, by Bliss Carman, is a poet's book of suggestions. In his preface Mr. Carman credits Mrs. Mary Perry King as his forerunner and assistant in this attempt to co-ordinate spiritual, mental and physical culture. Recognizing that "the paths of mental and spiritual training are well marked," he magnifies the importance of physical perfection and devotes a large portion of his work to such topics as "Rhythms of Grace," "Beauty of the Foot," "The Art of Walking," "Dancing as a Fine Art" and "The Sorcery of the Hand"; but he does not confine himself to physical subjects. "The Might of Manners," "The Use of Out of Doors" (in which Mr. Carman is a past master, "The Dominion of Joy," "The Growers" and "An Old-Fashioned Essence" (which is his simile for charm) are titles of some of the closing chapters. His choice of names is always a poet's choice, and extremely happy. "The Underglow or the Value of Instinct," "The Lucky Pilot or the Guidance of Reason," "The Winged Victory or the Power of Poise," "The Silver String or Personal Vibrancy" are examples of this poetic nomenclature. In "The Leaven of Art" he teaches that not only life in the open but life in art is essential to keep a man interested, grow-

ing, civilized and humane. It is, thruout, a gospel of good cheer that the poet preaches, kindly, hopeful and reasonable, with more spiritual import than appears on the surface; the happy phrases run on so pleasantly that the book might be called "light reading," but they are "good sentences" that "would be better if well followed." The gist of the whole is given in the introductory poem, "The Measure of Man," with its closing lines:

"Wherefore the triune dominion—
Religion, Science, and Art—
We may not disrupt nor divide,
Setting its kingdoms apart,
But ever with glowing ardor,
After the ancient plan,
Build the lore and the rapture
Into the life of man."

Views and Reviews. By Henry James. The Ball Publishing Co. $1.50.

The papers here collected by Mr. Le Roy Phillips, under a title used for Mr. Henley's essays not long ago, were printed originally in *The Nation,* scattered thru a period of twenty-five years, and now appear with a curious absence of any notice by their author. Gleanings, after a definitive collection of a writer's work has been made, are seldom, despite the prophecies of the editor, of intrinsic value or of more than curious interest to the student. But these miscellaneous articles by Mr. James have a real interest, often from the topics, still alive after two decades; always for the sake of their accurate thought and penetrating judgments. There is, to be sure, a certain quaintness in the exasperation displayed over Browning's needless obscurities, while the paper on Whitman becomes, in the face of present taste, positively daring. The notes on the Whistler-Ruskin episode fit in timely fashion with the series of articles on Whistler to which the public has of late been treated. Mr. James's own individuality has become so marked as to set him quite in a niche by himself, so that it is with pleasant surprise that one finds him so gentle and understanding a critic of writers as far afield as Dickens and William Morris. That he could not love Dickens is a foregone conclusion, but that he could see in that novelist matter for respect is a tribute to his fine breadth of view. The papers in Eliot's earlier novels and on her poetry make, with the two articles on her life and on "Daniel Deronda," in "Partial Portraits," an excellent study of that author. Mr. James's later method of handling English casts no shadow on these pages, save that "bristling," so gaily seized by the newspapers from one of his recent essays, here proves itself an old favorite, and fitted to the analysis of dramatic dialog, and of Mr. Kipling's earlier stories, as well as to a description of Philadelphia. It is such papers as these, even because they are slight in comparison with the essays on the "French Poets and Novelists," that show what reviewing may be and must be to serve as anything more than extended book notices.

The New Things of God. By Henry A. Stimson, D. D. 12mo, pp. 280. New York: F. H. Revell & Co. $1.25.

Dr. Stimson, one of the best-known pastors in this city, has here gathered a series of twenty-one sermons. They do not claim to represent any new theology, but to express those new views of God and his love, which in an age of new thought is leading to a new sense of his love, invariably accompanied by something of newness in the understanding of God's word. Yet if there is no new theology there is a serious suggestion in Dr. Stimson's declaration that Jesus discarded the "old bottles" of "Judaism, its traditions, its forms, its services, its sacrifices, its all—even its law and its Sabbath," and that the Church has been doing the same sort of thing ever since. The sermons are thoughtful, practical, and inspiring to the reader.

The Lure of the City. A Book for Young Men. By David James Burrell, D. D., LL. D. 16mo., pp. 284. New York: Funk Wagnalls. $1.00.

There has a multitude of books been written of advice to young men—often the substance of sermons; and such we presume the present is. It covers over twenty topics and chapters, such as "Going Into Business," "Amusements," "The Quitter," and is not only full of good Christian sense, but is readable and lively, just such talk as would appeal to those to whom it is addrest.

Home Life in Germany. By Mrs. Alfred Sidgwick. New York: Macmillan Co. $1.50.

Mrs. Sidgwick is better known to her American readers as a novelist, but she has written no more interesting story than this book on home life in Germany. The history of a country is simply a composite biography of the men who happen at that period to manage its interests and relations politically, commercially, etc. Women rarely figure in these except for an occasional queen or intriguer. Therefore the history of any country is only partial, and the reason is that it ignores the intimate home life of the people, where the women move and order events; and, as a rule, current literature is equally at fault. We rarely get more than the sensational features of social life in fiction or in the daily newspapers. The serene, fireside existence of the millions where the best people are born and bred does not appeal to the average writer. But this is the very life in Germany that Mrs. Sidgwick so delightfully portrays. The *inner* customs of that society not yet abandoned to publicity are dramatized at old-fashioned dinners and "coffee drinkings." Thus the reader receives a more veracious idea of real German life than can ever be had from a history. And the book does not lack the charm of personality, for the author (who is herself of German extraction, altho claiming England as her home) gives her impressions in the form of a visitor's experiences in the city homes and country places of the German people.

Reminiscences of Senator William M. Stewart, of Nevada. Edited by George Rothwell Brown. New York and Washington: The Neale Publishing Co.

The facts which remain in the mind of an old man after a prolonged period of service are not always those which we need or desire to know. It is too often the casual or the commonplace which sticks, instead of the essential or the illuminating event. Senator Stewart's recent volume of reminiscences illustrates well this general fact, since there must have been in his life, which dates back in its maturity to the days of California and the forty-niners, an abundance of that experience which might illuminate the history of the whole mining West. Yet his volume tells us little that we do not already know. We should like to hear of the actual social life of the mining camps, of the conditions which made up the communities of Carson City and Virginia City, of the political organization in the "rotten borough" which Mr. Stewart so long represented in the Senate, of the inner workings of the silver movement. But we have instead a book of harmless recollections which might have been written by any one who knew the date of the author's birth and had a list of his residences and public offices. There is nothing in the volume to show, of itself, why Senator Stewart was high in the confidence of statesmen and politicians. We are much in need of intimate contributions to American history in the guise of autobiography—so much so that we are grateful for even this on the rare occasions when the author has allowed himself to be communicative. But we are regretful that Senator Stewart did not take his opportunity more seriously. The book has been "edited" by George Rothwell Brown, who contributes to it an eulogistic introduction.

The Indian Captive; or a Narrative of the Captivity and Sufferings of Zadock Steele. Related by himself. To which is prefixed an Account of the Burning of Royalton. (Indian Captivity Series.) Springfield, Mass.: The H. R. Huntting Co.

The border warfare of the Revolution, tho without great significance in its results, is full of the picturesque and interesting. Zadock Steele figured as a victim of one of the attacks by the British and their Indian allies, being carried off as prisoner from Royalton, Vt., to Montreal, in 1780. He was the captive of the Indians, who sold him to the English, while these confined him with other prisoners of war on Prison Island in the St. Lawrence. After prolonged sufferings from hardship and deliberate cruelty here, he led a party in escaping in 1782. His narrative is direct and simple. It was worth while to reprint it in the attractive little book which the H. R. Huntting Company has just added to its series of Indian captivities.

Literary Notes

....Josef Hofmann has written a book on *Piano Playing*. It is published by the McClure Company at 75 cents net.

....Mr. Andrew Lang's annual fairy book is achromatic this year. It is entitled *The Book of Princes and Princesses*. In this book Mrs. Lang collaborates with her husband.

....Mrs. Alice Hegan Rice, the author of "Mrs. Wiggs of the Cabbage Patch," has written a new novel entitled *Mr. Opp*, which will have serial publications in the *Century*, after which it will appear in book form.

....Mr. Alfred Noyes, the author of *Poems, Flower of Old Japan, The Golden Hynde*, etc., was born in 1880 and spent his student days at Oxford. He has devoted himself to literature, chiefly poetry, since 1901. His works are published in America through The Macmillan Co. at a uniform price of $1.25.

....Meredith Nicholson, the author of "The Little Brown Jug of Kildare," confessed not long ago that some of his best ideas for entertaining fiction were caught by him during the process of shaving. Mr. Nicholson appears thus to have marked out a path for himself, as yet untrodden by any of our women novelists.

....A little pamphlet has been issued under the auspices of the American Peace Society, 31 Beacon street, Boston, entitled *The Freedom of Commerce in Time of War*, by James L. Tryon, the assistant secretary of the society, who personally attended the second Hague Conference. The book will be interesting to all interested in peace and international law.

....Dwight W. Huntington, the author of "Our Feathered Game," concluded his series of papers, recently published in THE INDEPENDENT, and which attracted wide attention, by saying: "North America can be quickly made the largest game producing country in the world." Mr. Huntington will presently publish another series of contributions on game subjects in the *Amateur Sportsman*.

....Dr. George Frederick Kunz, Tiffany's gem expert, whose "Book of the Pearl" is one of the most sumptuous books of the year, wrote a little volume some years ago entitled "Natal Stones: Sentiments and Superstitions Associated with Precious Stones." This book has always been exceedingly popular with the Tiffany patrons and has now reached its eighteenth edition. Dr. Kunz has just issued an edition de luxe of "Natal Stones," bound in half Levant morocco, with hand-made marbled sides and end papers.

....Mr. Archer Butler Hulbert, Professor of American History at Marietta College, and author of "The Ohio River," "Historic Highways of America," and of the "Niagara River," has just completed a course of three illustrated lectures at the Pittsburgh Carnegie Library in honor of Pittsburgh's Sesqui-Centennial, before the Pittsburgh University Extension Socity on "The Conquest of the Alleghanies." Professor Hulbert subdivided his theme as follows, viz.: (1) The Military Conquest; (2) The Social Conquest; (3) The Commercial Conquest.

Pebbles

"You can't see the leading lady now; she is busy in the dressing room."

"Is she changing her costume for the next act?"

"No, this is an Ibsen play. She is merely making up her mind."—*Cornell Widow.*

THE head mistress of a certain provincial school was one day examining a few of her select pupils in grammar. "Stand up, Juan, and make me a sentence containing the word 'seldom,'" she said, pointing to a small urchin. Juan paused as if in thought; then, with a flush of triumph on his face, replied: "Last week father had five horses, but yesterday he seldom!"—*Philippines Gossip.*

JUDGE'S WOMEN'S DEPARTMENT.

FOR the benefit of our women readers in the myriad homes where *Judge* is a favorite, we have entered into an arrangement with the famous editor of *The Perfect Ladies' Companion*, Mr. Hik Hok. Any perfect lady among our readers who has troubles of household or heart may go in perfect confidence to Mr. Hok, who will at intervals convey through these pages advice or comfort, as the case may demand.

Dear Mr. Hok—Please tell me a good place to go for the summer. I have ten children, four of them quite small, and I must go some place where they will be safe and yet get healthy, cool outdoor air and not disturb other guests. I hate to be conspicuous, and I hate gossipy summer resorts. Yours,
(Mrs.) Louise Allen.

The North Pole, madam. You may be just in time for Peary's steamer. That's the only place we know to fill your requirements.

Dear Mr. Hok—Ought I to let a man, whom I have known only two days, squeeze my hand? Is hand squeezing wrong? Yours,
Netta Wolf,
Lake Hopatcong, N. J.

A proper exercise of the muscles of the hand, Netta, benefits the whole system. Sharply expanding and contracting the digital muscles, by means of alternately resisting and responding to external pressure, inflates the lungs, opens the pores, and is an infallible remedy for brain fag, rheumatism, measles, spavin, pip, and, in fact, all of the ills which are benefited by any advertised soothing syrup. Two days is not too soon if his method is good.

Dear Mr. Hok—Why is a hen? Yours as usual, Ann Allyne,
New York City.

Beneath the apparent seriousness of your inquiry, Annie, we suspect a flippant intent. Perhaps you are joshing us, to use a vulgar phrase. We don't know why is a hen, but Providence apparently does, and because there are so many of them we think it is best to allow them space in the paper. Bless your frivolous little heart, Ann, we don't know why, but we're glad they exist, and we pray they may continue. So, even if your name *is* Annallyne, never say dye. Yours ever, Hik Hok.
—*Judge.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Another Peace Victory

LAST Friday the news leaked out from Washington that Japan and the United States have just made a pacific agreement to respect each other's territory and henceforth act together in China. The text of the agreement has not yet been publisht, but it is said to be drawn up in the form of a declaration, and will, therefore, not have to be ratified by our Senate, which has heretofore been the stumbling block to so many progressive peace measures. We publish the abstract of the five articles of the declaration in our "Survey of the World."

The agreement taken in conjunction with the arbitration treaty signed last May between Japan and the United States marks the farthest step yet taken by any two of the great world powers toward universal peace. For the arbitration treaty sends to the Hague Court all disputes except "vital interests" and those questions that affect third parties, while the present agreement makes each nation respect the other's territories, which are the only "interests" vital to a nation, and agree to work together in China, which is the "third" power most affected by their mutual foreign policies. Hence to all intents and purposes there can be no war between the United States and Japan as long as the treaty and the agreement last, for the treaty will settle all minor disputes by arbitration, and the agreement all major disputes by guaranteeing the present *status quo*.

We have special cause for rejoicing in this brilliant solution of the Japanese-American question, for THE INDEPENDENT alone, of all the journals in the United States, as far as we are aware, has repeatedly urged the administration to negotiate a treaty with Japan, the substance of which is now embodied in the recent arbitration treaty and the present agreement. In our issue of May 14th we said editorially:

"As long as 'honor' and vital interests are excepted from arbitration it will always be easy to find a pretext for going to war, for honor and vital interests cover as great a multitude of sins as of virtues. The time, we fear, has not yet come when it will be safe to refer all disputes to arbitration, for a nation might lay claim to another's territory or independence, and this no spirited people would or should submit to the arbitrament of an outsider. The ideal arbitration treaty is one which contains a clause requiring each nation to respect the other's territorial integrity and autonomy and submit all other questions to arbitration. If territorial integrity and autonomy are thus mutually respected, they will be the subject neither of war nor of arbitration, and manifestly no other matters are worth fighting about."

Thus it is seen that Japan renounces all claim to the Philippines and our Pacific Islands, and agrees with us to keep the "open door" in China, which has always been the demand of American diplomacy. Japan and America, together with England, Japan's ally, and our kinsfolk, from now on should control the destinies of the Pacific, working together as partners in progress and peace.

It is impossible to say whether all this is a greater triumph for the spirit of peace in the United States or for Japanese diplomacy. Secretary Root gives proof anew that in him America has a Secretary of State unsurpast, if not unequalled, in any chancellery of the world. The conception of the idea of the Court of Arbitral Justice, introduced by the American delegation at the Second Hague Conference and created by that body; the establishment of the Central American Court, the most advanced international tribunal of the world; and now a

treaty and agreement with Japan which together solve all their mutual problems —these are three feats of statesmanship unsurpast in the annals of our State Department. And no less has Baron Takahira shown himself a diplomat of the highest rank. Not only has he reversed the foreign policy of Japan, which, with the exception of benighted Turkey, was the only nation at the Second Hague Conference to refuse to indorse the principle of obligatory arbitration, but he succeeded after his predecessor had failed and had been recalled for suggesting an agreement similar to the one now adopted.

Two Great Meetings

Two weeks ago a most impressive meeting was held in Chicago representing the religious work of the Catholic Church in the United States. It was the first assembling of the Catholic hosts in the history of the country. It celebrated the transfer of the United States from a mission land to a country with an independent national Church, which shall carry on missionary work instead of receiving missionary aid and control. There were earnest and inspiring addresses, appeals for missionary activity, the anticipation of victory for the Catholic Church in this country, and forceful defenses against the bigotry which would charge the Church with lack of patriotism and loyalty. There were huge processions, grand and stately services in the Cathedral and the vast regiment hall, multitudes and multitudes of visitors and local adherents, so that onlookers remarked that they did not know the Church had so many members in Chicago or in the country.

This week a great meeting of the Protestant churches opens in Philadelphia, the first session of their great federative Council. It represents nearly twenty of the largest denominations, with almost twenty millions of communicants. It will be a meeting of commanding influence; but there will be about it nothing spectacular—no processions in the streets, no display of churchly magnificence to impress the people. Three or four hundred men, ministers and laymen, in their ordinary street dress, will gather in a hall, and will discuss, in the presence of such as wish to hear, the ways in which they can make Christianity more useful to the people of the country. But these will be representative men, whose conclusions will be accepted by the fifty million of communicants and adherents whom they represent. They have been chosen by the Baptist, Methodist, Presbyterian, Episcopalian, Disciple, Lutheran, Congregational and other national bodies, to speak and act for them. They will first make known to the country the fellowship of unity which Christianity ought always to exhibit. They will then consult how they can best evangelize the unevangelized in this and other lands, and how they can promote justice and peace and brotherly goodwill among all classes of our people. It is a great task which they have in view, and they have learned that it can best be done in common, without interference or rivalry. So, in a very simple, practical way, they meet and set about it.

We have thus called attention to the two meetings which, by good fortune, are held so close to each other. Between them they include nearly all the Christian forces of the country, and nine-tenths or more of the population. The time is not yet ripe for the two bodies to meet together officially, but they are engaged in the same great purpose, but in somewhat different ways. In common works of beneficence and reform they can and do meet more and more individually on the same platforms. Equally they wish this to be a truly Christian country; and for temperance, social order, and all the decencies of civic life they are one. Not all Protestants are yet ready to admit that the Catholic Church is a true and loyal Church, as the Lutheran protest has lately shown; but they are now few who denounce Rome as Antichrist. On the other hand, if Rome declares that the Protestants have no true Churches, they are ready to allow that they may be and often are good Christians. We are brought so close together that we know each other's good purpose, and we honor each other.

At the Catholic Congress much was said of the importance of bringing to the attention of Protestants the beauty and truth of the Catholic faith. Much was told of the success of those whose

work it is to preach to "our separated brethren." Thousands of converts have been reported. Equally at the meeting in Philadelphia the evangelistic work among the immigrants, Italian, Hungarian, Bohemian, Austrian, mostly from Catholic countries, will be a principal subject. On neither side should there be complaint of the activity of the other. Each will reach mainly those who have pretty much lost their connection with their Church. On neither side are we often trying to proselyte those who are living good Christian lives and are faithful to their vows. The Protestants do not try to convert members of their households who go regularly to their Catholic church and live like Christians. They are already well evangelized. But there is the mighty mass of those who live in crowded tenements, who fill our cities, the men among whom, and often the women, practise no religion whatever. There is room enough for both Protestants and Catholics to do all the work they will. They should not be jealous of each other. It is better to be a good Catholic or a good Protestant than a bad Christian. Particularly there ought to be no denunciation of those engaged in settlement work in the worst districts of our cities, in the midst of vice and want, because they mingle religion with their other philanthropy. But for the religious impulse there would be very little philanthropy.

And we go further. If there are those, Protestant or Catholic, who believe that there is no true religion outside of their Church, then it is their duty to try to convert the others to their view. They are not to be blamed for it, any more than in politics we blame those who try to convert men from one party to the other. This is a country of free speech. The truth is not in danger from discussion. The better cause will win in the end. There is a whole Catholic order of priests whose one effort it is to convert Protestants, and the Catholic papers report their success. That is right. And it is equally right to try to show Catholics a better way. But it is a misfortune if on either side harsh and unbrotherly words are uttered of those who under the best light they have are trying to serve Christ, and who certainly have his approval.

So we rejoice in these two great meetings. We are glad the churches are waking up. They need to be awake; they need to work in unison; if not in unity, at least in peace. There will be many and important subjects presented before the Council in Philadelphia, but none greater than that of the full evangelization and educational and political assimilation of the millions who come to us, ignorant of our institutions and our language, often driven by oppression to hate the rule of law and Church, the one chief menace of our Christian civilization.

The Campaign Funds

For the first time the names of contributors to party funds in a Presidential campaign, with the sums which were given, have been published. And this has been done under oath and in accord with the requirements of a statute which provides severe penalties for misrepresentation or omission. It is generally realized, we presume, that this is a reform of considerable importance. Something remains to be done, but we are confident that the good work will be finished. There will be no backward step. No party will venture in any national campaign hereafter to do less than the Republicans have done this time, and eventually all parties will do more. There will be adequate publicity laws in all the States and a national statute covering that part of the field which is subject to the power of Congress. Public opinion, enlightened and stimulated by the disclosures of the last few years—by the life insurance investigation, the allegations concerning the use of large sums taken from the treasury of the New York street railway combination, and the controversy over the Harriman fund of $260,000—not only approves the publicity of this year but also demands that the publicity of years to come shall be complete. In our judgment, it asks that contributions shall be made known to the public before election.

The notable advance made this year was due largely to Mr. Bryan. We do

not overlook the labors of Mr. Belmont's organization or the influence exerted by Judge Taft, but it is quite possible that the party which excluded a publicity plank from its platform by a vote of nearly ten to one and also prevented the enactment of a national law by a partisan trick, would not have subjected its fund to the requirements of the New York statute if Mr. Bryan had not caused his committee to adopt the publicity rules that it enforced during the campaign.

The refusal of the Republicans to publish contributions before the election gave the Democratic party an advantage which, but for the heavy handicap of Mr. Bryan's nomination, might have had considerable value at the polls. We are familiar with the arguments of President Roosevelt and Judge Taft against publicity before election. We remember that force was added to them by Mr. Bryan's attacks upon Governor Hughes and his unjust comments upon the contributions to the Governor's campaign fund. But these arguments are insufficient. They are outweighed by those in favor of publication at the time when the contributions are made. Why should the names of the contributors be concealed? Each party is fairly entitled to the effect upon public opinion of the contributions received by the other. The public is entitled to it. Let all the contributors and their gifts be weighed in the public mind. Publication after election is much better than continued secrecy, but at that time it excites but little interest and has less value than publicity before the decision is reached. Would the Republican party have suffered any appreciable loss if this year the names of its contributors had been made known before November 3d? We think not.

We do not mean to say that publicity after election does not exert a wholesome influence. In this instance, on the Republican side, it was foreseen and expected. For this reason, undoubtedly, certain contributions that might otherwise have been given with unworthy motives were repelled. Without them there was enough. Again, if those who did give sought thereby to establish a claim for favors in the way of appointments to office, publication not only left no room for such claims but even placed aspirants at a disadvantage. Inspection of the Republican list shows that business men whose desire was to support the general policy of the party were not prevented from contributing generously by knowing that their action would be disclosed to the world.

It is more than a good beginning, but, as we have said, something remains to be done. Publicity should not depend upon a candidate's decision, but should be required everywhere by law. And it should be given, so far as possible, before the day of election.

An Undisciplined Generation

If one would be pessimistic he could find material, these days, for his gloom and bitterness to feed upon. The newspapers offer an abundance of cheerful records and reflections for those who are cheerful minded, but it must be admitted that they obtrude also a saddening proportion of the terrible and the disheartening.

Inasmuch as we have no trustworthy statistics of crimes, or of life failures of any sort, it is idle to argue about the relative amount of wrongdoing and collapse in existing society as compared with other days. But taking our impressions from the chronicle of events, we are easily confirmed in a belief that self-control is a diminishing factor in our civilization. Lynchings and riotings occur so often that we are no longer startled by hideous outbreaks of madness. The daily list of sensational homicides and suicides has become a long one. Betrayals of trust have ceased to awaken amazement. Insanity, we are told, is increasing more rapidly than population. Entire communities reveal neurotic symptoms. Hurrying thousands rush to their labors in the morning with faces hard and tense; they swarm back to their apartments and tenements at night irritable and dejected. It becomes difficult for the cheerful man in such a *milieu* to go on looking pleasant.

There are explanations of these things to suit all credulities and tastes. The tariff has begotten trusts. The trusts have crushed the independent business man. The money power has corrupted morals and legislation. Religion has de-

cayed. Immigration has brought among us the passionate populations of south-eastern Europe. Panmixia has undone the beneficent work of milleniums of natural selection. One may build the philosophy of his assurance of national decadence on any of these postulates in keeping with his temperament or his predilections.

A great deal is heard too about the mischievousness of those suggestions to criminal and other evil conduct which abound in newspaper stories of sensational wrongdoing. Doubtless we have here a large factor in the deplorable state of affairs, but the question may be asked, Why the insatiable demand for reading of this sort? Newspapers and magazines furnish it because it pays. It pays because the public likes it, or at least because the world craves something that crudely appeals to feeling and makes little demand upon attention.

But back of all these explanations there is plainly something more fundamental. Wicked and unprofitable conduct is but one expression of a general restlessness which has seized upon the Western world. Life has become a touch and go. The multitude lives no longer at the slow pace. Nothing pleases us long at a time. The fashion must continually change. The goods must be shifted from window to window and from floor to floor. The customer knows that he can never find a commodity twice in the same place, and that it will be something to talk about if he can get the same brand of cigar or shoes made from the old last a second time. Nobody contemplates. Nobody meditates. The man who talks sense is a bore. Books that contained thought would bankrupt the publisher. Our "literature" is written for shop girls in the Subway trains and commercial travelers in the smoking car. "Reviews" are stickful advertisements of "best sellers," and even such attenuated reading is a weariness to the flesh of most of us. There are days together when our intellectual diet is cut down to headlines. Anything heavier would unfit us for business.

What is it that ails us? Can we be cured by the moral hypnotist; or shall we have to put ourselves on a regimen? Our own diagnosis is that we have lazily, negligently, with inexcusable moral slovenliness, allowed ourselves to get out of training. One can no more maintain a vigorous intellectual and moral life without practice than he can keep his muscles hard without exercise. When the man who has been used to physical work gives himself up to loafing he endures miseries of restlessness, and imagines that he needs a drink. Quite as certainly the man who lets himself believe that he is unequal to hard mental work soon finds his mind shying at concentration, and when the power to concentrate is gone the total personality disintegrates. It can no longer grip itself in self-control.

It is our firm belief that most of the restlessness and half of the wickedness of the American people today is directly attributable to slovenly-mindedness. Neither drugs, nor "suggestions," nor the laying on of hands, nor a thousand reformatories, can or could do as much to redeem us from impending moral ruin as a despotic and omnipotent schoolmaster might accomplish. As a nation we need to be intellectually hammered and "walloped." We ought to be made to commit Greek and Latin grammars to memory, to grind thru algebras and trigonometries; to wrestle with logics and philosophies. If we could thus be put to it, the moral fogs would begin to lift; the newspapers and theaters would cease to address themselves primarily to simpletons, and the nerve doctors would go out of business.

A Thanksgiving Aftermath

One of the strange and repeated events of the year, which perhaps have not received sufficient thanksgiving in this grateful season, is the humiliation of autocratic rulers. The humbling of the Czar of Russia had come a little earlier, thru the establishment of a constitution and the acceptance of a Duma; but this was only the portent of what was to follow.

First, the Sultan was put into a gilded cage. He was not removed, but he may be; he was simply robbed of all his despotic powers, and the people took his place as rulers. It was the most marvelous, the most unexpected, the most sudden, complete and peaceful revolution

known in modern times. No one could have imagined it possible. The people lived as in a dream, hardly able to convince themselves that it was true. It astounded the nations of Europe. It disturbed the balance of power, and now it threatens war between the countries that wish to take advantage of the change. Whatever the advantage or disadvantage to Austria and Servia, to the Germans and Slavs of Europe, this chief and great result is achieved, that the tyrant's rule is lifted from the Turkish Empire, that constitutional freedom is certified, at least for the present, and, in fact, assured for the future.

Then came the humiliation of the Kaiser of Germany, a second occasion for thanksgiving. He was told plainly, boldly, by the leaders of every party in the Reichstag, that he had no right to dictate the foreign policy of the empire. The people were to rule, and thru their elected representatives, not the Kaiser. And how sudden this was! It was incredible, that such a thing should happen. He was all-powerful, the mightiest autocrat over the mightiest army in the world. He believed in the divine right of kings, and his will was law. To criticise him was *lèse majesté*. How many people have been sent to prison for words far less severe than those which every newspaper has been free to utter these last few days! The Chancellor sat with head bowed, and listened silent to the reproaches cast on the Emperor for his meddling with what he had supposed to be his particular sphere of authority. Then the Emperor himself was compelled to make his apology, thru the Chancellor, and promise to restrain his exuberant license. Hereafter he must say nothing about foreign affairs, except by the consent of the Chancellor. No more cable messages to Kruger; no more "calculated indiscretions" in the way of interviews with British or American journalists. He has suppressed himself, when the people first suppressed him. Here is occasion for great gratitude, not only for the Prussians and Germans, but for the world at large; for the danger of war, everybody believed, came from the reckless intermeddling of William II.

And then followed the news of the humiliation of another despotic ruler, the Shah of Persia. By a revolution of the people, he was compelled to grant constitutional government, and the world laughed at the idea. Then he changed his mind—of course he did—(will the Kaiser change his mind?), and there was war between the constitutionalists and the imperial forces. Then he proclaimed the constitution annulled, swore that he would never submit to it, that it was against the Koran and the law of Islam; and this with the Sheikh ul-Islam at Constantinople declaring the Turkish constitution good Moslem law. Then, the very next day, while we were giving thanks, he yielded, at least in part, to the armed protests of his people, and withdrew his oath and submitted to the humiliation of the constitution which he had declared that his religion forbade him to accept. He is a vacillating ruler, and once more is reported to have offered a Council in place of a Parliament, but the end is sure. How many times is liberty forced to fight against the claims of despotism, protected by blind religion!

It has been a wonderful year. The new century is justifying itself. The people everywhere are claiming their rights. The republic of man is the kingdom of God. Let us give renewed thanks.

A Bishop at the Sorbonne

On Friday, November 13th—*absit omen!*—for the first time in many centuries, perhaps even in its existence, a Catholic bishop sat down as a professor at the Sorbonne. While the Bishop of Tarentaise, Mgr. Lacroix, following in the footsteps of Cardinal Lecot, of Bordeaux, created for his diocese the associations for public worship, as provided for in the Law of Separation. Rome forthwith condemned Lacroix, but not Lecot. Tarentaise, one of the poorest dioceses in France, has to forego Government grants, while Bordeaux and the Gironde, which are among the richest, still enjoy State aid. Thereupon Mgr. Lacroix resigned. Next the Government created a new chair at the Sorbonne, namely, "The History of the Concordat of 1801," and named the bishop as its first holder. Just before the opening of this year's session the Cardinal Secretary of State sent a

circular letter to the French episcopate, warning them against their country's universities. This circular, however, withdrew not the qualified permission given some time ago to the students of the Catholic Institute to attend certain courses. Neither the Government in naming, nor Rome in its latest warning, alludes to past discussions. As far, however, as Mgr. Lacroix is concerned, Rome's warning counted for nothing.

Dressed in black soutane, with a broad belt of purple, the episcopal color, and wearing the pectoral cross of his rank, the new professor entered, quietly took the chair once used by Loisy, faced a large audience, and began the regular lecture.

He opened up by explaining that to understand the story of the Concordat, it was necessary to begin earlier, and he would start with the Revolution of 1789. For this session, he would lecture on the Church between that date and 1802, *i. e.*, the year after the Concordat. He made some good points: Never was France more French than during the Revolution. He brought out how fatal it was to the clergy to create a *mentalité* and a life apart, to burn their bridges, to engulf themselves in a world of ideas in no sense national. *Mutato nomine,* the picture is true of the clergy under Pius X. But had the new professor such an *arriere-pensée?* With Lord Acton, the lecturer holds that the history of the French Revolution has to be redone; specially is this true of the Church's share in it.

He enlarged on the very many sources to hand. Archives national, cantonal, municipal, private, diocesan, parochial, those of the religious orders; then the abundance of monographs, letters, etc.

In his course he would follow scientific methods, just as a professor would do in profane history, and saw no reason why Church history should or could be treated by any other method. While admitting there was no strict impartiality, he held against Renan that a clergyman could write impartially on Church history, and cited Bossuet, who praised Luther and Melanchthon in his "Variations," Mabillion, Tillemont, Cardinal Matthieu, and Duchesne. Then he quoted the words of Leo XIII: "The first rule of history is not to dare to speak falsely and the second not to fear to speak the truth."

The lecture was a polished composition, well delivered and perhaps a trifle too oratorical, for the bishop was not quite thawed out.

But the rhythmic flow of his elegant language, together with the graceful gestures, conjured up before the mind the great orators of France—Bossuet, Fénelon, Massillon, Bourdaloue—as history has painted them. The lecture room was crowded with quite an unusual audience —professors, judges, ladies, among whom the widow of Waldeck-Rousseau, whose genius first started the researches which ended in disestablishment; a few noted clergymen; the two clerical members of Parliament, the Abbés Lemire and Gayraud; the two editors, whose papers Pius X condemned, Abbé Naudet, of *Justice Sociale,* and Abbé Dabry, of *Vie Catholique;* the well-known journalist and writer of "Pie X Vie Intime," M. de Narfon, who enjoys the curiously unique distinction of being a deacon, whom Rome canonically dispensed and laïcised.

At the close there was a generous outburst of applause. It is curious to note that in the official documents the bishop is styled plain *Monsieur,* and while a paragon of politeness, he always saluted the *Messieurs* but not once the *Mesdames,* of whom twenty and more were present.

But what of the ever watchful, jealous eye on the Tiber? We need not be surprised if it throw—and that soon—its banning glare upon the new professor at the Sorbonne.

Our Mid-Pacific Experiment Station

The United States spends large sums of money upon agricultural experimentation. The policy pays. In the Philippines and Hawaii our nation has had presented to it two great social experiment stations, the maintenance of which promises world-wide profit. Each is as different from the other as from the mainland. To administer both on the same lines or either in accordance with mainland precedents would be a fatal error. The Philippines experiment promises the most re-

markable contribution to the problem of training backward races for self-government that the world has yet known.

Hawaii's task bears not the slightest relation to this. Here the most diverse, virile races on earth, each of proven capacity for self-government, meet on a plane of equality impossible elsewhere. This mid-sea territory is the only place on the globe where racial amalgamation has a fair chance under ideal conditions. With the minimum of possible disaster the world may here attempt a solution of one of the most vext and baffling problems that mankind confronts. Is the United States unselfish enough to maintain at no cost to herself this unique social experiment station?

That Asia shall not come to the mainland seems the present settled tho short-sighted determination of our nation. That the Union will create a Gibraltar in Hawaii and man it adequately to preserve the peace of the Pacific appears also to be inevitable. But neither of these lines of policy calls for the application of our Asiatic exclusion and coastwise trading laws to these faraway islands. They should be kept open to the men and the ships of the world, as they always were from the day of their discovery up to that of their annexation to our country.

Meantime, if fearful of Asiatic preponderance, let freedom-loving American Christians build in Hawaii the noblest possible educational institution for training Asiatics under the influences of our civilization. Here let the best of the East meet the best of the West in an environment untainted by the narrow-minded hostility which characterizes mainland exclusion. Already our Mid-Pacific Institute, conceived under the inspiration of this ideal, is beginning to draw the attention of Asia, and the aid of a few men of large resources alone is lacking to enable it fully to meet the situation.

In a word, welcome the world to Hawaii, center there the noblest products both in men and institutions that Christianity has to offer, and then let the union of diverse races and civilizations bear its legitimate fruit. This process will be of inestimable value to world peace, to Asio-American friendship, and to the evolution of the coming cosmic man.

That Mischievous Interview

The German Foreign Office has denied it. Mr. Hale has repudiated it, and now *The World* itself, which claimed to have given the "authentic" version of the interview granted by the Kaiser to Mr. Hale, admits that it was deceived. But it puts the responsibility, to our surprise, on Mr. Hale himself. It declares that the interview was taken to him, read to him, that he made only two or three penciled corrections which affected himself, made no denial of the truth of the rest of it, but left it to be believed that it was correct. That leaves it all in a parlous position for Mr. Hale. Who is he? He is the Rev. William Bayard Hale, A. M., LL.D., S. T. D., a young man this side of forty, who was reporter on a Boston paper, then rector of an Episcopal church which he organized in Middleboro, Mass., then rector of a church in Philadelphia, then editor of the *Cosmopolitan Magazine,* then of *Current Literature,* then special correspondent of *The World,* then managing editor of the *Philadelphia Public Ledger,* and now on the staff of the New York *Times*—quite a career. He first made himself known to the public while in Middleboro by a series of sensational magazine articles on the condition of things in Fall River, Mass., and elsewhere in the neighborhood which created much indignation. We ourselves made investigation at Fall River and found his statements untrue. *The World* says:

> "The Rev. Dr. Hale was plainly willing that the synopsis should be printed, provided he were left free to disavow it afterward. As a subordinate employee of our esteemed contemporary, the New York *Times,* whose able and successful chief editorial manager, Mr. William C. Reick, is under personal obligation to the Kaiser for the Order of the Crown, and might sharply resent any public betrayal of the Emperor's confidence, such a course would very well serve the Rev. Dr. Hale's self-interest while gratifying his extreme vanity and his appetite for further international notoriety."

The New York *World* seems to have told the truth when it says that Dr. Hale allowed it to believe the synopsis correct. But all that raises other questions as to the alleged contents of the interview which we do not care to pursue, such as, Did the Kaiser really say those things? did Dr. Hale report that he said what he

did not say? did he purposely allow a report to be published which he knew to be false? There is crookedness somewhere; and for the peace of the world we are glad that the denials are believed, and that the published synopsis was, as *The World* says, "mistaken, misleading and mischievous."

The Tariff Hearings

The tariff revision is going on merrily before the Committee in Washington, and in a downward direction. There is a general agreement that the iron and steel schedules are tumbling; and the tanners and shoe factory men had a great inning Saturday in favor of free hides and lower duty on leather. A great change came over the committee on the Monday following Mr. Taft's statements of the Saturday before, that the revision must be a real one, and then came Mr. Carnegie's article in *The Century*. Before that time Chairman Payne was hustling everybody and showing much impatience at the whole proceeding. With Monday of last week the hustling was at an end, and witnesses got all the time they wanted to state their case, and the only standpatter left seems to be Mr. Dalzell, member of Congress for the Steel Trust. All the other Republican members have got into the revisionist group, and on the side of the incoming administration. It is likely to be an epoch-making revision and to afford Mr. Taft a splendid chance to make good in the first year of his administration. The newspaper reports give very imperfect accounts of these proceedings which promise such a tariff as the people want, and, to our surprise, many of the manufacturers.

The Court Protects Itself

If mobs must mob, and lynchers must lynch, we commend the action of the lynching mob at Tiptonville, Tenn. Three negro brothers were charged with murder. The mob took them to a magistrate and ordered him to try and convict them in a hurry. So Justice Davis, knowing what he had to do, called his jury, and it took but a very few minutes to find the men guilty, and the mob then, having satisfied the forms of law, strung the men up and riddled their bodies with bullets. Why wait for the official sheriff hangman, when a hundred hangmen were ready to volunteer? It was what the lawyers call a "wise discretion" which characterized the justice. He knew what was required and what was safe for him. The Charleston *News and Courier,* in commenting on the prudent concessiveness of the justice, recalls an incident in South Carolina judicial history. Matthew Love was tried soon after the Revolution for sedition and murder, before Judge Aedanus Burke, a brave soldier of the war then ended, and was acquitted. The relatives of those whom Matthew Love's Bloody Scouts had massacred during the war were displeased and seized him. Judge Burke ordered the sheriff to suppress the riot. "It is more than my life is worth or yours," was the reply; whereupon the judge called to his servant, "Kit, Kit, get the horses!" He leaped into the saddle and did not draw rein for twenty-four miles. The earlier and the later judge had a fine sense of what safety requires when a mob has its temper up. Of course it would be very undignified for a judge to be lynched.

Careful Enunciation

Mr. O. C. Blackmer, the veteran educational editor and reformer, writes us:

I am much pleased with your short note on "Careful Enunciation" in THE INDEPENDENT for October 22d. I think the "distinct enunciation" and scarcity of dialect of our American people are largely due to the careful training in our schools for so many years in the syllabic pronunciation of Webster's Spelling Book. And in addition to the influence of the old blue-covered spelling book, the purity of our language has evidently been conserved by the universal custom of singing in social life, and especially in the churches. In singing we have of necessity a syllabic pronunciation.

I sometimes think that our schools are losing ground in the matter of "distinct enunciation" by giving undue stress on words as wholes and neglecting the drill on the sounds and syllables that compose them.

I think some English phoneticians go very far away, in adopting what you call "general slovenliness of utterance" as standard English speech. In a "Primer of Spoken English" I notice the following symbols for what we have been accustomed to consider *words* in good and regular standing: "u" and "un" for *and;* "d" and "ad" for *had;* "d" for *do;* "v" for *have;* "uz" for *as;* "shl" for *shall;* "mus" for *must;* "u" for *of;* "iz" for *his;* "im" for *him;* etc., etc.

It is impossible to sing tunes with words mutilated in this way, and it seems to me that

THE NATHAN STRAUS PURE MILK EXHIBIT AT THE TUBERCULOSIS EXHIBITION.
Photograph by David B. Edmonston, Washington, D. C.

such kind of pronouncing print put before the eyes of children and the general public will soon debase our clear-spoken English to an undistinguishable jargon.

"A World's Fair for Health"

This week, Monday, there was opened at the American Museum of Natural History the biggest tuberculosis exhibition ever given. Over two hundred individuals and associations took part, and over three entire floors are occupied by the exhibition. A feature is the exhibition of the Bureau of Animal Industry, which has arranged to have meat actually condemned for tuberculosis in New York slaughter houses taken each morning to the exhibition, where housekeepers will have an opportunity to learn how to guard against infected meat. Near the entrance is the Nathan Straus model dairy, where cows are milked each morning and evening, the milk cleaned, pasteurized and bottled. Demonstrators are present during the day and evening to explain the exhibits and one of the first things pointed out is a row of electric lights, which go out every two minutes and thirty-six seconds, when a human being dies from tuberculosis. The number and character of the exhibition include everything from framed photographs to reproductions of model sleeping rooms and even entire homes. Among the latter is a concrete dwelling house for a workingman which won the gold medal from the International Tuberculosis Congress, and also a model of a typical farmhouse, the interior of which is so arranged as to carry out President Roosevelt's exhortation to the farmers to live in the best rooms in the house. The war against the great white plague is now worldwide, and this exhibit should do much to hasten the day when tuberculosis, like the plague and the black fever, will be an affliction of the past.

Personal Contributions

The Republican and Democratic candidates for Governor of Connecticut seem to have spent on the election a good part of the total expenditures of their parties. Governor Lilley spent $23,375.02; and the defeated Democratic candidate, Mr. A. H. Robertson, spent

$33,587.37. They each declare that every cent was legitimately spent, and they give the details. From an interesting and valuable letter from Mr. Robertson to THE INDEPENDENT we quote as follows:

> Of this sum I gave to the State Central Committee $23,570 and to the cities of New Haven, Hartford, Bridgeport and Meriden, $3,750. This amount, $27,320, represents, with the exception of about $1,500, all the money the Democratic party had in the election, both for national and State tickets. Or, in other words, no one else contributed a cent. The money was expended for public meetings, printing the tickets (which each party has to do), distributing the same and getting people to the polls. Every dollar of it was used legitimately and was a very small amount and much less than the other side had for the campaign.
>
> The balance of the money which I spent is what might be said I spent for my personal campaign. Under our system, the candidate has to buy his own pasters and get them into the hands of the voters, and I spent my money for this purpose and for newspaper advertising.
>
> It was a very large amount for one man to spend and more than I ought to have spent or could afford to do; but it was a very small amount for a party to spend, and probably if the whole truth was known not one-fifth of what was spent by the other side.
>
> There are two lessons to be drawn from it—the State ought to print the tickets and pasters, or we ought to have another system of tickets; and the corrrupt practice act should forbid the use of peddlers and carriages at the polls.

The suggestion that the State print the ballots is a good one, and is in line with President Roosevelt's recommendation that the necessary expenses of an election should be paid from the public funds. As it is only a rich man can run for office.

Tyranny

We make no complaint when the American Federation of Labor claims to dictate on questions of labor, telling for whom its members shall labor, and at what price. But it is another thing when it claims to have the right to interfere with the personal conduct and attitude of its members on other matters, such as what they shall eat, what school their children shall attend, whom they shall marry or whom they shall vote for as President of the United States. We made no great objection to Mr. Gompers's urging the members to vote for Mr. Bryan, for altho he was president of the Federation, his act might be regarded as personal and not official and authoritative. But now the Federation, in session at Denver, it has decided that any member of the Executive Council who does not choose to abide by the majority vote in political matters shall resign. That makes the Federation a political party, which the leaders wish it to become, or the adjunct of a political party. That is a tyranny which should not be submitted to, and the members will not submit to it, even if the Executive Committee is willing to. The late election proved that. A multitude of them voted with the Republicans, and a smaller number with the Socialists, and a hot time the Socialists gave them at the Denver convention last week. The permanence of republican institutions in this or any country depends on the independent liberty of judgment of the citizens. When it comes to be the fact that group passion, inspired by able and shrewd leaders, controls great classes, liberty and justice are nearly lost.

Defying the House of Commons

Whether the House of Lords is proving its power or is digging its grave is likely to be a question before the British people. The people, thru the House of Commons, voted a bill for the protection of free, undenominational education, and the House of Lords vetoed it a year ago. Now the Commons have voted to restrict the liquor business by giving the magistrates the power to close a fraction of the public houses. They spent months over the bill, and by compromise, and with the approval of high ecclesiastics of the Church of England, they past their bill by the overwhelming vote of 350 to 113. Then it went to the Lords, and the Conservative members held a caucus and almost unanimously voted to reject it, and then, in open House, they killed it by a vote of three to one. Three to one for it in the Commons; three to one against in the Lords. This is downright defiance, but they are trusting to the change in public sentiment indicated by the results of the by-elections. The explanation of the action of the Lords is that they are the rich people, and they have large property in the shares of the brewing companies, and reducing the number of public houses reduces the number of drinkers and so the profit of their investments. It seems mad thus to resist the will of the people, but it may be that it is the way

to destroy themselves. The Commons will perhaps do more than rage; they may retort by introducing a revenue measure in the form of a heavy license tax on public houses; and a revenue measure the Lords must hesitate to reject. The Lords will have another chance to show their obstinacy when the new Education bill comes before them, for they will reject it if they dare.

Since the Civil War Gen. O. O. Howard, one of the few survivors among the highest officers in that conflict, has given himself almost wholly to the work of reconstructing the white and black South, particularly in education. The Freedmen's Bureau had his labors, with all its fruitage in schools, and Howard University, the chief of all institutions for the higher education of the negro, bears his name. Now he devoted himself for eleven years to the establishment of Lincoln Memorial University, for the white mountaineers of the Appalachians, at Cumberland Gap, where Tennessee looks over into Virginia and Kentucky. Already the institution has land and buildings valued at $150,000, and an endowment of $100,000, which General Howard and his friends are determined to increase bv $500,000 more, as a memorial of Abraham Lincoln, who was himself one of the mountaineers, and which it is hoped to secure for the centennial of Lincoln's birth, February 12, 1909. A committee of distinguished men has undertaken this excellent work, with President Roosevelt's hearty endorsement.

The football season of 1908 was brought to a close on Saturday with the defeat of Annapolis by West Point. The game was played before 30,000 people at Philadelphia, and the final score was 6 to 4 in favor of the Army. Pennsylvania concluded a successful season on Thanksgiving Day by defeating Cornell 17 to 4. Yale outplayed Princeton by the score of 11 to 6, but was defeated by Harvard 4 to 0. This was the first victory of Harvard over Yale in seven years and the third in twenty-eight years. Football does not seem to lose its popularity. The Yale field could only accommodate about 30,000, but the management state they could have disposed of 75,000 tickets. The limit of safe construction has been reached in wood, and to seat the graduates and their friends a stadium will be required. One graduate, who was forced to pay $150 for three tickets, offered to start a subscription for such a structure at Yale to be named the Taft stadium.

Doubtless Prince Edward Island has the right to bar out all automobiles; its Legislature has past such an act and the highest local court has approved it. Perhaps the roads are too poor; perhaps the people are asleep and don't want to be waked up. It will be lovely to have one quiet island reserved for peace and silent rest. But can they shut out the modern world? Japan could not. Some new Commodore Perry will open Prince Edward Island to the world, we fear. In this city the other day a chauffeur was arrested for the sixth time for speeding and sent to prison. "Why not keep within the rule?" asked the magistrate. "Because a 150 horse power car is not geared low enough," was the answer. The wise judge retorted, "Then either have no such car in the city, or push it." There is peace in Prince Edward Island.

We are receiving, and shall publish later, a number of letters protesting against the *omnium gatherum* of charges and prejudices to the damage of the Jews as a people, collected in the article by Sydney Reid in our last issue. We hardly need to say that we not only do not indorse, but do repudiate unsubstantiated aspersions there made, and which Mr. Reid did not pretend to believe. An article by Mr. Bernheimer in defense of the Jews was the occasion of the article, which simply attempted to tell what are the prejudicial statements that find currency. We have too often protested against such charges to be imagined in sympathy with them.

Miss Catharine A. Carl is probably justified in objecting to the somewhat familiar form of the title of the interview with her which we printed last week under the heading "Painting An's Portrait." That really is an undignified way of speaking of the late Dowager Empress of China, whose real name was Tzu-hsi, but who in this country has been often called by the name of one of her titles which includes the syllable *An*.

Insurance

The Ohio Experiment

The Standard cites a very interesting experiment now under trial in the State of Ohio. In that State, under a law known as the Reed law, every teacher in every public, private or parochial school is required to devote at least thirty minutes during each month of the school session to the instruction of pupils between the ages of six and fourteen on the subject of fire dangers. The instruction thus given is to be based upon a book prepared for this purpose by the State Fire Marshall. A fine not exceeding $20 is provided for the failure of teachers to comply with the law. When the book is completed it will contain forty lessons. Sixteen of these lessons have been prepared and they have been issued in cheap pamphlet form. If the experiment now being tried results successfully the full series of lessons will be published in more elaborate form after they have been revised and approved by the teachers. The lessons already issued are well calculated to accomplish the purpose for which they were written. They are short and full of meat. The various common fire dangers are individually treated in simple language that is easily comprehended by the children. Illustrations drawn from the daily press, having to do with actual occurrences, are provided, and these cannot fail to make lasting impressions on the minds of the children. Statistics that have been carefully chosen add to the value of the lessons taught. In this connection it is well to bear in mind that the young are the hope of the country, and if the youth are well taught as to the lurking dangers to be apprehended from fire it must be that such a course must tend to reduce the fire hazards. The Ohio experiment may well be widely copied. The expense attending such experiments cannot be large and the saving because of them may easily be enormous. It is certain that a very large proportion of the annual fire loss about which much has recently been said, both in this department and elsewhere, is preventable. Possibly 50 per cent. of this loss may be too high a figure to hope to eliminate by being careful, but if only a fraction of this annual loss is saved the State of Ohio will be amply rewarded for its experiment.

The United States Treasury and Surety Companies

THE United States Treasury Department in its quarterly list, recently issued, has designated the surety companies that are authorized to furnish sureties on Federal bonds. The list includes the names of the companies, their capital, surplus and the limit of bonds each company may lawfully execute as follows:

	Capital.	Surplus.	Limit.
Pacific Surety	$250,000	$141,392.84	$39,139.28
Ætna Indemnity...	250,000	112,149.04	36,214.90
Illinois Surety ...	250,000	102,461.74	35,246.17
Federal Union Surety	300,000	51,716.83	35,171.68
American Bonding Co.	500,000	272,214.72	77,221.47
Fidelity & Deposit.	2,000,000	2,503,677.91	450,367.79
U. S. Fidelity & Guaranty..... ..	1,700,000	134,411.35	183,441.13
United Surety Company	500,000	130,094.28	63,009.42
Massachusetts Bonding	500,000	237,936.83	73,793.68
Detroit Trust Co..	500,000	1,048,328.03	154,832.80
Commerce Trust, Mo.	1,000,000	74,908.84	107,490.88
American Surety..	2,500,000	2,706,897.19	520,689.71
Empire State Surety	500,000	272,014.96	77,201.49
Fidelity & Casualty	1,000,000	1,953,099.87	295,309.98
Metropolitan Surety	250,000	10,336.65	26,033.65
National Surety..	500,000	662,255.87	116,225.58
Peoples' Surety...	250,000	200,000.00	45,000.00
U. S. Guarantee..	250,000	264,954.15	51,495.41
Bankers Surety, O.	500,000	95,815.32	59,581.53
Southern Surety, Tex.	400,000	46,049.84	44,604.98
Pennsy'nia Surety	250,000	75,291.75	32,529.17
Title Guaranty & Surety	800,000	518,931.42	131,893.14
Union Trust	1,500,000	24,686,333.96	2,618,633.39
Guaranty Trust & Banking.....	300,000	29,754.00	32,975.40
American Fidelity.	250,000	45,389.57	29,538.95
Citizens Trust & Guaranty.....	350,000	107,191.94	45,719.19

A FIRE insurance adjuster, evidently of some experience, was recently speaking of a fire loss in which he was interested professionally. He said:

"It seems to me it is the natural desire of a person who has had a fire, when making up the inventory, to put the value on the articles just a little bit more than their true worth. I find this especially so with women. Whether they think the companies are easy or that they need the money I have never been able to find out."

Financial

Sale of New York Bonds

OWING to the condition of the market, the City of New York was obliged, in September, 1907, when offering bonds, to raise the interest rate from 4 to 4½ per cent. At that time bonds amounting to $40,000,000 were sold. In February last there was another sale ($50,000,000) also at 4½ per cent. It is interesting evidence of the improvement in financial conditions that at the similar sale last week the city was able to return to the old rate of 4 per cent., and that the average price received (for $12,000,000 fifty-year bonds) was only 1⅝ below the average realized in February last, when the rate was 4½. That is to say, the average in February was 104, yielding an income return of 4.30 per cent., while the average last week was 102.385, which yields only 3.89 per cent. There were 275 bidders, and the sum of the bids was $148,266,360. For $500,000 in ten-year 4 per cent. bonds the average received was 101.52, altho only 100.4 was paid last year for similar bonds on which the rate was 4½ per cent.

Kuhn, Loeb & Co., J. & W. Seligman & Co., William Salomon & Co., Fisk & Robinson, and Speyer & Co. offered to take the entire issue. The offers of William A. Read & Co. amounted to about $9,000,000. To this house was awarded in Philadelphia, on the 18th ult., an entire issue of $3,500,000 of the thirty-year 4 per cent. bonds of that city, at 103.533. The list of awards made here last week shows that the highest price paid (for the fifty-year bonds) was 102.75, and the lowest 102.296. At the latter price Speyer & Co. obtained $4,308,000. Among the successful bidders were the following:

Speyer & Co., $4,308,000, at 102.296; J. & W. Seligman & Co., $500,000, at 102.50; William Salomon & Co., $1,000,000, at 102.514; William A. Read & Co., $500,000, at 102.56, and $500,000 at 102.36; Harvey Fisk & Sons and Blake Brothers & Co., $1,000,000 at 102.40 and $1,000,000 at 102.30; Asiel & Co., $500,000 at 102.386; United States Trust Company, $100,000 at 102.35 and $100,000 at 102.30; Sutro Brothers & Co., $1,000,000, ranging from 102.3172 to 102.5072; Dr. Ludwig A. Konstan, $500,000, ranging from 102.51 to 102.71; S. Japhet & Co., London (by National City Bank), $50,000 at 102.50; O'Connor & Kahler, $100,000 at 102.538 and $100,000 at 102.380; Fisk & Robinson, $485,000 (ten-year bonds) at 101.511.

A bid of Speyer & Co. for "all or none" at 102.389 (which exceeds the average of the awards) was rejected, after much consideration, because it was for the fifty-year bonds only and did not include the $500,000 having a ten-year term.

The Upward Movement

CAREFUL inspection of current news and commercial reports shows continued improvement of industrial and trade conditions. The number of men at work in manufactures steadily increases. Sharper demand is raising the price of raw materials. This is noticeable in the case of wool. Railroads are buying more freely. The H. B. Claflin Company, which is the largest of our distributors of dry goods, finds conditions "so distinctly favorable" that it has greatly increased its force of traveling salesmen and has arranged to double its road organization for the spring season. "Recovery is making remarkable strides," says *Dun's Review.*

Following the panic, railroad securities touched their lowest level on November 21st of last year; that is to say, the lowest as determined by an average of the prices of leading stocks. Comparisons show that one year from that date the average price of twenty of these stocks had risen from $81½ to $115¾. For industrials the lowest point was reached on November 15th. One year from that day the average of twelve representative stocks in this class had advanced from $53 to $88.

....There are now 58,739 stockholders of the Pennsylvania Railroad, and 28,000 of these are women.

....The aggregate yield of the six leading cereals (corn, wheat, oats, barley, rye and buckwheat) in the United States this year exceeds that of 1907 by a little less than 3 per cent.

THE FIRST READING OF THE EMANCIPATION PROCLAMATION.

This large steel engraving, 38x28 inches, prepared especially for THE INDEPENDENT by the famous engraver, A. H. Ritchie, is from the original painting by Frank Carpenter, now in the Capitol at Washington. In the sixties and seventies thousands of these pictures were sent to our subscribers as premiums for clubs. A book, entitled "The Picture and the Men," accompanied the engraving as a companion and key, explaining its occasion and describing the distinguished men whose portraits appeared in it. But a very few copies of the engraving and the book remain in our office undistributed.

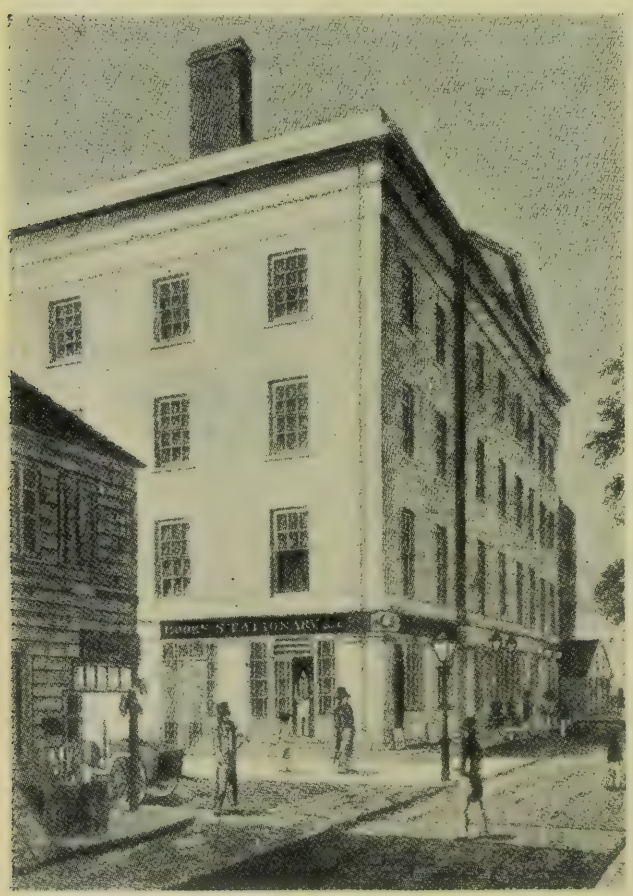
THE AUTHORS OF THE UNITED STATES.

On the stairs, from left to right—Mrs. Mowatt Ritchie, Prentice, G. W. Kendall, Cozzens, Gallagher, Mrs. Amelia Welby. Standing, from left to right—Kennedy, Alice Cary, Holmes, Willis, Mitchell, Morris, Poe, Tuckerman, Hawthorne, Simms, P. Pendleton Cooke, Hoffman, Cooper, Prescott, Bancroft, Parke Godwin, Motley, Beecher, Curtis, Emerson, Lowell, Boker, Bayard Taylor, Stoddard, Saxe. Sitting, from left to right—Miss Sedgwick, Mrs. Sigourney, Mrs. Southworth, Longfellow, Bryant, Halleck, Irving, R. H. Dana, Margaret Fuller, Channing, Mrs. Stowe, Mrs. Kirkland, Whittier.

This steel engraving, 24x36 inches, like the "Emancipation Proclamation," was engraved by A. H. Ritchie, from the original painting by Thomas Hicks. This was also used extensively by THE INDEPENDENT as a premium for clubs. It includes all the distinguished American authors up to 1870. We have still a few undistributed.

MARY CLEMMER AMES.

During the seventies and eighties, our Washington correspondent, and one of the most distinguished writers of the day.



JAMES PAYN.

The English novelist and our London correspondent in the eighties. He preceded Justin McCarthy.

"GRACE GREENWOOD."

Mrs. Sarah J. Lippincott. At one time our Washington correspondent.

THE INDEPENDENT OFFICE, 5 BEEKMAN ST.

The National Park Bank occupied the ground floor and THE INDEPENDENT the second floor. Used till 1874. Before moving to 251 Broadway we stayed a very brief time at 3 Park Place.

THE INDEPENDENT OFFICE, 251 BROADWAY.

THE INDEPENDENT occupied in this building the second, third and fifth floors from 1874 to 1893. The building has been demolished and the Postal Telegraph Building now occupies the site.

THE FULTON BUILDING.

THE INDEPENDENT has occupied the eighth floor of The Fulton Building, corner of Fulton and Nassau Streets, from 1893, when it was opened, till the present, but our composing and press rooms have more recently been transferred to 214 William Street.

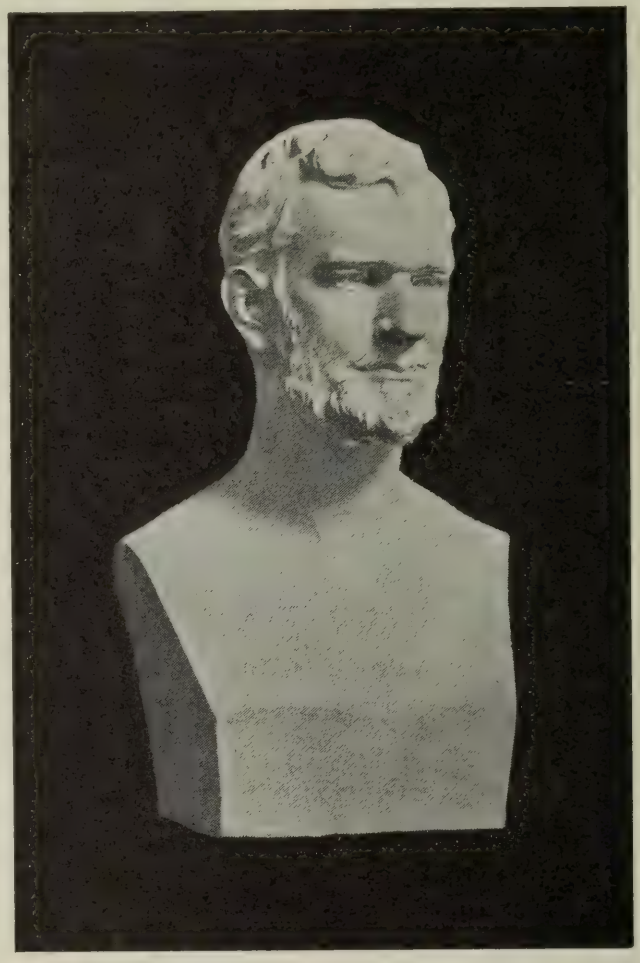
Sixty Years of The Independent

BY WILLIAM HAYES WARD



I JOINED the editorial staff of THE INDEPENDENT on January 1st, 1868, now nearly forty-one years ago. THE INDEPENDENT had then just past its nineteenth birthday. The founder and earlier editors of THE INDEPENDENT were then all living, and it has been my good fortune to be personally acquainted with every one of them during these sixty years. The thirteen years of solid growth under the editorship of the first triumvirate, Dr. Bacon, Dr. Storrs and Dr. Thompson, had been succeeded by the brief and brilliant reign of Mr. Beecher, and the no less brilliant, but erratic, reign of Mr. Tilton, who held control, aided by Oliver Johnson as office editor, when I was called to assist and succeed Dr. Joshua Leavitt, who had been with THE INDEPENDENT from its first issue, but whose general duties had been taken by Mr. Johnson, a man more congenial to the young chief editor, while he was left in charge of the Religious Intelligence.

I was called into the service because the founder and owner of THE INDEPENDENT, Mr. Henry C. Bowen, was dissatisfied with the religious drift of the paper under the editorial management of Theodore Tilton and Oliver Johnson, who had greatly offended the evangelical and yet progressive Christian people whom THE INDEPENDENT had been establisht to represent. Mr. Johnson, one of the sweetest men that ever lived, was in faith a devout radical, and had but two ideas to propagate, one anti-slavery and the other women's suffrage. For the dogmas of the Church he had no use. These two men controlled the paper under a contract which gave Mr. Tilton full editorial authority. Dr. Joshua Leavitt, who had been office editor until the coming of Mr. Johnson, was now old, and was allowed to overstep his Religious department with an occasional editorial on cheaper postage. Mr. Charles F. Briggs, the "Harry Franko," to whom James Russell Lowell dedicated his "Fables for Critics," was on the staff, but his department was financial, and to some extent political. Mr. Tilton and Mr. Johnson had free course to berate the orthodox, and to teach what was little more than Free Religion.

When THE INDEPENDENT was first started its editorial control was put absolutely in the hands of its three editors. The same was done when, in December, 1861, Mr. Beecher was made editor, and a similar absolute trust was confided to Mr. Tilton when Mr. Beecher made his unannounced withdrawal two years and a month later. The five original owners, whose principal service it was to meet the deficiency of income, which, in the first ten years, amounted to eighty thousand dollars, were too much absorbed in their active business to attempt to control its editorial policy; and when Mr. Bowen became sole owner, and, after the failure of his firm at the beginning of the Civil War, also its publisher, he gave his editor absolute freedom of direction.

THE INDEPENDENT, having been founded for the very purpose of becoming an advocate even more of the freedom of the slave than of liberty and reform in theology and religion, it is not strange that in those hot times of debate over the slavery question it made many enemies. It could not make its weekly denunciation of the Fugitive Slave law and the Dred Scott decision; it could not condemn the return of fugitive slaves or Daniel Webster's Seventh of March

Speech without arousing bitter hostility North and South. When five thousand New York merchants signed the call for the Castle Garden meeting to defend the rights of the South to its slaves whether North or South, and the firm of Bowen & McNamee refused to sign, and declared that their goods and not their principles were for sale, one of the five original owners, afraid of losing his Southern trade, may perhaps be pardoned for having withdrawn from its support and for publishing a card declaring that he had no sympathy with abolition. That left Jonathan Hunt, Seth B. Hunt, Henry C. Bowen and Theodore McNamee to carry the burden. Soon after the two Hunts left New York, one for Europe and the other for California. Thinking the paper might have some prospective value, Mr. Bowen and Mr. McNamee purchased the rights of their two associates, and $3,000 was paid for their half-interest. The paper, which had never paid its very modest expenses—four hundred dollars each to its three editors, and a thousand dollars a year to its office editor—was thus valued at six thousand dollars.

JOSEPH P. THOMPSON.
A marble bust of one of the three first editors of THE INDEPENDENT.

For thirteen years the original triumvirate conducted the paper, making it the stout defender of Congregational polity, of theological liberty and of human freedom. It would be interesting to recall the conflicts of those days, when Congregationalism was fighting for its rights of admittance to the territory west of the Connecticut line; and very few were drawn to it but those who were also Abolitionists. Those were the days when the theological professors at Andover signed a proclamation that slavery was a divine institution, but when one of them, Professor Stowe, vowed that he would never shave his beard till the Fugitive Slave law was repealed. The repeal came in war, and by that time beards had become common. In those days the American Board employed slave-holding missionaries to the Cherokees, and the American Tract Society cut out all condemnation of slavery from the English books it printed. It was then that, at an annual meeting of the American Board, a pious brother tried to shut off debate on the question of its complicity with slavery by calling for a season of prayer, and Dr. Leonard Bacon declared that this was no time for prayer, but a time for action. At last the great conflict burst out in war, and the firm of Bowen & McNamee, which had still kept a large part of its Southern trade, tho its customers were careful not to have it known, was compelled to suspend payment, as the debts due it from the South were repudiated. THE INDEPENDENT, which had no real financial value, was put into the temporary nominal possession of a brother-in-law of Mr. Bowen, the Rev. Erastus Dickinson, and at the same time the original triumvirate of editors withdrew, leaving Dr. Leavitt. Mr. Bowen immediately called Mr. Beecher to the editorial chair, and he was aided by Theodore Tilton, who had for several years been a boyish editorial apprentice. But Mr. Beecher was able to give but

little time to the paper, besides writing his "Star Papers" and a leading editorial. He was now the most popular exponent of anti-slavery sentiment in the country, and was asked, in 1863, to go to England to champion the Union cause. His success there is historic, but on his return he withdrew from THE INDEPENDENT, and Mr. Tilton was made its editor. It was during his brilliant editorial career, less than three years after the assassination of President Lincoln, that I was asked by Mr. Bowen to become one of the editorial staff.

During Mr. Beecher's editorship THE INDEPENDENT had ceased to be a champion of Congregationalism, and became, as it has since remained, an undenominational journal. Mr. Tilton was interested in political and reformatory matters rather than religious. On one occasion, when his Christian faith was called in question, he printed in the form of an editorial the entire Sermon on the Mount as the creed of THE INDEPENDENT. Mr. Johnson was a devout Unitarian, who had connected himself with a little company of radical Quakers, which I think has now gone out of existence as a denomination.

I became assistant to Dr. Leavitt, and was inducted by him into the charge of the Religious Intelligence of the paper. The close association with Dr. Leavitt was one of the privileges of my life. He was a Christian reformer, a pioneer in political anti-slavery, in education, in church music and in cheap postage. He was a man of very positive convictions, an old fighter for his principles. One day a somewhat venerable man entered the room and addrest Dr. Leavitt, who looked at him a moment, recognized who it was, and burst out: "I *abhor* you! I ABHOR *you!*" The man retreated, and Dr. Leavitt told me that he had been a clergyman who had joined the plural-marrying Oneida Community.

I saw very little of Mr. Tilton, who was absent a great deal in Washington and on his lecture tours, and wrote little besides his double-leaded leader. But Mr. Johnson was a man to love. He was not of age when he joined Mr. Garrison as one of the founders of his Anti-Slavery Society, and he was long its only survivor. Very faithful was he to the traditions of its principles, and writing as he did nearly all the editorial matter except Mr. Tilton's leader and perhaps a general article by Helen Hunt, the paper seemed to have two favorite topics—anti-slavery and woman's suffrage, never forgetting to satirize illiberal orthodoxy.

The complaints that came to Mr. Bowen, who now was in control of the publishing department, were so numerous that he personally visited leading clergymen in the East and about Chicago and promised a change, and secured their continued adherence as contributors. It was at this time that he invited me to join the staff in order to add something to the religious influence within the editorial ranks. His attention was called to me by the fact that my wife was his sister's daughter; and I presume that Prof. Franklin W. Fisk, D. D., of Chicago Theological Seminary, who was the husband of Mr. Bowen's other sister, and with whom I had been associated for a year as teacher of sciences in Beloit College, 1858-9, and who had known me from my childhood, had also recommended me.

I came into a position at first of no influence. I was young and ignorant of the art of which my associates were masters. Mr. Tilton was in the heyday of his fame as a lecturer and writer, magnificent in physical presence, with a fascinating personality, a musical voice, an epigrammatic and yet somewhat poetical style of rhetoric, a large knowledge of men and things, and an absolute confidence in himself. He wrote every week the leading double-leaded editorial. Mr. Johnson was the active editor, at the desk all day, secured the writers, and wrote nearly all the shorter editorials and notes. He had for years been managing editor of Garrison's *Liberator*. Mr. Garrison, who was then living in full peace after a life of turmoil, was satisfied with the liberation of the slaves, was no longer denouncing the Constitution as as agreement with Hell and the Church as the bulwark of oppression, and was a writer for THE INDEPENDENT.

It was in the back room with Dr. Leavitt that I had my desk. Dr. Leavitt had been a war-horse of political anti-slavery, and thus out of sympathy with Garrison, who was a non-resistant, non-voting foe of the nation's government.

WILLIAM LLOYD GARRISON.

The famous Abolitionist. After the Civil War he was a frequent contributor to THE INDEPENDENT. On our thirtieth anniversary he wrote us a letter in which he said: "THE INDEPENDENT's editorial department is ably sustained, its list of contributors large, varied and strong, its ruling spirit without bigotry or dogmatism and its scope such as to include much that pertains to literature, science, art, religious and secular intelligence and the most important events connected with the political history of the country, affording in the aggregate annually a large amount of useful information at a very cheap rate."

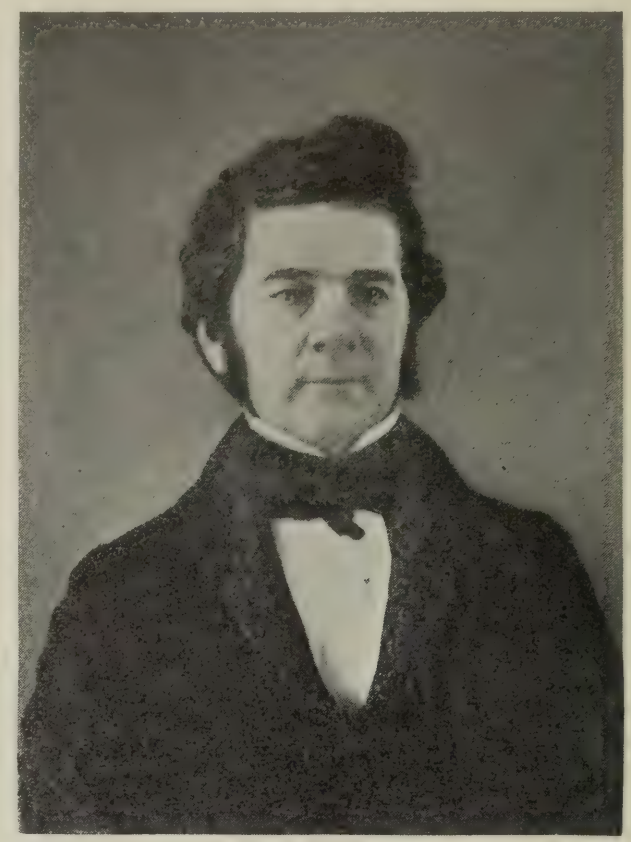
Dr. Leavitt was a Congregational minister, had been editor of *The Evangelist* and *The Emancipator,* and had taken active part in all the counsels for the organization of the Liberty party and the subsequent Free Soil party. Now he had no voice in the general conduct of THE INDEPENDENT. But he was a man of great experience and wisdom, and I was fortunate to be put under his immediate instruction. He was as tall as Mr. Tilton, and his full body compelled him at the age of eighty to stand as straight. I recall the day when Mr. Tilton burst jauntily into the back office with the exclamation: "I am going off for a six-weeks' lecture tour, Doctor; give me your blessing"; and Dr. Leavitt rose, even more impressive than Mr. Tilton, put his hand on the younger man's fair blond head, with its long waving hair, and said: "The Lord bless you—and make you a good boy!" It was not exactly what Mr. Tilton had expected.

My first duties were to cull the religious news from the papers, and write the column of "Ministerial Register," which was the record of the ordinations, removals and deaths of ministers. Soon I added departments of foreign mission news, scientific discoveries, and biblical and archelogical investigations, with an occasional dip into editorial writing. But the general editorial drift of the paper could not be much changed so long as Mr. Tilton and Mr. Johnson were in undisturbed management.

It was in the issue of November 10th, 1870, that, at Mr. Bowen's request, I printed under my own name a sketch of the life of Dr. Leavitt on the occasion of his golden wedding. Mr. Johnson did not happen to see it until it appeared in print. In that article I had occasion to draw the contrast between Dr. Leavitt's attitude toward the Church and the nation and that of Mr. Garrison, who had been the leader of the smaller band of Abolitionists who denounced the State as well as the Church, and refused to vote under it. When Mr. Johnson saw it he was very indignant, and so was Mr. Garrison, who, having fully accepted the results of the War, was no longer in a critical attitude, and was willing that his severe denunciations of Church and State should be forgotten. The next week Mr. Garrison publisht in THE INDEPENDENT a severe reply, in which he charged me with ignorance and youth, and denied the truth of my characterizations. As I had been a reader of *The Emancipator* and *The Liberator* from my young childhood, and had had the counsel of Dr. Leavitt, who was an older man than Mr. Garrison, and my father and grandfather had been active in the anti-slavery movement before Mr. Garrison became known, I was confident that I was right; and I prepared an article in which I defended my position by quoting his words in *The Liberator* and at the famous anti-Bible meeting at Hartford. When Mr. Johnson refused to allow me to publish such a historical vindication of the attitude of those who had organized the Liberty party as against that of the Garrisonian Abolitionists, I informed Mr. Bowen that I must resign my position. He told me

to be patient, for in a few weeks there would be a change. In the issue of December 22d Mr. Tilton publisht his valedictory, after having served the paper fifteen years, during seven of which he had been its editor. He left it, giving and receiving warm expressions of esteem, but it was made clear by him, and in the accompanying announcement of its proprietor, who now became also its responsible editor, that differences of policy had much to do with his withdrawal. These differences were as to religious faith.

Mr. Bowen resolved and declared that from that time he would never trust the unrestricted editorial control into any one else's hands. From that day till his death, in March, 1896, he was proprietor, publisher and editor. I do not need to speak further of his energy, enthusiasm, liberality and positive convictions. The history of the paper is his monument. He asked me to take the position of Superintending Editor, but I urged him to secure in that position the services of Dr. Edward Eggleston, and this he did. Dr. Samuel T. Spear was also added to the editorial force and continued his very valuable services with the paper until his death in 1891. After some two years' service Dr. Eggleston resigned, and I was called to the position of Superintending Editor, which I retained until the death of Mr. Bowen, since which time I have held the designation of Editor. During the period of twenty-seven years that Mr. Bowen held the editorship of THE INDEPENDENT he made it no sinecure, and especially during the last ten years he was very active in controlling and directing its policy both on political questions and on matters of theological policy.



I recall a long list of men of mark who have been members of the editorial staff of THE INDEPENDENT. Besides the distinguished men already mentioned, I single out only one or two. Dr. Washington Gladden was for several years our brilliant Religious Editor, and was succeeded by Dr. Henry K. Carroll, so well known as an authority on religious statistics and who, after twenty-two years of service, left the paper to be appointed by the President Special Commissioner for Porto Rico, and has later been the efficient secretary of the Methodist Board of Foreign Missions. For many years the genial and versatile Dr. Kinsley Twining was in charge of our department of book reviews, greatly revered and beloved. Among others who for a longer or shorter time had occupied editorial desks are Wendell Phillips Garrison, long connected with *The Nation* until his recent death; Charles F. Briggs, Lowell's friend when the latter was a free lance in New York; Justin McCarthy, M. P., who was literary editor while in this country late in the sixties; Prof. C. H. Toy, D. D., of Harvard University; Robert L. Stanton, D. D., formerly president of Miami University; Titus M. Coan; Prof. Norman Fox; David N. Beach, D. D.; John E. Bowen, whose service as office editor was cut short by his lamented death in 1890; W. M. F. Round, ex-secretary of the Prison Association; Prof. H. P. Johnson, of the College of the City of New York; Prof. Charles F. Richardson, of Dartmouth College; the late President George W. Atherton, of the State College of Pennsylvania; Leonard Woolsey Bacon, D. D.; Bliss Carman; John Woolfolk; F. B. Stanford; Elbert F. Baldwin,

FRANKLIN W. FISK.
The president of the Chicago Theological Seminary and a brother-in-law of Henry C. Bowen. A contributor to THE INDEPENDENT.

now of *The Outlook;* Susan Hayes Ward; Dr. E. Munsell Bliss, now of the Census Bureau at Washington, Paul E. More, now of the *Nation;* and Maurice Thompson, author and poet. Doubtless I have omitted names of others who do not occur to me; and many of distinction who have been regular editorial contributors to our various departments of Science, Art, Music, Biblical Research, Insurance, Finance, etc., are not included in this list. Another list must include those who are now my associates — Hamilton Holt, Frank D. Root, Dr. E. E. Slosson and W. G. Bowdoin.

During these fifty years THE INDEPENDENT has made two changes of its form. Up to 1873 it had been the largest blanket sheet in the country; but in that form enlargement could go no further, and its size was reduced and the number of its pages increased. Again, in July, 1898, another reduction to the magazine form was made, with another corresponding increase of pages. At the same time the magazine was made less distinctively religious in its plan, while maintaining the religious and pronouncedly ethical spirit with which all treatment of public matters should be permeated.

LEWIS TAPPAN.

From a daguerreotype taken in 1846 in possession of THE INDEPENDENT. Mr. Tappan was the father-in-law of Mr. Bowen, and he and his brother, Arthur Tappan, were two of the leading abolitionists in New York. During the riots of 1833 Lewis Tappan's home in Rose Street, New York, was attacked by a mob because of his anti-slavery sympathies.

As I turn the leaves of the first issue of THE INDEPENDENT I discover that its future course was admirably foretokened. That issue declared it to be the purpose of the paper to be what its name indicated, "Not so much to reflect public opinion as to act upon it." Those are golden words. Reform, reform, was the purpose of its young editors. Therefore that first issue reported Dr. William Patton's anti-slavery Thanksgiving sermon, preached in the now extinct Church of the Puritans. It was perhaps for the same reason that a special word of commendation was given to *The Tribune,* our most faithful ally in those days, for its enterprise in reporting sermons. There was an excellent musical article, and sanitary topics were well treated in view of an apprehended visitation of the cholera. Missions was a topic fully treated, and a missionary periodical was amusingly credited with an item of information which illustrates the growth of the country in these sixty years. It read:

"YANKEE ENTERPRISE: A letter in the *Missionary Chronicle* says: 'Yankee enterprise is already building flouring mills and selling town lots at the Falls of St. Anthony.'"

But it was the spirit of the paper that offered a revelation and made a revolution in religious journalism. Here was a paper that was warmly religious, and yet eager for new theology; that could in the same breath pray for revivals and yet denounce slaveholding; that did not care for its subscription list if it might help truth and justice; that began an editorial in its first issue about the American Board with the now familiar words, "This debt must be paid," and yet could attack the Board for its connivance with slavery.

The most marked difference that I observe between its first issue and those of its last forty years is the enterprise of its publishing department. Then there were

correspondents in other cities and letters from European countries, but nothing to compare with the magnificent galaxy of writers whom a liberal policy, then unknown in the newspaper world, has since allowed us to gather. This was first made possible by the great extension of our circulation in the late sixties, achieved by a very liberal offer of premiums—dictionaries, sewing machines and steel engravings. That was the method of the day, now almost forgotten.

As I look over the long row of files since publisht, I recognize that the aims of that day have been fairly well realized; and nothing is so near my heart as that the paper shall always remain true to the Kingdom of Christ, whatever banner his loving followers may carry; that it may be more than hospitable to new truth, and that it may seek to bring the Church into closer bonds of union; that it may always defend the wronged and the helpless of whatever race, may assert the widest fellowship of humanity, and that it may ever, in matters of national progress as well as of all righteousness and religion, forget the traditions behind and build new service on the eternal foundations of faith, hope and love, which are also those of liberty, fraternity and equality. And let me add my testimony to that of Mr. Tilton on the occasion of the twenty-first anniversary:

"From its origin till now THE INDEPENDENT has never grown cold in its love of liberty, and never slacked its zeal in the service of the oppprest. It has never had an editor who could not say with Governor Andrew, 'I know not what record of sin awaits me in the other world; but this I know, that I have never been guilty of despising a man because he was poor, because he was ignorant, or because he was black.' Selden's ancient motto shall ever be ours, 'Before all else liberty.' We make common cause with struggling negroes, with disfranchised women, with hunted Indians, and with opprest Chinamen. In a word, both in religion and in politics we believe in the universal and all-comprehensive law enacted by Him who spake as never men spake, when he gave to individuals and nations, to churches and States, this authoritative rule of faith and practice, "Whatsoever ye would that men should do unto you, do ye even so unto them.'"

NEW YORK CITY.

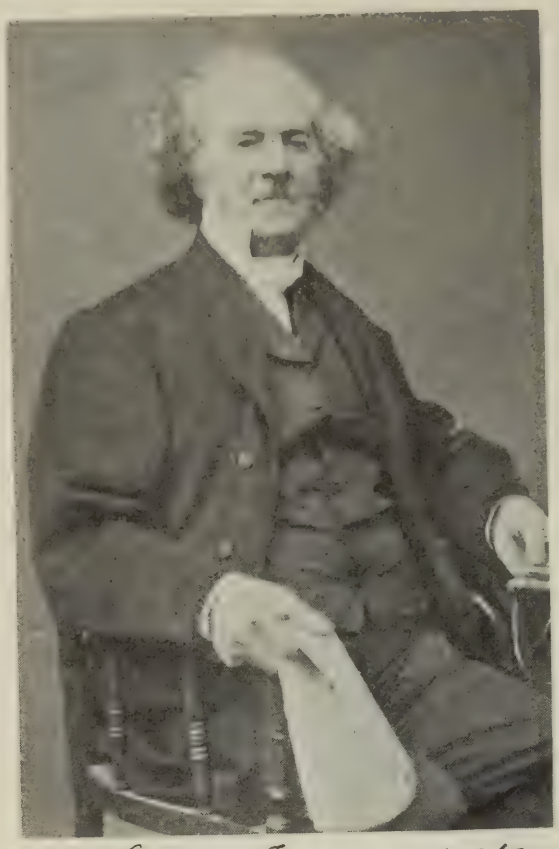
First News from Villafranca

BY ELIZABETH BARRETT BROWNING

From THE INDEPENDENT of June 7, 1860.

PEACE, peace, peace, do you say?
What! with the enemy's guns in our ears?
With the country's wrongs not rendered back?
What! while Austria stands at bay
In Mantua, and our Venice bears
The cursed flag of yellow and black?

Peace, peace, peace, do you say?
And this is the Mincio? Where's the fleet
And where's the sea? Are we all blind
Or mad with the blood shed yesterday,
Ignoring Italy under our feet,
And seeing things before, behind?



Peace, peace, peace, do you say?
What! uncontested, undenied?
Because we triumph, we succumb?
A pair of Emperors stand in the way,
(One of whom is a man beside)
To sign and seal our cannons dumb?

No, not Napoleon! he who mused
At Paris, and at Milan spake,
And at Solferino led the fight.
Not he we trusted, honored, used
Our hopes and hearts for . . . till they break,
Even so, you tell us . . . in his sight!

Peace, peace, is still your word?
We say you lie, then! that is plain:
There is no peace, and shall be none,
Our very dead would cry, "Absurd,"
And clamor that they died in vain,
And whine to come back to the sun.

Hush! more reverence for the dead!
They've done the most for Italy
Evermore since the earth was fair.
Nor would that *we* had died instead,
Still dreaming peace meant liberty,
And did not, could not, mean despair!

Peace, you say? Yes, peace, in truth;
But such a peace as the ear can achieve
'Twixt the rifle's click and the rush of the ball,
'Twixt the tiger's spring and the crunch of the tooth,
'Twixt the dying atheist's negative
And God's face . . . waiting, after all.

Lewis Tappan (1863)

Lewis Tappan, the well-known Abolitionist and New York merchant, was the father-in-law of Henry C. Bowen, and held possession of THE INDEPENDENT as assignee for a few weeks in 1860, at the time of the failure in business of Mr. Bowen. This letter shows the interest Mr. Tappan took in THE INDEPENDENT. Even nowadays the editorials in THE INDEPENDENT are sometimes criticised.—EDITOR.

FOR MR. H. C. BOWEN.

June 10/58.

MY DEAR SIR—I think that nothing will injure the value of THE INDEPENDENT in a business as well as moral point of view more than the editorial remarks on the 4th page near the close of the editorial headed "Valuable and Influential Men." Refuting the charge of being an abolitionist! Placing stress on the fact that distinguished men, instead of God and Truth, are on the side of the paper!

Such articles weaken the paper exceedingly and will, if persisted in, induce some one to establish a new paper that contends for high principles whether embraced by distinguished men or not. I feel ashamed of such an editorial. The editor should glory in the name of abolitionists, and think it disgraceful to Mess. Tyng, Jessup & Co. if they disavow the name. Yours truly,

(Signed) L. TAPPAN.

Have you seen a new paper entitled "The Witness"? If the editors take higher ground than THE INDEPENDENT it will diminish the latter's subscription list.

for Mr H. C. Bowen

June 10/58

My dear Sir,

I think that nothing will injure the value of the Independent in a more business as well as moral point of view than the editorial remarks on the 4th page near the close of the editorial headed "Valuable & Influential Men" Apologizing for Refuting the charge of being an abolitionist! Placing stress on the fact that distinguished men, instead of God and Truth, are on the side of the paper!

Such articles weaken the paper exceedingly & will, if persisted in, induce some one to establish a new paper that contends for high principles whether embraced by distinguished men or not. I feel ashamed of such an editorial. The editor should glory in the name of abolitionists & think it disgraceful to Mess. Tyng, Jessup &c if they disavow the name. Yours truly L Tappan

Have you seen a new paper entitled "The Witness"? If the editors take higher ground than The Independent it will diminish the latter's subscription list.

Miss Edith's Modest Request

BY BRET HARTE

From The Independent of January 24, 1878.

My Papa knows you, and he says you're a man who makes reading for books;
But I never read nothing you wrote, nor did Papa—I know by his looks.
So I guess you're like me when I talk, and I talk, and I talk all the day,
And they only say: "Do stop that child!" or, "Nurse! take Miss Edith away."

But Papa said if I was good I could ask you—alone by myself—
If you wouldn't write me a book like that little one up on the shelf.
I don't mean the pictures, of course, for to make *them* you've got to be smart;
But the reading that runs all around them, you know—just the easiest part.

You needn't mind what it's about, for no one will see it but me
And Jane—that's my nurse—and John, he's the coachman—just only us three.
You're to write of a bad, little girl, that was wicked and bold and all that;
And then you're to write, if you please, something good—very good—of a cat.

This cat she was virtuous and meek, and kind to her parents, and mild,
And careful and neat in her ways, tho her mistress was such a bad child;
And hours she would sit and would gaze when her mistress—that's me—was so bad,
And blink—just as if she would say: "Oh! Edith, you make my heart sad."

And yet you would scarcely believe it, that beautiful angelic cat
Was blamed by the servants for stealing whatever, they said, she'd get at.
And when John drank my milk—don't you tell me! I know just the way it was done—
They said 'twas the cat—and she was sitting and washing her face in the sun!

And then there was Dick, my canary. When I left its cage open one day,
They all made believe that she ate it, tho I know that the bird flew away.
And why? first because she was playing with a feather she found on the floor.
As if cats couldn't play with a feather without people thinking 'twas more.

Why once we were romping together, when I knocked down a vase from the shelf.
That cat was as grieved and distrest as if she had done it herself;
And she walked away sadly and hid herself, and never came out until tea—
So they say, for they sent *me* to bed, and she never came even to me.

No matter whatever happened, it was laid at the door of that cat.
Why, once, when I tore my apron—she was wrapped in it and I called "Rat!"—
Why they blamed that on *her*. I shall never, no, not to my dying day—
Forget the pained look that she gave me when they slapped *me* and took me away.

Of course, you know just what comes next when a child is as lovely as that.
She wasted quite slowly away—it was goodness was killing that cat.
I know it was nothing she ate, for her taste was exceedingly nice;
But they said she stole Bobby's ice cream, and caught a bad cold from the ice.

And you'll promise to make me a book like that little one up on the shelf.
And you'll call her "Naomi," because it's a name that she just gave herself;
For she'd scratch at my door in the morning, and whenever I'd call out "Who's there?"
She would answer, "Naomi"! "Naomi"! like a Christian. I vow and declare.

And you'll put me and her in a book, and mind, you're to say I was bad;
And I might have been badder than that but for the example I had.
And you'll say that she was a Maltese, and—what's that you asked? "Is she dead?"
Why, please sir, *there ain't any cat!* You're to make one up out of your head!

When I Awake I Am Still with Thee

BY HARRIET BEECHER STOWE

From THE INDEPENDENT of September 9, 1852.

STILL, still with Thee—when purple morning breaketh,
When the bird waketh, and the shadows flee;
Fairer than morning, lovelier than the daylight,
Dawns the sweet consciousness *I am with Thee!*

Alone with Thee—amid the mystic shadows,
The solemn hush of nature newly born;
Alone with Thee in breathless adoration,
In the calm dew and freshness of the morn.

As in the dawning, o'er the waveless ocean,
The image of the morning star doth rest,
So in this stillness, Thou beholdest only
Thine image in the waters of my breast.

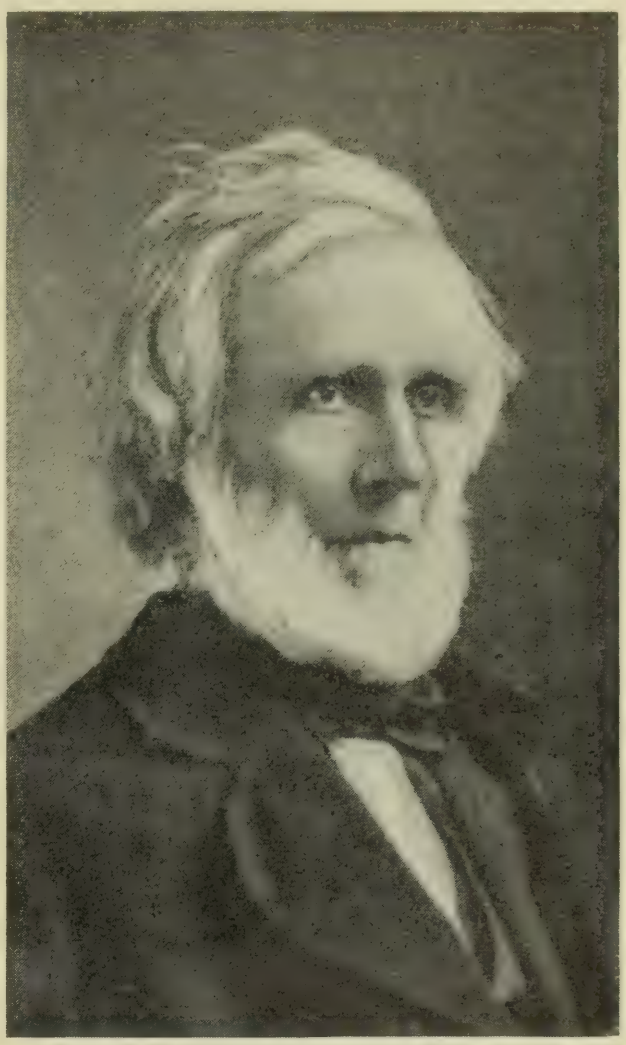
Still, still with Thee! as to each new-born morning
A fresh and solemn splendor still is given,
So doth this blessed consciousness awaking,
Breathe, each day, nearness unto Thee and Heaven.

When sinks the soul, subdued by toil to slumber,
Its closing eye looks up to Thee in prayer,
Sweet the repose beneath thy wings o'ershading;
But sweeter still to wake and find Thee there!

So shall it be at last, in that bright morning,
When the soul waketh, and life's shadows flee;
Oh! in that hour fairer than daylight dawning,
Shall rise the glorious thought, *I am with Thee.*

Conflicts and Conquests

BY WILLIAM HAYES WARD



THE INDEPENDENT has never been a narrow journal. All the world has been its field and nothing that pertains to humanity foreign to it. It has been interested in religious questions, but equally in politics; in social reform, but equally in literature, science and art. It has sought able and distinguished writers who might represent various conflicting views, but it has maintained positively its own in its editorial columns. In the pages of communications it has striven to inform its readers of the strength even of policies which it did not approve, but in its editorial columns its one rule has been to present and impress its own positive opinions as strongly as it could. Its purpose has not been to provide an agreeable miscellaneous journal, but one that should have influence and power, appealing particularly to intelligent and thinking people. We have enough journals that scatter everywhere and go nowhere. THE INDEPENDENT would not be of that ilk.

Under the first triumvirate of Bacon, Thompson and Storrs the two chief battles of THE INDEPENDENT were for liberal theology, as the term would be understood at that day, and for the overthrow of slavery. Such a journal was needed in New York, rather than in

Boston, and here were the men for it, backed, as they were, by Mr. Bowen to pay the deficits, and Dr. Bacon to give his long experience and wisdom. A liberal theology in that day was not what it is now. It mainly had to do with New School as against Old School doctrines, for the two branches of Presbyterianism had not then united after the division over Dr. Barnes and the Auburn Declaration. THE INDEPENDENT was Congregational, and Congregationalism, under Dr. N. W. Taylor, of New Haven, and Dr. Park, of Andover, and the more radical President Finney, of Oberlin, had mainly joined the liberals, altho the old guard were still strong. But new movements were coming up; for the succession of "improvements in theology," begun in New England by President Edwards, and developed by his son, and Dr. Hopkins, and Dr. Emmons, and later by Professors Taylor and Park, were far from meeting the full need. So when Horace Bushnell began to teach in a new way, he had to meet the old hostility, to be called a Socinian, a Unitarian, and the effort was made to drive him out of the Church. Then THE INDEPENDENT was his greatest defender; not that its editors accepted his theology, but they believed in the liberty of prophesying within the Church. They were successful, but it was a severe fight.

But the chief and the most prolonged conflict was over slavery. And it was a complicated struggle. The defenders of slavery, based on the Bible, were united and they were strong. But THE INDEPENDENT was the chief and most influential foe of slavery in the religious press. The foes of slavery were divided. There were those who refused to vote, attacked the Churches, agreed with the slaveholders that the Bible supports slavery, and so rejected Bible, Church and country, and were known as Garrisonians and Comeouters. They were, however, more noisy than numerous; for the ever-growing number, disregarding the authority of Hebrew slavery and the return by Paul of Onesimus to his master, quoted the passage in which the Hebrews were told not to return a slave to his master, and the denunciations in the prophets against oppression. They fought within the Church and within the nation, and out of them grew the Liberty party, which developed into the Free Soil party, and that into the Republican party. With this division of the anti-slavery ranks, which represented the Christian conscience of the North, THE INDEPENDENT was allied and became its organ, and with its growth grew THE INDEPENDENT in reputation and power, until this victory was achieved in the overthrow of slavery by civil war.

HORACE BUSHNELL.
The champion of New England liberal theology, whom THE INDEPENDENT supported in the early days.

Yet after that, even to this day, it has been a constant effort of THE INDEPENDENT to defend the civil and political rights of the negro, and to demand equality of opportunity and treatment for every citizen of whatever race or color. That fight still goes on after these sixty years.

Closely connected with this, in the earliest years of this journal, was the attack it made on the American Tract Society for complicity with slavery, and also its criticisms of the American Board and the American Home Missionary Society for

their relation with slaveholders. This attack and these criticisms were received with horror by the conservative journals, but the final victory of the anti-slavery forces in war brought all to the attitude which THE INDEPENDENT had taken from the first.

With the coming of Mr. Beecher, and particularly of Mr. Tilton and Mr. Johnson as editors, a new reform was taken up—that of women's suffrage, and for several years it very much took the place of that against slavery, where victory had now been achieved. THE INDEPENDENT

BISHOP GILBERT HAVEN.
Of the Methodist Church. Distinguished in literature as well as in the Church, and a frequent contributor to our columns.

has never ceased since then to maintain the rights of women to the ballot, and it has seen their rights gained in several progressive States and in other parts of the world.

In its support of a more liberal theology THE INDEPENDENT has had not a quite consistent course. Mr. Tilton and Mr. Johnson were not believers in evangelical Christianity, and their lack of sympathy with it was made evident in their criticisms, which were of quite a different tone from the criticisms of conservatism made by the first triumvirate. They ceased to represent even the liberal forces in American Christianity, and the loss and injury to the paper was very great.

Another diversion from the straight course of THE INDEPENDENT in support of breadth in religious faith occurred in the conflicts over the American Board and the Andover matter. These conflicts arose over the proposition to send out as missionary a man who held to the doctrine taught by some of the Andover theologians, but quite unnecessary as a defense of divine justice, of a second probation. At the meeting of the American Board at Des Moines there occurred what was called "The Great Debate," in which I was one of the defenders of comprehension, but we were decisively defeated. At this time Mr. Bowen, as a result of the most unfortunate Beecher affair, had lost sympathy with his pastor theologically as well as personally. I told him that five years would suffice to reverse the action at Des Moines, but he preferred the advice of Joseph Cook and the other conservatives, and put all the influence he could control on the wrong side. It was more than anything else the influence of THE INDEPENDENT which prolonged the period to seven years before the liberal rule was adopted by the American Board. During those years I wrote not one line for THE INDEPENDENT on the great question. Joseph Cook said at Pittsfield, at the meeting of the Board, that Dr. Ward was "bottled up." It was true, but my friends advised me to remain, as success was sure in the end. During this period the editorial writing on the subject was constant and emphatic, sometimes by Mr. Bowen himself, but more by Dr. Judson Smith, of the American Board, who held out even after Dr. Storrs had yielded, and by others with him. Meanwhile THE INDEPENDENT fell in its circulation to its lowest ebb, for, after having lost so many friends thru its course in the Beecher matter, it was now going against the tide of growing Christian fellowship, a strange position for it to take.

Because THE INDEPENDENT has been the champion of equal rights for all races, white, black, yellow or red, it has naturally supported the Republican party in

all Presidential elections, with a single exception, that of the election of Grover Cleveland in 1884, when James G. Blaine was the Republican candidate. In that campaign one of the editorial staff, Dr. Samuel T. Spear, was very positively in favor of Mr. Blaine, and another, Dr. Kinsley Twining, was equally vigorous in support of Mr. Cleveland. Mr. Bowen, as editor, was not willing to support either, and gave these two gentlemen free rein each to attack and condemn the other's, but not to support his own, candidate. The result presented one of the most curious examples of editorial conduct that I have ever seen; for each editor did his best to outdo the other, and there was no sparing of sharp criticism. Unfortunately, in that campaign, unlike that thru which we have now past, the personal character of the candidates was bitterly assailed.

Passing again to the great movements with which THE INDEPENDENT has been concerned, we may mention that for the unity of Christendom, whether by the federation of churches or their corporate union. This month the Council of the Federated Protestant Churches of America holds its first session in Philadelphia, and THE INDEPENDENT has done all in its power to cultivate the sentiment for it and to aid its achievement. Equally it has been careful to watch for union movements in Christian lands and in mission fields, and has greatly rejoiced to see that it has come to be a general belief that the time for sectarian division is past, and that, ceasing to emphasize their points of difference, they should come together.

THE INDEPENDENT has favored every movement for the enlargement of our national possessions. Under General Grant's administration we strongly favored the annexation of Santo Domingo, the failure to accomplish which was a great misfortune. But what we failed to accomplish then has been far more than accomplished by the accession since then of Hawaii, Samoa, Guam, Porto Rico, and the Philippines. THE INDEPENDENT has never wavered in defense of these accessions, not because of the enlargement of our territory, but because we believed that American influence and control would be a benefit to those lands.

The peace of the world by the promotion of arbitration and the development of a league of the nations has been of late years an object which THE INDEPENDENT has had much at heart. By correspondence and by editorials, and by sending one of its editors to attend the sessions of the Hague Conference, it has, more actively and persistently than any other American journal, given its best influence for this end. It has urged the action of our Government to propose treaties for arbitration of the widest sort, and of the Senate to confirm them. The growing sentiment in our own land and among the nations of the world in favor

JULIA WARD HOWE AS A YOUNG WOMAN.
The author of "The Battle Hymn of the Republic" and a valued writer for THE INDEPENDENT, now living at the age of 89.

of peace, and the substitution of the arbitrament of a court for the arbitrament of war causes us profound satisfaction.

I would mention one last matter of reform on which THE INDEPENDENT has ventured to take a positive position, that somewhat unpopular simplified spelling. We have not only defended it, but ours is almost the only popular magazine, as yet, which has to a considerable extent adopted it. This we do because it is right, and particularly because our cur-

rent abnormal and mischievous spelling is a serious handicap to immigrants of other languages, and is a shocking wrong to our children. The Society for the Prevention of Cruelty to Children ought to put our spelling in the first rank of its efforts for reform. Where we lead, the rest will later follow.

That THE INDEPENDENT has had its prevailing influence for progressive reform in social life, in political movements and in religious thought, and has thus been something of a force for good, is a matter of profound satisfaction. It has never been content to follow and record, but has preferred to serve its age by leading it to the better way, in search for the right and the true, and ever confident that the true and the right must prevail in the end.

NEW YORK CITY.

Our Lady of the Snows

BY ROBERT LOUIS STEVENSON

From THE INDEPENDENT of March 3, 1887.

Out of the sun, out of the blast,
Out of the world, alone I past
Across the moor and thru the wood
To where the monastery stood.
There neither lute nor breathing fife,
Nor rumor of the world of life,
Nor confidences low and dear,
Shall strike the meditative ear.
Aloof, unhelpful, and unkind,
The prisoners of the iron mind,
Where nothing speaks except the bell,
The unfraternal brothers dwell.

Poor passionate men, still clothed afresh
With agonizing folds of flesh;
Whom the clear eyes solicit still
To some bold output of the will,
While fairy Fancy far before
And musing Memory-Hold-the-Door
Now to heroic death invite
And now uncurtain fresh delight;
Oh, little boots it thus to dwell
On the remote unneighbored hill!

Oh! to be up and doing! Oh!
Unfearing, unashamed to go
In all the uproar and the press
About my human business!
My undissuaded heart I hear
Whisper Courage in my ear.
With voiceless calls, the ancient earth
Summons me to daily birth;
Thou, O my love, Ye, O my friends—
The gist of life, the end of ends—
To laugh, to love, to live, to die,
Ye call me by the ear and eye!

Forth from the casement, on the plain
Where honor has the world to gain,
Pour forth and bravely do your part,
O Knights of the unshielded heart!
Forth and forever forward! Out
From prudent turret and redoubt,
And in the millay charge amain,
To fall, but yet to rise again!
Captive? Ah, still, to honor bright,
A captive soldier of the right!
Or free and fighting, good with ill,
Unconquering, but unconquered still!

And ye, O brethren, what if God
When from Heaven's top he spies abroad,
And sees on this tormented stage
The noble war of mankind rage—
What if his vivifying eye,
O monks should pass your corner by?
For still the Lord is Lord of Might;
In deeds, in deeds he takes delight;
The plow, the spear, the laden barks,
The field, the founded city, marks;
He marks the smiler of the streets
The singer upon garden seats;
He sees the climber in the rocks;
To him, the shepherd folds his flocks,
For those he loves that underprop
With daily virtues Heaven's top,
And bear the falling sky with ease,
Unfrowning caryatides.

Those he approves that ply the trade,
That rock the child, that wed the maid,
That with weak virtues, weaker hands,
Sow gladness on the peopled lands,
And still with laughter, song and shout
Spin the great wheel of earth about.
But ye, O ye who linger still
Here in your fortress on the hill,
With placid face, with tranquil breath,
The unsought volunteers of death,
Our cheerful General on high
With careless looks may pass you by.

The Editors

BY WILLIAM HAYES WARD

THAT first triumvirate was an extraordinary body of men. Leonard Bacon was the oldest, for half a century pastor of the First Church in New Haven, not a tall man, like the two others, but commanding in voice and spirit, positive in his views, a master of denominational principles, radical in his democracy, a hater of slavery, a liberal, as theology ran in those days, greatly respected, but not always followed. He attended the first session of the Congregational National Council at Oberlin, but he gave it no sympathy, for he feared it would sacrifice independence and Presbyterianize the denomination. He could hardly imagine the distance in direction that the last session at Cleveland reached. He left behind him a distinguished family of clerical sons and grandsons, one of whom is now a chief professor in the theological seminary at New Haven. He gave his distinguished name to THE INDEPENDENT, but he wrote little for it.

Next may be mentioned Richard Salter Storrs, then a young man, who achieved half a century of distinguisht pastorate of the Church of the Pilgrims in Brooklyn, and who was known as the finest orator in the country. He was the son of a clergyman of Braintree, Mass., famous in his day, but eclipsed by his son. He was an orator, a rhetorician, a student of history, a writer of books; but to my mind he was greater than anything he ever wrote. Never was he so great as when some serious debate called out all his ready powers of argument, wit and wealth of knowledge. He was aided by a magnificent presence and voice, but somehow in his ordinary efforts he just missed supreme excellence by a certain balanced formality which forbad real naturalness and simplicity; but on special occasions he was magnificent, and his wisdom commanded respect, and, usually, acceptance. He, too, was not a very constant editorial writer.

The worker of the three was Joseph P. Thompson, pastor of Broadway Tabernacle. He was tall and handsome, a man of intense conviction, liberal like both the others, or more so, more devoted than they to the purpose of anti-slavery and liberal faith, more of a student of current events and current religious or social thought, an admirable speaker, and a special student in Egyptology. His church was the headquarters for the May Meetings, whither the tribes went up. He had ambitious initiative; he did the most of the editorial writing, aided by Dr. Leavitt. It was he that defended Dr. Bushnell, he that attacked the Tract Society, he that urged the cause of missions or of anti-slavery. He was the active editor, ready and able to fill all gaps. When his health began to fail he resigned his pulpit and went to Germany to be the head of the American colony and to pursue his Egyptian studies. He said to me one day in his church study (three rings was the open sesame), when I had called to express my hope that he would not resign: "It does not hurt a man at all if he has had a soft brain all his life; but if it begins to be reported that he has softening of the brain, that is the end of his influence."

These three men, or some of them, were greatly disturbed that Mr. Bowen, when he went into bankruptcy, did not pass over to them the possession of THE INDEPENDENT. They declared that he had promised to give it to them if he ever ceased to own it. It was for this reason that at the end of thirteen years they resigned. If they thought that would coerce him they did not understand the man with whom they had to deal. His brother-in-law (my father-in-law) came into nominal possession for a season, but Mr. Bowen put all his business energy into developing the paper. He immediately gave the editorship to his pastor. Henry Ward Beecher was the object of his intensest admiration. He

HENRY WARD BEECHER.

An early portrait of Mr. Beecher, from a daguerreotype in the possession of THE INDEPENDENT.

had been most active in bringing him to Brooklyn and building his church. Mr. Beecher was the most brilliant, and I may say the most influential minister our country has ever produced. He was no dry theologian, no nice scholar, but he was a devourer of books, and assimilated their contents as only a genius can. For Beecher was a true genius. He had an intense nature, was a poet in spirit, was a hater of every kind of public wrong, and especially of slavery; was devoted to the kernel of religion, and cared nothing for its shell. He was the peerless orator of the pulpit and of the nation—a very lion of the platform. He was too great for the formalities of rhetoric. His voice would one moment sink to the softest, tenderest tones of sympathy, or travel along the line of ordinary utterance, and then burst into a swell of solemn emotion or a passion of indignant invective, for all the gamut of oratory was his. He, too, held his pulpit till old age, with marvelous force, even after a storm of scandal that would have overwhelmed a lesser man.

When Mr. Beecher went to Europe to champion the cause of the North in the Civil War he ceased to hold the office of Editor, altho THE INDEPENDENT did not think it necessary to publish the fact. Mr. Beecher's friend and assistant, Theodore Tilton, was his successor, invested with full editorial authority. Mr. Tilton bade fair, for a time, to rival Mr. Beecher in popular esteem. He was Mr. Beecher's protégé, imitated him in pose and in his long hair, as well as in eloquent speech. He did not hesitate to challenge his pastor to public discussion on the platform of Plymouth Church on the question of the support of the American Board. But his inordinate self-confidence and his instability proved his lesser caliber. He went later into extremes of even absurd radicalism, as seen in his ridiculous eulogy of Mrs. Woodhull, and he attached himself to the less creditable if not extreme ways of social license. When at last he attacked Mr. Beecher, trying to drive him from his pulpit, at first by forcing him to become editor of a daily paper, and afterward suing him for alienating his wife's affections, while he did terrible damage to Mr. Beecher's reputation, the appearance was of one who was more anxious jealously to pull down another than to vent indignation at his own wrongs. When the jury failed to agree on conviction, and Mr. Beecher with extraordinary courage faced the condition and held his pulpit and his friends, Mr. Tilton lost courage and fled to Paris, where he lived in quiet retirement, devoted to chess and playing with poetry, until his death a year ago last spring. He never again returned to the scene of his triumphs and defeat.

While on the dismissal of Mr. Tilton and Mr. Johnson from the editorship of THE INDEPENDENT Mr. Bowen became responsible editor as well as proprietor and publisher, he took very little active part in its editorial conduct, and Edward Eggleston was made Superintending Editor. He had been a regular correspondent, and was a Methodist minister from Virginia, who had lived in Indiana, and had written one or two admirable novels of Western life. He was one of the most charming and delightful men I have ever met, tall, handsome, with curly hair, and that kind of frank consciousness of self which escapes egotism. He held the post but two years, and later founded the independent Church of the Christian Endeavor in Brooklyn, which suggested the name for Father Endeavor Clark's Society. On his resignation I took his place and held it until Mr. Bowen's death, when I took the title of Editor.

Of only a few of those who have been associate editors with me for the longest time have I room to speak. First of these was Dr. Samuel T. Spear. He was a Presbyterian pastor in Brooklyn, and an article by him appeared in the very first issue of THE INDEPENDENT. He had withdrawn from the pastorate, and, altho an old man, possest extraordinary vigor and emphasis of conviction on political as well as religious subjects. He wrote particularly on politics, and was very loyal to the Republican party. I feel especially indebted to him for his series of articles, publisht under his name, in which he developed the genius of our separation of Church and State. He was sufficiently logical to prove that churches ought to be taxed, and that no religious

teaching should be introduced into the public schools. These essays were publisht in a volume.

Especial honor is due to the service on THE INDEPENDENT of Dr. Washington Gladden, who was for a dozen years the Religious Editor, and whose editorials added brilliancy and strength. His service to the Church as pastor of the First Congregational Church of Columbus, Ohio, as Moderator of the Congregational National Council, and as teacher of all the churches as to their civic duties and their fellowship of union, has made him one of the best known and most honored of American clergymen.

Following Dr. Gladden, Dr. Henry K. Carroll entered the service of THE INDEPENDENT as Religious Editor, but he was also much interested in the political news of the day. He proved himself a man of infinite detail as well as of sound judgment, and the years of his service were notable, among other things, for the annual statistics of all religious denominations in the country. These were greatly valued, and they led to his being called to be the head of the Religious Census of 1890, which up to this time is the chief source of statistical authority. Afterward he was chosen as one of the two foreign missionary secretaries of the Methodist Episcopal Church.

A remarkably able succession of scholars have served as Literary Editors in charge of the reviews of books. Soon after I came on THE INDEPENDENT Justin McCarthy held that seat. His career since, as author and as leader of the Irish party in the House of Commons, is well known. Our readers still enjoy his monthly English letters, for altho blind, and altho his son has become one of the leading British authors, he remains in active service to the cause of letters.

Another who for some years held that position was Charles F. Richardson, for many years Professor of English Literature at Dartmouth College, a young man—for he came to us almost direct from college—whose versatility and wide culture made him greatly admired while with us. He had the book-lover's instinct, and could repeat the title and price of every book that had been published by the firm of Ticknor & Fields.

Another was Prof. C. H. Toy, the distinguished Oriental scholar of Harvard University. He was invited to THE INDEPENDENT as literary reviewer, when his too liberal theology rendered him unacceptable as teacher of the Old Testament in the Baptist Theological Seminary at Lexington, Ky. His culture was by no means narrowed to the realms of Hebrew and Arabic, and his wide knowledge and quiet strength were of great advantage to this journal, until President Eliot called him to be the head of the Semitic department at Harvard.

One of the most versatile and valuable associates in this department was Dr. Kinsley Twining, previously pastor of churches in Cambridge and Providence. He was an omnivorous reader of books, had the experiences of travel as well as of study, and his geniality and culture made him a fascinating companion. He aided in the editorial pages, as well as in the reviews of books, and his sound judgment was set off by a sparkling style.

Maurice Thompson, poet and essayist, was for many years connected with the book review department of the paper. But he had no desk in the office, the books being sent to him for review, while his verses and his miscellaneous papers on literature or descriptive of Western and Southern scenes were greatly appreciated.

It was at a later period that Paul E. More, who was giving up the study of Sanskrit for that of English literature, was for a few years Literary Editor. As an exact and broad scholar, and a judicious critic, he added strength to the department until called to hold the same position on the New York *Evening Post* and *Nation*.

Greatly regretted was the early death in 1890 of John Eliot Bowen, fourth son of Henry C. Bowen, who had for several years held the position of Managing Editor on THE INDEPENDENT. He had not only the executive qualities so essentially needed in that position, but he wielded a deft pen whether in prose or verse, while his personal qualities made him everywhere loved. He occupied the desk now held by Hamilton Holt, son of Judge George C. Holt, of the United States District Court, and grandson of Henry C. Bowen.

For a number of years the position of

office editor, with particular charge of the poetry, was held by Miss Susan Hayes Ward. Of her valued services in that department I would prefer others should speak.

Dr. E. Munsell Bliss, born in Constantinople, son of Dr. Bliss, of the Bible House there, and thoroly acquainted with foreign political affairs as well as editor of a Cyclopedia of Missions, was for half a dozen years a most useful member of our editorial staff. He is now attached to the religious department of the United States Census at Washington.

These too brief words in honor of a succession of men who have done long and loyal service on THE INDEPENDENT as its editors recall a succession of scholars and authors who for ability and distinction can hardly be matched in such a position. It has been a privilege to have been associated with them. I wish it were possible to add some worthy appreciation of many others who for a shorter time have occupied desks in this office. The names are given elsewhere. Nor ought I to forget those who, while not properly editors at the desk, have been frequent and most valued editorial writers, such as Helen Hunt Jackson, Professor Cope, the geologist; Dr. Meehan, the botanist; Prof. A. S. Packard, the biologist; William Winter, E. I. Prime-Stevenson, and a multitude of others of the older time; nor such men and women as E. P. Powell, Mrs. L. H. Harris, Prof. F. H. Giddings, Dr. James J. Walsh and Prof. John R. Commons, who are still enriching the editorial columns, without their names being attached. There are editors ignorant of their own limitations who imagine that the few men at the daily desk are the ones best competent to give sound judgment on all matters of current importance. The world of knowledge is too wide to be all enclosed in a single editorial sanctum.

The Descent into Hell

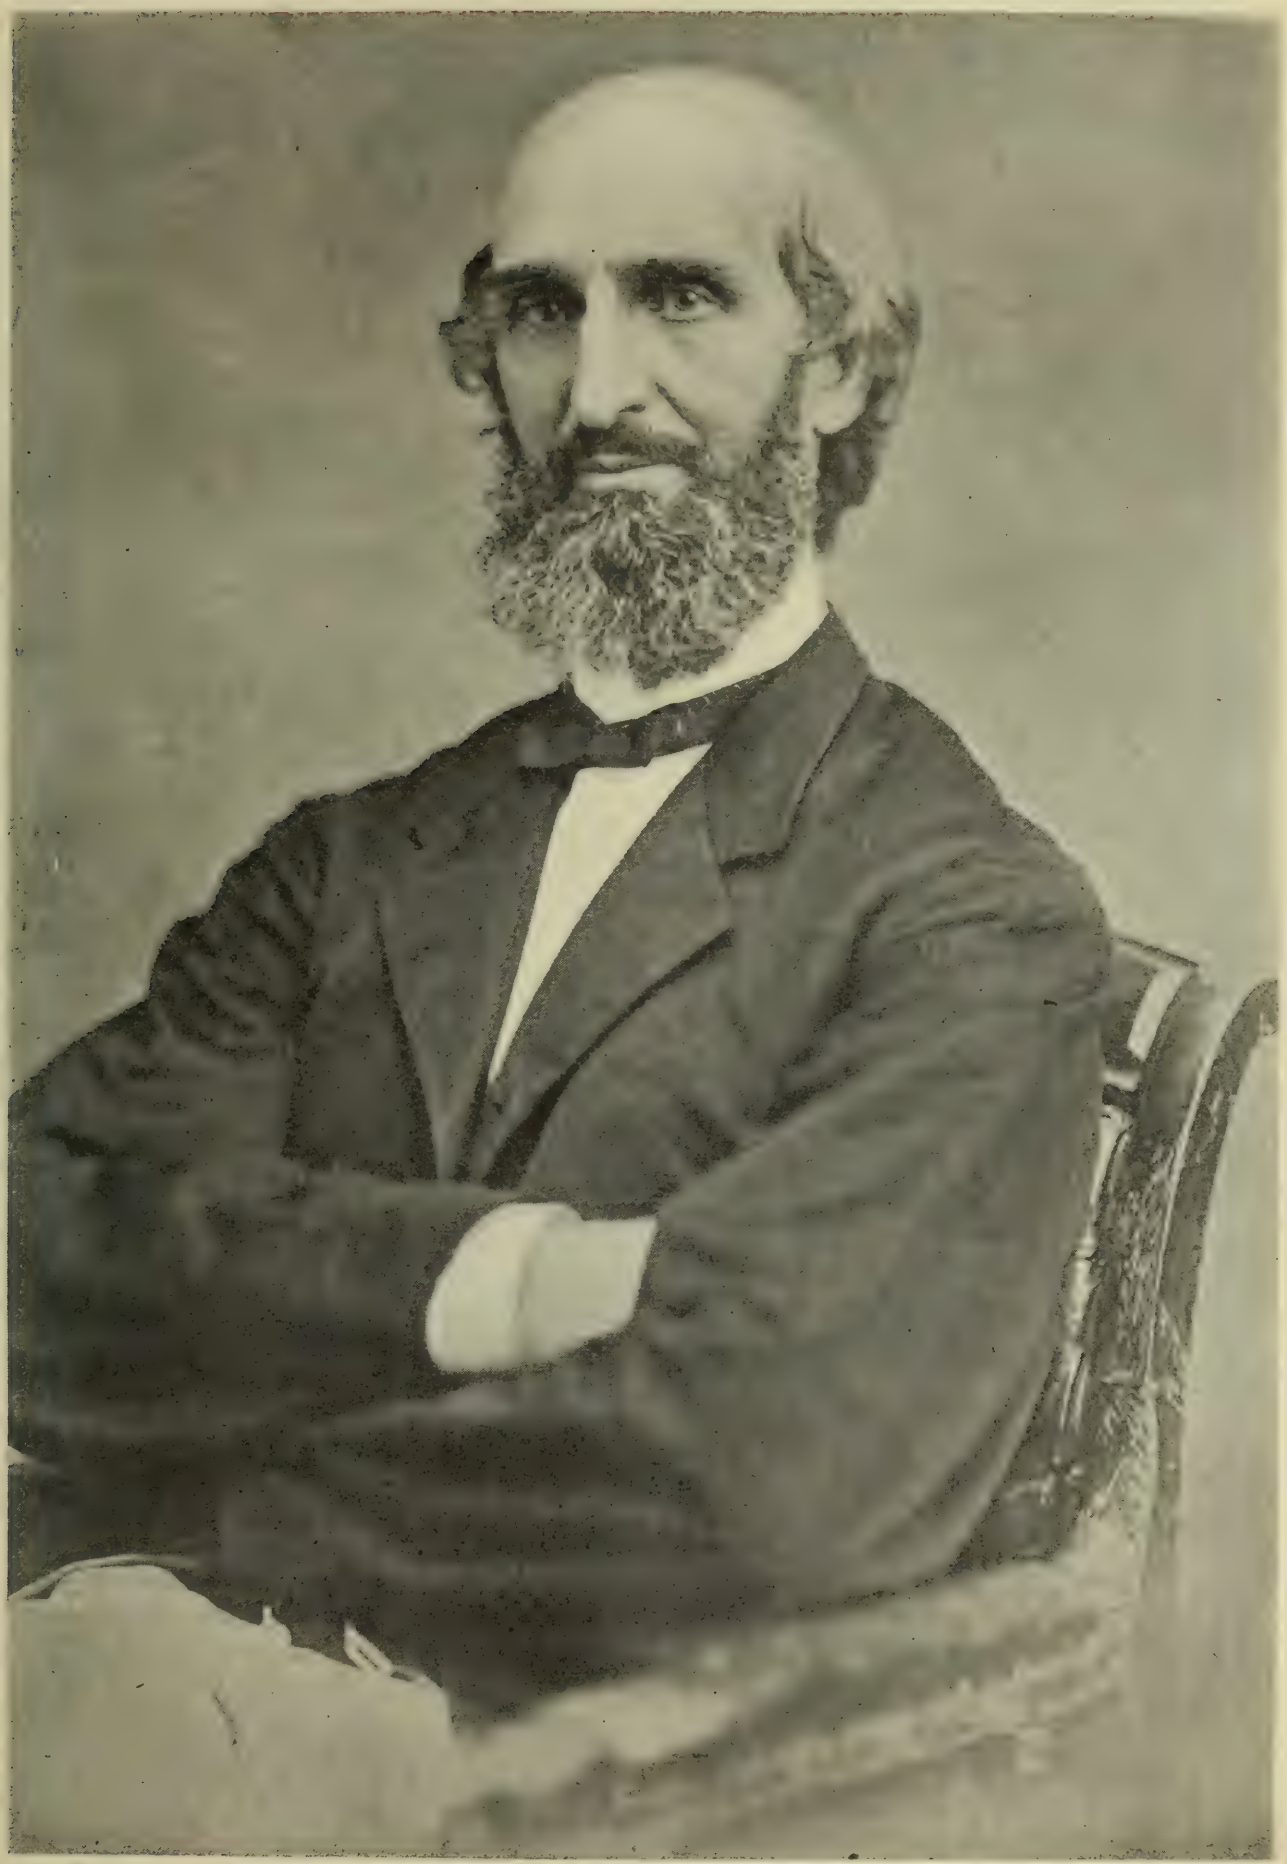
BY ALGERNON CHARLES SWINBURNE

Chiselhurst, January 9, 1873.

From THE INDEPENDENT of June 26, 1873.

O NIGHT and Death, to whom we grudged him then,
When in men's sight he stood not yet undone,
Your priest, your chosen, your servant, and your son,
We grudge not now who know that not again
Shall this curse come upon the sins of men
Nor this face look upon the living sun
That shall behold not so *abhorred* an one
Of all the days whereof his eye takes ken.
The bond is canceled, and the prayer is heard,
That seemed so long but weak and wasted breath;
Take him, for he is yours, O Night and Death.
Hell yawns on him whose life was as a word
Uttered by Death in hate of Heaven and light,
A curse now dumb upon the lips of Night.

What shapes are these and shadows without end
That fill the night full as a storm of rain,
With myriads of dead men and women slain,
Old with young, child with mother, friend with friend,
That on the dead mid-wintering air impend,
Pale yet with mortal wrath and human pain,
Who died that this man dead now too might reign,
Toward whom their hands point and their faces bend?
The raining flood should redden earth and air
If for each soul whose guiltless blood was shed
There fell but one drop on this one man's head
Whose soul tonight stands bodiless and bare,
For whom our hearts give thanks who put up prayer,
That we have lived to say, the dog is dead.



Henry C. Bowen

BY WILLIAM HAYES WARD

NOT one of the men who have given distinction to THE INDEPENDENT has done so much for it as the young man who founded it in 1848 and who left it only with his death in 1896. He came, while a boy, to New York from the farm, which had descended to his father from the first settlers of Woodstock, Conn. He was ambitious, alert to an extraordinary degree, and had the genius which is indicated by initiative and courage. He was taken into the employ of the dry goods firm of the famous Tappan brothers, Arthur and Lewis, and he subsequently married the daughter of Lewis Tappan, the distinguished Abolitionist. He connected himself with Dr. Cox's Presbyterian Church, and was soon active in its religious work. It was not long before he was conducting a neighborhood prayer meeting, but he was rebuked for it and told that he had no right to do it, as he had not been ordained an elder or evangelist. Just as he was disturbed about his duty in this matter, Mr. Hiram Bingham, one of the first missionaries to the Sandwich Islands, had returned to this country and visited New York. To him Mr. Bowen told his trouble, when the missionary put his hand on the youth's head, saying: "I ordain you, young man, to do all the good you can, wherever in the province of God you may be called to labor. Amen." "That," he continued, "is as good an ordination as any one can give." Two of the Tappan Brothers' clerks soon withdrew to found a wholesale dry goods house under the name of Bowen & McNamee, which continued in prosperous business till the crash of 1857, when it succumbed. He afterward founded the silk house of Bowen, Holmes & Co., which failed in the loss of payments from Southern customers in the Civil War.

Mr. Bowen was one of the founders of Dr. Storrs's Church of the Pilgrims, the first Congregational Church of Brooklyn, and afterward he was the most active founder of Plymouth Church, and brought Mr. Beecher from Indiana to Brooklyn. He was the munificent helper in founding a multitude of churches in his own city and thruout the Western country, and it was his insistence which developed the Congregational Union, a social organization, into the first church building society in the country. His passion for progress and reform made him one of the early adherents of the unpopular anti-slavery reform, and when in 1848 Drs. Bacon, Thompson and Storrs were willing to edit an organ of political reform and of theological and ecclesiastical liberty, Mr. Bowen was ready to find four young men who, with himself, should back the enterprise with their money. It is told elsewhere how he became sole owner of a financially valueless, and, indeed, expensive journal. To its business management he had given very little attention, altho he had given it standing in the commercial world by collecting and publishing a weekly list of business failures, which he kept up until obliged to include his own in the list. It was after his second failure, at the opening of the Civil War, I think, that he told me his liabilities were $1,800,000 and the credits due him $3,000,000, but collections from the South were impossible. Many years later he settled all his outlawed debts, and his creditors, in recognition of his honesty, gave him a handsome silver service.

It was after this second failure in business that he determined to put all his business energy on the development of THE INDEPENDENT. The conditions, unfavorable for reopening the silk business, were favorable for such a journal as this, a journal in the very flush of its victory against slavery, and representing also the progressive enthusiasms of the Church. And it had no competitor, for it had been the one earnest anti-slavery, undenominational Christian paper. Mr. Bowen pushed the premium system beyond anything previously known, offering large prizes for large lists of new subscribers, and this he kept up for many years, while he was no less ambitious to secure,

HENRY C. BOWEN.

From a photograph taken by Brady in 1868, who, at that period, was perhaps the most famous photographer in the United States. Mr. Bowen was then 54 years old.

at any price, the most distinguished contributors. Longfellow, Lowell, Whittier, Browning, Tennyson, to speak of poets only, were of those who answered his call, and Presidents and Senators came a little later, after the War was over, to be his guests on the Fourth of July at Woodstock, and their addresses filled double numbers of THE INDEPENDENT. In those days the woods were not full of competing magazines. Thus THE INDEPENDENT had the field to itself, and had an enormous circulation.

Those of the present generation cannot conceive the shock given to the country when Mr. Tilton presented charges against Mr. Beecher. Beecher was the nation's idol, the most distinguished preacher in the world, the very genius of American sentiments. The long and terrible ecclesiastical and legal conflict split churches and families and absorbed the attention of the country. Into that conflict Mr. Bowen was brought against his will. Altho now no partisan of Mr. Tilton, who was no longer editing either THE INDEPENDENT or the Brooklyn *Union,* and whose financial claims on his dismissal had been handsomely settled, Mr. Bowen could not and did not support Mr. Beecher, and when certain private utterances of his were reported he was charged with slander and excommunicated from Plymouth Church. He immediately was received into membership of the church in Woodstock, where he was born and had long had his summer home, and he became a regular attendant of Dr. Storrs's church in Brooklyn. For many months the exposures and trials continued, and THE INDEPENDENT, which did not support Mr. Beecher, and which defended Mr. Bowen, lost many friends.

This sad scandal, with the consequent estrangement of Mr. Bowen from Mr. Beecher and Plymouth Church, had the effect upon Mr. Bowen, not of making him cool on questions of freedom and social reform, but of withdrawing him from sympathy with such theological liberty as Mr. Beecher had represented. He was now an old man, and when the new theological questions came up represented by Andover and the American Board, he was positively and strongly with the conservatives, with Secretary Alden, of the Board, with Joseph Cook and Professor Park, whose own old age was defending the old against the new. For seven years this conflict lasted, and Mr. Bowen cared more for his view of truth than for the interests of THE INDEPENDENT, and many who had been its progressive friends left it and went elsewhere.

He died in 1896, eighty-three years old, surrounded by his large family of children, highly honored in the community, and leaving behind him a great record of distinguished service for the Church and for the nation.

Of his sons, one is now proprietor of THE INDEPENDENT, and another has done good work in the diplomatic service of the country; while one of his daughters is married to a United States District Judge, another to a distinguished diplomatist and author, and a third to a scholar formerly in charge of the American Archeological School in Athens.

NEW YORK CITY.

I'll Not Confer with Sorrow

BY THOMAS BAILEY ALDRICH

From THE INDEPENDENT, May 1, 1890.

I'LL not confer with Sorrow
  Till tomorrow;
But Joy shall have her way
  This very day.

No, eglantine and cresses
  For her tresses!
Let Care, the beggar, wait
  Outside the gate.

Tears, if you will, but after
  Mirth and laughter;
Then folded hands on breast
  And endless rest.

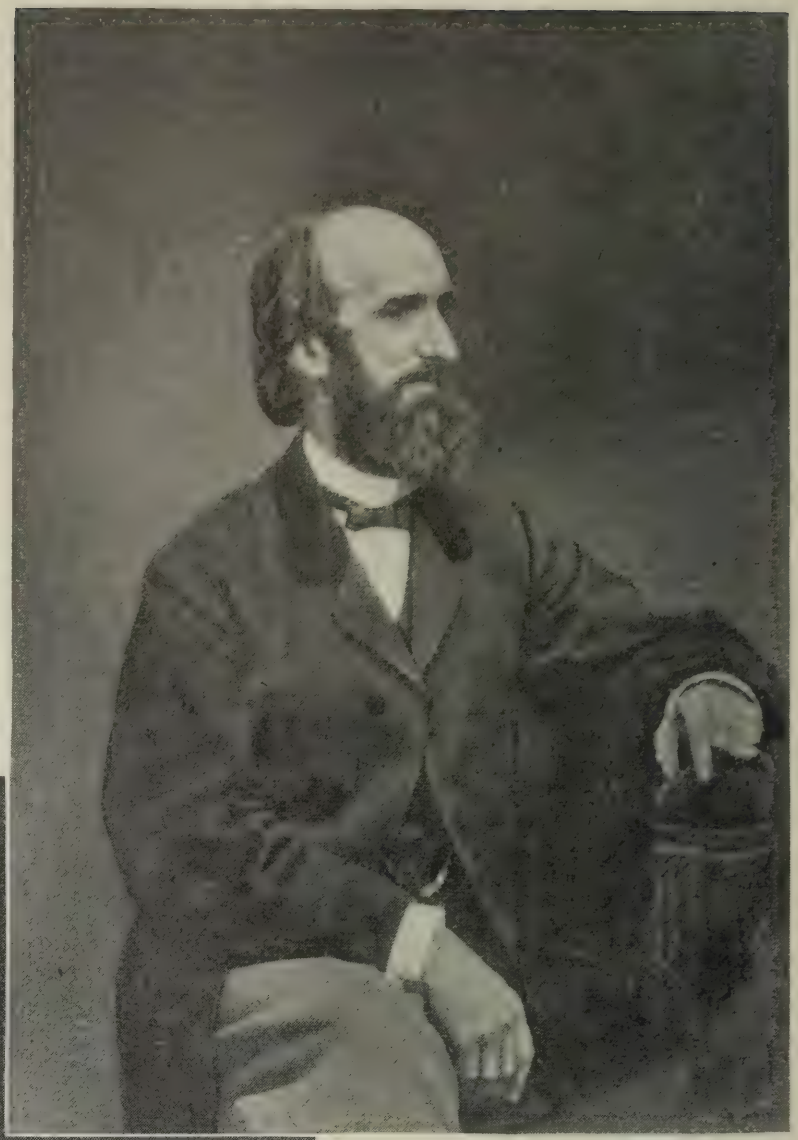
Reminiscences of Slavery Times

BY HENRY C. BOWEN

[These and other notes of the "times that tried men's souls" were written by Mr. Bowen about the year 1895, or shortly before his death in 1896. They have never been publisht.—EDITOR.]

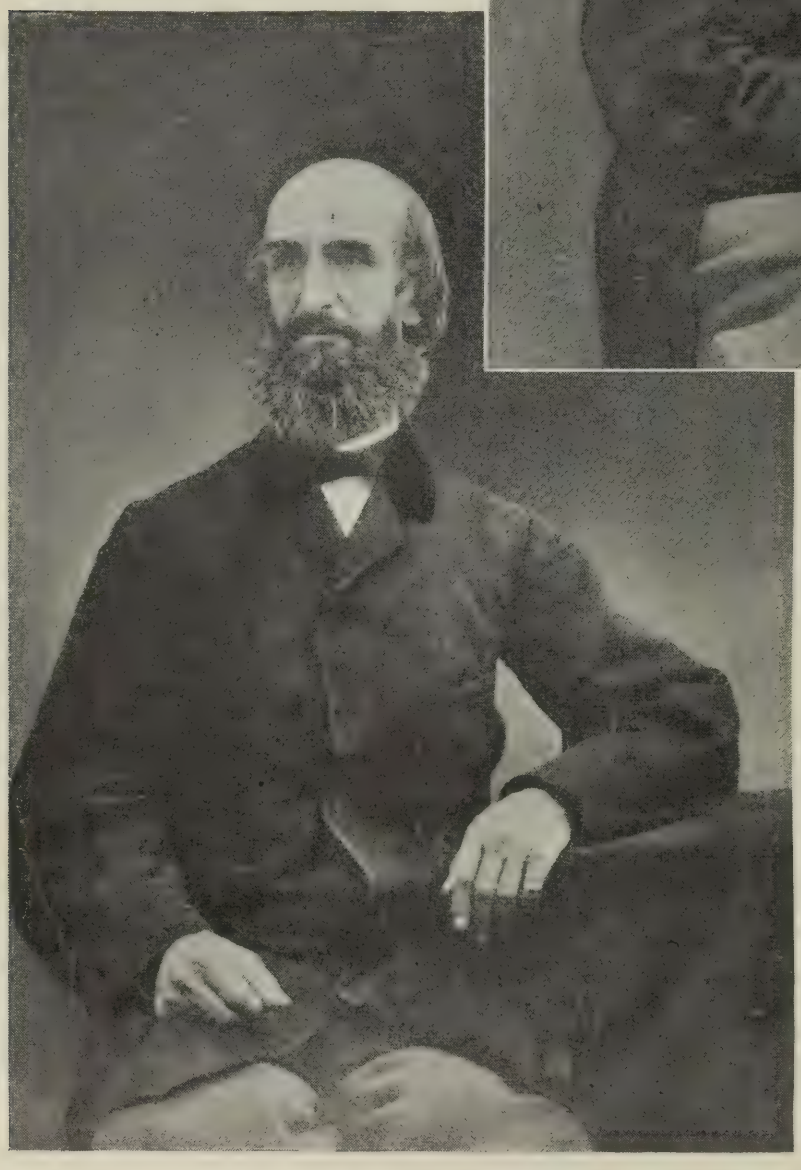
WHEN I was a very small boy there was a very clever colored man in our neighborhood by the name of Cuff Fellows. He was a very good cook and a very handy man indeed about the house; a good farmer and popular with every one in the village. He was frequently in our family; indeed, scarcely a month past when Cuff, as he was called, was not asked to do some work which he seemed to know how to do better than any other person. He could cook a turkey equal to any seen at Delmonico's; he could tend a baby, and if it was cross he could always keep it in a better humor than even the mother could. He could mow in the hayfield or go to the miller's with his grist. He could make a fire, break a colt, milk a cow or wash the kitchen floor as well as an expert. One day when his work was over he said, "Henry, I want to tell you something." He always had a story to tell and they generally related to himself. He said, "Did you ever know that I like to have been carried off by a slave driver? I will tell you about it." I saw at once that he was very much excited, for the very thought of what he had past thru seemed to stir him up greatly.

"In them days when I was a young man there was some slavery about here, and this yere man (meaning himself) was a mighty smart boy, and them slave ketchers wanted me. I heard dem tell about it, and I was allers afraid of bein' carried off some day. One day I was in the field cuttin' hay, and a gentleman drove up to the fence with a handsome horse hitched to a very handsome chaise. He stopped, took out a big whip which had a big handle to it and marched into the field where I was workin'. I look at him and I was feared that he was arter me."



Cuff was known by all his friends as having the best set of double teeth, for they went all 'round his mouth, of any man in the neighborhood. He used to show them whenever he grinned, and that set of double teeth would almost scare the bravest soldier. He made up his mind that if that fellow undertook to catch him he should know more about those teeth than any other fellow he ever saw. The man came slowly along the field until he came very near Cuff. He said good morning to Cuff, following it by the words, "I want you." "What?" said Cuff. "I want you," he said. At that he raised his whip, taking hold of the little end of it, and struck Cuff over the head. Cuff was frightened and greatly enraged, and he flew at him like a tiger, put his arms 'round him, and kept him up to him with all his might—for he was a very strong man—and began to bite him in the arms, on the chest, on his face, his hands and everywhere he could take hold of him. He bit him here and bit him there, and soon the blood began to run and the slave driver began to realize that his life was in danger, and that he had gotten hold of the wrong boy. He screamed and begged until Cuff made him promise, before he let him go, that he would not trouble him any further. And Cuff, after two or three more good bites, said, "Now you go, and if you attempt to ketch me again, I will bite your head off."

This is a true story, which was confirmed by some old people I knew at the time. At that time, when the story was told me, Cuff was about seventy years old, and I was a boy of ten, which dates



the occurrence back nearly one hundred years.

The Legislature of Connecticut did a good act—which the people of the town of Canterbury ought to have done long ago—in granting an annuity of $400 to Mrs. Prudence Crandall Philleo, of Kansas.

Miss Crandall, in the judgment of a majority of the "good, refined and cultured people" there, had no right to open her own private dwelling and devote her valuable time to the instruction of respectable colored girls; that would never do, they declared; such business was outrageous and must be

HENRY C. BOWEN.
From a photograph taken in 1860. Aged 46.

HENRY C. BOWEN.
From a photograph taken in 1865. Aged 51.

stopped. After several consultations with an able resident lawyer, Chauncey F. Cleveland, afterward Governor, it was at last decided "to make it hot" for Miss Crandall if she did not "give up teaching niggers" to read, write and cipher and study the Bible. They gave her notice in more forcible than polite language that she must "go somewhere else" if she wanted to engage in "such business." Miss Crandall decided that she had the right to do good, that her house was her own castle, and that she also had a right, so long as she obeyed the laws, to use it as she pleased. Then followed the invention

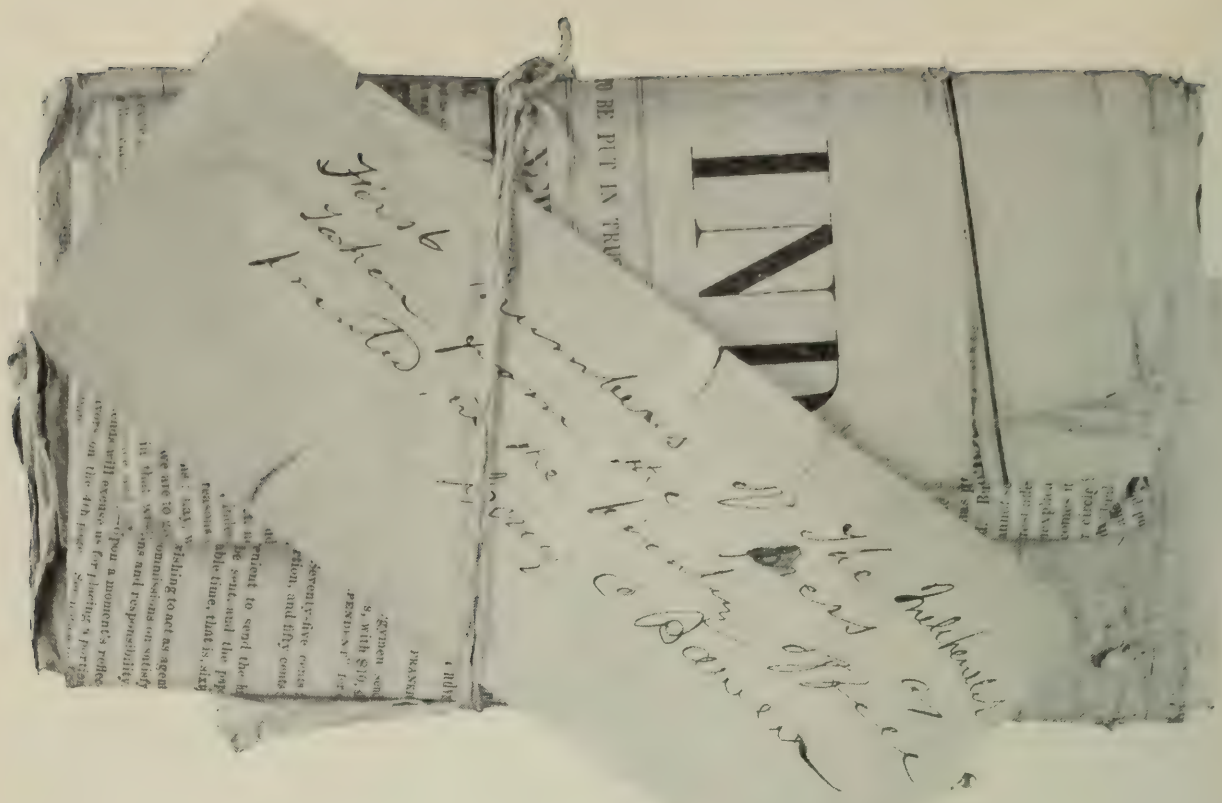
of the "only original" boycotting process of meeting a great difficulty. Indeed, the people of the town of Canterbury have the honor, I believe, of successfully accomplishing their wishes, in the practical adoption of this new boycotting method of meeting a very grave "social evil." It worked in this case like a charm. Miss Crandall for a time successfully stood her ground and nobly held the fort of her habitation. At length the boycotters entered her dwelling, destroyed her furniture and wrecked the whole premises, not even a Webster's spelling book or a Daboll's arithmetic being left to tell the awful tale that it was a schoolhouse.

I ought to know about it, for I then lived only a few miles distant from the scene of action, and got the news fast enough and full enough—thru Uncle Sam's weekly mail carrier—to make me then into a first-class abolitionist—the younger side of twenty.

Miss Crandall, in the destruction of her household and school furniture, was of course left in a very sorry condition. But the original boycotters at Canterbury did not stop there. They went to the village grocer and commanded him no longer to sell his molasses, ginger and saleratus to Prudence Crandall. They told the butcher the same, and the poor man that worked in the garden the same, and "the men at the mill below Canterbury Hill" the same. They scared the doctor and made him believe that if he sold his calomel and jalap to Prudence Crandall he would have no use for the same elsewhere. Even the good old minister of the town trembled with agitation. He had a small salary—only $400—and if he "took sides" with Miss Crandall "and her niggers" he very likely would have to go for his bread and butter to another parish. In her extremity Miss Crandall wrote to Mr. Arthur Tappan, of New York, who had previously given substantial evidence of his deep interest in her work. Mr. Tappan sent her money and encouraging words of sympathy, and promised to continue to help her so long as she needed it.

But the poor woman was left apparently without a friend in the town and was really in danger of starvation, if not of her life. Her pupils were compelled to leave her, and in that forlorn condition she was at length compelled to do as she was told, to "clear out of Canterbury" for life, liberty and the pursuit of happiness into some more congenial country.

On hearing thru a friend of the action of the State of Connecticut, Mrs. Prudence Crandall Philleo wrote in reply, giving facts about her persecution in Canterbury, which are enough to shame every citizen of that town and even of the whole commonwealth:



"What an amount of obligation I am under to the press generally, and above all to those noble, progressive persons who got up the petition at the first to be presented to their State Legislature in my behalf. I wish to express my gratitude and thankfulness to that worthy body for their appropriation, with which I am more than satisfied. In 1833, when the law was past by which my prospects in life were destroyed, it was celebrated by ringing the bell hung in the steeple of the church, into which we were not allowed to enter, and by firing a cannon thirteen times, placed upon an eminence a few rods from my door; and today, when your telegram arrived, the only jubilant display I wished to make was to have a private nook where my tears of joy and gratitude could flow, unobserved for the change that has wrought in the views and feelings of the mass of people."

Fringed Gentian

BY EMILY DICKINSON

From The Independent, February 5, 1891.

God made a little gentian;
It tried to be a rose
And failed—and all the summer laughed
But just before the snows
There came a purple creature
That ravished all the hill;
And summer hid her forehead,
And mockery was still.
The frosts were her condition;
The Tyrian would not come,
Until the north evoked it.
Creator! Shall I bloom?

THE FIRST INDEPENDENT.

Photograph of the first impression of the first issue of THE INDEPENDENT taken from the press by Mr. Henry C. Bowen, and now in the possession of THE INDEPENDENT. Mr. Bowen's memorandum appears in the reproduction.

The Editors to the Public

[The following was the leading editorial in the first issue of THE INDEPENDENT, December 7, 1848, and was signed by the three editors, Leonard Bacon, Joseph P. Thompson and Richard S. Storrs, Jr.—EDITOR.]

IN obedience to a law which usage has imposed upon the periodical press in this country, we subscribe our names as the associated editors of this Journal. The occasion requires us to explain to our friends and to the public the considerations which have induced us to commit ourselves to the enterprise, and the measure of responsibility which we assume in regard to it.

1. The undertaking does not originate with us. It is known that for several years past there has been an increasing demand for a religious newspaper, which, proceeding from the City of New York, shall be addressed to a class of readers somewhat different from those whose tastes and wants control the character of the journals already established here. The Methodists, the Baptists, the Dutch Reformed, the Protestant Episcopalians, and the Episcopalians of the Oxford school, have their several religious newspapers, adapted professedly to their wants. The Roman Catholics, the Unitarians, the Universalists, and we know not how many other sects, have their weekly publications of opinions and intelligence. Besides all these, there are two journals, of great circulation and distinguished ability, which, without being ostensibly connected with any ecclesiastical power, or with any committee of a religious sect or party are Presbyterian in their sympathies and in the ecclesiastical relations of their editors. Of these two one is completing its twenty-sixth year, and the other is only seven years younger. Since these journals began to be published, not only has the reading religious population of the city, and of the whole country, been greatly increased, but, within a few years past especially, there has been growing up a class of readers whose demand is for a Journal differing in character from those that now occupy the field. There is growing up in this metropolis, in this State, in the great and

free Northwest a body of churches whose organization is founded on the great New England principle of Congregational Independence. Multitudes of intelligent Christian men, who are not of these churches, are in sympathy with them, and are looking for some popular exposition of current ecclesiastical and religious questions, and of all the progress of our times, as seen from the position of that great principle. Measures have been proposed, again and again, for the establishment of a Congregational newspaper, to be published in this City. Some of us, tho urged to bear a part, have doubted, hitherto, the expediency of such an undertaking. But the demand has increased in its distinctness and urgency; and the duty of attempting to meet the demand has been presented to us in such a light, that we have consented to assume the management of the enterprise in the editorial department.

In the circumstances in which the editorial control was offered to us it seems to us that the providence of God was clearly calling us to a great work. We enter upon the undertaking in a full confidence that the resources, both of capital, and of energy and skill, in the way of business, which are pledged to the support of the new Journal will be fully adequate.

2. This Journal is not established as the organ of any ecclesiastical body, or of any sect or party—new school or old school. We are Congregationalists; but we do not undertake to be the representatives of Congregationalism. We have our own opinions on questions in theology; but we are not the champions of any man's "scheme" or metaphysical system or of the views set forth from any chair of theology. THE INDEPENDENT, then, is not to be held responsible for any opinions except its own, in matters of church, polity or theological doctrine. The doctors, Bushnell, Tyler, Taylor and Park, and the rest; the schools and seminaries; Andover, Yale, Bangor, East Windsor, Hudson, Oberlin, and as many more as there are, may agree or disagree, as they please. We are not responsible for any of them; nor is any one of them responsible for us.

3. It is not quite unnecessary, in such times as these, to add, that this Journal is not in the interest of any political party. On political questions as they involve great moral principles or affect great moral interests, we expect to utter our own opinions plainly; but no political party has any right or interest in our columns. The great question now before the people of the United States—the question by the side of which all other political questions now current sink into insignificance—is the question of the extension and perpetuation of Slavery by the sovereign authority of the Union. In the discussion of this question, we hope to bear our part. No aspect or bearing of it is too secular to be considered in a religious newspaper. We take our stand for *free soil* wherever Congress has power to legislate. Yet our Journal is not committed to the "Free-Soil party." We have to do with principles, not with candidates, nor with parties as represented by the candidates. In the same way other questions of national and State legislation will receive attention. The question of war or peace, so often as it arises, is a moral question. The question of cheap postage, and of an entire reformation of the post-office system, so as to secure the greatest amount of public accommodation at the least expense, is a question involving great moral interests. The question of laws to restrain and control, or altogether to suppress the traffic in intoxicating drinks; the question of laws to punish crimes against chastity, and generally all questions about crimes and punishments, are moral questions, and are to be discussed accordingly, without reference to party interests or party pledges.

4. Our arrangements for assistance in the editorial department, and for stated foreign correspondence, are of the most satisfactory character. When the responsibility of editing this paper was first proposed to us, we saw that the labor of selecting, compiling and condensing the record of current events, would be inconsistent with our duty as pastors; nor could we believe that our united contributions to the editorial columns would compensate for deficiencies in those selections, abridgments, summaries, and reports, which are the staple of a newspaper, and on which its value so much demands. But we are relieved in that re-

spect. Our relation to the Journal is not indeed to be merely nominal or that of superintendence only. We are the sole and responsible editors; and the making-up of every successive sheet will be under the personal inspection of one of us. Yet we are not to work unaided. Our assistant editor is one whose eminent knowledge of public affairs, both ecclesiastical and secular, and whose ability and experience in this particular line of intellectual activity, admit of no question; and we have full confidence that his powers will be earnestly and cheerfully employed to make THE INDEPENDENT what we wish to have it. Arrangements have also been made which secure for us the stated communications of several foreign correspondents, who are well acquainted, not only with their own countries, but with ours.

5. Our hope is to make such a newspaper as every intelligent and large-hearted pastor will welcome to his own family and to the families of his flock. We hope that our labor as editors of a religious journal—a labor which requires us to regard with habitual attention all the great interests of the Church and of humanity—will better qualify us for our work as pastors, whether in the pulpit, or from house to house. At the same time, we also hope that our relation as pastors, constantly employed in the pastoral work, and holding constant intercourse with other pastors and with the churches, will enable us, in some respects, to make a better newspaper than if we had retired from the pastoral office, or had never known its duties and its sympathies. We hope to pay our weekly visits in this way to thousands of families, spreading before them the changing map of the Church and of the world; teaching, exhorting, warning all; enriching each reader's mind with facts and principles; touching the springs of Christian affection and devotion; and aiding and cheering all the while the labor of the living ministry in a thousand pulpits.

LEONARD BACON,
JOS. P. THOMPSON,
R. S. STORRS, JR.

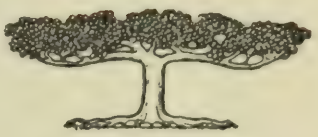
To Russia

BY JOAQUIN MILLER

From THE INDEPENDENT of March 23, 1882.

"Where wast thou when I laid the foundations of the earth?"

WHO tamed thy lawless Tartar blood?
What David bearded in her den
The Russian bear in ages when
You strode your black unbridled steed,
A skin-clad savage of the steeps?
Why, one who now sits low and weeps,
Why, one who now wails out to you—
The Jew, the homeless, hated Jew.



Who girt the thews of your young prime?
Why, who but Moses shaped your course
And bound your fierce, divided force
United down the grooves of time?
Your mighty millions, all today
The hated, homeless Jews obey.
Who taught all histories to you?
The Jew, the hated, homeless Jew.

Who taught you tender Bible tales
Of honey lands, of milk and wine,
Of happy, peaceful Palestine,
Of Jordan's holy harvest vales?
Who gave the patient Christ? I say,
Who gave you Christian creed? Yea, yea,
Who gave your very God to you?
The Jew! the Jew! the hated Jew!

A Ballad of Trees and the Master

-BY SIDNEY LANIER

From THE INDEPENDENT of December 23, 1880.

INTO the woods my Master went,
Clean forspent, forspent.
Into the woods my Master came,
Forspent with love and shame.
But the olives they were not blind to Him,
The little gray leaves were kind to Him;
The thorn-tree had a mind to Him
When into the woods He came.

Out of the woods my Master went,
And he was well content.
Out of the woods my Master came,
Content with death and shame.
When Death and Shame would woo Him last,
From under the trees they drew Him last:
'Twas on a tree they slew Him—last
When out of the woods he came.

A Historical Sketch of The Independent

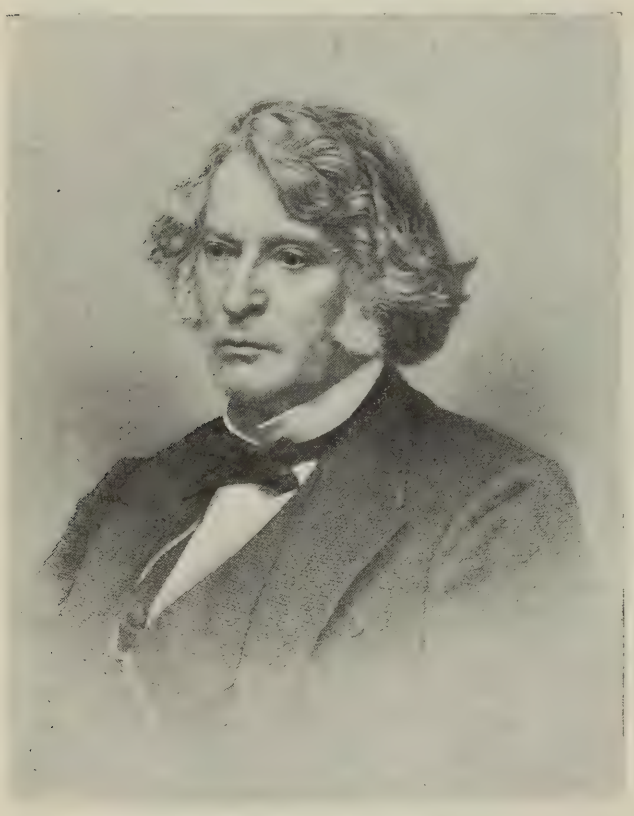
On the Occasion of Its Twenty-first Birthday

[This historical sketch appeared editorially December 20, 1869, and was written by Theodore Tilton.—EDITOR.]

THIS is THE INDEPENDENT'S twenty-first birthday. Hail, happy hour! Rejoice, favored newspaper! Give thanks, jubilant Editor and Publisher. Offer congratulations, kind and generous subscribers! Join in the festival, co-laborers, contributors, writers, friends and fellow-citizens! And long live the Republic! Amen.

If this opening strain be deemed too impassioned for the occasion, let the sober-minded reader recall the time when he himself was twenty-one years of age—how his heart leaped, how his pulse danced, how his eye twinkled—and let him pardon our irrepressible emotions on this gala-day.

It was on the first Thursday of December, 1848, that this Journal first saw the light, and it has striven to abide among "the children of the light" ever since.



Without wishing to prate tediously of these twenty-one years of our history, we will note only a few salient points of progress.

The paper was established to promote two ideas—one religious, the other political—one the Congregational as against the Presbyterian Church polity, the other the freedom of the slave against the tyranny of his master. Its original proprietors were five laymen: Henry C. Bowen, Theodore McNamee, Simeon B. Chittenden, Seth B. Hunt, and Jonathan Hunt. Its original editors were three Congregational clergymen, the Rev. Dr. Leonard Bacon, the Rev. Mr. Richard S. Storrs, Jr., not then a doctor of divinity, and the Rev. Mr. Joseph P. Thompson, then similarly untitled. In their salutatory, they expressed the hope that their editorial labors would contribute to their pulpit efficiency—a result which was soon after signally verified in the case of two of them, for they had no sooner begun to handle the editorial pen dexterously than they suddenly achieved for themselves those honorable doctorates which now shine like half moons at the end of their names. The assistant editor was the Rev. Joshua Leavitt, who, having already

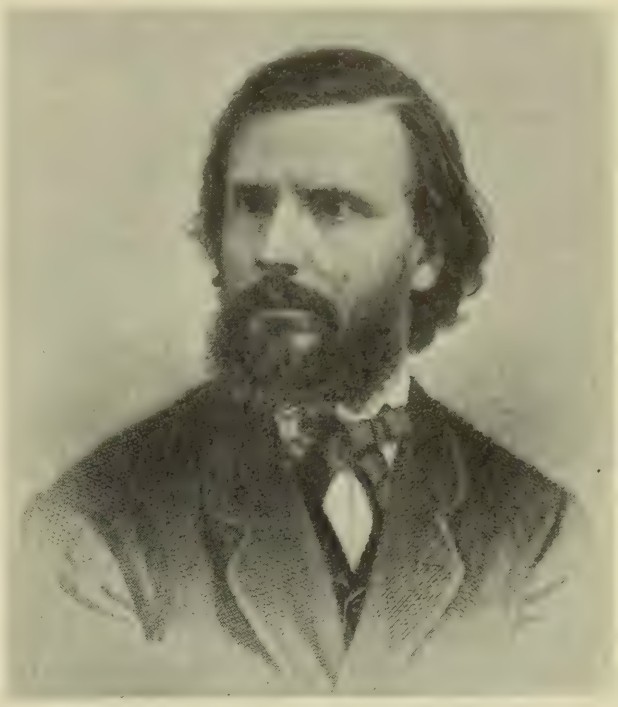
achieved distinction in the editorial profession as the conductor at one time of *The Evangelist,* and subsequently of *The Emancipator,* soon received likewise, as a similar reward of merit, a similar title; nor do we know of any American divine whose honorable double D more admirably harmonizes with a great solidity of judgment and a fine gravity of deportment.

It was at one time proposed to call the new paper THE RELIGIOUS INTELLIGENCER; another suggestion was THE CHRISTIAN TIMES; but its true, foreordained, predestined, and undying title was, is, and ever shall be, THE INDEPENDENT.

The salutatory to which we have already referred was entitled, "The Editors to the Public," signed in autograph by its three authors, and was an address which future historians of the Church will consider remarkable in that it apparently contained no reference to and no recognition of the Evangelical type of the Christian religion. It might have been

CHARLES SUMNER.
The most distinguished anti-slavery orator of the Senate. This photograph was from a steel engraving used as a premium by THE INDEPENDENT to new subscribers.

written by Theodore Parker, who was then at the hight of his heresy in Boston. The only allusion it made to Christ was an incidental use of the word Christian. We are not saying that this prospectus ought to have been less broad and catholic. Far from it! We look back upon it with pride, as a beautiful evidence of the religious liberality of our editorial predecessors. But it is fair to inform the world that the present editor has never been able wholly to remove from THE INDEPENDENT that imputation of theological laxity which its three Christian fathers thus set upon it like a birthmark on its natal day.



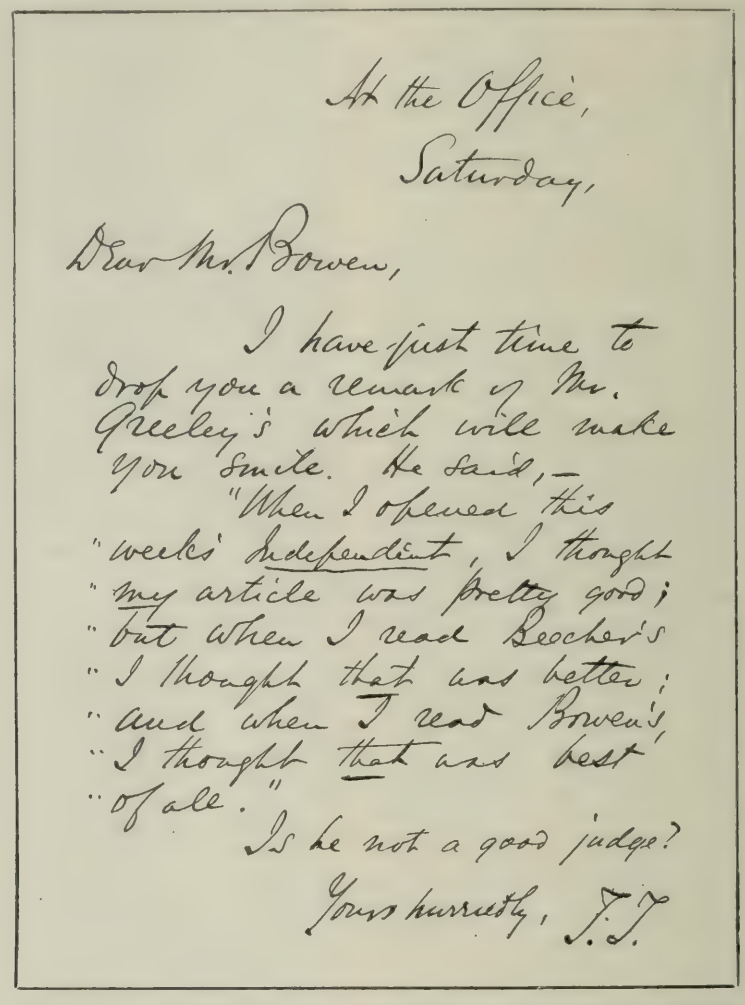
There is no picture in our memory's gallery more vivid than our remembrance of the old editorial office at No. 22 Beekman Street, into which every day, at 2 o'clock, stepped the brisk, smiling, and industrious Dr. Thompson; into which, about once a fortnight, came the venerable head of Dr. Bacon; and into which, about twice a year, moved the eloquent step of Dr. Storrs—

> "Whose very foot had music in't,
> As he came up the stair."

It used to be thought in the office that Dr. Storrs would have "put in an appearance" much oftener than he did, except for his fear of meeting the printers. His weekly "proof" was usually so cut and slashed into fastidious alterations that it took longer for the compositors to "revise" it than originally to "set it up." Several ingenious plans for waylaying him in the composing room were frustrated by his precautionary absence from the scene of danger. Dr. Thompson rarely and Dr. Bacon never made an alteration. The exact measure of their fame among our readers we cannot gauge, but among our printers their memory is without a stain of reproach to this day.

At the end of thirteen years, in December, 1861, this triumvirate of Congregational divines retired from their jointly occupied editorial chair, or rather settee, leaving the ample vacancy to be amply filled by the well-developed, but not uncomfortable proportions of the Rev. Henry Ward Beecher. As we had been only a subaltern in the original staff of editors, we never knew exactly the reason why our three chiefs retired, until Mr. Beecher in his inaugural explained that they withdrew "the better to fulfill delayed and cherished projects of

Christian scholarship and labor"—works on which, we presume, they have been since industriously engaged, and which will undoubtedly be given to the world when the occasion (like the learning) shall be fully ripe. Mr. Beecher, who, when THE INDEPENDENT was originated, had just ascended the steps of his new pulpit in Brooklyn, had already become, at the time of his accession to the editorial chair, the inferior of no American citizen in popularity and fame. Great interest was therefore felt as to the religious, and still greater as to the political, policy of his editorship. He had never been so wholly a Congregationalist but that he was always partly a Presbyterian. It follows as an inevitable consequence that he would not attempt to keep the paper unduly close to those straight paths of denominational demarcation which Dr. Bacon had mapped out. Having come from the West, with a Presbyterian flavor clinging like a spice to his garments, it was not in his generous blood to wage even a friendly warfare against the Presbyterian form of Church government. Accordingly, in his very first utterance, he put the Congregational and Presbyterian denominations side by side and expressed (indirectly, but sufficiently) his equal sympathy with both. By natural gravitation, THE INDEPENDENT became, under his leadership, almost as much a sympathetic co-worker with Presbyterians as it had formerly been their polemic antagonist. But, as may be readily imagined from what we have already said of the original prospectus of 1848, Mr. Beecher did not wholly escape that same theological suspicion which from the beginning had been inadvertently drawn like a mild fog about the establishment. It is just to him, however, to say that through this thin haze he was always plainly visible as a "burning and shining light." Gay, brave and cheery were the days of our service under that prince of captains. He allowed us all to think and work as we pleased; and we thought and worked the better for that liberty. He never found fault—indeed, he rarely made a suggestion. On every Wednesday morning (which was the day of going to press), he would rise at 6 o'clock, eat a Spanish mackerel, drink a cup of coffee, saunter into the sanctum, hunt for a quill, whittle it a while in meditation, and then with blots, spatters, scratches and dashes would burst forth into a double-leaded editorial article. He usually finished his manuscript about 11 o'clock, and while



FRANK B. CARPENTER.

Mr. Carpenter painted the picture (now in the Capitol at Washington) of "The First Reading of the Emancipation Proclamation," shown elsewhere in this issue. This portrait is from a steel engraving by A. H. Ritchie, who also engraved the Emancipation Proclamation. Both Mr. Carpenter and Mr. Ritchie were warm friends of THE INDEPENDENT.

the compositors were putting it in type (a task which sometimes made them think forgivingly of Dr. Storrs), he generally invited us to a walk up Broadway, with a view to rummage among bookshelves, or furniture stores, or museums of curiosities, or artists' studios, or picture galleries. About 1 or 2 o'clock we would be back again at the office; the proof would be brought in by the foreman; the brilliant author would throw himself down on a lounge, and, shutting his eyes (as he always does while music is playing), would say to his lieutenant, "Read it to me"; and so, with pencil in hand to mark his corrections, we used to play the scribe to this "St. Gregory dictating his homilies." We make this statement to avoid a possible perplexity to Mr. Beecher's future biographers, who might otherwise be surprised at seeing so many of his most eloquent passages in our own handwriting. In course of time he went

to England—to wrestle with wild beasts at Liverpool. This was in the summer of 1863, during which time (and it was a fearful time in our nation's history) the responsibility of the chief editorship fell on the aforesaid humble reader of a great man's proofs. When Mr. Beecher returned in the fall, laden with unusual honors, the crown of all men's good will around his brow, he renewed for a few weeks his customary Wednesday-morning program of mackerel and coffee and

Saturday,

Dear Mr. Bowen,

I have just time to drop you a remark of Mr. Greeley's which will make you smile. He said,—
"When I opened this
"week's Independent, I thought
"my article was pretty good;
"but when I read Beecher's
"I thought that was better;
"and when I read Bowen's,
"I thought that was best
"of all."
Is he not a good judge?

Yours hurriedly, T. T.

FACSIMILE OF AN OLD LETTER FROM THEODORE TILTON TO HENRY C. BOWEN. IN THE POSSESSION OF THE INDEPENDENT.
Horace Greeley was then a frequent contributor of THE INDEPENDENT.

a quill pen; but we soon found ourselves left in lonely solitude to eat the first, to drink the second, and to ply the third, without the society of our great companion, who, in addition to his many other virtues, had always a constitutional indisposition to superfluous hard work. At length, on the 1st of January, 1863—Mr. Lincoln's immortal day—the negroes were emancipated from their bondage and Mr. Beecher was emancipated from his editorship. The first of these events was celebrated by THE INDEPENDENT with joy and rejoicing; the other was not even so much as whispered by its columns to the passing breeze.

THE INDEPENDENT'S proprietors were sagacious men; they did not know whether or not the third mate could be trusted to steer the ship. But they were also generous men, so they invited him to a fair trial at the helm. "Let another praise thee," says Solomon, "and not thine own lips." We have nothing to say in boastfulness of our own editorial management, except on one proud point, and that is, whatever the paper may have lost with scope, variety and richness of contents; whatever decay of intellectual vigor may have been noticed year by year in its editorial columns, we have at least done our best endeavor to remedy any early remissness of its orthodoxy, and to hold up, like a flying banner, the pristine standard of "The faith once delivered to the saints."

Our chief interest in the early history of THE INDEPENDENT, as we look back

upon its time-tinted pages and yellow-stained files, is the aggressive warfare which it never ceased to wage during what Mr. Seward fitly called "the irrepressible conflict." At the time when it was started the last sands of President Polk's administration were running out of the glass. General Taylor had just been elected, and was waiting to take his seat. The Liberty party, with Martin Van Buren blowing its bugle, had made an unheeded (not unheard of) appeal to the conscience of the nation. Webster, Clay and Calhoun—"for there were giants in those days"—were fiercely wrestling with American liberty in the Senate chamber, and had not yet been overthrown by that conqueror of great men. Hale, Chase and Giddings were in Congress, but Sumner and Wade had not yet appeared. Garrison and Phillips were walking up and down among a "wicked and adulterous generation," that followed in a mob at their heels. No sooner had the new paper been put in running order; no sooner had its proprietors become soberly familiar with its weekly bill of expenses; no sooner had they begun to look each other in the face, saying, "How much longer shall we be able to stand all this?" than there occurred a crisis in the nation which well nigh proved a crisis in the paper. President Taylor died, leaving Millard Fillmore to play the antetype of Andrew Johnson. The Fugitive Slave Law was signed by a stupendous renegade who has recently augmented his original crime by vindicating it to a later generation. The whole nation rocked like a ship in a storm. THE INDEPENDENT, taking counsel neither with flesh nor blood, openly proclaimed that "The Fugitive Slave Law was no law for a Christian man." The dissolution of the firm of Hunt, Merriam & Co., and the absence of both the Hunts from New York, led to the withdrawal of these excellent men from the proprietorship, leaving the whole expensive burden to be borne by Bowen & McNamee—a firm who, in reply to the taunts which they daily received from Northern newspapers and from Southern customers, issued their memorable manifesto, "We sell our goods, not our principles." This double defiance of public opinion, first by the editors and next by the proprietors of THE INDEPENDENT, was a worthier service to the cause of true religion (as *we* look at religion) than had been rendered by all the voluminous disquisitions which the paper had previously printed on sectarian issues and denominational strifes. With unmingled admiration we look back upon that golden period in the history of the journal—a period before our own participation in its career—one of which we may therefore speak clearly without the reproach of self-laudation. Had it not been for the moral courage and the pecuniary liberality of its then remaining proprietors, who were determined that the paper should conquer a hearing, even if the struggle should cost every cent which the silk house could earn, THE INDEPENDENT must have gone down before the storm. By a singular providence, the paper which thus owed its continuance solely to the great fortune with which Mr. Bowen was able to buoy it up, was afterward, when that fortune suddenly failed its possessor, able to repay to him from its own treasury an income equal to the one he had lost. "He that watereth shall be watered also himself."

There are three special features of this journal in which it differs from its contemporaries of the press.

One is the variety of opinions to which our columns give free utterance. Our pages are a whole chorus of voices. Such a paper as *The Nation,* for instance, contains nothing but one man's opinions; all its articles, by whomsoever contributed, must be trimmed and shaped into harmony with its editor's views. To this rule the only exception is an occasional letter of explanation or correction which he admits from some correspondent. THE INDEPENDENT is conducted on a totally different plan—a plan which has been a cherished and favorite model of journalism with the present editor from the beginning of his editorial life. This plan is to make the paper reflect every week a whole parliament of opinions. Take any copy of THE INDEPENDENT, and its editor often finds in it more utterances with which he disagrees than with which he agrees. No contributor is asked to pay the least deference to our own views or prejudices; but, on the contrary, every contributor is informed, over and

over again, that no lock is to be put upon the gate of his lips. It is the unfettered, unbiased utterance of the individual soul, whether this utterance be in or out of harmony with any other person's convictions, even tho that person be the conductor of a *Saturday Review* or a *London Quarterly*. It is only this free and uninfluenced utterance that has any genuine value in newspaper literature. We hardly ever read the English magazines without wondering how much each article has been necessarily hammered and beaten by the author so as to fit the mold of the editor's creed or of the proprietor's prospectus. No such flattening, spirit-quenching rule prevails in the management of THE INDEPENDENT. For instance, there is no public question upon which we have a more positive opinion than upon the question of woman's suffrage; but we feel at the same time that we render to the public at large a signal service by printing Prof. Taylor Lewis's masterly presentation of the opposite view. The cause of truth gains, not loses, by a wide liberty of debate. We are glad that many other journals, particularly of the religious press, are, in this respect, now copying an example which THE INDEPENDENT was the earliest to set, and is still the oftenest to practise.

Another peculiarity of this journal to which we allude is one which its readers must long ago have noticed—*namely, the equal number of men and women who write for its columns.* Literature no longer rightfully belongs to man alone; woman claims a just and equal share in it. In conducting THE INDEPENDENT we recognize this claim. The contributions of women are oftentimes the brightest gems that glitter on these pages. *The Tribune,* with great advantage to itself, has added women to its reportorial and also to its editorial staff. Let us claim for THE INDEPENDENT (since we must boast a little on this boastful anniversary) the proud privilege of making this practice a signal, perpetual and intentional feature of our editorial policy. Sooner or later the whole press, both of America and of England, will adopt this wholesome fashion.

The third feature, at which we have hinted, is the absolute independence of the editorial department. THE INDEPENDENT'S publisher is its absolute owner; no other person has a penny's worth of stock in the establishment. But, by an understanding which has never once been forgotten, its publisher has not interfered with the editor's columns. Not once in the whole course of THE INDEPENDENT'S history has its publisher ever sought to dictate its editorial policy. Indeed, he never knows in advance what this policy is to be. He sometimes likes it, and sometimes don't like it, but never grumbles. It is only on such a basis as this that the proper independence of the press can ever be maintained. And we would be happy to know the name of any other publisher who, being at the same time the sole proprietor of his journal, has never once attempted to control the absolute freedom of its editorial course.

We need hardly restate here the religious or the political attitude of THE INDEPENDENT. Nevertheless, to avoid misconstruction on either of these points, let us say, in reference to the first, that this journal is not the organ of any ecclesiastical body or of any sect or party, old school or new school. We are Congregationalists; but we do not undertake to be the representatives of Congregationalism. We have our own opinions on questions of theology, but we are not the champions of any man's scheme or metaphysical system, or of the views set forth from any chair in theology. THE INDEPENDENT is not to be held responsible for any opinions but its own in matters of church polity or of the ecclesiastical doctrine. The doctors—Bushnell, Tyler, Taylor, Park and the rest; the schools and seminaries—Andover, Yale, Bangor, East Windsor, and Hudson, and Oberlin, and as many more as there are—may agree or disagree. We are responsible for none of them, nor is any of them responsible for us. In politics we hold to the comprehensive creed of the equal civil and political rights of all American citizens, without distinction of color or sex. From its origin till now, THE INDEPENDENT has never grown cold in its love of liberty, and never slacked its zeal in the service of the opprest. It has never had an editor who could not say, with Governor Andrew, "I know not what record of sin awaits me in the other world; but this I know, that I have never been guilty of

despising any man because he was poor, because he was ignorant, or because he was black." Selden's ancient motto shall ever be ours, "Before all else, liberty!" We make common cause with struggling negroes, with disfranchised women, with hunted Indians and with opprest Chinamen. In a word, both in religion and in politics, we believe in the universal and all-comprehensive law enacted by Him who spake as never man spake when He gave to individuals and nations, to churches and states, this authoritative rule of faith and practice: "Whatsoever ye would that men should do unto you, do ye even so unto them."

It is with these sentiments (if we know our heart of hearts) that we find ourselves celebrating our twenty-first birthday. This journal, after a terrible struggle, in which it gasped for vital breath, has at last achieved one of the most brilliant successes in the history of journalism. We do not propose to rest on our laurels. "Tomorrow," sang the poet, "to fresh woods and pastures new." During the coming year we hope to make this journal so bright that it shall eclipse the past. It has taken twenty-one years to establish THE INDEPENDENT on the granite and adamant of its present foundation. Hereafter, with no further thought of laying a foundation, we shall have nothing to do but to build the stately superstructure. The time for counting the cost is past. It is our good fortune to work with a publisher whom no expense frightens. "Spend money freely," is his injunction, "and fill the paper with the richest reading which money can buy." Lyman Beecher, always eager to preach, used to say that the Sundays did not come round fast enough. In view of the extensive preparations for our next volume we are eager to have the new year begin quickly. We are impatient to show our friends that THE INDEPENDENT of the past has been but a village newspaper in comparison with the richly freighted sheet which we expect to lay before them in the future. So, on this our birthday, we send a happy greeting to all our friends, and add thereto (with a remembered orthodoxy forgotten twenty-one years ago) the apostolic benediction of "Grace, mercy and peace."

The White Moon Wasteth

BY JEAN INGELOW

From THE INDEPENDENT of April 9, 1881.

THE white moon wasteth,
And cold morn hasteth
  Athwart the snow.
The red East burneth,
And the tide turneth,
  And thou must go.

Think not, sad rover,
Their story all over
  Who, come from far,
Once in the ages,
Won goodly wages,
  Led by a star.

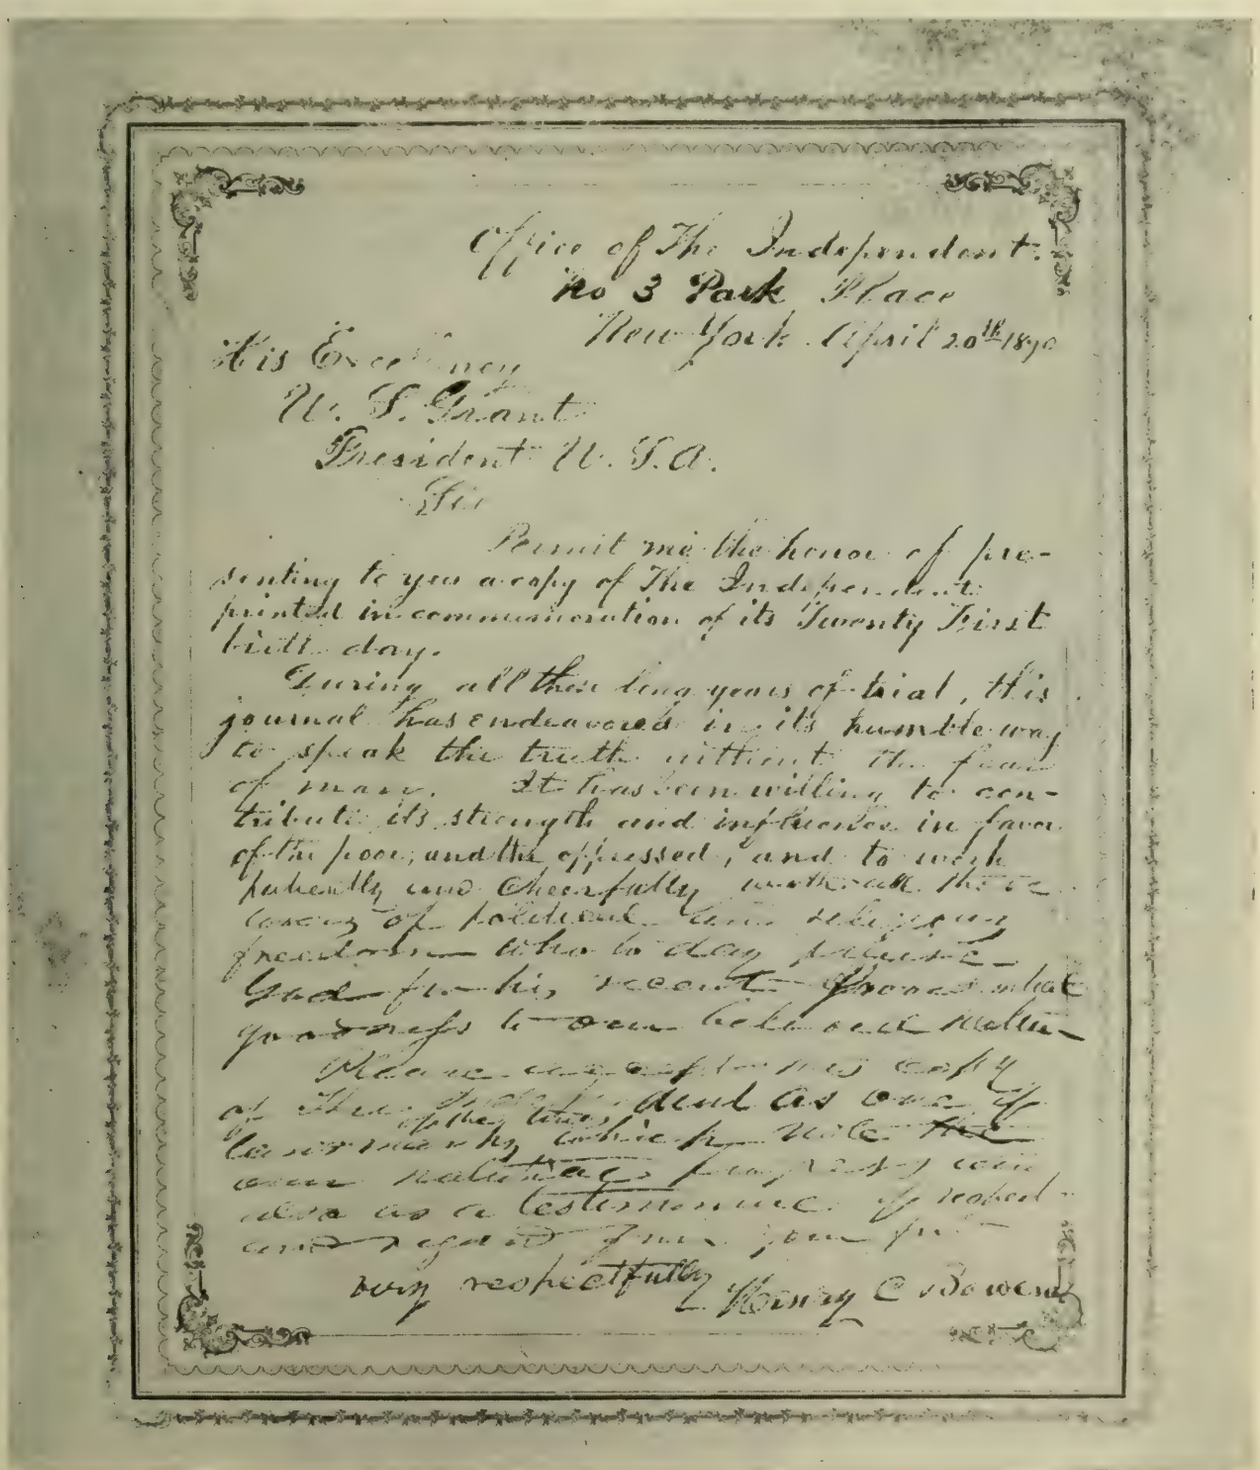
Once, for all duly,
Guidance doth truly
  Shine as of old.
Opens for me and thee
Once opportunity
  Her gates of gold.

Enter! the star is out!
Traverse, not faint nor doubt,
  Earth's antres wild;
Thou shalt find good and rest
As found the Magi blest,
  That Divine Child.

The Publisher to the Public

[This article appeared without name in THE INDEPENDENT on its twenty-first birthday. It was written by Henry C. Bowen.—EDITOR.]

TWENTY-ONE years ago we stood joyfully beside the press which gave birth to the first copy of THE INDEPENDENT—that comely, promising infant which today so auspiciously enters upon its majority. Like its great Master, whom it has attempted to serve, it was despised and rejected of men, because, with no unmeaning words, it set forth the golden precept of doing to others, even to the poor and opprest black race, what we would that men should do to us. It stood and spoke as a religious newspaper, so nearly alone that it was like the voice of one crying in the wilderness. Good men were beginning to feel ashamed that the New York *Tribune,* with Horace Greeley as its chief, was about the only preacher of impartial justice in all the land. And here I feel constrained to say that the Christian Church of this great Christian Nation, and all its patriotic people, owe a debt of gratitude to that noble, humanity-loving preacher which never can be overestimated.



JOSEPH H. RICHARDS,

Publisher of THE INDEPENDENT in the fifties and sixties. He was one of the three men who called on Henry C. Bowen to write to Lincoln to ask him to give his famous Cooper Union address in New York, which was such a powerful factor in making him President of the United States.

THE INDEPENDENT in all its earlier years, like every promising child, needed constant nursing and pecuniary support. Its editors were poorly paid, and the venerable and beloved Dr. Joshua Leavitt, then its office editor—recommended and urged upon us by the late David Hale, of the *Journal of Commerce,* as the ablest man in the country for that important position—was entirely supported the first year by outside contributions. Its first publisher, the late Seth W. Benedict, received a salary of only $300 per annum. The total rent paid for publishing office and editorial rooms was only $500. A few writers and contributors only were paid, and in such cases the amount seldom exceeded $5 an article, while the usual fee for the *best talent* was only $3 a column. The price of type-setting and other labor was not more than one-third to one-half the present rates. And yet, with all these small expenses, and the utmost economy in every quarter, the paper steadily ran into debt, until its proprietors, at the end of a half-score of years, found the concern minus over $40,000. It was *deficient* in this large sum after using up every dollar of its advance subscriptions (not less than $40,000 more) as fast as received. Its real debt was, therefore, over $80,000. Its proprietors, many times, were nearly discouraged at the constant calls for money. Changes in business, removals, and other providential causes unlooked for at the commence-

ment of the enterprise reduced its proprietorship from time to time from five, its original number, to one, its present owner. And here it should be stated, as an interesting item in its history, that within a period of less than ten years THE INDEPENDENT, the entire concern, was offered to several parties in New York for a mere pittance—less than its present monthly receipts; but no one could be found who would dare assume all its liabilities and agree to furnish the paper a whole year to all who had paid for it in advance. To promise to do so much, without a dollar in the treasury, was enough to scare anybody. At length, however, a responsible party was found; but he soon became frightened and withdrew. Finally a man of extraordinary courage was obtained, who had faith in its present owner, and he consented to risk all he had to keep the concern afloat.

Office of The Independent
No 3 Park Place
New York April 20th 1870

His Excellency
U. S. Grant
President U. S. A.
Sir

Permit me the honor of presenting to you a copy of The Independent printed in commemoration of its Twenty First birth day.

During all these long years of trial, this journal has endeavored in its humble way to speak the truth without the fear of man. It has been willing to contribute its strength and influence in favor of the poor, and the oppressed, and to work faithfully and cheerfully with all those [illegible] who to day [illegible] God for his recent proclamation that [illegible]

[illegible] as one of the [illegible] which [illegible] was [illegible] as a testimonial of regard and [illegible]

Very respectfully
Henry C Bowen

A LETTER TO PRESIDENT GRANT.

A facsimile of a letter of Henry C. Bowen written on parchment to President Grant on the twenty-first birthday of THE INDEPENDENT.

Without that special and providential help we fear THE INDEPENDENT could not have survived.

But we will no longer dwell upon the past, except with a few brief words, to do justice to its present editor, Theodore Tilton. He came into the editorial department of the paper at the earnest solicitation of the late Daniel Burgess. In the judgment of all the editors and proprietors, his services were not then needed, but his friend Burgess persisted until the writer yielded and induced his fellow-proprietors also to yield to a temporary engagement on trial. From the moment he entered the office he commenced to *work*. He was a skilful phonographic reporter, and was glad to go in all directions to furnish the columns of the paper with the latest religious intelligence. He first suggested the engagement of John G. Whittier, then called by a good many ministers and some papers, not a thousand miles off, "the infidel" poet. Today there is not a religious paper in all the country which would not gladly solicit the contributions of this gifted Quaker. Thanks to that good Providence which has spared his life to speak to our thousands of readers in this present sheet. It was Theodore Tilton who first suggested the engagement of Mrs. Stowe, Mrs. Browning, Horace Greeley, Wendell Phillips, and William Lloyd Garrison as regular contributors. When once these writers appeared in the paper, others among our most gifted clergymen and statesmen were sought and obtained, in order to give breadth and symmetry to our columns; and not until Louis Kossuth was added as the brilliant star in our firmament did this new "onward" movement seem to satisfy the ambition of this young editor. Indeed, he never has been satisfied, but has to this day constantly been "pressing forward." We have endeavored to keep even with him in promptly approving his every movement and suggestion to make THE INDEPENDENT a richer and better paper.

One word in regard to contributions. THE INDEPENDENT is the only religious newspaper in this country which can employ the best talent on a large scale. Other papers now and then have a good writer, but our columns are filled *weekly* with the most popular names known, and at a cost which would sink any other similar journal.

The recent determination of THE INDEPENDENT to stand only on unsectarian ground, I need not say, meets with my hearty approval. The time has come, in my judgment, when all Christians, every name and sect, should join hands in true fellowship to do the work of the Master. We have no time or space for denominational quarrels; and, while "we shall contend earnestly for the faith," we shall do so in such a way as to unite, not separate, true believers wherever they may be found.

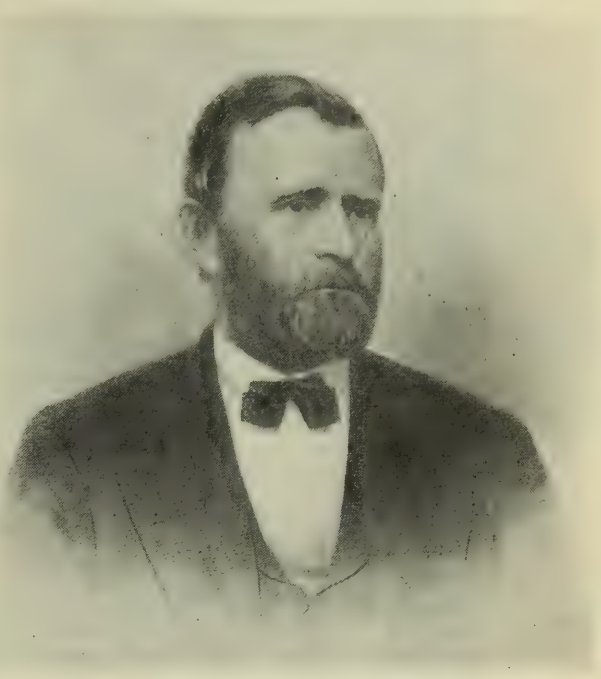
Those, who long ago predicted that THE INDEPENDENT was going over to infidelity have thus far been disappointed. Those few who are now plotting against it (and we know them), who lose no time to prophesy evil concerning us, and who never fail to upbraid good men for daring to write for us, will doubtless continue their "Christian warfare" thus illustrating the spirit which rules them. We shall keep at work, however, making a good, sound, orthodox, religious paper —such an one as in our judgment is needed by the masses of the people.

In order to increase our circulation, we shall not hang around the skirts of ecclesiastical associations, synods, presbyteries, pleading for influence or endorsement. We ask no help as a charity *to us* from any quarter; and we ask no one to subscribe to our paper unless he thinks he can get his money's worth in sound, practical, useful knowledge.

Some months ago, in speaking of our unprecedented growth and prosperity, we said:

Friends, at home and abroad, we feel greatly encouraged but we assure you that we are now maturing plans, without regard to cost, which will still greatly increase the value of THE INDEPENDENT, and insure for it a much higher position than it has ever held in the past and far greater popularity than it now enjoys. The field is wide, and we intend to fill it; the work is great, and we intend to do it to the fullest extent of our strength and ability. Our desire is, as far as in us lies, to obey the heavenly proclamation, "Go ye into all the world and preach the Gospel to every creature."

Today we commence to fulfill the plans then referred to. We have contracted with Messrs. Jessup & Moore, of this city and Philadelphia—the best news paper manufacturers, in our judgment, in America, as well as the most popular and prosperous—for $40,000 worth of white paper, of the quality used this week. That amount will supply us less than four months, but we shall use the same quality or better thru the year. Its cost to us for the *same number of subscribers* will be from $15,000 to $18,000 more than for that used the past year. It is far better than that ever used by any other newspaper in the country.



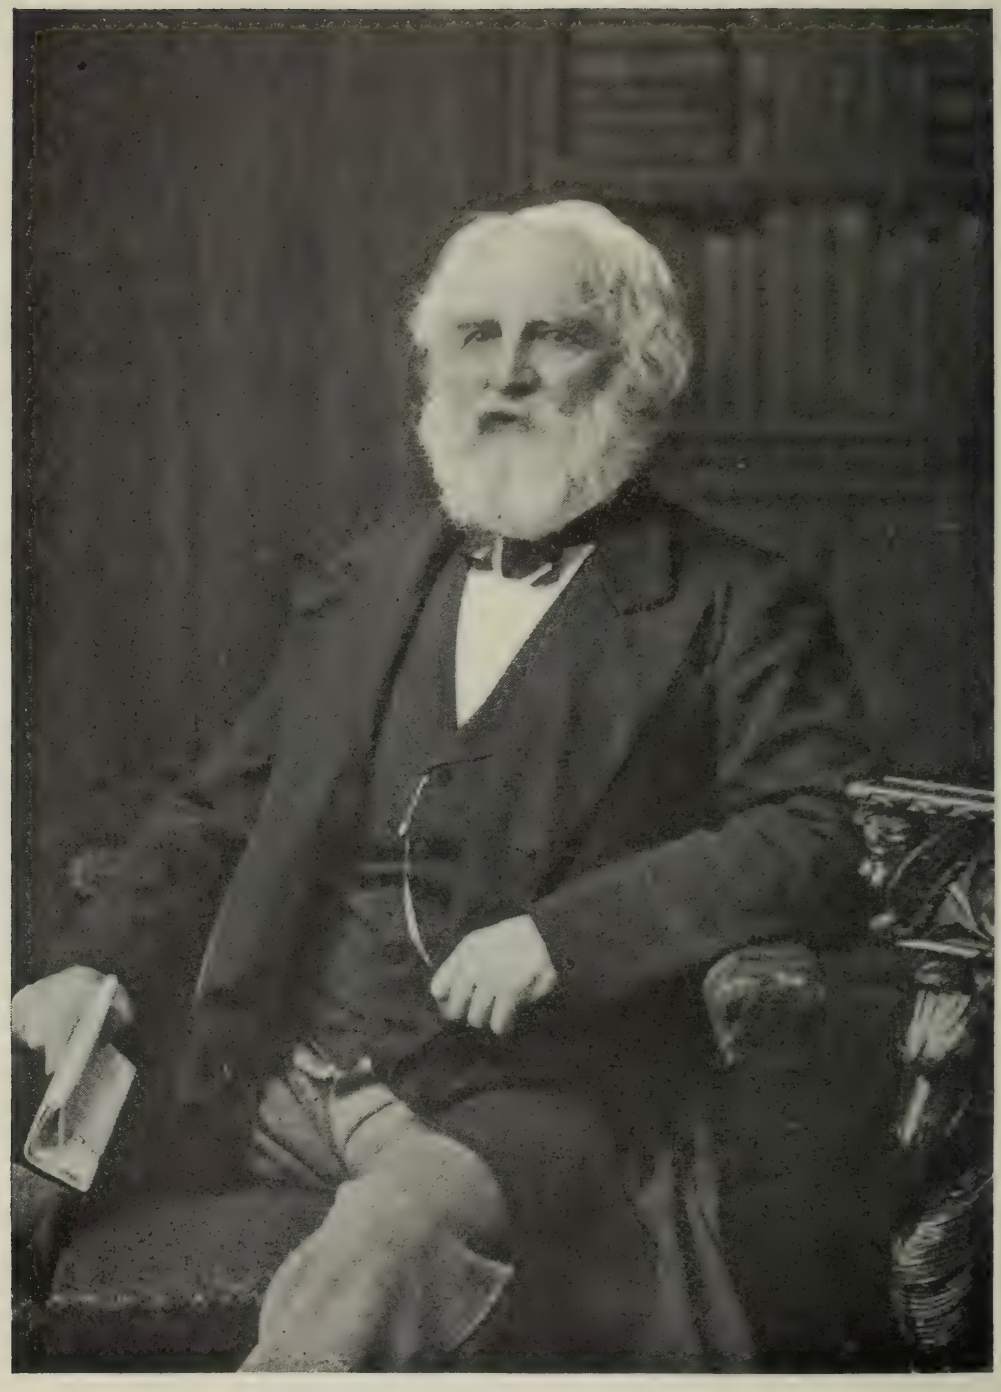
We have purchased of the Messrs. Hoe of this city probably the best four-cylinder press ever manufactured. It cost us, complete, including setting-up, over $30,000, and is a model in every respect. And yet, so large is our edition, that this splendid machine cannot do all our work in the time required. We are about contracting for three more presses in order to promptly meet the increasing demand upon us and prepare against accident.

Our readers will all, doubtless, be glad to see the splendid illustrations in this week's paper, and they will also be glad to know that we shall, on the first Thursday of each month, *thru the year,* publish a triple sheet, beautifully illustrated by the best artists in the country. We shall spare no expense whatever in making that monthly issue a great and popular feature; while we know we shall furnish a far better paper *every week* than we have ever done in the past.

We now, with able and competent assistance (owning all the necessary materials and machines) do all our own work of type-setting, stereotyping, printing, wrapping, mailing, addressing and publishing, and give constant employment, including editors, to about 100 persons.

The advertising patronage of THE INDEPENDENT is more than triple (in cash value) that of any other religious newspaper in the world, and there are no fifty-two consecutive numbers of any secular newspaper which have as much advertising in cash value as that which appears in a volume (fifty-two numbers) of THE INDEPENDENT. Business men have found out where to go to obtain the most for their money. While we devote so much space to the advertisers, our subscribers will bear witness that we have never restricted the reading matter, and in this particular they will be far better served in the future than in the past.

THE INDEPENDENT has worked hard the past twenty-one years to earn its present position; and it intends to keep it, and also to work hard in the future. We have from the commencement done the best we could with the means at command. Our *disposition* has been to spend all our money as fast as received in improving the paper. We will not admit that our present returns or dividends on the capital invested are quite satisfactory. Our increased facilities, we



PRESIDENT GRANT.

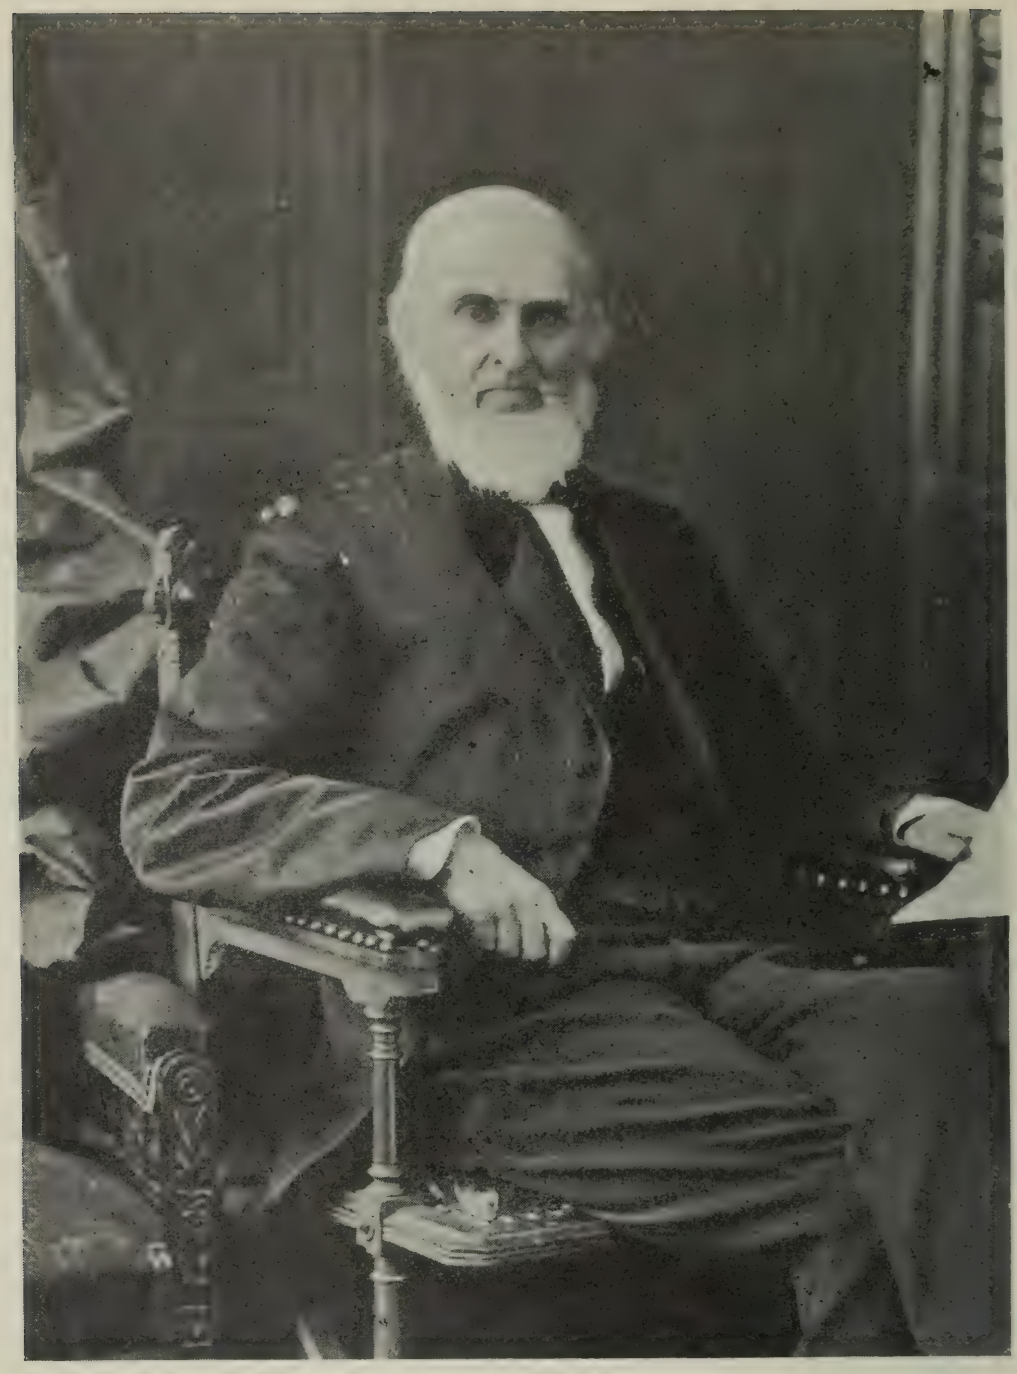
From a steel engraving by A. H. Ritchie used a generation ago by THE INDEPENDENT as a premium for new subscribers.

assure our friends, will be earnestly, yea, enthusiastically, devoted to keep the paper where it now is—far ahead of any other similar journal. Those who think they can overthrow, or supplant, or catch up with us, have a big job on hand, and if they succeed will richly deserve praise.

Thanks, a thousand thanks, to our friends in all quarters whose aid and constant help we have enjoyed. We mean to pay them a hundred-fold by henceforth continuing to make for our widely increasing field the best, ablest, richest, most useful, most beautiful, and hence the most popular religious newspaper in the country.

HENRY WADSWORTH LONGFELLOW.

The poem, a facsimile of the manuscript of which appears on the opposite page, appeared in THE INDEPENDENT of October 6, 1881. The original manuscript is now in the possession of THE INDEPENDENT.



President Garfield.

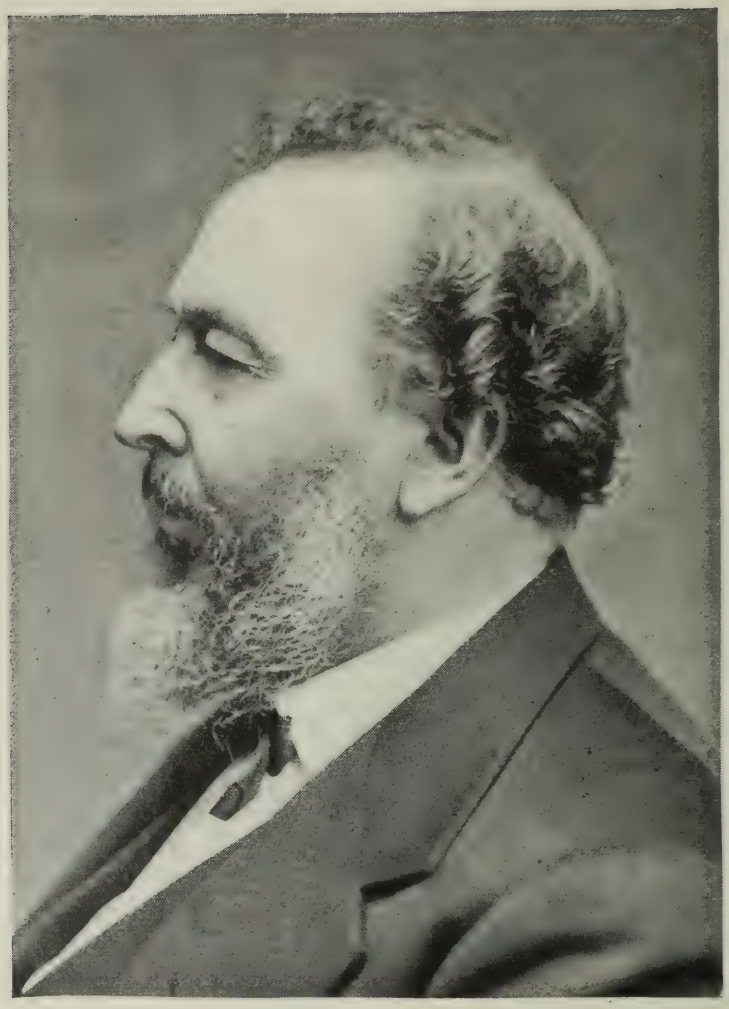
"E venni dal martirio a questa pace."

These words the Poet heard in Paradise,
Uttered by one, who bravely dying here,
In the true faith, was living in that sphere
Where the Celestial Cross of sacrifice
Spread its protecting arms athwart the skies;
And, Sol, thereon, like jewels crystal clear,
The souls magnanimous, that know not fear,
Flashed their effulgence on his dazzled eyes.
Ah me! how dark the discipline of pain,
Were not the suffering followed by the sense
Of infinite rest and infinite release!
This is our consolation; and again
A glad soul cries to us in our suspense
"I came from martyrdom unto this peace!"

Henry W. Longfellow.

Sept. 26, 1881.

JOHN GREENLEAF WHITTIER.



The poem, a facsimile of the manuscript of which appears on the opposite page, appeared in THE INDEPENDENT, December 15, 1881. Mr. Whittier wrote many poems for THE INDEPENDENT before and during the Civil War. There was much early prejudice against him and he was called the "Infidel poet." Tho a Quaker and an advocate of peace, the Civil War brought him fuller recognition, which was made complete by his "Snow Bound." The last poem of his publisht in THE INDEPENDENT was read at the Centennial Celebration in this city of George Washington's inauguration, April 30, 1889, and was entitled "The Vow of Washington."

Oak Knoll, Danvers, Mass.
3rd Mo 3 1882

From
("The Rock-bound of Baradoc")

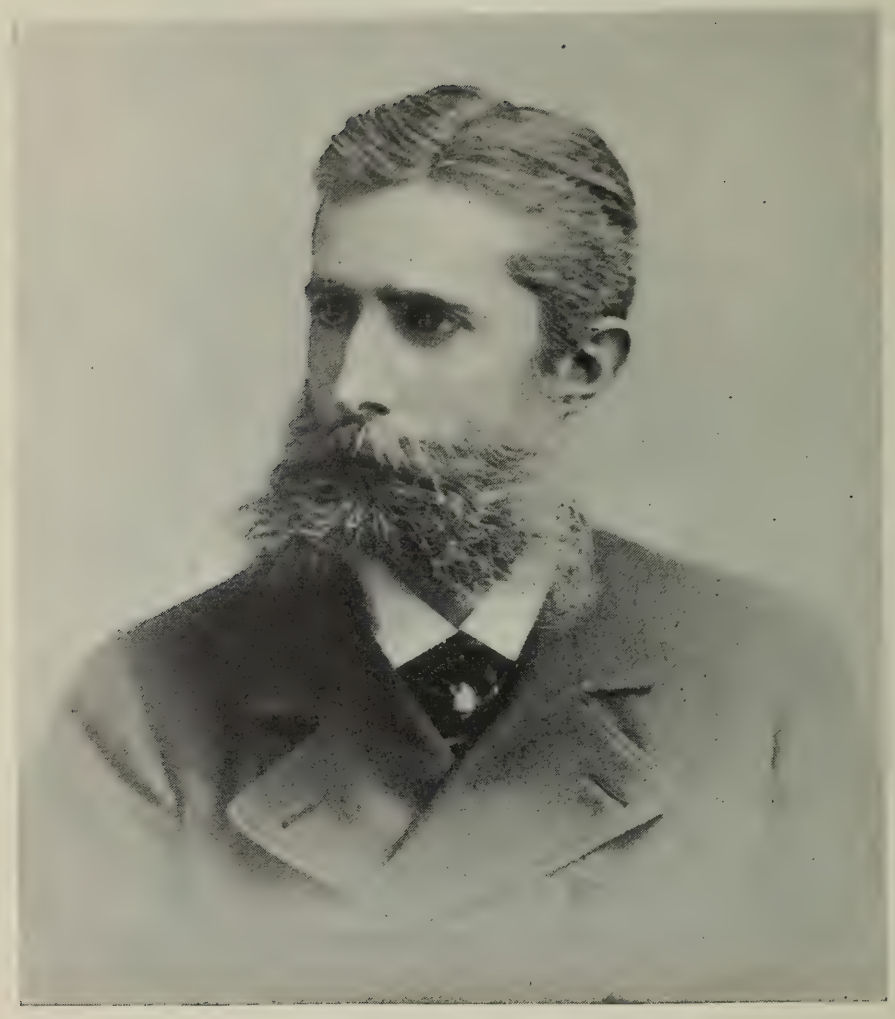
The Stranger paused and read.
"O winter land!" he said:
"Thy night to be I own;
God leaves thee not alone.
And if the fierce winds blow
Over thy wastes of rock and snow,
And at thy iron gate
The ghostly iceberg waits
Thy homes and hearts are dear;
Thy sorrow o'er thy sacred dust
Is sanctified by hope and trust
God's love and man's are here
And Love wherein it goes.
Makes its own atmosphere.
Its flowers of Paradise
Take root in the eternal ice,
And bloom through Polar snows!"

John G. Whittier

BAYARD TAYLOR.

The poem, a facsimile of the manuscript of which is printed on the opposite page, first appeared in THE INDEPENDENT of December 7, 1882. It will be noticed that at the bottom of the manuscript Richard Henry Stoddard has written a line, which, together with the date of the poem, shows that it was written in 1852 and had never previously been published. The original manuscript is now in the possession of THE INDEPENDENT.

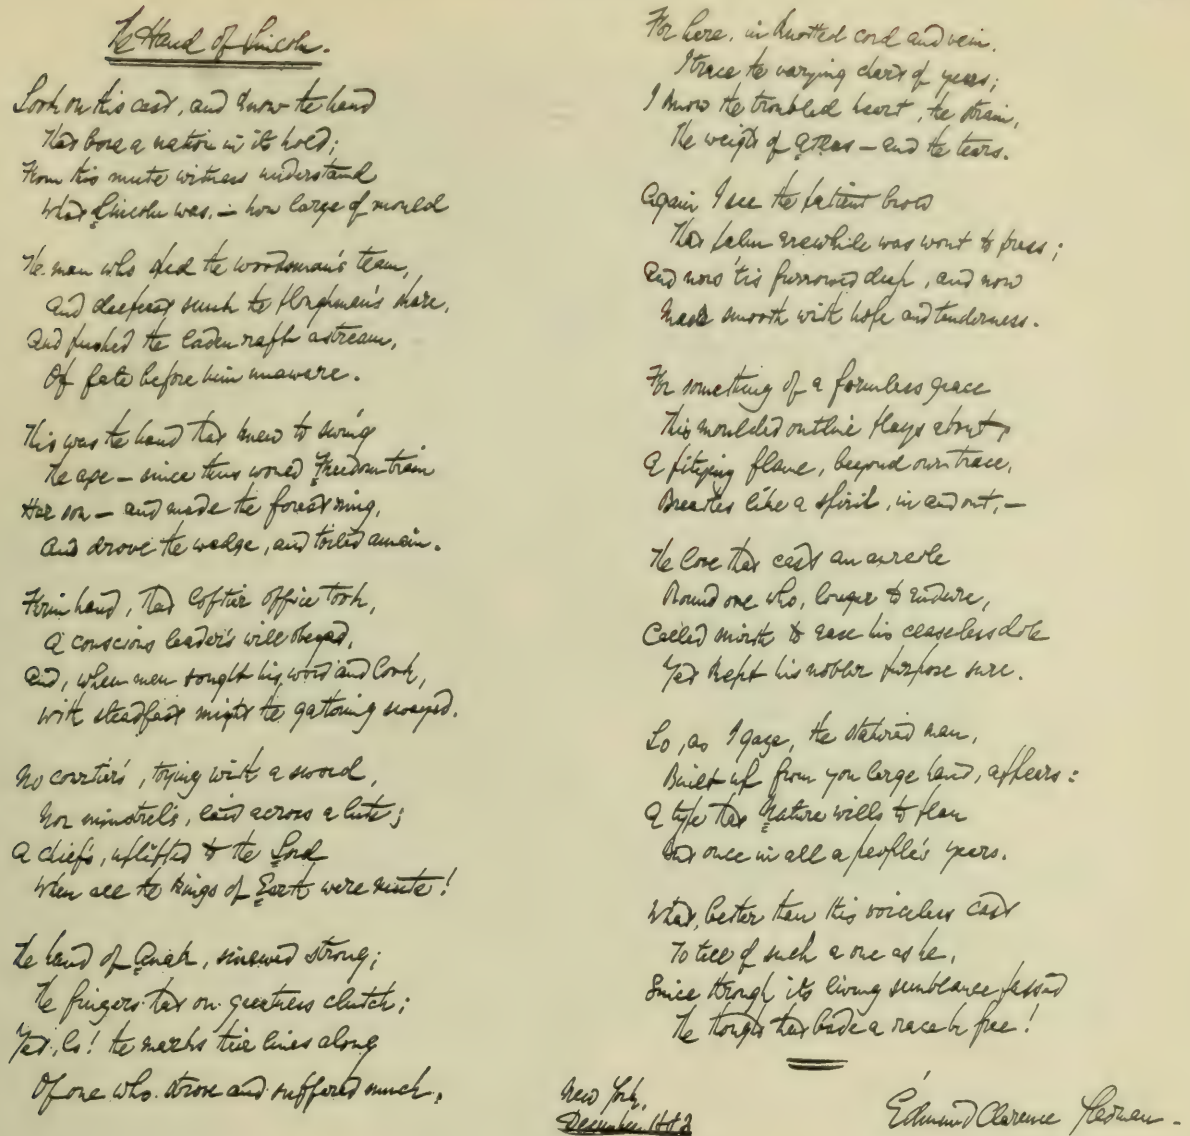
Persian Serenade.



Hark, as the twilight pale
Tenderly flows,—
Hark, how the nightingale
Wakes from repose!
Only when, sparkling high,
Stars fill the darkling sky,
Unto the nightingale
Listens the rose.

Here, where the fountain-tide
Murmuring flows,
Ners from the mountain-side
Fan thy repose.
Eyes of mine, glistening,
Look on me, listening:
I am thy nightingale,
Thou art my rose.

Sweeter the strain he weaves,
Fainter it flows,
Now, as her balmy leaves
Blushingly close.
Better than minstrelsy
Lips that meet kissingly
Silence thy nightingale—
Kiss me, my rose!



Granada.
Nov. 1852.

This poem, which is in the handwriting of Bayard Taylor, was never published, I believe.
S. H. Goddard July 13. '82

EDMUND CLARENCE STEDMAN.

The poem, a facsimile of the manuscript of which is printed on the following page first appeared in THE INDEPENDENT of December 20th, 1883. The original manuscript is now in possession of THE INDEPENDENT.

THE HAND OF LINCOLN.

Look on this cast, and know the hand
That bore a nation in its hold;
From this mute witness understand
What Lincoln was—how large of mould.

The man who sped the woodsman's team,
And deepest sunk the ploughman's share,
And pushed the laden raft astream,
Of fate before him unaware.

This was the hand that knew to swing
The axe—since thus would Freedom train
Her son—and made the forest ring,
And drove the wedge, and toiled amain.

Firm hand, that loftier office took,
A conscious leader's will obeyed,
And, when men sought his word and look,
With steadfast might the gathering swayed.

No courtier's, toying with a sword,
Nor minstrel's, laid across a lute;
A chief's, uplifted to the Lord
When all the kings of Earth were mute!

The hand of Anak, sinewed strong;
The fingers that on greatness clutch:
Yet, lo! the marks their lines along
Of one who strove and suffered much.

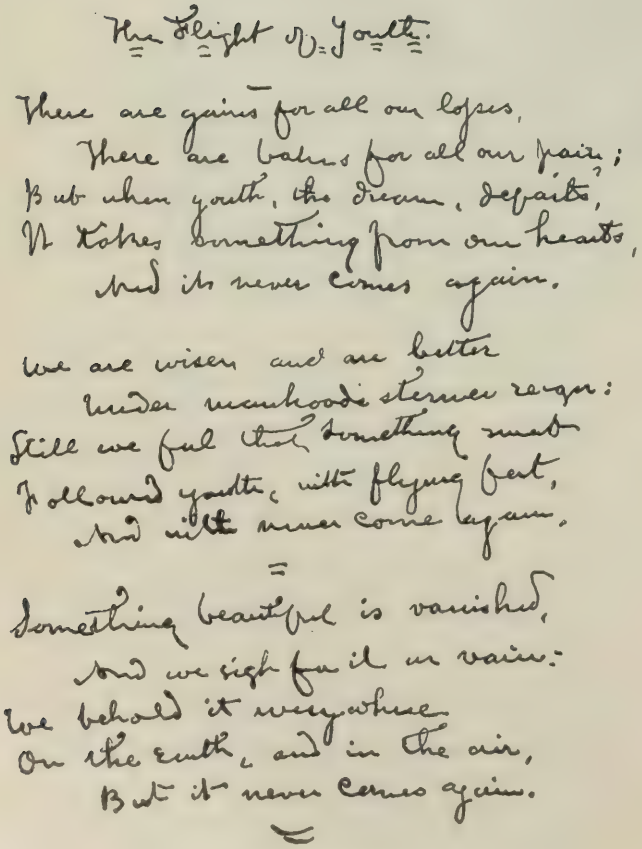
For here, in knotted cord and vein,
I trace the varying chart of years;
I know the troubled heart, the strain,
The weight of Atlas—and the tears.

Again I see the patient brow
That palm erewhile was wont to press;
And now 'tis furrowed deep, and now
Made smooth with hope and tenderness.

For something of a formless grace
This moulded outline plays about,
A pitying flame beyond our trace,
Breathes like a spirit, in and out.

The love that cast an aureole
Round one who, longer to endure,
Called mirth to ease his ceaseless dole,
Yet kept his nobler purpose sure.

Lo, as I gaze the statured man,
Built up from yon large hand appears:
A type that Nature wills to plan
But once in all a people's years.



What, better than this voiceless cast
To tell of such a one as he,
Since through its living semblance passed
The thought that bade a race be free!

EDMUND CLARENCE STEDMAN.

NEW YORK, December, 1882.

RICHARD HENRY STODDARD.

THE FLIGHT OF YOUTH.

["The Flight of Youth," one of Mr. Stoddard's numerous poems for THE INDEPENDENT, appears in the adjoining column. The original is in our possession.—EDITOR.]

There are gains for all our losses,
  There are balms for all our pain;
But when youth, the dream, departs,
It takes something from our hearts,
  And it never comes again.

We are wiser and are better
  Under manhood's sterner reign;
Still we feel that something sweet
Followed youth, with flying feet,
  And will never come again.

Something beautiful is vanished,
  And we sigh for it in vain;
We behold it everywhere,
On the earth, and in the air,
  But it never comes again.

WILLIAM CULLEN BRYANT.

The poem—a facsimile of which in the author's handwriting we reproduce on the two following pages—appeared in THE INDEPENDENT of December 20th, 1877. On this page is a reproduction of the galley proof which was sent to Mr. Bryant and on which he made the changes indicated. The original manuscript is in the possession of THE INDEPENDENT.

Are you willing that we should omit this? Yes. W. C. B.

A FAREWELL.

~~[Written in 1811 for one who was about to sail on a Distant Voyage.~~]

BY WILLIAM CULLEN BRYANT.

O THOU, whose cherished image seems
A portion of my heart,
Whose eyes of light make glad my dreams,
Farewell, for now we part.
The sail is swelling in the bay
That bears me on my distant way,
For years to rove the dreary sea—
For years—and think of only thee.

Yet will that beauteous image make
The dreary sea less drear,
And thy remembered smile will wake
The hope that tramples fear.
When I shall face the tempest's wrath,
Or struggle through the dangerous path
Where the blue icebergs, vast and steep,
Drifting and dashing, crowd the deep.

Then, too, when heaven with clouds is dark
And wild winds sweep the vale,
Wilt thou not think of him whose bark
Strives with the polar gale?
Wilt thou not think, and softly pray
For the sea-wanderer far away,
That, all his toils and perils past,
His hand may clasp thy hand at last?

~~But should my bones be left to bleach~~
~~Within the boundless deep,~~
~~Or, cast upon some desert beach,~~
~~Among the seaweed sleep,~~
Will not a pang thy bosom press,
Even in thy pride of loveliness—
A tear in thy sweet eyelids shine
For him whose latest thought was thine?

But should not them hear no more of me,
Or hear that I have died,
And sleep within that cold deep
On on its distant side,

A Farewell.

Written in 1841, for One who was about to sail on a Polar Voyage.

By William Cullen Bryant.

Oh thou, whose cherished image seems
A portion of my heart,
Whose eyes of light make glad my dreams,
Farewell, for now we part.
The sail is swelling in the bay
That bears me on my distant way,
For years to rove the dreary sea,
For years — and think of only thee.

Yet will that beauteous image make
The dreary sea less drear,
And thy remembered smile awake
The hope that trampled fear,
When I shall face the tempest's wrath,
Or struggle through the dangerous path
Where the blue ice bergs, vast and steep,
Drifting and dashing, crowd the deep.

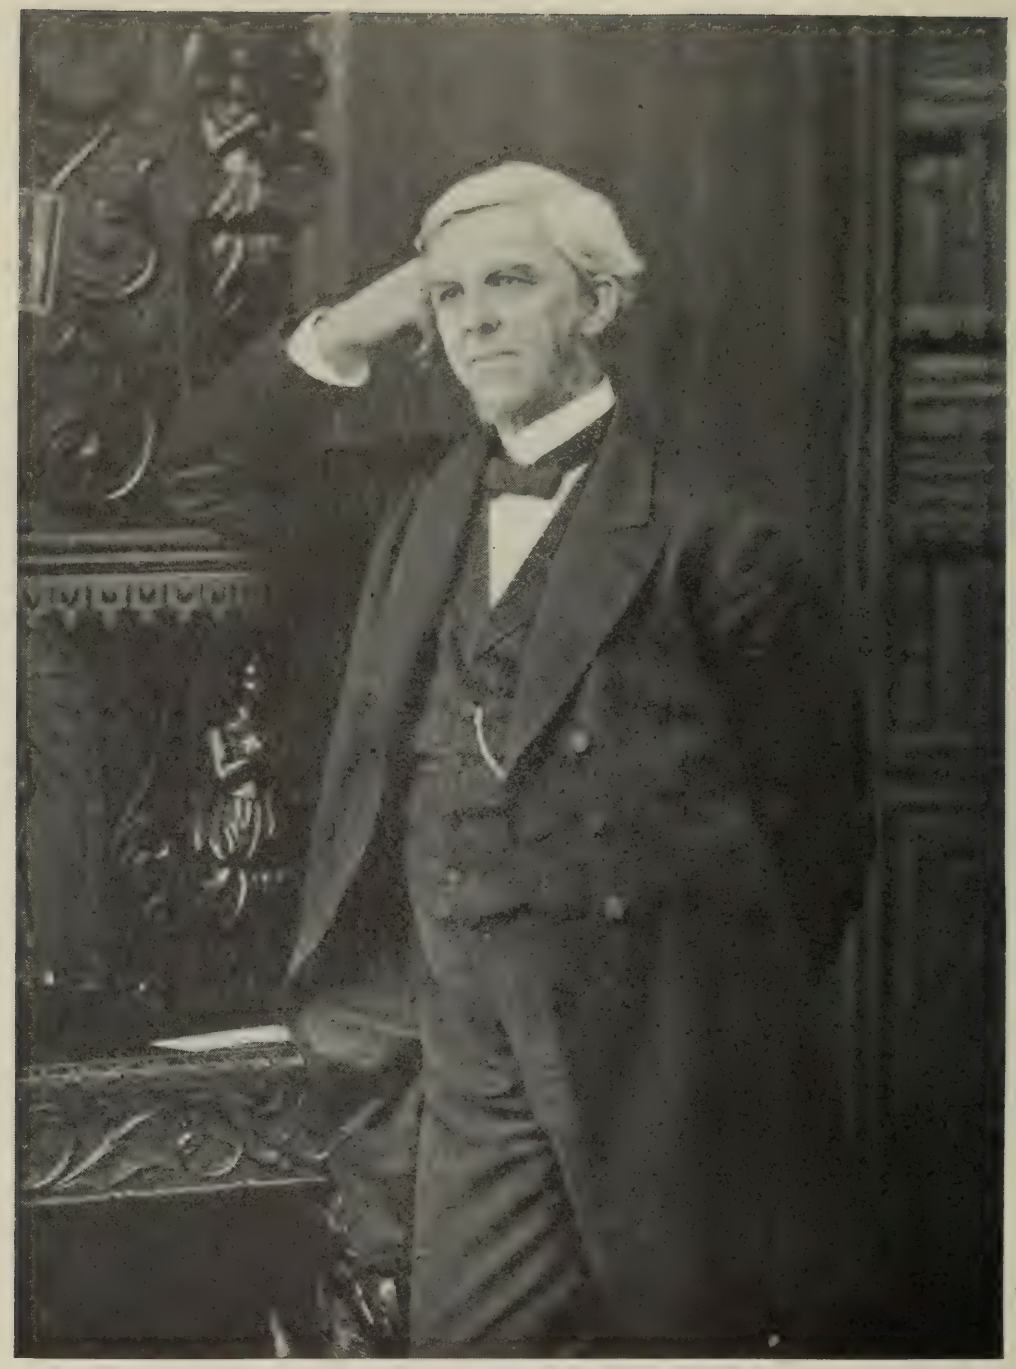
Then then, too, when Heaven with clouds is dark
And wild winds sweep the vale,
Wilt thou not think of him whose bark
Strives with the polar gale?
Wilt thou not think, and softly pray
For the dear wanderer far away,
That all his toils and perils past,
His hand may clasp thy hand at last?

But should my bones be left to bleach
Within the boundless deep,
Or, cast upon some distant beach,
Among the seaweed sleep?
Will not a pang thy bosom pierce,
Even in the pride of loveliness,
A tear in thy sweet eyelid's shrine
For him whose latest thought was thine?

The Golden Flower.

Ere Advent dawns with lessening days,
While earth awaits the angels' hymn,
When bare as branching coral sways
In whistling winds each leafless limb,
When spring is but a spendthrift's dream,
And summer's wealth a wasted dower
Nor dews nor sunshine may redeem,
Then autumn coins his Golden Flower.

Soft was the violet's vernal hue,
Fresh was the rose's morning red
Full robed the stately dahlia grew,—
All gone! their shortlived beauty shed;
The shadows lengthening stretch at noon,
The fields are stripped, the groves are dumb,
The frost-flowers greet the icy moon,—
Then blooms the bright Chrysanthemum.



The stiffening turf is white with snow,
Yet still its radiant disks are seen,—
Where soon the hallowed morn will show
The wreath and cross of Christmas green,—
As if in autumn's dying days
It heard the heavenly song afar
And opened all its living rays,—
The herald lamp of Bethlehem's star.

Orphan of Summer, kindly sent
To cheer the waning year's decline
Of all that pitying heaven has lent
No fairer pledge of hope than thine;
Yes! June lies hid beneath the snow
And winter's unborn heir shall claim
In every seed that sleeps below
A spark that kindles into flame.

Thy smile the scowling storm-cloud braves,
Last of the bright-robed flowery train,
Soft sighing o'er their garden graves
"Farewell! Farewell! We meet again!"
So let life's dark November bring
Hope's golden flower, the last of all
Before we hear the angels sing
Where blossoms never fade and fall!

Oliver Wendell Holmes.

Boston November 29th 1881.

OLIVER WENDELL HOLMES.

The poem, a facsimile of which appears on the two preceding pages, was first printed in THE INDEPENDENT, December 15, 1884. The original manuscript is now in possession of THE INDEPENDENT.

The Priest's Heart

BY CHARLES KINGSLEY

From The Independent of September 18, 1873.

It was Sir John, the fair young priest,
  He strode up off the strand;
But seven fisher-maidens he left behind,
  A-dancing hand in hand.

He strode up to the wise wife's house;
  "Now, mother, to prove your art,
To charm me May Carleton's merry blue eyes
  Out of a young man's heart."

"My son, you are held for a holy priest,
  Whose heart is set on high.
Go sing in your Psalter and read in your
      Book;
  Man's love fleets lightly by."

"I had liever look still on May Carleton
  Than on all the saints in Heaven;
I had liever sit still by May Carleton
  Than climb to the spheres seven.

"I have watched and fasted, early and late;
  I have prayed to all above;
But find no medicine save churchyard mold
  For the pain which men call love."

"Now, Heaven forfend that ill grow worse;
  Enough that ill be ill.
I know of a spell to draw May Carleton
  And bend her to your will."

"If thou didst that, which thou canst not do,
  Wise woman tho thou be,
I would run and run till I buried myself
  In the surge of yonder sea.

"Scathless for me are maid and wife,
  And scathless shall they bide,
But charm me May Carleton's eyes from the
      heart
  That aches in my left side."

She charmed him with the white witchcraft;
  She charmed him with the black;
But he turned his fair young face to the wall
  Till she heard his heartstrings crack.

The Birth of a Newspaper and Its Name

BY EDWARD EVERETT HALE, D.D.

HOW well I remember the first number of The Independent.

We did not know much about it, but we did know the name. And the word is a very critical word in the history of this world.

The reader may not recollect that the word "independent" and the sister word "independence" came into the English language because the Christians of England needed such words. Christian men of as pure a type as this world has ever seen, men who were willing to die for their religion, and who in many cases did die for it, made the word "independent" to signify the thing that they meant and wanted. The sister word "independence" came into being at the same time, and every boy who flings his hat into the air on Independence Day, who fires a cracker in honor of Independence Day, who wishes that Independence Day might come or is sorry that it is over, is, whether he knows it or not, paying his tribute to the crisis which came in the history of the Christian religion in the sacrifices, in the protests and in the successes of these men.

You will not find the word "independent" in Shakespeare; you will not find it in Lord Bacon. While there is enough of it in English literature after the year 1650, it associates itself with political independence, and is now, perhaps, used for political independence more than for the independence of thought of each child of God and each congregation which makes itself up from God's children.

So we youngsters knew that at last we

had a journal, the editors of which were not ashamed to say they were "independents." They did not mean to have their leading editorials, or the general drift of their paper, dictated to them by the successors of the successors of the successors of a priest who had got himself crowned on the Seven Hills. Nor did they mean to have doctrine or method dictated to them by any consociation or synod or other ingeniously devised aristocracy, in which old men were to tell young men what to think. They dared use the word "independent," a word of which even John Cotton was afraid, of which John Winthrop was afraid, and the other lights of the new-born "Congregationalism," but which, as the centuries have rolled on, has proved itself to be the central word. It is central if you mean that God has a revelation for each child of God, and that each child of God has a right for himself to tell God who he is and what he is about, and to listen for himself to the Father in whose arms he lies.

In the forties and fifties of the last century "respectable readers" were still under the empire of Clarendon and Hume as they read or talked history. I am personally a little proud that when, in my master's oration at Cambridge, I reminded the decorous Harvard alumni that it was two centuries since "Charles the First flung his rebel banner to the breeze," the phrase elicited surprise in the audience. Since that time Mr. Fiske and some other writers have taught the American people, at least, that Cromwell was not the rebel. Here is one of Mr. Fiske's marginal notes: "Had it not been for the Puritans, political liberty would probably have disappeared from the world," and the text shows that he meant The Independent.

ROXBURY, MASS.

An Alpine Walk

BY A. CONAN DOYLE

From THE INDEPENDENT of December 14, 1893.

UNDERNEATH the peaks of snow,
On the edge of nature's glacis,
Where the torrent far below
Ever rants, and roars and races,
And a man with just one slip
May come down a thousand paces;
So we walked from Engelberg
With the breeze upon our faces.

And we talked of many things
As we tramped thru that oasis;
Of republics and of kings,
Of religion and its basis,
Of the patience of the poor,
Of the evil in high places,
So we walked from Engelberg
With the breeze upon our faces.

Then we spoke of England, too,
And the Anglo-Celtic races,
Also of the landlord crew
And our law and its disgraces,
With the selfishness of man
Which has left such evil traces;
So we walked from Engelberg
With the wind upon our faces.

And of grim Carlyle we spoke,
And of Froude's much argued cases,
How about the merest joke
He would pull the longest faces;
And of Madame, too, we talked,
Of her temper and her graces;
So we walked from Engelberg
With the wind upon our faces.

Spoke of Kipling—his command
Over life in all its phases,
How he held within his hand
All the cards from kings to aces,
Passing swift from passion's frown
Back to comedy's grimaces;
So we walked from Engelberg
With the wind upon our faces.

Well, it was a pleasant talk,
And perhaps in duller places
We may recollect that walk,
When with tightly fastened laces,
With our Alpenstocks in hand,
In that air which stirs and braces,
We three came from Engelberg
With the wind upon our faces.

Quaker Ladies

BY BLISS CARMAN

FORMERLY OFFICE EDITOR OF THE INDEPENDENT.

From THE INDEPENDENT of May 25, 1893.

SAID Wind to me one morning:
"Come with me, rover mine:
I have found the Quaker Ladies
On their early slopes of pine."

There never was a bidding
More easy to obey;
My feet were in the meadows
Before the break of day.

My guide was on the mountains
Before the march of noon;
And when he halted for me
The pines began to croon.

There, loudly and ancestral,
Their voices came to me,
As when the stars of evening
First tented by the sea:

"Ah, mortal with the wind's will
Thy heart shall learn at length
That the only, only lovers
Are innocence and strength."

Then I saw the Quaker Ladies,
Those Innocents that strew
The floorings of the forest
With their tiny stars of blue.

I looked upon their faces,
Companioned yet alone,
And this foolish heart that loved them
Grew simple as their own.

For their eyes are full of quiet,
Their days are full of peace;
And I will pass tomorrow
Content to my release,

If but the wind above me
Say, "Wayfellow of mine,
There be other Quaker Ladies
Upon other slopes of pine."

Thirty-six Years in The Independent

BY REV. THEODORE L. CUYLER, D.D.

[Dr. Cuyler, now in his eighty-seventh year, is the oldest living contributor to THE INDEPENDENT, as he remains the most distinguished representative of the pulpit of the generation which created such lights as Beecher, Storrs and Tyng.—EDITOR.]

MY connection with THE INDEPENDENT began in April, 1860, when I had just come to Brooklyn as the founder of the Lafayette Avenue Presbyterian Church. One afternoon, when I landed from a ferryboat, Mr. Henry C. Bowen laid hold of me and said: "You must not get into that street car until you promise to send me an article for THE INDEPENDENT." The promise was made, and the next week I sent him an article entitled "The Cedar Christian"; it furnished the title of my next book. I became a constant contributor to the paper, and in November, when I met our newly elected President, Abraham Lincoln, in Chicago, his first salutation to me was, "I have kept up with you in THE INDEPENDENT."

Of the regular contributors in its first two decades—among whom were Horace Greeley, Whittier, Mrs. Beecher Stowe, Dr. Tyng, Dr. R. M. Hatfield and Dr. Ray Palmer—I am probably the sole survivor. My connection with the plucky and powerful paper continued for thirty-six years, and I contributed about six hundred articles to its columns. They have furnished the materials for several of my volumes, especially "God's Light on Dark Clouds," "Help and Good Cheer," and "Pointed Papers for the Christian Life." I look back upon my gospel ministry in THE INDEPENDENT with gratitude and joy.

In all the heroic conflicts that were waged for human progress and human rights, for the overthrow of chattel slavery and the preservation of our nation's life and liberty, it stood in the forefront

of secular and religious journalism. The master spirit that controlled and guided it was its clear-eyed and courageous founder, Henry C. Bowen. He never cringed and he never compromised. In 1852, when his commercial firm was boycotted in the South on account of his public denunciation of the "Fugitive Slave Law," I remember how we were all thrilled by his famous manifesto, "The goods of Bowen & McNamee are for sale, but *not their principles.*" To him our whole nation and the Church of Jesus Christ in all its denominations owe a debt of profound gratitude for his splendid services. During my three-score years of connection with the religious press I have been brought into close fellowship with many distinguished editors and managers, but I can truly say that in warmth of heart, sincerity of Christian character and indomitable strength of purpose, none of them surpast my well-beloved friend, Henry Chandler Bowen.

BROOKLYN, N. Y., July, 1908.

Nectar and Ambrosia

BY MAURICE THOMPSON

From THE INDEPENDENT of January 10, 1884.

IF I were a poet, my sweetest song
Should have the bouquet of scuppernong,
With a racy smack in every line
From the savage juice of the muscadine.

The russet persimmon, the brown papaw,
The red wild plum and the summer haw,
Serviceberries and mandrake fruit,
Sassafras bark and ginseng root
Should I make my verse pungent and sweet by turns;
And the odor of grass and the freshness of ferns,
The kernels of nuts and the resins of trees,
The nectar distilled by the wild honeybees,
Should be thrown in together, to flavor my words
With the zest of the woods and the joy of the birds!

Who sings by note, from the page of a book,
So sweet a tune as the brawl of a brook?
Shall Homer or shall Anacreon
Suggest as much as the wind or the sun?

Give me a shell from the sea so green,
Cut me a flute from the Aulocrene,
Give me nature's sweets and sours,
Her barks and nuts, her fruits and flowers;
And all the music I make shall be
Good as the sap of the maple tree,
Whilst a rare bouquet shall fill my song
From the muscadine and the scuppernong.

Three Old Saws

BY LUCY LARCOM

From THE INDEPENDENT of March 19, 1868.

If the world seems cold to you,
  Kindle fires to warm it!
Let their comfort hide from view
  Winters that deform it.
Hearts as frozen as your own
  To that radiance gather;
You will soon forget to moan,
  "Ah! the cheerless weather!"

If the world's a wilderness,
  Go build houses in it!
Will it help your loneliness
  On the winds to din it?
Raise a hut, however slight;
  Weeds and brambles smother;
And to roof and meal invite
  Some forlorner brother.

If the world's a vale of tears,
  Smile till rainbows span it!
Breathe the love that life endears,
  Clear from clouds to fan it.
Of your gladness lend a gleam
  Unto souls that shiver;
Show them how dark sorrow's stream
  Blends with hope's bright river!

The City of New York in 1848

BY GENERAL JAMES GRANT WILSON

AUTHOR OF "THE PRESIDENTS OF THE UNITED STATES," ETC.

WHILE the Eternal City—the city of the Cæsars—has recently celebrated, with imposing ceremonial, its twenty-seventh century; while the great British metropolis—the Londinium of Tacitus—claims a birth coeval with the Christian era, and while beautiful Venice, "rich with the spoils of time," with pardonable pride, boasts of its municipal records complete for more than a thousand years, the oldest important Anglo-Saxon city of North America still lacks fifteen years to complete her three centuries. But if we compare the "Fair City by the Sea," as Whittier called New York, with other cities of the Western world, her two hundred and eighty-five years of existence present a highly respectable degree of antiquity. The second city in commerce and population on the American continent, only commemorated its centennial in the autumn of 1903, for the erection of Fort Dearborn in 1803 by Captain John Whistler was the beginning of Chicago.

In September, 1609, a small ship of eighty tons, commanded by Henry Hudson, an Englishman, in the service of the East India Company of Amsterdam, entered the lower bay of New York. Like Columbus, Cabot, Verrazano and Vespucci, the discoverers of our continent, Hudson was in quest of a western passage to China. This dream was, of course, never realized by those Italian explorers or the British captain, but

Theirs was the tread of pioneers
  Of nations yet to be:
The first low wash of waves where soon
  Shall roll a human sea.

When the "Half Moon" came to anchor near the rocky hight of Hoboken, which for two centuries has been called Castle Point, and Hudson gazed with admiration on the beauty of the primeval forest-covered island, with its gigantic chestnuts, hickory, hemlock, maple and white oaks, with its superb position, and the picturesque Palisades to the north, he called out to his mixt crew of Dutch and English sailors: "A good land to fall in with, men, and a pleasant land to see." Hudson was the discoverer of the noble river which has since immortalized his name, as well as the discoverer of the site of our city,

with the best seaport in the New World —the chief gate of the nation, thru which more than one hundred thousand persons frequently pass in a single month to increase our population, and merchandise during a single year amounting to a thousand million dollars.

Many trading expeditions from Holland followed Hudson's discoveries, but the first permanent settlement was made on the lower end of Manhattan Island in 1623. Three years later Peter Minuet, the third Dutch Director-General, purchased the island of the Indians, who then owned and occupied it, founding the new city under the name of New Amsterdam. About a quarter of a century ago, I had the good fortune to discover among the archives at The Hague a letter written to the States-General of Holland by Peter James Schaghen, dated Amsterdam, 5 November, 1626, announcing the arrival of a vessel at that port with a cargo of beaver skins, and bringing intelligence of the purchase of the island of Manhattan from the Indians for sixty guilders—about twenty-four dollars! When, a few days later, the writer asked the late accomplished Queen of the Netherlands if, in her opinion, sixty guilders was not an exceedingly small consideration to give for Manhattan Island, with its fourteen thousand acres of fine wooded and superbly situated land, with broad navigable rivers on either side, Her Majesty promptly made the following clever reply in defense of the thrifty Dutchmen: "Oh, no, General, for if the savages had received a larger sum for their land they would have only drank more firewater. With sixty guilders they could not purchase sufficient to intoxicate all the tribe." I did not deem it necessary to inform Queen Sophia that the red men saw no Dutch gold or silver, but received the equivalent of $24 in bright-colored beads, brilliant bandanna handkerchiefs, utensils of shining tinware, a few hatchets, with some small mirrors, in which they gazed with astonishment and delight, for the first time, on their own dusky countenances.

THE CITY HALL PARK IN 1848.
From the original engraving owned by John D. Crimmins.

A single square inch of the soil of Manhattan has frequently been sold within the past five years for more than was paid for the fourteen thousand acres. Had the price of the island been

paid for in cash instead of merchandise, the sixty guilders would at present (December, 1908), with compound interest at the rate of seven per cent., amount to $6,438,998,694, almost one-third more than the assessed value for taxation of the real estate of the Borough of Manhattan for the present year, which is $4,224,502,751.

In 1653 the little settlement of New Amsterdam, which had been successfully ruled for six years by honest and sturdy Peter Stuyvesant, the last of the Dutch Governors, received its charter and was duly incorporated as a city, the quarter-millennial anniversary of which event was appropriately commemorated in May, 1903. Eleven years later an English fleet appeared under Colonel Richard Nicolls, and the place having no adequate means of defense, it became by right of conquest a British town named New York. There had been much friction between the Dutch of the New Netherlands and New Englanders, which continued in a measure even under Nicolls, the new Governor, for we find him writing in 1666, to the Earl of Clarendon, advocating a direct trade between Holland and New York, and using as an argument these words: "The strength and flourishing condition of this place will bridle the ambitious saints of Boston!"

Colonel Nicolls was a wise and moderate man, and perhaps the best of all the British colonial rulers. He will be remembered not only as the first English Governor of New York, but also as the first to point out the rare advantages of its superb situation, and foretell the future greatness of the magnificent metropolis of the New World, second to but one other on the face of the globe. "In one strong race all races here combine." But that the city would cover almost the whole island of Manhattan and extend northward and eastward over outlying districts, Colonel Nicolls never dreamed, nor even that New York

CASTLE GARDEN ON THE BATTERY, NEW YORK, IN 1848.
This was where the famous "Castle Garden Meeting" was held in favor of the Fugitive Slave Law, and which caused the firm of Bowen & McNamee to issue their statement, "Our goods but not our principles are for sale." From the original engraving owned by John D. Crimmins.

would ever grow to the dimensions it attained sixty years ago, when THE INDEPENDENT was establisht. Of that period the writer proposes to speak in the following paragraphs.

If I may be permitted to begin with a personal reminiscence, I well remember riding in 1848 with a school companion from his father's house in Park place, up Broadway to Corporal Thompson's cottage, where we watered our horses from the old-fashioned trough in front of his door, and continuing on several miles into the country until we came to Burnham's, on the Bloomingdale road, where we dismounted for breakfast, having observed men on many of the small farms and country places that we past gathering their crops of apples, and admired the brilliant foliage of the maples, which we saw in all their autumn splendor. Corporal Thompson's was a road house occupying the site of the late Fifth Avenue Hotel, at the junction of Twenty-third street and Fifth avenue, and Burnham's was a favorite country inn which stood in the center of the block between Seventy-eighth and Seventy-ninth streets, now occupied by The Apthorp, belonging to William Waldorf Astor. Burnham's was originally the country residence of John Cornelius Vandenheuvel, whose daughter married the fourth son of Alexander Hamilton.

In 1848 New York contained 376,485 inhabitants, with few buildings on Broadway and Fifth avenue above Fourteenth street, beyond which the houses were not numbered on the avenue, and on Broadway only to Twenty-first street. At that time there were no street cars, the only means of transportation being the Broadway omnibuses drawn by two and four horses, and there were, of course, no Brooklyn bridges or tunnels by which to cross the East River. The Harlem Railroad was in operation, and the Erie completed as far as Binghamton. The Tweed County Court House and the Post Office had not yet invaded the attractive City Hall Park, the business of the latter still being conducted in the old Dutch Church in Nassau street. Domestic postage was then five cents for a half-ounce letter, or ten cents for an ounce, for a distance under three hundred miles, and double those rates for letters going a greater distance. The rate on half-ounce letters to Great Britain was twenty-four cents. There was no Central Park in 1848, or for a decade thereafter, the Battery being the city's only pleasure ground. Castle Garden

MADISON COTTAGE, BROADWAY AND TWENTY-THIRD STREET, IN 1848, AFTERWARD THE SITE OF THE FIFTH AVENUE HOTEL.
From the original owned by John D. Crimmins.

was then a favorite place of amusement, and there Jenny Lind was first heard in September, 1850, by an enthusiastic audience of six thousand, the writer being among the number. Grisi, Mario and Sontag also sang in Castle Garden. There Lafayette was received by the city authorities and citizens in 1824, General Andrew Jackson in 1832, President Tyler in 1843, and the eloquent Hungarian patriot, Louis Kossuth, in October, 1851. For nearly a score of years it has been used by the city as a public aquarium. Another important place of amusement was the Park Theater, where nearly all the great theatrical and operatic stars that came to this country were first introduced to an American audience. Garcia's Italian Opera Company, the first that ever crossed the Atlantic, gave the "Barber of Seville" there in November, 1825.* The building was the property of John Jacob Astor, and was destroyed by fire in December, 1848, a few months after the death of its opulent owner. It was situated in Park row, several doors north of Ann street.

*Mrs. Julia Ward Howe was present as a child of seven, having been taken there by her father, a great lover of music.

The New York banks that were in existence in 1848 were Bank of New York, Manhattan, Merchants, Mechanics, American, Phenix, City, Chemical, Merchants' Exchange, Gallatin, Butchers' and Drovers', Greenwich, American Exchange, Commerce, Bowery, State of New York, Dry Dock, Fulton, Leather Manufacturers, Mechanics Association, Mechanics' and Traders', National, North River, Seventh Ward, Tradesmen, and Union, in all twenty-six. At the present time there are one hundred and fifty-eight banks in the metropolis.

The public libraries of New York sixty years ago were the Society Library, establisht in 1754, and believed to be the oldest in the United States. At the period of which we are writing it possest about 45,000 volumes, and was situated at 345 Broadway. It now has 130,000. The New York Historical Society, then with about 10,000, was in the University Building, in Washington Square, but at present, with 75,000, is occupying its spacious new building facing the Central Park, at the corner of West Seventy-seventh street. Columbia College, then at the foot of Park place,

THE OLD KENNEDY HOUSE AT NO. 1 BROADWAY IN 1848.
From the original owned by John D. Crimmins.

near Broadway, had about 25,000 volumes; it now occupies perhaps the finest college library in the country, the gift of its late president, ex-Mayor Seth Low, with a noble collection of books numbering 450,000. The Mercantile Library Association, in Beekman street, corner Nassau, possest 26,881, and now numbers 237,644. The Mechanics and Tradesmen's Society, 474 Broadway, had a library of 13,563 volumes, and at present occupies a stately edifice in West Forty-fourth street, with books numbering 100,027. The Public Library on the Astor, Lenox and Tilden foundations, for which the city is now erecting a noble marble edifice in Bryant Square, it is expected, will equal, if it does not surpass, any building ever erected for the conservation of books. The architects believe it will be completed in about two years. The collection, including the numerous circulating libraries, now numbers 1,619,489, and is surpast in extent only by the British Museum and Bibliotheque National of France.

THE PETER STUYVESANT TREE.

The pear tree brought from Holland by Peter Stuyvesant in 1647, and planted on his farm of sixty-two acres, called the Great Bouwerie, stood on the corner of Thirteenth street and Third avenue until the autumn of 1867, bearing fruit almost to the last. The writer of the article has a large engraving of the Governor in a frame made from a part of the ancient tree.

The magazines of that period were the *Democratic Review,* the *Eclectic, Graham's, Hunt's Merchants,* the popular old *Knickerbocker** and *Harper's Monthly,* establisht in 1847, which soon surpast them all in circulation. The leading morning dailies in 1848 were the *American,* edited by Charles King, later President of Columbia; the *Courier and Inquirer,* the *New York Herald, Journal of Commerce, Sun* and *Tribune.* The evening journals were the *Commercial Advertiser, Express* and *Post,* then, and until his death in 1878, edited by William C. Bryant. He, with Halleck, Hoffman, Audubon, Cooper, Irving, Morris, Paulding, Poe, Verplanck, Bancroft and Willis, were then living in or near New York.

Sixty years ago the publishers and principal booksellers of the metropolis, with their places of business, were D. Appleton & Co., 200 Broadway; Banks, Gould & Co., 144 Nassau street; Baker & Scribner, 36 Park row; Alfred S. Barnes & Co., 51 John street; Bartlett & Welford, 7 Astor House; Burgess, Stringer & Co., 222 Broadway; Robert Carter, 58 Canal street; Collins & Brother, 254 Pearl street; George F. Cooledge & Brother, 323 Pearl street; Cooley, Keese & Hill, 191 Broadway; Moses W. Dodd, City Hall Square, corner Spruce; John Doyle, 146 Nassau street; Charles S. Francis & Co., 252 Broadway; William Gowans, 63 Liberty street; Harper & Brothers, 82 Cliff street; Henry Iveson, 199 Broadway; Leavitt, Trow & Co., 191 Broadway; Roe, Lockwood & Son, 411 Broadway; Methodist Book Concern, 200 Mulberry street; Nafis & Cornish, 278 Pearl street; Mark H. Newman & Co., 199 Broadway; Pratt, Woodford & Co., 159 Pearl street; George P. Putnam, 155 Broadway; William Radde, 322 Broadway; Justus S. Redfield, 137 Nassau street; Samuel Raynor, 76 Bowery; Stanford & Swords, 139 Broadway; John S. Voorhies, 20 Nassau street; John Wiley, 161 Broadway, and R. & G. S. Wood, 261 Pearl street, establisht in 1804, and with the exception of the Methodist Book Concern, the oldest publishing house in New York. Except Harper & Brothers, all

*The first number of the *Knickerbocker Magazine* is now before me, with its blue cover representing an old Knickerbocker (supposed to be Peter Schuyler, of Albany) smoking his Dutch pipe. It was founded by Charles Fenno Hoffman in 1833.

the publishers are now above Canal street; in 1848 they were all below.

Sixty years ago Hugh Maxwell was Collector of the Port, and Philip Hone Naval Officer; James Tallmadge, president of the American Institute; James G. King, president of the Chamber of Commerce; A. B. Durand, president National Academy of Design; Albert Gallatin, president New York Historical Society, also of the American Ethnological Society; Richard Irvin, president of the St. Andrew's Society, and John A. King, president of the St. Nicholas Society. Caleb G. Woodhull was then Mayor and Frederick G. Tallmadge Recorder.

In 1848 the city debt was $12,010,350; on January 1st, 1908, it amounted to $537,577,801. The tax on real estate sixty years ago was $193,029,076; on personal property $61,164,447. For the present year the real estate tax is on $6,722,415,789; on personal property $453,774,611. The assessed value of real estate in New York City is now greater by more than two billion dollars than that of all the real estate in the whole of the United States west of the Mississippi River, including Louisiana and Minnesota. The assessed value of real estate per capita in 1898 was $774; in 1908 it is $1,520, or practically double what it was ten years ago, and about five times as much as it was in 1848.

While in banking, publishing, and so many other branches of business, the metropolis has made such gigantic progress during the past threescore years, the glory of her merchant marine, which displayed our flag on every sea, has departed. It is indeed sad to see the Hudson and East River docks so bare and deserted on both sides of the city, that, as the writer remembers, were in 1848 studded like a forest, with the lofty and graceful spars of the finest and fastest sailing ships that the world ever saw. The beauty and wonderful performances of the American merchant marine, almost rivaling the speed of steamers, were the admiration of Europe. Some of the clipper ships, originating in Baltimore and improved by Donald McKay and other New England and New York builders, sometimes even surpast the steamers in speed, carrying the latest news to England by slipping in between the ten-day steamers of the Collins, Cunard and Inman lines. The clipper "Dreadnought" landed the mails at Queenstown in nine days; the "Surprise" made the voyage from New York to San Francisco in ninety-six days; the "Natchez" made the run from Canton to this city in eighty-six days, while the "Honqua," another famous clipper,

ALEXANDER HAMILTON'S ELM TREES.

These trees were planted by Hamilton and are represented as they appeared in 1848 at 143d Street, east of Amsterdam Avenue. From an original owned by John D. Crimmins.

came from Shanghai to this port in eighty-eight days, sailing 328 miles in a single day. The "Flying Cloud," a celebrated McKay built clipper, covered 374 miles in a single day, the best run ever made by a sailing ship. But the Aspinwalls, Grinnells, Guions, Lows, Minturns, and other great merchants of the metropolis, were not responsible for the disappearance of these beautiful sea couriers from our docks. Steamships, the Civil War, and the strange policy pursued by the Government, so subversive to shipping interests, have not only driven the sailing ships, but, to a certain extent, our steamers also, from the ocean. The American who now crosses the Atlantic has to do so under a foreign flag, that of France, Great Britain, Germany, Holland or Italy.

But I must conclude this paper concerning New York sixty years ago, and will do so, with the poet's invitation:

"I pray you, let us satisfy our eyes
With the memorials and the things of fame
That do renown this city."

NEW YORK CITY.

Prairie Chickens

BY HAMLIN GARLAND

From THE INDEPENDENT of October 5, 1893.

FROM brown-plowed hillocks
In early red morning,
They awoke the tardy sower with this cheerful cry;
A mellow boom and whoop
That held a warning—
A sound that brought the seed-time very nigh.

The circling, splendid anthem
Of their greeting
Ran like the morning beating of a hundred mellow drums—
Boom, boom, boom!
Each hillock kept repeating,
Like cannon answering cannon when the golden sunset comes.

They drum no more,
Those splendid springtime pickets;
The sweep of share and sickle has thrust them from the hills,
They have scattered from the meadow
Like partridge in the thickets—
They have perished from the sportsman, who kills, and kills, and kills!

Often now,
When seated at my writing,
I lay my pencil down and fall to dreaming still
Of the stern, hard days,
Of the old-time Iowa seeding,
When the prairie chickens woke me with their war-dance on the hill.

The Ermine

BY ELIZABETH STUART PHELPS

From THE INDEPENDENT of November 28, 1878.

I READ of the ermine today,
Of the ermine who will not step
By the feint of a step in the mire;
The creature who will not stain
Her garments of wild white fire.

Of the dumb, flying, soulless thing
(So we with our souls dare to say),
The being of sense and of sod,
That will not, that will not defile
The nature she took from her God.

And we with the souls that we have
Go cheering the hunters on
To a prey with that pleading eye
She cannot go into the mud!
She can stay like the snow, and die!

The hunters come leaping on,
She turns like a hart at bay.
They do with her as they will.
O thou who thinkest on this,
Stand like a star, and be still.

Where the soil oozes under thy feet!
Better, ah! better to die
Than to take one step in the mire!
Oh! blessed to die or to live
With garments of holy fire!

Thirty Years Ago

BY RICHARD SALTER STORRS, D.D., LL.D.

From the thirtieth birthday issue of THE INDEPENDENT, December 5, 1878.

To the Editor of The Independent:

My Thanksgiving Day has certainly been far pleasanter and more peaceful because I have had no editorial work to do for THE INDEPENDENT. Yet I remember with great pleasure the years of my connection with it, and I most sincerely congratulate you and your associates, with the courageous, energetic, and far-sighted proprietor of the paper, on the constant and large success which attends it. I hardly ever open a number of it without wondering afresh at the extent and the variety of the resources which you are now able to lay under contribution, and at the amount of knowledge, and ripe reflection, as well as of practised and delightful writing, which you are able each week to supply.

It seems hardly possible that thirty years have passed since the paper was started, in the small and obscure office in Beekman street; with Dr. Bacon, to give it of his splendid rhetoric, of his wise thought on public affairs, and of the fruits of his large experience; with Dr. Thompson, to supply patience as well as brains, to keep the paper abreast with the last and best reading of the time, and to do more work on it than both his colleagues, with his indefatigable spirit and alert mind; with my untrained and procrastinating pen, to fill up whatever chinks my associates may have left, and to supply that general and just admiration of whatever they did for which every office ought to keep one editor always on hand. Then dear and venerable Dr. Leavitt used to supervise all and to make his modest suggestions a tacitly accepted law in the editorial room. Work never seemed to weary us, then. We had no bother with reporters; the printers found no fault with anybody's manuscript but mine; and unsought contributions went to the waste-basket with a certainty and a celerity which it was refreshing to see.

Those were pleasant days in the office; full of bright hopes, most of which have been realized; of plans, many of which have been joyfully accomplished; of affectionate and confiding regards, the greater number of which, thank God! have stood the test of other years, closer contacts and clearer knowledge. We knew something of the *gaudia certaminis,* no doubt; but we knew more of the gladness of helping important interests, and of quickening minds and strengthening hearts which other papers had failed to reach. I do not think that we ever were frightened from our convictions by any abuse, or ever were daunted because the opposition was vehement and persistent.

But I cannot realize that thirty years have passed since that day, until I rapidly call up before me the places and the faces in the vicinity of the office, with which I then was familiar. Dr. Spring was preaching, with great power and majesty, in the old Brick Church, at the head of Beekman street, where the offices of *The Times* and *The World* now stand. Dr. Tyng, Senior, had recently succeeded to the pulpit of the revered Dr. Milnor, in old St. George's, also then on Beekman Street. Dr. James W. Alexander was in the Presbyterian church in Duane Street, which has since become the church of Dr. John Hall, planted now on the confines of the Central Park. Dr. William Adams was in the Central Presbyterian Church, on Broome Street; and Dr. S. H. Cone was in the Baptist church near him. Dr. Erskine Mason was in the Bleecker Street church; Dr. Asa D. Smith in the Brainerd Church on Rivington Street; Dr. Stiles—unless I mistake—in Mercer Street; Dr. Krebs in Rutgers Street. Dr. Cheever's splendid "Church of the Puritans" stood where Tiffany's magnificent storehouse of riches and art now overlooks Union Square, and was occupied by one of the largest and best congregations in the city; Dr. William Patton was in the then promising Congregational church on Hammond Street; and Dr. Cochran in Sullivan Street. Drs. DeWitt, Vermilye, and Brownlee were pastors of the Collegiate Dutch Church, whose two hundred and

fiftieth Anniversary was celebrated so brilliantly the other day; Dr. Ferris was in Market Street, and Dr. Hutton on Washington Square. Dr. Bethune had not yet entered on his memorable career of ten years in Brooklyn. Bishop Onderdonk was living, and was still regarded, I believe, by most of his church-people as properly at the head of the Episcopal diocese of New York. Drs. Berrian and Wainwright were in Trinity Church; Dr. Seabury, learned, devout, an admirable writer, and about as high in his churchmanship as any one ever will be in this world without striking the stars with his sublime head, was in the Church of the Annunciation (I think that is the name) on Fourteenth Street; Dr. Bedell, since for so long a time the beloved bishop of his church in Ohio, was in Ascension Church; Dr. Muhlenberg, noble and beautiful, was in the Church of the Holy Communion; and Dr. Whitehouse, afterward for many years Bishop of Illinois, was at St. Thomas's.

Albert Gallatin was president of the Historical Society, with Luther Bradish for vice-president. Drs. White and Robinson, and, I think, Dr. Skinner, were professors in the Union Seminary; while Drs. Brigham, Badger, Halleck and Eastman were secretaries, respectively, of the Bible, Home, Missionary and Tract societies.

A few moments' thought would no doubt recall others, almost as prominent as these were at that time, and whose names would be equally significant of the swift and wide changes which have since occurred. But these are enough to help me bridge over in thought the interval between the present evening and that on which I wrote my first editorial article for THE INDEPENDENT. The thirty years have indeed gone by, not to return. Most of the men whom I have named are in their graves. Many of them have been there for years. Without exception, I think, all who remain here are in other positions than those which they then occupied, of honorable work and useful influence. But the paper continues, and I hope and doubt not will still continue. when all those who were active and controlling in the religious and literary life of these cities at the time of its commencement shall have passed to their rest.

This incorporeal, though hardly impersonal life of the paper, self-unfolding and abiding, has an immense promise in it, while it plainly imposes large responsibility on those to whose care it is at any time committed. I hope, my dear sir, that as your days your strength may be; that, like Asher of old, you may be always acceptable to your brethren, and find your feet dipped in oil, if that means that your path shall be pleasantly smoothed and lubricated before you. And I hope that when another thirty years shall have passed, THE INDEPENDENT may still be flourishing as now, still "growing as the lily, and casting forth its roots as Lebanon"—which is certainly the most vivid and perfect image that even the Scripture finds to give us whereby to describe the intimate union of beauty with strength, of a charming and perfumed grace with the vigor and the majesty of an assured power.

I am sorry not to have sent the article which you asked for, but the weeks have been too short and I have been too busy. I am, nevertheless, with these best wishes for the paper and its future, as well as with constant and warm personal regard,

Ever faithfully yours,

R. S. STORRS.

BROOKLYN, N. Y., November 28, 1878.

RICHARD SALTER STORRS, D.D., LL.D.

From an old photograph taken when Dr. Storrs was 38 years of age. In 1848, when he became one of the three first editors, he was only 27.

The Charge of the Heavy Brigade at Balaclava

October 25, 1854

BY ALFRED TENNYSON

[The publication of this poem in THE INDEPENDENT of March 2, 1882, excited wide comment, for it was the first time in America that a poem was ever sent to the United States by cable. This poem was copied by all the New York dailies and by leading newspapers thruout the country and credit given to THE INDEPENDENT. In England the poem appeared in *Macmillan's Magazine*. The "three hundred" of the "Heavy Brigade" who made this famous charge were the Scots Greys and the second squadron of Inniskillens; the remainder of the "Heavy Brigade" subsequently dashing up to their support. The "three" were Scarlett's aide-de-camp, Eliot, and the trumpeter, and Shegog, the orderly, who had been close behind him.—EDITOR.]

I

THE charge of the gallant three hundred, the Heavy Brigade!
Down the hill, down the hill, thousands of Russians,
Thousands of horsemen, drew to the valley—and stay'd;
For Scarlett and Scarlett's three hundred were riding by
When the points of the Russian lances arose in the sky;
And he call'd, "Left wheel into line!" and they wheel'd and obey'd.
Then he look'd at the host that had halted he knew not why,
And he turn'd half round and he bade his trumpeter sound
To the charge, and he rode on ahead, as he waved his blade
To the gallant three hundred whose glory will never die—
"Follow," and up the hill, up the hill, up the hill,
Follow'd the Heavy Brigade.

II

The trumpet, the gallop, the charge, and the might of the fight!
Thousands of horsemen had gather'd there on the height,
With a wing push'd out to the left and a wing to the right,
And who shall escape if they close? but he dash'd up alone
Thro' the great gray slope of men,
Sway'd his sabre, and held his own
Like an Englishman there and then.
All in a moment follow'd with force
Three that were next in their fiery course,
Wedged themselves in between horse and horse,
Fought for their lives in the narrow gap they had made—
Four amid thousands! and up the hill, up the hill,
Gallopt the gallant three hundred, the Heavy Brigade.

III

Fell like a cannon-shot,
Burst like a thunderbolt,
Crash'd like a hurricane,
Broke thro' the mass from below,
Drove thro' the midst of the foe,
Plunged up and down, to and fro,
Rode flashing blow upon blow,
Brave Inniskillens and Greys
Whirling their sabres in circles of light!
And some of us, all in amaze,
Who were held for a while from the fight,
And were only standing at gaze,
When the dark-muffled Russian crowd
Folded its wings from the left and the right,
And roll'd them around like a cloud—
Oh, mad for the charge and the battle were we,
When our own good redcoats sank from sight,
Like drops of blood in a dark-gray sea,
And we turn'd to each other, whispering, all dismay'd,
"Lost are the gallant three hundred of Scarlett's Brigade!"

IV

"Lost one and all" were the words
Mutter'd in our dismay;
But they rode like victors and lords
Thro' the forest of lances and swords
In the heart of the Russian hordes,
They rode, or they stood at bay—
Struck with the sword-hand and slew,
Down with the bridle-hand drew
The foe from the saddle and threw
Underfoot there in the fray—
Ranged like a storm or stood like a rock
In the wave of a stormy day;
Till suddenly shock upon shock
Stagger'd the mass from without,
Drove it in wild disarray,
For our men gallopt up with a cheer and a shout,
And the foeman surged, and waver'd, and reel'd
Up the hill, up the hill, up the hill, out of the field,
And over the brow and away.

V

Glory to each and to all, and the charge that they made!
Glory to all the three hundred, and all the Brigade!

Words of Appreciation

FROM READERS OF THE INDEPENDENT

[Of the many who would have been glad to send congratulatory letters on the occasion of THE INDEPENDENT's sixtieth birthday, we have asked but a very few to write, and have ventured to limit them each to but a single phase of the service which this journal has done. Each writes of that which has particularly interested him, and the succession of their faceted views will present a somewhat complete whole.—EDITOR.]

The Independent and the Nation.

To the Editor of The Independent:

On the sixtieth anniversary of the founding of THE INDEPENDENT let me write you a few words of congratulation. Thruout these sixty years THE INDEPENDENT has stood for sane and progressive policies in our national life. It was started to represent the anti-slavery principles of the churches. It was a chief supporter of the Liberty and of the Free Soil parties. It supported the Republican party, which succeeded them. It was a staunch champion of Abraham Lincoln. It helped fire the people to maintain the Union. It strengthened the hands of the President as he moved for the abolition of slavery. It is a record of which to be genuinely proud. With all good wishes, believe me, Sincerely yours,

THEODORE ROOSEVELT.

WASHINGTON, D. C.

From the President-Elect.

To the Editor of The Independent:

I take pleasure in sending you this note of congratulation on the sixtieth anniversary of the foundation of your magazine. THE INDEPENDENT always has stood for progress as it saw it. It supported the Fourteenth and Fifteenth Amendments, has demanded equal rights for all races, and has stood for a fair return for labor.

I hope it may yet enjoy a long period of prosperity, supporting what is best for America and her people.

Very sincerely yours,

WILLIAM H. TAFT.

HOT SPRINGS, VA.

International Peace.

SIR—I am surprised to learn that THE INDEPENDENT is such a venerable sheet. From its tone and "go-aheaditiveness" I thought it a product of more recent days. After twenty years' acquaintance it gives me great pleasure to congratulate you upon its forthcoming sixtieth anniversary.

In the supreme cause of International Peace and Arbitration it has long been among the foremost, and for much of the ground which the Peace movement has gained in America it is entitled to great credit.

This is not the only good cause it has supported. It may truly be said that it has stood for everything that is good. I do not know a publication that represents more fully than it does all that an independent press, conscientiously managed, should be. Not only what you have admitted, but what you have excluded, is important!

I should not like to miss THE INDEPENDENT, and wish you the success which it is desirable in the best interests of our country and of the world that it should meet with.

I am, Your grateful subscriber,

ANDREW CARNEGIE.

NEW YORK CITY.

Business and Finance.

SIR—I have read THE INDEPENDENT from my boyhood, and have always found it an instructive and a cosmopolitan journal, condemning the bad and advocating the good. It was founded by a business man, and has been prompt and correct in its report of affairs interesting and of advantage to the business world; it has been instrumental in the development of the country on safe and judicious lines; it urged and aided the construction of the great railroad enterprises which first tied the Atlantic to the Pacific; it defended sound money when so many went astray, and did its share to win the victory which has resulted in the establishment of the single gold standard; it has maintained an optimistic faith in the country and its resources, and has encouraged business integrity

and correct financial methods in the conduct of institutions; it urged the legislation which created our national banking system, and has supported the financial policy of our country which has given us prosperity; it has been free and open in its criticism, whether of governmental extravagance or of illegitimate and unscrupulous devices whereby the weak were made the prey of the rich and the strong.

THE INDEPENDENT has been independent in action as well as in name, and the policy it has pursued I hope has been in the long run as profitable to itself as I know it has been of advantage to the country.

I congratulate the paper on having printed its Sixtieth Anniversary Number, and I wish for it a long and uninterrupted continuance of prosperity.

Yours respectfully,

J. EDWARD SIMMONS,

President of the Chamber of Commerce of the State of New York and President of the Fourth National Bank.

NEW YORK.

The Negro Problem.

SIR—I do not express a mere personal preference when I say that the negroes of the United States are for THE INDEPENDENT. They have reason to be; for THE INDEPENDENT has been for them, has been their friend.

Ever since 1852, when Henry Chandler Bowen opposed the Fugitive Slave law, the people of my race have had the support and sympathy of the paper of which he was editor and founder, in every effort they have made in the direction of progress. It was at that time, in 1852, that Mr. Bowen uttered, in reply to the boycott of some of his readers, the famous declaration that his firm "had its goods, but not its principles for sale."

In saying that THE INDEPENDENT has stood by the negro in his struggle to elevate himself to a position of the highest usefulness. I do not mean that the paper has acted in this respect in any partisan spirit. The time has not yet come, nor will it, when the negro, as a race, can afford to have any purposes or interests that are in conflict with the real and fundamental interests of the white people in this country, North or South. In helping and encouraging the negro, THE INDEPENDENT has helped to make the world better.

I hope the time will never come when the negro in this country will be in so sore need of great and powerful friends as it was when THE INDEPENDENT took up his cause. But, in any case, I am sure my race will never find a friend more sincere and more steadfast than THE INDEPENDENT has been from that time to the present. The negro people of America owe a great debt of gratitude to the editors of THE INDEPENDENT for the services they have rendered to the race and to the country. Sincerely,

BOOKER T. WASHINGTON.

TUSKEGEE, ALA.

The Independent in Washington.

SIR—It is not surprising that the path of THE INDEPENDENT, in Washington, has been one of progress. Whether considering the magazine itself, or its successive representatives in the capital, it was inevitable. Edna Dean Proctor, D. W. Bartlett, Mary Clemmer Ames, Janet Jennings and the Hon. Samuel T. Barrows ably sustained the responsibility and aided THE INDEPENDENT in arriving at its present position, unique in identity, dignity, influence and audience.

There is hardly a committee room of the Senate or House of Representatives where one fails to find the last INDEPENDENT lying conspicuously on desk or table—often with articles marked or cut for future use. In the corridors of the Capitol and at the departments I have frequently listened to quotations or comments on the latest issue before my own copy was delivered, giving a pleasing suggestion of the early and careful inspection it had received, even if it was a criticism by some one not so pleasantly affected.

The increasing frequency of articles on vital subjects by Senators, Congressmen and high Government officials—members of the Cabinet and heads of departments—is a double testimony and a mute acknowledgment of the writers themselves that thru the pages of THE INDEPENDENT they can best catch the eyes of those whose attention they are most anxious to secure.

Apropos: One of the ablest and most

effective speakers of the Senate said to a circle of friends in the Marble Room:

"Three times I prest the matter most earnestly on the floor of the Senate, but the first results obtained came from a single article in which I combined the same thoughts in THE INDEPENDENT."

Also *apropos:* A Cabinet officer said that for two years, in reports, statements and testimony before the committee, he had tried to impress upon the Congress the advisability of a certain course, but found more effective an article in which he presented the matter thru THE INDEPENDENT.

This is hardly surprising when so many Senators and members take THE INDEPENDENT and read it quietly, in their homes, where they can consider and reflect in a different mood and spirit from that which involuntarily greets the speech, report and testimony.

Two years ago, by unanimous consent of the Senate, on a motion made by Senator Hale, an article in THE INDEPENDENT was republisht as a Senate document. Nor is there always more pleasing suggestion in commendation than in condemnation. Such was the case when, a few years since, an article found its way into THE INDEPENDENT to some extent criticising the work of the Administration in Panama. President Roosevelt himself, thru the War Department, replied directly to this article in a ten thousand word letter to Congress, naturally accompanying his message with a copy of the magazine containing the article to which it was a specific reply, thereby incorporating the magazine as a state document—two graphic compliments which in all the history of journalism doubtless stand without counterpart.

The occasional personal sketches of public men appearing during the past two years, as events brought them into special prominence, have proved exceptionally popular in the capital, tho obviously intended to interest those farthest away. The daily papers of Washington, as well as thru the country at large, frequently copy them. Hundreds of letters have been received from the capital concerning these sketches, and it is a pleasing indorsement of the care for accuracy expended upon them that not a single error has been noted or adverse criticism offered.

In its opening pages, reviewing yesterday, in its middle department, of timely articles—always by writers best fitted to speak upon the subject in hand—considering today, in its editorial pages at the end, contemplating tomorrow, THE INDEPENDENT holds a unique position of respect and deference in Washington, as a constantly increasing power—watched, heard and heeded because of its timeliness, its fearlessness, its moderation and the obvious justice of its intentions. The popularity of THE INDEPENDENT in Washington is not with any one party a whit more than with another. Its independence is a valuable asset in nature as well as name. WILLARD FRENCH,

Our Washington Representative.

WASHINGTON, D. C.

The Extension of Democracy.

SIR—Among all the excellent things that THE INDEPENDENT stands for, the democratic ideal assuredly is not the least, and among all the brave and fine things which THE INDEPENDENT has done, its unhesitating support of progressive democratic measures is deserving of sincere and especial praise.

The pressure which today is brought to bear to discourage a full and fair presentation of democratic policies is tremendous and persistent, as every editor is made aware thru that sixth sense which Samuel Bowles used to talk about, and as every publisher inductively discovers from his profit and loss account. The man who does not know that in America we are in a fight to the finish between democracy and privilege is sadly misinformed, and the editor of THE INDEPENDENT has given us abundant evidence that his information is exceptionally accurate and wide. THE INDEPENDENT'S readers, therefore, may rest assured that its pages have not been thrown open to a fearless discussion of all the most disturbing social questions of the day for sensational or for commercial reasons, and that its straightforward editorial advocacy of that government of and for and by the people in affairs economic, as in affairs merely legal and political, which is necessary for the realization of Abraham Lincoln's prophecy, has been pursued only from the highest motives of public duty.

In the columns of THE INDEPENDENT we have learned to look for first-hand statements from men in the thick of the contest, on all such subjects as the labor movement, including such specific questions as the abuse of the injunction and the miseries of child labor, the movement in behalf of the initiative and the referendum, the progress of public ownership, the curbing of privilege, the balancing of franchise by responsibility, the restraint of mob lawlessness, the promotion of education at State expense, and the great movement for some diminution of the unspeakable horrors and wastes of international war. And, while giving opportunity to every shade of opinion on these questions to express itself in contributed articles, THE INDEPENDENT editorially has consistently urged moderate and law-abiding but continuing progress toward the democratic goal. It can rightly take an honest pride on its sixtieth anniversary in knowing that its influence is one of the real forces which, in the end, will make the Declaration of Independence "come true." Sincerely,

FRANKLIN H. GIDDINGS (LL. D.).
Professor of Sociology in Columbia University.
NEW YORK CITY.

Social Reform.

SIR—THE INDEPENDENT is an exponent of test tube sociology, a vehicle for recording valid social experiments. On its staff and its contributors' list it employs critics who are sympathetic with serious tests of plausible social theories and skeptical of sanctum deductions. It gives no space to quack nostrums, wastes no powder on pretenders. In all the literary field, periodical or book, THE INDEPENDENT is not second to any in enlightening and influencing the serious and thoughtful about the practical ways in which the social conscience may be awakened, social knowledge be gained and social action be inspired.

Natural science acknowledges a big debt to Darwin for demonstrating the evolutionary hypothesis, and still more for giving currency to the experimental method of acquiring knowledge and applying it. What the imagination propounds, experiment must verify or disprove. An ounce of speculation may need a pound of trial. The test tube plays this part in chemistry and its dependent discoveries. Laboratory is the big word in post-Darwinian science.

Wordy war has been waged over the claim that political economy is a science, or its sub-section, sociology. Its claims have thriven on the rostrum methods; it has been little subjected to the laboratory tests.

If THE INDEPENDENT does not always know, if it is not always right, it is always clear, strong, unequivocal in discussing relevant social questions. It calls to its aid writers who have gone nearest to the tube test in social questions as in other fields of knowledge and interest.

THE INDEPENDENT is several years younger than I am; I know of its youthful exploits only by common repute, but in the many years of my intimate acquaintance I esteem it as the most efficient and unwavering sponsor for test tube sociology, to which I am a devout adherent. Sincerely,

N. O. NELSON.
Manufacturer Co-operator, Philanthropist.
ST. LOUIS.

Simplified Spelling.

SIR—It is at once the duty, the privilege and the pleasure of the conductors of a serious journal to advocate such reforms as they may believe to be within the sphere of practical politics. Yet it is not often that any one of the reforms which this magazine may urge upon the public can be exemplified in its own columns. The editor may preach civil service reform or forest preservation; but he is powerless to practise it himself.

By a happy stroke of fortune THE INDEPENDENT has preacht one reform which it has been able itself to practise. Its editors have not only set forth clearly and cogently the need for the steady and progressive simplification of our spelling, if our noble language is to be kept fit for the larger opportunities now opening before it; they have also had the wisdom and the courage to set the example in their own pages. They have loyally taken the medicine they prescribed for others.

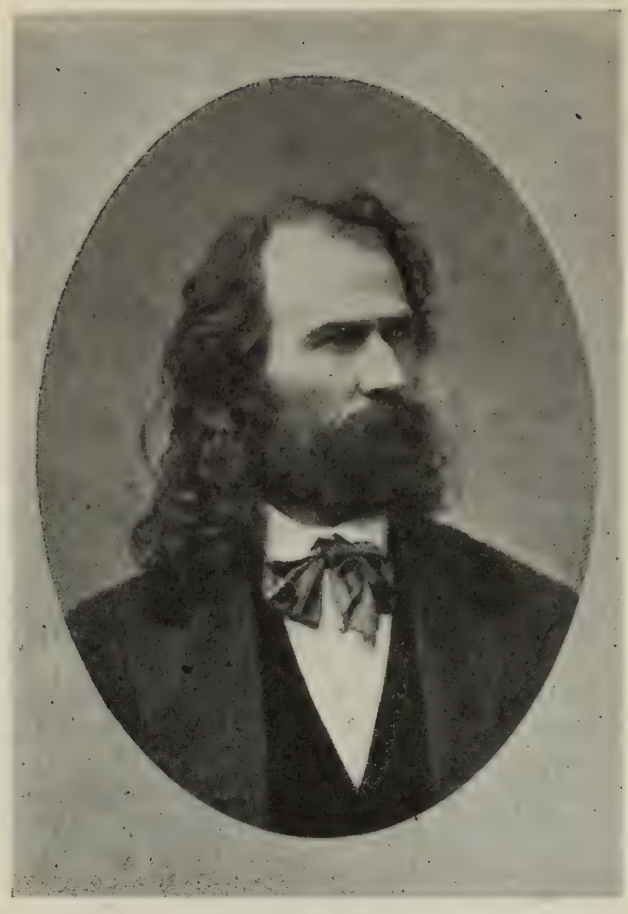
In so doing they have rendered a great service to the cause. They are helping to make the careless and often intolerant public perceive what simplified spelling really is. We are all of us prone to

shrink from the unknown and even from the uncommon; and yet familiarity breeds acceptance. We soon conquer our dislike to a disconcerting novelty, and in a little while we find ourselves wondering why we did not always conform to our new practice.

The recommendations of the Simplified Spelling Board have been approved by the conductors of not a few of the leading periodicals of the United States, but THE INDEPENDENT has taken a foremost place by resolutely accepting these recommendations. It has proved its faith by its works. Sincerely,

BRANDER MATTHEWS.
Professor of Dramatic Literature in Columbia University and ex-President of the Simplified Spelling Board.

Woman Suffrage.



SIR—The good service rendered to the cause of woman suffrage by THE INDEPENDENT deserves gratitude from all the friends of equal rights for women. That service dates back to the early days of the movement, when it took more courage to be an advocate of woman's ballot than it does today. When THE INDEPENDENT was founded, women had no vote anywhere, except the school ballot in Kentucky and in some parts of Canada, and the municipal vote in Sweden. Today they vote for all officers in Finland, Norway, Australia, New Zealand, Wyoming, Colorado, Utah, Idaho and the Isle of Man; for municipal officers in England, Scotland, Ireland, Canada, Kansas, Sweden, Denmark and Iceland; for judges of the tribunals of commerce in France; and for school officers in half of the States of the Union. THE INDEPENDENT has used its great influence to help bring about this change. Its attitude is that which every progressive paper must take, unless it would range itself on the same side of the woman suffrage question with the liquor interest, the gambling houses and the brothels. Every vicious interest to which women are hostile would far rather continue to contend with woman's "indirect influence" than try to cope with woman's vote. Sincerely,

ALICE STONE BLACKWELL,
Editor *The Woman's Journal.*
DORCHESTER, MASS.

Music and the Arts.

SIR—I fear that to carry out even conservatively your kind suggestion would mean my reverting to reminiscences and to personal opinions as to currents of art and public taste in America more than many of your readers would find interesting. The term of my long charge of the musical criticism and comment in THE INDEPENDENT (begun as an experimental matter in the "season" of 1880-81, and continuing with no interruption until that of 1900-01, or 1901-02) was largely one of complex and potent interests and influences in musical art before the American public; some of its currents seeming now of a classic significance in such history. I hope that nobody who was so amiable as to read regularly the articles or comments concerned grew tired of them during so long a series over the same signature; week by week, which, considering that last factor, is perhaps a sort of tautology for humbly hoping that nobody grew tired of—me?

Perhaps the most distinctive aspect today of those many columns and pages is that the establishing in THE INDEPENDENT of such a systematic editorial "feature" was not only an aim at variety in the "Departments" (then such a trait of your journal), but also a part of that timely and tactful "secularization" of them; a detail of THE INDEPENDENT'S expansion as a review; your special expression of the fact that the time had come when a vast section of the religious-minded public was also one openly and keenly attentive to all the arts—a public which differed from a more hesitant generation just preceding in that its ethical conscience did not question such tastes. THE INDEPENDENT, like many thousands of thoughtful and cultivated men and women, was at that date in a process of logical and interesting transition of sentiments and appreciations; and it can be a sympathetic thought to your older readers that their journal, true to its name and so observant of the signs of the times, was very much of a pioneer in assuring its subscribers that to countenance intelligently and graciously the world and even the flesh didn't of necessity mean extending such civilities to the Devil. I believe that at that era of

JOAQUIN MILLER.

The poet of the Sierras, for some years a frequent contributor to THE INDEPENDENT in poetry and prose.

Anglo-Saxon theology he was still quite generally thought to be extant.

With a very cordial salutation, *à travers chants,*

EDWARD PRIME-STEVENSON.

PARIS, FRANCE.

Books and Literature

SIR—I have always regarded it as fortunate that I began my journalistic work in the literary department of THE INDEPENDENT. The standard of the department had been set high by my predecessors—Hon. Justin McCarthy, Titus M. Coan, Prof. C. F. Toy, Prof. Charles F. Richardson, Dr. Kinsley Twining and Maurice Thompson. Nothing is easier and nothing is more commonly done than to apply to book reviewing our national habit of shirking criticism and aiming always to say something pleasant and "helpful," particularly when something "helpful" soothes the optimistic temper of the advertising manager as well as that of readers. What's the harm of saying a kind word? And, Why not just leave the bad books alone, if you can't praise? Just because every page of trash that is printed means so much distraction of attention from what is good, and makes it harder for the good to survive. As a matter of fact, the sharp censure of what is trivial and erroneous is just as important as the indication of what is excellent and correct. And this habit of equal censure and praise had been firmly established in THE INDEPENDENT by a succession of able editors in the book department, with the encouragement of those who handled the money. Mr. Maurice Thompson had last been in charge of the department, leaving it vacant by his death. He was a man of decided tastes and had made a brave fight in THE INDEPENDENT for what is sound and strong in literature. Dr. Twining also, who controlled the reviewing of historical and technical books, had continued the tradition of scholarly care. These principles I found established — independence, sanity, scholarship; and as I now read the magazine as an outsider, they seem still the guiding principles. Sincerely,

PAUL ELMER MORE.

Literary Editor of *The Evening Post* and *The Nation.*

Poetry.

SIR—Let me thank you on this day for the good service you have done these sixty years to those among your readers who are lovers of poetry. Not only have you provided for them a weekly feast, but, by your judicious choice, and words of appreciation when a new poetic star has arisen, you have cultivated the taste of many others and have taught them a wise discrimination. Have you not also given to the poets themselves helpful encouragement and criticism? No paper or magazine in the country has been able to rival your department of poetry. All the American masters of song, Bryant, Holmes, Longfellow, Lowell, Whittier, Aldrich, Gilder, Harte, Hovey, Riley, Stoddard, Taylor, have been among your contributors. In the earlier days, when you stood chiefly for religion and reform, Mrs. Stowe, the Cary sisters, Whittier and Stedman taught the gospel of liberty and of love through your columns. Of Whittier, Stedman said truly that no one else put so much heart and so much religion in his poetry, and you

gave your readers nearly seventy poems from his pen. You introduced to them Mrs. Browning, publishing more than twelve of her poems, doing your part to make true Mr. Tuckerman's statement that her readers in America far outnumbered those in England. In the most fruitful period of Joaquin Miller, Helen Hunt, Celia Thaxter, and "Susan Coolidge" (Miss Woolsey), you gave us half a dozen poems from each, yearly. During the years 1885 and 1886 you printed, respectively, 241 and 226 poems. Among their authors is a long line of English poets, including such names as Tennyson, Lang, Dobson, Gosse, Marston, Locker, Stevenson, Graham R. Tomson, whom we now know as Mrs. Marriott, and Charles and Eric Mackay, not to mention the Rumanian poet and queen, "Carmen Sylva."

How deeply are we indebted to you for an intimate acquaintance with many of our Southern poets, the two Haynes, father and son, Maurice Thompson, Mrs. Preston, Mrs. Dandridge, and far above all Sidney Lanier, seventeen of whose poems first appeared in your columns. Nor would I fail to express thanks for the Canadian choir, led by the musical Carman, and his kinsmen of the Roberts family, who have so often sung to the world from THE INDEPENDENT's pages, nor the brilliant Irish coterie, O'Reilly, Roche, Yeats, Mrs. Blake and our ever-prized Miss Guiney.

THOMAS WENTWORTH HIGGINSON.

Now the dean of American authors. He has always been a valued contributor of THE INDEPENDENT and is one of the last surviving members of the famous New England School of Writers of a generation ago.

While thanking you for much from these poets whose names are now known thruout the land, we also remember the many young writers yet unfamed whose talent you have fostered, whose verses have often delighted us. Success to them! We congratulate you, also, that many times you have dared to print a long poem, so long that it could hardly have found foothold elsewhere. Can we fail to thank you for thus having given us Lanier's "Sunrise"?

Still discover new poets for your readers, dear INDEPENDENT, and fill your poetry pages generously.

Yours cordially,

SUSAN HAYES WARD

Formerly Office Editor THE INDEPENDENT.

NEWARK, N. J., Thanksgiving Day.

Higher Education.

SIR—The enlargement of the field of knowledge, the enrichment of the course and of courses of instruction, the increase of administrative efficiency, the wider inclusiveness of women in the higher education, the emphasis on the professional training of teachers, the improvement of the professional schools of law and medicine, the giving to higher education larger human relationships, these are among the great movements and tendencies of the last sixty years. These forces and results began to emerge in the decade succeeding the Civil War and have, with a few exceptions, been moving forward with increasing volume ever since. Great have been the causes and great also the results.

In this whole movement THE INDEPENDENT has been a force at once conservative and progressive. In general, I should say that it has been conservative in its estimate of educational content and

instruction, progressive in its attitude toward educational administration. It has presented in justice, comprehensiveness and definiteness the duty and opportunity of enlarging the curriculum to correspond with the enlarging field of knowledge, but it has also been only a guarded defender of the elective system of studies. It has stood for a high type of noble scholarship and for a high type of efficient teaching. It has sought to promote a high and aggressive type of educational administration in the public schools as well as in the colleges. It has had no sympathy with undergraduate nonsense. Football, as now played, has not usually been the object of its praise. The cause of the education of women, and especially of coeducation, has found in its columns sturdy and constant defense. It has had little or no sympathy with educational frills and fads. In all these affairs and movements the paper has stood for a high type of interpretation, of justice in judgment, and of inspiration in leadership.

CHARLES F. THWING (LL. D.),
President of Western Reserve University.
CLEVELAND, OHIO.

Public Education.

SIR—During the lifetime of the New York INDEPENDENT we have seen great changes in the schools. There has been in progress what we may call an urbanizing of the rural or "district" school. Villages have grown large and the people's schools have increased in size. It has become possible to do away with individual recitation and substitute class recitation. More time is given for the teacher to probe the pupil's mind and help him trace out causal relations and by so much to turn him from verbal memorizing of mere facts into a thinker who can find out the reasons of things. Grading has become possible and diligent pupils may complete the eight-year course of study and enter the high school.

By 1870 high schools commenced a rapid increase of numbers, swelling the aggregate from somewhat less than 200 to more than 800 by 1880, and to 2,526 in 1890, and to 6,005 in 1900, and to 8,031 in 1906. In 1890 public high schools enrolled 221,000, and in 1906 742,000 pupils. With the increase of opportunity to take up preparatory studies for college there has been a corresponding increase of students entering on higher education. In the decade 1890 to 1900 high school pupils increased from 3,000 to 7,000 in each million of the population, and during the same period the attendance on colleges and universities increased from 800 to 1,300 in the million. The increase of public high schools extends to all sections of the country—North and South Atlantic, North Central and Gulf States, and to the Mountain and Pacific States.

In an era of great ferment of public opinion on the subject of education, extending to private schools as well as to public schools, the New York INDEPENDENT has sustained its reputation, established more than forty years ago, as a power for good in the creation of a healthful public opinion on all educational subjects that most concern the welfare of the people. I have been imprest from year to year with its judicial spirit, its fairness to all manner of educational interests, and I have had occasion to admire its good judgment as to proposed reforms, whether as to new methods of instruction or new devices of organization such as are often urged by doctrinaires with more zeal than knowledge. Sincerely,

WILLIAM T. HARRIS,
Ex-United States Commissioner of Education.
WASHINGTON, D. C.

Theology.

SIR—I have always admired the old motto of THE INDEPENDENT, "Even as we have been approved of God to be entrusted with the Gospel, so we speak, not as pleasing men, but God, which proveth our hearts"; and I have been glad to believe that the spirit of that motto has generally prevailed in the policy of the paper, in its treatment of theological themes. This would mean, necessarily, truth to inner conviction, the open mind to the newer aspects of the truth, and the courage to declare the truth as it was seen; and this fidelity to convictions, this open-mindedness, this courage, THE INDEPENDENT has surely not often lacked. All this has been coupled thru the years with a breadth of view that desired to lay before the readers of THE INDEPENDENT a presentation of the different lines of progress, in theology as well as in other fields, and with the enter-

prise requisite to secure such representative presentation. And with this there has been further combined discriminating editorial discussion, based on competent scholarship. This has made it possible for THE INDEPENDENT to do a service for the progress of theological thinking that not many journals, certainly, can claim to have rendered.

HENRY CHURCHILL KING,
President of Oberlin College.

OBERLIN, OHIO.

Church Union.

SIR—I have been a reader of THE INDEPENDENT since the beginning of its life; for many years I was a frequent contributor, and for four years one of its responsible editors, so that I may claim to have some knowledge of its history. THE INDEPENDENT has been a leader in many lines of work; for many years it was the doyen of Christian journalism in the anti-slavery conflict. I observe that Mr. Rhodes, in his monumental history, makes large use, in his notes, of its editorial utterances, as indicating the drift of opinion. But in nothing has its testimony been more pronounced and consistent than in the movements which are directed toward the promotion of unity and co-operation among the churches. From the beginning THE INDEPENDENT has been a clear witness against the sin of schism. It has testified, in season and out of season, against the deplorable divisions of Christendom; it has pointed out the puerilities of the sectarian distinctions, and exhibited the waste and futility of the competitions which those called to be saints insist on practising.

It was thru the influence of THE INDEPENDENT, I think, that the May meetings of "The Congregational' Union," in the good old anniversary days, were turned into a feast of fellowship. Some of the graybeards well remember those marvelous May days, when all the philanthropies and evangelism congregated in New York, and the common air, from the Battery to Murray Hill, tingled for ten days with oratory. The meeting of those days that drew the biggest crowd was the meeting of "The Congregational Union," and the object of that meeting was not to discuss Congregational schemes, but to ignore them, and to sound the praises of Christian unity. The speakers were the leaders of the other denominations, and the fraternization for which it gave the opportunity was a most conspicuous and influential manifestation of Christian brotherhood. I doubt if anything else was done, in those days, which more strongly helped to promote unity among the churches. Of this movement THE INDEPENDENT was the instigator, and a stenographic report of the addresses at the meeting filled two or three pages of its blanket sheet.

No one ever thinks of THE INDEPENDENT without thinking of Dr. Ward, and no one who knows anything about the endeavors after unity among the churches in this country ever forgets the work that he has done, in encouraging federation and in advocating the organic unity of kindred communions. In every such enterprise he has either been at the front or among the most zealous of the promoters.

In truth we may say that when the history of the reunion of American Christianity comes to be written, the part which THE INDEPENDENT has taken in the movement will occupy a prominent page.

Sincerely,
WASHINGTON GLADDEN, D. D., LL. D.

COLUMBUS, OHIO.

Religion in America.

SIR—During my editorial connection with THE INDEPENDENT of nearly a quarter of a century, religious journalism had a wide influence. The denominational press was never stronger than when the non-denominational press was most prosperous. THE INDEPENDENT occupied a unique position. Still retaining its hold on Congregationalism and giving close attention to the interests of that denomination, it had an intelligent and sympathetic interest in all that concerned all other churches, not only in the United States, but in the world. It aimed to give luminous accounts of all important movements in religious thought and endeavor thruout Christendom, treating them impartially in its news columns, and editorially supporting heartily whatever seemed to make for the spirit of progress and unity.

It made known to the world the principles and practices of the smaller and obscurer fractions of Christianity, and served a useful purpose in helping the progressive elements in each to make a successful fight for recognition. I recall that one body of literalists, who, by minute rules for dress, life and personal conduct, sought to shut out everything modern, was divided into three factions, of which that representing the old order is now but a very small, diminishing company of zealots, destined soon to become extinct.

THE INDEPENDENT was alert to discern in the Roman Catholic Church, despite its constant assertion that it is always and everywhere the same, distinct schools of thought, and to interpret for the encouragement of the newer Catholic party the signs indicating the loosening of the bonds of medieval tyranny. It saw in Leo, with his *"Lumen in celo,"* a worthier Pope than Pius IX, with his obstinate *non possumus* to human progress and human liberty, and it hailed as educating influences within the Church such movements as those led by Dr. Döllinger, and Father McGlynn, and Bishop Koslowsky, tho it was obvious that they could not succeed in really dividing the Church. Those Protestants who insist that the Church of Pius X is the same as that of Pius IX are in accord with the element in that Church who say there is not and cannot be such a thing as progress for Catholicism. The rest of the world knows better.

THE INDEPENDENT, helping by its comprehensive and impartial survey of the religious world to make those of different faiths better known to one another, advanced the cause of Christian unity, which it has always advocated most earnestly. It insisted that organic union ought to begin in denominational families, like the Methodist, Presbyterian, Baptist and Lutheran, and that the principles of comity should obtain everywhere. The wisdom of its policy is amply borne out by such movements as Church Federation, the Conference of Foreign Mission Boards, the Ecumenical Missionary Conferences, and other cooperative demonstrations.

In the opinion of sturdy defenders of orthodoxy THE INDEPENDENT was much too ready to sympathize with heretics and too intolerant of heresy trials. In the last quarter of the nineteenth century there were many such trials in the United States and Great Britain, and reviewing them now, at this safe distance, I think that most candid minds would say that they should be avoided, except in extreme cases, in the interest of sound belief as well as of denominational peace, for the usual result of a heresy trial is to confirm the heretic in his heresy and to inoculate sympathizers with it.. The alternative is not unbounded toleration, but a quieter process of elimination.

THE INDEPENDENT reported revival movements sympathetically and sometimes with extraordinary fullness, and foreseeing the great hold foreign missions were to have upon the Church, it gave periodically pages of missionary intelligence fresh from the field.

THE INDEPENDENT made a feature of its table of statistics of all denominations, printed at the beginning of each year. It had been attempted before, but had never been carried to so complete a presentation. A review of the year, setting forth the order and importance of the leading events of the year in the religious world, was also a service widely appreciated.

On the whole, no other periodical, so far as I know, ever did or is doing now for the religious denominations what THE INDEPENDENT used to do,

Sincerely,

HENRY K. CARROLL (LL. D.).

PLAINFIELD, N. J.

The Independent and the Land.

SIR—I remember very well the beginning of THE INDEPENDENT and the pleasure with which it was greeted by my father and mother. I have noted its progress and its history thru all the years of its life, and of late with not a little personal satisfaction. It was about 1865 that I wrote my first article for its columns, on "The Art of Stopping," altho I have not stopped yet. Inheriting a strong bias for Nature study and Nature love, my ministerial life was never dissociated from gardening and orcharding, and it was for that reason that I soon drifted toward the Horticultural Department. This department was always ably conducted, especially by Rev. Dr. Car-

roll. I am not sure that he knew personally very much about plum trees and strawberry growing, but he certainly had a knack for knowing when his correspondents could be trusted. It is a curious fact, yet is a fact, that some of our best rural editors were city born and city bred. But the best editor is always the man who edits least, and meddles none at all with the judgment of one who is bred to the topic.

THE INDEPENDENT had a way from the outset of bringing out writers who had a rural gift; country knowledge and literary tact combined. Of these Maurice Thompson was the most eminent—a poet in his fingers as well as in his brains, for he did his whole life up into rhyme and rhythm. If ever a man was born a poet in his way of looking at things and doing things, as well as saying them, it was Thompson. It would be a good thing to republish a few of his best articles. He contributed a big part of the life of THE INDEPENDENT for many years.

About thirty years ago city congestion began to be a question of such moment that England and Germany appointed commissions to consider the problem, and in America for the first time we began to feel that we were socially on the road of the Old Continent. Our cities began to rival those of Europe for their congested masses and alarming poverty. If any other journal preceded THE INDEPENDENT in the serious discussion of this problem I do not know it. Instead, however, of bewailing the fact that the best forces were being drawn away from the country and absorbed in town life, we undertook to trace the possibilities of reaction, and make the best of the situation. It seemed much wiser to forecast the dissolution of the herd and show the possibilities hidden in rural life. We watched the census and seized with avidity every token of a change. I am not sure but we exaggerated realities somewhat; at least, we let nothing go that told in favor of the simpler life. We were prepared to comprehend, and make the most also, of the rapid reaction that began about 1890. THE INDEPENDENT was the first journal in the United States to discover and argue from the fact that the increase of population was no longer drifting city-ward. We were then prepared to understand very promptly the purport of the great fiscal change that took place, or began to take place, in 1894, when a trade balance was announced in favor of the United States, three-fourths of which was due to the export of country produce. Naturally we believed in a good deal of freedom of trade.

I had one hearty laugh when the managing editor said: "Powell, is this really a statement of facts, or is it a presentment of ideals—a state of affairs that ought to be?" My answer was: "It includes facts, but it states those facts so as to make the argument very strong on the right side; it is such a presentment as shall serve as a stimulant to more rapid movement." I have all along had a deep conviction that THE INDEPENDENT did more than any other organ of the public to make this breach with city congestion a popular passion. It certainly led the way, and today it can quietly rejoice in the fact that public sentiment is almost wholly given over to a rising taste for country life. We have seen the funeral of Old Hayseed and an end put to agricultural depression, while the list of deserted farms is no longer publisht by Connecticut and Massachusetts. We have come to a time when country life is as free from isolation and deprivations as any form of town life.

I run the risk of speaking boastfully in behalf of our splendid journal, because I do not think THE INDEPENDENT has itself fully realized its own achievements along this line. It is not impossible for a consistent journal to hypnotize the public into doing really what it had not planned to do. Nearly all great movements come about in this way. The rightness or righteousness of the affair is first demonstrated, and the people are persuaded to go ahead, really inaugurating what they supposed to be a well establisht movement. At any rate THE INDEPENDENT has always believed in the country and encouraged the simpler life, so that when Wagner came to the front, with his hearty preachment of the simple life, there was really a great movement already under way in this country.

We have seen and we have fostered rural free mail delivery until it has laced together eight-tenths of the population

and has stimulated a distinctively country intellectual life. This corelated itself with the development of granges, with whose activities THE INDEPENDENT has closely allied itself. We have also had our share in establishing rural telephones, and have welcomed the trolley as a rural achievement. There are few sections of the country now that are not open to modern thought and to scientific methods. Every one knows the position THE INDEPENDENT has taken in reference to the agricultural colleges. These colleges have risen with great rapidity, and are rapidly becoming the center of State life as well as State thinking. In other words, we believe that our educational life and our business life should be identified, and this will come about thru the development of such colleges and their congeners.

THE INDEPENDENT will remain in the heartiest sympathy and fullest co-operation with farther efforts to make the whole land uniform in privileges, and give to all the people the conditions of simple wholthiness.

Sincerely,
E. P. POWELL.
Author of "The Country Home," etc.

CLINTON, N. Y.

Our Charter Friends

[Very, very few are those still living who have themselves been subscribers to THE INDEPENDENT from its first year. Most have past before, but there are families which have never allowed death to interrupt their loyalty, and some of them have reported to us their names. In such devoted friends THE INDEPENDENT takes especial pride, and it gives us pleasure to add a few words of reminiscent appreciation from some of them. The names of such as we are thus informed of are the following.—EDITOR.]

LYMAN ABBOTT, . . New York City.

EDWIN NORTON ANDREWS, Chicago.

We had THE INDEPENDENT from its beginning in our family, and have taken it ever since.

BENJAMIN BLAKEMAN, . Rockford, Ill.

With the exception of a brief period during the time when Mr. Tilton was its master spirit, I have been a subscriber to your valuable paper from its earliest issues.

I past the sixty years' anniversary of my wedding last October; my time is shortening up.

J. S. BROWN, . . . Conneaut, Ohio.

WILLIAM B. BURKE, . Meriden, Ct.

From my youth up I remember it as the Sunday literature we children were allowed to read, and I also recall the accumulated piles of same in the garret, which only disappeared at the time of the home removal.

W. H. CATLIN, ... Meriden, Conn.

I well remember the dislike my father had for the *Observer* because it was pro-slavery, and for the same reason he did not like the *Evangelist* or the Boston *Recorder*. I know he was a subscriber to THE INDEPENDENT until his death in 1880. I have continued the subscription until the present time.

REV. F. S. CHILD, . . Fairfield, Conn.

GEORGE W. CHILD, E. Woodstock, Ct.

I am glad to include my own name—following that of my father, John Child—among the readers of THE INDEPENDENT from the beginning, and have no desire to give it up.

JOSIAH G. COBURN, . Newton, Mass.

I have been a subscriber from the beginning.

DANA COOK, ... South Bend, Ind.

I have very vivid recollections of my happiest boyhood days, which in my case were rainy ones, for on such days I was permitted to rummage thru the garret, piled high with files of THE INDEPENDENT. Then, cosily curled up in a large armchair before a cheerful wood fire, with a large red apple in one hand and THE INDEPENDENT spread out on my lap and the spacious arms of the chair, I was soon lost to the world, deep in the fascinating romance of "The Pearl of Orr's Island."

G. D. CRITTENDEN, . Shelburne Falls.

My father commenced to take THE INDEPENDENT in 1848 and I have taken it, I think, every year since his death, in 1867. Mr. Beecher was editor and Mr. Richards was manager back in the days when my father took it, and Joshua Leavitt, whose early home was near us, was connected with the paper. I remember him and used to read the *Liberator*, which Garrison edited in the early forties, and I well remember the horrible pictures the *Liberator* contained which illustrated the cruelties incident to the life of the slave. My father had a near neighbor whose brother was a private tutor in the family of Governor Lloyd, of Maryland, about seventy to eighty years ago, and it was said that Fred Douglass was Governor Lloyd's son by a favorite female slave, and that Douglass's rare intellectual gifts were inherited from Governor Lloyd, who was one of the ablest men of the South.

LOUISE S. CURTIS, . . . Chicago, Ill.

M. M. DEWEY, ... Malone, N. Y.
I am pleased to say I read the paper in my mother's home from its first year until I became a subscriber in my own home, more than fifty years ago.

ELLEN EDWARDS, . . Canfield, Ohio.
I never knew of a time when we did not have the paper in the house.

WASHINGTON GLADDEN, Columbus.

W. W. GOODWIN, . Newburyport, Mass.

JUDGE C. S. GOLD, . W. Cornwall, Ct.
T. S. Gold, my father, had the paper from the first till his death, two years ago at the age of eighty-eight. Since then I have continued the paper. I find it interesting and instructive. Should have a bad time to get on without it. The first editor, Dr. Thompson, was a classmate of my father's at Yale, Class 1838.

REV. JAS. H. HOADLEY, . New York.
I wish to congratulate THE INDEPENDENT upon the fact that it has reached its sixtieth anniversary. It is a great periodical and has done a great work for this country from the day that its honored owner declared that he had goods to sell and not principles. In all its long and useful history it was never more ably edited than it is today.

CATHARINE P. HOWARD, . Hartford.
I have read the paper from its first number to the present time with both interest and profit, and it has my good wishes for its future success.

DR. E. WELLS KELLOGG, . Milwaukee.
My father, Rev. S. H. Kellogg, and his father, Rev. E. W. Kellogg, took THE INDEPENDENT from its beginning.

JERUSHA A. MARSHALL, . Brooklyn.

CHARLOTTE B. MILLER, . Skaneateles.

EDWIN A. MOORE, . Kensington, Ct.
As a magazine THE INDEPENDENT fills a niche (we invite spelling reformers to tackle that last word) in one's daily life that no other periodical does or attempts to do thru weekly offerings, and it succeeds.

MRS. W. N. NASH, . . Zanesville, Ohio.

MRS. E. M. ORTON, . . Pasadena, Cal.

ALBERT C. PEPOON, Northport, Wash.

ELIZA R. PIERCE, . . . Ogden, Utah.
In making our list of yearly subscriptions for magazines and papers, THE INDEPENDENT always comes first.

WILLIAM F. PORTER, . . New York.

E. P. POWELL, ... Clinton, N. Y.

H. P. PUTNAM, . . Provincetown, Mass.
My father was first before me, and I have had it for fifty-five or fifty-six years myself.

W. S. RAYMOND, . . . Potsdam, N. Y.
In our family the annual subscribing to THE INDEPENDENT has past to the third generation, and today the weekly reading of its interesting contents is made with pleasure.

Sixty years ago my grandfather, Sewall Raymond, received "the first number," and the subscription has never been canceled: Sewall Raymond, 1848 to 1866; George B. Raymond, 1866 to 1897; William S. Raymond, 1897 to 1908.

May THE INDEPENDENT reach its centennial with an ever-increasing list of subscribers and of popularity.

REV. A. M. REID, . . Steubenville, O.
I have been a reader of THE INDEPENDENT from its first issue.

M. E. SAFFORD, . Shelburne Falls, Mass.

MRS. A. SANFORD, . New Haven, Ct.
I have taken THE INDEPENDENT from its beginning, except for one year when my husband switched off for a change, but was ready to take it up again at the expiration of the year.

V. B. STERLING, . . New Milford, Ct.
My father, Cyrus C. Sterling, of Washington, Conn., was among the first subscribers in 1848, and he continued to take THE INDEPENDENT as long as he lived. After his death in 1857 I became a subscriber, and THE INDEPENDENT has been a most welcome weekly visitor from that time till the present. It is eagerly looked for by every member of the family, and its articles and editorials on all the questions of the day are read with great interest. We wish to congratulate THE INDEPENDENT on reaching its sixtieth anniversary, and wish it many more years of usefulness and success.

REV. M. J. TALBOT, . Providence, R. I.
I wish to testify my continued interest in the paper and in the multitude who will hail this anniversary in comparison with the few who participated in the risks and the toil of establishing such an advocate for a struggling cause.

M. W. TAYLOR, . Takoma Park, D. C.

H. R. TAYLOR, . Clifton Springs, N. Y.
From the very first the whole family wanted to read it at once on account of its special articles. By 1860, when I was married, it had become such a necessity that it was made our family paper, and has been ever since excepting one year. We could not quite stand Mr. Tilton's articles.

S. N. UFFORD, . New Dorchester, Mass.
My father, Rev. H. G. Ufford, when in the city of New York, prominent in the Brick Church, Rev. Dr. Spring, was among the early Abolitionists, afterwards removing to Connecticut, was nominated for Comptroller on the ticket with James G. Birney, of the Liberty party. Many a poor fugitive he has aided to escape to Canada, when, if detected, the penalty was a tremendous one, attending meetings where he and others did not fail to find on their clothing often eggs thrown maliciously by "gentlemen" in waiting for them.

WM. HAYES WARD, . . Newark, N. J.

MARY L. WEBSTER, . . Bangor, Me.
My father subscribed to it as an inheritance from his father, even as I am doing.

MARY R. WILCOX, Lawrenceville, N. J.

DENNIS WORTMAN, East Orange, N. J.

W. W. WOODRUFF, . West Chester, Pa.
I am now nearly eighty-four years of age, and cannot much longer be a subscriber. But while THE INDEPENDENT maintains its present character, and I am able to read, I expect to continue a subscriber.

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

In the Editorial Department

FROM the beginning of its history THE INDEPENDENT has sought to make its editorial pages the cream of its service to its readers. We value the privilege of giving information or pleasure, but chiefly we have sought to give, in our editorial pages, that quality which has been called dynamic, which shall exercise a certain intellectual or moral force on the reader, teaching him to understand something and feel and do something. The country and the world are moving forward, knowing more, doing better, and we should be ashamed if THE INDEPENDENT were to be dragged along behind, instead of pulling from the front. It looks forward, not backward. It sees before it the vision of the very Kingdom of God on earth, and it would have its place with Him and those who are workers together with Him for its coming.

Editorials must be of different sorts—some descriptive, some argumentative; some laudatory, some condemnatory; some gentle, some impassioned, as the subject may demand. But a single main purpose, which cannot control the other departments of information or mutual discussion, must control, namely, the dynamic—and this because THE INDEPENDENT addresses itself not to the unthinking, but to the intelligent and thoughtful. We do not say that we seek an audience "not few but fit," for in such a country as ours, with its general education, the number of those who think for themselves and seek wise conclusions on important matters is very large—large enough to supply circulation for a journal which has so high an aim as ours.

Our aim and rule in editorial writing may be thus exprest: To present well-considered judgments on as many subjects as possible that are or ought to be of public interest, and to support them by sound arguments as forcibly as we can. This does not mean that our judgment is always right, for we are fallible; but it does mean that we do have certain great principles that must be unquestioned by which we try to square our intellectual and moral conclusions; and to the problem of their application we give as unbiased a study as we are capable of, taking pains to secure a large view of the conditions involved, and not to be controlled by the merely popular or temporary. While we try to be right, we yet know that, journalistically, it is better to be wrong and strong than to be indifferent, uncertain and weak. But the permanent editorial strength of a journal depends on its being strong in the right and not in the wrong, and particularly its being right in those matters in which it is in advance of the more popular opinion.

To be always right would require infallibility, and that means omniscience, which no editor, no board of editors, no library possesses. Yet a competent board of editors should come about as near omnisciense as is allowed to human faculty. When an error is made it should be a cause of shame, and, if of any importance, be humbly acknowledged. That is a part of the obligation to attempt to be, now and always, right.

That THE INDEPENDENT has not always reached its editorial aims we know well enough, but we confess no shame as to our purpose and effort. Elsewhere we refer to some of the principal subjects of public interest in which we have used urgency. As to our success we leave that to our readers; they are our jury. WILLIAM HAYES WARD.

Our Contributors

In the "Survey of the World" we aim to present to the jury of our readers the evidence uncolored and unbiased; in our signed articles we let the plaintiffs and defendants argue the case, and in our editorials we assume the omniscient air and deliver judgment. Our editorial opinions, therefore, frequently differ from those of our contributors, and in this we take pride. For altho of necessity we must dictate the policy of The Independent and write in the editorial columns only what we believe, our readers have a right to hear the other side; and hence most of the best radical as well as the conservative writers at home and abroad have found a welcome in our columns. All we ask is that our contributors keep within the bounds of sanity, decency and fair play. There has always been room enough in The Independent for Horace Bushnell, Dr. Parkhurst, Leo XIII, Mrs. Eddy and Herbert Spencer to discuss religion; Taft, Bryan and Debs the election; Tolstoy and Hobson war, and the "Childless Wife," and President Roosevelt race suicide. Only crooks and cranks are disbarred.

But not only do we strive to furnish our readers a rich variety of "intellectual surprises," but we have always aimed to select those writers who know the most about their subject, and then let them freely and in their own way say what they wish. We do not edit their contributions.

The first requisite in an article for The Independent is "authority" and the second "timeliness"; and, fortunately, about two-thirds of the time we are able to procure articles that are both authoritative and timely. A kind friend once said: "The Independent prints more contributions from the ablest writers than any other journal in the United States." Whether this is true or not, it would be invidious for me to say. But in going over the files of The Independent for the past six decades, I have been struck anew by the surprising number of distinguished men and women who have honored us with their contributions. Indeed, I recall no writer of importance in America during the past sixty years, and very few in Europe, who have not appeared in at least one issue of The Independent. Our contributors' list looms large with celebrities, not a few of whom we ourselves discovered and brought out. The Independent was among the first to recognize Elizabeth Barrett Browning, Sidney Lanier, "Gail Hamilton," Helen Hunt, Justin McCarthy, Maurice Thompson, Sir Gilbert Parker, Upton Sinclair and many others. Sometimes we have missed a genius, as when, several years ago, we rejected a dozen or more of Jack London's articles before the author of "The Sea Wolf" made his reputation. We even debated in solemn editorial conclave, several months before "Frenzied Finance" appeared, whether to invite Mr. Thomas W. Lawson, of Boston, to contribute an article on "The System," but finally decided that it would not be of value to our readers. Here is a list of a few of our more distinguished contributors:

Poets.

Thomas Bailey Aldrich, Sir Edwin Arnold, Alfred Austin, Joel Benton, Elizabeth Barrett Browning, William Cullen Bryant, Hezekiah Butterworth, Will Carleton, Bliss Carman, Phœbe and Alice Cary, Rose Terry Cooke, Mary Low Dickinson, Julia C. R. Dorr, Thomas Dunn English, Edgar Fawcett, Louise I. Guiney, Richard Watson Gilder, Bret Harte, Paul H. Hayne, Oliver Wendell Holmes, Julia Ward Howe, Jean Ingelow, Rudyard Kipling, Sidney Lanier, H. W. Longfellow, Lucy Larcom, James Russell Lowell, Joaquin Miller, Louise Chandler Moulton, Edwin Markham, Henry Newbold, Nora Perry, S. M. B. Piatt, Edna Dean Proctor, F. Turner Palgrave, Edmund C. Stedman, Richard Henry Stoddard, Algernon Charles Swinburne, Carmen Sylva, Bayard Taylor, John B. Tabb, Celia Thaxter, Henry Timrod, J. T. Trowbridge, Henry Van Dyke, William Watson, John Greenleaf Whittier.

Novelists and Essayists.

Louisa M. Alcott, James Lane Allen, Irving Bacheller, John Kendrick Bangs, Sir Walter Besant, Frank T. Bullen, John Burroughs, William Allen Butler, Hall Caine, Moncure D. Conway, Rebecca Harding Davis, Margaret Deland, Mary Mapes Dodge, Edward Eggleston, Kate Field, Hamlin Garland, Maxim Gorky, Edmund Gosse, Edward Everett Hale, "Gail Hamilton," Arthur Sherbourne Hardy, Thomas Hardy, Joel Chandler Harris, Thomas Wentworth Higginson, Blanche Willis Howard, William Dean Howells, Helen Hunt, Henry James, Andrew Lang, Jack London, Brander Matthews, Olive Thorne Miller, Donald G. Mitchell, Kirk Monroe, Justin McCarthy, W. E. Norris, Elizabeth Stuart Phelps, G. Bernard Shaw, Upton Sinclair, George W. Smalley, F. Hopkinson Smith, Goldwin Smith, W. T. Stead, Maurice Thompson, Ivan Tourgeneff, Leo Tolstoy, Frederick Van Eeden,

Charles Dudley Warner, Mary E. Wilkins, I. Zangwill, Emile Zola.

STATESMEN AND PUBLICISTS.

Count Apponyi, Nelson W. Aldrich, John Bigelow, David J. Brewer, William J. Bryan, James Bryce, Elihu Burritt, Joseph H. Choate, Schuyler Colfax, Grover Cleveland, Emile Combers, George W. Curtis, Sanford B. Dole, Neal Dow, George F. Edmunds, William M. Evarts, David Dudley Field, Hamilton Fish, James A. Garfield, William Lloyd Garrison, William E. Gladstone, Horace Greeley, Hannibal Hamlin, Wade Hampton, John Hay, Rutherford B. Hayes, Abram S. Hewitt, John Jay, Jean Jaures, the Emperor of Japan, Louis Kossuth, Henry Cabot Lodge, Seth Low, William H. McKinley, Count Okuma, Theodore Roosevelt, Carl Schurz, John Sherman, Charles Sumner, William H. Taft, Henry Wilson.

CLERGYMEN.

Edward Abbott, Lyman Abbott, Henry Ward Beecher, Edward Beecher, Maud Ballington Booth, Horace Bushnell, William Ellery Channing, Francis E. Clark, Robert Collyer, Joseph Cook, Theodore L. Cuyler, Howard Crosby, Archdeacon F. W. Farrar, Cardinal Gibbons, Newman Hall, George H. Hepworth, Archbishop Ireland, Leo XIII, Père Hyacinthe Loyson, B. Fay Mills, Dwight L. Moody, W. Robertson Nicolls, Joseph Parker, Francis L. Patton, George F. Pentecost, Charles H. Parkhurst, A. H. Sayce, Philip Schaff, Charles M. Sheldon, Newman Smyth, Henry A. Stimson, Richard S. Storrs, T. De Witt Talmage, H. Clay Trumbull.

EDUCATORS.

W. Benjamin Andrews, James B. Angell, Simeon E. Baldwin, Charles A. Briggs, Nicholas Murray Butler, Timothy Dwight, Charles W. Eliot, Franklin W. Fisk, Daniel C. Gilman, Arthur T. Hadley, Caroline Hazard, Mark Hopkins, W. DeW. Hyde, David Starr Jordan, Simon Newcomb, Noah Porter, Francis E. Walker, Lester F. Ward, George Washburn, Booker T. Washington, Woodrow Wilson, Carroll D. Wright.

PHILANTHROPISTS AND REFORMERS.

Jane Addams, John Graham Brooks, John Burns, Andrew Carnegie, Anthony Comstock, Señora De Costa, Frederick Douglass, Henry George, Franklin H. Giddings, Samuel Gompers, John B. Gough, Daniel Huntington, Benjamin Kidd, Prince Kropotkin, Mrs. Charles R. Lowell, William E. Mead, N. O. Nelson, Robert C. Ogden, Robert Dale Owen, Anne Cobden Sanderson, Charles Sprague Smith, Elizabeth Cady Stanton, Lucy Stone, Baroness Von Suttner, Frances E. Willard.

MISCELLANEOUS.

John D. Archbold, George Bancroft, Arthur Brisbane, Luther Burbank, Vincent D'Indy, A. Santos Du Mont, John Drew, Daniel Frohman, Camille Flammarion, Gen. A. W. Greeley, Albert Bushnell Hart, Charlton T. Lewis, Hugo DeVries, Pietro Mascagni, Alla Nazimova, Ignace Paderewski, Thomas F. Ryan, Camille Saint-Saëns, Admiral W. S. Schley, Herbert Spencer, Henry M. Stanley, Ellen Terry, Louisa Tetrazzini, Alfred Russell Wallace.

The names of the foregoing contributors are now household words in America, and many of them are fortunately still alive and will doubtless contribute additional articles to our columns from time to time. But THE INDEPENDENT has not only been the medium by which the leaders of the past three generations have addrest the American people, it has frequently brought out the life-stories of undistinguisht men and women who will never become leaders in this country, but who have made the nation what it is. The history of the world is essentially the history of the coming to their own of the common people; and therefore, the typical biographies which we have published of these folk are of no slight historical and sociological importance. Sometimes our very best articles are publisht anonymously. They pique the curiosity of the subscriber and provoke no end of comment.

It may not be out of place in this Sixtieth Anniversary Number to lift the veil a little and tell how we obtain our contributions. Roughly speaking about one-half of them are solicited and the other half are selected either from a large number of regular contributors who have a standing invitation to send us whatever they may write, or else from the enormous mass of unsolicited manuscripts from more or less unknown authors. The solicited manuscripts are frequently very hard to get. Indeed, we editors often importune a haughty celebrity as much as the starving poets importune us, instances being even known where the celebrity has a printed rejection slip which he returns, thanking us for our distinguished consideration, and regretting "that my engagements will not permit me to respond to your kind request, tho this does not imply any lack of respect for the magazine which you edit." Last October, for instance, when we printed articles from all the Presidential candidates telling why the American people should vote for their respective selves, our readers must not think that these articles fell into our editorial basket like ripe apples. Since one of the most enterprising monthlies got only Bryan and Taft to discuss a single as-

pect of the campaign, another only Watson to argue the issue of the small parties, and still another printed in italics an editorial note from Bryan and Taft stating that they had no time to write about the campaign, we would not like to tell our readers how many letters and telegrams were sent before we finally completed the symposium. Catching notable contributors is like fishing, the big ones generally get away. We are happy to say, however, that most writers feel that in addressing THE INDEPENDENT readers they are sure to reach an audience with influence; and therefore, we have some advantage over those magazines whose only return for "copy" is a big check.

The contributors whom we expect to send us their very best material without being especially asked are well known to our readers. Justin McCarthy, E. P. Powell, Park Benjamin, Mrs. L. H. Harris, Prof. F. H. Giddings, to mention only a very few, are indispensable adjuncts to the Editorial Staff. We do not worry about British politics, country life, the navy, the American novelists or sociology, while they keep their health.

The rest of our material comes in unbidden. Doubtless it would surprise our readers to see the avalanche in the morning mail. We accept from five to ten of these articles to a bushel basketful we reject. It takes a day of each week for one of us to go over these manuscripts, and when there is any doubt about a certain one, it is past on to another editor for his opinion, and sometimes the whole staff reads it before it is finally accepted or rejected. Anybody can recognize a very good or a very bad article, but it takes a trained editor to come to a decision in regard to those articles which are "good enough to print" but not "irresistible." When in doubt our rule, unlike that of the whist-player, is to refuse trumps. Still we have to go over all the manuscripts that are sent us, for who knows but "some mute inglorious Milton" may be among them. If we do not read every letter of every syllable of every word of every article submitted to us, we do conscientiously go over them all despite the belief held to the contrary by the host of literary aspirants who glue the inside pages of their manuscripts together or turn one upside down and then receive them back disarranged with our polite rejection-slip.

It is a curious fact that more poetry is sent to this office than any other kind of purchasable matter and I understand a similar condition confronts other magazine editors. This would seem to prove that the poets still pipe on for the love of piping and not to satisfy any insatiable craving on the part of the public.

I take this occasion to remind our readers and contributors again that they cannot send us too many articles. There is material in everybody's life for one good novel or short story, and in everybody's vocation for a bit of prose or verse —preferably prose. We accept almost any kind of articles except nature stories on "The Hush of the Woods," Christmas fiction beginning "The snow was falling in great white flakes," or sonnets commencing "As one who." Some of the very best matter that we have ever printed has come from those who thought they could not write. Indeed, one of my most valued colleagues dates the beginning of his literary success to an article in THE INDEPENDENT describing how all the editors in New York rejected his manuscripts.

As long as THE INDEPENDENT remains the forum in which the ablest writers of the world discuss the affairs of the day, as long as it holds out the welcoming hand to the unknown and untried writer, and as long as it speaks the strong word for humanity, I am sure it will find a wider and ever wider constituency.

HAMILTON HOLT.

The Survey of the World

IN publishing what we call a "Survey of the World," our purpose is to set forth a succinct account of the most important and interesting events of each week, and to do this without bias or any expression of our own opinions. We decided long ago that these pages of the magazine should be strictly a news department, and that THE INDEPENDENT'S opinions should be expressed only in its editorial columns. This involves some sacrifice of popularity, for we are aware that we could make the Survey more readable if

we should leave out half the record of facts and should select the most picturesque topics for discussion and comment.

It is not an easy task to make in eight pages an accurate and fairly balanced Survey of what has taken place in the world during a week. Nearly all the writing must be done in the last thirty-six hours, and when it is undertaken the material must be at hand conveniently arranged for immediate use. From the beginning of the week the daily journals must be carefully read; the despatches and other news articles must be taken out from day to day, and all of them must be classified as the end of the week draws near. In many cases they are parts of a continuous story, and the chapter to be printed must take into account the latest developments and events in this story, as well as those which were earlier. Our readers would probably be surprised if they could see the number and the bulk of the clippings which are classified every week. Reports, especially those relating to politics, are much longer and more diffuse in American dailies now than they were a few years ago. The differing points of view in leading journals deserve to be considered. Special despatches supplement those of the news agencies. It sometimes happens that only one topic in the week's record will yield more than fifty columns for the classified collection. In the American field it is advisable to consult the newspapers of several cities as to questions of national politics. Local events of general interest are, of course, most fully reported by the papers publisht in or near the places where these events occur. In dealing with the broad foreign field, the use of cable despatches is supplemented by files of London and Paris dailies and weekly and monthly periodicals from all parts of the world. When the material is at hand (except that which must be obtained in the last hours) and the time has arrived for "boiling it down," topics must be selected and the allotted space must be apportioned. Of course, a great part of the collected material cannot be used. Still, it could not properly have been ignored or avoided; for in any special field of human activity the events of one day lead up to and explain the events of following days, and not until the end of the week can it be determined whether the record in that field will be needed for immediate use. The general field is a very broad one, including current records of political movements, official utterances, legislation, wars, revolutions, labor controversies, financial panics, prosecutions, disasters, etc., in the treatment of which judicious selection and a proper adjustment of emphasis are required.

Our Survey differs from the newspaper chronicle not only in its condensation, but also because matters of merely local interest are excluded from it, and on account of the care with which any series of events is followed in it to a conclusion after the record has been obscured in or crowded from the columns of the dailies by some new subject. By these methods and with the use of original maps and liberal quotations of authoritative utterances we aim to make the Survey a "source book" of contemporary history. There may be only a few paragraphs relating to a particular country, say Turkey, publisht during the year, but if these should be cut out and pasted together they would form a continuous record.

We believe and know that this topical summary of four hundred pages every year is much valued by our readers. And it may be added that it is useful to those who make it. Not all of their time, of course, is given to this work, and there is no better preparation for the editorial discussion of political questions and events, national legislation, financial conditions and changes, labor disputes, national and international movements, and other subjects of general interest, than that necessarily careful and conscientious study of the current record which the construction of such a summary requires.

FRANK D. ROOT.

The Literary Department

THE INDEPENDENT has, from its foundation, devoted a great deal of attention to literary criticism, believing that it could render no better service to its readers than by helping to select the

books that are really worth while from among the thousands of inferior or trashy volumes. As the years have gone by this duty has become increasingly difficult and more essential because the number of books publisht has multiplied amazingly and the advertising of them has become more artful and clamorous.

It is said that the late Lord Acton, one of the most scholarly men of the age, averaged a book a day for many years. Assuming that this is as good as you could do yourself without neglecting your other occupations, let us see how much you would have to do to read all the new books. Altogether there are publisht every year about 135,000 volumes. But perhaps you do not read Turkish or Danish; in short, suppose you neglect all foreign literature, including British, except so far as reprinted in the United States, and let us consider only the American books, some 8,000 a year, being thankful you are not a German, for you would have to read three times as many. You start in with a New Year's resolution to improve your mind by reading all the new books—you have doubtless heard some friend say that he, or more likely she, "reads all the new books." Reading at the rate of a book a day it would require at least 21 years to get thru with the books of 1909, and by that time you would be some 170,000 books behind, with no chance of carrying out your contract. But you say you do not want to read all the books publisht, but only those that are of interest or importance. Very good. That is where we come in.

THE LITERARY EDITOR'S DEN.
Fifty feet of new autumn books awaiting their turn to be reviewed.

We select about a thousand out of these 8,000 books, and tell you enough about these to enable you to tell whether you want to make their further acquaintance. This Gideon's band of sifted books is, as we have said, only a small fraction of

those publisht, and includes only a part of those which publishers and authors are kind enough to send us, but our aim is to review all those which an intelligent reader would be apt to consider if he had the year's output spread on a counter before him, except, naturally, such technical and special books as he has a personal interest in. Of course, we have to omit many fair and some very good books, but we rarely miss one of importance. After we have picked out what books are, or may be, worth reviewing, our next task is to decide who can best review them. In the case of all important works our object is to secure the services of the man who next to the author knows most about the subject, and we not infrequently succeed in finding a man who knows much more about it than the author. If we publisht our list of book reviewers you would recognize nearly as many names as in our list of contributors. Anonymity is used in this case to secure freedom of speech, not to conceal mediocrity. The writer of a paragraph is as carefully selected as the writer of a page, and we often have as many different authors represented as there are books criticised. Our reviewers are paid at the same rate as contributors, altho we have a great many applications from people who offer to review for us works on any subject in the whole realm of knowledge, and "take pay in books." We have not accepted any of these kind offers. The object of each review is to give the following information to our readers:

1. That there is such a book.
2. What the author has tried to do.
3. How well he has succeeded.
4. What we think about it.

Accordingly, our reviewers are instructed to give the name, author, publisher and price, to point out any peculiar excellencies or marked defects, to include a fair statement of the author's position, thesis or argument; to discuss this so far as space permits, and, last and least, if not incompatible with the preceding requirements, to make the review interesting and readable in itself. Nothing is easier than to write an amusing and satirical screed, *"à la Quarterly,* so savage and tartarly," about a worthless book. This is a common practice in some literary journals, and it would undoubtedly enliven our columns to adopt it, but we do not, for two reasons: it takes up too much space and so crowds out a good book, and, second, a man is not necessarily a criminal because he has written a poor book. Cover it with a mantle of silence and let it die a natural death. Our literary department is not run for our own amusement, nor as a supplement to the advertising columns, but as a reliable guide to the best reading for the benefit of our subscribers. Whether one buys, begs, borrows or steals books, he needs to know how to select them intelligently.

EDWIN E. SLOSSON.

Art in The Independent

THERE has been a great change in the art features of THE INDEPENDENT since 1848. Then wood engraving was the only known medium. Now the half-tone and zincograph processes have crowded out the old woodcut, which has long since ceased to be used.

It may be said in general that our illustrations illustrate. That is to say, a picture that does not illuminate the text, shed a ray of light on some one in the public eye, or make clearer some feature of a passing event, is viewed with rigid disfavor in the art department, however pretty it may be.

For the most part, photographs lend themselves best to our use. These come into our hands in various ways. Sometimes the author sends those he has himself taken, in with his article. His camera may be a very poor one or it may be a very good one. He may be a poor photographer or a very good one. If the article is important and the pictures poor, we may have to use them. By means of retouching and the skillful use of the air brush an all but hopeless photograph may often be transformed into a half-tone plate that is surprisingly good.

If the author has failed to obtain his own photographs, the art editor is sometimes able to supply illustrations by purchase from dealers who make a business of supplying photographs for publication.

These cost anywhere from $1 to $10 or more.

If the article has a local setting, the staff photographer may be assigned to cover and to obtain the required photographs. In the case of the so-called yellow journals, the city editor frequently wants photographs of people who do not care to have them taken. Sometimes the camera gets smashed in such cases, but that is considered to be a part of the day's work. THE INDEPENDENT does not use such methods.

It is sometimes impossible, however, to get a photograph until publication day. In such a case some exceedingly quick work is required, and it occasionally happens that a photograph taken in the morning is made into a halftone plate in the afternoon and printed in the evening of the same day.

When photographs will not do, drawings must be made by an artist from his conceptions of what the author meant to convey otherwise the illustration "fights" with the text. The artist ought, generally speaking, to read the author's text, tho some of our highly illustrated contemporaries do not seem to regard this as essential.

The special covers of THE INDEPENDENT are other problems for the art editor. These covers are also variously obtained. Sometimes they have been the result of a competition where students from art schools and other friends have sent in a large number of drawings, from which the art editor, aided by his editorial colleagues, has selected those which seem to be most appropriate for the months in which they are to be used. In this connection it may be said that it is a curious fact that in spite of the utmost care in setting forth specifications there are always some contributors who ignore these as if they did not exist. Such persons reserve the right to wonder why they are not prize winners.

For the last year or more the covers used on THE INDEPENDENT have been assigned to various artists. The art editor will in such cases talk over the cover design that is to be with the artist to whom the assignment is made. He makes certain suggestions to the artist, which may be modified by counter suggestions made by the artist. The preliminary details having been arranged, the artist in due time submits a rough sketch in pencil, in which he reduces to an art form the ideas he proposes to bring out in the cover. His ideas are hinted at rather than developed, but they form a working basis. If these cartoons seem hopeful the artist is commissioned to make the finished drawing, which when completed may still be modified in detail if desired.

When the cover calls for the use of more than one color the process becomes more complicated, and involves the making of an extra set of plates for each additional color.

The art editor is expected to see that the paper is artistically "made up," and in order to accomplish this with more certainty on THE INDEPENDENT, he goes to the printing office with his "dummies" on press days, and, taking off his coat and putting on an apron, he works with the printers and the types. In the photograph of the Composing Room he is to be seen at the imposing "stone" busy with his "make-up" problems. Appropriate headings, marginalia, head and tail pieces, and dozens of little unconsidered trifles, that almost everybody overlooks, it is his province to provide. He feels rewarded if sometimes the readers like the pages he designs, as they do the architectural slant lines of a house roof—without knowing why.

W. G. BOWDOIN.

How the Subscriptions Are Handled

THE subscription department of a magazine, unlike the editorial and advertising departments, is seldom brought to the attention of the reader, except when he receives a notice of the expiration of his subscription. Despite its obscurity, this department of THE INDEPENDENT employs the largest number of clerks, and handles by far the greatest amount of correspondence. The most frequent form of letter is the request from a subscriber for a change of address, which during the spring and fall involves a large amount of extra labor in handling the mail. If all the requests were correctly made out the work would be simple enough, but unfortunately one-third of the orders have to be looked up and some

omission supplied. The most frequent omission is the failure to give the old address, which makes it impossible to find the subscriber's name, as our subscribers are listed by post office addresses and not alphabetically by their own names. This necessitates our sending a blank to be filled out.

Another common occurrence which makes trouble is the unsigned postal. This is a difficulty that can be overcome. For instance, we received recently the following card:

ARKANSAS CITY, KAN.—Please change my address to Hammond, Minn.

(No signature.)

In this case we wrote to the postmaster at Arkansas City, found that a certain subscriber's papers, that had been called for regularly, were unclaimed, and changed this address to Hammond, Minn.

Another recent request for a change gave a chance for a little Sherlock Holmes work:

Please change my address from Dark Harbor, Me., to Lowell, Mass. (Unsigned.)

This hitch was adjusted within a very few minutes. The list of our present subscribers in Dark Harbor was compared with the list in Lowell last winter and a common denominator discovered. This address was changed without further hesitation.

Another form of postal is the one correctly addressed to us on one side, but with the reverse blank. These are filed away to await an irate letter a month later. Not long ago we received a card postmarked Boston, with nothing written on the back. A month later the following letter arrived:

Four weeks ago I asked you to change my address from Boston to Houston, Texas, *which has not been done.* If you cannot be more attentive to my requests I shall discontinue my subscription.

The address was changed, without any explanation on our part. An incident occurred last winter worth relating. A lady wrote to us complaining that she had sent us a dollar for a six months' subscription and had never heard from us. A careful inquiry revealed that she had pinned our address on a dollar bill and dropped it in a post box. A search thru our files revealed a tag addressed to us with two pin holes thru it and postmarked from the source of trouble. We agreed to divide the loss and send the magazine a full year for another dollar, which was done. In this file where the tag was found we keep all the coin cards received without the name being filled in. There are about four hundred of these. In case they are postmarked from a small town we can sometimes identify them by writing to the postmaster, but when sent from a large city there is little chance of discovering the remitter. Routine troubles, such as unsigned checks, uncurrent money and unusable postage stamps, are too common to be enlarged on. Here is a letter with some individuality which arrived a few weeks ago:

Please quote me the price of a life subscription to THE INDEPENDENT. I want to subscribe.

LUCY MORSE.

This tantalizing letter was postmarked Station H, New York City, but there was no other hint at an address. In a vain endeavor a delicately worded letter was sent to her at Station H, only to be returned a few weeks later, and Lucy is probably wondering at our lack of interest in the length of her life.

In the subscription department of a large magazine one would expect that sentiment and romance would find no place, yet now and then an incident occurs which for a moment makes a sharp break in the routine work. A letter came in recently from a young lady, requesting that her paper be stopped, as she was to be married soon, and THE INDEPENDENT was already going to the new home. A few months later we heard from her again, asking to be re-entered on our list and still using the prefix "Miss," which seemed to indicate that a tragedy had taken place.

Here is another letter, more cheerful in its tone, and indicating that THE INDEPENDENT in this case was a potent factor:

LOS ANGELES, CAL., NOV. 19, 1908.

The Independent, 130 Fulton St., New York:

DEAR SIRS—At the request of a subscriber the following change in address is desired. Miss Lilly Donald, Riverside, California, to Mrs. Dean Downing. Los Angeles, Calif. The above-mentioned person has been receiving THE INDEPENDENT for the past two years by

my sending it to her, but has seen fit to change her name. Yours respectfully,

(Signed) DEAN DOWNING.

We received a letter not long ago asking us to send THE INDEPENDENT for three years to a name in a certain county prison in Pennsylvania. The check was signed by a woman with the same surname as the man. It may have been a loyal wife, or perhaps a devoted sister, planning to cheer the weary years of some transgressing loved one.

Around Christmas time we receive many letters, with every clue of the sender carefully concealed, requesting the magazine sent to some address for a year. The recipients often inquire of us to whom they are indebted for their Christmas present, and we are unable to enlighten them.

An unusually large percentage of our subscribers renew their subscription, the yearly loss sometimes being less than 20 per cent. Many of our most successful magazines lose from 40 to as high as 60 per cent. of their subscribers every year. The new names more than balance the discontinuances, because many of our readers are glad to extend the influence of THE INDEPENDENT. We could relate many incidents where our loyal friends have given us the most valuable assistance. An old friend of THE INDEPENDENT in Pennsylvania annually subscribes for ten or more missionaries in the foreign field.

Our foreign subscription list is unusually large, for many find THE INDEPENDENT more valuable in keeping them in touch with the home country than a magazine printing largely fiction. Some of these subscribers do not receive their copies until several months after publication. We have, among others, a subscriber in the Pitcairn Islands, a lonely group of rocks in the South Pacific Ocean, to which boats from Auckland, New Zealand, run about once in two months. As it takes the mails a month from New York to Auckland, this subscriber probably receives his copies anywhere from three to five months after publication. Other copies that go into the interior of Africa take almost as long. If THE INDEPENDENT were to cease publication with this issue, it would still be read with interest far into 1909.

GARDNER RICHARDSON.

Publishers of Sixty Years Ago

IN the first issue of THE INDEPENDENT appeared the advertisements of John Wiley, George P. Putnam, *The New York Tribune, The Scientific American,* A. S. Barnes & Co., and Fowler & Wells. It is an interesting fact that the same advertisers have advertisements in our sixtieth anniversary number. The publishing house of John Wiley & Sons was establisht by Charles Wiley in 1807. In 1848 George P. Putnam, who had been a partner with John Wiley, began business under the name of George P. Putnam, which name was changed a year or so later to George P. Putnam & Co. Fowler & Wells, the publishers of *The American Phrenological Journal,* was started in 1838. In the same year was founded the house of A. S. Barnes & Co., whose chief business has been school book publishing. It now includes science, history and general literature, and its monthly periodicals are *The School Journal, The Teachers' Magazine* and *Educational Foundations.* In our first issue appeared reviews of books publisht by Moses W. Dodd and Baker & Scribner. Moses W. Dodd was the father of Frank H. Dodd, the senior partner of Dodd, Mead & Co., which house was formed in 1837. Baker & Scribner, now known as Charles Scribner's Sons, was organized in 1846. It may be added that Harper & Brothers started in 1817, D. Appleton & Co. in 1825, and P. Blakiston's Son & Co., of Philadelphia, in 1843, and advertisements of the three houses last named appear in the current issue. The American Tract Society was organized in 1825. The Baker & Taylor Company was establisht in the city of Hartford in 1830, and in 1848 moved to 4 Cortlandt street, New York, and was known under the firm name of Pratt, Woodford & Co. The American Book Company, formed in 1890, was the outgrowth of Ivison, Blakeman & Co., and other firms who have long been patrons of THE INDEPENDENT. For sixty years THE INDEPENDENT has given prominence to its book reviews, and its relations with the leading publishers in the United States have been intimate.

D. P. KINGSLEY.

Pioneering in Life Insurance

BY DARWIN P. KINGSLEY, LL.D.

President of the New York Life Insurance Company.

THE life of The Independent—sixty years—may seem a long or a short period of time. It depends on the point of view. To a sheepherder on the Western plains sixty years is an eternity; to men who do things it is like a tale of yesterday. Life is endless to the man who accomplishes little and that little scarcely worth while, but to the virile, ambitious, creative man the days are too short and the years are too few.

American life insurance has crowded into sixty years—indeed, into fifty years—such achievements that the period stands out sharply and probably always will; just as the Colonial period in our history stands out, altho its material accomplishments are almost negligible by comparison with the stupendous activities of present day business.

Pioneering is dangerous. Our life insurance companies—some of them—have been pioneering. There is no finer work. The masses of men have generally walked blindly past the opportunity which they sought. The pioneer, the man of imagination and courage and a sense of justice which is exact, tho rough, has had eyes for the world, has had that penetrating vision which sees things not only as they are, but as they ought to be. Our forefathers, for example, were land hungry, yet they thought the Mississippi Valley was uninhabitable. They wanted opportunity to work out their own ideas in government, and yet as the hour has struck from time to time they have hesitated and been afraid. They hesitated over Kentucky and the country north of the Ohio. They threatened rebellion over the purchase of Louisiana. They delayed over Oregon until we narrowly escaped war with Great Britain. They condemned Seward when he purchased Alaska. It

is the same sentiment which suggests that we now run away from the Philippines.

The pioneer has led the way in each case. And how quickly the scene has sometimes changed. What seemed a danger yesterday is a source of unmeasured strength today. What seemed recklessness, extravagance in energy, life and limb, was later seen to have been born of a prophetic insight. It was this insight and the fearlessness that went with it that gave us Kentucky and Tennessee, Ohio, Indiana and Illinois, and ultimately, Louisiana and the noble commonwealths along the right bank of the Mississippi.

The instinct of the pioneer has generally been sound. He has made gross mistakes and he has been misunderstood. He has been called a visionary, when, as a matter of fact, he alone had eyes. He saw wealth where others saw only pain and hunger. He saw great States where others saw only a desert. He saw unmeasured progress and freedom where others saw only extravagant fancies, dangerous practices, and a general menace to establisht society.

Life insurance has had—has now here in the United States—its Dinwiddies, who have conquered insurance Kentuckys and Ohios, its Livingstons who have acquired Louisianas, with as little authority as Robert Livingston had in 1803. It has had—and it has now—its Tories and its Copperheads. At the moment it stands at a point of seeming doubt, surrounded with much hostility, apparently deprest and dismayed. Certain companies, by herculean work, by methods which were direct and not always above criticism, have so splendidly exploited the possibilities of American life insurance, have so emphasized its possibilities and its stupendous future, that the Louisiana fear has reappeared, and legislative committees have gravely tried to turn the hands of the clock backward. They have solemnly announced that certain companies are already too large, and then (and here the reactionaries of 1906 succeeded better than their forefathers in 1803) they proceeded to enact their fears into law. The result has been disaster and dismay. Legislation based on hysteria and fear never has had any different results.

But life insurance will overcome even such misfortunes and even such enemies. It will overcome the inertia which makes bad laws doubly calamitous, because, once written into the books, it is not easy—however bad and un-American they may be—to eradicate them.

The prophecy contained in the work of certain American companies between 1892 and 1905 will be realized, because, great as the accomplishment was, it was, after all, only a prophecy. Out of the newer and larger and better conception of life insurance which the work of those years created will come, when the evil done by the Armstrong Committee has been buried with their bones, a yet larger accomplishment and a still keener understanding of the profound service which life insurance can render society. The good the Armstrong Committee did will live after them, but only because their work will be corrected and revised.

We are already beginning to wonder at a statesmanship which arbitrarily limits the legitimate activities of men, which even compelled the destruction of valuable plants; we especially ponder over the quality of a leadership which attempts to fix wages by law. But we shall never understand—neither in a dozen years nor in fifty years—those sections of the insurance laws of New York State which discriminate against our own companies in favor of the companies of other States, and even openly discriminate between the companies of New York State. We shall ultimately have revision, necessary even if the courts correct, as seems likely, the most glaring faults of our existing code. But meantime the primacy of New York companies is waning. How long will the Legislature permit this condition to last?

Josiah Quincy was patriotically alarmed in 1811. He foresaw endless disasters if the country expanded as then seemed possible thru the admission of Louisiana to the Union. The Armstrong Committee was alarmed in 1906 in the same way and wrote their alarm into law. That Josiah Quincy was honest doesn't lessen the magnitude of his error. That the Armstrong Committee was honest will be no defense after our shackles have been taken off and we have developed—as we shall—an extent and quality of practical usefulness which sociologically will be as real and as fine as Missouri and Iowa, Kansas and Nebraska, are in the development of the nation.

New York City.

INSURANCE

1848—Fire Insurance—1908

ELSEWHERE in this issue the president of the New York Life Insurance Company admirably reviews the last sixty years' progress in life insurance. In this department, therefore, we content ourselves with a *résumé* of fire insurance, one of the specialties of THE INDEPENDENT from the very beginning.

In 1848 there was virtually no supervision of insurance by any of the United States. The governmental machinery of the State of New York did not include a department charged with that duty, and such administrative authority as was exercised over the conduct of the companies was placed in the hands of the State Comptroller. It is interesting to note that at this time Millard Fillmore, afterward President of the United States, held the office of Comptroller of the State of New York.

We learn from Mr. Fillmore's annual report to the Legislature for the year 1848 that the law "made it the duty of every moneyed corporation" to file with the Comptroller, annually, a sworn statement of its affairs; and that the term "moneyed corporation" meant all such "having banking powers or authorized to make insurances." Mr. Fillmore undertook to enforce this law and drafted a form of annual statement to be used by the fire insurance companies—probably the first blank of the kind ever required by a State of insurance companies. Judged by the standards of today, its inadequacies and deficiencies are its chief characteristics. It seemed to cover everything that was essentially inconsequential and nothing that was actually necessary to exposing the transactions and true financial condition of the companies.

An examination of the report of 1848 reveals the existence during that year of fifty-four fire insurance companies filing statements, of which twenty-four were joint stock and thirty mutual corporations. There were twenty-two others, including fire, marine and life companies, which, by their charters, were exempted from making reports. Two of these, now dead, were stock companies. Of the twenty-four stock companies reporting to the Comptroller all but five—the Albany Insurance Company, the North River Insurance Company, the United States Fire Insurance Company, the Westchester Fire Insurance Company and the Williamsburgh City Fire Insurance Company—have either failed or retired. Only two of the thirty mutuals have survived—the Glen Cove Mutual and the Suffolk County Mutual.

The report purports to show in some sort of detail the assets, liabilities and losses paid by these companies; but so incongruous and unrelated are the items composing the account that it is impossible to extract from them a clear statement, either of the business or financial condition of the companies appearing.

The gross assets of the stock companies for the year ending December 31st, 1848, are put down at $6,046,114.57, but it is next to impossible to indicate what these assets were. The gross assets of the thirty mutuals are represented to be $4,707,305.44, of which $4,564,915.73 were policyholders' paper—notes given for premiums.

The gross liabilities of the stock companies are posted at the insignificant sum of $408,526.98, which, as a matter of course, was absurdly inadequate, there being no provision made for the liability incurred on account of capital stock, no reserves for unearned premiums, or unpaid losses. The gross liabilities of the mutuals appear at $136,012.20.

The insurance in force in the two classes of companies seems to have been respectively: Stock companies, $196,868,248; mutuals, $72,354,218.

During the sixty years since 1848, as nearly as a careful search of available records affords, the number of stock fire insurance companies which have been organized in the State of New York, and, thru failure and otherwise, have been compelled to discontinue business, closely approximates two hundred. Since the establishment of the State Insurance Department in 1859 the number so beginning and failing or discontinuing aggregates one hundred and fifty-three.

There are in existence today fire insurance companies of States other than New York to the number of twenty-five that commenced business prior to 1848, of which three are in Connecticut, eleven in Pennsylvania, four in New Jersey, one in Missouri, one in Massachusetts, three in Ohio, one in Rhode Island and one in Virginia.

Fire insurance has moved on with the procession of civilization. The four pages in the report of 1848, containing its simple annals, have grown to a bulky volume of 998 pages in 1908—a minute history of the business during 1907. There has not been a marked increase, however, in the number of New York stock fire companies, the aggregate now being but forty-six. It is not a favorite investment with capitalists. The mutual organizations have nearly all disappeared, there being but four now in existence, holding assets of $584,875.

Measuring by assets, the ten leading stock companies operating at this time are the Home of New York (1853), Hartford of Hartford (1810), Continental of New York (1853), Aetna of Hartford (1819), German-American of New York (1872), Insurance Company of North America of Philadelphia (1792), Phenix of Brooklyn (1853), Phœnix of Hartford (1854), Fire Association of Philadelphia (1817), and National of Hartford (1871). The Pennsylvania Fire Insurance Company was organized in 1825.

Other well known companies, organized after the establishment of THE INDEPENDENT, were the Springfield Fire and Marine (1849), the Connecticut Fire (1850), the Hanover Fire (1852), and the Phœnix Insurance Company of Hartford (1854). The Orient Insurance Company of Hartford was organized in 1871.

Below will be found in convenient form the totals of the essential statistics of the existing stock companies organized in and doing business under the laws of the State of New York, as of date, January 1st, 1908:

Total number of companies...	46
Paid-up capital	$21,150,004
Total admitted assets.....	124,801,517
Total reserves for unearned premiums	58,052,496
Total of all liabilities.....	88,527,784
Surplus for protection of policyholders	36,273,733
Premiums received in 1907....	67,142,471
Total income in 1907.....	74,373,002
Losses paid in 1907.....	31,326,169
Dividends paid stockholders in 1907	3,105,338
Commissions paid agents in 1907	14,328,933
Total disbursements in 1907...	62,934,868
Total insurance in force on December 31st, 1907.....	10,164,186,404

The total number of stock companies doing business in the State of New York, on January 1st, 1908, including those domiciled in the State, those from other States and foreign countries, was 169. The principal items composing their statistical history during the year 1907 follow: Amount of their combined capitals, $74,819,233; amount of their combined assets, $430,363,427; amount of their combined liabilities, $322,612,317; amount of their combined net surpluses, $107,751,110. Their combined total income for 1907 was $285,411,217; their combined total losses were $121,801,012; their combined total disbursements were $245,918,381. The amount of their outstanding insurance aggregates several hundred millions in excess of 35 billions of dollars.

THE Chamber of Commerce, at a meeting held last week, adopted the report of its committee on insurance as follows, viz.:

Whereas, The present insurance law as governing life insurance companies was adopted at a time when the emergency seemed to necessitate prompt action and it was impossible to consider with due deliberation all the effects of the new law upon the varied interests to which it would apply; and

Whereas, In some particulars it seems necessary to amend the statute to the advantage of the interests involved without affecting the general purpose of the law; and

Whereas, The Superintendent of Insurance of the State of New York in his recent report to the Legislature discusses the relative progress of the life companies of this State as compared with the progress of the life companies of other States during the year 1907, as exhibited in the sworn returns included in said report, and sums up the situation in these words:

"Covering the business of the years 1904 and 1907, the outside companies exhibit a decrease of only $81,000,000 in new business written, and an increase of $874,000,000 of total insurance in force, while New York State companies have a discouraging record as above shown of $692,000,000 decrease of new business and $53,000,000 decrease of insurance in force.

"In 1904 the new insurance written by the life insurance companies of other States then authorized was about 64 per cent. of that written by New York companies, while of new insurance written in 1907 the total of our own companies was only about 80 per cent. of that of the outside companies;" and

Whereas, There seems to be a difference of opinion as to the cause of this "discouraging record," now, therefore, be it

Resolved, That the Governor of this State be and he hereby is requested to appoint a commission of five responsible citizens of this State, two of whom should be expert in all branches of life insurance administration, immediately to investigate the conditions surrounding the life companies of this State and report to the incoming Legislature, but not later than January 15th, 1909, what, if any, action in the judgment of such commission that body should take in the premises.

(Signed),

ANTON A. RAVEN,
GEORGE E. IDE,
ELBRIDGE G. SNOW,
HENRY EVANS,
HENRY C. SWORDS,
Committee on Insurance.

NEW YORK, November 30th, 1908.

FINANCIAL

The Record of Sixty Years

We have brought together, in the table which appears below, a few statistics which show the great and remarkable growth of the United States in wealth, manufactures, trade, banking institutions, etc., since THE INDEPENDENT was founded, sixty years ago. Many other figures might be added, but these are sufficient to indicate the development which has taken place since the first number of THE INDEPENDENT was printed. We have used the year 1850, because official statements for that year are available, while those for 1848 either do not exist or can be found only with much difficulty. In the second column there are a few figures which are not strictly those of the present year, but are drawn from the latest census reports:

	1850.	1908.
Population	23,191,876	89,000,000
Wealth	$7,135,780,000	$107,104,211,917
Value of products of manufacture	$1,619,106,616	$14,802,147,087
Wages in manufactures	$236,755,000	$2,611,540,000
Farm property.....	$3,967,343,580	$20,514,001,838
Exports	$144,375,726	$1,860,799,087
Imports	$173,509,526	$1,194,341,994
Government receipts.	$43,592,889	$589,895,763
Government expenditures	$37,165,990	$659,552,125
Railroads, miles.....	9,021	229,951
Money in circulation	$278,761,982	$2,736,646,628
Deposits in savings banks	$43,431,130	$3,690,078,945
Deposits in State banks	$109,586,595	$3,047,601,188
Deposits in all banks and trust companies	.....	$13,077,330,466
Deposits in New York City commercial banks.....	$21,443,148	.....
Deposits in New York City commercial banks and trust companies...	.....	$2,530,216,000
Pig iron output, tons	563,755	25,307,191
Corn crop, bushels..	592,071,104	2,927,416,091
Cotton, bales	2,333,718	11,345,988

Thruout these sixty years of national growth—marked, as they have been, by a wonderful expansion of railway and telegraph service, the establishment of powerful corporations, and an extraordinary financial development — THE INDEPENDENT has been interested in the commercial progress of the American people and has exerted its influence for the public good. When it was founded there were less than 6,000 miles of railroad in the country. It urged the support of those great enterprises which gave us transportation lines to the Pacific. It has stood for honesty in the nation's currency standard and in corporation finance. The legislation which created the national bank system, and which it promoted, was enacted when it had been publisht for about fifteen years. It has discussed the business and financial questions of the time both in its financial department and in its editorial columns, with the purpose of giving useful information and of insisting upon the use of proper methods. Its influence and the soundness of its policy have been recognized by eminent bankers and the country's greatest financial institutions. These have habitually chosen its advertising pages for announcements addrest to intelligent and conservative readers. Its just and fearless criticism of the evils that inevitably accompany extraordinary financial growth and activity has commended it to that great and dominating element in the American business world that abhors evil.

❧

....Henry P. Davison, who lays aside the vice-presidency of the First National Bank to become a partner in the banking house of J. P. Morgan & Co., has shown exceptional financial ability and performed tasks of great responsibility which are usually given to older men. He is but forty-one years old and has made his own way, the quality of his work causing such rapid promotion that he was forced to give up the study of law, which he was pursuing at night. For some years he was with the Liberty National Bank, rising there to the office of president. Six years ago he was taken by George F. Baker to the First National, and now Mr. Morgan, a good judge of financiers, has drawn him into his great firm. Mr. Davison's ability was proved in the hight of the recent panic, when he took part in the many important conferences which were held, and also, as a member of a special committee of the Clearing House Association, conducted a searching examination of several financial institutions which sought aid. In Europe, last summer, he assisted the Aldrich Commission, at its request, in its inquiries concerning the great Government banks of England, France and Germany. His successor in the bank is Thomas W. Lamont, who has been vice-president of the Bankers' Trust Company.

The Independent

VOL. LXV NEW YORK, THURSDAY, DECEMBER 17, 1908. No. 3133

Survey of the World

The President's Message

At the beginning of his last annual message (sent to Congress on the 8th) the President says that "the financial management of the nation's interests during the last seven years has shown the most satisfactory results," altho our currency system is defective. Receipts have exceeded expenditures by nearly $100,000,000; the interest-bearing debt has been reduced; "there have been no new taxes and no increase of taxes." Following his financial statistics are about 3,000 words on the control of corporations, railroad companies included. Much of this is argument; much, as the President remarks, is repetition of what he has "said again and again" in previous messages. His specific recommendations are these: The railroads should be placed "completely under the Interstate Commerce Commission and removed from the domain of the Anti-Trust law"; the commission should be empowered to "exercise complete supervision and control over the issue of securities as well as over the raising and lowering of rates," and, "as regards rates, at least," its power should be "summary"; the railroads should be explicitly authorized to make combinations and traffic agreements, subject to the commission's approval, and with provision for full publicity; telegraph and telephone companies engaged in interstate business should be put under the jurisdiction of the commission; there should be "abolition of rebates and special privileges," short-time franchises for all corporations engaged in public business (including those which get power from water rights), with both national and State guardianship of mines and forests:

> "I believe that it is worse than folly to attempt to prohibit all combinations as is done by the Sherman Anti-Trust law, because such a law can be enforced only imperfectly and unequally, and its enforcement works almost as much hardship as good. I strongly advocate that instead of an unwise effort to prohibit all combinations, there shall be substituted a law which shall expressly permit combinations which are in the interest of the public, but shall at the same time give to some agency of the National Government full power of control and supervision over them. One of the chief features of this control should be securing entire publicity in all matters which the public has a right to know, and furthermore, the power, not by judicial but by executive action, to prevent or put a stop to every form of improper favoritism or other wrongdoing."

He argues at length that the National Government has a right to control all the agencies of interstate commerce and that only by that Government can this right be exercised wisely and effectively. Much is said of the evils of unrestricted individualism on the one hand, and of the dangerous teachings, on the other, of those who are moved by a spirit of narrow and unreasonable hostility to wealth. The fight against adequate Government control, Mr. Roosevelt says, is chiefly carried on under cover, and especially under cover of an appeal to States' rights. Frequently one may read in the same speech a denunciation of predatory wealth fostered by special privilege, and also a denunciation of centralization in the National Government of the power to deal with this centralized and organized wealth. One denunciation nullifies the other. Turning to labor, the President says he believes in steady efforts to bring about a condition of affairs in which the laborers, those who produce and who find markets for products, shall own a far greater share than at present of the

wealth they produce. There must be prohibition of child labor, diminution of woman labor, shortening of work hours, prohibition of stock watering, discouragement of stock gambling, a progressive inheritance tax on large fortunes, and postal savings banks—all in the interest of workers. In a long passage he argues earnestly for broad and liberal laws concerning employers' liability and compensation for the injury or death of an employee by accident while in service, asserting that in such legislation we lag behind the remainder of the civilized world. He asks for a model employers' liability law for the District of Columbia, and for an eight-hour day in all work carried on by the Government. He urges Congress to increase "the totally inadequate salaries now given to our judges." "Beginning with the Supreme Court, the salaries should be doubled." This recommendation introduces 4,500 words about the attitude of organized labor in the recent campaign and the shortcomings of some judges. Reviewing the demands of labor leaders for "improper" legislation, which would have "legalized blacklisting and boycotting," and referring to the Gompers movement, he remarks that the wageworkers, by "repudiating the effort to get them to cast their votes in response to an appeal to class hatred, emphasized their sound patriotism and Americanism." The whole country, he adds, has reason to be proud of their attitude of sturdy independence. He criticises at much length those judges who "show inability or unwillingness to put a stop to the wrongdoing of very rich men under modern industrial conditions, and inability or unwillingness to give relief to men of small means or wageworkers who are crushed down by these conditions; who, in other words, fail to understand and apply the needed remedies for the new wrongs," and whose minds "have never been opened to the new applications of old principles made necessary by the new conditions." He repeats the recommendations of previous messages concerning modifications of injunction practice, asserting that "repeated resort" to objectionable methods of procedure has given to organized labor a "sound basis for discontent." Describing the new conditions and the "new types of wrongdoing," he speaks of the offenses of great corporations, who "employ the very best lawyers to pick flaws in statutes" and also expert secret agents to render hostile legislation innocuous by procuring the insertion of provisions apparently drastic but really unconstitutional. The rejected employers' liability law of 1906 he calls "a very slovenly piece of work." The greater part of a passage of 2,000 words urging the preservation of our forests is given to an account (illustrated by photographs in an appendix) of the desolation and injury wrought by destruction and disappearance of the forests in Northern China. Our inland waterways, he says, have suffered by reason of changes of plans for improvement and by unscientific treatment. The work of developing them should be given to a permanent commission. He asks for the immediate admission of New Mexico and Arizona as States, an increased appropriation for the Bureau of Education, a parcel post on rural routes, American citizenship for the people of Porto Rico, an appropriation for four battleships, a concentration of the medical and sanitary bureaus, and an extension of the Ocean Mail act for the establishment of lines to Asia, South America and Australia. Hawaii's fortifications should be made impregnable. With a compliment to Cuba is coupled a "solemn warning" that "the only way a people can permanently avoid being governed from without is to show that they both can and will govern themselves." There are words of praise for the Filipinos and for those in charge of work on the Panama Canal. Recommendations heretofore made concerning promotion in the army and the navy are repeated. Nothing better for the navy could have occurred, the President says, than the cruise of the battleship fleet around the world.

Mr. Roosevelt Makes Congressmen Angry

The President also spoke, in his message, of an amendment to an appropriation bill, enacted last year, providing "that there should be no detail from the Secret Service and no transfer therefrom." What he said on this subject has caused much indignation and bitterness in Congress, and in the House a special committee to consider

the matter has been appointed. The passage begins as follows:

"It is not too much to say that this amendment has been of benefit only, and could be of benefit only, to the criminal classes. If deliberately introduced for the purpose of diminishing the effectiveness of war against crime it could not have been better devised to this end. It forbade the practices that had been followed to a greater or less extent by the executive heads of various departments for twenty years. To these practices we owe the securing of the evidence which enabled us to drive great lotteries out of business and secure a quarter of a million dollars in fines from their promoters. These practices have enabled us to discover some of the most outrageous frauds in connection with the theft of Government land and Government timber by great corporations and by individuals. These practices have enabled us to get some of the evidence indispensable in order to secure the conviction of the wealthiest and most formidable criminals with whom the Government has to deal, both those operating in violation of the Anti-Trust law and others. The amendment in question was of benefit to no one excepting to these criminals, and it seriously hampers the Government in the detection of crime and the securing of justice."

Having said that it forbade the Secretary of the Treasury to prevent frauds in the customs service or to investigate irregularities in branch mints and assay offices, and had "seriously crippled" that officer, the President continued:

"The chief argument in favor of the provision was that the Congressmen did not themselves wish to be investigated by the Secret Service men. Very little of such investigation has been done in the past, but it is true that the work of the Secret Service agents was partly responsible for the indictment and conviction of a Senator and a Congressman for land frauds in Oregon. I do not believe that it is in the public interest to protect criminals in any branch of the public service, and exactly as we have again and again during the past seven years prosecuted and convicted such criminals who were in the executive branch of the Government, so in my belief we should be given ample means to prosecute them if found in the legislative branch. But if this is not considered desirable, a special exception could be made in the law prohibiting the use of the Secret Service force in investigating members of the Congress. It would be far better to do this than to do what actually was done, and strive to prevent or at least to hamper effective action against criminals by the executive branch of the Government."

Upon motion of Representative Perkins, on the 11th, the House unanimously adopted resolutions providing for the appointment of a committee to consider this part of the message and report what action should be taken. The committee is composed of Mr. Perkins, of New York; Mr. Denby, of Michigan; Mr. Weeks, of Massachusetts; Mr. John Sharp Williams, of Mississippi, and Mr. Lloyd, of Missouri.

Appointments in the Civil Service

By a vote of 65 to 119, the House, on the 9th, refused to place under the civil service rules the appointments of clerks, enumerators and other employees required for the coming census. In the debate, Mr. Hepburn, of Iowa, sharply attacked the merit system, which was defended by Mr. Gillett, of Massachusetts. —— By an executive order, President Roosevelt has placed under the civil service rules the appointments of all fourth-class postmasters in the fourteen States north of the Ohio River and east of the Mississippi. In these States there are 15,488 postmasters of this class, or nearly one-third of the entire number, which is 54,312. It is understood that all other fourth-class post offices will eventually be included, either by President Roosevelt or by Judge Taft. The latter is an earnest advocate of the merit system and was for some years president of the Cincinnati Civil Service Reform League. A beginning was made in these fourteen States because the examinations which furnish names for an eligible register can be made there with less difficulty than in other parts of the country. There will probably be an examination in each county. Postmasters now in office will continue to hold their places, subject to the rules, and enforcement of the order must await the preparation of eligible lists. Heretofore postmasters of this class have been appointed almost exclusively upon the recommendation of the Representative of the district or of a Senator. When a vacancy occurs hereafter, it must be filled from the eligible register upon certificate from the Civil Service Commission, and at the examinations the political affiliations of candidates will have no weight. When Mr. Roosevelt became President 108,967 of the 235,766 employees in the civil service were under the merit rules. On June 30th last the number had been increased to 206,637, out of a total of 352,104.

The Agreement with Japan

There was a formal exchange at Washington, on the 30th ult., of the notes in which the United States and Japan define and declare their policy in the Pacific and with respect to China. At the beginning of his note to Secretary Root, Ambassador Takahira referred to recent interviews with the latter, at which, he said, an exchange of views had shown that the Governments of Japan and the United States were "animated by a common aim, policy and intention in the region of the Pacific Ocean," where both held "important outlying insular possessions." He continued:

"Believing that a frank avowal of that aim, policy, and intention would not only tend to strengthen the relations of friendship and good neighborhood, which have immemorially existed between Japan and the United States, but would materially contribute to the preservation of the general peace, the Imperial Government have authorized me to present to you an outline of their understanding of that common aim, policy, and intention:

"'1. It is the wish of the two Governments to encourage the free and peaceful development of their commerce on the Pacific Ocean.

"'2. The policy of both Governments, uninfluenced by any aggressive tendencies, is directed to the maintenance of the existing *status quo* in the region above mentioned, and to the defense of the principle of equal opportunity for commerce and industry in China.

"'3. They are accordingly firmly resolved reciprocally to respect the territorial possessions belonging to each other in said region.

"'4. They are also determined to preserve the common interests of all Powers in China by supporting by all pacific means at their disposal the independence and integrity of China and the principle of equal opportunity for commerce and industry of all nations in that empire.

"'5. Should any event occur threatening the *status quo* as above described or the principle of equal opportunity as above defined, it remains for the two Governments to communicate with each other in order to arrive at an understanding as to what measures they may consider it useful to take.'"

Replying, in a note of the same date, Secretary Root said:

"It is a pleasure to inform you that this expression of mutual understanding is welcome to the Government of the United States as appropriate to the happy relations of the two countries, and as occasion for a concise mutual affirmation of that accordant policy respecting the Far East which the two Governments have so frequently declared in the past.

"I am happy to be able to confirm to Your Excellency, on behalf of the United States, the declaration of the two Governments embodied in the following words." [Here the Secretary inserted in identical words the five articles of the declaration in the Ambassador's note.]

In a statement to the press concerning the notes, Ambassador Takahira said that they were a declaration, and not a treaty. Japan had "entire confidence in the great moral strength of the United States Government," and the latter, as past experience had proved, had "full trust in the strong good faith of the Japanese Government." It was "something like a transaction between trusted friends," and it was sincerely to be hoped that the people of each country would "have the same confidence as their own Government in the declaration of the other." It was officially stated that the substance of the notes had been given, some days earlier, to the Governments of other Powers interested in the Pacific and in the condition of China, and that the declaration has been cordially approved by them. The notes have been sent to the Senate, and Secretary Root has given notice that he desires to make a statement before the Senate committee. Prominent Democratic Senators deny that such an agreement can be made without the Senate's approval, and they will express their views in debate.

Conviction of Abraham Ruef

At the close of his third trial, on the 10th, Abraham Ruef, formerly the political boss of San Francisco and associate of Mayor Schmitz, was found guilty. The jury was out twenty-four hours. At his first trial (for extortion) he confest his guilt, but the judgment was reversed by a higher court. At the end of his second trial (for bribing supervisors) the jury disagreed. This time the charge was that he had bribed the supervisors to obtain an overhead trolley franchise for the street railway company. The extreme penalty is fourteen years in prison. Just before the verdict was announced, Prosecutor Heney, almost entirely recovered from the wound made by Haas's bullet, came into the courtroom and was greeted by loud cheers. He had been testifying at the trial of one of Ruef's lawyers for bribing a talesman thru the agency of E. A. S. Blake, who was recently con-

victed and has confest.——William J. Biggy, Chief of Police, was drowned in San Francisco Bay on the night of the 30th ult., and it is believed that he committed suicide. He had crost the bay in a police launch to call upon Police Commissioner Kiel at the latter's residence in a suburban village. On the way back he complained of being ill, and he disappeared while the engineer was busy with his work. Mr. Biggy had been a State Senator. After the arrest of Abraham Ruef he was appointed elisor to take charge of this defendant and he was regarded as a powerful supporter of the bribery prosecutions. Mayor Taylor made him Chief of Police a little more than a year ago. After the recent suicide of Haas (who shot Prosecutor Heney), he was criticised for having failed to discover the pistol which Haas used. He was despondent when he called upon Commissioner Kiel, and he then handed in his resignation, which the Commissioner would not accept. He said he had been "hounded by the newspapers."—A new trial has been refused to the four defendants who were convicted of complicity in what are known as the new capitol frauds at Harrisburg, Pa. These are Contractor John H. Sanderson; J. M. Shumaker, formerly Superintendent of Public Buildings; William M. Mathues, formerly State Treasurer; and William P. Snyder, who was Auditor-General. They will appeal from this decision of the trial judge.

Revolutionists Successful in Hayti

Nord Alexis, the aged President of Hayti, fled from his capital on the 2d and took refuge on board a French warship. On the morning of the 5th, the revolutionary army, led by General Antoine Simon, marched into Port au Prince and was officially welcomed by the Committee of Public Safety. The people cheered Simon, who at once went to the cathedral, where a Te Deum was celebrated. Alexis was really driven from his capital by a quiet revolt there against his authority. Knowing that Simon was at hand with a victorious army, the people organized and with arms took possession of all points of vantage. Then Alexis fled, cursed by an angry mob, and narrowly escaped assassination on his way to the water front. During the night following his departure, the shops were sacked by rioters, but order was soon restored by General Poidevin (representing the new Committee of Public Safety), whose soldiers shot down twelve of the robbers. Simon proclaimed himself temporary Chief Executive, and directed that the National Assembly should elect a President on the 17th. He will then be elected. When General Fouchard, another aspirant, landed at Port au Prince, Simon speedily won his allegiance by making him Chief General of the army. Simon's only formidable competitor is General Firmin, who has a large following in Northern Hayti, and some have thought that Firmin would fight. But at the end of last week Simon easily establisht his authority at Gonaives, a Firminist town, where he landed 200 soldiers.

Panama Canal Sale

On December 6th a letter from Mr. Roosevelt to William Dudley Foulke, of Indiana, was made public in which the President denounced in vigorous language Delavan Smith, editor of *The Indianapolis News,* and William M. Laffan, of the New York *Sun,* for their charges and insinuations of corruption made during the recent campaign:

"The fact is that these particular newspapers habitually and continually, and as a matter of business, practise every form of mendacity known to man, from the suppression of the truth and the suggestion of the false to the lie direct. Those who write or procure others to write these articles are engaged in the practice of mendacity for hire; and surely there can be no lower form of gaining a livelihood. Whether they are paid by outsiders to say what is false, or whether their profit comes from the circulation of the falsehood, is a matter of small consequence."

The President denies that there is any ground whatever for the allegation of the *News* that his brother-in-law, Douglas Robinson, and Charles P. Taft, brother of the President-elect, and other Americans were connected with a syndicate which had profited by the sale of the Panama Canal property to the United States. The *News* asserted that "The United States bought from American citizens for $40,000,000 property that cost these citizens only $12,000,000," and charged the administration with suppression of the papers showing the dis-

position of the money paid to the French company. Publicity was originally given to these charges in the New York *World* and they were extensively copied during the campaign. William Nelson Cromwell, who had charge of the purchase, has made a full explanation of the financial arrangements, and says:

"I again denounce the statement wherever publisht, or by whomsoever made, that there was a syndicate formed by American citizens to purchase the Panama Canal and to sell it to the United States as absolutely and unqualifiedly false and untrue.

"There is no mystery and never has been. The fund in question paid into the Bank of France by the United States produced the net sum of 206,000,000 francs, the sum of 128,600,000 francs being placed to the credit of the liquidator of the old Panama Canal Company, and 77,400,000 francs being placed to the credit of the new Panama Canal Company in liquidation, and by said bank paid over to said liquidators, respectively, pursuant to a decision of arbitration at Paris, February 11, 1902, confirmed by the Civil Tribunal of the Seine.

"I am informed by the liquidators that the shareholders to whom distribution was made numbered 6,796."

Representative Rainey, of Illinois, has introduced a resolution calling for a commiteee of five to ascertain if any part of the $40,000,000 was directly or indirectly paid to American citizens or to an American syndicate.

The Education Bill

Premier Asquith announced in the House of Commons December 4th that the Government had given up the attempt to prepare an education bill, stating that it was hopeless to expect any satisfactory settlement between the warring factions at present. At one time it was thought that an agreement had been reached between the Archbishop of Canterbury and the leaders of the Non-Conformists. A large non-partisan and non-sectarian committee of prominent men and women was organized, and negotiations have been carried on daily between Walter Runciman, of the Board of Education, and the Archbishop of Canterbury, but it was found impossible, as it has been twice before, to agree upon the details of the very complicated system of education prevailing in England. The Church of England and the Roman Catholic authorities were united in opposition to the bill because of its insufficient grants for the support of denominational schools, and the non-secularists were equally dissatisfied with the compromise. The bill as planned provided that schools which remained under denominational control should receive a small grant from the Government in proportion to the number of children, but the Archbishop of Canterbury insisted upon having a much higher rate for these schools than Mr. Runciman was willing to allow. The Government feared that if these grants were increased it would result in the maintenance of a large number of separate denominational schools, so one aim of the bill, which was to unify national education, would be defeated.——The British Government in India is taking strong measures against the organizations that are utilizing the boycott as a political weapon. The Council on December 11th past a bill providing for summary action against seditious persons and on the following day put it into action, arresting and transporting to parts unknown a Bengali lawyer, Dutta, who was a leader in the boycott movement. Two editors of prominent Nationalist papers have also been arrested and transported.

Reform of the House of Lords

At a Liberal mass meeting, held in London, December 11th, Mr. Asquith announced that the paramount issue of the party henceforth must be the question of the right of the House of Lords to veto bills past by the Commons. He said he had refused to dissolve Parliament as a consequence of the rejection of the licensing bill by the House of Lords, and he did not intend to dissolve it at the bidding of an irresponsible assembly. The Government would only dissolve Parliament at the time which they with the confidence of their elected and representative supporters deemed right. In the meantime the House of Lords has undertaken the task of reforming itself according to its own ideas. A committee appointed for the purpose has presented a plan of reorganization, which would give the reformed House about 400 members; that is three Peers of the Blood Royal, 200 representatives elected by the hereditary Peers, 130 qualified hereditary peers, ten Spiritual Lords of Parliament, and five Lords of Appeal in Ordinary. To these must be

added a possible annual increment of four Peers for life, up to the number of forty. The committee agreed that it was undesirable that the possession of a peerage should give the right to sit and vote in the House of Lords, but that the 665 hereditary peers should constitute an electoral body to choose 200 of their number to sit and vote as Lords of Parliament not for life, but for a single Parliament. The qualified hereditary peers are to be men who have held the positions of Cabinet Minister, Viceroy of India, Governors-General of Canada and Australia and similar officials in other colonies, naval and military officers of high rank and men who have served twenty years in the House of Commons. It is recommended that official representatives of Canada, Australia, New Zealand and South Africa be admitted. ——A meeting held in Albert Hall, London, by the Woman's Liberal Federation, was pretty nearly broken up by the organized disturbances of the Suffragettes. In accordance with their policy of attacking the Government on all occasions, they prevented for a long time the Chancellor of the Exchequer, David Lloyd-George, from addressing the meeting. Some of the Suffragettes appeared in their prison garb, and from all parts of the house came shouts of "Deeds, not words." The disturbers were removed as rapidly as possible, but as some of them were chained to the seats, it was a difficult and disorderly proceeding. Mr. Lloyd-George when he obtained a hearing explained that the majority of the Government were in favor of granting suffrage to women, and would introduce a bill to that effect, but not until the eve of the dissolution of Parliament.——A bill has been introduced to prevent the breaking up of public meetings by the Suffragettes and others, providing heavy penalties against acting in a disorderly manner at a lawful public meeting, particularly during a Parliamentary election.

The Austrian Situation

There is an optimistic tone this week about the European dispatches in regard to the dangerous situation created by Austria's annexation of Bosnia and Herzegovina, altho no tangible evidence of favorable changes is adduced. It is reported that the aged Emperor is anxious to preserve peace, especially in this his jubilee year, but what measures, if any, he has taken to relieve the strain are unknown to the public. Certainly not the dismissal of his Minister of Foreign Affairs, Baron von Aehrenthal, who is responsible for the annexation. On the contrary, the Emperor has conferred upon him the highest order in his gift, the Grand Cross of St. Stephen. The Austro-Hungarian Ambassador to Turkey, Marquis Pallavicini, has not left Constantinople, as was reported, but has begun negotiations with Grand Vizier Kiamil Pasha by offering, it is said, $10,000,000 as compensation for the two provinces. In the meantime Austrian troops are being sent into Bosnia in large numbers for the purpose of holding the annexed provinces and, if necessary, of making a campaign against Servia and Montenegro in the spring if these countries maintain their belligerent attitude. An interpellation is to be considered in the Hungarian Diet this week calling for the dismissal of Baron von Aehrenthal on the ground that he deceived the Emperor into approval of his policy by representing that no opposition would be offered by the Powers to the annexation. His action, however, is disapproved by all, except Germany, and the other member of the Triple Alliance, Italy, is highly disturbed by it. In the Italian Chamber of Deputies ex-Premier De Fortis denounced the annexation and used such plain language as the following about Italy's ally:

> "I am alarmed by the increase in Austrian armaments. The day is coming when we must demand a clear explanation from our ally, from whom alone Italy has fear of war. If this state of things continues, we must resume full liberty. Meanwhile, let us increase our army and navy, which will be the best guarantee of peace."

Other speakers were still more violent in the expression of anti-Austrian prejudice, but at the end of the three days' debate the Government received a vote of confidence by 297 to 140. Neither Premier Giolitti nor Foreign Minister Tittoni defended the action of Austria, admitting that it was unwarranted and

unwise, but they held that the Triple Alliance was still necessary to the security of Italy. The sixtieth anniversary of the accession of Emperor Francis Joseph was celebrated with so much enthusiasm in Vienna that four people were killed and twenty-two seriously injured by the overcrowding in the streets. The Emperor, with seventy-five members of his family, assisted at a Te Deum at the Hofburg Church in the morning, received officials and congratulatory delegations all the afternoon and in the evening attended a gala performance at the opera. But the real situation is best exprest by a current epigram that the longer he lives the more his subjects love him and hate each other. Race riots between the Czechs and the Germans continue in Prague, altho the city is now under martial law.——The indignation of the Young Turks has taken the form of a boycott against all Austrian ships and goods. The boycott committee at Constantinople claims to have 5,000 Turkish dealers on its list, and it is difficult to find men to unload and distribute freight from Austria. Boats containing the baggage of passengers on Austrian steamers have been sunk in the harbor. The Turkish Government, anxious not to offend Austria at this crisis, is exerting its powers to put down the boycott.

The New Emperor of China

The dragon throne is now occupied by the three-year-old boy Pu Yi, who officially begins his reign on January 22d, under the name of Hsuan Tung. On December 2d the court laid aside their mourning temporarily and assembled in their most gorgeous robes in the Throne Hall of the Forbidden City. Among the officials gathered from all parts of the empire were a number of coolies of the lowest class, whose presence as representatives of the people is required by ancient custom. After the child emperor had offered a sacrifice before the tablets of the late Emperor and Dowager Empress, his mourning garments were taken off and his nurses put on him a silk robe embroidered with the imperial dragon. Then he walked unaided to the throne and ascended it amid the noise of drums, bells and firecrackers. From the throne he kowtowed to his stepmother, the Dowager Empress, and received the kowtows of the princes and dignitaries present. He then went back to his nurses and was clothed again in mourning garments. The first edict of the new Emperor announcing to his subjects his accession was carried with much ceremony to the Throne Hall, where the vermillion seal was affixed. The decree grants amnesty to minor criminals, gives bounties to the soldiers, advances the degrees of scholars, promotes all officials one grade, and bestows honors on their parents. A decree issued two days later is, or should be, of much more importance, for it confirms in the following wards the promise of the preceding rulers to establish constitutional government in China:

"Every one from the Emperor downward must obey this decree. The date of the eighth year of Hsuan Tung, as fixed for the convocation of Parliament, is unalterable. Let no vacillation or indifference be shown, but let everybody quicken his energies so that the Constitution may become a fact and tranquillity prevail universally. Thereby the spirits of their late Majesties shall be comforted and good government secured for countless ages."

——Tang Shao-yi, Governor of the Province of Fengtien, Manchuria, and special ambassador of the Chinese Government, was received by President Roosevelt on December 2d and presented to him the letter from the late Emperor with which he was charged. This expresses the gratitude of China for the remission of a portion of the indemnity awarded by treaty to the United States on account of the Boxer troubles. The money will be used for the education of about 2,000 Chinese students in the United States. One hundred young Chinese will be sent annually to American schools and colleges for the next four years, and afterward fifty a year. They will be distributed among different institutions in order to get the benefit of diversified training and to avoid too close association among themselves. One-fifth of the number will study the political sciences; the rest will be trained in industrial lines. They will be under the control of a Chinese educational commissioner with five assistants, living in this country but not connected with the legation.

John Milton

1608 December 1908

BY THOMAS WALSH

WHAT other tread is on Olympus now,
O vacant winds, O hollow valleys where
Of yore the Muses roved? What sightless stare
Confronts the peaks that hailed blind Homer's brow?
"Great Pan is dead!" so every crag and bough
Bemoaned; "Zeus vanished from his high repair!
Apollo's shaft inert!" What foot hath there
Dispersed that avalanche of gods but thou,

Who strode concurrent with the angel throng
Of Sinai and of Tabor, whilst the choirs
Of Bethlehem's hills caught up the scattered lyres,
And the Far-Darting bow was made a Cross?
O Milton, still doth thine epochal song
Sound from Life's peaks upon the vales of dross!

BROOKLYN, N. Y.

Race Prejudice Against Jews

[In accordance with our custom of presenting to our readers both sides of a controverted question, we published November 12th an article by Dr. Charles S. Bernheimer defending the Jews against what we then called "the unreasonable and often vicious expressions of prejudice" against the Jews; and we followed it on November 26th with an article on the other side which, as we said, contained, not reasons, but excuses, for a racial prejudice that no responsible person was willing to defend over his own signature. That such a feeling is widespread and influential is undeniable, and there is no better way of showing its weakness and wickedness than by forcing it in the open to defend itself. That the quoted sentiments were low in tone, malicious at times and irrational as arguments was not our fault. We would have secured a more redoubtable and reputable plea if we could have found one. In Europe, where anti-Semitism is disguised under the cloak of ethnic theory, patriotism or religious zeal, a more imposing defense of it could have been procured, but we believe that for this country Mr. Reid's article fairly represents that side. In this issue we close the controversy, in our usual way, by some letters from our readers and an editorial. It should be remembered that the quotations given below are merely extracts and not complete letters or articles. We are pleased to see that they are substantially all on one side, but it is sadly disappointing to find that THE INDEPENDENT, which was founded for the express purpose of combating race prejudice, and for sixty years has devoted more space to that than any other periodical, should now be accused of it.—EDITOR.]

From a Distinguished Jewish Scholar.

My attention has just been called to the article on the Jews in the last issue of THE INDEPENDENT. Many of your friends and admirers will sincerely regret that you gave it a place in your journal. We do not object to criticism at all; we are even quite ready to admit that some of the things complained of are matters of just reproach, which we ourselves are doing our utmost to rectify. But we do feel that the whole tone of the article is so far below the general tone of THE INDEPENDENT as to make it a blot upon the fair fame of the magazine. I have not seen Dr. Bernheimer's article; but I venture to think that it handled a delicate matter in a delicate way. I do not know who Mr. Reid is; but he writes as if he had been a reporter on Drumont's Libre Parole or as if he were qualifying

for the yellowest of the yellow press. It seems such a pity that if these subjects must be discussed, they cannot be discussed in a quiet, dispassionate manner. Surely we here in America have enough to do trying to undo the curse that Christian Russia, Rumania and Austria have laid upon the Jews whom they have forced to flee to this country. Such articles as this one of Mr. Reid make our task immeasurably more difficult than it is, and surely we ought to demand of our great organs of public opinion that they help us on our way. This article certainly does not. It is so full of exaggerations as to create the worst possible feelings of anti-Judaism among Christians and of resentment among the Jews. Suppression of the truth is quite the same as an actual untruth. I take only one example! It is probably true that the New York stage has not been elevated by the Jewish managers who control so much of it. But Mr. Reid forgets, or does not care to say, that the Opera in New York is almost wholly the work of Jews—Grau, Conried and Hammerstein. With such a suppressive view starring us in the face, what are we to think of the truth of the other charges? RICHARD GOTTHEIL.

NEW YORK.

My Career.

The writer was born and reared in a small town, in the only Jewish family in the place. It was a town of churches, of Sunday schools, of prayer-meetings, etc., but altho he at all times profest his own faith, he was never barred from any home or circle in the community. True, he did hear from time to time the taunts of religious prejudice but he overcame them with the moral force of good conduct.

At the age of sixteen he went to a Protestant college in a distant State, conducted mainly for the education of ministers of that faith. He registered as a Jew and being conducted for the first time to the campus by a fellow-student, directly realized that he was an object of abnormal interest. Inquiring of his companion, he learned that "These fellows never saw a Jew before." With such a beginning and the only Jew in the student body, he entered upon a college career of three years. He joined a literary society and was received into a fraternity. Always showing proper respect for the opinions of others, he never hesitated to express and to defend his own religious views. But once was he taunted with being a Jew and when he knocked down the insulter, amidst the plaudits of those present, that party arose with an apology and thereafter was among his closest friends.

The chief interest of college life centered in the literary societies, the offices of which were the goal of the youthful politician's aspirations. Elections were held every three months and the Jew never failed to run for office and never failed of election, passing by degrees from the humblest to the highest position in the gift of his society. On one occasion when the non-fraternity students, groaning under the epithet of "barbarians," combined and resolved that no fraternity member should get an office, the Jew was the only "Greek" who came out a victor.

He entered a contest for a debater's medal. His leading opponent was a young preacher, two of the three judges were preachers of the same faith, yet the Jew got the medal. He was no better nor brighter than numbers of the students, he fawned on no man, but with the exception of his faith he was not different from any of his fellows. Had there been one more Jew in the college and had the two been clannish and drawn a line between themselves and the general student body, a different experience might have resulted.

So much for religious instruction as the source of prejudice against Jews. Our Jew has now been in active life for several years. He lives in a large Jewish community, is and has long been actively identified with their communal affairs, is the lay head of his congregation and is recognized by the secular press as a spokesman for their interests. He belongs to every local Jewish cultural and benevolent movement but not to the Jewish social clubs. His family are not ostentatious, flippant or narrow. They visit among non-Jews and Jews alike. Now and then he overhears talk showing prejudice against Jews, usually from the lips of an ignoramus and usually provoked by an ignoramus. Personally he has never felt this prejudice, either in business, socially or otherwise. Appointed a member of the school board, he was always treated with cordiality and respect. In point of age and service its youngest member, he was chosen by his colleagues as president of the board, a position he held until his voluntary retirement. This is a brief sketch of an experience which may point a moral or adorn a tale. It need not be an exceptional case Neither magnetism, money nor patronage can explain it, for all were lacking. One who best knows explains it as reducing all differences to one of faith only, a difference for which all the world admires and respects constancy linked with tolerance. Let the Jew cast aside his racialism and his nationalism—both myths and mischief makers—and assimilate with the life of those around him. The philosophy of his history, his *motif,* his *raison-dêtre* is religion. To that and that alone let him steadfastly cling. As the world will know him better it will like him more, and from it he will learn to despise those peculiarities which so often make him unpopular.

A JEW.

TEXAS.

An Editorial.

According to a writer in THE INDEPENDENT there is no prejudice against the Jews—prejudice being a judgment formed without reason. There is, however, considerable dislike of them based upon the facts that they are criminal in an extraordinary degree, that they are "dirty" in their personal habits, that they are cultivated and intelligent but will not intermarry,

that they are domineering and self-seeking and that they so intimidate the public authorities that all the statistics which would readily prove this assortment of statements are withheld lest the wrath of the powerful Jews be visited on the head of the offending officials. The foregoing is an entirely fair summary of the article which THE INDEPENDENT has had the indecency to publish coupled with the further indecency of anonymity since the writer of the article gives these opinions not as his own but as those of persons who were unwilling to let their names appear. It would be a "very dirty Jew" indeed who would say such things about a great number of his fellow citizens. What kind of a Christian is this writer in a Christian religious paper—and what kind of a Christian is its editor?

The American Hebrew.

From a Christian Minister.

I have read with much interest the articles by Messrs. Bernheimer and Reid upon the relations socially of Jews and Gentiles. Mr. Reid in representing the Gentile side fails to emphasize as strongly as he might the last point cited, viz.: the persistent and ineradicable hostility of the Jews to intermarriage and amalgamation with other races. This is at the bottom of the whole matter and causes a segregation and isolation of the race which in the last analysis is the cause of all the other objectionable features which Mr. Reid cites.

The Jews pride themselves, and with some reason, upon being superior to all other races, and so long as they consider it contamination, if not treason, to intermarry with those of non-Hebrew ancestry, how can there be unrestricted and happy social intimacy?

The Jews can hardly expect that this attitude will not be resented, and thus they have only themselves to thank for the condition of which they complain. Intimate social relations between attractive young people are sure to result in mutual attachments which look toward marriage, and marriage can follow only at the peril of such trial and persecution as Mr. Reid depicts.

We may dismiss all the minor difficulties. These would soon disappear if the fundamental barrier were removed, but so long as in the words of the Rabbi quoted by Mr. Reid, the Jew "believes that God Almighty has intrusted his people with a Message and a Mission," which forbids them to amalgamate with other races, so long will unrestrained social intercourse with such races be impossible.

Let the Jew heed the teaching of the greatest Rabbi his race has ever produced, who plainly taught that the day of such exclusiveness had forever passed away, and he will find that the ostracism of which he complains will vanish.

But until such change in his attitude takes place, however conscientious he may be in his conviction, he ought to admit that he has no one but himself to thank for the condition he deprecates.

E. N. W.

NEW YORK.

An Injustice.

But that THE INDEPENDENT should permit such an ignorant treatment of a question that has agitated the world since the birth of Christianity is certainly surprising to those who value that journal for its spirit of fairness. Surely, any one can see that Mr. Reid's article is designed not for an intelligent discussion of the Jewish question but as fuel for an unthinking rabble. Here we have again the stereotyped accusations of the ignorant Jew-hater that the Jew is dirty, greedy, loud, conquering, a firebug, a swindler, etc., and then the climax that after all his faults the Jew is yet unwilling to intermarry. Does THE INDEPENDENT think that this is an intelligent presentation of arguments against the Jew? It is nothing but the clap-trap of the ignorant anti-Semite who ignores history and tradition and who imagines that the Jew as found today is only a plague sent down upon the Gentiles in order to despoil their earthly Eden.

Summing up, articles like those of Mr. Reid can have but one object in view, and that is to inflame the ignorant and fanatical man against a race that has for centuries been victimized and is even in this enlightened age the easiest prey for the rabble. Hence, I think that THE INDEPENDENT did an injustice to the Jewish people by giving publicity to this article on the pretext that it represents the so-called justification for anti-Jewish prejudice.

JACOB FISHMAN,
Of the *Jewish Daily News.*

NEW YORK.

"Because You're an Anti-Semite."

The difficulty with the anti-Semite is not that he discovers the vices of the Jew and consequently hates him, but that he hates the Jew instinctively and consequently discovers his vices. It is proven to the Jew with a perspicuity that baffles his own logical mind that he is guilty of arson, fraudulence, insolvency, dishonesty. He is a criminal and hence it is even a virtue for the Gentile lovers of moral order to hate him. But how will you justify — even explain — the hatred borne against him by the thousands of Christians who are unfortunately culpable of the same vices? How will you account for the bitterness against the Jew by many of the inmates of prisons? Are *their* moral virtues also outraged and do *they* reason that the Jew turns a deaf ear to the Sermon on the Mount and therefore he must be hated?

But the anti-Semite is always ready with some other vice to analyze the motive for the prejudice against Jews. He watches them with the unrelenting moral eye of the Puritan. When he discovers that they have but slightly transcended the border of conventional virtue he raises a hue and cry of their inherent viciousness, so that they carrying

> "the stamp of one defect,
> Being nature's livery, or fortune's star,
> Their virtues else—be they as pure as grace,
> As infinite as man may undergo—
> Shall in the general censure take corruption
> From that particular fault."

So the anti-Semite is forever discovering new faults in the Jew. He labels them and catalogs them and pigeon-holes them and they form the tokens by which to recognize and judge the Jew. To probe for human frailties in the heart of a nation and to flaunt them before an already prejudiced crowd to intensify (rather than justify) hatred—what a task for the disciples of him who proclaimed peace and goodwill toward men!

Do you wish to learn the lesson of peace and goodwill? Go into the home of an orthodox Jew on a Friday night when the candles are lit and shedding a benignant gleam in welcome of the Sabbath. There is something about the quaint ceremonies, something about the pervading atmosphere that is more convincing of a preponderance of amiable qualities among the Jews than endless arguments.

Do you wish to learn the lesson of the Christian virtues, of faith, hope, charity? Behold a nation that has believed and hoped these 2,000 years for solidarity and rest, a nation that still, in its daily prayer, invokes the Almighty to speed the time and return them to Jerusalem. The Jews have patience—this was what Peer Gynt said he learned from them, and Ibsen considered the Jews the aristocracy of the human race. As for the other Christian virtue, charity, the Jews never allow one of their own fold to suffer from need. It is a distinctly Jewish institution. It is a *mizvah*, i. e., there will be a special heavenly reward for obeying the command to give charity. A Jew has a claim to help upon members of his tribe for the reason that he is a Jew. A beggar—Jew or Gentile—is seldom turned away empty handed from a Jewish door.

ALBERT MORDEL.

PHILADELPHIA, PA.

A Jew and Christian.

I am a Jew, thirty years old, and have lived in our little city of less than three thousand souls all my life.

I have lived a rather solitary life, without intimate friends, and in my childhood and youth had responsibilities beyond my years.

My character has been formed by my responsibilities, hard work, public school teachers and by reading good books and periodicals.

My favorite author is Dickens; I read David Copperfield about once a year.

I have never had any religious training. In this I think myself fortunate. I think it is wrong to teach religion to children. Children should be taught all that is good and true but allowed to choose their own religion when they have reached maturity.

Christ is my ideal.

I do not care if his birth was divine or not, all births are divine. If I was convinced that he was born as the New Testament says it would not impress me in the least.

I drive thru the country all the seasons of the year. In the spring I see nature come into life and the farmers plant their crops. During the summer I see the crops grow and see them ripen in the fall. And when the crops are harvested and her work done Nature goes to her death robed in her most gorgeous colors. All this is wonderful to me.

A little grain of corn is planted and in a hundred days it has grown an enormous stalk and reproduced thousands and thousands of its kind. Is not that a miracle?

I see the earth stored by an Unknown Power with everything to make men happy.

With all these wonders close at hand those of two thousand years ago do not interest me. I do not need them to enhance my admiration of Christ. I do not believe Christ performed any miracles, indeed, if they were proven to me I would think less of him. If Christ could not win the love of the people because of his beautiful character, gentleness and wisdom he would not care to have it. I do not believe that a man like Christ would stoop to awe those about him, if they were unimpressed by his life and teachings, by a display of the supernatural, even if he possest the power.

The simple ethics of Christ are enough for me and they rule my life.

There are honorable, splendid Jewish men and women but the Jews have no religion. There are many rites and ceremonials but absolutely no religious spirit.

If the first Jew—Abraham—had been a man like Christ humanity would be four thousand years farther along on its upward and onward march.

The Old Testament tells that Abraham was pious and virtuous and the Lord rewarded him with many flocks and herds and he was very prosperous. That is the history of Judaism, the richest men have always been and are today their leaders.

To love and teach the savage tribes never entered into their philosophy, they were God's chosen people and the balance of humanity of no consequence.

For four thousand years the Jews alone knew of God but not until Christ came did one of them endeavor to tell the world of Him and they cast Christ out with ridicule and contempt.

When there was but one Christ there were thousands of Jews; Christ's humanitarianism spread and spread until it won the world and today the Jew complains of persecution because of inferior numbers.

The Jews have no Mission that I can see; for four thousand years before the coming of Christ they had their great opportunity and did not take advantage of it. Judaism is dead and Omission should be carved on the tombstone.

Jews ought to intermarry.

Mr. Sidney Reid says the Jews are beating the Christians in the schools and colleges—the average Jew has greater intellectual power than the average Christian.

In material things the average Jew is superior to the average Christian in sound judgment, foresight, thrift, industry, patience and perseverance. Add to these qualities pure Christianity by intermarriage and the offspring will be very desirable citizens.

WILLIAM W. BAUM.

LIGONIER, INDIANA.

Judophobomania.

When I read the article by Sidney Reid, entitled "Because You're a Jew," in THE INDEPENDENT, it seemed to me that I was reading a translation of an article from the leading organ of the Black Hundreds published in Russia. In that Russian organ the Jews are attacked in the most violent manner, but that same organ also attacks in equally violent manner such Christians as Count Tolstoy. It preaches massacre and the members of the party publishing that journal remove the people they hate in a very simple way. They murder them. Thus the Black Hundreds incited and participated in the massacre of the Jews, and when such leaders as Herzenstein, the greatest of statemen among the Constitutional Democrats, and Dr. Yollos, one of the most important publicists in Russia, were in their way, they murdered Herzenstein and Yollos. The tone of the article by Sidney Reid is the same as that of the *Russkoye Znamya,* the organ of the Black Hundreds. The "arguments" advanced are the same. The "proofs" are the same. Only in Russia they have the courage of their brazenness, while in this case it is a cowardly attack hidden beneath anonymity, which may best be characterized as Judophobomania.

The truth of the matter is that anti-Jewish prejudice is an imported plant in this country and that here the soil is not suitable for its development and growth. The complete fiasco of the notorious German anti-Semite, Ahlwart, who came to preach anti-Semitism in New York at the time Theodore Roosevelt was chief of police, may be mentioned as an example.

If the Christians who spoke to Mr. Reid and slandered a whole race, stipulating "that their names should not be mentioned," were in their own life, in their intercourse with their neighbors acting in accordance with the principles laid down by the teachings of Christ, there would be some sense in their question: "If they have a living religion how comes it that they have so much swindling, etc?" The people whose views Mr. Reid says he is voicing are afraid to lose their jobs, therefore they slander without using their names, striking in the dark, as it were.

It is better not to touch upon the religious differences between the Jews and the Christians. Neither the Jews nor the Christians have as yet attained to the ideals of their separate religions. HERMAN BERNSTEIN.

NEW YORK CITY.

Prejudice Against Jews.

I am a Jew, as you see not only by the "sky" at the end of my name, but by my patriarchal "Christian" name. Like nearly all of us I am something of an expert in "race prejudice," for I began to play the role of "a case" at clinics early in life. When I was a boy in a city up the State, I had Christian as well as Jewish playfellows, and I still remember occasions upon which my Christian playmates vigorously expounded the philosophy—with particular reference to my own case—so happily stated by Mr. Reid in the last number of THE INDEPENDENT.

I remember especially how a Christian boy once hit me in the eye and I refrained from crying when I entered the house, because I knew my mother would punish me if I did. The incident is recalled by Mr. Reid's statement that Jewish boys invariably take away the playthings of Christian boys. It seldom seems to have been so in my experience, but perhaps times have changed and the invaders have become more aggressive.

As I read Mr. Reid's article I felt my indignation growing against the Jewish incendiaries, the fraudulent bankrupts, the pickpockets and the successful merchants and students. I missed, however, the special application to my own case, which is always what I am in quest of in articles of this sort. I belong to none of those categories. I could, if it were desirable, produce a great many affidavits to prove that I am not dirty, or pushful, or successful—to say nothing of statutory offenses. And yet, since my name ends in "sky," any hotel man or insurance agent, according to the code compiled by Mr. Reid, would feel justified in exerting "race prejudice" against me. It is not the "sky" so much that would be objected to but what the "sky" connotes. But what does the "sky" connote in this case? Do any of Mr. Reid's informants know?

Very few of my friends—I say it without pride or resentment—are either dirty or very successful. It might perhaps be safe to say that but a small proportion of the Jewish readers of Mr. Reid's article in THE INDEPENDENT merit these epithets. Yet some of them have "sky" in their names, and others have its equivalent on their faces. They are all fair game for the "Aryan" who hates to be beaten —so Mr. Reid, or his authorities, inform us. Why? Where is the connection?

Evidence of the fact that Christians do not meet Jews on the same footing as they do Christians comes to every Jew sooner or later, more or less; but knowledge of this fact is not as galling to Jews as the uninformed reader of magazine articles would be led to suppose. I was nearly thru college before I learned that Jews were not admitted to the fraternities. It had never occurred to me to try to join one. Several of my Jewish friends, as I remember, had a great contempt for the fraternities. Nor was the reason "sour grapes." They were too busy becoming successful students to waste their time in dissipation.

I have been in Adirondack hotels ("sky" and all) on the friendliest terms with Christians of many kinds. They were not the "fashionable" hotels, but does anybody with intelligence enough to be concerned about race prejudice go for a summer vacation to a fashionable hotel? The number of Jews who are trying in vain to enter the charmed circle of the Four Hundred must be comparatively small. The mass of the Jewish people in America are blissfully ignorant of the woes of these brethren.

Mr. Reid reports that a Gentile who falls in love with a Rose of Sharon is roughly dealt with by her people—and hence, we are to in-

fer, he prefers not to have anything to do with her, or her brother; and similar tribulations ensue when a Jew marries a Christian maiden.

My best friend married a Christian woman. The other day I was present at a family reunion at the home of my friend's mother. His wife was the only Christian present—unless her children be included—and there was no sign of a row. One of my cousins married a Christian and his parents, I hear, wish the daughter-in-law to live with them, altho they would have infinitely preferred, being orthodox, that he should marry a Jewess. I could cite a number of other cases of harmonious mingling of Jews and Christians. The higher the culture and intelligence of the combining elements, the more perfect is the union. And the reason, obviously, is, that there are no irreconcilable differences between good and sensible Jews and good and sensible Christians. It sounds like a truism.

ABRAM LIPSKY (Ph.D.).

NEW YORK CITY.

Criminality.

The writer of these lines has been drawing indictments for the criminal court in a community embracing many nationalities, including a Jewish population of about 100,000. For his own information, and also for the purpose of finding excuses for his own pet prejudices against nationalities other than his own, he kept private statistics on the criminality of various nationalities. Having spent considerable energy and labor on the thankless task he finally reached the conclusion, that whilst each nationality would show a special predisposition for a "favorite" line of criminality, the general percentage of criminality among the respective nationalities would vary but little. One nationality would show a stronger tendency toward criminal violations of property rights, another would make up for it by criminal violence, bloodshed or immorality. In the number of criminals, however, contributed by each nationality, the respective percentages would show but little variance. In neighborhoods where members of different nationalities lived under similar economic conditions, there was almost no perceptible variance in point of percentages of criminality.

If it were true that the existence of anti-Jewish feeling among Gentiles is due merely to such "Jewish crimes" as arson, fraudulent bankruptcy, fraud upon railroad companies, etc., there should have been less anti-Jewish feeling among Gentiles before the advent of insurance companies, courts of bankruptcy and railroad companies. Yet, in those "good old times" anti-Jewish feeling was running riot and was never short in excuses. Such accusations as poisoning water wells, killing Christian babies for ritual purposes, stabbing the crucifix and causing it to bleed, practising witchcraft, etc., have served the same purpose The prejudice is the same, only the excuses change according to times and conditions. There is never a prejudice without an excuse. "If you want to drown a dog, call it mad"—is a German proverb which fits the case.

As to the charges of "tipping the head waiter" in restaurants and crowding the schools, the "defendant in the above cause" will probably plead guilty and take the consequences.

LEON ZOLOTKOFF.

CHICAGO.

The Same Old Story.

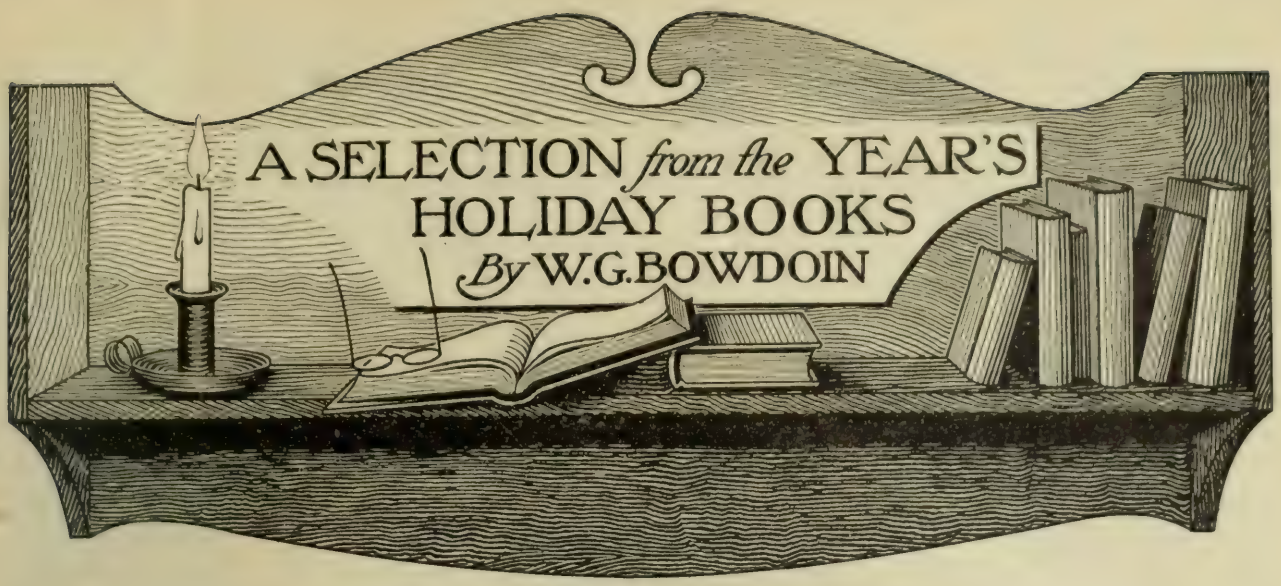
In publishing an article in THE INDEPENDENT of November 12th, by Dr. Charles S. Bernheimer, on "Prejudice Against the Jews in the United States," the editor, in an accompanying note, stated that it was one of a series "called out by unreasonable and vicious expressions of prejudice against Jews," and that the following article would set forth some of these expressions collected by Mr. Sidney Reid from persons who, however, refused to permit their names to be disclosed. This collation was duly served up to THE INDEPENDENT'S readers in last week's issue. It contains the usual array of sweeping denunciation and accusation grouped together so as to include all the faults and offenses that have been alleged against the Jews by their enemies from ancient times down to our own enlightened era. THE INDEPENDENT provides the antidote in the shape of Dr. Bernheimer's article, before the diffusion of the poison contained in Mr. Reid's anonymous symposium. It would have been fairer to all parties in interest, if these anonymous assertions had been treated as all such effusions are usually treated by discriminating journalists.

The tendency on the part of a considerable section of the American periodical press of high standing to give publicity to unjust and ungenerous attacks on the Jewish people, is a matter for sincere regret. The harm thus done cannot be offset by a refutation. The poison lingers when the antidote is forgotten. There is enough race and religious prejudice as it is, without adding to it by such means. The Jewish press might, if it were so inclined, retort in kind; but the inclination does not exist even where the facts might seem to warrant it, and the persons most directly concerned would not be reached by any such methods. A broadminded public shou'd realize that the peculiar connection of their religion with their race leads the Jews to feel that any unjust attack on the latter, is an attack on their faith as well, and for that reason, if for no other, the "vicious and unreasonable" assertions of irresponsible writers should be consigned to the oblivon they deserve. It is merely to emphasize this duty that the responsible Jewish press notices these fulminations at all. If the men of "light and leading" cannot be persuaded to deal justly in this matter, whence shall our help come?

THE JEWISH EXPONENT.

Anti-Jewish Prejudice.

None will publicly say over his own name why and wherefore there is this prejudice against the Jews. But it exists here, there, and everywhere. Even the most catholic harbor it: scratch the surface of their liberality and it appears. As Napoleon said, "Scratch a Russian and you will find a Tartar."



The Hebrew Standard.

Specimen illustration from "The Riverman," by Stewart Edward White; reproduced by permission of the publishers, The McClure Company, for the Holiday Book Number of *The Independent.*

The Morgan Miniatures. Privately printed. Three volumes. Magnificently executed and illustrated from originals in the Morgan Collection. Obtainable only by presentation.

Chats on Old Miniatures. By J. J. Foster, F. S. A. Copiously illustrated. Colored frontispiece. Rubricated title page. Stokes Co. $2.00.

Miniatures, Ancient and Modern. By Cyril Davenport. With 46 illustrations. McClurg. $1.00.

Bookplates. By Edward Almack, F. S. A. With 42 illustrations. McClurg. $1.00.

Enamels. By Mrs. Nelson Dawson. With 33 illustrations. McClurg. $1.00.

Jewellery. By Cyril Davenport. With 42 Illustrations. McClurg. $1.00.

A History of British Water Colour Painting With a Biographical List of Painters. By H. M. Cundall, I. S. O., F. S. A. With 58 colored illustrations. Dutton. $6.00.

With Whistler in Venice. By Otto H. Bacher. Illustrated with many reproductions of Whistler's work and of etchings and photographs by the author. Century. $4.00.

The Arts and Crafts of Older Spain. By Leonard Williams. In three volumes. Illustrated. The World of Art Series. Chicago: McClurg. $4.50.

Arts and Crafts in the Middle Ages. By Julia De Wolf Addison. With many illustrations, including four in full color, from special photographs and rare old prints. Bronzed title page. L. C. Page. $3.00.

The Mallet's Masterpiece. By Edward Peple. Illustrated by C. M. Burd. Title page and other pages in tint. Moffat, Yard, 75 cents.

How to Appreciate Prints. By Frank Weitenkampf, Curator of the Print Department of the New York Public Library. Illustrated. Frontispiece after Whistler. Moffat, Yard. $1.50.

Japanese Wood Engravings, Their History, Technique and Characteristics. By William Anderson. New editon. Illustrated with many reproductions of Japanese prints in black and white and in monotint. London: Seeley & Co. 75 cents.

The Flowers and Gardens of Japan. Painted by Ella Du Cane. Described by Florence Du Cane. Title page contains decoration in green tint. Illustrations in color thruout. One of the Adam and Charles Black publications. Macmillan. $6.00.

George Cruikshank. By W. H. Chesson. Illustrated with numerous reproductions of Cruikshank's drawings. Dutton. 75 cents.

Chats on Old Lace and Needlework. By Mrs. Lowes. Rubricated title page. Colored frontispiece. Numerous reproductions of old lace and needlework. Stokes. $2.00.

The Greater Abbeys of England. By Abbot Gasquet. With illustrations in color after Warwick Goble. Rubricated and decorated title page. Dodd, Mead. $3.50.

Old Edinburgh. By Frederick W. Watkeys. In two volumes. Illustrated with many reproductions from rare old prints and photographs. Rubricated title page. L. C. Page. $3.00.

Grenada, Present and Bygone. By Albert F. Calvert. With 20 colored and 8 half-tone illustrations and numerous line drawings in the text. Rubricated title page. Dutton. $2.50.

Home Life in Italy. Letters from the Apennines. By Lina Duff Gordon (Mrs. Aubrey Waterfield). With 13 illustrations by Aubrey Waterfield and 15 illustrations from photographs. Macmillan. $1.75.

Venetia and Northern Italy, Being the Story of Venice, Lombardy and Emilia. By Cecil Headlam. Illustrated in color by Gordon Home. Rubricated title page. The volume contains a folding map and other illustrations in black and white. Macmillan. $2.50.

Along the Rivieras of France and Italy. Written and ilustrated by Gordon Home. Ilustrations in full color. Rubricated title page. Macmillan. $3.00.

Geneva. Painted by J. Hardwicke Lewis and May Hardwicke Lewis. Described by Francis Gribble. Rubricated title page. Illustrations in full color. One of the Adam and Charles Black publications. Macmillan. $2.00.

In Viking Land. Norway: Its Peoples, Its Fjords and Its Fjelds. By W. S. Monroe. With many illustrations from special photographs. Rubricated title page, which is also bordered. L. C. Page. $3.00.

St. Botolph's Town. An Account of Old Boston in Colonial Days. By Mary Caroline Crawford. Illustrated. Engraved and rubricated title page. L. C. Page. $2.50.

Cape Cod. By Henry D. Thoreau. Illustrated from photographs by Clifton Johnson. Rubricated and illustrated title page. Crowell. $2.00.

The Niagara River. By Archer Butler Hulbert. With maps and illustrations. Frontispiece in photogravure sepia tint. Rubricated title page. Putnam's. $3.50.

Florida Enchantments. By A. W. and Julian A. Dimock. With numerous illustrations from photographs. Rubricated title page. Outing Co. $3.00.

Mansfield Park. By Jane Austen. Engraved title page printed in brown and cobalt. Frontispiece and 23 other illustrations in color by C. E. Brock. Dutton. $2.00.

Tales. By Edgar Allan Poe. Centenary Edition. With pictures in colors by E. L. Blumenschein. Duffield. $2.50.

My Lady of the Fog. By Ralph Henry Barbour. With 12 illustrations by Clarence F. Underwood and decorations by Edward Stratton Holloway. Frontispiece and some of the other illustrations in color. Lippincott. $2.00.

The Chariot Race from Ben-Hur. By Lew Wallace. Illustrated in full color by Sigismond Ivanowski. Engraved title page. Harpers. $1.25.

The Countess Diane. By Henry C. Rowland. Decorations in vert. Illustrations in color by John Rae. Engraved and tinted title page. Dodd, Mead. $1.25.

The Panther, a Tale of Temptation. By Anne Warner. With illustrations by Paul K. M. Thomas. Title page in three colors. Tinted marginalia. Frontispiece in color. Boston: Small, Maynard. $1.25.

The Ruby of Kishmoor. By Howard Pyle. With illustrations in full color by the author. Tinted title page. Harpers. $1.00.

The Better Treasure. By Mary Raymond Shipman Andrews. With illustrations by H. M. Bunker. Engraved title page in black and brown. Marginalia in brown tint. Bobbs-Merrill. $1.25.

The River-Man. By Stewart Edward White. New York: The McClure Co. $1.50.

The Guest of Quesnay. By Booth Tarkington. New York: The McClure Co. $1.50.

Lewis Rand. By Mary Johnston. Boston: The Houghton-Mifflin Company. $1.50.

An Idyll of All Fools' Day. By Josephine Daskam Bacon. With numerous illustrations by R. M. Crosby. Dodd, Mead. $1.25.

Marjorie Daw. By Thomas Bailey Aldrich. With illustrations in color by John Cecil Clay. Title page in double tint. Houghton, Mifflin. $2.00.

The Sermon on the Mount. From the translation authorized by King James A. D. 1611, together with the Revised Version of A. D. 1901. Rubricated page borders. Duffield. 60 cents.

Proverbs from the Almanac of One Richard Saunders (Benjamin Franklin, otherwise Poor Richard). Rubricated page borders. Duffield. 60 cents.

The New Medieval Library. Of the Tumbler of Our Lady and Other Miracles. The Book of the Duke of True Lovers. The Chatelaine of Vergi: A Romance of the XIIIth Century. Illustrations in photogravure. Duffield. $2.00 each.

Out of Doors in the Holy Land. Impressions of Travel in Body and Spirit. By Henry Van Dyke. Illustrated. Frontispiece and other illustrations in color. Rubricated title page. Scribners. $1.50.

The House of Prayer. By Florence Converse. With 8 illustrations by Margaret Ely Webb. Rubricated title page. Frontispiece in color. Dutton. $1.50.

The Little Flowers of St. Francis of Assisi. Translated from the Italian by T. W. Arnold, M. A., with a note by Dr. Guido Biagi. Illustrations from miniatures, manuscripts, etc., in color and in black and white. Engraved title page. Duffield. $3.00.

Christmas Today. By Hamilton Wright Mabie. Rubricated title page. Dodd, Mead. 75 cents.

By the Christmas Fire. By Samuel McChord Crothers. Illustrated by Frances B. Comstock. Rubricated title page. Houghton, Mifflin. $1.25.

Poems from Punch. Etched frontispiece. Rubricated title page. Leather bound. Boston: H. M. Caldwell. 75 cents.

Home Again With Me. By James Whitcomb Riley. Drawings by Howard Chandler Christy. Decorations by Franklin Booth. Frontispiece and other illustrations in color. Rubricated borders. Text superimposed on tint. Indianapolis: Bobbs-Merrill. $2.00.

Riley Songs of Summer. By James Whitcomb Riley. With pictures by Will Vawter. Rubricated title page. Illustrations in black and white. Indianapolis: Bobbs-Merrill. $1.25.

Drifted In. By Will Carlton. Colored frontispiece. Other illustrations in black and white. Moffat, Yard. $1.50.

Lyrics of Lowly Life. By Paul Laurence Dunbar. With an introduction by W. D. Howells. Numerous illustrations. Title page in tint. Dodd, Mead. $1.60.

Davy Jones's Yarns and Other Salted Songs. By Thomas Ybarra. Illustrated in color by Henry Mayer. Henry Holt. $1.25.

Bachelor Belles. With illustrations in color by Harrison Fisher. Decorations by Theodore B. Hapgood. Title page in tint. Dodd, Mead. $3.00.

The Henry Hutt Picture Book. Frontispiece and many other of the illustrations in full color. Pictorial title page. Century. $3.00.

In the Open. Intimate Studies and Appreciations of Nature. By Stanton Davis Kirkham. Colored frontispiece. Illustrations from photographs by Rudolf Eickemeyer. Paul Elder. $1.75.

Bird Legends and Life. By Margaret Coulson Walker. Numerous illustrations. Baker & Taylor. $1.25.

The Book of the Pearl. The History, Art, Science and Industry of the Queen of Gems. By George Frederick Kunz, A. M., Ph. D., and Charles Hugh Stevenson, LL. M., D. C. L. Frontispiece and some other of the illustrations in color, the rest in black and white. Title page ornamented with border printed in green tint. Century. $12.50.

My Treasures. A record for owners of objects of art. Stokes. $1.00.

The Simple Jography, or How to Know the Earth and Why It Spins. By Peter Simple, F. T. G. (Fellow of the Terrestrial Globe). Edited by Oliver Herford. With pictures of Peter Simple, Theodore Roosevelt, the earth and others. And some imitations of pictures by Cecilia Loftus. Boston: John W. Luce & Co. $1.00.

Little Stings. By T. W. H. Crosland. Ornamental title page. Busy Bee decorations thruout the book. Boston: John W. Luce & Co. 75 cents.

All in the Same Boat. Text and illustrations by James Montgomery Flagg. Red Line Edition. Life Publishing Co. 75 cents.

The Pleasant Thought Year Book. Pleasant and profitable thoughts taken from a large number of authors and arranged for every day in the year. By M. R. J. DuBois. Henry Holt. $1.00.

The Carolyn Wells Year Book of Old Favorites and New Fancies for 1909. Illustrated by Mrs. M. E. Leonard, Miss Bertha Stuart, C. De Fornaro, Oliver Herford and Strothmann. Tenry Holt. $1.25.

Chrysanthemums and Other Essays. By Maurice Maeterlinck. Translated by A. Teixeina de Mattos. Title page in red and green. Dodd, Mead. 25 cents.

Any of the books reviewed or advertised in this number will be sent by THE INDEPENDENT on receipt of price.

THE most gorgeous book of the year in so far as makeup and lavish decoration is concerned is that of the *Morgan Miniatures.* The three volumes are bound in white vellum, with hand-hammered oxidized silver shields in the center of each. The corners and clasps are also of silver. The volume containing the Richard Cosway miniatures is ornamented with a heart-shaped shield outlined with delicate silver ribbon scroll and vine, which incloses a facsimile of Cosway's autograph in blue enamel written across the center. One of the interesting miniatures in the Morgan book represents the eye of the celebrated Mrs. Fitzherbert, who was the wife of the Prince Regent, afterward George IV. It is beautifully painted and shows the eye as if rising from a bank of blue and gray clouds. The painting is by Cosway, and, so far as is known, this was the first painting of this kind to be made.

In *Chats on Old Miniatures* the reader will learn something of the fascination of collecting. Ivories of the olden time may sometimes be picked up in the second-hand shops, and when this happens the buyer naturally feels like knowing something about them. The book is

filled with information of great value to the collector as well as to the general reader.

The series of four "little books on art" issued thru McClurg includes *Bookplates, Miniatures, Enamels,* and *Jewelry.* The bookplate volume, by Mr. Almack, is exceedingly disappointing. There was room for another book on bookplates, but it cannot truthfully be said that this is it. The author does not seem to be aware that anything has happened in the bookplate world since 1899. Cyril Davenport's book on *Miniatures* is somewhat better, altho he was confronted with the difficulty of condensing a large subject into a very small book. The same author is less adequate in his treatment of *Jewelry,* at least in so far as modernity is concerned. Perhaps the best book in the series is Mrs. Dawson's. She has at least been conscientious in her study of *Enamels,* and has given her subject careful thought. The result has been a carefully digested book on enamels that one may read with much benefit. In spite of its brevity it is good.

MARIE ANTOINETTE.
By Dumont. In "The Morgan Collection."

A History of British Water Colour Painting as written by H. M. Cundall contains a biographical list of painters. The earliest form of water color painting was tempera, employed during the early Memphic dynasties of Egypt, *i. e.,* 3000 B. C. The Egyptian painters on papyrus or on walls mixed their colors with water and used mastic, wax and various glues as a medium to fix them. Beginning with a brief survey of miniature painting as practised in England, the reader is conducted thru the development of the art of water color painting in England down to the end of the nineteenth century. The illustrations have been carefully selected and constitute an exceedingly attractive feature of the book.

Whistler is now so highly esteemed that most of us cannot realize that he once wondered if his life was worth living. The world knows now that it was. New lives are being constantly written like Miss Cary's and Mortimer Menpes's. *With Whistler in Venice* deals with the Venetian period in Whistler's life, perhaps the least familiar to his many friends. It was nevertheless a very important part in his career, and the book, written by one who knew him intimately during this time, is an important contribution to Whistlerana. One of the book's illustrations is reproduced in this issue of THE INDEPENDENT.

Such a book as *The Arts and Crafts of Older Spain* makes a stronger appeal to the general reader today than it could have done several years ago. The author has aimed to give a clear and fairly complete account of the Spanish arts and crafts as they were in the old days. In this he has succeeded very well, even if his researches have led to the writing of three volumes in the development of his theme. Gold, silver and jewel work, ironwork, bronzes, arms, furniture, ivories, pottery, glass, various textiles, embroidery, tapestry and lace are the principal subdivisions of the general subject.

Another volume on the same subject is called *Arts and Crafts in the Middle Ages.* This book surveys the subject more comprehensively, but the text is briefer. In this book consideration is given to the illumination of books, which certainly belonged to the practice of the arts and crafts of the period, but which subject is strangely omitted from the book on older Spain.

The Mallet's Masterpiece is a story that centers around a carving of the Venus de Melos. Art and romance go hand in hand in the story, which is told with much skill and dramatic power.

Mr. Weitenkampf, in *How to Appreciate Prints,* has differentiated between the etching, line engraving, stipple, mezzotint, aquatint, wood engraving, lithographs, photo-mechanical processes and color prints, and if one reads what he says about each there will no longer be such a hopeless maze in the mind of the reader concerning all these. *How to Appreciate Prints* is an excellent book to read, not alone by the one who knows nothing of the subject, but it is also helpful for the man who does know something about prints, but who wishes to know still more. A book by an enthusiast always makes good reading, and the author of this book is nothing if not enthusiastic.

ILLUSTRATION BY HARRISON FISHER.
In "The Harrison Fisher Book," accompanying the poem "I Will Not Let Thee Go." Dodd, Mead.

Japanese Wood Engravings is now reprinted in smaller size from the edition of 1895. It falls off decidedly in the reprint, which seems a pity, since there is now a growing cult for Japanese prints that is bound to extend. The text on Japanese art as contained in the present book is, however, very helpful.

In *The Flowers and Gardens of Japan* we come into contact with the Oriental fondness for both flowers and gardens. No wonder Japan is called the land of flowers. No wonder the Japanese write books upon books on their arrangement. No wonder their landscape gardening is at once the surprise and the despair of their would-be rivals. The colored illustrations lend realism to the book, and the wistaria and the azaleas in a Kyoto garden, the lotus at Kodaiji, the lotus and the chrysanthemums and the other illustrative subjects, all are gems of color work.

George Cruikshank knew London as perhaps no other man has ever known the city. But he knew more than London. He depicted the Spain of Don Quixote and Gil Blas, the Ireland of Lord Edward Fitzgerald, and even the America of Uncle Tom. He touched with his pencil such widely separated themes as Jenner, current fashion, modern ballooning, the evils of intemperance, housebreaking, the betting book, ghosts, the miser's daughter, the Tower of London, Dr. Syntax, Windsor Castle, German popular stories as collected by M. M. Grimm, Gilpin, Robinson Crusoe, as well as unnumbered other things that interested him from day to day, and which with his pencil he immortalized.

Chats on Old Lace and Needlework, by Mrs. Lowes, is written from an English viewpoint. Many of the book's illustrations are derived from that wonderful storehouse of treasures, the South Kensington Museum. The period just preceding and during the Reformation was the golden age of needlework. Apart from their households, women had no other interests in those days. They spent their long leisure hours, not in improving their minds, but in beautyfying the churches with specimens of their skill as needlewomen.

A very beautiful book has been made up concerning *The Greater Abbeys of England.* It contains sixty illustrations of the more important of the English abbeys, and every one is a beautiful study in color. If ever a book was a temptation to Grangerize this one is, for any one of the sixty color plates in this book would look well framed. There are three hundred and seventy-eight pages of description, history and tradition.

Old Edinburgh is the outcome of a

recent sojourn in Edinburgh. The writer groups in the text the principal events in the history of Edinburgh, as well as some which, while interesting, are somewhat less important. Some account is also included of the manners and customs of the old-time citizens of this Scotch city. The illustrations, printed in brown tone, that are introduced from rare prints, add greatly to the book's value.

No city in all Spain possesses so much fascination for the foreigner as the old Moorish capital of Granada. In Calvert's *Grenada Present and Bygone* the glories of the Alhambra and other features of Grenada as described by Washington Irving live once more. The book's illustrations, many of which are beautifully executed in full color, add much to its value as a souvenir.

Most travelers get to know about as much of the home life of the people among whom they journey as is contained in the red-bound Baedekers they carry, and no more. The author of *Home Life in Italy* proceeded along very different lines. He found himself in an out-of-the-way corner of Italy, away off the beaten tracks. But he did not despair. Far from it. He made real friends among the people where he sojourned. He put his heart and soul into studying conditions and he made notes of the impressions he got from the little world around him, and the result was a book that represents the real home life in the Italian Apennines.

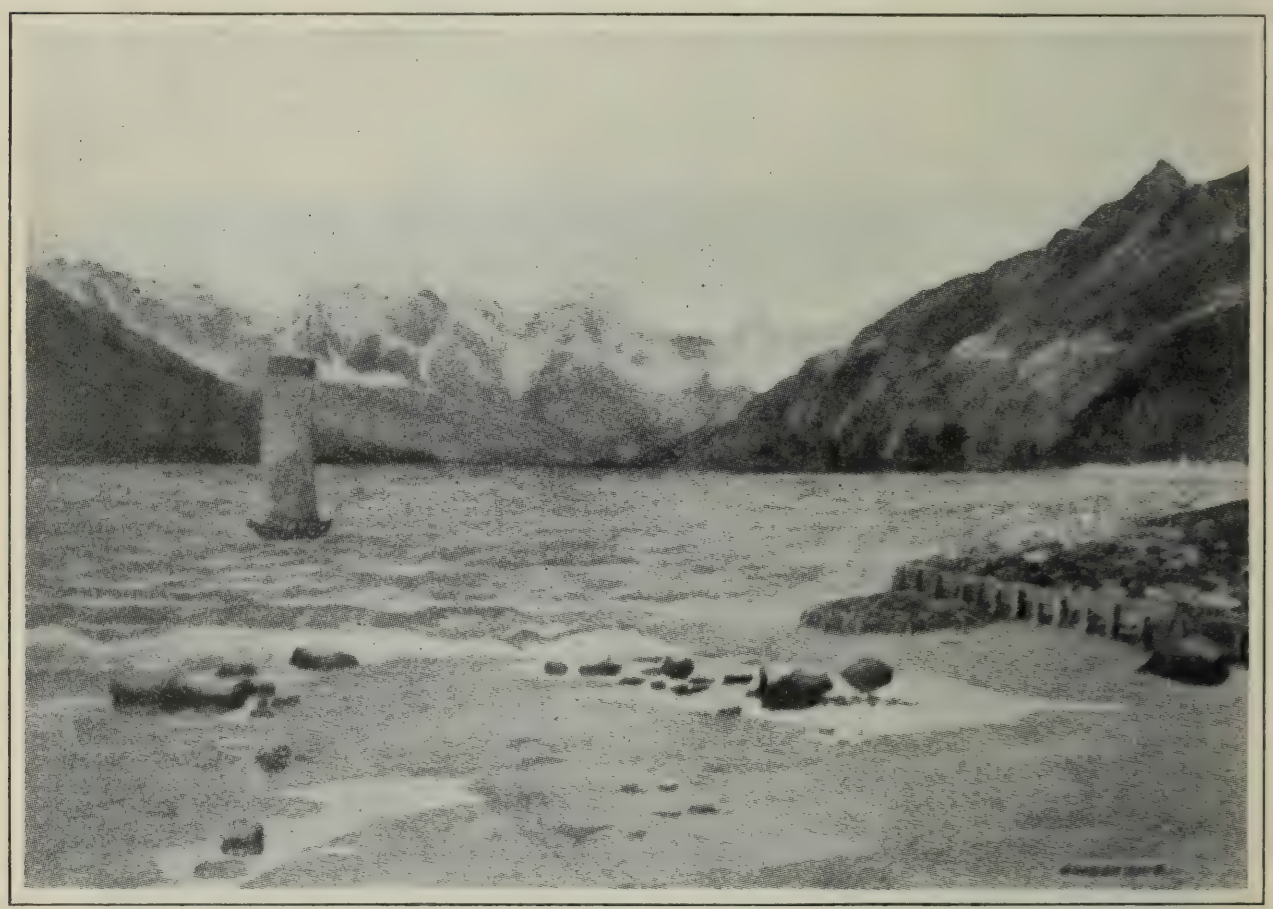
Gordon Home has illustrated two books on old world travel respectively entitled *Venetia and Northern Italy* and *Along the Rivieras of France and Italy.* The first embraces the Lombard lakes and the Lombard plain, the chief towns that lie in the valley of the Po, Como, Milan, Venice, and the foot of the Alps as far as Bergamo, while the second describes the whole coast from Marseilles to Pisa, omitting only a few towns close to Genoa which have suffered thru the growth of factories and uninteresting houses. In both cases the illustrations have been characterized by careful and painstaking work. These two books are admirable examples of modern color work at moderate cost.

Copyright, The Century Co., New York, 1908.

SHELL OF *DIPSAS PLICATUS*, WITH ATTACHED METAL FIGURES OF BUDDHA COATED WITH NACRE.

From "The Book of the Pearl." Century.

In *Geneva* the history of this ancient city is given, something of its literature and science, its men of letters, its songs



and squibs, its religion and its romanticism. The chief charm of the book lies, however, in the twenty colored illustrations with which the book is embellished.

The recent rupture of the political relations that had so long existed between Sweden and Norway will give to *In Viking Land* a special interest, because the book touches upon this severance. It also includes a brief account of the young king whom the Norwegians have selected as their sovereign, together with the methods of operating this very democratic monarchy. The more usual features of a book on Norway appear incidentally, of course.

St. Botolph's Town deals with old Boston as it was in Colonial days. The book is concerned with Boston in the making, as it were. Before it became the "hub of the universe" it had an existence, and in Miss Crawford's book we come into close contact with the undeveloped Boston.

Clifton Johnson has taken Thoreau's *Cape Cod* and, following in the footsteps of that great naturalist with a modern camera, found the country still very much as Thoreau saw it, and has preserved it for us in his pictures. To make the realism as complete as possible, Mr. Johnson went over Thoreau's journeys as nearly as may be during the same season of the year.

One of the most remarkable streams in the world is described in the pages of *The Niagara River*. Niagara Falls, with its romance and its marvels, has long been a Mecca for honeymooners, and the brides and grooms that walk along the river banks at the Falls hand in hand have long been familiar to visitors there. An account of Blondin's achievements in his famous tightrope walking over the Niagara River of course appear in the book. Captain Webb lost his life in attempting to swim the Niagara River rapids. The notorious "Steve" Brodie went over Niagara Falls, lived to tell the tale, and to become the keeper of a Bowery saloon before he died of dissipation. There has been a century of other Niagara cranks, but the real interest of the book lies in the material it contains regarding the geology and the history of the Niagara River.

SUNSET AT LAKE COMO.
From Headlam's "Venetia and Northern Italy, Being the Story of Venice." Lombardy & Emilia.

The old closet naturalists used to sit down in their closets and write about animals as they thought they were or as they thought they ought to be. The Dimocks, in their book, *Florida Enchantments,* not only saw what they write about, but they were of it. The result has been a book that breathes of Florida life in almost every phase. The great out-doors called and they answered. They cruised for weeks in their yacht along shore. They canoed on the shallow and often clogged rivers and streams. They captured the alligator. They lived with the bee hunters in the interior. That is why the book they wrote has a vitality that would have been impossible to a closet naturalist.

THE MAD WOMAN.
From a woodcut after Hokusai in the Hokusai gwa-fu (1820). From Anderson's "Japanese Wood Engravings."

Jane Austin's *Mansfield Park* appears this season in new dress, with twenty-four colored illustrations by C. E. Brock. It is one of the series of English Idylls imported by the Duttons.

Tales by Edgar Allan Poe in the present centenary edition are illustrated by E. L. Blumenschein in color. The spirit of the tales as written by Poe has been caught by the artist, who accents the grewsome and the weird.

Mr. Barbour's *My Lady of the Fog* is a charming little romance, in which a poor young man wins the love of a very rich girl without knowing that she was rich. The capricious ways of the god Cupid and of his fellow conspirator, the eternal feminine, in this story have been sketched with a master hand. Hope, uncertainty, fear, self-depreciation, worship, inspiration—all these and more fall from the writer's pen into exactly their proper places. The young man's determination not to be a fortune-hunter nearly spoiled the match, but not quite.

The novelty about *The Chariot Race from Ben-Hur* (originally issued in 1880) lies in the illustrations made for the fragment by Sigismond Ivanowski. These are strongly sympathetic and are characterized by brilliant coloring.

The Countess Diane is a pleasant little romance with a Breton background, against which stands out in bold relief touring cars, a couple of adventurous young men, the Countess, *et al.* It is very doubtful if the thing ever really happened, but even if it did not the story makes good holiday reading nevertheless.

The Panther is a tale charged with mysticism. Love is shown in a process of growth and development under temptation. As the woman's love grows, so grows the mystic panther. Step by step

these two yield to evolution until the panther is full grown and love blooms.

Howard Pyle's pirate story, *The Ruby of Kishmoor,* is full of action—indeed, melodramatic. It relates the adventures of one Jonathan Rugg in the tropics and gives them settings that are extremely surprising. How a sober, tall, lean, loose-jointed young Quaker, pre-eminently a man of peace, undertook an adventure that was highly quixotic, and was enabled to overcome single handed three villains of the deepest dye, and how he was tempted with great wealth and female beauty without falling, all these things, and more, are they not fully set forth in the book?

A SCARECROW.
From Thoreau's "Cape Cod." Crowell.

There is a touch of pathos in *The Better Treasure* that makes it a little somber in the reading, but the story has the Christmas flavor, and when it was darkest in the hero's life then came the dawn, according to the good old-fashioned formula.

The River-Man, Mr. White's admirable story of life in the Michigan forests, was reviewed in THE INDEPENDENT of November 5th, and in this issue we publish one of its color illustrations.

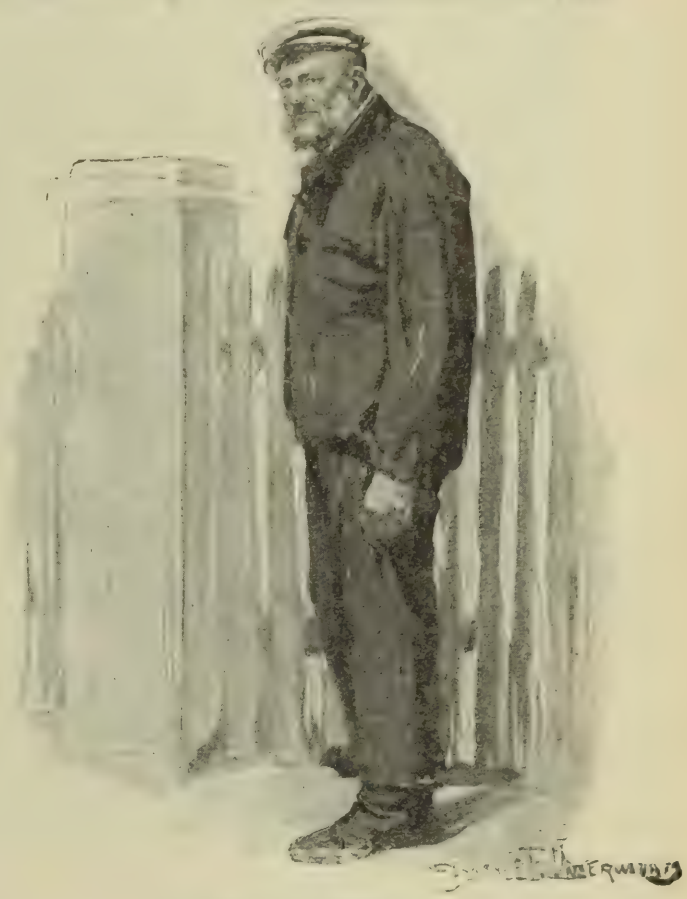
The Guest of Quesnay, which provides us with another color plate, was also the subject of a review on November 5th, entitled "Booth Tarkington's Happy Discovery of the Scientific Process of Regeneration," but we hasten to add that it is a bright and interesting story for all the metaphysics we found in it.

Miss Johnston's latest and best novel, *Lewis Rand,* from which we reproduce an illustration in color, is a story of a hundred years ago, but differs from the ordinary historical novel in having real people instead of lay figures in antiquated costumes. It will be reviewed at length in our next number.

Josephine Daskam Bacon has lost nothing of her reputation, gained thru her "Memories of a Baby," in *An Idyll of All Fools' Day,* that is among the holiday books this season. The story is full of nonsense, but is smooth reading and it has the saving grace of romance that is so appealing to all women and to most men.

Marjorie Daw, that charming story of Aldrich's, which was originally written in 1872-73 at the Cambridge home of James

Russell Lowell, has this season been given separate publication for the first time. It deserved it long ago. The sympathetic illustrations of John Cecil Clay will tend toward giving the story renewed popularity.



Included in the Rubric Series are *The Sermon on the Mount* in both the King James and the Revised Versions and *Proverbs from the Almanac of one Richard Saunders* (*Benjamin Franklin*), otherwise Poor Richard's Almanac. Both of these are well adapted for gift books of an inexpensive but pleasing quality.

The New Medieval Library includes three new (or should we say old?) volumes entitled respectively *Of the Tumbler of Our Lady, The Book of the Duke of True Lovers,* and *The Chatelaine of Vergi.* These books rescue from oblivion certain stories current during medieval times, and by putting them into attractive shape and old style bindings they appeal to the readers of today whom they could not reach in manuscript form. Medieval bindings with their metal bosses and leather clasps are simulated as appropriate settings to the volumes.

That Christianity is an open-air religion Dr. Van Dyke has made plain in his *Out-of-Doors in the Holy Land; Impressions of Travel in Body and Spirit.* From the birth in the grotto at Bethlehem (where Joseph and Mary took refuge because there was no room for them in the inn) to the crowning death on the hill of Calvary outside the city wall, all of the important events of Christianity took place out of doors. Except the discourse in the upper chamber at Jerusalem, all of its great words, from the sermon on the mount to the last commission to the disciples, were spoken in the open air. Mr. Van Dyke holds, therefore, that the best understanding of Christianity comes to those who carry it under the free sky and interpret it in the companionship of nature.

The House of Prayer, in the form of an allegory, includes much that will be found helpful to the Christian who is confronted with doubt and mistrust. The little boy hero learns much, as any reader of the volume also will, from the angel verger in the little fanciful chapel. The story is told with great simplicity and yet with none the less charm.

The Little Flowers of St. Francis of Assisi is a collection of the legends and traditions relating to St. Francis and his best-loved and more prominent companions, as written down by one or more of the brethren for the greater glory of their seraphic founder and the edification of the world in general. It differs in many respects from the ancient biographies as prepared by Brother Thomas of Celano, Brothers Leo, Angelo and Ruffino, and the biography written by St. Bonaventura. The illustrations in this book are obtained from manuscripts and contemporary miniatures.

CAPTAIN GEORGE.
By Clarence F. Underwood in Barbour's "My Lady of the Fog." Lippincott Co.

The point of view of Hamilton Wright Mabie, in his delightful little essay on *Christmas Today,* is best indicated by a quotation:

"The Christmas story, in this oversophisticated age, seems to have past into the keeping of children and to have become part of the wisdom of youth. Its tenderness, simplicity and majesty; its childlike bringing together of the shepards and the angels; of the stable, the kings, and the Christ; its blending of the earthly and the heavenly, of the prose of poverty and the poetry of faith seem incredible on the Boulevards of Paris, in the central roar of London, amid the rushing tides of life in New York. But what ultimate question can be answered in the tumultuous outpouring of the energies of the moment!"

Dr. Crothers writes in *By the Christmas Fire* of "Christmas and the Literature of Disillusion," of "Christmas and the Democratic Spirit," and of other related and unrelated topics, in such a manner as will be sure to give charm to many readers who have appreciation for delicate suggestions and imagination.

The many famous poems first publisht in *Punch, or the London Charivari,* have been collected by Rev. Albert E. Sims in a well-bound volume of convenient size, entitled *Poems from Punch.*

James Whitcomb Riley is represented this season by two books. The first, which is new as to matter, is entitled *Home Again with Me,* and is illustrated with drawings in tint by Howard Chandler Christy and decorations by Franklin Booth. It is in the characteristic Riley vein, and tells a story thru which runs the needful romance to give it a poetic touch. The other Riley volume now reprinted is his *Songs of Summer,* with pictures by Will Vawter.

Will Carleton's latest collection of poems is called *Drifted In.* Mr. Carleton sees the things that are happening around him. He puts the modern motor cars and other progressive things in his verses. Perhaps the younger generation will see more in *Drifted In* than those of us who are somewhat older saw in "Over the Hills to the Poorhouse," but we doubt it.

The recent death of Paul Laurence Dunbar makes the new edition of his *Lyrics of Lowly Life* especially interesting. The biographic fragments that Mr. Howells gives in his introduction call attention to the fact that Mr. Dunbar had no trace of the Caucasian in his ancestry, but was a negro thru and thru. One short poem from the book may be quoted:

Copyright, Century Company, New York, 1908.

NOCTURNE—FINISHED PLATE.
From "Whistler in Venice."

PASSION AND LOVE.

A maiden wept and as a comforter,
Came one who cried, "I love thee," and he seized
Her in his arms and kissed her with hot breath,
That dried the tears upon her flaming cheeks.
While evermore his boldly blazing eye
Burned into hers: but she uncomforted
Shrank from his arms and only wept the more.

Then one came and gazed mutely in her face
With wide and wistful eyes; but still aloof
He held himself; as with a reverent fear,
As one who knows some sacred presence nigh.
And as she wept he mingled tear with tear.
That cheered her soul like dew a dusty flower—
Until she smiled, approached, and touched his hand!

Davy Jones's Yarns and Other Salted Songs would not amount to much were it not that Hy. Mayer has illustrated them. His drawings rescue the verses from the commonplace.

In *Bachelor Belles* there have been gathered certain poems more or less well known which Harrison Fisher has illustrated. Three stanzas of one of these is reproduced herewith, together with a black and white reproduction of the beautiful colored plate that accompanied it:

I WILL NOT LET THEE GO.
BY ROBERT BRIDGES.

I will not let thee go,
  Ends all our month-long love in this?
Can it be summed up so,
  Quit in a single kiss?
I will not let thee go.

I will not let thee go.
  If thy words' breath could scare thy deeds,
As the soft south can blow
  And toss the feathered seeds,
Then might I let thee go.

I will not let thee go.
  Had not the great sun seen, I might;
Or were he reckoned slow
  To bring the false to light,
Then might I let thee go.

The Henry Hutt Picture Book contains numerous types of the "Henry Hutt girl," all of which are attractive and many of which are well calculated to take a susceptible man quite off his feet. The society girl is "caught," the student, the theatrical girl, the girl in hope, in doubt, and other varying conditions, to every one of which Mr. Hutt has given a close personal touch that is quite distinct from any other artist.

If there were any doubt of the popularity of nature study it would be dispelled by the continued publication of such books. One of these that comes to us breathing of the woods and the fields bears the title of *In the Open.* Beginning with spring and the life that characterizes that season, the author takes his readers willing captives as he introduces them to the birds, their habitats, the wild gardens, the homely but interesting weeds, insect life and lore, the wonderful ant and her ways, the pasture stones, the winter woods, the waters, the mountains, the forest, and finally the sea.

Bird Legend and Life contains some good photographs of wild birds, and descriptive matter of the kind usually found in such popular nature books. A few pages of desultory bird lore are as far as the author has gone in her endeavor "to get together the most important avian legends and superstitions, and also to discover in them evidences of apparent truth."

CAPTAIN KEITT.
By Howard Pyle. Frontispiece of "The Ruby of Kishmoor. Harper's.

If the last word had not been written about the pearl in *The Book of the Pearl,* it must be exceedingly elusive. George Frederick Kunz and Charles Hugh Stevenson in collaboration have produced a monumental monograph. They have woven together history, art, science and industry. *The Book of the Pearl* is a *vade mecum* for those interested in this gem. Both descriptive material and illustrative matter has been massed in the book's 600 pages, until it seems as if nothing could by any chance have been left out. The binding by the Decorative Designers is in pearl gray, with three shades of gold. The pages are broad margined, and the illustrations include three photogravures, seventeen pages of color plate, and eighty in tint and black.

If you cannot buy this book for yourself, by all means look at it at the library. If you do not do this you will miss one of the possible joys of the Christmas season.

My Treasures is intended as a memorandum book wherein a man who has choice books, rugs, furniture, silverware, pewter, brass, lace, prints, bric-a-brac, or, in point of fact, miscellaneous possessions of any kind, can record them, and thus keep track of them.

Oliver Herford becomingly appears in simple, unaffected style in his *The Simple Jography.* His playful nonsense is quite in keeping with the season, and if you begin to read his *Jography* the chances are one hundred to one that you will finish it.

There is a lot of cleverness in *Little Stings.* If Mr. Crosland, the author, had lived in Æsop's time he would have been classed in with the fabulists, but as it is, he takes his place with the cynics who write calendars and such things.

If the reader has friends going abroad, it would be an exceedingly graceful thing to give them a copy of James Montgomery Flagg's book, *All in the Same Boat.* They would appreciate it more than perishable flowers and uneatable candy.

ILLUSTRATION FROM "MARJORIE DAW."
Houghton, Mifflin & Co.

Those who like to read a little selection each morning with which to begin the day will find *The Pleasant Thought Year Book* something of a novelty in the newer authors who have been given a place in its pages.

The Carolyn Wells Year Book for 1909 is made up of prose and poetic fancies. Thruout the volume her wit sparkles and never grows monotonous. That would not be like Miss Wells.

There are many year books and booklets this year, as well as calendars that are notable for various reasons. Some of these are more elaborate than in previous years. Lack of space alone prevents giving more detailed description of these. The Pilgrim Press, of Boston, issues a number of little booklets with a religious trend. Among these may be mentioned the following, viz.: *Whence Cometh Help, The Signs in the Christmas Fire, The Blues Cure, An Anti-Worry Recipe, The Face Angelic, The Love-Watch, The Practice of Immortality* and *The Land of Pure Delight. The Shepherds,* by Sophie Jewett, is issued thru the Valhall Studio, No. 339 Halsey street, Brooklyn. Hugh and Margaret Eaton, at this address, also issue a charming line of privately printed and hand colored Christmas cards, etc., which are individualistic as to design and in execution. Some of these are hand illuminated. Among the hand illuminated publications issued by them perhaps the most notable is their *Christmas Calendar for All the Year.* It is a five-sheet calendar of engrossed quotations, one from the Bible and the others from Stevenson and the Brownings, with rubricated initials and decorative borders.

Chrysanthemums and Other Essays, by Maurice Maeterlinck, bound in vellum, is an attractive substitute for the holiday card as ordinarily used. E. P. Dutton & Co. are again leaders with their beautiful calendars, some of which are imported, and all of them very handsomely printed. The range as to price is extensive. Eveleen Harrison and Dorothy Graves issue, thru St. Bartholomew's Press, a very pleasing church calendar, ornamented with Tissot pictures. Paul Elder & Co. continue their old line of mottos for dens. The book buyer who says he cannot find a satisfactory one this year is certainly hard to please.

The Children's Christmas Book Shelf

BY MONTROSE J. MOSES

AUTHOR OF "CHILDREN'S BOOKS AND READING."

THE books this year present no new characteristics which might point to a definite or even a possible tendency. Modern improvements add a few details to the worn-out stock and trade: a wireless telegraph boy, a motor cyclist, are among recent heroes, but our heroines are the same as they have been for many years. There is no effort made in the book world to depart from the accepted model. Education is partly responsible for this; but mental inertia, or lack of any desire to approach the child's sympathy from the youthful standpoint, marks most of the season's books. Our authors are either lazy or ignorant of the fundamental elements in child nature; the deluge shows they are not idle; therefore it must be that they are imitative rather than creative. That is why the juvenile fiction consists of incident rather than of individuality; that is why fact overshadows fancy, wellnigh to the verge of hounding the latter entirely from the book shelf.

Poetry and Verse

A Treasury of Verse for Little Children. Selected by M. G. Edgar. Ill. by Willy Pogany. Crowell. $2.50.

The Children's Longfellow. Houghton. $3.00.

Divine and Moral Songs for Children. Isaac Watts. L. C. Page. $1.00.

The Book of the Little Past. Josephine Preston Peabody. Houghton. $1.50. [Elizabeth Shippen Greene is the artist for a number of color plates.]

The Monarchs of Merry England. Roland Carse. Stokes. $1.50. [Poignantly illustrated.]

Fresh Posies. Abbie Farwell Brown. Houghton. $1.50.

The Orphant Annie Book. James Whitcomb Riley. Bobbs-Merrill. $1.50.

Familiar Nursery Jingles. Ill. by Ethel Franklin Betts. Stokes. $1.25.

The Happy Chaps. Verses by Carolyn Wells; pictures by Harrison Cady. Century. $1.50.

In Peanut Land. Eva Dean. Fenno. $1.75.

Dream Blocks. Verses by Aileen Cleveland Higgins. Ill. by Jessie Willcox Smith. Duffield. $1.50.

Little Sam in Volendam. Rhymes and pictures by Estelle M. Kerr. Moffat, Yard. $1.50.

Really Babies. Elizabeth B. Brownell. Rand, McNally. $1.25.

The Muffin Shop. Louise Ayres Garnett. Rand, McNally. $1.50.

My Busy Days. A Child's Verses by Edith B. Sturgis. Appleton. $2.00.

It is not the fault of our public schools that children still love poetry. Youth is rhythmic, it surges with the beat of lines; poetry develops as childhood develops; from the jingle to the ballad means from four to fourteen. Let the youngster swallow his poetry whole; it were a pity indeed to force upon him any technical

ALICE AND THE GRIFFIN.
From Duffield's "Alice in Wonderland."

details of the verse. Education says: You must look for this and that in poetry. Common sense says: Like it or don't like it but be sure you have some sensible reason born of your imagination, of your feeling—in other words, born of you. Therefore we welcome the volumes of poems, even tho the anthologies have unusual inclusions; they are mostly handsome publications, and, in consequence, expensive. Those who have paid any special notice to children's books may have seen the growing tendency of publishers and compilers to sacrifice the name "Mother Goose" for the general terms, "Nursery Jingles." If events move as they are now moving, we may forget the Dame altogether, as many of us have forgotten Charles Perrault, the first to make her known. M. G. Edgar's *Treasury of Verse for Little Children* contains a number of well-known selections, several of historical value, and some few of unfamiliar worth; in this latter respect the compiler exhibits an individual taste. After all, Lucas's Anthology is one of the best for youngsters. The specially illustrated *Children's Longfellow* is an attractive publication and an excellent idea. The poems are judiciously selected and are given intact, except in the cases of "Evangeline," "Hiawatha" and "Standish." The paper and type are of good quality; the color plates are particularly noteworthy.

No more tasteful reprint is found than that of Dr. Isaac Watts's *Divine and Moral Songs for Children,* delicately bound in color, with flat-tone outing pictures by Mrs. Arthur Gaskin. The severity of religious stricture is thus tempered by a human touch. A certain strained quality to the child verse of Josephine Preston Peabody keeps her *Book of the Little Past* from being of direct appeal to boys and girls; the poems are contemplative and more in sympathy with the grown-up view of life. Its title page is beautifully clean and well balanced. *The Monarchs of Merry England* contains a humorous suggestion as to the probable survey of the field from William I to Richard III, and from thence to Edward VII. The verses are far above the ordinary, and convey fact in a most diverting and ingenious way. Abbie Farwell Brown tries, in her *Fresh Posies,* to reach children who love to read and to recite. Many of the verses hold to the child spirit, while others neglect it. I hope that the book will have an encouraging reception, for there is in the lines a naïve appreciation of youth that is rare. One section is devoted to limericks.

Decoration from Stokes's "Monarchs of Merry England."

James Whitcomb Riley has never been issued in more attractive *format* than in *The Orphant Annie Book* of verse; besides the title poem, there are many more quaint examples of his art. The eye is at once attracted by the large cover, even tho one is inclined to weary a little over the conventional ugliness of the school to which Ethel Franklin Betts as an artist belongs; her line drawings are far more felicitous than the color pages. Greater stability of brush work is seen in Miss Betts's illustrations for *Familiar Nursery Jingles,* a heterogeneous arrangement of some of ours most famous rhymes. The modern jingle book no longer seems to be made to withstand the wear and tear of enthusiastic use. The volumes are fragile. *The Happy Chaps* are relatives of the Brownies, tho in intent and purposes they differ, and in some respects the drawings, quite as humorous, are even more satiric than Mr. Cox's. Miss Wells's verse text is surprisingly good, considering the quantity. Eva Dean's *In Peanut Land* is only original in the fact that it suggests the possibilities of a game, where one may make characters for adventurous stories out of peanut shells. Aileen Cleveland Higgins is the author

of a set of verses, *Dream Blocks;* they are irregular in construction, and strangely incongruous, if not lacking in point. Nevertheless, the publishers have made an exquisite book, with illustrations by Jessie Willcox Smith, whose best results are found on the cover, which is poetic in idea. The pictures and rhymes in Estelle M. Kerr's *Little Sam in Volendam* will please many youngsters, altho they are somewhat stilted in conception. In general form, *Really Babies* is altogether charming; the verses therein, by Elizabeth B. Brownell, are less appealing than the photographs, which were taken from life by the author, and have been reproduced on cream-tinted paper. *The Muffin Shop* consists of pictures in color by Hope Dunlap, and of a metrical narrative by Louise Ayres Garnett. Many old jingle friends are met with under new conditions and the captions for the illustrations are given in rhymed couplets. Edith B. Sturgis has attempted, in *My Busy Days,* to write some Stevenson verses in simple form. These have been printed in a large book, and each page set in a decorative border. Margaretta Hinchman's colored pictures are striking.

MISS BETT'S PICTURE OF RILEY'S "LITTLE ORPHANT ANNIE."

Some Fairy Tales

The Water Babies. Charles Kingsley. Dutton. $2.50.
Fairies of Sorts. Mrs. Molesworth. Macmillan. $1.50 net.
Alice's Adventures in Wonderland. Lewis Carroll. Duffield. $1.25.
Prince Babillon, or The Little White Rabbit. Nella. Mitchell Kennerley. $1.25.
Mr. Wind and Madam Rain. Paul de Musset. Harper. 60 cents.
Christmas Every Day. W. D. Howells. Harper. $1.75.
Tommy Trot's Visit to Santa Claus. Thomas Nelson Page. Scribner. $1.00.
The Spring Cleaning. Frances Hodgson Burnett. Century. 60 cents.
Santa Claus and All About Him. Pictures and story by E. Boyd Smith. Stokes. $2.00.
The Good Wolf. Frances Hodgson Burnett. Moffat, Yard. $1.00 net.
The Land of Lost. Allen A. Green. Small, Maynard. $1.25. [Where things mislaid are usualy found.]

There is always room to welcome a reprint as well known as Charles Kingsley's *Water Babies,* especially when Nister puts his name on the title page. Arthur Dixon's paintings are probably too smooth and too matter-of-fact in their humor; this may be because we miss the old-fashioned pen drawings which, like Tenniel's pictures for *Alice in Wonderland,* never lose their freshness. The latter story, with illustrations by Millicent Sowerby, has been reissued in a shape not as attractive as it should be. We prefer our Lewis Carroll in less contracted form. Mrs. Molesworth has lost none of her charm for the present generation. Her *Fairies — Of Sorts* will find a warm reception, aided in part by the black and white drawings made by Gertrude D. Hammond. Parents would do well to consider a list of "other books by the same author." Charles Robinson is rightly regarded as one of the very best illustrators for children. His simple line drawings convey an immense amount of feeling and meaning, and to the story of *Prince Babillon,* told by "Nella," they add a grace and fancy that are sure to attract. His pen point has a gossamer quality that trails down the page and provokes fancy. It is only necessary to record another issuance of Paul de Musset's ever popular *Mr. Wind and Madame Rain,* and to pass from thence to Mr. Howells's *Christmas Every Day,* which his publishers have brought out, bound in a red Yuletide cover, and with decorative pictures that eat up much space in blank pages, which style detracts from the general effect. Tho not a new idea, the story is told with a fetching simplicity and a delightful use of repetition. This is more than can be said for Thomas Nelson Page's ordinary tale, *Tommy Trot's Visit to Santa Claus,* which is wholly devoid of novelty or originality. One cannot accuse Mrs. Burnett of such paucity of invention. Mothers could do no better than give *The Spring Cleaning* to their children, and if they are sending gifts to other people's children, again this is the very story for them. The book is small, but you get between its covers an infinite amount of delightful nonsense; her "Racketty-Packetty House," her "Cosey Lion," and this new story, told by Queen Crosspatch, should prove a boon to the nursery, and every professional storyteller in our libraries should know these volumes by heart. No less spontaneous is the same author's *The Good Wolf,* whose cumulative style indicates to what active advantage repetition may be used.

Copyright, 1908.

From "Six Girls Growing Older."
W. A. Wilde Co.

If Mr. Page's treatment of Santa Claus proves unsatisfactory, such cannot be said of E. Boyd Smith's conception in *Santa Claus and All About Him.* It is not the text that matters, but the interpretative drawings in color; here the detail is joyously clever and will please older people because of

From "The Children's Longfellow."

This book contains all the famous poems which have made Longfellow's name so dear to every child.

From Mary Johnston's "Lewis Rand."

An engrossing story of the days of Thomas Jefferson, by the author of "To Have and to Hold."

a subtle humor, even as it will hold the youngsters because of the strong appeal to imagination.

Folk Lore and Its Antidote

The Pinafore Picture Book. Sir W. S. Gilbert. Ill by Alice B. Woodward. Macmillan. $2.00 net. [Antidote No. 1. Including some music and dialog.]

Fairy Tales from Folklore. Herschel Williams. Moffat, Yard. $1.00 net.

Tales of Laughter. [A Third Fairy Book.] Ed. by Kate Douglas Wiggin and Nora A. Smith. McClure. $1.50.

The Welsh Fairy Book. W. Jenkyn Thomas. Stokes. $1.50.

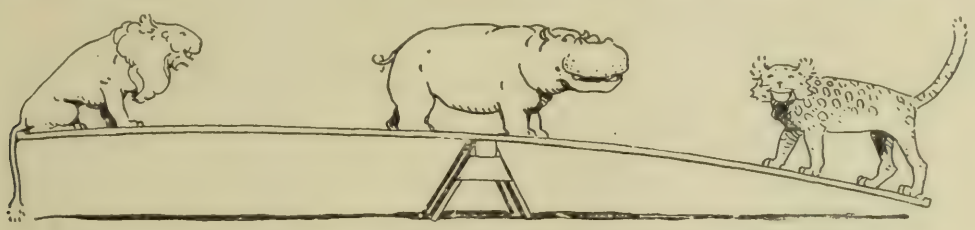
Gaelic Fairy Tales. W. M. Parker. Glasgow: Sinclair. [David Nutt. 1/6.]

Æsop's Fables. Ill. Lucy Fitch Perkins. [In *The Dandelion Classics*, which, on the whole, are desirable.] Stokes. $1.50.

The Tortoise and the Geese and Other Fables of Bidpai. Retold by Maude Barrows Dutton. Houghton. $1.00.

Old Man Coyote. Clara Kern Bayliss. Ill. by E. Warde Blaisdell. Crowell. $1.00.

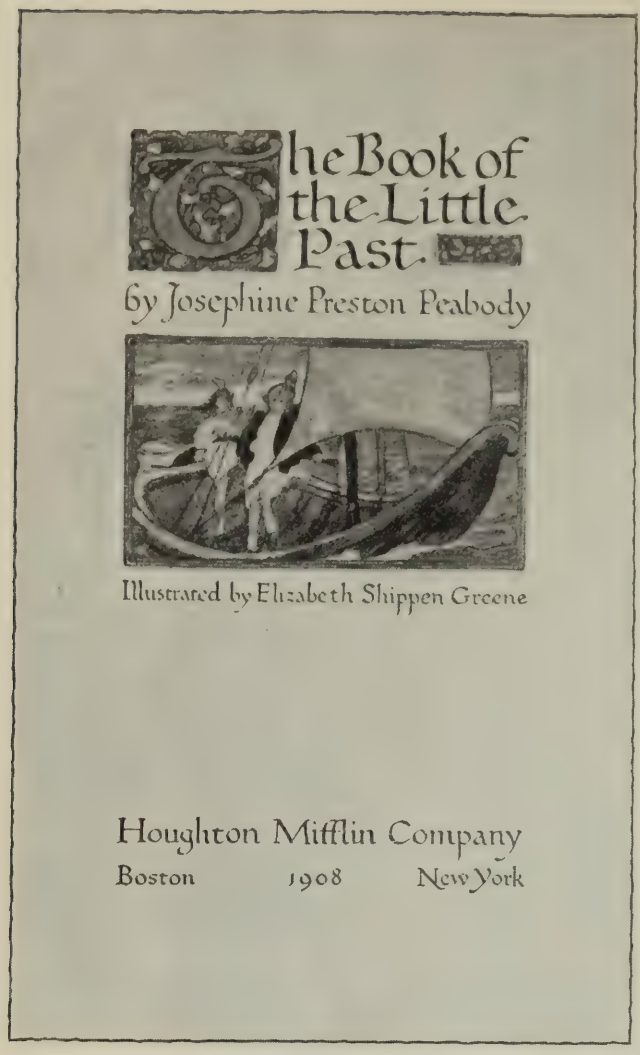
The Fire-Fly's Lovers. William Elliot Griffis. Crowell. $1.00.



The Flaming Sword. Edith Ogden Harrison. McClurg. $1.25 net.

The Children's Treasure-Trove of Pearls. Ed. by Mary W. Tileston. Little, Brown. $1.50.

Anne's Terrible Good Nature. E. V. Lucas. Macmillan. $1.75.



The Elm-Tree Fairy Book. Ed. by Clifton Johnson. Little, Brown. $1.50.

Some writers approach the imaginative from a wrong point of view; they soon become engrossed with the scientific progression of their material, and because variation of legend interests them, they infer, by that peculiar logic which transfers a grown-up standard to younger shoulders, that children should be interested likewise. That is one reason why we are being deluged with folk lore, and why so much is being raked up as literature that time had wisely buried. There needs must be a section devoted by us to new folk lore books, but I must leaven it with an interspersion of more nearly imaginative material. No better way to begin than to welcome Sir W. S. Gilbert's *Pinafore Picture Book,* an idea which we hope he will continue with others of his operas, especially if, each time, he succeeds in writing such delightful introductions as this one, which exhibits delicacy, *camaraderie,* and a youthful heart. The more the merrier. In *Fairy Tales from Folk Lore* Herschel Williams vouches for their genuineness and turns to twelve countries for the folk element. The interest is relative, and the nationalistic value is beyond the ken of boys and girls. We do not discount the fancy, but undoubtedly the student emphasis is too strong. Of same intent, tho a much fuller volume, is the third fairy book edited by Kate Douglas Wiggin and Nora A. Smith, with the inviting title, *Tales of Laughter.* The stories are selected for the sake of the story, and no preface justifies their choice or traces their origins. An interesting spirit surrounds W. Jenkyn Thomas's *Welsh Fairy Book,* and its purpose is pioneer, for, so it seems, Welsh youngsters have never, until now, owned a collection of national tales, tho legends have been told them from generation to generation. A queer light plays

DECORATION FROM MRS. BURNETT'S "THE GOOD WOLF."

over these fancies, and even more so, from a grown-up viewpoint, thruout the thin volume of *Gaelic Fairy Tales,* which, with the English text, also reproduces the Celtic tongue; a touch of weirdness pervades the whole. *Æsop's Fables* need no introduction save, in this new edition, to say a warm word for Mrs. Perkins's illustrations, and to beg the publishers in the future to lead the type lines a little more. We are told by Maude Barrows Dutton, the revamper of *The Tortoise and the Geese,* that the original author of her stories was Bidpai, who deserves to be saved from oblivion, and who not only is as great as Æsop, but was in fact the latter's chief source of inspiration. Yet, however interesting the Indian may be to the archeologist, we pin our faith to our familiar nursery friend and much prefer him. *Old Man Coyote,* as told by Clara Kern Bayliss, belongs to the school of Uncle Remus, filled with the same slyness, but not tempered by the same sense of irresistible fun. *The Fire-Fly's Lovers* is a fairly pleasing collection of legends

A HOUGHTON-MIFFLIN TITLE PAGE.

belonging to old Japan, and told by William Elliott Griffis with a certain charm. A little too much emphasis is placed upon the moral of each tale in *The Flaming Sword;* otherwise Edith Ogden Harrison's attempt to treat biblical material purely as legendary of earth and sky is by no means deprived of keen feeling. Mrs. Perkins, with her customary use of flat tones and simple lines, adds much to the artistic appearance of the book. The type spacing here is what we recommend to the publishers of the *Dandelion Classics. The Children's Treasure-Trove of Pearls,* as compiled by Mary Wilder Tileston, very wisely includes the more modern yet old-fashioned tale, as typified by Juliana Ewing, Maria Edgeworth, Grimm and Asbjörnsen. E. V. Lucas's *Anne's Terrible Good Nature* is very pleasing in its variety. Clifton Johnson has once more chipt the edges of cruelty from the world's fables, and put thirty-four between covers under the title, *The Elm Tree Fairy Book* (No. 3).

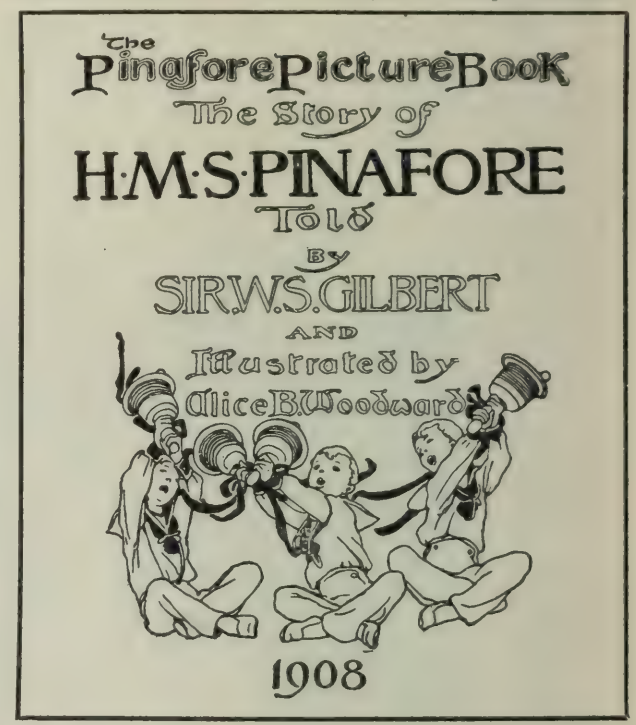
The Classics

The Lamb Shakespeare for the Young. Duffield. 80 cents net per volume.
A Midsummer Night's Dream. Ill. by Arthur Rackham. Doubleday, Page. $5.00.
Every Child's Library: "The Old, Old Myths of Greece and Rome" [a concise mythology]; "The Seven Champions of Christendom"; "Sigurd the Dragon-Slayer"; "One for Wod and One for Lok." Dutton. 50 cents per volume.
Stories of Wagner Operas, Told for Children. Elizabeth M. Wheelock. Bobbs-Merrill.
Stories of Persian Heroes. E. M. Wilmot-Buxton. Crowell. $1.50.
Wonder Stories from the Mabinogion. Edward Brooks. Penn Pub. Co. $1.25.
The Chaucer Story Book. Eva March Tappan. Houghton, Mifflin. $1.50.
The Æneid for Boys and Girls. A. J. Church. Macmillan. $1.50.
English Voyages of Adventure and Discovery. Edwin M. Bacon. Scribner. $1.50.
A Wonder Book. Hawthorne. Stokes. $1.50.

The Lamb Shakespeare for the Young should prove popular, especially as the volumes are so attractively bound, and are edited with such evident desire to enforce the true spirit of Shakespeare. So far, there have been publisht "As You Like It," "The Winter's Tale," "Cymbeline," "Twelfth Night" and "The Merchant of Venice." The Lamb text is added to by the inclusion of quotations from the original, and at the end of each volume, the songs of the play are printed in somewhat simplified form. The outline drawings are sympathetically and sufficiently interpretative. The full text of *A Midsummer Night's Dream* has been published in a sumptuous volume largely composed of illustrations by Arthur Rackham. This artist has establisht a style, half color, half line—a mixture of pen and brush—peculiarly his own; he possesses a keen imagination, a delicate fancy. Another collection of books is to be had in what is known as *Every Child's Library.* The five titles before me happen to be from the pen of a single author, Thomas Cartwright. We would condemn this did we not understand that future volumes are to contain reprints; the books are handy in shape and the type is excellent. As for the reading matter, it wisely caters thus far to the heroic in childhood. The colored plates are richly reproduced. Seven of the Wagner operas have been retold for children by Elizabeth M. Wheelock. The cover design is attractive, but the style of the author is too slavishly dependent upon the incidents to be distinctive. The text is more like a thoro synopsis. E. M. Wilmot-Buxton has turned to the chronicle of Sohrab and Rustam for his *Stories of Persian Heroes.* His preface

is of an informing character, while his text is not without pronounced feeling. Young readers, we hope, will be told of the Matthew Arnold poem, which is not so old in tone that it could not make appeal to the "betwixt and between" age of youth. The decorative borders in this volume might have been dispensed with. On somewhat the same order is Dr. Edward Brooks's *Wonder Stories from the Mabinogion;* many readers are already familiar with the version made some years ago by Sidney Lanier. The present book seems to have been carefully done and should find a considerable audience. The cover design is good and the drawings belong to the Howard Pyle school of black and white. Once more we have Chaucer retold for children—this time by Eva March Tappan; we cannot say that she has successfully retained the ancient flavor, and unless that is done, the task were hardly worth while doing at all. Could one but overcome the obsoleteness of Chaucerian language, the style would be simple enough; in fact, the retelling always seems to be clumsy and complicated. Little can be added to what has already been said concerning A. J. Church's method of recording the classics in simple language. *The Æneid for Boys and Girls* is the contribution to this season's output.

AN INDIAN HORSE-RACE.
From Howard's "Famous Indian Chiefs I Have Known."



Somewhat unusual is Edwin M. Bacon's book of *English Voyages of Adventure and Discovery,* which is based upon Hak-

luyt; it is an excellent reference book for young people, and a good way of studying history from sources. Among the welcome reprints, it is a pleasure to record Hawthorne's *A Wonder Book* in *The Dandelion Classics;* Mrs. Lucy Fitch Perkins has made the decorations and illustrations.

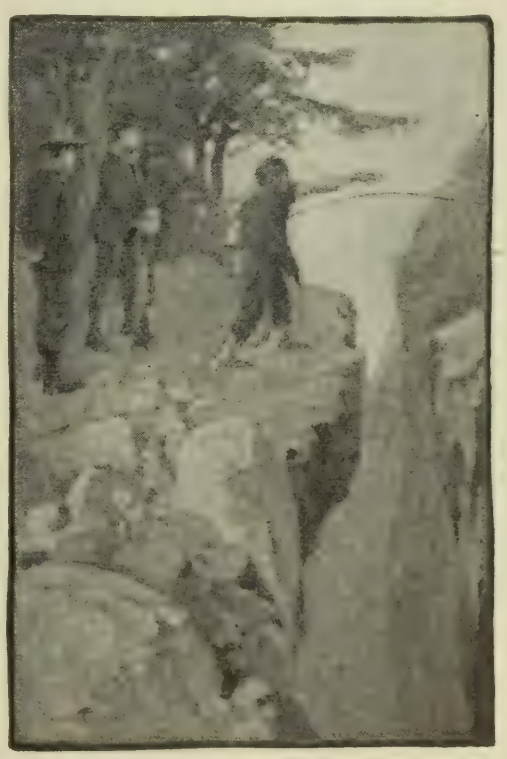
Fiction

Harry's Island. Ralph Henry Barbour. Century. $1.50.
The New Boy. Arthur Stanwood Pier. Houghton. $1.50.
The Leather Stocking Tales. Jesse Lyman Hurlbut. [Every Child Can Read Library.] Winston. 75 cents.
Red Cap Adventures. S. R. Crockett. (Second Series.) Macmillan. $1.75. [The book is excellently illustrated in color.]
The Boy Forty-niners. Everett McNeil. McClure. $1.50. [The pictures almost tell the story.]
The Advent of Arthur. Enid Leigh Hunt. Lippincott. $2.00. [This importation is unnecessarily thick and heavy.] Four other volumes of similar *format* are:
Sandy Carmichael. Cutcliffe J. Hyne. Lippincott. $2.00. [Dealing with cannibal life.]
The Secret of the Sandhills. Francis Marlowe. Lippincott. $2.00. [A tale of pirates.]
Matthew Strong. Mrs. Francis. Lippincott. $2.00. [Mentioned here only as warning that it should not be of this series, since it is a novel of varied emotion.]
Life on the Ocean. George Little. Lippincott. $2.00. [A volume of personal adventures, full of sea yarns. In an introduction, W. Clark Russell narrates the history of its republication.]
Clotilde. Marguerite Bouvet. McClurg. $1.25.
The Moons of Balbanca. Mrs. M. E. M. Davis. Houghton. $1.00.
The Stroke Oar. Ralph D. Paine. Outing. $1.50. [Story of the Yale-Harvard boat race told by an athlete, but running into deeper water than usual.]
The Misadventures of Marjory. J. B. Naylor. Clark. $1.50.

There are not many children who care for quiet stories; they are drawn to books which are crowded with action, and their interest in a way is measure of their physical need. But, after a lengthy examination of so-called juvenile fiction, one will readily understand that the cause of complaint against most writers for young folks is to be found in the almost invariable model upon which all plots are based, by which all characters are analyzed. Vitality is absent, distinctive traits are wanting; the text is broadly healthy, but not specifically strengthening. The average of literary style among writers of children's books is high; the average of originality, of permanency, is about as low as it can get to be, without wholly annihilating our hope for the future. A few that show the most distinct merits we give in the above list. Ralph Henry Barbour's *Harry's Island,* for example, in its natural description, in its reality of incident, is a wholly commendable piece of work, even tho it tends to become too long drawn out, perhaps to fulfill its serial use in *St. Nicholas Magazine.* There is wholesome fun in its pages, but it is only casually amusing after all. *The New Boy,* in which Arthur Stanwood Pier follows the spirit of St. Timothy's, adheres with almost mathematical precision to all the ethical requirements, to the athletic demands, to the conventional bully and self-sacrificing hero, of a hundred stories of like character. The tale is told sincerely, but with ever recurrent monotony. Once upon a time it used to be the fashion for boys to thrill over Cooper; they thrilled

over every rustle of twig and every blood-curdling yell, but now there are educators who believe these old-time volumes are too long for these busy days, and so they would condense the standard literature. But with all due deference to Rev. Jesse L. Hurlbut, who has thus torn asunder the original *Leather Stocking Tales,* we would raise a protest against such proceedings. We even look askance at the purpose of S. R. Crockett, who in his second series of *Red Cap Adventures* attempts to create a wider interest in four of the Waverley novels. The latter has literary feeling, however, and in a vein of genuine enjoyment he links the many separate tales which are grouped under each novel. The renaissance of Cooper and of Scott in child land will occur not thru the subterfuge of emendation, but when the bugaboo term *literature* loses

some of its educational meaning. The restless boy to whom contemplation means a certain preordained task will find recreation in *The Boy Forty-Niners;* thruout this story Everett McNeil, in rough and ready manner, tries to satisfy the melodrama instinct in youth; its chief virtue is of the unrefined diamond sort, its atmosphere suspensive. For the quiet girl of ripening sentiment, Enid Leigh Hunt has written a long story of English life entitled *The Advent of Arthur;* the youthful maturity of the heroine has a certain charm; the feeling in the text is somewhat personal and the whole is only a shade removed from a regular novel. A picturesque romanticism which will please certain girls on the borderland of long dresses fills Marguerite Bouvet's *Clotilde,* which is laid in New Orleans when that city was predominantly marked by Paris airs and manners. No less picturesque, but younger in appeal, is the Creole background to *The Moons of Balbanca;* Mrs. M. E. M. Davis's narrative is a skilful blending of social custom and clever adventure. The volume is small, but varied in interest.



Books of Locality

Roy and Ray in Canada. Mary Wright Plummer. Holt. $1.75 net.
Canada. [*Romance of Empire Series.*] Beckles Willson. Stokes. $2.00.

Other books which may be accounted local in a sense are:

Four Boys on the Mississippi. E. T. Tomlinson. Lothrop, Lee. $1.50. [Belonging to *Our Own Land Series.*]
A Little Heroine of Illinois. Alice Turner Curtis. Lothrop, Lee. $1.25. [Belonging to the *Little Heroine Series.* A Civil War story.]
Dave Porter in the Far North. Edward Stratemeyer. Lothrop, Lee. $1.25. [The fourth of a series, but the author assures us it can stand alone; its hero is still in search of a father.]
The Forest Runners. Joseph A. Altsheler. Appleton. $1.50. [Characters here have been used in previous stories. Early colonizing days in Kentucky have attracted two writers this year. There is no doubt that some good remains after reading such quasi-historical fiction. One forgets the fiction, luckily, and a residue impression of history remains.]
A Venture in 1777. S. Weir Mitchell. Jacobs. $1.25. [The story was written for the benefit of the Church Home for Children.]

Miss Mary Wright Plummer continues her conversational information in *Roy and Ray in Canada;* could we overcome our prejudice against artificial informational question and response, we would welcome the author's pleasant observation; the map facing the opening page of the text is a feature which many publishers should note and profit by. Much more direct in style, and holding by far more romantic color, is Beckles Willson's picturesque history of *Canada;* plenty of action is mingled with fact; the volume is handsomely printed and the color plates are exceptional. Belonging to the same series, and fraught with a similar element of adventure, heroism and actuality are A. D. McCormick's *The Netherlands* and George W. Lambert's *Australia.* Evidently C. H. Forbes-Lindsey, when he came to write a life of Daniel Boone, found his facts so few that fiction had to be employed; considering his limitations in this respect, he has succeeded in presenting a vivid picture of a backwoodsman's life in Kentucky during parlous times. Everett McNeil also approaches his data from the historian's angle. But *In Texas with Davy Crockett* is a story pure and simple, however it may deal with the Texas War of Independence. No doubt there is an educational impulse back of Mr. McNeil's nar-

Copyright, 1908, W. A. Wilde Company.
'I COULD NOT THINK WHAT HE WAS DOING IT FOR."
From "Trail of the Badger."

rative; his foreword is indicative of that fact. Sidford F. Hamp has written before of Western life, and now he takes the Colorado border thirty years ago as the background for his new story; he approaches his subject from actual experience; he himself saw the struggle that beset the Anglo-Saxon and the Mexican when their paths met. Hence the human document lends additional value to an otherwise conventional sequence of adventures. The story is a first person narrative. Emerson Hough writes of *The Young Alaskans,* and casting his heroes in a dory, lands them in a wilderness of the North. These men who describe locality are not far wrong in the impressions they give as a whole, and their visual sense is almost perfect, but too often the story sinks to the plane of a mere framework. Take the chapter headings of the majority of children's books; one versed in the tendency of juvenile literature could faithfully reproduce the plots from such slim indications. Mr. Hough's detail, however, is somewhat new. Edward S. Ellis's *Fire, Snow and Water* is a few degrees colder, if possible, dealing with existence in the Lone Land. No amount of criticism can curb this author, but we hope the astounding end papers of this new volume will make purchasers think carefully before committing themselves.

Tales of Sea and Land

An Annapolis Youngster. Lieut.-Com. E. L. Beach. Penn Pub. Co. $1.25.
A U. S. Midshipman Afloat. Lieut.-Com. Yates Stirling, Jr. Penn Pub. Co. $1.25.
A West Point Cadet. Capt. Paul B. Malone. Penn Pub. Co. $1.25.
Adventures at Sea. [Harper's Young People's Series.] Harper. 60 cents.
Adventures of Pirates and Sea Rovers. [Harper's Young People Series.] Harper. 60 cents.
Adventures with Indians. [Harper's Young People Series.] Harper. 60 cents.
With the Battle Fleet. Franklin Matthews. Huebsch. $1.50.
Three Years Behind the Guns. L. G. T. Century. $1.50.
Famous Indian Chiefs I Have Known. Maj.-Gen. O. O. Howard. Century. $1.50.
The Imprisoned Midshipman. Molly Elliot Seawell. Appleton. $1.25.
From Keel to Kite. Isabel Hornibrook. Lothrop, Lee. $1.50.

However often described, there are certain phases of life that repetition cannot stale. Lieut.-Com. Edward L. Beach has written of *An Annapolis Youngster.* In incident the book is conventional, but in point of view it is the real thing, coming from a real officer. Lieut.-Com. Yates Stirling advances further in *A U. S. Midshipman Afloat.* We may yet expect volumes to run the whole gamut of the naval grade. *A West Point Cadet* is publisht, with all the glamor infused into it by its author, Captain Malone, of the Army. The cover designs of these three books are attractive. A varied collection of *Adventures at Sea* has been issued in one volume; whale hunts, wrecks, fires, castaways and the like afford constant stimulation, as told by twelve authors. Following the same scheme, one finds in *Adventures of Pirates and Sea Rovers* sufficient buccaneering to while away some exciting moments of reading. Howard Pyle knows his wolves of the Spanish Main, and there are others who give vivid accounts of olden time sea rovers. In this series, the Indians are not neglected; a good spirit of adventure marks each story; there is delightful quaintness, too, seen, for instance, in Philip V. Mighel's *For Sale: A Warrior.* True documents are oftenest the best, and no reader will be able to resist Franklin Matthews's account, *With the Battle Fleet,* on its cruise to the Far East. The author only went as a correspondent for the New York *Sun;* his active participation and his fresh descriptive instinct are far above the ordinary. Sincerity likewise marks *Three Years Behind the Guns,* descriptive of the adventures of a "Diddybox," and initialed "L. G. T." The account is autobiographical, and while it might be assigned to grown people, it has a distinct appeal to readers who have past fourteen. It possesses a certain marked advantage over Maj.-Gen. O. O. Howard's *Famous Indian Chiefs I Have Known* in the fact that its style has not been tampered with, in order to appeal to younger minds. The latter book is full of rich possibilities, but its style is too matter-of-fact; perhaps bluntness best suits an army author, but we believe the defect is largely due to the simplifying process. The very excellent author of "Little Jarvis," whose life on the "Constellation" has given so much pleasure to young folks, has written *The Imprisoned Midshipman,* a tale of Tripoli in the first years of the nineteenth century. It is full of stirring patriotism, and will interest old and young alike. James B. Connolly has written largely of Glouces-

ter folks; his tales of the Massachusetts coast have much in them of direct appeal to older boys. Isabel Hornibrook has also publisht a long story of Gloucester which she calls *From Keel to Kite,* chronicling the ambition of a young hero who would become a naval architect. In five hundred pages there is much salt air and many adventures, vouched for by real skippers and real captains.

The Perennial Series

Rover, the Farm Dog. Lily F. Wesselhoeft. Little, Brown. $1.25.

Sidney at College. Anna Chapin Ray. Little, Brown. $1.50.

Helen Grant, Graduate. Amanda M. Douglas. Lothrop, Lee. $1.25. [The sixth of a series. Her intellectual development is astounding, and we are assured she will come again next year. Such a heroine needs to be winning to live down the illustrations of Amy Brooks.]

Mary Ware: The Little Colonel's Chum. Annie Fellows Johnston. L. C. Page. $1.50. [The tenth of a series. The author is a slave to her juvenile audience. Since she married off the heroine, she must now fill up gaps. Mrs. Johnston's pen is facile.]

Six Girls Growing Older. Marion Ames Taggart. W. A. Wilde. $1.50. [The third of a series. A healthy spirit pervades this book which ends just ripe for a romance. The author approaches Miss Alcott in the sweetness and healthy sentiment of her characters.]

The Wide Awake Girls. Katharine Ruth Ellis. Little, Brown. $1.50. [This is the birth of a new series. The heroine first meets her friends thru a letter in a magazine, and afterwards visits them in Wisconsin, Oregon, and Germany. The idea is unique and the narrative—it is devoid of much plot—is pleasing.]

Little Sister Prue. Amy Brooks. Lothrop, Lee. $1.00. [With ungraceful illustrations by the author. The heroine having appeared in one series, "The Randy Books," transfers her allegiance to a new one. The interest is mild, with a vein of humor in the dialogue which is largely dialect. Miss Brooks is prolific and will take Prue to school next year.]

Dorothy Dainty's Gay Times. Amy Brooks. Lothrop, Lee. $1.00. [The seventh of a series. The story is feeble, but the action is better than that displayed in the pictures.]

Wee Winkles at the Mountains. Gabrielle E. Jackson. Harper. $1.25. [This little hero and heroine are slowly approaching ten, and it is their fourth appearance in a book. Mrs. Jackson has succumbed to the temptation, and she promises on her last page to do so again next year. The characters have "just fun."]

Little Ned Happy and Flora. Gertrude Smith. Harper. $1.30 net. [Printed in large type, with brightly colored pictures. The text is simple and full of sweet, mild action for baby minds.]

The Browns at Mt. Hermon. "Pansy." Lothrop, Lee. $1.50.

Those who write stories for children seem to meet success largely thru persistency along certain lines. They concoct variations of the same theme, not attempting to freshen juvenile imagination by spontaneousness and novelty, but seeking only to tickle the taste until it is sated. These authors, with their publishers, succeed in one thing—they establish an advertising "trademark" which is a monetary asset. The yearly repetition of "series" points to popularity, but not to originality. We might almost say: Show me your author, and I'll tell you the story.

Lily F. Wesselhoeft is known by her accounts of nature and animals. She has written dog stories before, and her farm hero, *Rover,* is simply a country cousin of *Jack, the Fire Dog.* Kindness is the motive behind the adventures in this book. *Sidney at College* continues the life of a heroine which has been thus far recorded in three other volumes by Anna Chapin Ray. Vassar is the background, and a slight extension of the bounds would make such a story like the conventional novel.

FROM KENNERLEY'S "PRINCE BABILLON."

In fact, there is so little to be said for or against these books that a record only is sufficient as a guide. They are all smoothly written and very much alike.

Useful Books

A Child's Guide to Pictures. Charles H. Caffin. Baker & Taylor. $1.25 net.
The Wonder Book of Light. Edwin J. Houston. Stokes. $1.50 net.
Photography for Young People. Tudor Jenks. Stokes. $1.50 net.
Harper's Indoor Book for Boys. Joseph H. Adams. Harper. $1.75.
Animals of the World. Tudor Jenks and Charles R. Knight. Stokes. $2.00 net.
The Eleanor Smith Music Course. [4 vols.] American Book Co. 25 cents, 30 cents, 40 cents, 50 cents.
Aiken's Music Course. [1 vol.] American Book Co. 50 cents.
How to Understand Electrical Work. W. H. Onken and J. P. Baker. Harper. $1.75. [Electricity as applied to daily life. A good feature is the inclusion of a dictionary of electrical terms.]
How It Is Done, or the Victories of the Engineer. Archibald William Nelson. $1.25. [Dealing with the construction of bridges, railways and canals.]

No manual has appeared in years that proves such good reading as Charles H. Caffin's *A Child's Guide to Pictures;* the style is not dry, the theories are not obtrusive; the viewpoint is wholly practical and entertaining. Tho intended for teachers, librarians and parents, this book could be read aloud to girls and boys who have past fourteen years, and if sympathetically explained would bear excellent results. The theory of light is wonderful, and should possess fascination for the inquiring youthful scientist. Dr. Houston's book is full of information, which is reinforced by illustrations and diagrams. It is a logical progression from light to photography, and no one is better suited than Mr. Tudor Jenks to describe the varied uses to which a camera might be put. The amateur will welcome such a manual. Joseph H. Adams, when he wrote *Harper's Outdoor Book for Boys,* imposed upon himself the task of producing a companion volume dedicated to indoors; such is the new book, replete with suggestions concerning carpentry, wood-carving, metal work, bookbinding and the like. To be able to accomplish all outlined in this fat handy guide would turn a novice into a master craftsman. It is very evident that the publishers of *Animals of the World* thought of this book after they had purchased the forty color plates; the text is concise, and the introduction by Mr. Jenks outlines the evolutionary interest attached to a study of natural history. The music courses mentioned in the list above contain some excellently graded songs, many of them far above the average in quality of melody. A collection of this character should be examined carefully before purchasing. In appearance the books suggest school use.

And here I am brought to a sudden halt; with the editor it is not time so much as space that counts; therefore the following supplementary list must suffice to group together a few volumes which have excellencies of varying degrees.

Historical

Letters from Colonial Children. Eva March Tappan. Houghton. $1.50. [History written from the maturing child's standpoint; the temperament is well maintained.]
American Hero Stories [1492-1865]. Eva March Tappan. Houghton. $1.50. [A conscientiously written narrative, more on the conventional historical model. The illustrations are of interest.]
New Little American Cousins. Mary Hazelton Wade. Wilde. $1.00. [A simple discussion of our territorial expansion.]
The Lincoln Centennary is responsible in part for *Abraham Lincoln: The Boy and the Man.* James Morgan. Macmillan. $1.50 net. [The more biography we have of this style, the better. Mr. Morgan has a dignified and human way of presenting his subject.]
The Story-Life of Abraham Lincoln. Wayne Whipple. Winston. $1.75 net. [A mixture of narrative and compilation; a use of the authentic and the trivial, with copious illustrations.]
The Toy Shop. Margarita Spalding Gerry. Harper. 50 cents. [One of the numerous fictions that have sprung up around the personality of Lincoln.]

Biographical

Juan Ponce de Leon. F. A. Ober. Harper. $1.00 net
The Cabots. F. A. Ober. Harper. $1.00 net.
Lives of Our Presidents. Ed. by J. L. Hurlbut. Winston. 75 cents [Largely repeated in—
Stories of Great Americans. Ed. by J. L. Hurlbut. Winston. 75 cents. [Superficial.]
Story-Lives of Great Musicians. F. J. Rowbotham. Stokes. $1.50. [Of interest to young players.]

A Few Old Favorites

Spinning-wheel Stories. Louisa M. Alcott. Little, Brown. $1.50.
A Garland for Girls. Louisa M. Alcott. Little, Brown. $1.50.
Proverb Stories. Louisa M. Alcott. Little, Brown. $1.50.
Silver Pitchers. Louisa M. Alcott. Little, Brown. $1.50.

Some Fun

When Mother Lets Us Cook. Constance Johnson. Moffat, Yard. 75 cents. [An appetizing book.]
Home Occupations. Bertha Johnston. Jacobs. 50 cents. [Concise.]
The Hole Book. Peter Newell. Harper. $1.25. [Very clever and unique of its kind in pictures and idea.]

Tho other stories stare at us from the shelves, we needs must stop.

Any of the books reviewed or advertised in this number will be sent by THE INDEPENDENT on receipt of price.

HEADBAND FROM KNICKERBOCKER'S "HISTORY OF NEW YORK."

The Grolier Club

BY IRA H. BRAINERD

[Mr. Brainerd is a member of the Grolier Club and author of "Edwin Davies French: A Memorial." He is a lawyer in active practice in New York City.—EDITOR.]

IN his entertaining and somewhat whimsical "Book Fancier" Fitzgerald (Percy, not Omar) says that "in the last century there flourished—if the term be not too extravagant—a book hunter named Wilson." Wilson surely flourished, for he bought and rescued for twopence the copy of Dame Juliana Berner's "Treatysse of Fysshinge," that now finally is lodged at an expense of three hundred and seventy pounds in the library at Windsor Castle.

In the latter part of the Nineteenth Century there flourished in New York, and now, in the Twentieth, still continues to flourish—"if the term be not too extravagant"—The Grolier Club. It was organized in 1884 for the purpose broadly indicated in adopting its name from Jean Grolier de Servier. A marvelously apt choice of a name was this, for Grolier had taste and means and opportunity to be a princely example to all encouragers of art, to those who take delight in any of its many forms. He was a man of affairs and did good service for France as ambassador at the court of Rome in the pontificate of Clement VII; the Rome and France of the Renaissance were his, and he was a potent factor in it. "His list of friends and acquaintances began with kings and popes and ended with artisans and toilers." Literature, printing, binding—books, in short, were his especial delight and care.

So in taking the name of Grolier for the new club the founders bravely fixed their standard and desire, which they set forth in the constitution and later amplified, declaring—

"Its object shall be the literary study and promotion of the arts pertaining to the production of books, including the occasional publication of books designed to illustrate, promote and encourage those arts; and the acquisition, furnishing and maintenance of a suitable club building for the safe-keeping of its property, wherein meetings, lectures and exhibitions shall take place from time to time, likewise designed to illustrate, promote and encourage those arts and suitable for the purposes of the Club."

Its nine founders, Messrs. William L. Andrews, Theodore L. DeVinne, A. W. Drake, Albert Gallup, Robert Hoe, Jr., Brayton Ives, Samuel W. Marvin, Edward S. Mead and Arthur B. Turnure, hardly could have foreseen that in little more than a year they would number a hundred and twenty kindred spirits, representing both sides of the ocean. The

GROLIER CLUB HOUSE,
29 East Thirty-second street.

original membership limit was 200, including both resident and nonresident. It was shortly increased to 250 resident, and nonresident at the discretion of the Council.

Its first exhibition, May, 1884, was a group of representative etchings by forty masters, loaned by the Club members; over 600 visitors attended it. This was the Grolier's introduction to the public.

Its first publication, in January, 1885, "A Decree of Starre Chamber, Concerning Printing," was equally promising, and was welcomed as equal to anything produced by the presses of England or France. The first active year of the club saw also the publication of the "Rubaiyat," little more than a pamphlet, exquisitely printed on Japan paper and having a delicate decorated cover. Probably next to Fitzgerald's first issue, this is the most sought edition of the philosopher of happy resignation.

Its Madisan avenue quarters became smaller and smaller for its needs as the Grolier grew in numbers and gathered the furnishings of club comfort. Even when pursuing and encouraging the arts, and in a good cause, one asks for comfort and room. The Grolier found them at 29 East Thirty-second street, its present home, where it moved in the fall of 1889, purchasing the property and leaving on it a mortgage now long since paid off and burned one joyful night and its ashes inurned in a glass bulb, mounted on ebony and standing on the exhibition room mantel, a witness forever of Grolier prosperity and honor.

Here, with ampler, better room, the club has been able to enjoy, and to have its friends enjoy, its increasing collections of books, engravings, etchings and kindred things associated with literature and dear to the collector and the lover of art, tho now a house as large again would not be too great for their proper disposal.

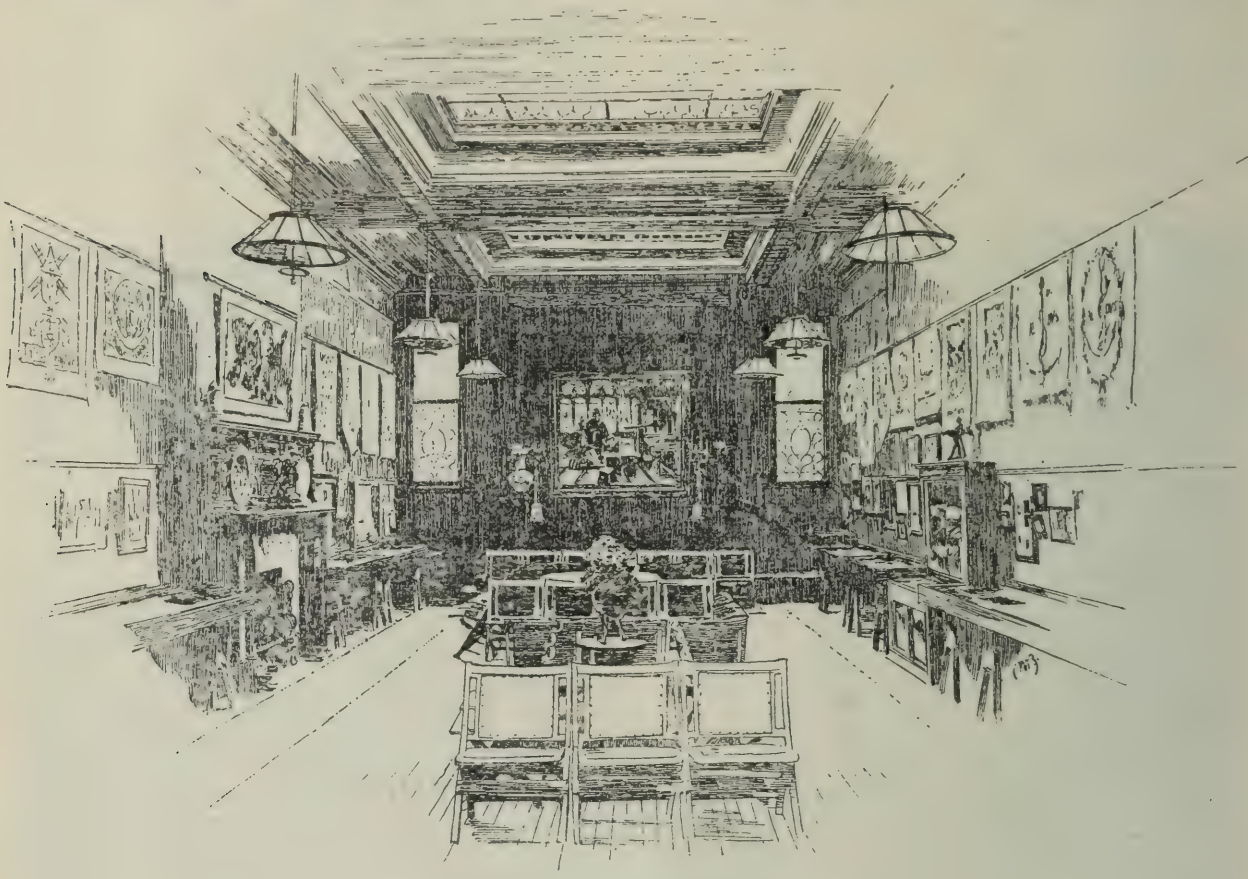
The glory of the Grolier Club is its library. It has indeed been blest with fairy godmothers in this respect. Members have not only presented it with books, but have sought books to present. Specimens of different presses of all ages are here, the Aldines and Jenson, the Elzevirs and Strawberry Hill, and bindings of every leather known to the tanner, of silk and of metal—

> The catenati with their chains,
> Le Gascon's fairy filmy grace,
> And books in which poor Roger Payne's
> Square solid handiwork we trace.

The Grolier cases have such an array of book bindings as one could not easily find together for comparison. Styles and materials change with the centuries. The formidable folio in its old English calf or stamped pigskin had and has its use—

and so has the embroidered or tortoise shell or ivory bound New Testament or Prayer Book; and so, too, the tiny, bound volumes (the word is a good one), varying from five-eighths of an inch high to two and one-half inches, of which Mr. S. P. Avery presented the Club with a collection numbering 150 or more, many of them most minutely and elaborately decorated. Contrasting with these, as Gulliver to the Lilliputians, we find Mr. Bishop's monumental work on Jade, books impressive enough to contain the Edicts of Fate. Illuminated manuscripts on vellum are to be seen, the handiwork of the cowled artists of the early centuries, and some rare first editions of later but still old times. A first edition of a Yeats or a Barrie is one thing; a first edition of "Paradise Lost" is quite another, coming down, a sort of legacy to our time from Milton's own, and perhaps having past thru his own hands—one gets a little nearer to the man, and the long years have tried him and found him not wanting.

Truly all these books have their use and their inspiration, yet they are numerically but a small part of the full 11,000 volumes, mostly, in English, French and Italian, of bibliographies, essays, histories, biographies, books of anecdote and treatises — many choicely illustrated, some depending on the life of text alone — all bearing on the arts connected with the manufacture of books, paper making, etching, printing, illustrating or binding—an addenda to a recent year-book notes, the Club's possession of 400 volumes and over on this last subject. The library is probably the largest and finest of this sort in the world, outside the great national libraries of France and England, and it is placed freely at the service of any one responsibly introduced.

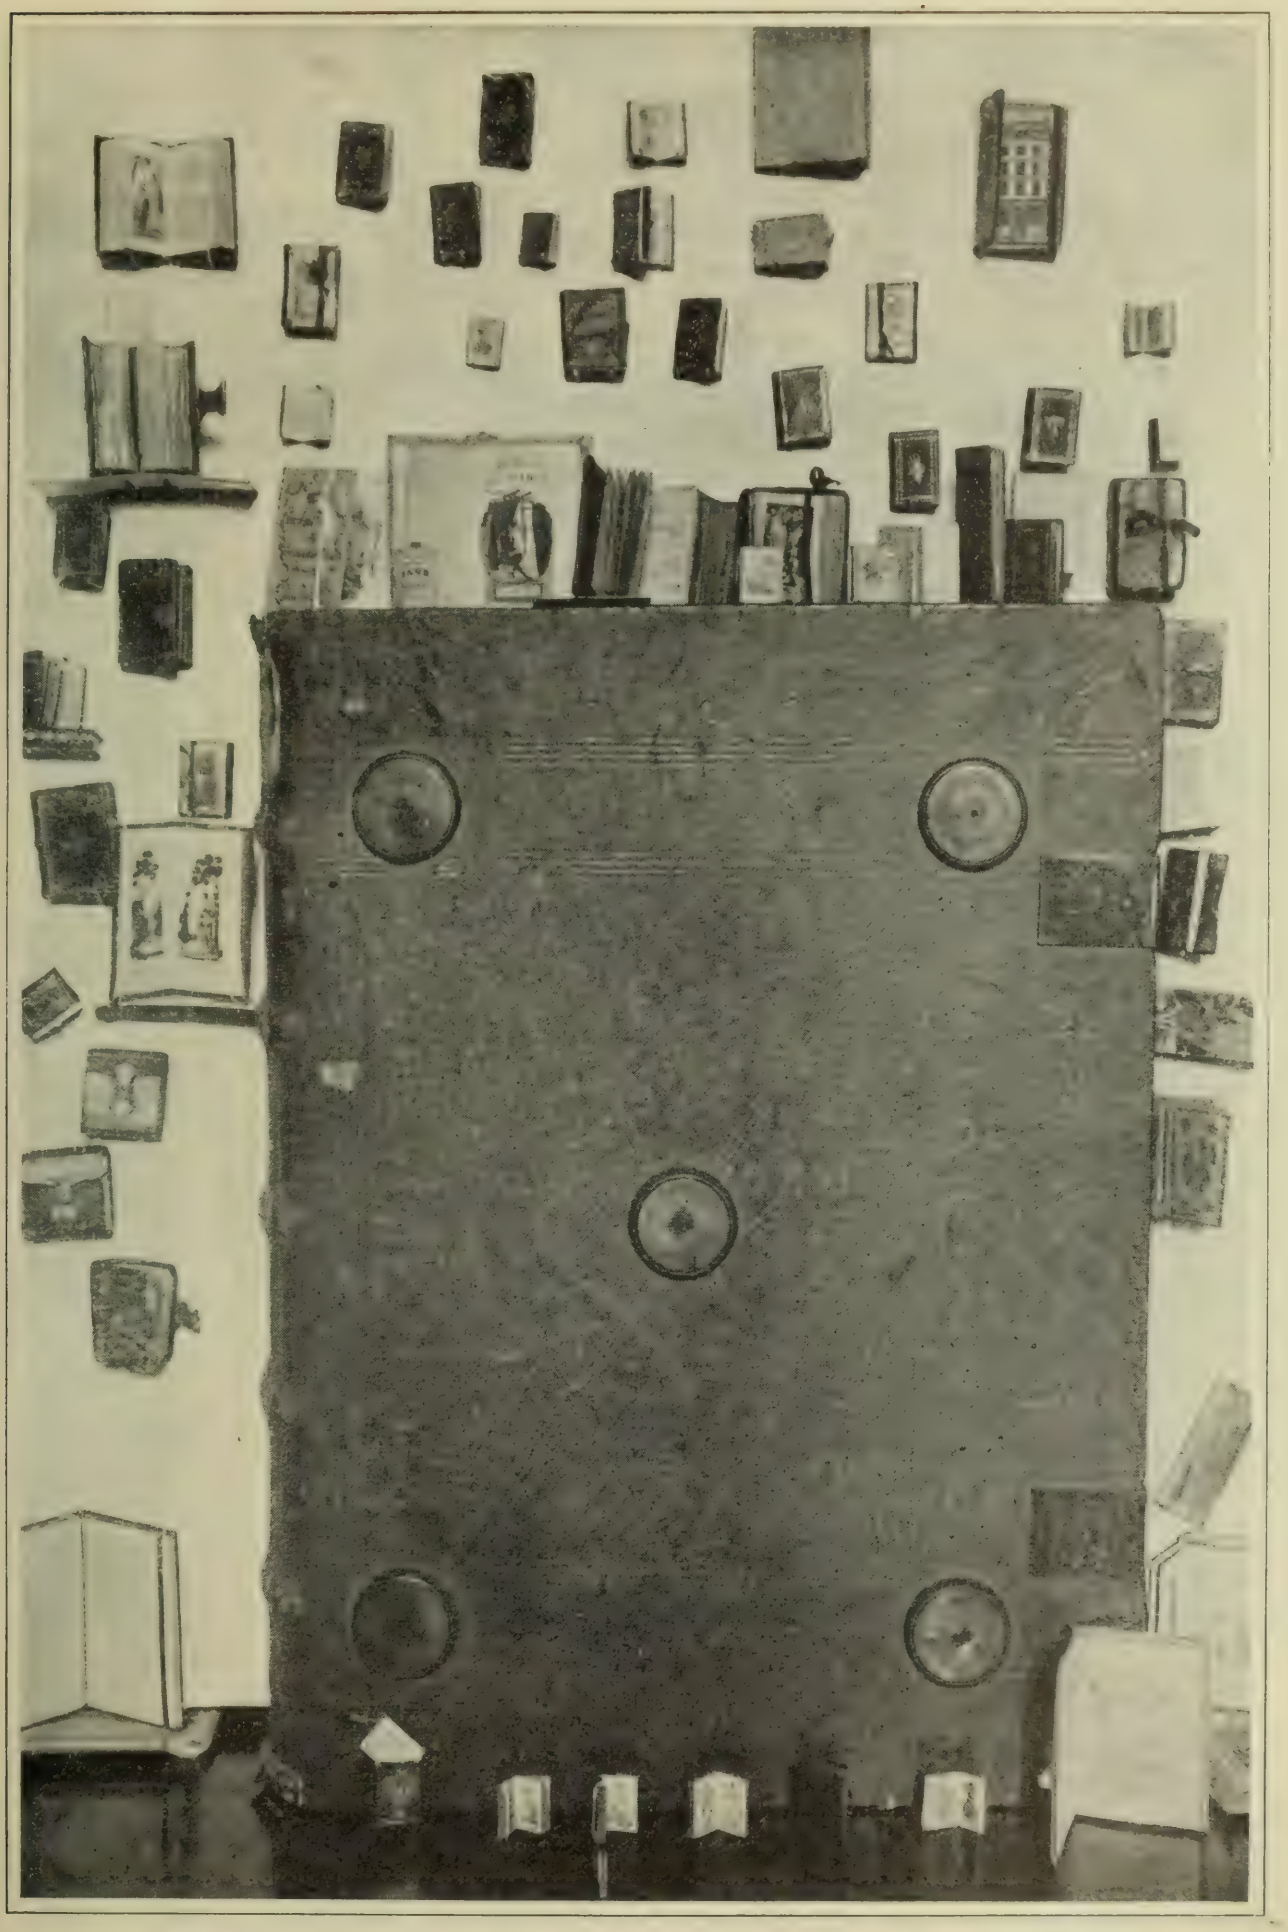


THE TAPPERIJ

But while this notable library has grown by leaps and bounds, a fine collec-

tion of etchings, engravings and other prints has been gradually formed, a few only of nearly 3,000 hang on walls too scant.

Whist night, Thursday night, better than any other, probably shows the Club under Dr. Sam Johnson's definition, "an assembly of good fellows meeting under certain conditions." Yet there is a singular democracy in the Grolier atmosphere, especially when the members gather in the Tapperij. This is such a Dutch room as none but an alert New Yorker could gather the features to compose it.



GROLIER CLUB GALLERY.

Long clays and short hang at the wall, and so does an old Dutch clock with long pendulum leisurely swinging away the hours. A jar of tobacco, not Dutch, is on the low table, cheese and biscuits are in yet other jars on yet other squat, sturdy tables. Old coppers and mugs are in evidence, and the head of a keg smiles welcome from the corner by the fireplace, but that's a sad joke, for the keg has no other head, and a two-headed keg is the only keg for real life, they say. At one side rests an age-darkened violin, silent to him that hath no music in his soul. A wattled ventilator and a sanded floor add to the illusion. It has been suggested that no one not wearing klompen be allowed there, but no such rule exists.

The odd sixty different exhibitions of books and the related arts, given by the Grolier Club in its admirable gallery have unquestionably done much to gratify and encourage the taste for the best products of the printing press. The exhibitions run from three weeks to two months varying in this respect with the general popularity of the subject and the urgency of other club enterprise. Cards of admission are sent by the members to their friends, and any one interested may without much difficulty obtain a card from the genial and alert curator, Mr. J. L. Morton, or by addressing the committee of arrangements.

It is no doubt true that these invaluable loan collections exhibited come largely from the private collections of the members, and one wonders on the one hand how the Old World can bear the heavy draft made by American connoisseurs on its historic and contemporary art resources, and on the other hand one is happily surprised at the art produced in America by early engravers, the great number and beauty of the engraved or etched portraits of Lincoln, Franklin,

ELEPHANT FOLIO AND MINIATURE BOOKS IN GROLIER COLLECTION.

and Washington, and at the picturesque features of historic old New York, or, again, at the collection of early printed books relating to America, dating back to the days of Columbus and often having quaint allegorical title pages and copper plate maps and pictures of the aborigines quite as true as the medieval German and Dutch notion of the lion or rhinoceros; and those books seen at the Grolier—we refer to bygone exhibitions—were but a fragment after all, for Mr. Church's great bibliography of early Americana is contained in five reference volumes. One wonders, too, at the array of missals and silver bindings, the jeweled book covers, the first editions of One Hundred Books famous in English Literature, a list made up by much consultation and pronounced representative by so sound a scholar as the late Prof. Norton, so representative it was that the lecturer of the evening when the exhibition was opened declared he had read all but two; he conscientiously confest that it might be three, for tho he had read *most* of it, he had not read *all* of Johnson's Dictionary. The beginning of the 100 list was "The Canterbury Tales"; it ended with Whittier's "Snow Bound." Japanese prints, engravings or etchings by Whistler, Rembrandt, Meryon, Seymour Hayden, Faithorne, Durand and others, have been shown, each forming a notable collection.

During the month of December and for some days in January there is an exhibition of engraved portraits of John Milton and early editions of his works, in all their range, from "Paradise Lost" to "Letters of State," chiefly the result of years of research and collection by Mr. Beverly Chew. It will be remembered that in the past year Christ Church College, at Cambridge, in the tercentenary celebration of Milton's birth, was proud to place on view one hundred and eighty engraved portraits of the poet. The Grolier Club takes some satisfaction in the fact that it is able to exhibit three hundred and twenty-five, forty of them being by American engravers.

In January the long series of publications of the club will be exhibited in celebration of its twenty-fifth anniversary, for the club feels that it may be justified in a review. In March an exhibition will be given of Barye bronzes, the most complete group of the beautiful and varied work of the best of animal sculptors that has ever been shown in America. Finally, in April and May will be an exhibition in which the club will take a peculiar interest; it will contain practically the entire engraved work of the late Edwin Davis French, numbering about three hundred and fifty copper plates. Mr. French was a member of the Grolier Club, and did much of his engraving, not only of book plates, but of more general work, for different members of it.

Well known as the Grolier is in and about New York City by reason of its long series of fine exhibitions and its pleasant club-house, it is, of course, more lastingly known and wider for the publications it has issued in a continuous series, averaging two each year, of books superb in their workmanship and examples of the finest of the printer's art, and of marked distinction in their matter.

For the greater part, the publications of the club are directly associated in subject matter with its aims, and in their make-up, paper, printing, illustrations and binding they are intended to show the highest of skill embodying refinement. Paper is chosen with extreme care as to shade, weight, texture, durability, and generally it is especially made and bears the name Grolier or the club seal as a watermark; the type is chosen with the same aim to fitness, and some new type faces have been introduced by the club. Usually the books are in case bindings of paper or cloth boards, appropriate and artistic, for many members prefer special bindings, more or less costly, and each book is sent out sheathed in a slip case to protect it from the dust that flieth by day and night. The books are issued in editions limited in number to the club membership, which, as a rule, very promptly subscribes for the entire issue.

Some few of these books have been reprints, as were the "Areopagitica," with its sympathetic and scholarly introduction by Mr. Lowell, and the facsimile reprint of the "Laws and Acts of New York Printed and Sold by William Bradford." These assuredly were two books that a literary or book club in New York

might well reproduce. Another, equally pertinent, was "Knickerbocker's History of New York," printed from the manuscript, with corrections by Irving not otherwise publisht, and illustrated with drawings by Boughton, Drake and Pyle, and also with etchings by Eno and Raubicheck. The club takes as much pride in its edition of Bury's "Philobiblon" as in any of its books. The Bury may illustrate in thoroness and selection the purpose and achievement of a book club worthy of life and regard. This bible of the bibliophile had been for many years practically out of print. Professor West, of Princeton, undertook for the Grolier to restore the text and adequately translate it, adding notes and introduction. The restoration of the text required a careful collation of the manuscript copies in the chief English libraries, and the editorial matter demanded historical and antiquarian talent of a high order, and always a proper translation must be a translation, a reproduction of the spirit and meaning of the text, and the manufacture—but there stand the books themselves, with Bury's seal stamped in gold on the vellum covers. A reproduction of the cover of one of the choicest of Grolier publications—a sort of embodiment of the spirit

BOCCACCIO'S "LIFE OF DANTE."

of the Renaissance—is given here, the complete translation of Boccaccio's "Life of Dante," the design based on the curious dream of Dante's mother, wherein she likens him to a peacock having angelic plumage and an hundred eyes.

Original books of some little importance, particularly of the bibliographic sort, are among the half hundred regular publications by the club. A volume is devoted to the Charles Whittinghams, printers of the famous Pickering books, and another to the eminent French bibliophile, Count Hoym. An invaluable work is "Title Pages as Seen by a Printer," by Mr. De Vinne. The book is illustrated by many facsimiles of title pages, given for their historic interest as well as to emphasize the praise or censure of the master printer of America—shall we not say, of the world? Catalogs or check lists have been issued of the engraved portraits of Franklin and Washington, and of the works of engravers and etchers, illustrated with fine reproductions of scarcer and more significant portraits and plates. Two invaluable bibliographies, compiled by members of the club, and very largely from their own libraries, have been issued. The first, "A Catalogue of the Original and Early Editions of Some of the Poetical and Prose Works of English Writers, from Langland to Wither"; the second covering the period from Wither to Prior. The amount of labor involved in these annotated bibliographies, and their usefulness, it is hard to measure. In contrast with these, the club has issued two bronze medallion portraits, one of Lowell and one of Hawthorne, and an etching by Leopold Fleming of Aldus, in his printing house, showing Grolier some bookbindings. The original painting on which this etching is based is the central feature in the club's gallery. Generally the club's exhibitions have been accompanied by catalogs, each in a modest way a careful bibliography or check list, and usually accompanied by a prefatory note, biographical or critical, from the hand of an authority.

The Grolier signalizes its first quarter century by issuing a book on which the publication committee has been active for several years. The members were requested each to nominate an American book on which he would like the club to expend its greatest care. No suggestions were made in this request. A considerable majority of the responses called for a Grolier edition of Hawthorne's "Scarlet Letter." The late George H. Boughton, a member, was selected as the illustrator, and, shortly before his death, he finished the illustrations. These were to be printed in color, and Mr. Hoe was entrusted with the duty of seeing this properly done. Taking the best of the French printers, he instituted a series of experiments in intaglio printing, reaching, it is thought, the best possible results in color work; and now, after some years of labor upon it, the volume is issued this month.

December Is Here

BY HARRY COWELL

"See, December is here!"
Wail the wind and the rain.
"Ah, the winter so drear!"
Trees, a-shiver, complain.
Lo, the doom of the Year!"
Writes the frost on the pane.

"But His birthday's anear!"
Beams His own star aglow.
"'Tis the season of cheer!"
Such the song of the snow.
"Leaves will soon reappear!"
Thus a sweet voice and low.

San Francisco, Cal.

General Philip H. Sheridan

BY GENERAL HORACE PORTER

[The following eulogy of General Sheridan is from the oration delivered by General Porter on the occasion of the unveiling at Washington, on November 25th, of the heroic equestrian statue by Mr. Borglum. General Porter was with General Sheridan during his campaigns with the Army of the Cumberland and the Army of the Potomac, and no one can more justly measure the genius of our unequaled cavalry leader. General Porter's own distinguished diplomatic experience as United States Ambassador at Paris, and as the author of military histories gives weight to his eulogy of his commander.—EDITOR.]

PHILIP HENRY SHERIDAN first saw the light in Albany, N. Y., the 6th of March, 1831. The next year he was taken by his parents to Perry County, Ohio, where he passed his boyhood's life. It is not the purpose at this time to recite his biography; the American people know it all by heart. The salient incidents only of his remarkable career will be referred to for the purpose of illustrating the distinguishing traits of his character. Sheridan attended the village school and attained the groundwork of a practical education. His sympathetic nature, manly traits and sound judgment rendered him popular with his comrades, and their confidence in his fairness was often manifested by their appeals to him to decide disputes that occurred among them.

Ambitious to support himself and not be a burden to his parents, he obtained a position in a country store, at the youthful age of fourteen, receiving for his services the not very munificent compensation of twenty-five dollars a year and board. Within a twelvemonth he had become so useful that his pay was increased to sixty dollars. Before the end of the year he was engaged in a store as bookkeeper. As all transactions then were conducted on the credit system, his duties were arduous and required great skill as an accountant.

When the Mexican War broke out he read with deep interest the accounts of our victories, and became fired with ambition to enter upon a military career. The Congressman from his district was accustomed to visit the store, and he had become so favorably imprest with the character and intelligence of the boy that he willingly granted his request for an appointment to West Point, and young Sheridan, having past the required examination satisfactorily, entered the military academy as a cadet in the year 1848, and gained steadily each year in the order of merit. After having been three years in the academy, an incident occurred, as a consequence of his sensitive nature and a spirit that could not brook offense, which came very near putting an end to his military career and depriving the country later of his inestimable services. A cadet sergeant having spoken to him in a manner that Sheridan deemed offensive and uncalled for, he threatened him with his bayonet, and when they met afterward, attacked him in a fisticuff which was stopped by an officer appearing on the scene. His conduct was deemed a serious breach of discipline, punishable by dismissal, but on account of his previous good conduct, this sentence was commuted to suspension for a year. During this interval Cadet Sheridan returned home. His old employer was glad to re-engage him as bookkeeper, and he was able to support himself by this occupation until he returned to the academy the next year. In 1853 he graduated No. 35 in a class of fifty-two members, numbering among them the subsequent distinguished generals McPherson, Schofield, Sill and Hood. Soon after receiving his commission in the army he was assigned to active duty on the Pacific Coast, in campaigns against the hostile Indians, and when the serious war began in Oregon in 1856. Sheridan was chosen to lead an expedition for the relief of a block house on the Columbia River. Landing on the north side, he found the Indians in overwhelming force, and, after some skirmishing, in which a ball grazed his nose, he found that a successful front attack would be impossible, and he decided to make a bold effort to turn their position.

It was extremely hazardous, but his only choice was between such an attempt and the abandonment of the whites who had taken refuge in the block house, who would fall a prey to the hostiles and be subjected to the worst forms of Indian barbarities. Sheridan quietly withdrew, put his men on a large bateau he had brought with him, transferred them to the south bank, the movement being concealed by a wooded island, and towed the boat with great difficulty up the rapids to a point nearly opposite the block house. There he was joined by the portion of his force that he had ordered to march quietly along the south bank. He ferried them across, rescued the whites in the block house, and held his ground until reinforcements arrived.

General Wool, commanding the department, commended Sheridan highly for his conduct, and General Scott, commanding the army, in a general order, complimented him by saying: "Second Lieutenant Philip H. Sheridan, Fourth Infantry, is specially mentioned for his gallantry." This exploit is mentioned as peculiarly illustrative at that early date of Sheridan's chief military characteristics. The boldness, promptness of decision and intrepid courage displayed in this little expedition are the same qualities that later in a broader field gained him his marvelous successes.

When the Civil War broke out Sheridan was transferred to the East, and General Halleck, commanding in Missouri, wanting an officer of unceasing energy, of unimpeachable integrity, familiarity with bookkeeping, and skilled in accounting, made him his auditor of accounts, which then were hopelessly tangled, and afterward quartermaster and commissary. Sheridan systematized the methods of those departments, and in this performed a valuable service, for which he was highly commended. He was, however, constantly yearning to serve actively with troops, and in April, 1862, he succeeded in being ordered to join the army in the field. This he always regarded as the turning point in his military career. He was first assigned as a member of the staff of General Halleck, whose headquarters were then at Pittsburg Landing. His reputation for soldierly qualities soon made him well known to his superior officers, and upon their recommendation, he was appointed colonel of the Second Michigan Cavalry by the Governor of that State. On June 11th he commanded a brigade consisting of his own and one other cavalry regiment. He was kept in the advance, and was expected to inform himself fully of all the enemy's movements. Such a difficult service could not have been intrusted to better hands. Sheridan developed characteristics at this time which became conspicuous in all his after campaigns. He secured trustworthy scouts and guides, and demonstrated his love for maps. There being no maps in existence of any value, he set to work to construct them, and the knowledge thus attained stood him in good stead when he had to make sudden and rapid movements in the enemy's country. It became a common saying in the army that when Sheridan took a nap in the afternoon in camp he always went to sleep with a map in his hand. On the 1st of July, while Sheridan was at Booneville with less than 1,000 men, the enemy attacked him with a force of about 5,000. Sheridan had the choice of giving battle and making the best fight he could or retreating suddenly, abandoning his camp and stores, and giving up this important position to the enemy. He promptly decided to fight, believing, as usual, that "boldness, not caution, wins." He promptly made the best disposition of the greater part of his force, and sent the rest around the enemy's left flank by a circuitous wood road, with the existence of which he had become familiar when map-making, with directions to attack the enemy's rear, not waiting to deploy, but to charge in column and make a sudden and bold assault. This was so well planned and executed that it was made simultaneously with the attack in front. A locomotive had arrived at the railway station, and he ordered the whistle to be sounded and the men to cheer lustily, so as to give the impression of the arrival of reinforcements. The enemy, finding himself struck in front and rear, and not knowing the real weakness of the opposing force, broke and made a precipitate retreat. Sheridan had gained a complete victory. Tho a minor battle, the ability, skill and

courage displayed by the commander brought him into great prominence, and five general officers united in a strong recommendation for his promotion, addrest to General Halleck, saying: "The undersigned respectfully beg that you will obtain the promotion of Sheridan. He is worth his weight in gold."

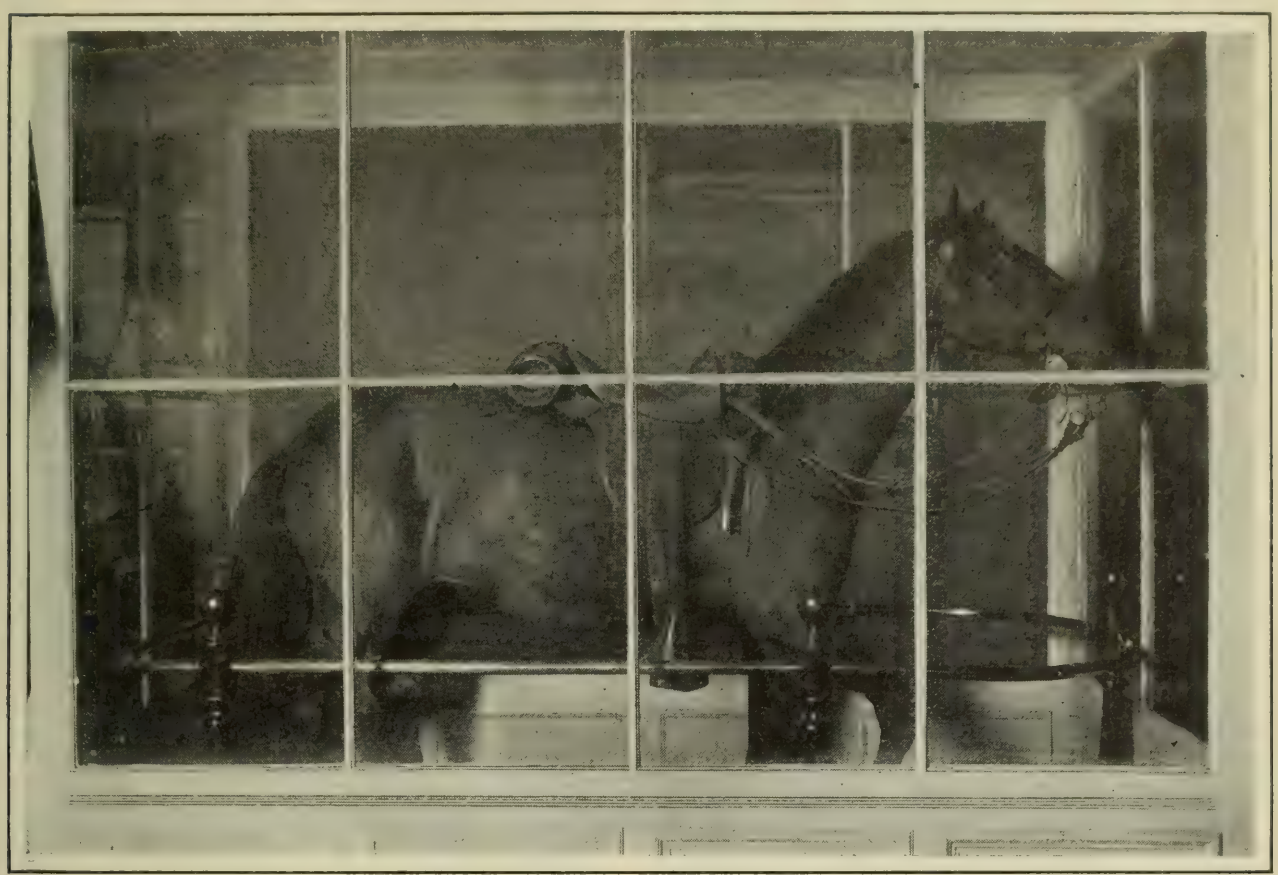
He was made a brigadier-general of volunteers, his commission dating from the day of his victory at Booneville.

Sheridan was soon after transferred to the Army of the Ohio, then in Kentucky, and put in command of a division. At the successful battle of Perryville his command held an advanced position, and

THE GUTZON BORGLUM STATUE OF GENERAL SHERIDAN,
Unveiled at Washington, D. C., on November 25, 1908.

his gallantry was conspicuous thruout. When the enemy had driven McCook's corps back and were pressing upon our exposed left flank, Sheridan with Mitchell arrested the tide, drove them back thru Perryville, and re-establisht the broken line.

Two months later, in the sanguinary Battle of Stone River, fought by the Army of the Cumberland, under Rosecrans, Sheridan's division at times bore the brunt of the fighting. The enemy attacked in front and flank, division after division was driven back by superior numbers; when Sheridan was reached the fate of the day seemed to be in his hands. He resisted vigorously, then advanced, and by a supreme effort drove the opposing force back, changed front in face of the enemy, held in check vastly superior numbers, and retired only at the point of the bayonet. This persistent and desperate fighting enabled Rosecrans to re-establish his line of battle and save the day. Sheridan lost all of his four brigade commanders, many colonels and battery commanders, and 1,633 men, nearly 40 per cent. of his command. Rosecrans complimented him personally on the field, and recommended him for a major-generalship of volunteers, which he received.



In June, 1863, the Army of the Cumberland advanced against Bragg's army, and Sheridan's division was frequently in the lead.

When it became important to reach the rear of the enemy's columns, which had crossed the Elk River, finding that stream swollen to an immense volume of water, running with the swiftness of a mill race, and unfordable by means of the ordinary methods, Sheridan, with his usual ingenuity and quickness of thought, ordered the men of his division to secure their ammunition by putting their cartridge boxes on their shoulders, close up and form a compact mass by those in rear placing their arms around those in front, and in this formation plunge into the stream. By this means they successfully resisted the force of the flood and promptly secured the coveted position on the other side. In bridging the Tennessee River and pursuing Bragg's army, Sheridan's labors exhibited all the characteristics of the practical soldier. For nearly a week before the final battle of that campaign his division had received orders requiring it to march and countermarch until the men arrived on the field of Chickamauga thoroly worried and exhausted. But, inspired by their commander, they fought with desperation, and the severe losses suffered bear sad testimony to their gallantry and devotion. The division went into action with an effective strength of 4,000 bayonets; it lost 1,517 officers and men, including two brigade commanders. In the retreat of the Twentieth Corps to Chattanooga, Sheridan's division formed the rear guard. I shall never forget his appearance when I met him that memorable second day of the fight. His cheeks were bronzed by southern suns and his face was begrimed with the smoke of battle; he had scarcely slept or tasted food for nearly twenty-four hours; yet his voice was as cheery, his movements as vigorous, and his mind as alert as on many a day when the army was advancing instead of retreating. Bragg's army closed upon Chattanooga, encircling it completely on the south by a strongly fortified line. General Grant had been placed in command of the Military Division of the Mississippi, and arrived in Chattanooga in October to give personal direction to all the troops there.

In November he fought the battle of Missionary Ridge. Sheridan's division was in the center of the line and was notably conspicuous in the gaining of that memorable victory.

The enemy had three lines of rifle pits. The order was given to capture the first line. Sheridan led his troops in person, riding between his skirmish line and line of battle, accompanied only by an orderly, so as to be less conspicuous. The first line was promptly carried, but the position being greatly exposed and his troops suffering from a terrific fire, he deemed it better to yield to the temper of his men and charged both the second and third line, the latter crowning the hights of Missionary Ridge. Tho it was not strictly in accordance with orders, his soldierly instincts gave him an assurance that he would succeed, and his willingness to assume responsibilities when he was confident that a movement would contribute largely to victory prompted

him to let his men, now aroused to a high pitch of enthusiasm, charge both the other lines. The assault was completely successful and fully justified his judgment. The routed enemy fled panic-stricken from the hights. Nine guns and a number of wagons were captured. Sheridan, without losing time to communicate with his superior officers, pursued the retreating enemy to a distance of seven miles, and paused only when he found himself becoming unduly isolated from the rest of the army.

"RIENZI."

This is the famous horse that carried Sheridan "to Winchester, twenty miles away." It is now stuffed and in the Government museum at Governors Island, N. Y.

Out of an effective force of 6,000 he lost 123 officers and 1,181 men killed and wounded. These figures comprised one-third of the casualties of the entire army. He had captured 1,762 prisoners and seventeen pieces of artillery. It was the first time Sheridan had fought under Grant's personal direction, and that officer was profoundly imprest with the admirable military qualities displayed. In referring in his Memoirs to this decisive victory, he says:

"To Sheridan's prompt movement the Army of the Cumberland, and the nation, are indebted for the bulk of the capture of prisoners, artillery and small-arms that day. Except for his prompt pursuit, so much in this way would not have been accomplished."

Sheridan participated prominently in the movement for the relief of Knoxville, Tenn., and received much commendation for his arduous services in that difficult winter campaign. In March, 1864, Grant was placed in command of all the Union armies, and proceeded to Washington to consult with the national authorities as to the dispositions to be made for the spring campaigns.

He had determined to reorganize the cavalry of the Army of the Potomac, with a view to making it a more prominent and effective force, and was anxious to select the most capable officer to command it. He naturally chose Sheridan, and ordered him at once to Washington, who, on his arrival, was presented to the President, Secretary Stanton and others, and made the subject of cordial congratulations upon his distinguisht services in the West. He had been worn down almost to a shadow by exhausting work and exposure in the field; he was thirty-three years old and

looked still younger; he weighed only 115 pounds, and as his hight was but 5 feet 6 inches, he certainly did not, while in the council chamber of the nation, look the picture of a formidable cavalry leader. The next time General Grant met the President he remarked: "The officer you brought on from the West seems rather a little fellow to handle your cavalry." To which Grant replied: "You will find him big enough for the purpose before we get thru with him."

Sheridan's cavalry was soon showing its usefulness in the crossing of the Rapidan and the Battle of the Wilderness. The day after the battle General Meade and Sheridan had an acrimonious altercation regarding the operations of the cavalry, in which Sheridan said, with much warmth, that if he could have matters his own way he would concentrate all the cavalry, move out in force against Stuart's command, and whip it. General Meade came over to General Grant's headquarters immediately after and repeated to him this astounding statement, and evidently expected the general to share his astonishment. Grant quietly remarked: "Did Sheridan say that? Well, he generally knows what he is talking about. Let him start right out and do it."

Early the next morning Sheridan started upon his famous cavalry raid in the rear of Lee's army, in which he tore up railway tracks, destroyed much property, whipt Stuart's cavalry, its gallant commander being among the dead, and even captured a portion of the outer defenses of Richmond.

We have not time to speak of the efficient work of Sheridan's cavalry in seizing and holding advanced points of vantage, and the gallant co-operation with the infantry in the movement of the army of the Potomac from the Rapidan to Petersburg and the frequent successful raids and battles with the enemy's cavalry. That summer, when Lee detached troops to the Shenandoah Valley and threatened Washington, Sheridan was transferred to that theater of war and put in command of an army of about 26,000 men. The scope of his command was constituted the Middle Military Division. In September he struck the enemy at the crossing of the Opequon, fought him from dawn to dark, drove him thru Winchester, and sent him "whirling up the Valley," having captured 3,000 prisoners and five guns. Thirty miles south of Winchester the enemy stopt to reorganize at Fisher's Hill. Here Sheridan again struck him and drove his scattered forces thru the passes of the Blue Ridge. For these successes he was made a brigadier-general in the regular army.

The next month there occurred one of the most dramatic incidents in Sheridan's life. He had been ordered to Washington to consult with the authorities there, and was on his way back to his headquarters, having reached Winchester, twenty miles from his army, when he heard heavy firing and learned that the enemy had made an attack. He threw himself into the saddle, and putting spurs to his favorite horse, Rienzi, dashed off at breakneck speed to the front. Meeting his army, broken, in great confusion and in full retreat, he rushed forward, swinging his hat, shouting encouragement to his men, and crying: "We must face the other way. We will go back and recover our camp." The news sped from one command to another that their unconquerable commander was on the field. The men, changing from the depth of despondency to the extreme of enthusiasm, faced about, and with wild cheers followed their heroic leader. The enemy was completly routed, with the loss of many prisoners, much material, and forty pieces of artillery. The disastrous defeat had been changed to a crowning victory, and "Sheridan's ride" became famous in story, in painting and in sculpture. Grant, on receiving the news, ordered a salute of a hundred guns to be fired in honor of Sheridan's signal victory, and said in conversation with those of us on his staff who were with him at the time:

"Sheridan's courageous words and brilliant deeds encourage his commanders as much as they inspire his subordinates. While he has a magnetic influences possest by few men in an engagement, and is seen to best advantage in battle, he does as much beforehand to contribute to victory as any living commander. His

plans are always well matured, and in every movement he strives with a definite purpose in view. No man would be better fitted to command all the armies in the field."

The enemy had lost in this campaign 16,952 killed and wounded, 13,000 prisoners, and most of his artillery. The Shenandoah Valley was thus finally rendered impossible of occupancy by Confederate troops. Sheridan was now made a major-general in the regular army.

The terms of President's Lincoln's order conferring this rank were:

"For personal gallantry, military skill, and with just confidence in the courage and patriotism of his troops displayed by Philip H. Sheridan on the 19th of October at Cedar Run, where, under the blessing of Providence, his routed army was reorganized, a great national disaster averted, and a brilliant victory achieved over the rebels for the third time in pitched battle within thirty days, Philip H. Sheridan is appointed Major-General in the United States Army . . ."

On February 9th, 1865, Sheridan received the thanks of Congress for "the gallantry, military skill, and courage displayed by him in the Valley of the Shenandoah, especially at Cedar Run."

In February, Sheridan was ordered to move out and destroy the enemy's communications leading to Richmond, and then to join Grant, or, under certain contingencies, to unite his force with Sherman's army, then in North Carolina. In order to surprise his enemy he resorted to the ingenious stratagem of organizing a fox hunt, collecting foxes and hounds and issuing particular instructions for the hunt. This news was carried to the enemy by the inhabitants and he was thrown off his guard and left his forces widely scattered. The hunt was suddenly converted into a colossal raid by 10,000 cavalry. He struck the enemy at Waynesboro, completely routed his forces, and captured seventeen battle flags, 1,600 men and eleven pieces of artillery. This decisive victory closed hostilities in the Shenandoah Valley. Sheridan then struck out toward Richmond, wrought serious damage to the James River and Kanawha Canals, cut the railroads, destroyed vast amounts of supplies, and finally joined Grant in front of Petersburg.

When the final campaign against Lee's army began, Sheridan was selected to move around to the southwest with his cavalry, destroy communications, and intercept the enemy in case he should evacuate the defenses of Richmond and Petersburg. Lee detached a large force of cavalry and infantry and sent it to check this movement. Sheridan fought the infantry with his cavalry all day, gradually falling back to a better defensive position. By a series of brilliant flank movements and counter attacks he succeeded by nightfall in being able to hold an important position at Dinwiddie Court House, where he successfully repulsed all the assaults made upon him. Grant sent him the Fifth Corps to strengthen his command, and the next day Sheridan advanced five miles to Five Forks, driving the enemy before him. There he found a large force of infantry, artillery and cavalry, heavily entrenched in a strong position, and promptly determined to give battle. His plan was to deploy a portion of his cavalry dismounted and make with it a fierce attack, as if to turn the enemy's right, and then throw the whole of his infantry against the left flank. By this means his infantry force would be interposed between the force attacked and the rest of Lee's army, and would be able to impede any movement looking to their junction. General Grant had directed me to remain with Sheridan the day before and this day and to send to headquarters by mounted orderlies a bulletin about every half hour giving him reports of Sheridan's movements in this important crisis of the opening campaign. When the assault began, the infantry, in moving forward over the boggy ground and struggling thru the dense undergrowth, were staggered by a murderous fire from the entrenched line, and fell back in some confusion. Sheridan now rushed into the midst of the broken lines and cried out: "Where is my battle flag?" As the sergeant who carried it rode up to him, Sheridan seized the crimson and white standard, waved it above his head, cheered on the men, and made heroic efforts to close up the ranks. Bullets were now humming like swarms of bees about our heads and shells were crashing thru the ranks. A musket ball pierced the battle flag; another killed the sergeant who had carried it; another wounded an aide; others struck two or three of the staff officers' horses. All this

time Sheridan was putting spurs into Rienzi, dashing from one point of the line to the other, waving his flag, shaking his fist, encouraging, shaming, entreating, praying, threatening, the true personification of chivalry, the very incarnation of battle. It would be a sorry soldier who could help following such a leader. With fixt bayonets and a rousing cheer the closed ranks now rushed forward and dashed over the earthworks, sweeping everything before them and killing or capturing every man in their immediate front. Sheridan urged on Rienzi, and with a bound the animal carried his rider over the earthworks and landed among a mass of prisoners who were crouching close under the breastworks. The enemy was completely routed at all points, the important strategic positions were secured; the trophies captured were six guns, thirteen battle flags and nearly six thousand prisoners. Sheridan on that field had been superb. He had fought one of the most complete tactical battles of the war, admirable in conception, brilliant in execution, strikingly dramatic in its incidents and productive of immensely important results. It had been my good fortune to serve near him both in the West and in the East, and much as I admired his marvelous soldierly qualities on other fields of battle, I felt that I had never measured the true scope of his matchless genius until that memorable day at Five Forks. At the close I said to him: "I could not help feeling that you exposed yourself today in a manner hardly justifiable on the part of a commander of such an important movement." His reply gave what seems to be the true key to his uniform success on the field: "I have never in my life taken a command into battle and had the slightest desire to come out alive unless I won."

A few days later, while pursuing Lee's army, then retreating toward Appomattox, Sheridan attacked the enemy at Sailor's Creek, capturing six general officers and over 9,000 prisoners. The untiring energy, hard fighting and skill displayed in this last campaign of the war added still further to the fame he had theretofore attained. He was present with General Grant when that officer received General Lee's surrender at Appomattox Court House.

After the war Sheridan commanded at different times the Military Division of the Gulf, the Department of Missouri, and the Military Division of the Mississippi. In 1870 he visited Europe to witness the operations in the Franco-Prussian War. He was promoted to the rank of lieutenant-general, and finally to that of general, the highest military title known to our Government. He was the nineteenth general-in-chief of the American army.

General Sheridan showed himself possest of the highest characteristics of the soldier. Bold in conception, self-reliant, demonstrating by his [illegible] that "much danger makes great hearts most resolute," prompt in decision, fertile in resources, possessing an intuitive knowledge of topography, com[illegible]estlessness of a Hotspur w[illegible]nce of a Fabius, it is no [illegible] stands in the front rank of the [illegible] great captains. The hearts of [illegible] men warmed to him with the glow of an abiding affection. The inspiration of his example roused them to deeds of individual heroism unparalleled in modern warfare, and under his leadership his unconquerable columns rushed to victory with all the confidence of Cæsar's Tenth Legion. Generous of his life, gifted with the ingenuity of a Hannibal, the dash of a Murat, the courage of a Ney, the magnetism of his presence forged weaklings into giants, transformed routed squadrons into charging columns, and snatched victory from defeat. He preferred shot and shell to flags of truce; he would rather lead forlorn hopes than follow in the wake of charges. His standard rose above all others on the field; wherever blows fell thickest his crest was in their midst; despite the daring of the defense, opposing ranks went down before the fierceness of his onsets never to rise again; he paused not till the folds of his banners waved above the strongholds he had wrested from the foe.

Sheridan's sword always pointed the way to an advance; its hilt was never presented to the enemy. Under his guidance the flag of his country was never once dethroned from its proud suprem-

acy. He was never defeated. He loved brave men; he despised dastards. He did not believe the Lord ever intended his works to be made manifest by cowards. His sole ambition was his country's welfare. He simply did his duty and trusted to history for his meed of praise; the more history discusses him the more brilliant becomes the luster of his fame. His record is like a torch, the more it is shaken the brighter it burns. He proved himself one of the noblest contributions to "earth's contingent of master spirits." In him modesty went hand in hand with valor; he never underrated himself in a battle; he never overrated himself in a report.

On the 5th of August, 1888, he was called away to his final home, and the laurel of his brow was intertwined with the cypress. Then all the land displayed the machinery of public mourning, and the thunder of his guns was replaced by the tolling of cathedral bells. When he past the portals of eternity, earth mourned one hero less.

Yonder statue, which so faithfully portrays his noble features, is a fitting tribute of grateful hearts. The hallowed memories which cluster about it will recall the heroic age of the Republic. It will point the path of loyalty to children yet unborn. Its mute eloquence will call for equal sacrifice should war again threaten the nation's life.

Brave Sheridan! In gazing upon yonder bronze I seem to see his silent clay again quickened into life, once more riding Rienzi thru a fire of hell, leaping opposing earthworks at a single bound, and leaving nothing of those who barred his way except the fragments scattered in his path. Matchless leader! Harbinger of victory! we salute you. As long as manly courage is talked of or heroic deeds are honored, there will remain green in the hearts of a grateful people the talismanic name of Sheridan.

NEW YORK CITY.

ARDENT FRESHMAN (to hostess)—I think this Roquefort is the best cheese alive.—*Yale Record.*

"You say this man stole your coat?" said the magistrate. "Do I understand that you prefer charges against him?"

"Well, no, your honor," replied the plaintiff. "I prefer the coat, if it's all the same to you, sir."—*Philadelphia Press.*

TO FATHER TIME.

Backward, turn backward, O Time in thy flight!
Give us an autoless day and a night.
Give us a "yellow" sans headlines to scan,
A rustleless skirt, and a hustleless man,
A babe teddy-bearless, a microbeless kiss,
A fistic fight fakeless, a straight-frontless miss,
A giggleless schoolgirl, and—better than that!—
A summer-clad college man wearing a hat!
I know, Father Time, that I'm asking too much,
But turn to a day ere a dinner was lunch.
Swing back to an age peroxideless for hair—
An æon ere "rats" made their rendezvous there—
An old-fashioned breakfast without Shredded Hay,
A season when farmers went whineless a day,
A burgh moving-pictureless—ah, what a treat!
A gumless-girl town and a trolleyless street;
I'm asking too much, but I pray, Daddy Time,
For days when a song had both substance and rhyme!
—*The Bohemian.*

"I GUESS paw must have past a lot of time at the dentist's when he was in New York," said Johnny Green.

"Why do you think so?" queried his ma.

"'Cause I heard him tell a man today that it cost him nearly $300 to get his eyeteeth cut," replied Johnny.—*Chicago News.*

Two men were standing together in a corridor of a post office. One of them happened to notice that a post card, held in the fingers of the other, was addrest to the holder.

"Why, what does this mean?" he asked. "Do you address letters to yourself?"

"In this case, yes," was the answer.

"That's funny."

"Well, not so very. See the other side."

He held it up, and the other side read: Bro. Blank—There will be a meeting of the I. O. O. S. B., No. 387, at the hall, the evening of October 1st, to transact special business. Members not present will be fined two guineas. J. B——, secretary."

"Yes, but I don't exactly catch on," protested the innocent.

"Oh, you don't? Well, I got the cards printed myself; the society is all a myth. When I want to go out of an evening I direct one of these cards to my house. I reach home, and my wife hands it to me, with a sigh. I offer to stay at home and stand the fine of two guineas, but, of course, she won't allow that. That's all, my friend, except that the scheme is worked by hundreds of others, and our poor deluded wives haven't tumbled to it yet."—*Tit Bits.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

The President's Message

MR. ROOSEVELT begins his last annual message with a somewhat misleading review of the Government's receipts and expenditures during the seven years of his administration. It is true that the net excess of receipts has been about $100,000,000, but for some time past there has been a large and growing deficit. A surplus of $84,000,000 in the fiscal year 1907 was followed by a deficit of $58,000,000 in 1908, and the Treasury foresees a shortage of $114,000,000 for the year ending in June next, with one much larger in 1910. Mr. Cortelyou's statement shows the situation clearly, and, unlike the President's, is accompanied by judicious recommendations designed to prevent waste and cause an adaptation of expenditures as to income. As the President says, no new taxes have been levied. But if expendiutres are not reduced it will soon be necessary to impose new taxes or to borrow large sums.

His recommendations concerning the regulation of railroad companies and other great corporations are substantially those which he has made in past years, altho he does not now suggest executive licenses for Trusts. It must be admitted that only by the National Government can the desired regulation be accomplisht, but the problem is a very difficult one. Mr. Roosevelt is inclined to insist upon an excessive exercise of power by the executive branch, and to assign to that branch some duties which are properly judicial. He now marks out a formidable task for the Interstate Commerce Commission, for it will be noticed that he would have the Commission exercise complete "control" over the issue of railway securities as well as the raising and lowering of freight rates. Railroad companies should not be forbidden, in our opinion, to make public traffic agreements, subject to the Commission's approval, and this permission should be given by an amendment of the Sherman act. Mr. Roosevelt has repeatedly asked for such an amendment, but Congress appears to avoid any modification of the statute. This is unfortunate. No action at the present session can be expected, but the whole question should be taken up next year and thoroly considered.

In the list of reform measures required for the benefit of wage workers the President includes a progressive inheritance tax on large fortunes. Such a tax may soon be required for revenue, but probably Congress will not consider the imposition of it until it is needed for this purpose. The measures more directly affecting labor are good ones. Some of them may not be within the scope of national legislation, but a model law relating to employers' liability should promptly be enacted for the District of Columbia.

Much of the message concerns judges and courts. We believe, as the President says, that the salaries of Federal judges are inadequate and should be increased. His criticism of those judges whose conduct he disapproves would have been bettered by more complete specifications. If there be judges who unduly favor the rich and are oppressive to the poor, they should be clearly exposed to the public condemnation. Charges that cannot be fixt upon any judicial officer tend to discredit the en-

tire judiciary in the minds of those who give little thought to such matters. It is desirable that judges should understand the new conditions of the time and see the proper bearing of these conditions upon the decision of questions at issue, but it seems to us that the President is not inclined to give due weight to the obligations of a judge with respect to the interpretation and application of statutes.

In his recommendations, suggestions and arguments concerning the regulation of corporate wealth, the just treatment of labor, and the conduct of the courts, Mr. Roosevelt's purpose is most commendable. This all intelligent and fair-minded Americans believe. He has been striving with all his energy to insure reform. Zeal may occasionally lead him to err in method or expression.

He is undoubtedly convinced that by insisting upon thoro preparation for war he is promoting peace, but there are others who also most earnestly desire peace and cannot regard all his utterances and recommendations with approval. He finds it "unfortunately true that the great body of our citizens shoot less and less as time goes on":

"To meet this we should encourage rifle practice among schoolboys, and indeed among all classes, as well as in the military services, by every means in our power. Thus, and not otherwise, may we be able to assist in preserving the peace of the world. Fit to hold our own against the strong nations of the earth, our voice for peace will carry to the ends of the earth. Unprepared, and therefore unfit, we must sit dumb and helpless to defend ourselves, protect others, or preserve peace. The first step—in the direction of preparation to avert war if possible, and to be fit for war if it should come—is to teach our men to shoot."

And he "cannot too strongly emphasize" the need of such appropriations as will "within the shortest possible time" make the Hawaiian Islands "practically impregnable":

"It is useless to develop the industrial conditions of the islands and establish there bases of supply for our naval and merchant fleets unless we insure, as far as human ingenuity can, their safety from foreign seizure."

Is there need of such haste? What foreign Power can be thinking of seizing those islands? This urgent recommendation, it should be borne in mind, is made only a few days after a notable peace agreement with Japan, an agreement which refers specifically to our insular possessions in the Pacific. And he also asks for four battleships—"additional destroyers and colliers, and, above all, four battleships." All this, it seems to us, is not strictly peaceful. Undoubtedly Mr. Roosevelt desires to avoid international war, but the character of his official utterances might lead poorly informed persons to think he was "spoiling for a fight."

That part of the message in which he objects to recent legislation restricting the use of employees of the Secret Service has excited sharp resentment in Congress. We treat of it in a separate editorial.

The Federal Council of Churches

THE plan for the sixtieth anniversary of THE INDEPENDENT prevented the words we would have said last week as to the meeting in Philadelphia for eight days of the Federal Council of the Protestant Churches of the United States. During the session several other minor denominations joined the Council, bringing the total number up to thirty-three, with eighteen million communicants. It was interesting to see them admitted, the vote being taken not by a general call on the delegates, but by vote of the several denominations, the members of each rising in turn to give their unanimous vote. These thirty-three denominations represent the overwhelming majority of the Protestant communicants in the country, and fifty or sixty million of our population, most of the rest being related to the Catholic or Jewish faith.

This visible expression of the unity of Protestant Christianity, at least of its approaching total unity, is by no means the least advantage of this organized Council. To be sure, Protestants are by themselves and the Catholics by themselves, but the breach between the two is surely not as wide as it was fifty years ago, and a truce is already in sight. We saw it when the Presbyterian Church dropt from its Confession of Faith its denunciation of the Roman Church as Anti-Christ; and in a multitude of places the two bodies work together for reforms. What is called in New Jersey the Bishops' law was drawn up by a Catholic and a Protestant bishop to restrain the liquor nuisance. Only a few of the Catholic journals speak sneeringly of the meeting

in Philadelphia. On both sides it is becoming clearer that the believers in the Christ must not waste the strength in fighting one another which ought to be spent in advancing the kingdom of God.

The president of the Council for the next four years will be Bishop Hendrix, of the Southern Methodist Church. It seems that in ecclesiastical, if not in political, affairs we can have a Southern president, the first one to be chosen by the first regular session. To be sure, Dr. William H. Roberts, of the Presbyterian Church, has been the most efficient chairman of the preliminary organization created in New York three years ago, but the Council itself was not organized until it met in Philadelphia, approved by all the constituent bodies. To Dr. Roberts as chairman, and Dr. Sanford as secretary, most grateful praise is due from the churches for the success now so fully achieved.

The utmost harmony prevailed. How could it be otherwise? It seemed as if the very spirit of God was with them. We do not mean that no differences of personal opinion were uttered, nor that every action taken was of supreme wisdom, for that would mean death rather than life. But the overwhelming sentiment was of that common faith and fraternity which the organization exprest.

There were no doubtful questions as to what to do. On co-operation in foreign missions, on united evangelization at home, on the fellowship of the Church with workingmen, on care for the immigrants, on temperance and education, all were agreed. It only remained to express that agreement and to provide for the organization of State and local federations. That will be a principal work of the executive committee. To every pastor and communicant in the country we would present this object. Organize in your State; organize in your city or town. Join your Christian forces. Do, if you can, what has already been so well done in Los Angeles and in some other cities. Write to the secretary, Dr. E. B. Sanford, at the Bible House, in this city, for information and documents, or to the secretary of the State organization, if there be one. There will be one soon.

The expense of all this will be small. It is planned to have for the national organization a schedule involving not more than $30,000 a year, distributed among the denominations, and which will provide for headquarters in four or five principal cities in this country. In the executive committee every denomination is represented by one member, and an additional member for every half million communicants. On that committee great responsibilities will rest. The effectiveness of the Council will depend on their wisdom and energy. They will have no authority; they can control no denomination; but their work will be to recommend, to inspire, and the churches will follow. But the chief work will have to be in the local communities, done by local federations. It will be their business not only to see to it that evangelistic work is done wisely and faithfully, but that the mind of the churches is exprest in municipal and State legislation, and every moral question that affects their community.

This meeting marks an epoch in the history of the American Church, if we have faith and grace to make it so.

Lady of Christ's, Iconoclast of Kings

THREE lands in four ages have produced four confessedly great epic poets—Greece in Homer, Italy in Virgil, Italy again in Dante, and England in Milton. Their great poems are the massive, monumental works which the world agrees to crown as the supreme product of poetic genius. These mighty epics we know well; they are a part of human culture; but what do we know of the men who created them?

Homer is a breath, a tradition, perhaps only a myth. Seven cities claimed his birthplace, but was there a Homer, or was he, like a composite photograph, but the bare name under which clustered a hundred cyclic bards who wandered from coast to coast, each adding to the story which each had learned? No one knows. We hear the reverberations of distant thunder, but the blinding personal flash is denied us.

Virgil was the reincarnated Homer of tradition; less virile, less original, content to repeat and develop and add to the

Grecian story of the fall of Troy, and all for his own fame and in adulation of those who could give him ease and wealth; a great poet, a clinging, blameless, but not a great man.

In Dante we pass to a new type, to one who was great equally as a poet and a man, to one who had the true and new spirit of revived Christianity and awakened liberty. He was a man who had convictions and could write and fight for them. That was a man indeed fit to bind myrtle leaves about his visionary brow; who could dare to leave the story of wars and visit Heaven and Hell and tell their glories and horrors, their sainted and their damnèd dead.

Then came, after another lapse of centuries, England's last great epic poet, blind to the approach ot even or morn, or the human face divine, but whose inward mind, irradiated with celestial light, could see and tell the invisible things of the eternal spheres.

How strange was the difference between the pagan epics of Greece and Rome and the Christian epics of Dante and Milton! The old were of "fabled knights in battles feigned," of emblazoned shields, jousts and tournaments; but in the two Christian epic poets the scenes were laid in Heaven and Hell, the characters were disembodied spirits or the principalities and powers of the Throne and the Pit, and the Christ supreme has cast out the gods of Olympus.

Like Homer, Shakespeare is little more than a mere voice, scarce anything else. We do not know the man. He slipt out of human sight quite unobserved, and has left scarce a trace beyond his dramatic works. He was ready enough when scarce past middle age to sink into obscurity, inactivity and silence. No wonder when people try to get a vision of the greatest of English dramatists that it would seem that the contented squire of a country town, resting from the mimic stage, could not possibly have written the immortal plays, and that some mighty genius like Lord Bacon must have been their author. But no one can question who and what was John Milton. No man was so fit in all English history to write "Lycidas" and "Comus" and "Paradise Lost," and the "Defense of Unlicensed Printing." In his youth he was the unequaled scholar, the poet, and the "Lady of Christ's"; but under the gentlest beauty of style and thought, under the most faultless purity of personal life, there burned the flame of noblest patriotism and piety, which blazed out into the fiercest passion of devotion when Puritanism lopt the head of the tyrant king. Then the poet tost aside the hope of fame, that last infirmity of noble minds, and flung himself into the political arena in defense of liberty and the rights of the people, glad to be the champion of regicides against the world. Then Cromwell's battles and Milton's Latin and English pen made British fame over all the Continent. There was the proud soul's self-effacement, the left hand only, as it were, at work—but oh! how mightily—while the deft right hand of poetry was fain to rest till a time of peace might come. Yet the most glowing, wonderful passages of English beauty, tenderness, eloquence and conscious majesty of soul are scattered here and there in those controversial tracts, and they might have given him immortality even if, scarce saved from a traitor's death when Charles II gained the throne, he had not in sightless seclusion composed the world's loftiest epic poem.

Milton would never have subscribed to the monstrous modern lie of "art for art's sake." His muse bore no mirror to reflect every sight. His every line had its high purpose. None less than the Heavenly Muse inspired him; and he held that he only was fit to write the poem for the ages whose life was itself a poem of purity, and basked ever in the co-eternal beam of Him who is eternal Light.

Lo Here, Lo There

HERE are a few interesting samples of American philosophizing on big problems, gathered from the newspapers of three or four consecutive days:

Addressing a circle of friends and business associates at Chicago, Mr. J. Pierpont Morgan disclosed the secret of fortune making. "My father told me," he said, "not to discount the future of America. 'Remember, my son,' he said, 'that any man who is a bear on the future of this country will go broke.'"

At the meeting of the National Con-

servation Commission, Senator Smoot, of Utah, as chairman of the section on forests, reported that: "We take from our forests each year, not counting the loss by fire, three and one-half times their yearly growth," and he added that the yearly loss by fire is five times the sum which it would cost actually and effectively to stop this form of destruction. At the same convention attention was called to the rate at which our mineral wealth is going. Unless other supplies are found, our coal will be exhausted by the middle of the next century, and our iron before that.

The Hon. Lawrence O. Murray, Controller of the Currency, in his annual report to the President, remarks that the banking power of the United States, as represented by capital, surplus and other profits, deposits and circulation, in 1908 was measured by the figure $17,642,705,274, an amount exceeding the banking power of the world in 1890, which, as given by Mulhall for that year, was $15,985,000,000, of which $5,150,000,000 was credited to the United States.

To the mind of the trained economist these reports on resources, and the rate at which we are converting them into quick assets, expectations and smoke, may suggest an all-sufficient reason for Mr. Morgan's unprecedented generosity in giving away the secrets of his trade. Mr. Morgan may have heard of the economic law of diminishing returns.

At the annual banquet of the alumni of Union College on the evening of December 10th, Dr. Homer Green, lawyer and man of letters, declared that the American nation is entering upon an age of civic righteousness. Thanks to the Great Disturber, who has devoted six of the best years of his life to reforming the railroads, the Standard Oil Company, the nature faker and the birth rate, the American conscience has been softened and its moral fibre hardened. It is too early to predict how good we shall be, but we have at any rate turned over a new leaf.

On the same evening the alumni of Dickinson College listened to a speech by the Hon. Leslie Shaw, sometime Secretary of the United States Treasury. Mr. Shaw had none of Mr. Morgan's serene satisfaction in things as they are, and he did not share the buoyant optimism of Mr. Green. He had made a disquieting discovery and was agitated in his mind. "Our colleges and universities," he said, "are teaching sociology." The audience was startled, and when Mr. Shaw explained what the dread thing actually is the apprehension deepened. The sociologists, as Mr. Shaw has taken pains to learn, are socialists. And if they are not socialists they are anarchists. The exposition was luminous, and if the Dickinson alumni do not bestir themselves to avert the impending popular knowledge of these abhorrent things, it will not be because they have not been shown their duty.

How is the plain man to know where he is "at" when the masters thus play upon his simple wits? Shall he go gleaning on the national preserves in the path of the reaper, J. P. M.? Or shall he buy bear bets on the exhaustion of Mr. J. J. Hill's iron ore beds? Shall he keep his boy on the farm and shield his mind from sociology, or shall he risk a college training for him and let him go in for a career of civic righteousness?

We shall not presume to advise. A mere hint to the perturbed is all that we shall offer. One morning an estimable citizen of Connecticut, who had listened the night before to an address by Dr. Mary Walker, was asked what he thought of Dr. Mary's pantaloons. With commendable caution he replied: "I dun know. I hain't been out around yet." The habit of suspending judgment until one has ascertained what everybody else is thinking has much to commend it. But it has been observed that men who leave large fortunes, or impose upon the public their "policies," or revolutionize human thought, or convert many to righteousness, have not been excessively addicted to it.

The time was when, in America, the visitor from foreign parts remarked upon a certain sturdiness and independence of the national mind, but that was before the modern purveyor of news had learned how to hail in headlines his impartial indorsement of each new pragmatic philosophy that is confidently evolved between drinks and cigars at the toastmaster's call.

The Last Word

In the discussion of the prejudice against Jews, opened by Mr Bernheimer's article, we give the Jews the last word, and they have the right to it. The Independent has ever denounced such prejudice, whether racial or religious. It is based on ignorant selfishness. In the Knownothing times of fifty years ago and more, such prejudice was directed against Catholic immigrants; now to a less degree against Jewish immigrants, and in a considerable measure against Italian and other immigrants. Such prejudice is characteristic of ignorant people. Kaiser William's mother used to tell the story of a small shopkeeper who ran out of his door one day and struck a Jew. He was arrested and asked why he struck him. "Because," he replied, "he belongs to the people who killed my blessed Lord." But that was a great many years ago," said the judge. "It may be," was the response, "but I never heard of it till yesterday."

The Jews think themselves a peculiar people, possest of advantages belonging to no other people. Christians think the same of themselves; and Moslems have a similar comfortable assurance. Because a people is proud of its history or its race or its religion is no reason why it should not freely be allowed its sense of superiority, for we have the same conceit of ourselves. The Britons are proud to rule the waves; the Scotch ask, "Where will you find such men as in Scotland or such horses as in England?" Every American section has its boast, from Plymouth Rock to Alamo; but we all allow each other's enjoyment of its own superiority; and equally we must allow Jews to make their boast when they have so much in which to take pride, and the pride and claim of each is part of the common pride and claim of the united country.

If there are ignorant or disagreeable or uncultivated or forthputting Jews, so there are as bad or worse Christians in our own communities. The Jews are no different in these respects from other races and religions. Multitudes of them have come out of oppression and poverty and are not yet assimilated. In this they are like other immigrants who have had better advantages at home. The American Jew, grown up in our institutions, is the most patriotic of all our citizens, the least likely to herd politically, the man who has a mind of his own and is an advantage to the community. They have more than their share of intelligence, industry, thrift and ambition, and all that is to their credit and deserves our praise. The mass of muck-rake, vulgar criticisms of Jews reported in the article which these letters condemn were not approved by the writer of that article and were repudiated by The Independent. We only regret that these slanders should be taken so seriously. That indicates a greater sensitiveness than there is any occasion for.

The evil is that the miserable caste spirit is deeply rooted in the hearts of most people. A multitude of people, even many educated people, have never fully accepted the principles of equal democracy. Every race suffers from it. In Liberia no white man can be a landholder. The Jews suffer; so do the Italians, so do the Irish, each in a degree. Similar prejudice exists between Catholics and Protestants. Even the best of us do not like to see an American girl marry a European earl. The Jews have to take their part in this universal wrong. Let them be patient; let them practice a proper contempt for such prejudices. That sort of high-souled superiority which looks down on ignorant injustice needs no pardon.

Treaties and Affirmations of Policy

The purpose of the agreement—or, if it be not an agreement, the mutual statement—between the United States and Japan, is to formulate what is, and will be, the policy between the two countries, and accomplish all that a treaty would accomplish, and yet not make a treaty. The reason for not making a formal treaty is to escape the United States Senate. In other countries the Government can itself, without consulting its parliament, make a binding treaty; the United States cannot. Great Britain has a Parliament as free to act as our Congress, as unlimited in authority as ours in every

other respect; even more unlimited, for it is limited by no written constitution. But the men who compose the Government—Mr. Asquith and his Cabinet, or Mr. Balfour and his Cabinet—can bind the United Kingdom to a policy of peace or war, to a treaty with Japan or France, and Parliament not know it, and not know to the present time exactly what the secret treaty contains.

Now, our Constitution forbids this; and for good or ill, we are tied to our Constitution. That Constitution can with the greatest difficulty be amended. It becomes necessary to discover or invent certain rights and powers of Congress not exprest, but implied in it, and equally, the Executive branch of our Government finds it desirable, at times, to do things that ought to be done, but which our somewhat outgrown Constitution does not provide for its doing. In order that they may be done, certain indefinite provisions in the Constitution, such as that for the "general welfare," have to be interpreted in a way that could never have occurred to its makers. The Supreme Court gives the larger interpretation, and thus the Constitution is enlarged by interpretation.

But in the matter of specific rights given to specified branches of the Government, there will be sensitiveness as to enlarged interpretation. Accordingly, when President Roosevelt and his Secretary of State, Mr. Hay, attempted to make an agreement with Santo Domingo, an excellent one, which might not get a two-thirds vote of the Senate, the Senate asserted its rights of treaty-making, and the President had to retreat.

Now once more the President has made an agreement, or mutual statement, with Japan, a very desirable one, one that will be, or ought to be, practically as binding as a treaty; but is it a disguised, or hardly disguised, treaty, and will the Senate allow it? That remains to be seen, altho it is declared that it is not a genuine treaty, and that before it was signed on both sides, as treaties are signed, leaders in the Senate had approved it as a valid exercise of Executive power.

The provision in the Constitution as to treaties is as follows:

> "He [the President] shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur."

That is all.

Now, to what extent is the statement signed by Secretary Root and Ambassador Takahira tantamount to a treaty? The document is designated in its preamble as "the result of the exchange of views"; "the expression of mutual understanding"; "a concise mutual affirmation of that accordant policy respecting the Far East," and a "declaration of the two Governments." A treaty can do little more than to make "affirmation" and "declaration" of an "accordant policy," formal, to be sure, and limited for a fixt period of years.

Now let us consider the contents of this "declaration." It first gives "the wish of the two Governments" as to the free development of commerce in the Pacific, which means the "open door" in China. It does not exactly assert what the Governments *will* do, but what they *wish* to do, no serious difference if the "wish" has a moral binding. Next, "the policy of both Governments" is more definitely stated to be the maintenance of the *status quo* in the Pacific and equal commercial opportunities in China. This is a "policy," looking to its continuance in the future, having moral if not binding force, and is meant to protect us against any ambitions of Japan in Hawaii or the Philippines, and to assure us the "open door" in China. So long as the assurance of the "policy" is regarded as settled it is as good as a treaty. In the third article it is more definitely stated that the two nations "are accordingly firmly resolved reciprocally to respect the territorial possessions belonging to each other." They are "firmly resolved" to do this. To be sure, that is not exactly a promise in words, binding in international law, or perhaps not binding anywhere tomorrow, verbally; but in any international court a failure to respect this "firm resolve" would be regarded, we presume, as an act of perfidy. A treaty could do little more.

Under the fourth article the two Governments declare that they are "determined" to preserve the independence and

integrity of China, and, once more, "the principle of equal opportunity for commercial industry." This determination looks to the future and certainly binds the two nations morally. Finally, if any event should make it desirable to revise this statement of policy, "it remains for the two Governments to communicate with each other," etc. That is, they do not in definite terms pledge themselves to do this, but "it remains" for them to do it; that is, they will do it.

It is a fine agreement, very valuable, a triumph of diplomacy, as good as a treaty, such a "declaration" of "policy" as our Government ought to be able to make constitutionally; and we hope the Senate will find that its prerogatives are not infringed. But we cannot expect serious objections not to be made. It should not be a binding precedent. We are glad that Secretary Root is likely to be in the Senate to defend his own action. At any rate, we do not see how the Senate can undo what has been done.

The Nobel Prizes

MEN of science, of letters and of peace all over the world are coming to look forward to December 10th with somewhat the same feeling as children to December 25th. Five prizes of $38,000 each, not to mention a medal and other honors, are dropt into their stockings on the anniversary of the death of the founder, Alfred Nobel, and the Scandinavian committees who make the awards are as capricious and incalculable as Santa Claus.

A few weeks ago it was announced that Swinburne would get the prize in literature, but instead it goes to Rudolf Eucken, of Jena University. The session of the Stockholm academicians must have seemed like a college debating society, when they were trying to decide which is the greatest man, the British writer of sensuous and sonorous verse or the German professor of religious philosophy. Perhaps the fact that the prize in literature went last year to an Englishman, Rudyard Kipling, turned the scale. Perhaps they found Swinburne's verse too realistic, for the will of the great dynamite-maker stipulated that the prize should be awarded for "literature of an idealistic tendency." In this respect Professor Eucken certainly is satisfactory, for he has been for thirty years the stalwart champion of idealism against the growing materialism of the age. He was born in Aurich, East Frisia, January 5th, 1846, and was educated at Göttingen and Berlin. In 1871 he was called to the chair of philosophy at Basel, and three years later to that of Jena. His publisht works followed the normal order—first historical, then critical, and later constructive. His own philosophy of life is expounded in three successive volumes: "The Unity of the Spiritual Life." "The Struggle for a Concrete Religious Experience," and "The Truth of Religion," appearing in the eighties. But after his sixtieth year he was aroused to renewed literary activity to meet a new foe of the vital personal religion in which he believed. His weapons had formerly been directed against realism and materialism. Now he finds the chief danger to Germany is the rise of pantheistical mysticism, self-centered, quietistic and barren. Against this he raises the banner of "activism," and realizing that it is not a battle of philosophers only, he appeals, like the pragmatists, to the people. His latest works, appearing last year and this, "The Fundamentals of a New Philosophy of Life," "The Main Problem of the Philosophy of Religion at the Present Time," and "Introduction to a Philosophy of the Spiritual Life," are all intended to be of popular character. He does not call himself a pragmatist, altho he is about as near one as a German philosopher steeped in Kant, Hegel and Fichte could be, but in his recent volumes he recognizes the close relationship between the activists and pragmatists, and welcomes the aid of the latter against their common foe. Eucken was introduced to America by President Noah Porter of Yale in 1880, who induced Prof. M. Stuart Phelps to translate his "Fundamental Concepts of Modern Philosophic Thought." The best exposition and critique of his later thought in English is "Rudolf Eucken's Philosophy of Life," by W. R. Royce Gibson, publisht last year.

The prize in chemistry belongs by right to this continent, for it was chiefly in McGill University, Montreal, that Prof. Ernest Rutherford carried on the researches in radio-activity which have

been thus rewarded, but he has recently gone to England to become director of the physical laboratory of the University of Manchester. He was born in New Zealand nearly thirty-seven years ago and was trained in the Cavendish laboratory, Cambridge, under Prof. J. J. Thomson, who two years ago received the Nobel Prize in physics for work in the same field. This newly discovered land can hardly be claimed by either physics or chemistry, for it is beyond the historic limits of both.

Prof. Gabriel Lippmann, who receives the physics prize, is best known to the public thru his discovery in 1891 of a process of color photography based upon the interference of light waves, the most scientific and exact of any of the methods for reproducing color, altho it has not yet been made commercially practicable. Among physicists, however, his reputation is based upon the enunciation of the law of the conservation of electricity and a long series of researches in capilarity, electricity and light. He was born in Luxembourg in 1868 and has been professor of physics in the University of Paris since 1883.

The prize for the promotion of peace is divided between two Scandinavians, Bajer and Arnoldsson. M. F. Bajer, of Denmark, was long a member of the Danish Parliament from the town of Horsens, but he is now retired on account of his age. Probably to him more than to any one else the International Peace Bureau at Berne, Switzerland, owes its origin. For many years he was president of the Bureau, resigning only last year. Like Passy of France, Cremer of England, and Moneta of Italy (all Nobel prizemen) he has been the leading worker for peace within his own nation, where by his writings and speeches, but especially as secretary of the Scandinavian branch of the Interparliamentary Union, he has rendered conspicuous service. Klas Pontus Arnoldsson was born at Gothenburg, Sweden, October 27th, 1844. He is a publicist and author who has during his whole active life been working for religious liberty, for woman's equality before the law, for international peace and Scandinavian unity, realized in the form of a Scandinavian republic, consisting of all the three countries united on a basis of perfect equality. Among his writings may be mentioned "Scandinavia as a Republic," 1872; "Benedict Spinoza," 1871; "The Neutrality Question," 1883. He has been the editor of various papers, dailies, weeklies or monthlies, but always advocating the ideas to which he has devoted his life. He has been a member of the second chamber of the Swedish Riksdag for several terms and one of the leaders in the interparliamentary peace congresses. He took a prominent part three years ago in the peaceful accomplishment of the separation of Norway and Sweden.

Last year the Nobel prize in medicine was divided betweeen the Italian Golgi and the Spaniard Ramon y Cajal for their work in brain anatomy. The award was eminently equitable, because it would be difficult indeed to separate the work of these men, and there was no doubt at all that what they accomplished by successive steps had done more to make scientific certain phases of medicine than anything else in the last quarter of a century. This year a corresponding division of the Nobel prize in medicine was made between the Russian Metchnikoff and the German Ehrlich for precisely similar reasons. From two very different standpoints they have approached the subject of immunity, one of the most important in the whole realm of medicine, as a curative art and science, and have made distinct contributions to it. For a time indeed it seemed as tho the work of these two men was mutually contradictory, but now it is becoming evident that the discoveries of each dovetail into those of the other, to give us a larger and more complete view of Nature's processes of resistance to disease, of her powers of recovery from disease and her modes of protection against it.

Immunity is often supposed to be a rather mysterious process, and indeed it is, but in spite of that it is one of the most familiar of medical truths. We all know that when a man has had measles or smallpox or typhoid fever, and still more when he has had such of the so-called children's diseases as whooping cough or mumps, he is not liable to take it again. This is not true for some infectious diseases as, for instance, diphtheria, but it is true for most of them. Why this immunity should occur is the problem that has occupied medical sci-

ence during the last fifty years particularly. Metchnikoff threw the first light on the subject by experimentally demonstrating that the white blood cells of the body have the function of englobing microbes and digesting them. The white cells are the active agents of protection. Figuratively they act as a flying soldiery or body of police who at the first sign of invasion attempt to repel the invaders. Our own Surgeon-General Sternberg had suggested this idea even before Metchnikoff announced it, but Metchnikoff worked out the details in the Pasteur Institute at Paris, and the theory of phagocytosis rightly belongs to him.

Prof. Paul Ehrlich took up the subject of the protective power of the serum of the blood. He showed that the watery portions of the blood, even when there were no corpuscles red or white in it, still possest a bactericidal power. He further showed that this was increased whenever there were high powers of resistance in an animal or when it had acquired immunity to disease. This seemed to contradict Metchnikoff's idea of the activity of the phagocytes or white cells, but it soon became clear that the serum owed many of its properties to the fact that it contained substances which had been absorbed from the white blood cells while they were in it, and, on the other hand, that very probably the white blood cells owed some of their protective activity and immunizing power to stimulation by substances contained in the blood serum. In a word, the discoveries of the two men combine, not to solve the mystery of immunity, but to bring us a little closer to the heart of the mystery of it, to make us realize that no process in the body is very simple, but that it depends on many active factors, working together and complementing one another. Metchnikoff and Ehrlich eminently deserve this blue ribbon of medical science for important original work.

A Tattered Congressional Passion

CONGRESS is angry, angry with the President; so the Washington correspondents tell us; and we, who do not see for ourselves the interior Congressional mind, are expected to believe it. Congress will do something, will rebuke the President, and then the President will retort in ten columns, with specification and quotation—so these veracious purveyors of fact and fancy assure us.

Well, what is the matter? What has the President done?

In his message he criticised the act of Congress which forbade certain use of the Secret Service appropriation, and desired its repeal. He said:

"In its perfect form the restriction operates only to the advantage of the criminal, of the wrongdoer. The chief argument in favor of the provision was that the Congressmen did not themselves wish to be investigated by Secret Service men. Very little of such investigation has been done in the past, but it is true that the work of the Secret Service agents was partly responsible for the indictment and conviction of a Senator and a Congressman for land frauds in Oregon.

"I don't believe that it is in the public interest to protect criminals in any branch of the public service, and exactly as we have again and again during the last seven years prosecuted and convicted such criminals who were in the executive branch of the Government, so in my belief we should be given ample means to prosecute them if found in the legislative branch. But if this is not considered desirable a special exception could be made in the law prohibiting the use of the Secret Service force in investigating members of the Congress. It would be far better to do this than to do what actually was done and strive to prevent, or at least to hamper, effective action against criminals by the legislative branch of the Government."

This was all there was affecting Congress to which any exception could be taken. Every word there said seems to be true. We have read columns of discussion and condemnation of the President, but nowhere have we seen a denial of the statement that the chief argument in favor of the restriction was that the Congressmen themselves did not wish to be investigated by Secret Service men. Is not that the fact? If such was the fact the reason was not creditable to Congress. Congressmen are not impeccable. They include men of easy conscience. One Senator and one Representative have been convicted of land frauds, and others are supposed to be guilty. They ought not to be screened any more than a servant of the executive branch of the Government.

Few of the American people know how important and effective has been the work of Secret Service agents in procuring evidence for use in the prosecution of men exerting great influence by reason of their offices or political

affiliations. This use of them ought not to have been forbidden by last year's statute. Knowing that such agents had assisted in the conviction of one Senator and two Representatives, those members of the House who proposed and caused the statutory restriction must have foreseen that they would be accused of legislating for the undue protection of themselves or of some of their associates. They deliberately invited the charge which has now been made in a President's message. There is need of such work as the Secret Service men have done beyond the limits of the field for which the Service was created; and if the present force is not large enough to permit the use of a part of it for the punishment of prominent offenders who are not counterfeiters, it should be increased, or a separate group of detectives should be maintained.

It is not enough in sensitive defense of Congress against the President to argue that Congress has added $50,000 to detect customs frauds, and $500,000 for the enforcement of anti-trust laws, or any other appropriations. It is simply a question whether trained Secret Service men can be employed to ferret out other branches than those against counterfeiting. It has been the habit to detail such men to protect the President and to do other necessary investigation. The law limited their service to counterfeiting and, lately, the protection of the President; but the custom has been to put these trained men temporarily in another bureau, and, we understand, pay them from that, or to allow them to resign for such temporary employment, with the assurance that they will be reappointed. The new amendment forbids details, furloughs, or transfers, or any payment to such officer for two years after he resigns if employed in any other bureau. On the face of it the amendment is vicious. It needs further defense than has yet been given. The vice of it appears in the reason which the President says was the chief one given for its passage, that Secret Service men might not be employed to investigate Congressmen, just as the vice in the peculiar ballot laws of certain States is in the reason given to shut out certain voters from the polls. Honest men do not need to fear investigation, and those who do fear it ought not to be protected. We trust that Congress will be careful what it does to sustain its dignity.

Mr. Roosevelt, however, might well have procured from the promoters of the restrictive legislation a statement of their reasons and purpose before saying in his annual message that "the chief argument" in favor of it "was that Congressmen did not themselves wish to be investigated by Secret Service men," and ironically suggesting that investigation of their affairs be excepted by special provision. His method was not wisely chosen. It may defeat his purpose and it will tend to prevent favorable action in Congress in support of some of the reform measures in which he is deeply interested.

A Blind Poet

Complete blindness has not taken the cheerfulness out of the heart of our poet-friend, Father John B. Tabb. To a sympathetic friend who wrote him an effusive letter he replied in the following limerick:

"There once were two brothers named Wright,
Who rose in aerial flight;
But a poet I know
That mugh higher could go,
For he soared till he got out of sight."

A more serious, and yet not disheartened, touch is in the following received from him:

"Back to the primal gloom
Where life began,
As to my mother's womb
Must I a man
Return:
Not to be born again,
But to remain;
And in the School of Darkness learn
What mean
"'The things unseen.'"

In such a loss the brave soul, looking inward and upward with cheer and courage, finds, as in the death of Manoah's blind son:

"Nothing is here for tears, nothing to wail
Or knock the breast."

"Psychomeres"

He is a "scientist." His name is Fournier d'Albe, and he is secretary of the Dublin Society of Psychical Research. He says that the soul is "an aggregation of psychomeres inhabiting the cells of the human body." That is, the soul is made up of soul-particles, for that is what *psychomere* means. If it is physi-

cal, as he says, of course it is made up of parts. He goes on to say that it probably weighs about one-thousandth part of the weight of the human body. He ought to leave no probability about that. Take the case of a small man who weighs a hundred pounds; his soul would weigh one and six-tenths ounces. That can be tested by weighing a man before and after death, say by electrocution, and seeing if he has lost that much weight in dying. He should try it on men, and first on dogs, for dogs have some sort of a soul, something that thinks. The whole thing is not worthy to be called a theory or even an hypothesis; it is a bare bit of imagination, guesswork and nonsense. After death, he tells us, the psychomeres unite and form a soul body, which resides in the air-space above the earth—say two hundred miles, a space which is thickly peopled with souls; and after 30,000 years the souls are transformed and move into interplanetary space, ending in a final cosmic union of all souls of all ages. The reporter tells us that Mr. D'Albe is no obscure dreamer, but a genuinely scientific man. This is no dreaming; it is insanity. Dreams have more sense.

Our valued correspondent, Dr. J. H. De Forest, has received, on his return to his mission field, the order of the Rising Sun from the Emperor of Japan, for his good work in removing misconceptions and promoting cordial relations between our two countries. THE INDEPENDENT modestly takes a part of this glory, as Dr. De Forest has written much for us in this line. We presume that a principal part of his admirable service consists in his complete castigation of Congressman Hobson, whose lecture on probable war with Japan excited his indignation.

Mr. Taft's address to the club of Southern residents in New York was admirable in every way, and especially because he did not dodge the negro question, as he might have done. He distinctly said that the ballot laws in the South should be administered with absolute impartiality. Now we know perfectly well that they are not so administered. We know they were enacted for the very purpose of preventing equal administration, as was everywhere declared, to shut out the negroes from the ballot. We know perfectly well that other laws are not administered equally and equitably. Mr. Taft also spoke wisely on the subject of negro education. He wants industrial education for the mass and the highest education and the highest opportunity for the choice spirits. That is enough, for each what he wants and needs, and the door open for all. We believe that many, perhaps most, that heard Mr. Taft approved, and there is a growing number in the South that approve.

The President has this week sent another message to Congress on the Brownsville raid in which he includes a confession by one of the negro soldiers and implicates a number of other soldiers in the crime. On the basis of this he recommends the restoration of those not guilty. This needs careful investigation. We shall be extremely glad to have the innocent restored, but if it proves that the present evidence is trustworthy it will be a sad stain on an otherwise spotless record.

It is difficult always to avoid errors, and there have to be "Errata" in the most carefully printed books. In our last issue the Southern Baptist Theological Seminary was spoken of as at Lexington, Ky., instead of Louisville, and under the picture of the old Castle Garden it was stated, in half the edition, that a famous meeting was held there to oppose the Fugitive Slave Law. It was to support the law.

Too late for publication in our Sixtieth Anniversary Number in the roster of our charter subscribers we received the following names: Wm. W. Goodwin, Newburyport, Mass.; Mrs. Chas. F. Howard, Hartford, Conn.; George P. Jennings, Greens Farms, Conn.; Mrs. F. T. Paine, Highland, Cal.; William E, Park, D.D., Oberlin, Ohio, and John A. Paine, Ph.D., Tarrytown, N. Y.

We have received a number of letters for or against the article published December 3d on "The Tariff and Matrimony" by a recent college graduate. We gather that the tariff, so far from protecting our infant industry, is really interfering with it.

Financial

Annual Treasury Reports

SECRETARY CORTELYOU points out, in his annual report, that the Government's ordinary expenditures have increased by 400 per cent. since 1878. This growth has been, of course, at a much greater rate than that of population or national wealth. While there was a surplus of $84,000,000 for the fiscal year 1907, the year 1908 showed a deficit of $58,000,000. The Secretary's estimates—which, as he says, "are for the most part problematical"—indicate a deficit of $114,000,000 in 1909 and one of $143,000,000 in 1910. Mainly because of the requirements of projects for internal development, it may not be feasible or expedient to make a reduction of expenditures, but there should be, as Mr. Cortelyou suggests, a careful scrutiny and a proper classification of them, together with an improvement of the present very defective methods of making appropriations. Much could be done in Congress by a joint committee on budget revision. If Congress, after the adoption of proper methods, should not be able to keep appropriations within the limits of revenue, it should then provide for additional taxes. It may be necessary to add taxes on incomes and inheritances. What took place in the course of the panic leads the Secretary to suggest measures for the adoption of an international gold certificate, the use of which, he thinks, might prevent the shipment of large quantities of gold across the Atlantic in times of stress. In past years much consideration has been given to propositions of this kind, but it is the opinion of international bankers that they are impracticable. When gold is imperatively demanded by the situation, nothing else will suffice. International certificates could not be subject to immediate redemption, and the use of them might be affected by war. Still, the question might profitably be considered by an international conference of representatives of finance ministries and government banks.

Comptroller Murray, in his annual report, estimates the banking power of the United States at $17,642,705,274, and that of the entire world at $45,750,300,000. Banking power here has increased by 242 per cent. since 1890, against an increase of 159 per cent. in the remainder of the world. In September last there were in this country 6,853 national banks. In July the number of all our banks (national, State, savings, private and trust companies) was 21,346. Their capital was $1,757,200,000, and their deposits amounted to $12,784,500,000. Deposits one year earlier had exceeded $13,000,000,000; the increase since 1900 has been 76 per cent. Under the new Emergency Currency law only one association of banks has been formed. This one is in Washington, D. C.

The State Bank

Of the new buildings erected by leading financial institutions in this city in recent years one of the largest is that of the State Bank on Grand street on the East Side, an illustration of which appears on the opposite page. The bank was organized eighteen years ago with a capital of $100,000 and no surplus. The capital was recently increased to $1,000,000 out of the earnings of the bank, and the surplus today, including all undivided profits, is over $825,000. The deposits are over $14,000,000, and the total resources more than $16,250,000. These few figures show the remarkable growth of the State Bank. The officers of the bank are O. L. Richard, president; Arnold Kohn, vice-president; W. L. Burckett, second vice-president; A. I. Voorhis, cashier, and John Kneisel, assistant cashier.

....Of the twenty-six banks which were in existence in this city in 1848, it is interesting to know that only the following fourteen are alive today. The year in which each bank was established is given in parenthesis: Bank of New York, National Banking Association (1784), Bank of the Manhattan Company (1799), Merchants National Bank (1805), Mechanics National Bank (1810), Bank of America (1812), Phenix National Bank (1812), National City Bank (1812), Chemical National Bank (1824), Mer-

THE NEW STATE BANK BUILDING.

chants Exchange National Bank (1829), National Butchers and Drovers Bank (1830), Greenwich Bank (1830), American Exchange National (1838) and the National Bank of Commerce (1839).

....F. C. Walcott, who has been elected vice-president of the Knickerbocker Trust Company, was active in the work of reorganization which resulted in the reopening of the company, and has since been conspicuous in its management. He was graduated at Yale, in the class of 1891, and twenty-seven of his classmates are now bankers. Mr. Walcott's ancestors founded the textile manufactures at New York Mills, N. Y., and for fourteen years he was directly concerned in the development of the New York Mills Corporation, rising from the office of foreman to that of president. James E. Miller, who has been elected assistant secretary of the Knickerbocker, is also a Yale graduate (1904), and was a member of both the winning crew and the football team of his time.

INSURANCE

Second Annual Meeting of the Association of Life Insurance Presidents

THE second annual meeting of the Association of Life Insurance Presidents was held in the Metropolitan Life Building on December 4th. The opening session was given up to exercises in honor of Grover Cleveland. A suggestion was made by Dr. John H. Finley, president of the City College, that the old house in Caldwell, N. J., in which Mr. Cleveland was born be purchased and preserved as a national memorial. Dr. Finley's suggestion was favorably received by the insurance men in attendance, who represented about a third of the 211 life insurance companies in the United States and Canada. Charles A. Peabody, president of the Mutual Life Insurance Company, who acted as Mr. Cleveland's successor as chairman of the association, paid a brief but beautiful tribute to Cleveland, whose name, he said, had been a bulwark of strength to the association.

Paul Morton, president of the Equitable Life Assurance Society, whose relations with Mr. Cleveland were very close, also spoke of the former President's connection with life insurance affairs, his regard for economy, his keen interest in the small policyholder, and his broad view of the duty which led him to lend his influence and reputation for nice honesty to the cause of rehabilitating the institution of life insurance in the minds of the people. Following the tributes to Mr. Cleveland the association devoted itself to the consideration of the growing evil of taxation. Mr. R. L. Cox, who was re-elected as general counsel and manager, voiced the sentiment of the association when he said that one of its objects was

"To obtain relief from the inequalities and inequities of present rates and methods of taxation of life insurance is not your personal problem except in so far as you may be policyholders yourselves. Any further concern on your part arises from the duty devolving upon you to look out for the interests of the policyholders you represent.

"This meeting is therefore being held mainly to discuss ways and means of bringing legislators and policyholders face to face in dealing with the great burden imposed upon policyholders by legislative hands—that of taxation by the States.

"We have heard much of the burden of life insurance taxation as expressed in aggregate figures. We know that life insurance—the cooperative sharing of losses caused by the untimely death of productive human beings—is burdened annually for the support of government to the aggregate amount of at least $11,000,000. That this burden is borne solely by policyholders is not so well known, nor has it hitherto been seriously considered by policyholders themselves.

"While expenses of management are very properly being carefully scrutinized, it may be well to tell those who do not know it that the tax burden nearly equals the salaries paid executive officers, clerks and all others employed in connection with administering the affairs of the companies at their home offices."

To the Chamber of Commerce resolution, printed in this department last week, Governor Hughes has replied, stating that, while he would be glad to comply with any request originating in the Chamber of Commerce, it did not seem to him that it was advisable to appoint the proposed commission at the present time. If the Chamber of Commerce, or others interested in the matter, desired to suggest any particular amendment of the law, he would be glad to give it the most careful consideration.

JOHN R. HEGEMAN, president of the Metropolitan Life Insurance Company, who was arrested on the charge of perjury in connection with certain "year end" transactions, was last week ordered by the court to be discharged from custody. In connection with the entries on the books of the Metropolitan, which it was claimed were ordered by President Hegeman, showing that these loans had been sold to Vermilye & Co. on December 31st, and the collateral for these loans was repurchased by the Metropolitan on January 2d following, it was said that he had committed forgery. He was arrested for that, but was discharged by the magistrate on habeas corpus proceedings. The District Attorney appealed from this latter order, so that both the forgery charge and the perjury charge came before the Appellate Division and were decided in the opinions handed down last week. Justice Ingraham said:

"To sustain the charge it must appear that the relator deposed falsely. If, as a matter of fact, the statements contained in the report were true, he did not depose fasely; and it would appear that on the undisputed evidence the statement contained in the report was true, and therefore, it would seem to follow that the crime of perjury was not committed."

The Independent

VOL. LXV NEW YORK, THURSDAY, DECEMBER 24, 1908 No. 3134

Survey of the World

The Senate Against the President

The paragraph in the President's message in which he criticised the limitation by Congress of the use of the Secret Service, and stated that the main reason for it was that Congressmen did not wish to be investigated, has greatly provoked both branches of Congress, and made a breach with the President, in which both the Republican and Democratic members are united. In the Senate Mr. Aldrich, as its leader, was made chairman of a committee to report on the subject, and he speedily brought in a report, amendments to which by Democratic members he readily accepted. The temper of the Senate is shown in the discussion. Senator Bailey, of Texas, said:

"Either Congress is the most infamous body in the world, or it will take speedy action on the grossest and most wanton insult ever offered any legislative body in the world. I cannot understand the delicacy which Senators have shown in dealing with the President. He has not been considerate in his dealings with Congress. I doubt if any mayor in the United States ever sent such a message to a corrupt city council."

Senator Culberson, of Texas, Democratic leader, said:

"I believe it was a deliberate, studied and gratuitous insult to the Congress of the United States by the President of the United States. I have no doubt that Senators on the other side of the chamber feel as deeply the insult as Senators on this side."

The resolution as amended is as follows:

"*Resolved*, That that portion of the annual message of the President relating to the Secret Service is hereby referred to the Committee on Appropriations, who are instructed to inquire whether the legislation referred to in the message has impaired the efficiency or sufficiency of the force employed in the Secret Service; and such committee are further directed to ascertain what persons other than those included in the Secret Service were paid from the public treasury during the fiscal year ended June 30, 1908, for services in connection with the enforcement of the laws or work in the detection or investigation of postmasters or criminal acts or violations of law, including all special attorneys, special agents, inspectors or other employees of any department of the Government or any branch of the public service, and also the same information as to all persons whose employment was authorized by indefinite or general appropriations; the information to contain the names of all persons so employed or paid, their previous occupation, the nature of the work in which they were engaged, by whom they were appointed and upon whose suggestion or recommendation. The inquiry, however, not to include officers appointed by the President and confirmed by the Senate or officers specifically provided for by law, or laborers appointed as such and actually engaged in employment as laborers."

Full authority was given the committee to make investigations, and they were directed to report as soon as practicable, from time to time, the results of their inquiry, and to make such recommendations as they might see fit with reference thereto, and further to report what action if any, in the judgment of the committee, the Senate should take with reference to that portion of the message.

Action of the House

Apparently by some concerted agreement of the two houses, the House of Representatives took measures for investigation in quite a different line. Mr. Perkins, as chairman of the Select Committee, brought in the following unanimous report:

"WHEREAS, There was contained in the sundry civil appropriation bill which past Congress at its last session and became a law, a provision in reference to the employment of the Secret Service in the Treasury Department; and

"WHEREAS, In the last annual message of the President of the United States to the two houses of Congress it was stated in reference to that provision: 'It is not too much to say that this amendment has been of benefit only and could be of benefit only to the criminal classes,' and it was further stated, 'the chief argument in favor of the provision was that the Congressmen did not themselves wish to be investigated by Secret Service men,' and it was further stated, 'but if this is not considered desirable a special exception could be made in the law, prohibiting the use of the Secret Service force in investigating members of Congress. It would be far better to do this than to do what actually was done, and strive to prevent or at least to hamper effective action against criminals by the executive branch of the Government'; and

"WHEREAS, The plain meaning of the above words is that the majority of the Congressmen were in fear of being investigated by Secret Service men and that Congress as a whole was actuated by that motive in enacting the provision in question; and

"WHEREAS, Your committee appointed to consider these statements of the President and report to the House cannot find in the hearings before the committees nor in the records of the House or Senate any justification of this impeachment of the honor and integrity of the Congress; and

"WHEREAS, Your committee would prefer in order to make an intelligent and comprehensive report, just to the President as well as to the Congress, to have all the information which the President may have to communicate; therefore, be it

"*Resolved*, That the President be requested to transmit to the House any evidence upon which he based his statements that the 'chief argument in favor of the provision was that the Congressmen did not themselves wish to be investigated by Secret Service men,' and also to transmit to the House any evidence connecting any member of the House of Representatives of the Sixtieth Congress with corrupt action in his official capacity and to inform the House whether he has instituted proceedings for the punishment of any such individual by the courts or has reported any such alleged delinquencies to the House of Representatives."

The presentation of the resolution was followed by a lively discussion, chiefly over one clause in the preamble. First Mr. Williams, formerly Democratic leader, spoke for the Select Committee, saying that the purpose of the resolution was to learn on what grounds the President had made his "seemingly unprovoked and unjustified attack upon the honor, the honesty, and the reputation of the legislative branch of the Government." He said the committee had been able to find no evidence of the truth of the President's statements, but thought it proper to give him a chance to prove them if he could; and he added:

"The American people have the right to know, if the American Congress be corrupt, that it is corrupt, and the President having made the statement to the effect that the entire body of the National Legislature had been actuated by the corrupt motive of shielding criminal Congressmen, we have thought it was right before we brought in the final resolution to give him some opportunity to establish the fact that he had some reason for making that statement."

The modification in the preamble was proposed by Mr. Bennet, of New York, so as to avoid the statement that "the plain meaning" of the President's language was that "the majority of the Congressmen were in fear of being investigated"; but the amendment was rejected by a vote of 270 to 14. General Keifer's suggestion that the usual words, "if not incompatible with public interests," be added, was rejected, Mr. Williams for the committee saying that they omitted it intentionally, as no public interests could take precedence of a matter involving the integrity of Congress. It is believed that the President is preparing a reply which may be sent to Congress as soon as it meets after the recess, or even be publisht earlier; but the Senate has to make its own investigation, and will not take it up until after the recess, and it may be a considerable time before a report on the Secret Service can be made.

Mr. Roosevelt's Hunting Trip

It has been announced officially that when Mr. Roosevelt goes to Africa in March he will be the leader of a scientific expedition, outfitted in part by the Smithsonian Institution, and will gather natural history specimens for the Government's collections. The party will be made up as follows:

Mr. Roosevelt; his son Kermit, official photographer of the expedition; Major Edgar A. Mearns (retired), of the Army Medical Corps, well known as a naturalist, who will be the party's physician; Edmund Heller, trained naturalist, a graduate of Stanford University, who has had much experience in collecting and preparing specimens of the large animals and has done such work in many parts of the world; J. Alden Loring, a field naturalist who has made an excellent record in South America, Europe, and elsewhere; R. J. Cunninghame, now in Africa, guide and manager, who has collected specimens there for the British Mu-

seum and has been chief hunter for the Field Columbian Museum of Chicago. Mr. Roosevelt and his son will kill the large animals, whose skins and skeletons will be shipped to this country.

Secretary Walcott, of the Smithsonian, explains that Mr. Roosevelt will pay all the expenses of himself and his son, including outfitting and transportation, receiving nothing from the Government funds, but giving to the Government valuable specimens; also, that the expenses of the naturalists will not be paid out of Government or Smithsonian funds. It is understood that the money needed, about $20,000, has been subscribed by friends of the Institution. The President on June 20th asked the coöperation of the Institution in a letter from which we make the following quotations:

"By May 1st I shall land at Mombasa and spend the next few months hunting and traveling in British and German East Africa, probably going thence to or toward Uganda, with the expectation of striking the Nile about the beginning of the new year and then working down, it, with side trips after animals and birds, so as to come out at tidewater, say, about March 1st. . . .

"This would give me ten months in Africa. As you know, I am not in the least a game butcher. I like to do a certain amount of hunting, but my real and main interest is the interest of a faunal naturalist.

"Now it seems to me that this opens the best chance for the National Museum to get a fine collection, not only of the big game beasts, but of the smaller mammals and birds of Africa, and looking at it dispassionately, I believe that the chance ought not to be neglected.

"Of course the actual hunting of the big game I would want to do myself or have my son do, but the specimens will all go to the National Museum, save a very few personal trophies of little scientific value which for some reason I might like to keep."

The Brownsville Case

President Roosevelt transmitted to Congress, on December 14th, a confession from Boyd Conyers, one of the negro soldiers participating in the Brownsville affair, in which he gives a detailed explanation of the way the guns were obtained and the names of the leaders. He makes the following comment on it:

"It appears that almost all the members of Company B must have been actively concerned in the shooting, either to the extent of being participants or to the extent of virtually encouraging those who were participants. As to Companies C and D there can be no question that practically every man in them must have had knowledge that the shooting was done by some of the soldiers of B Troop, and possibly by one or two others in one of the other troops.

"This concealment was itself a grave offense, which was greatly aggravated by their testifying before the Senate Committee that they were ignorant of what they must have known.

"Nevertheless it is to be said in partial extenuation that they were probably cowed by threats, made by the more desperate of the men who had actually been engaged in the shooting, as to what would happen to any man who failed to protect the wrongdoers.

"I recommend that a law be past allowing the Secretary of War, within a fixed period of time, say a year, to reinstate any of these soldiers whom he, after careful examination, finds to have been innocent, and whom he finds to have done all in his power to help bring to justice the guilty."

The Senate past the resolution of Senator Foraker calling upon the Secretary of War to make a full report of the methods employed by the detectives who elicited the confession. He also added an amendment to his bill for the reinstatement of the soldiers, providing that they apply individually before a commission composed of retired generals—Chaffee, Bates, Jesse Lee, Davis and Daggett. Senator Lodge made a speech defending the action of the President.

Cabinet and Other Appointments

Only one appointment for President Taft's Cabinet has been definitely given out as decided upon and accepted, that of Mr. Knox as Secretary of State, and it is announced that Mr. Taft will confer with him in regard to the other secretaryships. The following list is generally regarded as the most probable, altho several of the names are doubtful:

Secretary of State—Philander C. Knox, of Pennsylvania.

Secretary of the Treasury—Myron T. Herrick, of Ohio.

Attorney-General—George W. Wickersham, of New York, or H. L. Stimson, of New York.

Secretary of War—Charles Magoon, Governor-General of Cuba.

Secretary of the Navy—William Loeb, of New York, or Charles H. Thompson, of New York.

Secretary of the Interior—Richard A. Ballinger, of Seattle, Wash.

Postmaster-General—Frank F. Hitchcock, of Massachusetts.

Secretary of Agriculture—James M. Wilson, the present Secretary.

Secretary of Commerce and Labor—George A. Knight, of California.

——The President has transmitted the following nominations to the Senate:

To be Envoy Extraordinary and Minister Plenipotentiary to Rumania and Servia and Diplomatic Agent in Bulgaria, Huntington Wilson, of Illinois.

To be Third Assistant Secretary of State, William Phillips, of Massachusetts.

To be Governor of Arizona, Joseph H. Kibbey, of Arizona.

To be a member of the Isthmian Canal Commission, Lieut.-Col. Harry Hodges, Corps of Engineers.

Mr. Taft's Speeches

At the twenty-third annual dinner of the Ohio Society at the Waldorf-Astoria, attended by 940 members of the society and distinguished guests, President-elect Taft spoke of the duty of the Executive, and of the leaders of the Senate and House to carry out the policy declared in the platform. On the tariff plank he said:

"Now, the most important plank, or, at least, the most pressing plank, the one which was fixt in that platform by date and by early date, was the revision of the tariff at an extra session, to be called as early as possible after the 4th of March, and in that platform and that plank was fixt the standard by which that revision was to be governed. It was that the tariff was to be revised on principles of protection, and then the principle of protection was defined by stating that the rates to be fixt, the tariff rates, were to be the measure of the difference between the cost of production here and the cost of production abroad, with, as stated, a reasonable profit to the manufacturer. Now, what that means, as I understand it, is that the cost of production includes abroad a reasonable profit or interest on capital, and so here a reasonable interest on capital, and that that differs abroad from what it is here, and that all that means is that you include the elements of cost abroad, which include the raw material, cost of labor, interest on capital, and perhaps other things, and so on this side, and then you reach the difference. And that in this revision which we are to make that difference is what our tariff shall be.

"Now, what duty does that devolve on the party? It devolves on the party the duty of determining what now is that difference and fixing it accordingly. It does not involve taking a decree pro confesso against those in the community who cannot for any reason appear before the committee to be heard. It means that the committee shall make actual efforts themselves to determine the difference—affirmative effort—and then fix the tariff accordingly.

"Now, I am a protectionist, but I do not think it inconsistent with being a protectionist or upholding the protective system to say that it makes the possibility of trusts and monopolies easier than if we did not have protection. But I believe in the system to the point of thinking that the way to stamp out monopolies and trusts is not by destroying the whole protective system, and that what we ought to do and what this platform intends that we shall do, is not to have excessive rates beyond the rates necessary and fixt by this measure of protection, so as to tempt monopoly and to give monopolists an opportunity to take advantage of those excessive rates.

"There have been those in the party who believe that it did not make any difference how high the rate is, the theory being that competition would reduce the rates so as not to make them injurious. But I venture to say that the reading of the platform and the plank in the Republican platform at Chicago shows that the majority of the party were in favor of the definition and in favor of protection as I have defined it. And it was on that plank that we went before the country and were successful. Now unless we do revise the tariff in accordance with this promise—if we only make a surface revision and keep the word of the promise to the ear and break it to the hope—we shall be made accountable to the intelligence of the American people and shall suffer the consequences that such failure to keep our promise usually is visited with by that people. It is therefore better to have no revision of the tariff and to let the bill fail unless we are going honestly and thoroly to revise that tariff on the basis that I have explained and on the basis promised by the party.

"It is with the utmost pleasure that I state my sincere confidence that there is now being made in Washington, and that there will continue to be made, an honest, thoro attempt to find what that difference of cost is and to fix the tariff accordingly. It is not a matter easy of solution. It is a matter of evidence, and evidence of witnesses prejudiced on one side and prejudiced on the other. And therefore the conclusion is a matter of judgment, and we can have no perfect tariff bill. But if we go ahead, as I believe we are going ahead, to try honestly to do our duty in that respect, and to revise the tariff accordingly, we shall receive from the American people their commendation. So much for the tariff."

He also spoke at the same time of the necessity of enforcing the Sherman law, and in an address at a dinner of the Civic Federation at the Hotel Astor he defended that act against Melville E. Ingalls, who urged its repeal. Mr. Taft also mentioned two measures in which he was especially interested:

"One of these questions I have in mind is an employers' liability act. Another has to do with delays in the administration of justice, civil and criminal. These delays are one of the greatest dangers to the republic.

If by an employers' liability act we could remove from the courts nine-tenths of those damage suits, the great number of which are responsible in part for the overcrowding of our courts, we would not only help poor laboring men to quick recovery of needed money, but we would remove from the courts a great burden of litigation, so that they would not be clogged as they are now."

The Tariff on Steel

The Ways and Means Committee, which has been occupied of late with the steel business, will close its hearings this week with Mr. Carnegie's testimony. Prof. Frank W. Taussig, of Harvard, appeared before the committee to advocate the removal of the duties on raw materials, such as coal, iron ore, lumber, hemp, flax, corn, barley, oats and wool, and the reduction of the rate on woolen clothing and sugar. Charles M. Schwab, president of the Bethlehem Steel Company, when he came before the committee, was shown a letter written by him to Henry C. Frick in 1899, in which he said that steel rails could be made in this country for $12 a ton, and that there was nothing to be feared from German or English competition. Mr. Schwab explained that the letter was written when he was an optimistic and enthusiastic young man seeking preferment in a great company; that it was written at Mr. Frick's suggestion when he was preparing to sell out, and that the cost of production since then had advanced. The cost of manufacture of steel rails in this country now is $21.50 a ton. They are now sold abroad at about $26.50, on the narrowest possible margin. Altho they were sold a little cheaper abroad than at home, the foreign trade enabled the steel plants to keep going, and so benefited this country. Only 7 per cent. of the total output was ordinarily shipt abroad, altho this year it may be 20 per cent. In five years, he said, there will not be a Bessemer steel works left in the United States. They will be replaced by the open-hearth process, which in ten years will be superseded by the electric methods being developed in Germany. These changes improve the quality of the steel and slightly increase the cost of production, and the expense of replacing the machinery will be a heavy burden in the next few years. He was opposed to any reduction of the tariff, except perhaps by the free entry of Cuban iron ore.——Judge E. H. Gary, chairman of the board of directors of the United States Steel Corporation, gave still higher figures than Mr. Schwab for the cost of production, $1.31 more on steel rails. The cost of pig iron at the Chicago works was $12.65 a ton, or, including all charges, $13.50, as against a cost of $11 in Germany and $9 in England. The United States Steel Corporation, he said, could stand it to have the steel duties removed, tho its profits would be reduced, but all its competitors would be ruined by such action, thus giving the Steel Corporation a monopoly.——The Ways and Means Committee will begin next week the preparation of a bill for a revision of the tariff, which will be brought before the special session of Congress to be called by President Taft about the middle of March for this purpose.

The Trusts

The final decree of the United States Circuit Court in the Government suit to dissolve the American Tobacco Company and other holding and subsidiary companies has been filed with Commissioner Shields. The defendants are restrained and enjoined from further directly or indirectly engaging in interstate or foreign trade in leaf tobacco and its manufactured products, until they show the restoration of reasonable competitive conditions. The restraint order is stayed upon appeals to the Supreme Court.——The Interstate Commerce Commission has decided that the allowances made for the transfer of sugar from refineries to trains were essentially rebates, and therefore in violation of the law. The decision concerns the New York Central, the Delaware, Lackawanna and Western, the Lehigh Valley, the Erie, the Pennsylvania, the Central of New Jersey, the Philadelphia and Reading, and the Baltimore and Ohio Railroad companies, and the Ocean Steamship Company and connecting steamship companies. It was charged in the hearing that the cartage allowances, amounting to 2 cents per hundred pounds or more on shipments of sugar, were imposed to favor the nine refineries of New York and vicinity and to discriminate against those of Philadelphia. They were first imposed in 1885, and until the passage of the Elkins act in 1903 they were

kept secret. When the Hepburn act came into force in 1906, the Pennsylvania, Baltimore & Ohio and Philadelphia & Reading railroads decided that they could not legally continue these allowances, but the New York Central and other companies maintained them. It was shown that $266,000 was paid for cartage of sugar at New York City in 1907, of which $79,800 was paid upon shipments which were never carted, but received by the carriers at the shippers' door. The conclusion of the commission is that:

"The transfer allowance here considered is, by every test afforded by the law, a rebate. It seems to be given with a purpose of reducing the rates for transportation of sugar from New York, being called a 'transfer allowance' to conceal the fact that such reduction is made. It is not a payment for any actual service rendered to the carriers, and from every point of view, whether given on shipments from refineries only or to the public generally, and whether specifically named in the tariffs or included in but concealed in a lighterage or cartage allowance, it is unlawful in and of itself."

The Standard Oil Company has filed its brief in the Supreme Court in opposition to the proceedings of the United States against that company on the charge of accepting rebates from the Chicago & Alton Railroad Company, in which the United States District Court imposed a fine of $29,240,000. The brief contends that the law

"does not authorize a review by the Supreme Court on an application of the Government of a judgment of the Circuit Court of Appeals in a criminal case by which a writ of error of the defendant is sustained and disposed of by reversing the judgment and sentence of the trial court."

It is contended that in a case of this character a writ of certiorari is equivalent to a writ of error.——Governor Hughes has appointed a volunteer commission to investigate Wall Street methods, composed of the following individuals:

Horace White, a New York author and editor; Charles A. Schieren, formerly Mayor of Brooklyn; David Leventritt, former Justice of the Supreme Court; Clark Williams, State Superintendent of Banks; John B. Clark, professor of Political Economy in Columbia University; Willard V. King, president of the Columbia Trust Company, New York; Samuel H. Ordway, lawyer, of New York City; Edward D. Page, of Faulkner, Page & Co., New York, and Charles Sprague Smith, Director of the People's Institute.

The committee has no legal standing or authority and will serve without pay. The presidents of the New York Stock Exchange and the Consolidated Stock Exchange have exprest their approval of the action of the Governor, and assured the commission of their co-operation in the investigation. In Governor Hughes's letter of instruction he asks the commission to collect facts, receive suggestions and make recommendations in regard to the following question:

"What changes, if any, are advisable in the laws of the State bearing upon speculation in securities and commodities or relating to the protection of investors or with regard to the instrumentalities and organizations used in dealings in securities and commodities which are the subject of speculation."

——John D. Rockefeller, Jr., has brought charges of criminal libel against the publishers of *The American* for the publication of an article headed

"J. D. Rockefeller, Jr., originated peonage in stockade, it is said."

Holland Attacks Venezuela

A beginning of hostilities between Holland and Venezuela was reported a week ago last Monday morning. On Saturday, the 12th, the "Gelderland," one of the three Dutch warships recently sent to Venezuelan waters, captured the Venezuelan coast guard ship "Alix" near Puerto Cabello, put her crew ashore and towed her, flying the Dutch flag, to Willemstad. There was no resistance on the "Alix," and no shots were fired from the neighboring Venezuelan forts, altho notice had been given that the forts would fire upon the Dutch ships for any hostile act. Two of these ships are near La Guayra, and other captures are expected. The Governor of Curaçao says that the taking of the coast guard ship was "not an unfriendly act," but merely "a reprisal" on account of the Venezuelan Government's refusal to give satisfaction for President Castro's "unfriendly acts toward Holland." The course of the Dutch Government is due mainly to the expulsion of the Dutch Minister from Curaçao and to a decree of Castro which injuriously affected the commerce of Curaçao. As soon as it became known in Caracas that the Dutch had seized a Venezuelan vessel, a big crowd at once assembled in the Palazza Bolivar in support of the Government,

where a decree was issued by Acting-President Gomez placing the Republic "in a state of defense." Another crowd, however, of those opposed to the Castro administration, composed largely of students, engaged in a counter demonstration. A pitched battle ensued, many shots were exchanged, and several were wounded. Before the mob was dispersed it attacked the office of *El Constitutional,* the Castro organ, and looted the building of the lottery monopoly, while the ornamental inscriptions posted thruout the city setting forth the virtues of Señor Castro were demolished. The press despatches from Caracas seem to indicate that there is a good chance for a successful revolution against Castro, who has made himself unpopular by his government monopolies and has brought trade almost to a standstill. Castro has practically sucked the Venezuelan lemon dry. Last week, Monday, the Dutch captured "23 de Mayo," another Venezuelan coast guard ship. The crew made no resistance, and after being put ashore at Porto Cabello the vessel was towed to Wilhelmstadt. In the meantime Castro has left France, where his reception has been anything but cordial, and arrived in Berlin, where he occupies a suite of thirty rooms in the best hotel. Tho he has refused to pay his official call upon the German Government, the reception of the latter is more friendly than that accorded by France. He declines all interviews, tho he fills more columns every day than any one who has visited that capital for years, and seems to be less concerned over the affairs in Venezuela than over his kidney trouble, for the treatment of which he has come to Berlin. It is said that he was eating fifteen-course dinners and drinking quantities of wine every day, until Dr. Israel, who is to perform the operation, finally ordered him to a private sanitarium, where his diet could be supervised. It is reported that Castro is about to buy 50,000 Mauser rifles, and that he is negotiating with three German shipbuilders for four battleships and four cruisers, offering half payment in advance and the remainder upon the delivery of the vessels. The shipbuilders, however, insist upon additional security for the remaining half. It is also said that Castro has asked the permission of the German Government to engage German naval and military officers to reorganize the Venezuelan army, and establish a navy. But doubtless this is only one of the many rumors that have been manufactured by the disappointed correspondents, to whom Castro refuses to grant interviews.

The Opening of the Turkish Parliament

The new Turkish Parliament was opened by the Sultan in person at noon December 17th. It was a mild, sunny day, and the streets and houses were gaily decorated and thronged with people from all parts of the empire, who enthusiastically cheered their sovereign and representatives as they past. The route was lined with soldiers, but there was no manifestation of any hostility toward the Sultan, notwithstanding the fact that the city contained thousands of revolutionists who had suffered exile or imprisonment under his *régime* of absolutism. The state coach containing the Sultan and the Grand Vizier, Kiamil Pasha, drove at a moderate pace from the Yildiz Kiosk by the way of Pera and the Mahmoud Bridge to the parliament house, near the mosque of St. Sophia. The hall was closely packed with deputies, senators, officials, courtiers, priests, diplomats and representatives of the native, but not the foreign, press. The Speech from the Throne was read by Ali Djevad Bey, First Secretary of the Imperial Chancellery. The following are its most important passages:

"I regret to be compelled to announce to the representatives of the nation that the Prince of Bulgaria and the Governor General of Eastwern Rumelia have deviated from the path of loyalty and proclaimed the independence of those provinces.

"I also regret to announce that Austria-Hungary has made the illegal move of proclaiming the annexation of Bosnia and Herzegovina, which temporarily are occupied by her contrary to international good faith and treaty stipulations. My ministers are occupying themselves with these grave questions, and I hope they will receive the assistance of Parliament.

"When I first proclaimed a constitution thirty-two years ago there were many difficulties in the way of its execution, and I was advised to suspend it momentarily. In the interval great efforts were made toward popular

education and for the establishment of institutions of a nature calculated to elevate the public enlightenment. I am now happy to know that the people are more able to understand the benefits of a constitution, and I was heartily glad to restore it, notwithstanding influential advice to the contrary. My will is definite and unalterable, and henceforth the constitution will regulate the affairs of the nation. The Cabinet, which Kiamil Pasha has formed, will fulfill our decision."

After a prayer from a descendant of the Prophet, the Sultan personally addrest the representatives as follows:

"I am very glad to see around me our Parliament, which I opened today. Let the representatives of the people pray the Almighty for a continuation of the fruitfulness of the labors of the Chamber. May God bless your efforts."

After his departure the deputies severally took the oath of allegiance and faithfulness before the Grand Vizier.

Indian Sedition

The British Government in India is taking strong measures against the organizations that are utilizing the boycott as a political weapon. The Council on December 11th past a bill providing for summary measures against seditious persons and on the following day put it into action, arresting and transporting to parts unknown a Bengali lawyer, Dutta, who was a leader in the boycott movement. Two editors and eight other Nationalist leaders have also been arrested and transported. A striking manifestation of anti-British hatred occurred in Calcutta when the murderer of the informer in the bomb outrages was executed. His body was covered with flowers and rich clothes and carried to the place of cremation by an immense crowd, shouting "Bande Mataram," Viscount Morley, Secretary of State for India, in presenting to the House of Lords a plan for the reorganization of the Indian Government, said that there was no fear of anything in the nature of a general uprising, but if the murders continued a dangerous panic might ensue. The British Government would pursue its promised policy of reform uninfluenced and undeterred by the threats of the bomb throwers. The Council of the Viceroy would be increased from 24 to 62. The provisional councils and lieutenant-governors would be given enlarged powers and elected natives would be brought into the administration of the central and provincial governments. But the official majority would be retained, as it was not the intention to establish a parliamentary system in India. Lord Morley's standpoint may be seen from the following quotations:

"None of those responsible take the gloomy view; they know the difficulties, and are prepared to grapple with them, and hope to attract the good will which must, after all, be the real foundation of our prosperity and strength in India. We believe that it is so far unsapped, and we believe that the admittance of Indians into a larger and more direct share in the government of the country, without for a moment taking from the central power its authority, will strengthen the foundation of our position.

"Military strength, material strength we have in abundance. What we still want is to acquire moral strength in guiding and controlling the people of India in the course on which time is launching us."

Aeronautics

Wilbur Wright made his longest and highest flights on December 18th, and probably won the two prizes offered in France for the best records made before the close of the year; the Michelin cup, valued at $4,000, for distance, and the prize of the Aero Club de Sarthe for hight. He flew for one hour and fifty-four minutes, making forty-five turns. The distance, according to official computation, is 62 miles, but, allowing for turns, the total course is nearer 75 miles. In the afternoon he flew over a line of small balloons at at elevation of 100 meters, or 328 feet. The Russian Government is expected to buy the Russian rights on the aeroplane of the Wright brothers, paying $100,000 and royalties on machines constructed in Russia. The medal of the Aero Club of America is to be presented to Orville and Wilbur Wright by President Roosevelt.——Roy Knabenshue sailed unseen over the city of Los Angeles one night last week and dropped harmless bombs on the roofs of the City Hall, Court House and other public buildings.——The German Aerostations Company, of Berlin, has ordered seven Zeppelin airships, with the intention of establishing a regular service connecting twenty-seven German cities, among them Hamburg, Strassburg, Dresden, Berlin, Leipsic and Friedrichshafen.

The Shepherds' Vision

BY EFFIE SMITH

Upon the dim Judean hills,
The shepherds watched their flocks by night,
When on their unexpectant gaze
Outshone that vision of delight,
The fairest that did ever rise
To awe and gladden earthly eyes.

From no far realm those shepherds came,
Treading the pilgrim's weary road;
Not theirs the vigil and the fast
Within the hermit's mean abode;
'Twas at their usual task they stood,
When dawned that light of matchless good.

Not only to the sage and seer
Life's revelation comes in grace;
Most often on the toiler true,
Who, working steadfast in his place,
Looks for the coming of God's will,
The glorious vision shineth still.

Baileytown, Tenn.

The United States of Central America

BY MANUEL ESTRADA CABRERA, PRESIDENT OF GUATEMALA

[The following letter was written in answer to our request by the President of Guatemala. We have omitted from the beginning the courteous personal introduction in which he refers to our request and to the record of The Independent in support of the Central American Tribunal of Justice. He then proceeds as below.—Editor.]

I have the pleasure of stating to you that I cannot fail to appreciate your work in this matter; that as a matter of fact there has been much talk recently as to the advisability of uniting in one nation the five states of the Isthmus; that I have no objection whatsoever to express my views on this matter to the American people, and that consequently I will say that not only I, but, in general, all Guatemalans desire the union of Central America, especially as one of the articles of the constitution of this republic declares that Guatemala will be ready to become a part of such a union provided it can be done in a stable, just, popular and proper manner; and that I have worked and still work for the realization of that plan.

Now, as to when the plan may be realized. It will be when the Presidents of the five republics, putting aside all personal interests, will act in accord to establish the legal bases on which will rest the election of the future President of Central America, for the peoples are already prepared for the union and want it.

You see, then, that the day is not far distant when the event will take place, and therefore we should congratulate ourselves, not only we Central Americans because we shall then be a great people, but the other Powers of America also, because they will then be inspired with greater confidence in their relations with a great nation.

Guatemala, Central America.

The Year in Finance and Trade

BY FRANK D. ROOT

[Mr. Root, a member of the staff of THE INDEPENDENT, has for years devoted much attention to the general course of financial and industrial affairs. All the details of the record of American financial and commercial activity during the current year cannot be set forth within the limits of this article, nor can there be any elaborate analysis. His aim has been merely to touch upon the leading points in the record and to direct attention to a part of the statistical evidence which deserves to be considered.—EDITOR.]

AT the beginning of 1908 only a little more than two months had elapsed since the first shock of panic. Confidence and prosperity had given way to fear and widespread depression. The year has been one of slow but sure recovery from the effect of that memorable disturbance. The upward movement, halting at times, was greatly accelerated immediately after the national election, when trade was stimulated by the release of delayed or contingent orders. This revival was accompanied by broad and active speculation in securities, with rising prices. Reaction and comparative dullness marked the closing weeks of the year. Crops were large, money was plentiful at the exchanges, rates for loans on call were very low, and $50,000,000 in gold was exported. This outward movement of gold began in April. Nearly $120,000,000 had been imported in the preceding November, December and January to satisfy panic demands.

In the following table, relating to representative railway and industrial stocks, are shown the net loss in 1907, the advance immediately after the election of Judge Taft, prices on December 19th, and the net gain for the year up to that date:

SECURITIES

	Net Change in 1907.	Nov. 2, 1908.	Nov. 16, 1908.	Close Dec. 19, 1908.	Net Change to Dec. 19.

In January there was much progress toward a restoration of normal monetary conditions. The premium on currency disappeared, and but few Clearing House loan certificates were outstanding at the end of the month, altho the last of those issued in New York were not canceled until March 28th. But all taken there by solvent banks were retired in January. In New York, $101,060,000 of these certificates had been authorized and the greatest amount taken by banks had been $88,420,000, on December 16th. In the whole country an issue of about $250,000,000 had been authorized, and the largest amount outstanding on any date had been about $220,000,000. The New York Clearing House banks' reserve deficit, which had risen at one time to $54,000,000, gave way to a surplus of $6,000,000 on January 11th, and this was speedily increased to $40,000,000 on February 1st. Later in the year it rose to $68,000,000. European banks reduced their rates of discount, that of the Bank of England falling from 7 to 4 per cent. in January, to 3 per cent. in March, and to 2½ in May.

Steps were taken to punish the New York bank speculators whose offenses had brought on the panic. Morse, Heinze and the Thomases were indicted. In November, Morse was convicted and sentenced to be imprisoned for fifteen years. It was in January that two or three more banks which had been controlled by these speculators suspended, but other embarrassed banks were resuming business, and the great Knickerbocker Trust Company reopened its doors in March. The rate for loans on call at New York fell in

January from 15 to 2 per cent. It remained at 2 per cent., or at even lower figures, thruout the year, until December, when it rose to an average of 2¼. Stocks were dull and weak in February; in March they showed more strength. A wage reduction at the cotton factories affected 60,000 employees, and 140,000 more were soon to suffer a similar loss. In this industry there was much depression; output had been cut down both in the North and in the South. There was much talk about an increase of railroad freight rates, but the movement for such an increase was checked by the President's letter directing the Commission to inquire whether there was any warrant for higher rates.

In March the New York Central reduced its dividend rate, and in the second quarter of the year five other railway companies took similar action; but there were many signs of general improvement, and May saw a considerable revival of public confidence. New high records were made in the securities market; large loans were easily placed; the number of idle freight cars was reduced. On April 29th it had been 413,605. Congress adjourned on May 30th, and on that day the new Emergency Currency act became a law. Business and industry do not appear to have been affected by this legislation. Of greater value were the bills enacted at Albany, owing to the report of Governor Hughes's Advisory Banking Commission and the efforts of Mr. Williams, the New York Superintendent of Banks. There were about twenty of these, requiring needed reforms in the management of banks and trust companies, especially with respect to the cash reserves of such institutions. In legislation, they are the most important fruit of the panic. With the enactment of the Emergency Currency bill a Monetary Commission (of Senators and Representatives) was created, which has since been making inquiries here and in Europe. At the end of the year only one of the currency associations of banks for which provision was made in the Currency Act had been formed. This one is in Washington, D. C. But it is not probable that such associations (to procure and issue emergency notes) will be needed for some years to come. Congress appropriated $1,008,804,000 for the coming fiscal year, in the face of a growing deficit, and with the prospect of a shortage of $120,000,000 in the year approaching. This, however, appears to have had no unfavorable effect upon the general situation.

In May and June good crop reports began to have much weight with investors and manufacturers. Below are shown the final official estimates of the year's crops, as they were publisht in December, hay being measured by tons, tobacco by pounds, cotton by bales, and the other products by bushels:

CROPS.	1908.	1907.
Corn	2,668,651,000	2,592,320,000
Wheat	664,602,000	634,087,000
Oats	807,156,000	751,443,000
Barley	166,756,000	153,317,000
Rye	31,851,000	31,506,000
Buckwheat	15,874,000	14,290,000
Flaxseed	25,805,000	25,851,000
Rice	21,890,000	18,738,000
Potatoes	278,985,000	297,942,000
Hay	70,798,000	63,677,000
Tobacco	698,126,000	608,120,000
Cotton	12,920,000	11,261,163

The farm value of these, cotton excepted, is $3,694,261,000, against $3,408,967,000 for the yield in 1907.

Judge Taft was nominated in June and Mr. Bryan in July. By many business men the Democratic nomination was regarded as beneficial, on the whole, because, in their opinion, it insured a Republican victory. In the securities market and elsewhere there began to be seen indications that leaders in speculation and investment were discounting the election of Taft. In June they were waiting; in August they were at work. Crop reports helped them. The number of idle cars had fallen from 413,000 in April to 253,000 in the middle of August, and in that month the rate for loans on call was only 1 per cent. On the Stock Exchange there was much activity, due in part to manipulation. A. O. Brown & Co., a brokerage firm of small resources, engaged in very large operations on August 22d with matched orders. This firm's suspension was followed by an official investigation, and the firm's board members were expelled from the Exchange. Altho temporarily checked by

this incident and events connected with it, the upward movement was soon resumed. Little change in the condition of trade and industry was reported, but there were some favorable signs. On June 5th the Government had brought suit against the anthracite coal railroads to enforce the commodity clause of the new Rate law. There was quite a general expectation that the roads would be successful in their defense. In September the clause was pronounced unconstitutional by a majority (Judges Gray and Dallas) of the Circuit Court of Appeals in Pennsylvania. It was generally believed that this decision pointed to a final rejection of the clause, which, if enforced, would very seriously disturb the business and finances of a powerful group of railroads.

In September, the Maine election,-with its small Republican plurality, alarmed many, and their disquietude affected the stock market, which had become top-heavy. After the break there appeared to be an inclination to cease discounting and to wait for the election. Suspension of dividends by the American Locomotive Company also exerted a depressing influence. But the general situation was improving. On the 16th only 173,000 idle cars were reported. The recovery of embarrassed banking institutions in New York excited comment. Of thirteen under State control, eleven had been able to resume. The Knickerbocker Trust Company was anticipating payments on deposits. In this month the Archbold letters began to appear, and in business circles it was thought that Bryan had been harmed by his association with Haskell. In October, the Steel Corporation's report for its third quarter had a good effect, showing a considerable increase of net earnings. The figures follow:

STEEL CORPORATION'S QUARTERLY EARNINGS.

	1906.	1907.	1908.
First	$36,634,490	$39,122,492	$18,229,015
Second	40,125,033	45,503,705	20,265,756
Third	38,114,624	43,804,285	27,106,274
Fourth	41,744,964	32,553,995	.....
	$156,619,111	$160,984,447	.....

Iron output is one of the barometers by which trade conditions and tendencies are measured. With the Steel Corporation's earnings should be printed the following figures, showing the rapid decline from the record output of October, 1907, and the gradual recovery since June of the present year:

PIG IRON, TONS.

1904	16,497,033
1905	22,992,380
1906	25,307,191
1907	25,781,361
1907—	
October	2,336,972
November	1,828,125
December	1,234,279
1908—	
January	1,045,250
February	1,079,721
March	1,228,204
April	1,149,602
May	1,165,688
June	1,092,131
July	1,218,129
August	1,359,831
September	1,418,998
October	1,567,198
November	1,577,854
Eleven months	13,902,606

Immediately after the election in November there was evidence of a decided revival of business and industrial activity, with remarkable speculation for an advance on the Stock Exchange. While the defeat of Bryan had been foreseen by leaders in finance, the confidence of many others had been shaken a little. Moreover, very few had expected so large a majority for Taft. Stocks of goods were low. Orders had been withheld. These were suddenly released. Business seemed to rise with a bound. From all directions came reports of increase of work time and of the number of active employees. At a later date it was seen that the pace set by this sudden outpouring of delayed or contingent orders could not be kept up. Security prices advanced at once, expert speculators vying with what Wall Street calls "the public" in purchases for the rise. On the Stock Exchange more than 4,000,000 shares were sold in the first three days following the election. Nine days (one-half day included) showed a daily average of 1,414,500 shares; fifteen days an average of 1,270,000. With the inevitable reaction, the trading was then narrowed, and in the first part of December the high prices were not maintained. Nearly 25,000,000 shares were sold in

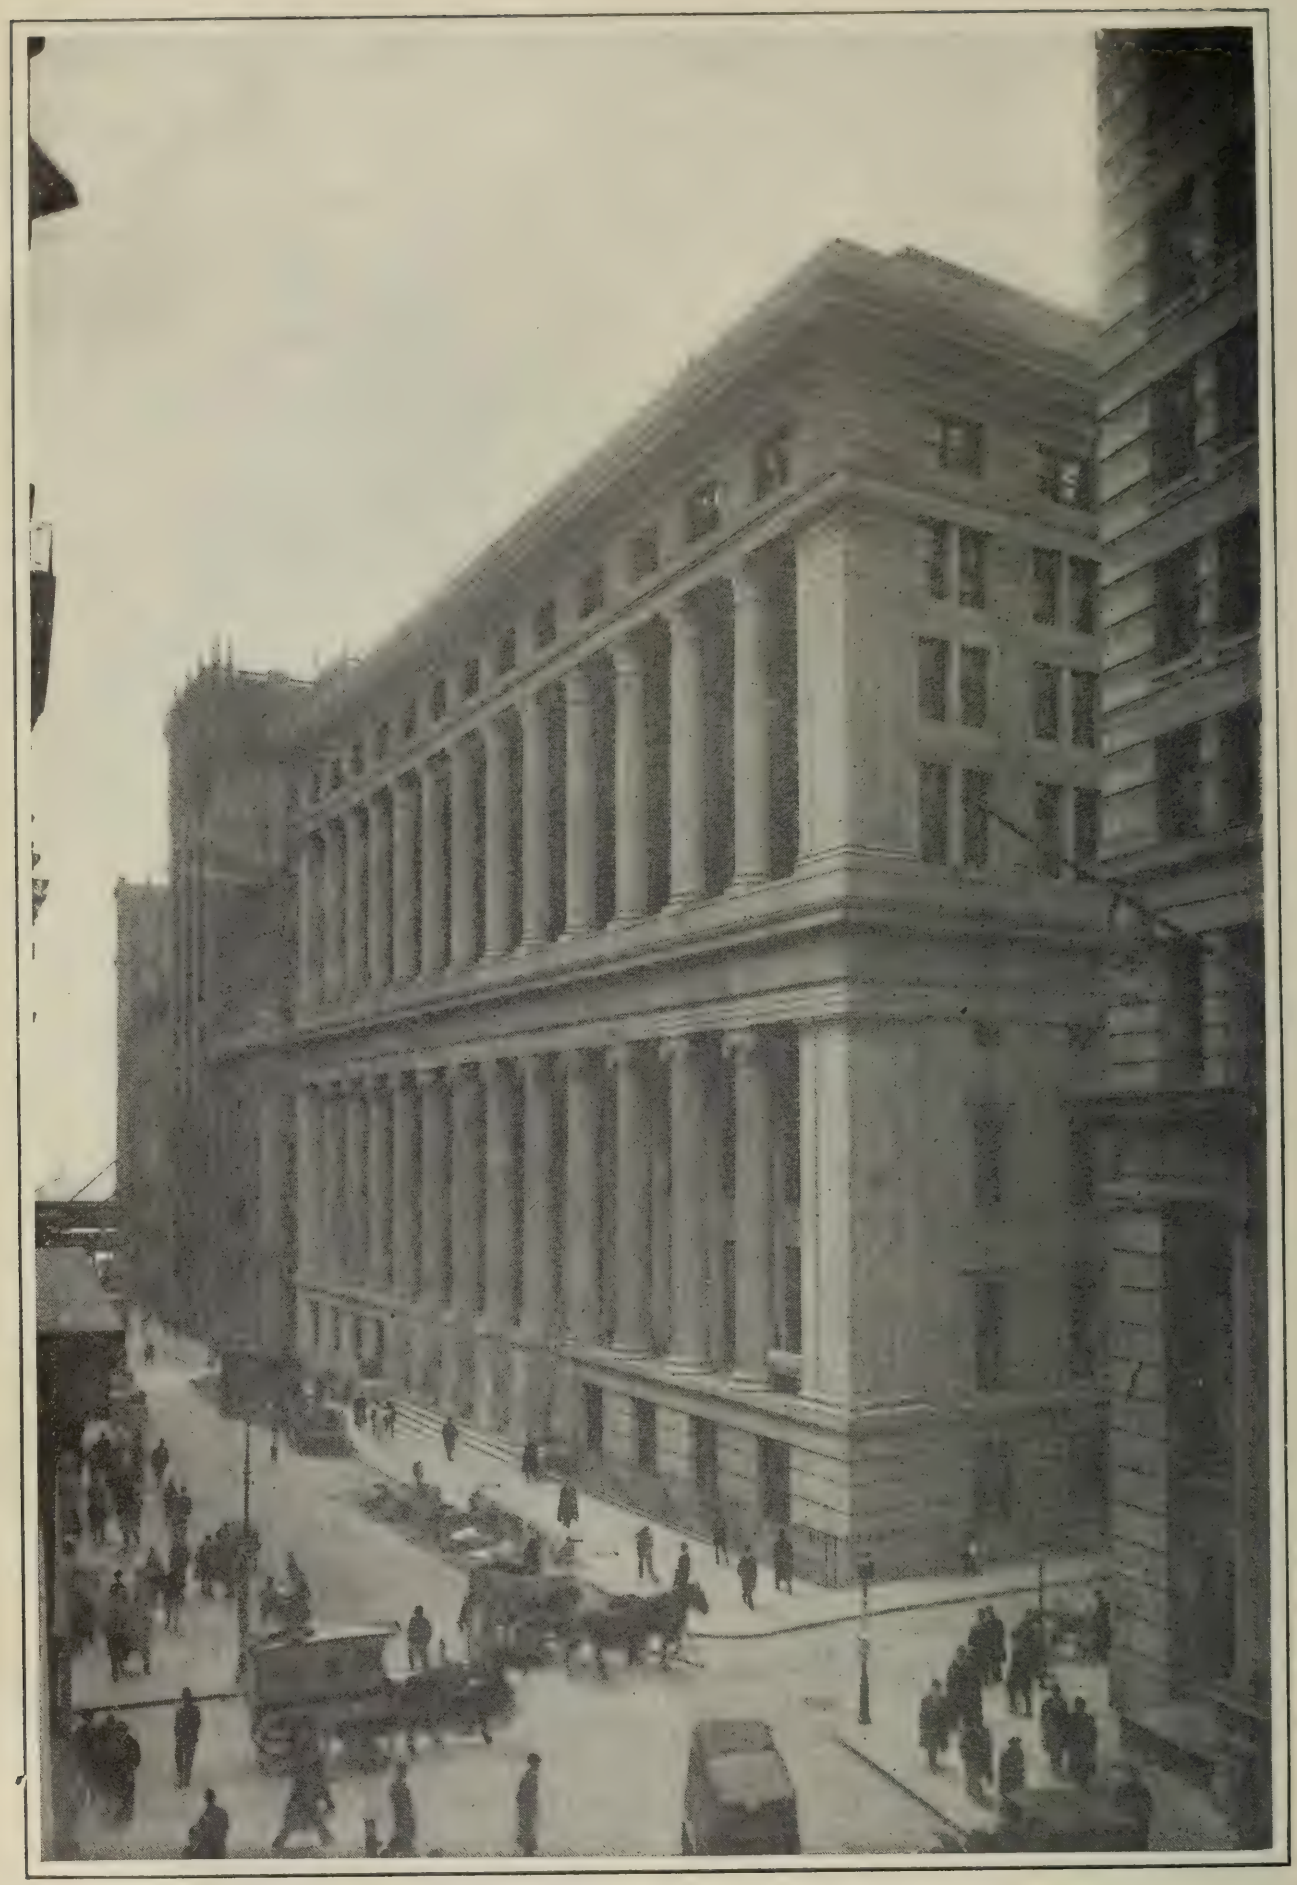
November, and one-fourth as many bonds as changed hands in the entire year 1907. The year's record is shown below:

STOCK EXCHANGE TRANSACTIONS.

	Shares, Number.	Bonds, Par value.
1905	263,081,150	$1,024,418,770
1906	284,298,010	674,452,850
1907	196,438,824	526,170,450
1908—		
January	16,594,895	$91,291,400
February	9,839,706	56,567,700
March	15,939,255	63,009,320
April	11,648,123	80,118,000
May	20,975,022	96,507,506
June	9,652,437	57,022,000
July	13,857,563	80,260,100
August	18,851,265	82,272,300
September	17,582,499	83,704,000
October	14,296,901	89,371,500
November	24,966,326	136,554,200
Eleven months	174,203,992	$916,678,020

It will be noticed that while stock sales for the full year will probably fall below those of 1907, bond sales will be twice as great as those of that year.

In the last few weeks, and following the wild burst of stock speculation, there has been additional evidence of that steady improvement which points to a full restoration of prosperity. At the end of November, New York City was able once more to sell bonds bearing interest at 4 per cent. In February the city was obliged to offer a rate of 4½ per cent., in order to attract bids at par or better. In November the old rate of 4 per cent. was restored, there were offers of $148,000,000 for an issue of $12,500,000, and the price obtained was nearly as high as that which was paid in February. When the premium is taken into account, the city now pays interest at the rate of 3.89, while in February it could do no better than 4.29. The Western Union Telegraph Company has increased its dividend rate, and the Union Pacific has shown a year's net income large enough to pay 16¼ per cent. on its common stock. In October immigration began to exceed emigration. Arrivals for ten months were only 327,240, against 1,150,116 in 1907, and departures of those who had been in this country but a short time indicated a net loss (in ten months) of 240,000. But recent reports show that now those coming are more than those going. An impending revision of the tariff imposes some restraint upon manufacturers, some of whom are very naturally inclined to proceed with caution until they know what changes are to be made in the duties imposed upon foreign products which compete with their own. But within six months they will know what the new rates are to be.



NEW YORK, December 19th.

Another Man With the Hoe

BY JOHN HUTCHINS

THRU rows of halfgrown corn he moves,
Erect, elate as one who loves
His toil. Before his hoe the plow
Its coarser work has done and now
Gently, almost as with caress,
The buried stalk, rude clods that press,
He frees, or slays some cruel weed
That saps the hills' life in its greed.
The sun, that makes the corn-joints crack
With growth, beats hotly on his back;
Behold him lift his hat and stand
Dashing the sweat drops with his hand!
He looks about him: acres wide
Of well tilled fields provoke his pride.
He looks above where, piled on high,
God's clouds, like stairways, mount the sky,
Or skim the curved horizon's rim,
Like sails that in the haze hang dim.
Coquetting, plain to win his ear,
The catbird on the wall sings clear.
He listens, rapt with sight and sound
And kin to every creature round.
Thus, slaked at fountains which God fills,
Essence of bird-songs, breath of hills,
He thrills with gladness just to be
And do his work and know he's free.

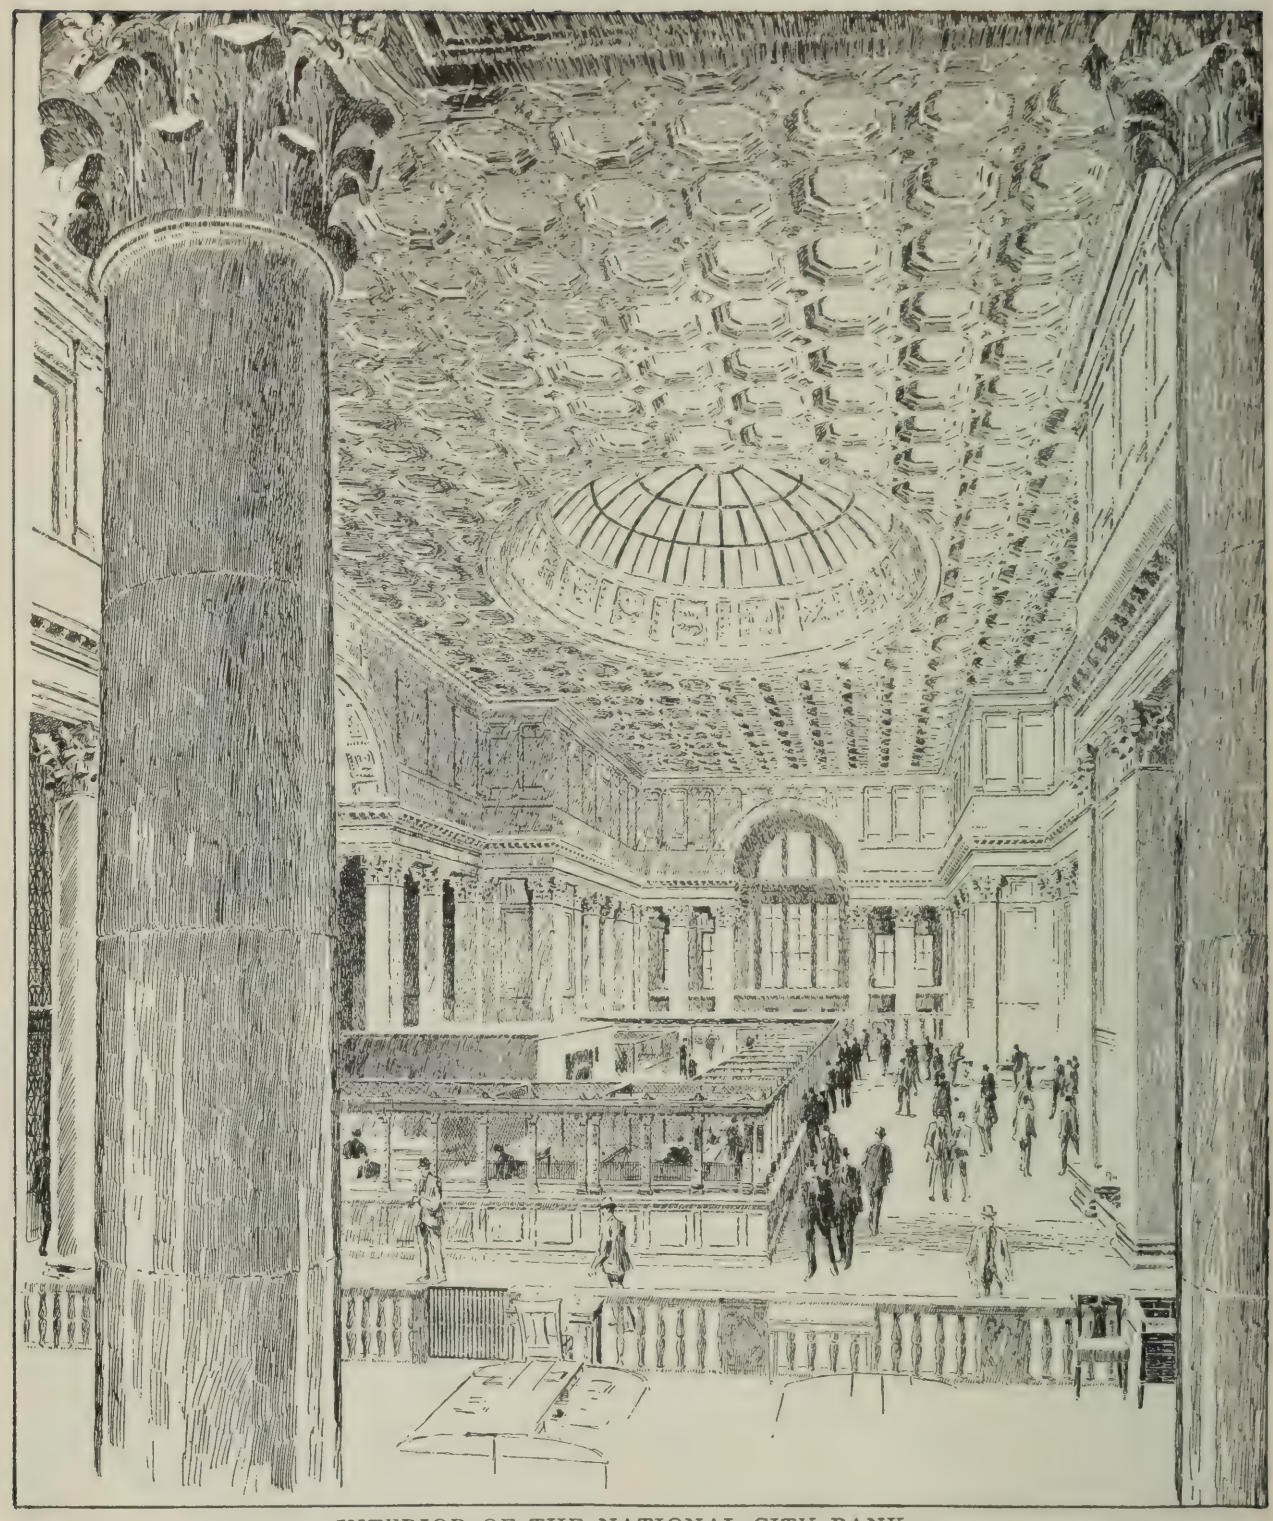
LITCHFIELD, CONN.

EXTERIOR OF THE NATIONAL CITY BANK.
Formerly the New York Custom House.

The Largest Bank in America

BY THOMAS B. KIRBY

[The following article is by a member of the editorial staff of the *Wall Street Journal*. The article is of especial interest now when the National City Bank has just moved into its new and commodious home.—EDITOR.]



THE occupation of its new building by the National City Bank this week was an important event in the history of banking in New York. The site, the irregular block bounded by Wall street, Hanover street, Exchange place and William street, began to be occupied 250 years ago by fashionable residences, but in 1790 most of these were converted into offices, which were rented chiefly to lawyers, insurance and other brokers. The concentration in Wall street of the increasing business activity of New York required more office room, and in 1827 the old buildings upon the site were torn down and the first Merchants' Exchange building was erected. The Stock Exchange of the day had offices in this building, but the trading of the exchange was done in the street at the corner of Wall and Hanover streets, in the same manner that business is now done upon the "curb" in Broad street. The Merchants' Exchange was burned in the great fire of December 16th, 1835. The ruins remained undisturbed for several years.

Another Merchants' Exchange having similar architectural character was erected upon the site in 1842, and was occupied as such and for office purposes until it was purchased by the United States Government for a Custom House in 1863, the business of the port having outgrown the capacity of the old Custom House at the corner of Wall and Nassau streets, which was thereafter occupied by the Sub-Treasury, that had previously been located in what is now the assay office. New stories were added to the building, rooms were overcrowded, and adjacent buildings on the south side of Exchange place were rented and connected by a bridge across the street, and still the congestion of business grew every week. Congress at last recognized the situation and provided for the erection of a new Custom House, but stipulated that the old site must first be sold for not less than $3,000,000, this sum to be used in part for the construction of the new custom house.

This provision prevented any bids for the old building for some time. It was believed that the cost of tearing down the old building and erecting a modern skyscraper would be so great, in addition to the price of the site fixt by Congress, that it would be difficult, perhaps impossible, to earn a satisfactory interest upon the investment.

Figuring upon the basis of an ordinary investment, these calculations may have been correct, but when President Stillman secured the site from the United States in 1899 for the National City Bank, he was not calculating upon an ordinary investment, but upon providing a home for the National City Bank that should endure for centuries and be an abiding testimony to the solidity of what is now the largest bank in the United States, and which it is his ambition and the ambition of all connected with the bank to make some day the largest bank in the world.

The contract between the Government and the National City Bank provided that the building should be occupied by the Custom House until its new building was ready for occupancy. The bank was, therefore, unable to take possession of its property until a year ago, when the work of reconstruction was begun. All the original external architectural features of the old Merchants' Exchange have been preserved as they were before the Government began tinkering with the building to provide more room for its clerks. The great monolithic granite Ionic columns on the Wall street front were left intact, but the entire interior of the structure was removed and rebuilt. More space was needed by the bank, and the architects, Messrs. McKim, Mead & White, solved the problem by adding four stories, with Corinthian columns superimposed upon the Ionic columns of the Wall street

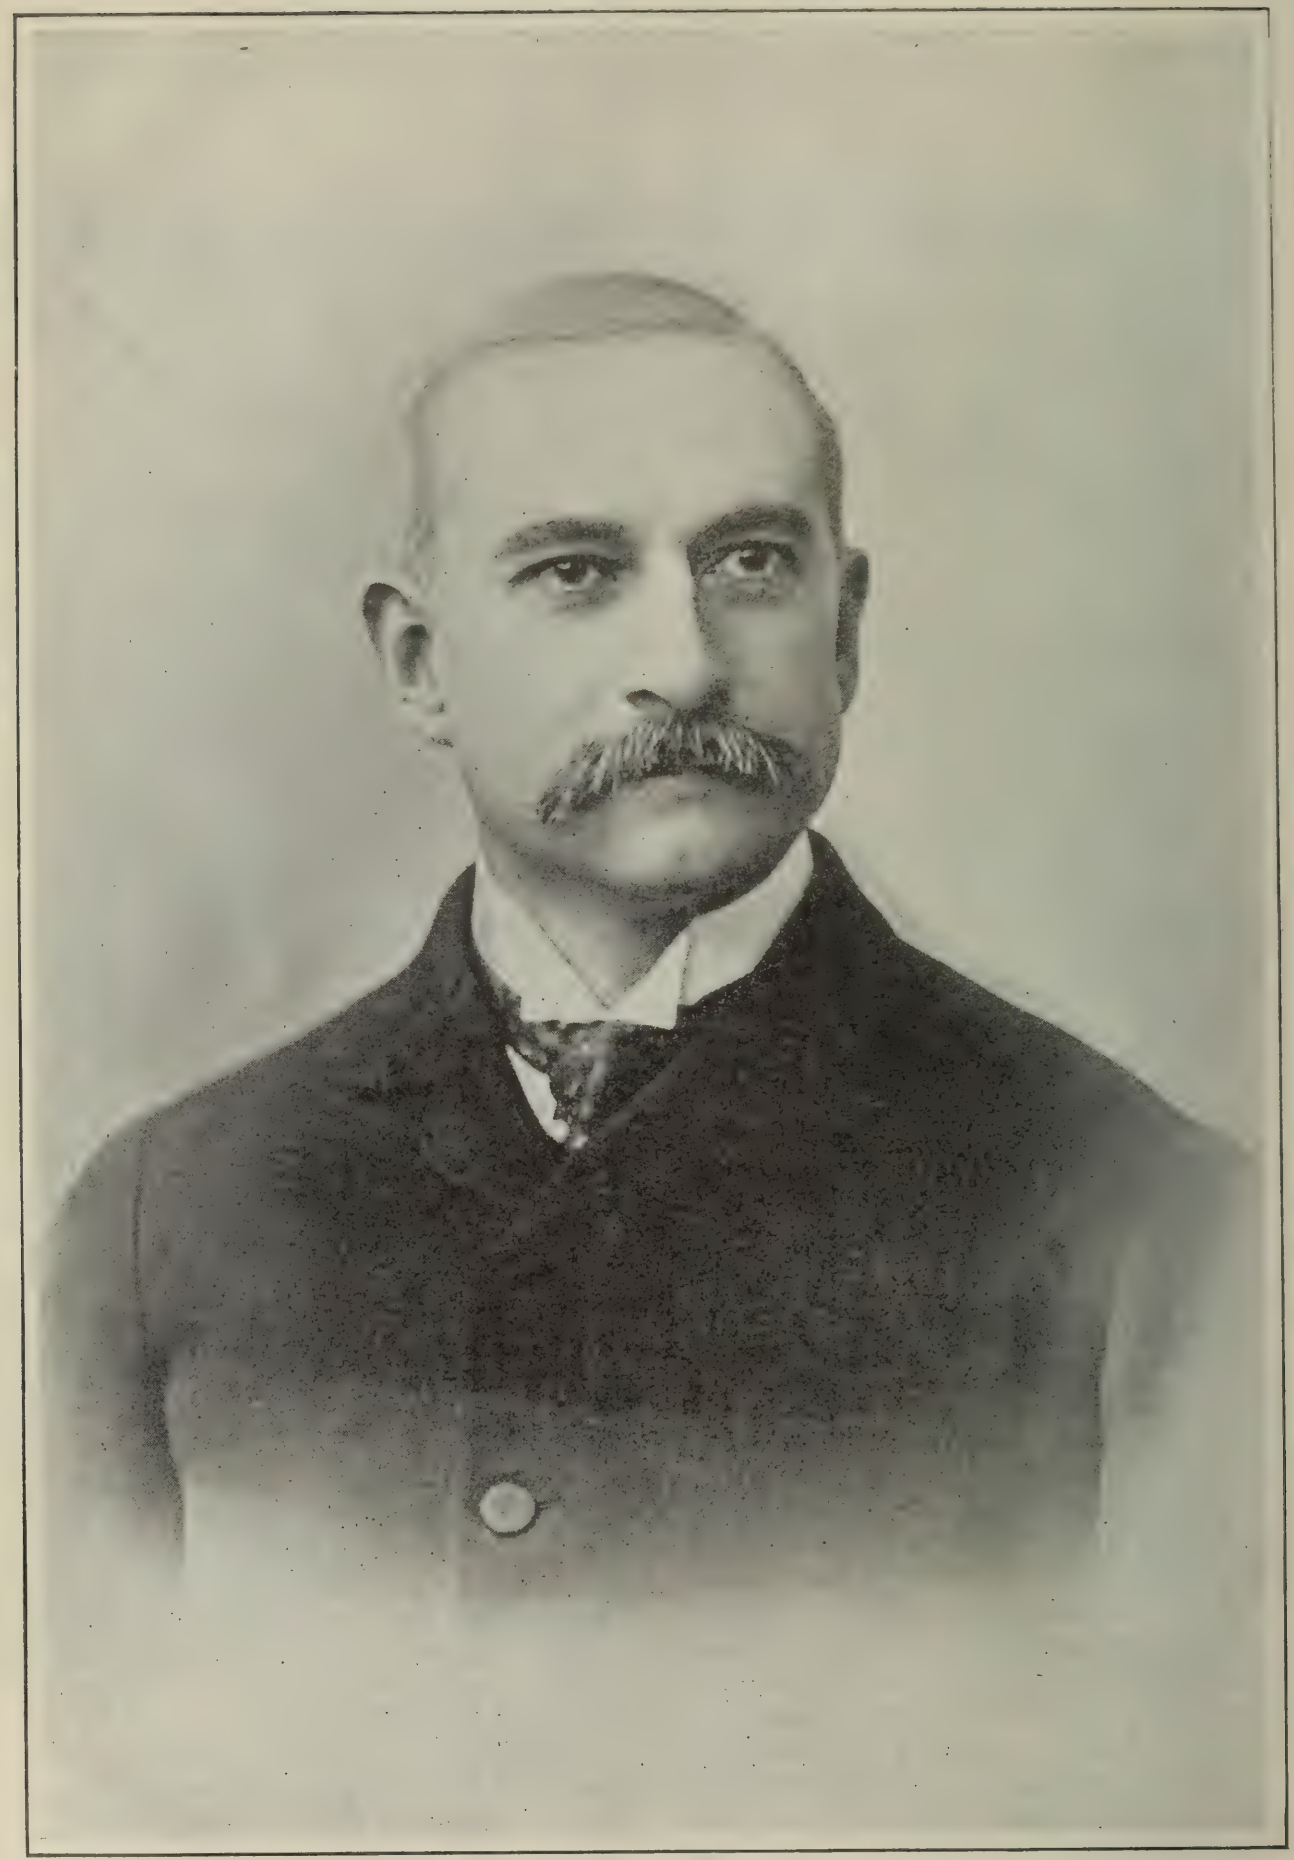
INTERIOR OF THE NATIONAL CITY BANK.
From a pen drawing by Birch B. Long.

front. The architecture is daring, but the effect is imposing, and grows upon one as the adaptation of the work to the requirements of the case are comprehended.

In the old Custom House, formerly Merchants' Exchange, the main floor and rotunda was reached from Wall street by a lofty flight of stone steps, very inconvenient of ascent and descent. Entrance to the new banking chamber is by a short flight of steps, wide and easy tread, rising not more than five feet above the sidewalk level. The chamber is approximately 190 feet wide and 170 feet deep, having a floor space of about 3,200 square feet, including the portion set apart for the use of officers of the bank. The ceiling is 60 feet high, and it is 83 feet to the top of the central dome. Upon the floor of this chamber are concentrated all the departments of the bank having direct business with the public. The bookkeeping and auditing departments are housed elsewhere.

The feature of this great banking chamber is that there is nothing in it or about it to attract attention except its vastness. All the columns, panels, balustrades, the partitions that separate the various tellers and other employees from the public are of light gray Italian marble; the floor is of smooth gray stone from France. The only other color comes from a few solid bronze fittings and the dull mahogany furniture. Incidentally, it may be observed that the two solid bronze doors on the Wall street portal are the largest in the world.

There is no attempt to disguise the bank vault. It is built of armor plate and stands upon pedestals which reach below the foundation of the building. It is placed very near the center of the part of the chamber occupied by the working force of the bank. It weighs 300 tons, and the two great circular doors, one on the east and the other on the north side, weigh each 16 tons, but are so perfectly adjusted that a child can open them with one finger. Without the combination it would be dangerous for any one to attempt it, for there is an arrangement to make the punishment fit the crime, not with boiling oil, but with superheated steam. The safe is colored gray and looks like a great block of steel. An arrangement of mirrors enables top and bottom and all sides to be observed at once.



The other parts of the machinery of banking, of which the public, including depositors, know nothing except by results, are no less well equipped than is the great open banking chamber. Every modern convenience has been installed. The apartments of the president and other officers of the bank are furnished simply, but richly. In some of them the fine old Italian marble wainscoting of the original building has been preserved.

The National City Bank will celebrate the centennial of its organization in its new home in the year of the next Presidential election. It was organized by special act of the New York Legislature in 1812 with a capital of $800,000. At that time there were eight other banks in existence in New York State, with total capital of $7,552,760. In the whole United States there were only eighty-eight banks, with a combined capital of $42,610,601. The Comptroller of the Currency received reports for the fiscal year ending June 30th, 1908, from 21,346 banks, having a capital of $1,757,159,203.

The growth of the National City Bank has kept pace with and sometimes has been in advance of the progress of the country.

The bank abandoned its old charter and reorganized under the general banking law of New York in 1852. Its capital was increased in 1853 from $800,000 to $1,000,000. It was one of the original members of the New York Clearing House, being known at that institution as No. 8. It came into the national system in 1865, simply adding the word National to its original title. The capital of the bank was increased from $1,000,000 to $10,000,000 January 2, 1900. The capital was further increased to $25,000,000 in June, 1902, at which figure, with the addition of $25,531,300, surplus and undivided profits, it now remains, making its present working capital over $50,000,000.

The bank in its early years was chiefly a commercial bank, as were all banks at that time, and in that line gained prominence under the administration of Moses Taylor, who was for forty-five years a director and for twenty-six years president. Mr. Taylor had the reputation of

JAMES STILLMAN,
President, The National City Bank.

being the best judge of commercial paper in New York. When Percy R. Pyne succeeded Mr. Taylor in 1882 the bank's capital was $1,000,000, surplus $2,000,000, loans $7,500,000, and deposits $6,500,000.

Upon the accession of James Stillman to the presidency, in 1891, the policy of the bank was broadened. Without neglecting the mercantile customers who had grown up with the bank, it was the new policy to advance with the times, and to provide sufficient capital to meet the requirements of the great corporations that were assuming so large importance in the business of the country, and, above all, to

FRANK A. VANDERLIP,
Vice-president, The National City Bank.
From a photograph taken especially for THE INDEPENDENT.

become, so far as was possible under the restrictions of the national banking system, a bank of banks. Its success in this line is indicated by the fact that on November 27th, 1908, the National City Bank reported to the Comptroller of the Currency deposits of banks and trust companies of $104,515,900 out of a total of such deposits in all the national banks of Greater New York of $695,134,100.

The bank began its career with a subscription of $500,000 to the United States loan of 1813, issued to provide means for carrying on the second and last war with Great Britain, and has participated in every important Government loan since that time. It has become affiliated with some of the largest European banking institutions, and is now, thru its European connections, one of the most important factors in the foreign exchange market. In connection with the First National Bank and Messrs. J. P. Morgan & Co. it was awarded $10,000,000 of the recent issue of $30,000,000 Panama Canal bonds.

As in the navy the man behind the gun alone makes victory certain, so, in banking, success depends upon the energy and *esprit de corps* of the men who handle the cash and the documents which represent money. The employees of the bank maintain an organization called "The City Bank Club," the purpose of which is the study of banking problems, and incidentally social enjoyment. Both are represented in a magazine publisht by the organization called *Number 8.* The bank's library is also at the service of the employees.

Ample provision has been made in the new building for the comfort of the employees, now numbering more than 400. The so-called "roof floor," above the four rented floors, is devoted almost entirely to their welfare. Each employee has a locker there. There is a large room for the meetings of the organization and another for committee meetings. The dining room will seat 128 at a time, and it is asserted that the culinary arrangements are surpast by only one hotel in New York City. The officers of the bank also have a dining room upon this floor and on one side overlooking the interior court. Ample provision has been made for baths, lavatories, etc. Access to the roof is by special elevators, not open to the public.

New York City.

Christmas Violets

BY EVALEEN STEIN

They breathe of all most lovely things,
Of daffodils and robin wings,
Of hillsides where the wild-flower springs
Through mosses green;
Of thickets where the bloodroots blow,
Of little streams with flutelike flow,
Of hermit-thrush and vireo
That sing unseen.

So beautiful they are, so sweet,
With all glad memories so replete,
What lovelier flowers wherewith to greet
In happy phrase
This holy season that men call
Of blessed times the best of all,
The year's supremest festival,
The Day of days.

They tell not now of Him who died,
For his compassion crucified,
But of the Babe, the dewy-eyed,
That hallowed morn,
That lay within the manger's nest,
By angels watched, by love carest,
The Flower sweet on Mary's breast,
The Babe newborn.

And so these Christmas buds today
In reverent-wise I gently lay
Against my lips, the while I pray,
As at a shrine;
For, lowly sweet, I see in them
The type of Him of Bethlehem,
The Violet sprung from Jesse's stem,
The Prince divine.

Lafayette, Ind.

Christmas

BY WILLIAM T. STEAD

Author of "If Christ Came to Chicago," "The United States of Europe," "The Americanization of the World," Etc.

IF Christmas did not exist, if there never had been a Christmas, and the human race at this moment found itself with a memory from which all idea of Christmas has been expunged by a sponge of oblivion, what a different world it would be! If Christmas did not exist the deep instructive longing of the human heart would surely lead to the invention of some substitute to fill the void. If we had to invent such a substitute what are the essential features of Christmas which would have to be reproduced in the new festival?

The inquiry sets us thinking. What is Christmas to mankind? What is Christmas to us? Probably no two men or women would answer these questions exactly in the same way. There is the Christmas of the churches and there is the Christmas of Dickens; the Christmas that is a pause point in the evolution of human history, and the Christmas that is a family festival. There is one thing, however, that is characteristic of all the Christmases, Christmas is not as other days. There are 365 days in the year, 364 of which are more or less like each other, but Christmas stands apart, unique with a glory all its own. And in that quality of unlikeness to all other days it becomes to all of us, whether believers or unbelievers, a kind of natural and universal measuring point of our life. Each of us measures our own age from our own birthday. The only general metewand of time is the interval between Christmas and Christmas. We constantly find ourselves estimating the date of some occurrence by the number of Christmases that have come and gone since it happened. Christmas has become a kind of universal birthday of the human race, which indeed is what might naturally have been anticipated from its origin and association. But what is most interesting to note is that this holds good among all of us whether or not we belong to the family of the faith.

An institution which sets us all thinking of the flight of time serves the purpose of a universally recognized landmark in the pilgrim path which we are ceaselessly treading from the cradle to the grave. It is a good thing to have reminiscence rendered automatic by the creation of such an anniversary. For in the hurry and bustle of modern life such meditative moments are few and far between. We have lost the habit of looking behind and before. Living only in the passing moment we become more and more ephemerides, oblivious that that moment is but the meeting point of two eternities, the eternity of the Infinite Past and the eternity of the not less Infinite Future. Anything that links us in an unbroken chain with 1900 years of human history is good. Each Christmas is a link, and the first link hitches on to the manger in Bethlehem.

Christmas not merely compels retrospect; it suggests the line along which that retrospect shall proceed. Each recurring Christmas revives the memory of the angels' song, almost the only verse in the Bible upon which secular journalists feel themselves free to preach lay sermons. It reminds us that the aim and objective of Christianity were summed up in the two brief strophes of the angelic anthem "Peace on earth, good will to men," seven little words, but what a world of meaning in each. Christmas reminds us "this then is what Christianity means." It brings us down to the essence, and reminds us of the original touchstone by which we may test the value of all Christian and pseudo-Christian developments. It is also a vigorous incentive to renewed exertion. For the more we reflect upon this seven-worded formula the more we are compelled to realize how very, very far short we have fallen of realizing this primitive

ideal. The world still shakes beneath the iron-sandaled feet of war. The resources needed for the regenerating of the peoples are squandered in ever-increasing millions on the apparatus of slaughter. Yet it is true that the very magnitude of our armaments, the very deadliness of our arms of precision, are working out in a curious inverted roundabout way the reign of peace. Nothing is more certain than that the average percentage of the days in the lifetime of an ordinary man, taken all the world over, during which he is officially declared to be in a state of war with his neighbors, is lower today than it has been since history began. War, once the normal condition of nations, is now an exception. Preparation for war is constant; actual warfare is rare. Once the time when kings went forth to battle came round as punctually as spring. It is not two centuries since every "heart of oak" that was launched from an English dockyard was certain to be called upon to face the broadsides of the enemy. In our time England has been building ironclads for seventy years, and not one of them has ever fired a shot at a hostile ship. The German army is the most powerful fighting machine the world has ever seen, and for thirty-five years it has never fought a battle. Our modern system of armed peace is ruinously extravagant, but it is wasteful of gold, not of blood. Its chief offense against the Christian ideal lies in perpetually preoccupying the brain of mankind with preparation for slaughter which seldom takes place.

Christmas reminds us all that the first object of our foreign policy should be the conversion of foes into friends. It brands as anti-Christian all the current lies about this, that, or the other nation being our "natural enemies." The more we dislike a neighboring nation the more we should try to make friends with it. The peace budget, by which for every $1,000 devoted to armaments one should be devoted to propaganda of peace and the exercise of international hospitality, still awaits realization. But it will come, and every Christmas brings it nearer.

These matters are, however, of wide and general national and international interest. That is to say, in other words, that they must of necessity appeal to the few. The mass of men do not generalize. They live in smaller areas than that bounded by national frontiers. Then fatherland is their home. And it is as a festival of the home and of the family that Christmas is the most living force. It is the season of family reunions. The Christmas dinner is the Sacrament of the family. It is a blessed means of grace to millions. But it might be made thrice blessed if its sacred mission was taken more seriously to heart.

There are few families in which peace reigns and good will prevails. When the children grow up and marry, divergent tendencies manifest themselves and the once united circle shows ominous gaps. We can live at peace with our own children—sometimes, but it is not so easy when our sons have brought us daughter-in-laws and our daughters sons-in-laws. Those who are only children-in-law are often dangerous obstacles to the harmony of the home. It is but seldom that there are grandsires who can gather round their Christmas dinner table all their children and all their grandchildren. Christmas comes but once a year, but when it comes it ought to give the signal for an honest, serious, earnest attempt to wipe out these barriers which spring up so easily and to restore that unity of spirit which is so often lacking. Therein at least the Christian gospel has a distinct advantage over the non-faiths into which many have fallen. To the unbeliever there is no appointed day in which an authoritative voice rings thru the chambers of the memory, like the voice of a muezzin from a Moslem minaret summoning him to do his utmost to heal breaches, to compose feuds and restore peace and good will in the family circle. If in every house at Christmas time a chair was left vacant for every member of the family who is absent because he is out of charity with the old folks at home, the eloquence of that reminder would lead to many searchings of heart and in many cases to many much to be desired reconciliations.

There is another use of Christmas which unfortunately is much neglected. The Protestant Church has no festival for the dead. The Positivists and the Catholics do at least remember on a day

definitely fixt in their calendars those who were with us but who are not, because they have past hence. Christmas ought to be one day of the dead. A great change is coming over the world before long on this matter. The consciousness of the continued existence and unbroken intercourse of the so-called dead with those who linger behind yet a little while is deepening. It will ere long demand clearer and more definite expression. The Protestant Church sings of the army of the living God, of which the vanguard has past the river of death while the rest are passing on. It asserts its belief in the communion of saints. But the memory of the dead is regarded as something too sacred to be spoken about, and as a result the dead soon cease even to be a memory. This ought not to be. Our dead are no more dead than our boys are dead when they leave home to attend college or university. At such a season as Christmas we should feel it an exercise of solemn joy to recall their memory and to renew our fellowship with them. To some of us the consciousness of reunion will be mutual. But to all who have past beyond it will be very real and satisfying.

It may be said that we should remember our dead at all times. But as what is everybody's business is nobody's business, so what is the duty of every day is apt to slip out of every day unless one day is specially set apart for its performance. That is the *raison d'être* of Christmas.

London, England.

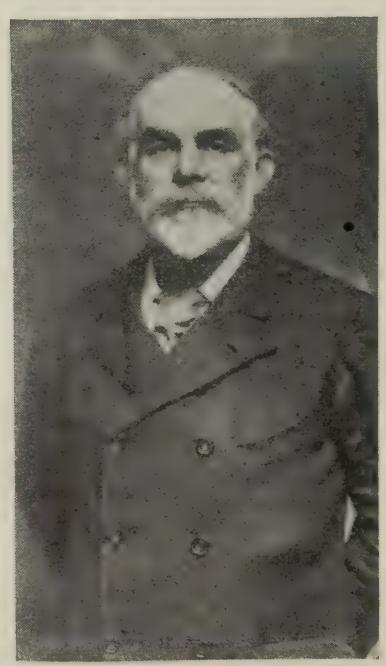
Politics and Letters in the Winter of Westminster

BY JUSTIN McCARTHY

PARLIAMENT is continuing steadily at its work, and Parliament, I may say, is at present the House of Commons, for there has been nothing lately going on in the Peers' chamber to attract much of attention or of expectation. The public galleries of the House of Commons are still empty, and the Speaker has declined to give any precise idea as to when or how or why the outer public is again to be allowed any opportunity of contributing spectators to the daily and nightly proceedings in the representative assembly. The exclusion of outsiders from the galleries has thus far been on the whole so patiently endured that many observers are beginning to ask why, if the public can thus do without any glimpse at the Commons in movement, and the Commons can do without the animating presence of an admiring audience, it might not be as well to let the Speaker's edict remain in force without making any further trouble about the whole matter. Nevertheless, I take it for granted that, when the business of Parliament becomes more interesting and exciting than it is at present, the Speaker will be called upon to withdraw his restrictions, even at the risk of having bundles of petitions or other such documents flung down from the Strangers' Gallery to the floor of the representative chamber, or even of having "Votes for Women" shrieked from the Ladies' Gallery. The impression out-of-doors is, in fact, that the House of Commons is just now and for some time will be only engaged in the passing of legislation which every one who takes an interest in public affairs has already discussed to the fullest extent and over and over again, and that no question the decision of which will have to be referred to a general election is likely to come up between the present time and the Christmas holidays.

Mr. Asquith, I must say, has been distinctly adding to his reputation during all these recent weeks. He was always known as a most ready and brilliant debater, but there existed a very common impression that when, on the death of Sir Henry Campbell-Bannerman, he was raised to the position of Prime Minister,

AUSTIN BRERETON.



the promotion was only due to the fact that somebody had to be lifted into the vacant place, and that no one could at the moment think of any better appointment. We were all expecting to have in Mr. Asquith a Prime Minister who could make vigorous and vivid speeches, and could turn off inconvenient questions by humorous and discouraging replies, but most of us did not expect that Mr. Asquith was likely to win the position of a genuine statesman. Of course, as yet he has not had much opportunity of securing for himself such a renown, but I feel bound to say that he has already given full evidence of a genuine capacity for statesmanship, even in the judgment of those who, until quite lately, regarded him only as a practised master of forensic and parliamentary skill and eloquence. The conviction, however, grows stronger as the days and days go on, that the determined policy of the Government will be to offer to the country at the earliest possible moment the opportunity of deciding at a general election the great question as to whether or not the voters in Great Britain and Ireland are willing that the House of Lords shall be allowed, whenever the peers feel so inclined, to reject every measure past by the House of Commons.

RICHARD WHITEING.

My Irish readers in the United States know by this time that the leading members of the present Government, Mr. Asquith and Mr. Birrell, of course, among them, have lately given the most positive asseverations of the ministerial resolve to stand by the principle and the policy of Home Rule for Ireland. In the meantime, therefore, the House of Commons is steadily going on with legislation which has to be accomplished as speedily as can well be done, but which has already been so fully discussed and argued over by the legislators and those legislated for that all alike have only to wait in patience for each definite settlement.

In the meantime much attention has been drawn toward the many differences of opinion which have arisen between John Burns, President of the Local Government Board, and many of the Labor members. Quite lately there has been a remarkable instance of this antagonism, in which I feel compelled to say that John Burns, himself a Labor member, did not show to advantage. On a subject belonging to the pressing question concerning the unemployed, a particular concession in legislation was sought for by the Labor members generally, and it became the duty of John Burns to explain the policy of the Government. As Burns set that policy forth it showed as if the demand of the Labor members were destined to be refused. The result was a fresh debate, during which Mr. Asquith rose as Prime Minister, and found himself compelled to explain that the President of the Local Government Board had somehow misunderstood the intentions of the Cabinet and that those in-

JOHN BURNS.

tentions were to concede the demand made by the representatives of Labor. It was not, perhaps, a very serious mistake and could in any case have been easily and promptly rectified, as in fact Mr. Asquith did rectify it, but it produced no small sensation among the Labor members, and indeed among many other members of the House, to find that the misconception had been made by John Burns, himself the most distinguished of all the parliamentary representatives of Labor. Here and there and everywhere one heard it suggested that John Burns had been converted or perverted from his views as to the rights of labor by the fact that he had been created a "right honorable" and a member of the Cabinet and endowed with a splendid salary.

Now I have known John Burns personally for a great many years, and I am perfectly satisfied that his possession of high office and of a large annual stipend had nothing whatever to do with his judgment as to this or that political question coming within the range of his department, and that he is just the same true-hearted and public-spirited John Burns as he was when only a Labor member and without the faintest expectation of a seat in the Cabinet and a large annual income. But we all know that when in any department of life a man is suddenly raised to a higher position than that held by any of his fellows these fellows are only too often ready to believe that his remarkable success has put him out of sympathy with the humbler wants and claims of his early associates. Of course it has also to be borne in mind that a man like John Burns, who had for years been advocating with absolute sincerity and with great capacity the wants and the claims of his own laboring class, might well have found on coming into executive office that the funds at the disposal of the Government, drawn as they are from the general taxation of the country, did not by any means allow the Ministry to spend on behalf of the working classes the vast sums of money which this or that enterprise in beneficent legislation would have called upon them to do. We have seen over and over again that this conviction has been forced on many and many a most sincere and devoted reformer when he is raised from the comparatively irresponsible position of a mere unofficial reformer into that of a Cabinet Minister, responsible to the whole rate paying public for the use which he proposes to make of the national funds. So sincere a reformer and so patriotic a man as John Bright told me more than once of the painful difficulty in which he found himself when on his acceptance of office as President of the Board of Trade it became clear to him that the means within his disposal would not allow him to go nearly as far in beneficent public expenditure as it was still his unalterable desire to do. While, therefore, I sincerely regret that John Burns should be brought into any position of difficulty and antagonism as regards the Labor members generally, I feel firmly convinced that he is as sincere and devoted an advocate of the just claims of the laboring classes as he was before he had ever obtained a seat even in the House of Commons.

We have had some literary work brought out during the past few weeks which has promise of an abiding place in the language and even of casting its light thru the medium of the translator into foreign places. In work of this kind thus lately brought out I think I can promise an abiding place to Richard Whiteing's volume called "Little People," publisht by Messrs. Cassell & Co., of London and New York. In the opening lines of his first chapter Mr. Whiteing tells us that "The Irish have a beautiful fancy, but you must know them and they must know you before they will make you free of it." Then he goes on to tell us that thus instructed "you have only to rise at dawn to see the Little People going home." We further learn from him that "The Little People are the ancient inhabitants of the country, still waiting for a turn of the luck, and meanwhile lying low." Then he asks us whether the Little People are not only a section of the quiet folk who form the vast majority of our kind? This then is our author's apologue and it points the moral of his exquisite volume of essays. I am inclined to think that this one small volume is on the whole the most remarkable accomplishment Richard Whiteing has yet achieved in that world of literature where he has already won for himself so especial a fame. Profess-

edly "Little People" is only a volume of humorous, pathetic, imaginative, and realistic essays on the men and women who do nothing particular in this world and of whom it may be said that "every one of them, in his secret heart, dreams of being somebody, somewhere, some day, if not of a whole millennium of mastery over the powers of this world."

The pages of "Little People" are poems writ in prose; they are thrilling with pathos, sparkling with humor; they are character sketches from real life, and even from realistic life, while here and there they become fanciful dreamings from a world of imagination. Some of my readers may think when glancing over these words of praise and before they have read Mr. Whiteing's volume that I am carried away too far and too fast in my admiration for the gifts of the author, but I venture to say that those who read the volume will be ready to vie with me in my enthusiasm for this latest of our author's productions. Richard Whiteing is in fact a man of genius and is destined to make an abiding name in the history of his country's literature. There are times when I cannot help thinking that Whiteing might have done better for himself, in the merely practical and paying sort of way, if he could have made up his mind to mold the book into the form of a novel and thus have secured for its pages that vast number of novel-readers who probably never could be induced to settle down to the study of a collection of essays, and especially of essays like these which at the first glance over them seem to put something like a tax upon the intellectual faculties of those who borrow their books from the most convenient library. But I am sure that no such consideration as this would ever have tempted the author of this volume to obey any impulse except that of his own artistic nature. Whiteing has chosen his part in this as his other works, and his choice will find its most appropriate and most treasured reward.

To Americans who love London, the publication of Mr. Austin Brereton's "Literary History of the Adelphi," issued with excellent illustrations by T. Fisher Unwin, London, will be a peculiarly welcome book. For if perhaps no part of old London is more interesting from its earliest to its latest associations than that tranquil region at the back of the roaring Strand which is known as the Adelphi, from the names of the two brothers Adam who stamped their individuality upon it, certainly no one is better acquainted with its most intimate history than Mr. Austin Brereton. He says of his subject very happily that there "is no part of London of which a man can be in less apprehension of tiring than the Adelphi. It is of London, yet away from it; in the heart of the world, yet secluded. To know it is to love it." Certainly those who do not know the Adelphi must learn to love it from Mr. Brereton's packed and fascinating pages, and those who already know it and love it will but love it the more for having its history so pleasantly and profitably related to them. Mr. Brereton has a winning method of conveying the information with which his memory is stored and his book is a serious as well as an entertaining contribution to a subject that never can be old or stale, the history of London. Greatly welcome for the sake of its subject, it can be read with unfailing pleasure and laid down with cordial approval.

London, England.

From Growth, Knowledge

BY EDWIN L. SABIN

When fell the first keen blow
  Cried I, in bitter pain:
"There's naught but tears for future years"—
  And yet I smiled again.

And came a second grief.
  Cried I: "Oh, broken will!
My work is thru; I cannot do"—
  And yet I worked on still.

And in a third dark hour:
  "The heart no more can give,"
Cried I. Each breath (meseemed) was death—
  And yet, behold, I live.

We live, we work, we smile;
  The wound becomes a scar:
God wills it so, that we may know
  How strong His weakest are.

Denver, Col.

The Expansion of Wall Street

BY JOHN MOODY

[Mr. Moody has for some years been widely known in banking circles and as an author of works on financial and economic questions. He is the editor of *Moody's Magazine*, and among his books are "The Art of Wall Street Investing," "The Truth About the Trusts," ""The Investors' Primer," etc.—EDITOR.]

IN its larger sense the term "Wall Street" means more and has a much more intimate relationship to the nation at large than one is apt, on first thought, to realize. When Walter Bagehot wrote his "Lombard Street," nearly forty years ago, he confined himself entirely to a description of the mechanism of the English money market. And the title of his book was in no sense a misnomer; at least not for those days. But today, if one were to employ the term "Wall Street" as the title of a book describing the American financial center, one would find it necessary, in order to do adequate justice to the subject, to cover an enormously greater field than was attempted by Mr. Bagehot in his little classic on the London money market of forty years ago.

But not only has the modern Wall Street far outgrown its former geographical limits, but it has expanded and ramified greatly within the past two decades in respect to its scope, its character and the methods employed for carrying on its important and ever growing operations. From a banking and financial center of ordinary type, radiating out from an ordinary Stock Exchange as its chief institution, Wall Street has, within twenty years, so vastly changed that the Stock Exchange has become, in relation to many other important functions which are performed, only one of many parts of the mechanism of the "Street." Since 1888 the mechanism and general character of the business of Wall Street have undergone fully as radical transformations as has the Street's outward physical appearance. Twenty years ago the pedestrian could not regard himself as being in the Wall Street district unless he found himself south of Pine street, east of Broadway, north of Beaver and west of Pearl streets. Within that small district of a few squares he might feel the Wall Street atmosphere, but wandering a block from it in any direction he would really be as far removed from the "financial maelstrom" as he would today in the boro of the Bronx. And within that limited district of the bulls and bears he would see little that in appearance would seem exceptional or extraordinary. In other words, Wall Street in those days was very much like any other street. The buildings were commonplace, and most of them very old. Drexel, Morgan & Co.'s building, six stories high, with its marble exterior, was a notable structure; and when the Mills Building, nine stories high, was erected, its massive proportions and great capacity were the greatest of sensations. Exchange place and Broad street were nests of old-fashioned, tumble-down rookeries, filled with exchange members, stock brokers and "two-dollar traders." To be fifty feet south of Exchange place meant to be outside of the financial district. This was equally true of any location on Wall street east of Brown Brothers' building.

But to refer to the financial district today we must include all lower New York. The wonderful sky-line of New York City, with its dozens of towering skyscrapers, a grand panoramic view of which we get from the North River, is, in a very real sense, "Wall Street." All that section from the Battery north to Cortlandt, John and Fulton streets we now find is embraced within the financial district, while to the west of Broadway, nearly to the river's brink, are banking firms and institutions, and in the direction of the East River Wall street has appropriated practically all the territory. And added to all this great spreading out of a generation is the wonderful growth up into the air; blocks and blocks of fifteen, twenty, twenty-five and thirty story buildings, with every few months adding more and greater structures—all this wonderful evolution in lower New York is Wall street's doing.

But this is only the beginning of the

story. Today we find sections of Wall Street in other parts of the great city. There is a center on Thirty-third and Thirty-fourth streets, where numerous brokers have their offices; another group are to be found at Forty-second street and the Grand Central Station; still others further to the north, and on the Brooklyn side of the river, many large houses, doing an extensive Stock Exchange business, are located. Banking institutions of the various kinds, emanating as it were, right from Wall Street, where their control is lodged, and from whence they get their guidance and backing, will be found sprinkled thruout all the five boros, up into Westchester county on the north, and far out into the newer sections of the Greater City on Long Island.

So much for Wall Street's geographical expansion within the great metropolis. But the Wall Street of today is not confined within the limits of a single city. While it has been spreading all over New York, it has also been "taking root" and growing up in other parts of the country. A generation ago it was not possible to do business satisfactorily on the New York Stock Exchange unless one were either in close touch with a broker in New York or in one of the other large Eastern cities. But nowadays one can get stock quotations and have orders executed in a hundred cities in the United States and Canada just as quickly and satisfactorily as can the man who is standing at a ticker next door to the Stock Exchange. The development of the "branch office" and "wire house" business since the early '90's has revolutionized the methods of stock trading. There are many houses in Wall street today which maintain dozens of branch offices in different parts of the country, all connected by private wire; and there are many others which maintain private wires to other brokers and to ordinary correspondents. In fact, in most any city of twenty thousand inhabitants or over from the Atlantic to the Pacific will nowadays be found up-to-date facilities for giving orders for immediate execution on the New York Stock Exchange.

But as pointed out at the beginning of this article, the business of the Stock Exchange is only one of the many sides of the modern Wall Street. While sales of a million shares mean only a normal day for the Stock Exchange, and the sales of bonds run into the millions daily, yet the buying and selling done outside the walls of the Stock Exchange are frequently of far greater extent and often have greater significance. For the vast development of the corporate enterprises of the country, with the greatly increased demand for investments of all kinds, has brought prominently into the field two new divisions of the great Wall Street mechanism, both of which have spread out to an almost boundless extent during the past ten or fifteen years. These are the investment bankers and the curb brokers; one filling a purely investment field beyond or outside of the scope of the ordinary functions of the Stock Exchange, and the other occupying a special and unique speculative field. The investment bankers seek to develop and to cater to the conservative investment interests of the country. They are not brokers in the ordinary sense, but usually sell bonds and selected stocks on their own account. Many of them are members of the exchanges, but many are not. Nearly all of them make a specialty of certain lines of bonds or other securities, and all, who are well establisht, large and permanent, make an effort to give expert advice on investments, and offer only those classes of securities which measure up to certain standards or pass particular analyses.

Like the stock brokerage field, this purely investment division has adopted twentieth-century methods of development and expansion. Having had its real birth less than twenty years ago, the "bond business," as it is ordinarily termed, has long ago caught up to, and even forged ahead of, other financial lines in devising ways and means to build itself up. The old-fashioned notion of the conservative bond dealer, as of the banker, was to sit in his office and wait for business to come to him. If it did not come, then he got along without it. But not so the modern investment banker. He goes after the business; not merely by advertising, but by sending men out on the road. Ten years ago this custom had developed to considerable extent as far as the savings bank and insurance fields were concerned; but the present day custom of sending bond

salesmen to scour the country, look up and interest individual investors, is chiefly a development of the present decade. Some houses have developed very large organizations for this special work, and keep dozens of men on the road all the time. Others maintain branch offices in different cities, just as many of the stock brokers do, and keep in touch with the investment fields of particular localities thru permanent representatives.

When it is realized that this country probably contains from two to three million individual investors, whose separate holdings perhaps average about $1,000 each, it will at once be seen that there is an enormous field for development still open to the investment banker; and it is quite safe to say that this particular side of the general Wall Street expansion will see much further growth within the next decade.

The development of the Wall Street curb market is a phenomenon which has kept pretty even pace with the purely speculative inflation which we have witnessed thruout the country during the past five or six years. This is not to say that all curb transactions are speculative, nor that all curb securities are of a speculative character, for a great many are just the reverse. But the "curb" is essentially the field to which the speculative issue naturally gravitates. Here you will find the market for the mining stock and the "get-rich-quick" scheme; new or "unissued" issues, unlisted industrials and "cats-and-dogs" will be quoted and dealt in here, side by side with many high-grade securities which happen not to be listed on the Stock Exchange. The growth of the industrial trust and the public utility development of recent years has had much to do with the expansion of the "curb." Prior to 1898 the curb market was a comparatively small affair, and its dealings were limited largely to a few stocks. But with the days of the reorganization of the great railroad systems of the country, when many new issues of stocks and bonds were being brought out, and many temporary issues were seeking a market, the curb took on new life and began its career of rapid expansion. The industrial combinations which began to follow thick and fast about this time had a further accelerating effect on the curb market, and the number of securities regularly dealt in and quoted began to run up into the hundreds.

With the growth of the curb market itself, the "outside" security business has developed in several other directions. For instance, there are now many concerns which make a specialty of buying and selling unlisted and ordinarily unquotable securities; one or two houses having developed this branch of the business to such an extent that they are able, on a moment's notice, to furnish quotations on from fifty to one hundred thousand different securities. These unlisted security houses also have correspondents stationed thruout the country.

But the real growth of Wall Street is more clearly demonstrated, in a large way, by showing its modern connection, in an official sense, with the great corporate undertakings thruout the United States. Not only in the railroad field is Wall Street a dominating factor, but all the great industrial, public utility and other enterprises, regardless of location, are both financed and practically carried on thru Wall Street channels. Twenty years ago, when the railroad mileage of the country was 30 per cent. less than its total of today, and when the entire capitalization of all American railroads was under nine billions of dollars, possibly one-third of all outstanding steam railroad securities were quotable in Wall Street, while perhaps about the same proportion of the total railroad capital and mileage was controlled by so-called Wall Street interests. But today, with railroad mileage exceeding two hundred and twenty-five thousand miles, and total capitalization running up to fifteen billions, we find that more than 75 per cent. of all railroad securities are quoted in New York, and that all the vital railroad mileage of the country, that is, about 93 per cent., is directly represented in an official and definite sense in Wall Street.

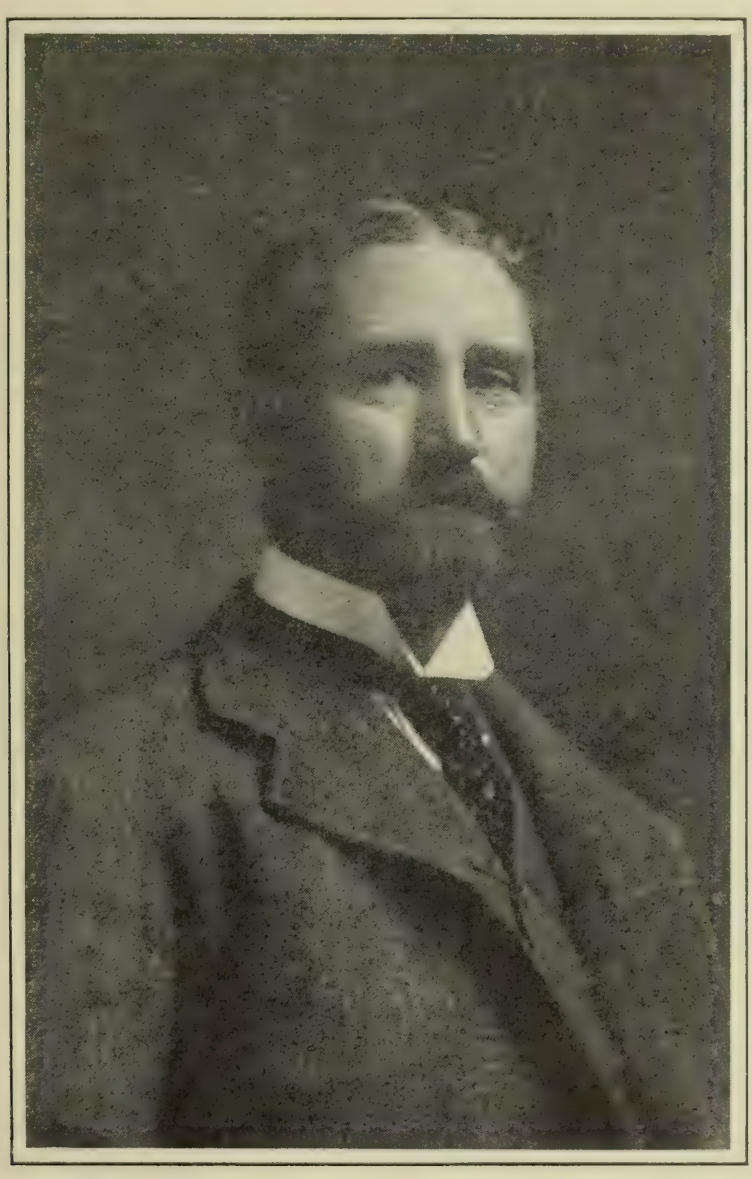
Turning to the industrial field, the changes of a generation are far more noticeable. In 1888 the trust movement had hardly begun; very few industrial undertakings were in such large corporate form as to justify active Wall Street connections. But since that time practically the entire industrial interests of the country have assumed the so-called trust program, and have gone into the

corporate form on the largest conceivable scale. The iron and steel industry, for instance, which twenty years ago was entirely under local control in various parts of the country, has now been concentrated, thru the formation of the United States Steel Corporation and its few large competitors, all being entirely controlled from the Wall Street end. This same general fact is true in relation to other great industries, such as tobacco, rubber, cotton oil, copper, sugar and a hundred others. Even the purely commercial lines, such as department stores and other retail shops, mail-order enterprises, candy stores and barber shops, have gone largely into corporate form, and are controlled in a financial sense in the Greater Wall Street. The nickel in the slot machines, the moving picture exhibitions and many other "catch-penny" enterprises are under the control of large corporations whose securities are quoted in the Wall Street fields. It has been recently estimated that out of a total of approximately ten billions of dollars of capital represented in this country in industrial corporations something like 70 per cent. have Wall Street connections.

But the most striking phase of the growth of Wall Street control in corporate undertakings is undoubtedly to be found in the field of public utility enterprises. With the coming in of the trolley and the electric light in the '80's and '90's an enormous impetus was given to the field for investment in franchise undertakings, and this was greatly added to by the rapid development of the telephone and the new adaptations in various ways for the use of both gas and electric light and power for purposes outside of that of mere illumination. At the beginning most of these enterprises were promoted by local capital, but as development went on, and as the natural tendency of competing franchise corporations to get together made itself more evident, larger aggregations began to enter the field, many of these being promoted by capital from Wall Street channels and other large financial centers. Thus, in the course of a decade, practically all the gas, electric light and traction systems of the larger cities of the country were under the more or less direct control of Wall Street interests; and this control has, within the past few years, been intensified rather than the reverse. But beyond this clearly evident tendency in the public utility field, a further movement has been in progress within the last five or six years, of which the average individual is not aware, but which is having a far-reaching effect. This is the development of the public utility holding company. There are now in the neighborhood of twenty-five or thirty large holding companies mostly all of which are within the financial control of Wall Street, which themselves own or control, by stock ownership or otherwise, many hundred companies in the gas, electric light and trolley fields which are in operation in different parts of the United States and Canada. With the growth of these companies the local control of the franchise or public utility concerns in our smaller towns and cities is rapidly passing away, and connection with the Greater Wall Street is becoming closer year by year.

A broad expansive view of the entire matter will demonstrate the fact that the modern Wall Street is an institution which reaches out in both a financial and supervisory sense into all vital fields of enterprise and industry in this country today. The growth of the country, therefore, in population, wealth and material resources, means, in a very real sense, the growth of Wall Street. It is the clearing house or center of control or superintendence of the great workshops of the nation. This does not mean that the industries of the country are, as is often said, "owned" by Wall Street. On the contrary, but a small proportion of the thirty-odd billions of corporation securities in this country are actually "owned" or permanently held in Wall Street. The actual owners are the two to three millions of individual investors who are scattered all over the country and thruout Europe and other parts of the world. But these owners are, of course, chiefly silent partners. They do not operate their enterprises, nor do they aspire to. This is the commission which is delegated to the Greater Wall Street, and is its chief *raison d'etre*.

New York City.



The Support of Higher Education

BY HENRY S. PRITCHETT

President of the Carnegie Foundation for the Advancement of Teaching.

THE common experience of civilized nations has resulted in the general policy that common school education is the duty of the State and should be supported by taxation. With respect to the support of higher education there is no such uniformity of practice. In nearly all States of the Union, however, higher education in some of its phases is also supported by taxation, and in the great majority of the States this support extends to all branches of the higher learning and to the professions. Both in the United States and in Canada this support comes from the State or Province. In neither country does the central government undertake to deal with education.

To this well-settled policy there have been noticeable exceptions in the United States in the appropriations of the proceeds of the sale of public lands to the support of agricultural and mechanical colleges. The administration of such funds, however, is turned over to the various States, and the result is practically a gift to the State.

HENRY S. PRITCHETT.

The precedent established by the Mor-

rill Act is constantly invoked in the United States in the effort to obtain further aid from the general government for local schools of various kinds. The most persistent effort in recent years has been that made in the interest of mining schools and agricultural high schools. If this is successful a similar effort will at once be begun for the establishment of commercial schools. A number of those interested in education in the South have advocated national help in the establishment of county high schools. This whole effort is a part of the recent movement to turn to the general government for aid in every possible cause. In my judgment, such legislation is contrary to true public policy. There is no more reason why the United States should pay for a mining school in one State than for a commercial school in another. Once this door is open, paternalism of the most demoralizing kind is invited. The problem of education is one for the municipality, the county, and the State to solve. There is no more uncomfortable evidence of the demoralizing effect of government aid than the spectacle of a great and powerful commonwealth applying thru its representatives for assistance from the United States Government to found and maintain schools for which the State itself is abundantly able to provide. The way to better educational facilities in these States lies along the path already traveled, in the development of local schools, the maintenance of good standards, and, above all, in the development in each State of an enlightened public opinion. This process means the education of a whole State, a process which no free gift can help. There are to my thinking only two groups of our citizenship for whose education a State may with dignity and justice invoke the aid of the United States Government—these are the Indians and the negroes. Both of these are in one sense wards of the nation. Neither came into his present position by his own volition. For that situation the country as a whole is responsible. The burden imposed by the ignorance of both of these groups is in a very real sense a national matter. Here, if anywhere, a State might be justified in asking the co-operation of the whole country in solving the problems of education.

With respect to higher education two radically different plans are in the process of development in the United States, one, that of the university or college supported by tuition and private endowment, the other, the university or college supported by taxation and governed therefore by the State whence its support is drawn. While these two systems of colleges and universities are growing contemporaneously they are characteristic of different sections of the country. In New England there is but a single State university, while in the West, with few exceptions, the privately endowed institutions are overshadowed by the great State universities. It seems clear that a privately endowed university in a State where higher education is supported by taxation has a somewhat different function from that of a university where this is not the case. Such institutions as the University of Chicago, Leland Stanford Junior University, and Washington University, St. Louis, standing in States where university education is practically free, have very different obligations to general education from Harvard or Columbia, which do their work in States where university education is not supported by taxation.

The colleges of the older States—New England, New York, Pennsylvania and New Jersey—sought and obtained in their beginnings State aid. In the end, however, they abandoned the effort to obtain support from their respective States and decided to depend on tuition fees helped out by the support from private giving. This action was partly the result of denominational effort to control colleges, but the outcome was in the main due to distrust of State control and the political interference which was considered inseparable from it. In addition, the difficulty of securing adequate support from a State seemed at that time far greater than that of securing it from individuals.

The experience of the last two decades has greatly modified this view. It is true that the State universities were launched upon the uncertain sea of political management. But the very cir-

cumstances of their life made it necessary to undertake the education of an entire State as to the value of education itself and the obligation of a great commonwealth to support higher education generously. Slowly, but none the less surely, the stronger universities in the more progressive States have secured freedom from unwise political interference. The alumni of these institutions now form a most influential part of the citizenship of their States and help to form public opinion.

Furthermore, with the help of a fast developing public opinion, the governing boards of these institutions—chosen for long terms—have shown that it is possible to secure thru ordinary political action competent boards for great institutions of learning. The late William F. Vilas, some time United States Senator from Wisconsin and a member of President Cleveland's Cabinet, rendered for many years conspicuous service as a member of the board of regents of the University of Wisconsin, and upon his death left to the university a bequest of a large sum of money, a gift whose disposition gave evidence of his close and intimate knowledge of educational conditions and of the university's needs.

The most impressive feature, however, of the advance of the tax-supported institutions is the generous support rendered them by their respective States. Several States now contribute annually a million dollars each to the support of their State university, and in some States the bulk of this income comes in the form of a mill tax, which is rendered without action of the legislature and which increases automatically with each revaluation of State property. A million dollars a year is, however, a very modest sum for a great and rich State like Wisconsin, or Illinois, or California to spend on its State university. These institutions may confidently expect incomes far larger than any privately endowned universities can hope to enjoy. It is clear that State support of education in a commonwealth educated to that ideal is the most generous and constant source from which such support can be drawn. The history of institutions like the University of Maine and the Pennsylvania State College shows how quickly the people of even the older States respond to the demands of their State college. It is not to be expected, or desired, that the well-endowed universities and colleges of the New England and of the Middle States will ever seek a closer relation with their State governments, tho they are almost sure to cultivate a closer relation to the State system of education. It is not unlikely, however, that other and younger institutions may find in these older States both a wider opportunity and a surer ground of support in some relation to the State government.

There is one feature of State support of education which is worth noting. In the earlier days the State university president was expected to lobby for his annual appropriation. In the better institutions that day has gone by. The State university president goes before a committee of the legislature with his budget. He appears there not as a beggar but as a State officer, exactly as the head of a government bureau goes before the committee of appropriations of Congress. He submits to whatever questioning on these estimates the committee desires to make, but having made his statement he will, if he be a wise man, throw the entire responsibility for making or refusing the appropriation asked for upon the legislature. His duty is done when his case is fairly and fully stated. On the whole, this position is a far more dignified one than that of the college president who undertakes to solicit money from individuals. The process is also far less expensive in the time consumed from the normal administrative duties.

When one leaves out of consideration the group of well-endowed institutions on private foundation and the group of universities and colleges receiving a generous support from taxation—in all not more than one hundred and twenty-five institutions—it must be confessed that the remaining American colleges obtain a very precarious and uncertain support, pieced out by a system of unremitting appeals to individuals and the public.

Three causes have combined to make college begging in the United States assume a magnitude and an influence on the efficiency and morality of those con-

nected with education which is unknown elsewhere. These are, first, the multiplication of so-called colleges thru denominational, local, or State rivalry; second, the increased cost of college work, partly due to modern laboratory methods and partly to the effort to teach all subjects; third, the example of a few generous givers to education, whose wide generosity has helped to inspire the belief that any college can get support if it begs efficiently.

Few persons, even among the teachers or officers in the stronger and better supported institutions, appreciate what a factor the solicitation of money has become in the life of many colleges. In some of these the president's chief business is to beg, and he has little time left for any other. When he has secured the promise of $50,000 on condition that he raise three times as much elsewhere, all other considerations go by the board while this sum is being begged. Three years of such a life has thoroly demoralized some good colleges. It is interesting to note that some of the denominational colleges in recognition of this tendency have appointed an official college solicitor, who is not the president, thereby giving the latter the opportunity to attend to his legitimate duties.

One very serious outcome of this situation is the tendency to secure a college president on the basis of his ability to get money rather than on the ground of his scholarly and moral fitness. A well-known giver to small colleges wrote concerning a newly chosen president: "Can he get money? It takes a smart man to get money." The tendency of this whole system is to bring in smart men who can get money rather than scholars and leaders.

The support of many colleges is seriously impaired by the discriminations made in favor of particular classes of students. Most denominational colleges, for example, remit tuition to students who announce their intention to prepare for the ministry and to the children of ministers. Any college president who has had to do with the distribution of trust funds to students realizes how quickly such discriminations affect the point of view of the student body. It is difficult to favor certain classes of students by financial assistance without doing more harm than good, and if there is one man more than another who needs to stand on his own feet it is he who aspires to be a religious leader.

Over and above all this, in a number of colleges in the South and West particularly, college rivalry has led not only to a most undignified solicitation of students but to a shading of tuition fees to the loss of the college income. A sharp parent can often secure by pitting one college against another a large reduction in tuition, if not its entire remission for the first year. The whole process is demoralizing, and there is nothing in American college life comparable with it except that form of college graft under which successful athletes are steered into college and university athletic teams.

The financial side of the administration of colleges has perhaps been one of its weakest parts. One reason for this has been the lack of care in the selection of governing bodies. A large proportion of those who sit on boards of trustees in colleges have no conception of college work, and have shown little readiness or ability in the handling of even its financial responsibilities. In many cases the boards are large and unwieldy, made up of men who have little knowledge of the college and who are wholly unprepared to assume any active part in the financial administration. The so-called "practical business man," when elected to such membership, has rarely taken it seriously and has still more rarely justified the wisdom of his choice. The Carnegie Foundation expects to present in the form of a bulletin in the course of the coming year an exhibit of the form of organization and government of all colleges in the United States and Canada, in the hope that an exhibit of the present conditions may lead to a more careful consideration of the form and personnel of the governing boards. One of the serious difficulties of most colleges is to find in their communities men who are capable of assuming the duties of trustees and who are willing to give the time and effort which ought to go to the performance of such duties. The practice of appointing on such boards prominent men who have neither

the experience nor the time to attend to the duties of a trustee is one that ought to disappear. Dummy trustees in a college board are as much out of place as in the board of directors of a life assurance company, and their presence is likely to bring similar results.

That the claims of deserving colleges should be set before the public is evident. That it is a duty of public-spirited men of means to give to such colleges is equally clear. How to seek such aid effectively with dignity and modesty, or how to give it with wisdom, is not so easy a matter. The ordinary intelligent man of wealth has no means of judging between the genuine college, which has a real work to do and which ought to be helped, and the imitation college. As a rule, the man of large means who gives money to a college does so on the solicitation of some friend of the college and on the general assumption that all institutions calling themselves colleges deserve help. The notion that every enterprise which calls itself educational ought to receive the money it asks is quite as far from a sound policy as the assumption that every individual who applies for money is entitled to aid. An institution calling itself a college may be a true center of education, or it may be drawing to its halls students who are receiving stones instead of the bread they would have received had they gone elsewhere. In the long run, the raising of standards and the gradual education of public opinion will make a discrimination between the college which is needed and the one which is not. Such an educated public opinion will rate the honest and efficient academy above the insincere and superficial college.

Meantime, it is clear that the trustees of every true college should see to it that the college for which they are responsible enters upon a rational and just financial policy, the beginning of which is common business honesty, the sort of honesty which exacts a fair price for its service, furnishes the service it undertakes to provide, and pays its obligations promptly and fully. Such a college will not have one standard of admission in its catalog and another in its practice; it will not print a tuition rate and shade it to meet competition; it will not engage its professors at one salary and at the end of the year pay a lower one; it will not advertise high-sounding courses of study to attract students and place the conduct of such courses in the hands of inexperienced boys. Many a college which could pay fair salaries to its teachers and offers a fruitful curriculum to its students is reduced to constant begging by the effort to cover the whole field of human knowledge. Their courses of study remind one forcibly of the bills of fare at the ambitious hotels in small towns where one finds a long and complicated printed menu, but seeks in vain for a simple and wholesome meal. Poor financial management, the unfitness and lack of devotion of trustees, and the habit of dependence on continuous begging are all intimately connected with low college standards, and superficiality and inefficiency in education. The student body which lives in an atmosphere of continual begging is unfortunate.

How We Say It

BY TUDOR JENKS

QUAINT Tom Tusser's farming rhymes,
Writ in Good Queen Bess her times,
Live, in fragments, through the ages.
(*Vide* "Bartlett's" useful pages.)
So we know that it was he
Who bade all should playful be
At Yuletide, and should "make good cheer,
For Christmas comes but once a year!"

Ancient Tusser could not know
Into what the day would grow:
Endless shopping, special sales,
Postcards, fees, tips, gifts, and vails.
Still, his lines come not amiss,
Since we change the emphasis:
We can say, "Yes, make good cheer,
For Christmas comes but *once* a year!"

NEW YORK CITY.

Postal Savings Banks

BY CHARLES E. SPRAGUE

President of the Union Dime Savings Institution, Formerly President of the Savings Bank Section of the American Bankers' Association.

THE article by Postmaster-General Meyer in The Independent for November 5th, is doubtless as strong a presentation of the case for postal savings banks as can be made. It has, however, two serious defects: First, some of its chief premises are untrue; second, erroneous conclusions are drawn from correct premises.

Mr. Meyer's first statement is that "there are 1,453 savings banks in the United States," and that "this shows that adequate facilities are not being provided for many of our people to deposit their money." This is entirely misleading; there are in the United States more than 15,000 institutions which receive savings deposits. I will explain how Mr. Meyer fell into this gigantic error.

In a few States of the East the line is sharply drawn between "savings banks" and "banks," the latter being the commercial institutions. But in all the States west of New Jersey, under the laws there prevailing, the functions are mixt. The State banks, the National banks, the trust companies, almost without exception, receive and solicit savings accounts; and many of the so-called savings banks do a commercial business, in fact, a few of them do no other.

Even in this State, while the savings banks confine themselves to their legitimate function, some other corporations (wrongfully, in my opinion) strive to entice the savings depositors by "interest departments," "special accounts," etc., one bank even going so far as to imitate the color of the passbook of a neighboring savings bank. This is all wrong; but in States where no genuine savings bank system exists, the national banks, the trust companies, and most especially the small local State banks perform this duty and perform it well. The many excellent "building and loan" or "coöperative savings and loan" associations, existing all over the country, also fill the same function.

I therefore deny the statement that "adequate facilities are not being provided for many of our people to deposit their money." I have never heard a complaint of such inadequacy except from one lady. She hoped our bank would circulate those little steel boxes as receptacles for small deposits; she had never saved anything yet, and could not save unless she had the facilities. I found upon inquiry that she lived at the Waldorf-Astoria, with two savings banks, two trust companies, two national banks and a State bank, all within a hundred yards of that hostelry!

Mr. Meyer quotes the fact that $8,000,000 in money orders were purchased payable to the buyers themselves, "thus indicating that this sum was deposited with the post offices for savings purposes." "It shows also that there is a timid class which has only faith in Government institutions and that there are people who are so anxious to have a Government depository for their earnings that they are willing to pay Government for keeping it [them]." The trouble with this reasoning is that the fact by no means "indicates" nor "shows" the conclusions. I can state something which will largely account for the fact of the orders payable "to self." Actors, and probably other traveling persons, take this means of deposit, not from timidity, not from any special faith in Government custody, but for the simple reason that they wish while "on the road" to get their money carried to some large city where they expect to arrive at the end of the season. As they express it, they don't want to spend a dollar in a J. town (what the J. stands for I don't know), but they are very desirous of being able to spend it on Broadway, and the Government charges a very low fee for transporting their earnings to New York or anywhere else. Of late years they are more apt to make their money orders payable to a savings bank; twen-

ty-three such deposits reacht one savings bank at one mail delivery this morning. Actors are not such spendthrifts as some suppose.

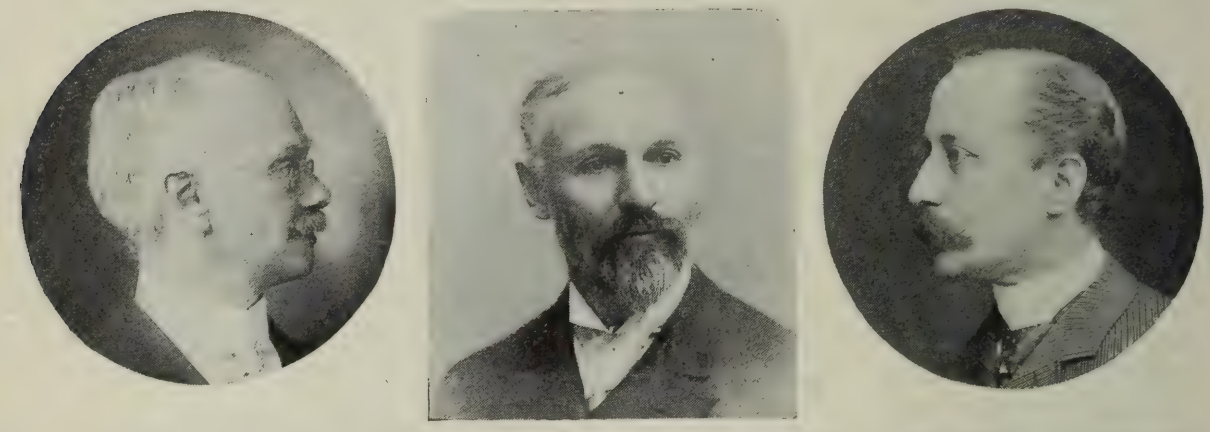
That $100,000,000 were sent thru foreign money orders does not prove that it was sent to deposit in postal savings banks over there, and I don't believe it was. In so far as it was sent by immigrants, it was mostly for two unselfish purposes: To assist relatives to live, where living is harder than here, and to bring those relatives over to our country. Mr. Meyer says that these foreigners "will not deposit in private banks." But they do deposit in the worst kind of private banks—those strictly private ones not subject to any supervision, whose only recommendation is that the banker speaks their own language. He in many cases departs, leaving his clients desolate and moneyless, and he may or may not have used some of those $100,000,000 of international money orders to carry away the proceeds of his robberies. I have during many years talkt with many recent arrivals who had not yet learned English, and have found no evidence of that special feeling of confidence in governmental institutions which Mr. Meyer alleges.

Mr. Meyer charges the opponents of his scheme, who are officers of banks, with either "misunderstanding of its purposes or purely selfish motives." It certainly is not the former, for they are the men who probably understand the banking and the savings situation far better than Mr. Meyer, whose knowledge of banking matters appears, from his biographies, to be entirely theoretical. That the postal savings banks would not injure *existing* financial institutions; in that I quite agree with Mr. Meyer, and also with the bankers of the country, selfish or unselfish. But probable *effects* should be studied as well as purposes; and it is believed that while postal savings banks would not cause any now existing savings banks or other depositories to close their doors, they would certainly retard or preclude the organization of the small bank, which is doing such good work in the Northwest, building up the business and the industries of small communities.

The reason why the banking men of the country are the chief opponents of the postal savings scheme is because they are precisely the men who know most about the subject.

In time of panic what the people want is currency. Very few savings bank depositors had any fear of the ultimate solvency of the banks in 1907—they simply wanted to have the money at once. Had their deposits been in postal banks they would have been just as eager to draw and hoard or sell that money as any other money, and the Government would have had to refuse payment of that which it had agreed to repay on demand. The national banks would not have retained the postmasters' deposits, but would have very largely have had them loaned out in Wall Street. There would have been exactly the same stringency as occurred.

Postal savings banks of a nature superior to those devised by Postmaster-General Meyer do now in fact exist without governmental intervention. Every day citizens go into the post office, fill out forms more simple than those which will be required under the proposed law, pay for a money order, and send it to some savings bank, even to the greatest one in the world if they prefer. Or they stay at home on the farm and hand their money and book to the rural free delivery carrier, who takes it to the bank in the town. There is no real lack of opportunity to save, anywhere within reach of a post office, for money can be sent by registered letter from those offices which do not sell money orders. And when it comes to withdrawing the money in time of need the process is far simpler and more prompt in the present system than it could possibly be in a system consisting of a huge office in Washington, with 40,000 branches, the bookkeeping being necessarily carried on in the central office, whither the book and draft would have to be sent for verification before payment. Canadians tell me that it is pretty easy to put money into their postal savings banks, but a wearisome process to take it out.



This country does not need to grab the pennies of the thrifty, like the European countries with their perpetual debt, which have taken the opportunity to make forced loans from the people by

the device of enacting that all moneys received by the post offices should be "invested" in the public debt. Our Government does not need the money, and cannot itself usefully employ it.

My space has only sufficed for an answer to Mr. Meyer's words. I could call attention to many other objections to the principle and to the inherent defects of the particular bill which is to be prest in Congress; its exemption from legal process, making the savings depositories admirable "fences" for bankrupts, embezzlers and thieves; its requirement that the signature of the depositor shall be written upon the passbook, facilitating forgery; the impracticable computation of interest; the accumulation of funds in Wall Street, which would surely follow from the deposits in national banks; its entire lack of any provision for the secure investment of the savings. The evils arising from dumping savings money into business banks were long since felt in the State of New York, and for over thirty years such practises have been prohibited and prevented.

As to the foreigners, "ignorant of our language and institutions," when they find an institution where their language is spoken they patronize it in large numbers and prove as good depositors, civil, reasonable and thrifty, as those of native birth, and they know the difference between 2 per cent. and 4 per cent. just as well. Who will be interpreter in the postal saving bank?

NEW YORK CITY.

Dr. L. C. Warner, chairman of the International Committee, in the center; A. E. Marling, vice-chairman and chairman for the home work, at right, and W. D. Murray, Esq., vice-chairman and chairman for the foreign work of the association, at left.

The Remarkable Growth of the Young Men's Christian Associations

BY LUCIEN C. WARNER, LL.D.

CHAIRMAN OF THE INTERNATIONAL COMMITTEE OF THE Y. M. C. A.

THE Young Men's Christian Association has the most complete system of supervision of any organization with which I am familiar. There are two agencies of supervision: The International Committee, with general oversight of all the associations of North America, and the Separate State and Provincial committees, with closer supervision of the local fields. The International Committee employs eighty-two secretaries and expended last year upon the home field in North America $221,843. This is in addition to the work of the State and Provincial committees, which expended last year $354,029.

The benefits of this supervision are shown in the growth of the associations of North America, even in a year of

1. The Montreal Y. M. C. A. Building, situated on Victoria Square. It is outgrown and will probably give way soon to a new building. 2. Wichita, Kan., Association Building, recently opened. Cost $100,000. At the rear is seen the building formerly owned by the association, but lost during the panic. 3. The new Y. M. C. A. Building for Newport, R. I. The gift of Alfred Vanderbilt in memory of his father, Cornelius Vanderbilt. Cost $110,000. 4. The new Bradford, Pa., Association Building, recently opened. 5. The San Francisco Association Building, now in process of erection. To cost $750,000. The previous building was destroyed by fire. 6. Denver, Colo., Association Building. Cost $250,000. For this building the president of the association gave a very large portion of his fortune and fully half of his time for a year in **extending the canvass.**

financial panic. There are at present in North America 1,952 associations, with a total membership of 446,032. This shows an increase during the past year of about 9,000 in membership. The last reports show 630 association buildings, an increase of 41 buildings during the year, or at the rate of nearly one new building each week. The total value of these buildings is $40,716,051, against $33,210,485 last year, or a gain of $7,505,566. The total net property owned by the associations, which includes endowments, libraries and furniture, as well as buildings, was $50,229,026, an increase of $6,500,000 over the amount reported last year. The amount reported for current expenses in carrying on the work of the associations was $6,182,926, an increase of about $800,000 over the expenses of the previous year.

Considering that we have just past thru a period of unusual financial depression, when nearly all benevolent and philanthropic work has fallen off very largely, this showing is very remarkable, and is a striking tribute to the leadership of the associations and to the high value which is placed upon their work by the general public.

When we contrast the associations of North America with those of other countries, this growth is even more remarkable. Associations are establisht in forty-three countries, and these report 7,942 associations, with a total membership of 810,892. It will thus be seen that more than one-half of the total membership of the associations of the world are in the United States and Canada. The total number of buildings reported is 1,118, of which 630, or over one-half, are in North America. The value of these buildings is $48,677,076, of which $40,716,051, or over five sixths of the total amount, is in North America, while the remaining $8,000,000 is distributed over twenty-two other countries. The remarkable preponderance of the associations in North America is even more strikingly shown in the fact that the increase in the value of buildings in North America last year is almost as large as the total value of all the buildings in other countries. If we were to deduct from the value of the buildings in other countries those erected in China, India, Japan, Korea and South America with American money, the contrast would be still greater.

THE TOWN OF TAFT, MONTANA.
One of the "hell-broke-loose" places on the Northwest frontier at which the association has practically abolished gambling by its attractive entertainments and activities on pay day.

ONE OF THE EDUCATIONAL CLASSES OF THE CHICAGO ASSOCIATION.
THE READING ROOM IN THE EL PASO, TEXAS, BUILDING.
THE BILLIARD ROOM IN THE EL PASO Y. M. C. A. BUILDING.

The most notable event in the association movement of the past year has been the erection of a building at 124 East Twenty-eighth street, as headquarters for the International Committee. This building is the gift of two noble women: Mrs. William E. Dodge, who gave the land, and Mrs. Russell Sage, who gave the money for the erection of the building. The total cost of the building, including the furniture, is a little over $500,000. It furnishes accommodations for four agencies of supervision; the home department of the International Committee, which has the supervision of the associations of North America; the foreign department of the International Committee, which employs seventy-five secretaries upon the foreign field and spent last year upon the foreign work $168,556; the Student Volunteer Movement, and the American Board of the Young Women's Christian Associations. The value of this building to these different departments of work can hardly be overestimated. It makes the work of the large corps of secretaries not only easier, but much more efficient. It affords suitable accommodations for the publishing department, whose sales last year were over $75,000; for association men; for the historical library; and for the records of various kinds which are so essential in the conduct of a work of this character. The building stands as a fitting recognition of the large and important work which these four agencies are accomplishing for the young men and young women not only of North America, but of many foreign lands.

New York City.

Aspects of the American-Japanese Agreement

BY SYDNEY BROOKS

[Mr. Brooks is one of the best known publicists in England and has done much to explain America to England and the Continent. As England is more affected by our recent agreement with Japan than any other nation, save China, the following article from a recognized English authority is of importance.—Editor.]

GREAT BRITAIN has warmly and spontaneously welcomed the agreement between the United States and Japan. It has been from the first the hope and calculation of British diplomacy that the Anglo-Japanese alliance would form the nucleus of a Far Eastern league of peace. That hope has now been realized. Great Britain, Russia, France, Japan, and now the United States, are today banded together by a series of treaties, covenants and agreements to preserve the integrity of China, to respect each other's territorial possessions in the Far East, and to uphold the principle of the open door in the Celestial Empire. Nothing more was needed to complete the transformation which the past eight years have witnessed in the politics of the Far East; and of all the Powers now pledged to maintain the new *status quo* there is none whose adherence to it gives a more lively satisfaction to the British people than that of the United States. It not only places the coping-stone on a laborious work of international peace; it also registers what is little less than a revolution in the scope and attitude of American diplomacy.

For it is as not less than this, as not less than the climax of a veritable revolution, that the agreement with Japan must appear to one who, like myself, has watched, at close range and with an alien but sympathetic eye, the development of American diplomacy in the Far East during the past twelve years. In November, 1897, when Germany seized Kiao-Chau, I happened to be a resident in the United States, and both then and for three years after had the opportunity of studying America's opportunity on the spot. It

was one of interested but quite impersonal detachment. The occupation of Port Arthur and the lamentable Anglo-Russian duel that followed it, the general policy of Russia in Manchuria, of France in Yunnan and Kwangsi, and of Germany in Shantung, appealed to the dramatic sense of the American people, but to little more. To the masses the "opening up of China" was a phrase merely, with as much or as little bearing on their own fortunes as the opening up of Mars. The connecting link, so far from being looked for, was scarcely even suspected. There were, to be sure, individual exceptions. A chamber of commerce here, a merchants' association there, a few of the better sort of journals, and some consuls and ex-consuls, like Mr. John Barrett, did what they could to show the right relation between American interests and whatever the future might hold in store for China. But the public generally was not to be moved from its unconcern, and Washington faithfully reflected its attitude. In spite of the fact that American exports to China were second only to Great Britain's, that American trade with China had trebled its value in the preceding seven years, and was growing at a greater rate than any of its competitors, that the foreign market was just beginning to make itself as essential to American industries as it long had been to American products, and that, so long as China continued to trade with the West, the United States had the geographical advantage of all rivals except Japan—in spite of all this, neither the American people nor the American Government eleven years ago gave a single sign of direct and active interest in the Chinese crisis. There was one *ex tempore* debate in Congress, neither very lucid nor well informed, and then the matter dropped. No resolutions were taken, no policy was so much as hinted at. After awhile even such spectacular interest as was felt in the opening phases of the trans-Pacific drama faded away under the pressing acuteness of the Cuban problem, and for the time being was altogether killed by the Spanish and Philippine wars. It had, however, gradually come to be understood that British and American interests, so far as trade went, were on all fours; and thruout 1898 and the major part of 1899 Americans took the fullest advantage of this coincidence to shift the whole burden of maintaining the open door onto Lord Salisbury's shoulders.

One of the first results of the war that planted the United States on the edge of Asia was to bring China within the visible horizon of American diplomacy. The country that had strewn the Pacific with stepping stones from San Francisco to Hong-kong, that had annexed the Philippines and thereby started an Asiatic empire of her own, could no longer afford, could no longer find it possible, to be indifferent to the adjacent affairs of the Middle Kingdom. Mr. Hay recognized this from the first. When he signed the Treaty of Paris he realized clearly all that it would involve in expanding the diplomatic activity of his country; and within a year of taking office he had given decisive proof that the consequences did not frighten him. His circular note to the Powers in September, 1899, announcing that the United States could not agree "to any recognition of exclusive rights of any Power within, or control over, any portion of the Chinese Empire," and inviting the Powers to give a written adherence to the policy of the open door, marked the first appearance in our time of the United States as a working member of the family of nations, with an interest in other than purely American questions. The precise value of the note and of the pledges it produced may have been disputable, but its significance remains unquestionable. It was a landmark in American history. It added China to the list of tangible American interests, and it committed the United States to the preservation of the open door. Up to then America, it is not too much to say, had had no foreign policy at all apart from the Monroe Doctrine. Since then she has been one of the most active and resourceful of the Powers in the direction of Far Eastern affairs; and her policy thruout has been the policy devised and prosecuted by Mr. Hay.

His task was an extremely difficult one, and many of its difficulties came, not from his rivals in the Far East, but from his own countrymen. Nations are sometimes slow to accept the consequences of their own acts, and Americans six or seven years ago were far from

realizing, perhaps even now do not altogether understand, how far the inexorable stream of events must carry them. When Mr. Hay came to impart to American diplomacy not only a new tone and character, but a new range and spaciousness, the United States was the most contained and in some ways the most provincial of the great Powers, still mainly interested in American questions, still repeating Washington's alleged warning against "entangling alliances," still regarding any participation in world-politics with a curious and unconquerable timidity. Americans had overthrown Spanish power in Cuba and the Philippines, but the far harder task of overthrowing the mental habits and the received traditions and instincts of a hundred years' growth, they had not yet accomplished. They had an empire, but they had not yet become imperial. They had expanded physically, but they had still to expand mentally. They were a World-Power in fact, but not in consciousness, in breadth of vision, in a resolute acceptance of new conditions, or in a not less resolute emancipation from the precepts of an outworn past. Mr. Hay, therefore, had not only to battle for American interests in the Far East, but he had to educate his countrymen in the realities of their new international position. He succeeded at the very least in rousing their interest; his pertinent and skilful diplomacy claimed and received the applause of a tickled national pride; and it altogether gratified Americans that their Secretary of State should be distinguishing himself on such a stage and before such an audience. Yet I am not quite sure that the masses of his countrymen felt more than a spectacular and external interest in Mr. Hay's efforts. To most Americans, I imagine, they represented a highly finished feat of diplomatic dexterity rather than successive steps in the development of a national policy. Had those efforts failed it is probable that very few Americans would have thought it a matter of much importance. I suspect, in short, that, tho keenly alive to the importance of their trade, both present and prospective, in the Far East, Americans had not, in Mr. Hay's lifetime, reached the point of regarding it as an issue on which they would feel justified in going to war. It is doubtful, indeed, whether war in defense of the integrity of China or of American treaty rights had at that time presented itself as a serious possibility to the "man in the cars." Mr. Hay did much, and did it brilliantly, to accustom his countrymen to the idea that the Far East was really a concern of theirs, and so long as he was able to safeguard their rights by diplomatic agreements and assurances, they cheered him on. Had he, however, suddenly failed; had Russia, for instance, met one of Mr. Hay's demands with a refusal, I question whether public opinion would have supported him. Mr. Hay had America behind him only so long as he spilled ink, but not blood.

In some ways this only makes Mr. Hay's triumphs all the more remarkable. He was a diplomatist winning diplomatic victories without the implication of force, a Bismarck with no Moltke in the background. And his victories were very real. Thruout the Boxer rising his perspicacity, good sense, and, above all, his humanity, stood out in admirable contrast to the diplomacy of Europe. His handling of that momentous crisis was, of course, roundly denounced at the time for its squeamishness, but I do not see how an unbiased judgment today could fail to admit that Mr. Hay showed a higher union of imagination, practicability and justice than any of his brother negotiators. Again, in his dealings with Russia over the evacuation of Manchuria and the position of American traders in that province, Mr. Hay's polite and deadly insistence on the essentials, his patient and relentless diplomacy, overmatched at every point the subterfuges, casuistry and blandishments employed against him. His final service to his country and the world consisted in persuading Russia and Japan to agree to restrict the area of hostilities to Manchuria; and he died in the consciousness that he had enlarged the sphere and outlook of American diplomacy, initiated his countrymen into the elements of *weltpolitik,* and educated them to take the bigger view. It is true, of course, that events singularly befriended him in his lifetime and have continued after his death to emphasize and drive home the lessons he inculcated. For the last four years, indeed, scarcely a week has gone by in which Americans have not been

made to feel the vastness of their stake in the Far East. The Russo-Japanese War, in itself, profoundly stirred the emotions of the country; and the facts—both of them facts that ten years ago would have been incredible—that the peace conference which ended it was arranged by an American President and met on American soil, added to the intensity of popular interest in the fate and fortunes of Asia. Hardly was the war over, hardly had Americans formulated any theory of what the sudden leap of a new, inscrutable and most formidable Power on the very edge of Asia to the front rank among the nations might portend, than they found themselves embroiled with China, and their trade boycotted as a protest against the exclusion laws. Thruout 1906 the multiplying tokens of the "new spirit" in China, and of Japan's organized determination to duplicate in commerce her successes in war, held American interest, and I may add, American anxiety, even amid the distractions of the Russian revolution. Since then Russia and Japan, and France and Japan, have defined their Far Eastern policies in terms that reflect both the spirit and the purpose of the Anglo-Japanese alliance; the immigration trouble has arisen, has reached an ominous magnitude, and has been settled, for a time, at any rate, by the united good sense of Washington and Tokyo; and the American fleet has sailed on its unprecedented voyage. Everything, in short, has conspired to change the indifference of ten years ago to a vigilant and tingling concern.

And if the past decade has thus enormously elevated the Pacific in the scale of American interests, it has not less palpably deprest the Atlantic. The needle of American policy, which used to point to Canada, to the West Indies, to South America, oscillates now between Tokyo and Manila; and event after event has whittled down the importance of the Atlantic in the scheme of American interests and strategy. The menace of war, never a very heavy one, has been dissipated, it is hardly too much to say, from Maine to Florida. Since the expulsion of Spain from Cuba and Porto Rico, the West Indies, as a source of possible conflict between the United States and any European Power, have practically ceased to exist. The West Indian problem, from the American standpoint, has ceased to be an international and has become a domestic problem; and the Caribbean has been deprived of its last element of serious friction. The storms that blow from it in the future may often beat upon America, but will no longer threaten to embroil her with any other Power. Again, the revolution that has taken place in Anglo-American relations within the last ten years is another and potent guarantee for the peace of the Atlantic seaboard. The diplomacy of the past decade has wiped off the slate every Anglo-American issue of any consequence; and the idea that any one of those that still remain unsettled, or all of them put together, could result in a war between Great Britain and the United States would be rejected as monstrous and incredible by the people of both countries. Finally, it is a commonplace of observation that the last ten years or so have witnessed on the part of all European Powers a growing acquiescence in the Monroe Doctrine. This is partly because, thanks to President Roosevelt, the Monroe Doctrine has ceased to be a doctrine merely and has become a fact pointed with ships and guns, and partly because it has lost its old one-sidedness and is now weighted with reciprocal responsibilities. The growth of the American navy has finally knocked on the head any ambition that any European Power may have cherished of effecting a lodgment on South American soil. The dream of colonizing the southern continent under the flag of any one of the great Powers has been definitely shattered, and the principle of regarding South America as, in this respect, a *terra clausa,* is now accepted, in fact if not quite in theory, as an international axiom; nor would the wildest speculator on the possible developments of the future any longer include among them the contingency of a war waged by a European Power with the United States for the possession of even an inch of South American territory. These three factors—the virtual disappearance of the West Indies, of Great Britain and of the Monroe Doctrine as menaces to the peace of the United States—have, as it seems to me, sensibly detracted from the political and strategical

importance of the Atlantic in the periphery of American interests. So far as one can judge, they are factors that are likely to be permanent, just as the other factors that have correspondingly raised the Pacific to the first place in American thoughts, are also likely to be permanent. What it comes to, therefore, is that the relations of the United States with the Powers of the Far East appear destined to be more intimate, of greater moment, and possibly of greater hazard than her relations with the Powers of Europe.

It is in these considerations that the true justification of the voyage of the American fleet must be sought. To foreigners, at any rate, that voyage and the subsequent demand for a two-coast standard of naval strength, have appeared as a legitimate linking of policy with strategy, the rectification of a distorted focus, the adjustment of American sea-power to the plain facts of her geographical position and her political interests. It is in the light of these considerations, also, that the agreement with Japan takes on its true significance. There are many standpoints from which one might discuss it, the constitutional standpoint being by no means the least interesting among them. For the present, however, I only propose to touch on a few of them. First of all, the agreement is a valued pledge of good will between two nations, made to understand and sympathize with each other, who have nothing whatever to gain and everything to lose by persisting in an irrational enmity. Secondly, it is an emphatic acknowledgment that in the sphere of American interests the Pacific is destined to count politically for as much as, if not for more than, the Atlantic. Thirdly, it marks another and decisive phase in America's struggle to disentangle herself from the restrictions of an obsolete past. Unless I am wholly mistaken, a working agreement such as Mr. Root has concluded with Japan would have been impossible ten years ago. It would have been impossible, because Americans had not then put tradition so far behind them as to admit the word "alliance," or any word pointing in the direction of an alliance, into their political vocabulary. Their prejudices were all on the side of "isolation," "seclusion," independent action," and all against any kind of formal understanding and cooperation with other Powers. It is now apparently beginning to be realized how much those prejudices militated against America's effectiveness in world-politics. A Power that automatically and unreflectingly rules out the possibility of alliances under any circumstances whatsoever is a Power that wilfully handicaps its freedom of action and runs the risk of sacrificing its interests to a theory. This particular theory was all very well so long as the United States was more or less a hermit nation. But in the broader field on which she has now entered immutable rules and cast-iron systems are a hindrance, not a help. That nice adaptation of means to ends which is the essence of diplomacy cannot possibly be effected if the choice of means is abridged beforehand by a hard and fast formula. I regard, therefore, the mere fact of the agreement as a sign of America's emancipation from dogmas and prepossessions that may have had their point in Washington's day, but have long since lost it. And, fourthly, the clause in the agreement which provides for consultation between the two governments as to the measures that should be taken to preserve the *status quo* and the open door, seems to answer the question which I propounded earlier in this article —the question whether American diplomacy in the Far East rests simply on ink and paper, despatches and representations, or whether, if the necessity arose, it would employ the only means that have ever made, or can ever make, diplomacy effective and successful. For these reasons and for many others the understanding, or the agreement, or the exchange of views, or the informal compact, or whatever else may be its correct designation, seems to me, tho lacking the validity and binding force of a treaty, to be an instrument of the most hopeful augury and of the highest moment.

LONDON, December 2.

Books No Public Library Should Be Without

BY EDWIN E. SLOSSON

THE public library whose income is inadequate—and we know of none which does not come into this category—has so many more demands made upon it by its constituency than it is able to satisfy, that it is hard to distinguish between essentials and desirables. The most clamorous demands are often the least important and indeed, if complied with would lead the library far from the line of greatest usefulness. The wise librarian will, so far as he is able, turn a deaf ear to these, and attend to the silent demands of those who do not come to the library at all now because they know it will be of no use. He has to decide for himself the question posed by Spencer, "What knowledge is the most worth" to the people of his community. What information are they likely to need very much in some unforeseen emergency of the future; information that will be of service in their daily work and may even change a life or make a fortune? The librarian ought to be "the lady from Philadelphia" in each community, the person to whom everybody turns when he gets into trouble for lack of knowledge.

In deciding what books to buy first, two general rules may be useful.

First. The public library is intended to supplement, not to supplant, existing sources of literature. Its primary purpose is to keep on hand the books that are needed but cannot readily be obtained elsewhere. It ought not to be merely a free news stand. The local bookseller has a right to complain if his subsidized rival gets enough copies of "Mr. Crewe's Career" to supply the public demand this year.

Second. In buying books begin at home and work outward, begin now and work back. By the laws of intellectual perspective the things nearest to us loom largest in our view. The library occupies a particular position in time and space, and this is its natural starting point for the accommodation of knowledge.

If we apply these simple rules, the axioms of the library, we can specify some of the most essential classes of works for a public library of general circulation. If the anxious inquirer does not find at least the following in his town or county library, he has a just ground of complaint and should as a public spirited citizen file a claim against the trustees for any damages resulting from their failure to supply the desired information.

I.—Files of the local papers. There should be complete files of at least two of the leading weeklies or dailies of the town or county. It is not necessary to explain the importance of these for legal, commercial, historical and personal purposes. In order to find out how rare and valuable such a set is, it is only necessary to try to get one. Everything relating to local history should also be diligently collected, books, pamphlets, photographs, diaries and letters. This is the one line in which it is legitimate for a small library to specialize and acquire a unique collection. If a future great man should come to have been born in Smith Center —and he is as likely to be as anywhere— his biographer ought to go to the Smith Center Free Library in perfect confidence of finding there the most abundant material for his opening chapter on "Birth, Ancestry and Early Environment." The librarian should gather the material for local history while it is obtainable, even tho it is simply stored in packages done up by years.

II.—Next comes the State. Most of the material can be obtained free when it first comes out, but a few years later not for love or money. Get a complete file of Governors' messages and departmental reports, the catalogs of the State university, the bulletins of the agricultural experiment station, the annuals of the State historical, scientific, literary, religious, political and fraternal societies and conventions. Do not despise the boom pamphlets published by the board

of trade and the railroad, because they are of nature of advertising. Advertisements make the best of material for the historian, being often unintentionally truthful in the picture they give of the state of society of the period.

III.—The most recent and authoritative information about the United States and all foreign countries. This also leads the reluctant librarian into the field of "Pub. Docs." wherein the worthless and the valuable are inextricably commingled —volumes of the most practical character and volumes of no conceivable interest to anybody, all packed together in blue and gray striped bags in the storeroom. But at least the special reports of the Census and the bulletins of the Bureau of American Republics should be within the reach and cognizance of the librarian. The rest of the world is still more difficult. The latest volumes of the "Annual Register," the "Statesman's Yearbook," the "International Yearbook" and a set of Baedekers will be a good start. Books of travel should be bought with discretion. Those most loudly advertised are apt to be expensive, superficial and conventional, padded out with thick paper and half-tones from fifty-centime photographs, telling nothing that had not been often told as well before. We are a migratory people, our commerce is expanding, and we are beginning to take an interest, even an active part, in international politics. There is no telling where the lightning is going to strike next, so the only safe way is to have rods up all around. How many libraries, large or small, had anything about the Philippines on the first of May when Admiral Dewey gave the order to open fire on the Spanish fleet? A few months ago I happened to want some information about Santo Domingo and made a hasty raid on two important geographical libraries in New York City. One of them had not heard from the island since the latter part of the seventeenth century; the latest news at the other was dated 1871. Santo Domingo is a slow place certainly, but changes have taken place there since we last thought of annexing it in Grant's time. In this case as in most others it is not a question of expense. The Dominican Government publishes a comprehensive illustrated annual telling all about the island that may be had for the asking. It is in Spanish, of course, but anybody can read Spanish with a dictionary if he has to. The only way a librarian can keep his books up to date is to go thru the list of countries in Dewey's Index every year or two and when he finds a gap in his shelves, fill it with the best material he can get hold of. If the twentieth is not "the greatest of all centuries" it is the most important for us.

IV.—Maps. Here is where libraries are very likely to be deficient, because maps are hard to find and difficult to handle when got. The ordinary small library thinks it has done its duty when it has a faded wall map and an unwieldy American atlas. It is to be hoped that no boundary dispute will ever hinge on an American map, for if it does war will be inevitable, because the blue countries smudge over on to the red countries in a way to drive The Hague Court distracted. I do not mean the United States Geographical Survey Maps, of course. Every library should have them. Then as far as possible get the maps that each Government published of its own territory. That they are in a foreign language does not matter much unless it is Russian.

V.—Files of the leading English and American periodicals. This is the cheapest and surest way of making a library equal to any emergency call and the librarian who can handle his periodical indexes skillfully will get a reputation for omniscience that will extend into the neighboring counties. It is not at all necessary to buy back numbers, only to bind them from year to year, for the last ten years will cover most of the calls. Nor does it matter much if there is a number or a volume missing here and there. The librarian who is short of book money cannot afford to pay fancy prices for a rare volume just to gratify his pride in a perfect set. With the local paper it is different, for it may be necessary to determine whether a certain notice did or did not appear in December, 1861, and if a single number is missing the file is useless for this purpose.

VI.—Recent scientific and technological works. Those over twenty years old may as well be burned up unless shelf-room is abundant and dusting is cheap.

They are in most cases worse than useless because misleading. New or revised compendiums in each branch of science come out every few years and should be carefully selected to see that every science is represented by some recent and authoritative work, however brief and condensed. It is dangerous to buy a series. Select each book separately. Pay no attention to "Wonders of Nature" or "The Classics of Science" even if the set does look pretty when the agent uncoils the chain of bindings. Any further money should be put in journals of original research which do not lose in value like books. The small library may well specialize in the technological literature of its local industries, keeping a good supply of trade journals and getting books that the manufacturer or mechanic or farmer will not sneer at. It is a shame that the young man ambitious to rise in his trade should be obliged to pay extravagant prices to a correspondence school for books that his town library ought to provide him for nothing.

VII.—The Classics. Mark Twain's definition of "a good library" is "any collection of books that does not contain 'The Vicar of Wakefield,'" but in this, as in other respects, he differs from the rest of the world. However little they may be in demand the public library must have a tolerably complete set of the standard works of history, biography, fiction, poetry, and morality which form the subsoil of our modern literature. This requirement is easier and cheaper to meet than the others we have mentioned. The volumes that have been picked from the literature of all ages as fittest to survive are comparatively few, and they neither go out of fashion nor get worn out. That "the best are the cheapest" is truer of books than of most things about which it is said. The hundred best books as prescribed by Lord Avebury or any other apiarist may be bought in decent editions for the price of half a dozen of the bulky biographies and letter-books that spring luxuriantly from the grave of every celebrity.

VIII.—Recent and authoritative works on pending questions. Here the book-buyer must be cautious and read between the lines of advertisements and even of reviews for an unlimited amount of money may be spent with little to show for it. The volumes that have been publisht in the last three years on Russia, Japan and China and those that soon will be published on Turkey are numerous and costly and it is hard to pick out the few of real value. Reference to the periodicals will satisfy most readers, but those who are seriously interested will need thoro and comprehensive works. There should be in every library the best books on such subjects as prohibition, woman suffrage, labor, socialism, insurance, banking, tariff, race questions, international arbitration, etc., in most cases two or more works presenting opposing or divergent views.

After all these essentials have been attended to any other money left over from the appropriation may be spent for detective stories, memoirs of dead French ladies, the achievements of Eusapio Paladino, and whatever else may be called for. A broad policy and a tolerant spirit are needed in the free library. It is just as legitimate to spend public money for books that merely amuse as it is to provide fireworks on the Fourth or music in the park on summer evenings, but the paving and waterworks must first be attended to. It is assuredly one of the functions of the public library "to cultivate the reading habit." The reading habit is a pleasant pastime, less liable to run into a vice than most other forms of recreation, but it is much more important to cultivate the finding habit, the ability to find what one wants to know without much reading. Reading in itself is not meritorious, any more than walking. We walk either for the exercise or to get to some place. The paths in the park may be winding, but the streets of the town should be straight.

Books that are unreadable are often the most useful. A man who intends to become a hero would come to the library to get the address of the Carnegie medal fund; a woman who had been persuaded by some novel or play to qualify for the profession of heroine would want to look up the divorce laws of different states; both would be better satisfied with a dog-eared copy of a 25-cent newspaper almanac than with Carlyle's "Heroes and Hero Worship." The librarian in providing for the practical wants of his con-

stituency should try to get not only the "best books," but the best sources of information, whatever their form and literary standing.

The ratio of books in circulation to the total number is not the proper measure of the usefulness of a library; often quite the contrary. Call slips should be weighed instead of being counted. A girl comes in wanting the key to "The Mystery of the Yellow Room"; a lady desires to learn all about the matrimonial complications of Victor Hugo and of his wife; a man who has bought a lot in town wants to find out how to lay a cement walk; a farmer thinking of selling out and moving needs to know the value of wheat land in Saskatchewan. Are all these demands of equal importance? If not, would the average public library be able to meet them in the order of their importance?

NEW YORK CITY.

Mary Mother

BY LOUISE DUNHAM GOLDSBERRY

I

I HEARD the water-brook laugh in its sleep,
Out in the silken silence of the night;
The shiver of delight that shook the deep
Green grasses when the winds came close,
And somewhere from its rest
A bird dreamt out loud in its nest.

I heard no footfall at my door,
Nor latchet lift,
But, glozing all the rushy floor,
A splendor came,
And One, white-glowing as a flame,
Called me by name!

I? All Israel's queens
Have hoped for this;
And humblest woman-child that leans
Against her mother's lips
Has heard the whispered prayer that she
Her LORD'S Mother might be!

Beyond the rim of hills the blackness shone
Where He passed thru
But in the woods I heard the thorn-tree moan
Above its thorns:
And oh, I hid me in my mother's bed
To tell her what the Angel said!

II

My Baby, my Baby, what love-names shall I name thee?
I know not one that's half as sweet as thou;
Scared is my heart its very own to claim thee
And kiss thee, as I kiss thee now!

Mother's dear Baby! Life of her life and being,
Only for her alone thy every baby-grace;
Of all the world, thy wise, wise young eyes' seeing,
Mirrors but just thy mother's face!

My Honey-Cup, my Star, my azured Flower,
Sleep safe in the soft curve of mother's arm;
Above thy precious head no storm shall ever lower
Nor stone these little feet shall ever harm!

III

Ye say, "Mary sleep";
Ye bid me weep
For sorrows done;
Did they not say
HE dies today—
My Son?

Once, beneath a star
Years afar,
We slept, The Child and I:
Every azure vein I've kissed,
Feet, and wrist;
Baby-curves that lie
Hid for but the mother-eye—
Did they say
"To-day?"

IV.

Spice; I lay ye here; the Wise Men gave
Spice that Night:
Little Son, thou shalt not care—
Mother's hands, 'tis, makes thee fair
For the grave;
Mother's lips that from the light
Kiss thy eyelids down:
All the journey now is done—
Sleep, my LORD! Sleep, Little Son!

WASHINGTON, D. C.

Literature

Miss Johnston's Best Novel*

Miss Johnston could scarcely have chosen a more brilliant or romantic period in American history than that represented in her last novel. Thomas Jefferson is back from France, the Louisiana Purchase has been made. He is the idol of the Democrat-Republicans, and the President of the seventeen United States. Aaron Burr has killed Alexander Hamilton in a duel, and is now engaged in his famous conspiracy for a Western Empire. The Federalist party are stronger socially than they are politically, and apparently everybody with acres is engaged in improving his estate, when he is not engaged in a duel or a conspiracy or in reading poetry to his lady love. The author's use of historical details is so mixt with the social life of Virginia, with the freshness and greenness of the young Virginia county where the scenes are laid that the illusion of reality is perfect in spite of the gay colonial fashions and stilted manners of the times portrayed. But it must always be said of Miss Johnston that her historic sense surpasses her histrionic ability, her dramatic faculty. Few who lay their scenes in the past can give to them exactly the right tone of time as she does in this story. Usually there is a garish modern light somewhere in the ancient tale. But with Miss Johnston the charm is so complete that we do not weary with page after page of her delightful descriptions undramatized by any speaking life. She belongs to that class of excellent writers, for example, who cannot interpret romantic love with action. She has a conception of love as fair and faint as the vision of distant flowers blown in an enchanted wind, but she cannot produce a love scene between a man and a maid with any emotional conviction in it. She never exceeds in love a pretty, prim dignity which she really believes to be coquetry. This is illustrated by the courtship of Unity Donebridge and Fairfax Cary in the present story. Once the marriage vows are said, however, she is more at home with love. She writes of it in pastel shades of the spirit, as if truth were a color as well as a principle. No one else perhaps comes nearer, in fact, to presenting all her ideas in Elysian colors, as if human hearts were rosy flames, as if courage was red, and a wife's faithfulness was made of lavender coolness. There is something very near originality of interpretation in her rendering of the relations between Lewis Rand and his wife.

This man, Lewis Rand, is the hero of the story. He is the son of a tobacco roller, he is forceful, brilliant, and begins his political career as a protégé of Thomas Jefferson and makes his social position by marrying Jaqueline Churchill, a beautiful woman belonging to an old and distinguished family. In Rand, ambition is that first, fierce, unscrupulous and untutored aspiration of an under nature striving to rise in the scale of things. But the passions that belong to his class live in him as they so often do in men of this quality and eventually cause his failure and disgrace. He is easily tempted by Aaron Burr to enter his conspiracy, because he craves more than a finer spirit would the glitter and glory of palaces and crowns. But the Gideon rage of his forefathers lives in him. Finally in a black hour he kills his political rival, who had also been the lover of Jaqueline before his marriage. The last chapters are given to his struggles with an awakened conscience. The climax and conclusion are reached when he voluntarily surrenders and confesses his crime. One feels upon closing the book that the author ended it too soon, a rare fault in a novelist, and that the great tragedy lies beyond its covers, in the prison darkness with the soul of Lewis Rand.

Much has been made in stories of this

*Lewis Rand. *By Mary Johnston.* Boston: The Houghton, Mifflin Co. $1.50.

period of the Burr conspiracy—too much, and probably Miss Johnston presents Burr for the first time in the half indignant, half contemptuous light with which his contemporaries regarded him. And from start to finish great men move thru the scenes, not as great men, but as neighbors and guests and friends. The elegance of the times appears to have been exprest mostly in shrubbery, bearskins, antlers, tea cups and ladies' harps. Much stress was placed upon blood and breeding. And it is evidently still Miss Johnston's own belief that "good blood is nature's truth," now, no less than in Jefferson's day, when Lewis Rand failed for the lack of it, and the truth of it.

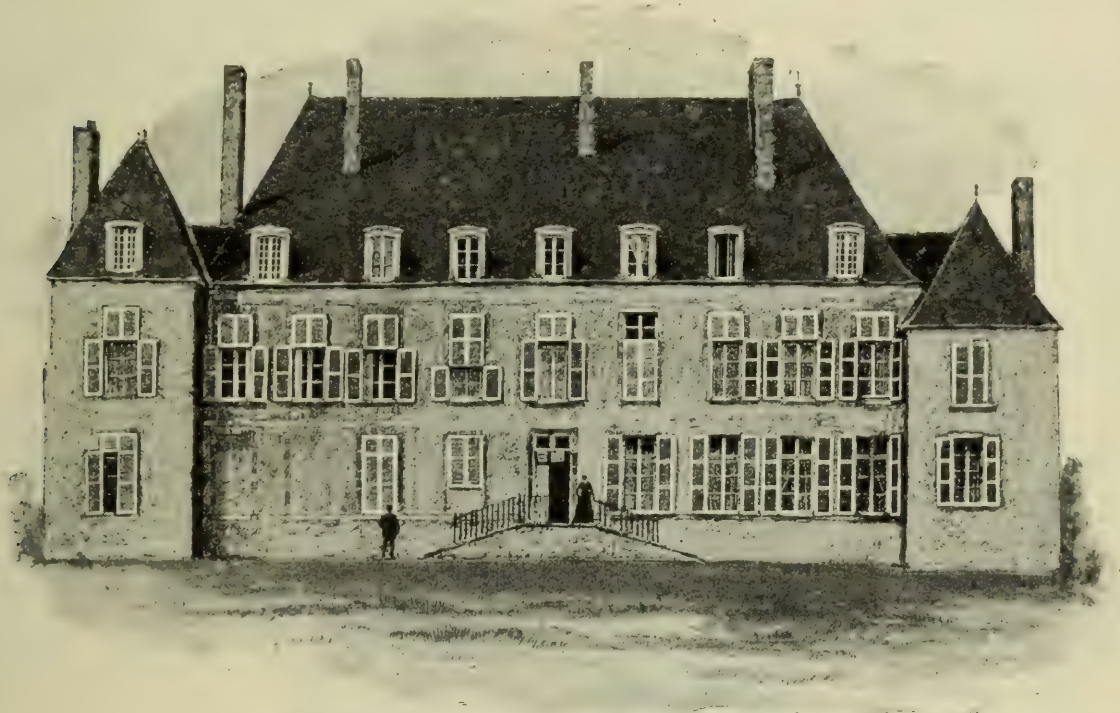
The French Revolution

Prof. Fred. Morrow Fling, of the University of Nebraska, has publisht the first volume* of his monumental work on *Mirabeau and the French Revolution,* at which he has been laboring a great many years, making exhaustive researches for materials and evaluating them by all the tests known to modern critical scholarship. Altho the works of Stern and Lomenie, to say nothing of lighter efforts, have appeared since Professor Fling drew up his plan nineteen years ago in Leipzig, he rightly contends that there is a legitimate demand for a thorogoing presentation of the theme in English, and those acquainted with biographies in foreign languages will admit that he has not only justified his contention but made a solid contribution to Mirabeau literature in general. Part I, now before us, deals with the youth of Mirabeau up to the year 1774, in which we find him in prison, celebrating the attainment of his majority by writing his famous *"Essai sur le despotisme."*

Professor Fling has most successfully adopted the method of weaving source extracts into a connected story, and he has been especially fortunate in being able to draw upon a voluminous correspondence, consisting of letters exchanged betwen Mirabeau's father and his brother, the kindly *bailli*, with reference to their youthful charge; the notes of schoolmates and army companions, instructors and officers; Mirabeau's own journal, and letters and family papers. By means of a skilful presentation, the reader is enabled to form his own conception of the youth who was destined to become such a remarkable leader of men and the inspiration of that fundamental French Revolution which preceded the Reign of Terror, often mistaken for the Revolution.

Our author has not unduly obtruded his own personality between the reader and his subject, and by the well-chosen extracts one is made to feel an acquaintance with Mirabeau that no mere professorial interpretation could possibly give. The book draws us irresistibly into the great human drama it describes, which is more than can be said for many works so scholarly in tone and execution. We are at once carried into the family circle; we feel the aspirations of the father for the heir to his estates; we share his anxieties over the conduct of his wayward son; we understand his mental outlook, his family pride, his legal authority; and, in short, with Professor Fling, we run the whole gamut of ambition and passion dominant in the aristocratic circles of the period. The impetuosity of the youth and the pedantry of the father lend color to the theme. Here, too, the old *régime* is revealed in its inner social character; the use of *lettres de cachet,* imprisoning offending children, the strength of paternal dominion, the favoritism shown by the officers of the law to nobles, the family circles, the careers open to boys of wealth and position, and the bitterness and scandal that made the society of Provence notorious thruout France.

The ancestry of this maddest of a mad race is traced, as far as the documents will permit, and the fiction about the ancient Italian family is exploded for good. The life of the father is traced in order to show the influence of his life and teachings on the more distinguished son, and one is bound to concede that, in spite of Mirabeau's complaints against his father's pedantic and foolish notions about educating a son, and the father's bitter feeling against the son, they were remarkably alike in temper and conduct; for, after all, the elder was also a celebrated man in his day, and only eclipsed



*Mirabeau and the French Revolution. *By Fred Morrow Fling.* New York: G. P. Putnam's Sons. $3.50.

by the greater brilliance of the son. Known as *L'ami des hommes,* his pseudonym, he styled himself the "friend of the human race," "one full of sentiments of zeal and love for his fellows," and he was also a leader of the physiocrats, and a powerful antagonist of arbitrary power on the part of the monarch. He was most anxious to bring up his son in his own faith, and therefore superintended closely his early reading. However, he had very little confidence in the boy's talents, and a friend of the family, Baron de Gleichen, pictured the situation thus:

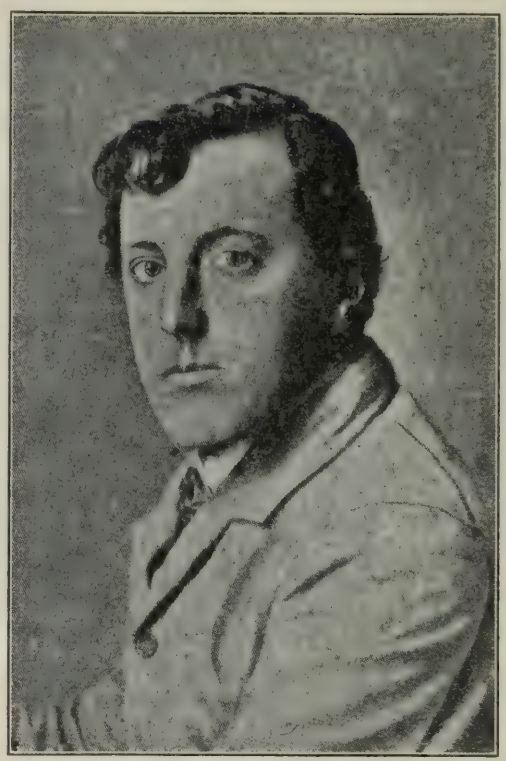
"The despotic, debasing and hateful manner in which this son was treated and rendered desperate in the paternal house, because he was ugly and could not be conquered by punishment, stifled in him the sentiments of honor and ambition that ought to be found at the bottom of every courageous soul, increased the violence of his passions, and sharpened his intellect, so unlike and so superior to that of his parents. I often told them that they would make a great rascal when they might make a great man of him. He has become both."

Here is the question about which the story revolves, and by his own letters the father stands convicted of these charges. There was but a brief period of confidence between the father and son, but the necessity of marrying in accordance with the wish of the father led to a madcap adventure which for some time threw him back into his old extravagances and made him again the despair of his parent. The influence of the mother on the youth, at least for the good, was not considerable, for the elder marquis described life with her as "twenty years of the nephritic colic." Considering all the formative forces which molded the character of young Mirabeau, it is not surprising that in his after years he sometimes shocked the moral sense of the most virtuous of the bourgeoisie and disgusted the Queen.

Professor Fling's thorny path lies before him, for this volume is mainly concerned with a plain and interesting narrative. Final judgment cannot be past until the more complex problems of the later years are met, but Professor Fling gives promise of fulfilling the expectations raised by this instalment. His work will take a high place in the sane and critical literature on the French Revolution, and will reflect credit on the American school of history.

THE BIRTHPLACE OF MIRABEAU AT BIGNON.
From "The French Revolution," by Fred Morrow Fling, Putnam's.

Faust. Freely Adapted from Goethe's Dramatic Poem. By Stephen Phillips and J. Comyns Carr. New York: The Macmillan Co. $1.25.



Following the general story of Goethe's "Faust," but with such free adaptations

as, in the judgment of the authors, may serve to bring the drama down to the needs of the modern theater, Stephen Phillips and J. Comyns Carr have made a most readable play, whatever facilities the stage may have, or may not have, for its production. In the opening scene, in which Mephistopheles seeks permission to use his arts on earth to seduce man from his obedience to heaven, occurs the beautiful song of the three archangels, and from this the lightness and grace as well as the strength of the new work may be fairly judged:

"By angels, though uncomprehended,
Strength from his aspect still is drawn,
The Universe abideth splendid,
As fresh as at Creation's dawn."

Mephistopheles appears on the scene:

"Hail to mine ancient friends, my present foes!
This neutral mountain between Hell and Heaven
Is still permitted to these exiled feet;
Here may my Darkness mingle with your Light."
Raphael: "Whence com'st thou now?"
Mephistopheles: "From yonder speck, the earth;
From wandering up and down upon the place,
And pacing to and fro in hate unresting.
And yet man so torments himself, my toil
Seems idle: and heedless my unceasing task.
I would he were more difficult to damn!"

STEPHEN PHILLIPS,
Author of the new "Faust," Macmillan.

In the first speech of the devil it is easy to see the style and stately blank verse of Milton, the true Goethe grace and spirit being more evident in the second speech, which also shows the devil in his true colors. Curtailment in the cast or characters and much retrenchment in the dialog, together with some resetting of the scenes, afford opportunity for both dramatic taste to be put in evidence and poetic quality to show itself, and in neither direction is ability wanting. The delightful task of regenerating the race of man after Eve has contributed so much to his fall is assigned to Margaret, and, curiously enough, by the Archangel Raphael himself, who, speaking to the arch fiend, says:

"And thou shalt batter thee, and all in vain,
Against an influence appearing slight,
And frail as the resistance of a flower;
And yet a power thou canst not comprehend.
He through the woman-soul at last shall win."

With the mastery of light and easy blank verse, so deftly modulated that the reader finds in it the advantages of movement and straightforward narrative, and yet feels the elation which only poetic choice and rhythm can give, there is now and then the heroic strain, the full Shakespearean breadth of swing, perhaps as well represented as anywhere in the following speech, where Faust closes the bargain which is to give the devil a strong soul, unless—unless:

"If from all time one moment thou canst pluck,
So rich in beauty that my soul shall cry
Tarry! thou art so fair!—
Then shalt thou claim the immortal part in me!
Then let Time's beating pulses cease to stir;
The shattered hands upon the dial's face
Fling down into the dust; their use is gone,
And Hell itself shall toll the final hour.
So stands my challenge!"

The thought here is Goethe's, but the expression is more than Goethe's. Whether or not of a character to be successfully placed upon the stage, here is a drama that can be be read with delight, not only as a translation, but almost as an original.

Ruwenzori: An account of the Expedition of Prince Luigi Amedeo of Savoy, Duke of the Abruzzi. By Filippo Di Filippi. New York: E. P. Dutton & Co. $8.00.

The "Mountains of the Moon," which appeared and vanished so mysteriously on the maps of Africa and in the accounts of successive travelers, were finally conquered by that romantic and adventurous explorer, the Duke of the Abruzzi. In 1906 he led a well-equipt expedition across Uganda to the border

THE DUKE OF THE ABRUZZI,
Explorer of the Ruwenzori Mountains.

of the Kongo, and made, for the first time, the ascent of all the important peaks of the Ruwenzori group. We discust editorially his achievements when they were first reported in his lecture before the Royal Geographical Society, and here we have the narrative of the expedition together with the complete geographical and meteorological data—a model of exploration work and worthily reported in this volume. As a story of adventure and of triumph over difficulties it will be interesting to the general reader, and as a description of one of the very few unknown spots upon our globe it has a unique scientific importance. The five maps, based upon careful triangulation, are admirably printed, while the numerous beautiful photographs bring these semi-mythical Mountains of the Moon actually before the reader. There are two folding panoramic views of the range taken from opposite mountains and twenty-seven full-page plates, in addition to a large number of illustrations in the text of mountain scenery, tropical plants and native life. The reason why the mountains long remained unknown is that they are usually concealed by clouds, so many explorers have past near them without knowing of their existence, and the natives of the vicinity never ascend them. The mountains surveyed by this expedition have been named after distinguished African explorers as follows: Mt. Stanley (16,815 feet), Mt. Speke (16,080 feet), Mt. Baker (15,988 feet), Mt. Emin (15,797 feet), Mt. Gessi (15,647 feet) and Mt. Luigi di Savoia (16,299 feet).

The Other Americans. The Cities, the Countries, and Especially the People of South America. By Arthur Ruhl. New York: Charles Scribner's Sons. $2.00.

The "other Americans" of course live south of us, across the Gulf of Mexico, and know as little of North America as North America knows of them. The kind of life they lead, and have led quite as long as we of the English-speaking race have lived ours, is indicated by Mr. Ruhl in his young fervid, journalistic way. He is a born journalist, and carries his pen and pad along commercial routes wherever they run—from Panama to Patagonia—past the capitals of the mountain states, along railroads that have commerce with the stars, thru the deadly zone of the mosquito, where they "always talked disease and death; by day with pipes alight, clad only in pajamas," . . . or, toward evening, "when the mosquitoes began to swarm over from the marshes in clouds," and "one felt that at least one or two of them must be stegomyas"; thru Bolivia, where they melt ice on the Fourth of July. With the crispness and sometimes with the linguistic peculiarities of a baseball reporter, he sets down everything, alive or dead, that interests him, and some spice in his ink somehow enables him to interest us in our moments of armchair ease, when science, or politics, or religion are not too absorbing. The picture is that of Latin America as seen by "young" America. There is no dull page. Statistics and bright-eyed senoritas are handed out together. Business treads on the heels of bull-fighting. The keen forehandedness of Chile is set in contrast with the *dolce-far-niente*-ness of the born Peruvian. We are at one moment in the slums, the next in some family

where they live "in the feudal South American way." The young men "blush and look at their plates," while the young girls laugh at their English. "What do you think of *heem*, señor? All he can say is 'Good morning—how dough you do? Ye-e-s? Dough-you-like-Lima?' He has estudied all hees life an' he can't spik a whole sentence of English!" The book has its especial value now that we are looking for that railroad that is to go on stilts, if need be, from some point near the North Pole to the toe of Patagonia. Attractive chapters are "Caracas and the Venezuelans," "The Royal Mail and Panama," "The Highest Railroad in the World," and "Across the Cordilleras in Winter."

FROM "SALTHAVEN."
By W. W. Jacobs. Scribners.

Salthaven. By W. W. Jacobs. New York: Charles Scribner's Sons. $1.50.

Mr. W. W. Jacobs's sea-captains are a people apart. No one ever saw them, yet we know them better than we do our nearest neighbors. *Salthaven* has two of the most delightful captains that even Mr. Jacobs's magic ever called up. There is, also, an office boy, Charles Bassett by name, who is an acquisition. "He is the sort of boy who would get off a 'bus after paying his fare to kick a piece of orange peel off the pavement." The story is a leisurely one, full of the keen, salt flavor of Mr. Jacobs's unique humor. It is good for the soul to laugh with, and at, these ever delightful sea-folk.

FROM "THE OTHER AMERICANS."
By Arthur Ruhl. Scribners.

Literary Notes

....By a new process invented in this city books for the blind will be printed for the first time this month on both sides of the paper. Heretofore it has not been possible to utilize both sides of the paper in embossing tactile prints, so that texts for the blind, always expensive, have been doubly so because of this limitation. The new process consists in embossing on one side of a page between the lines of embossed work on the other. William B. Wait, Principal Emeritus of the New York Institute for the Blind, and B. B. Huntoon, superintendent of the American Printing House for the Blind, at Louisville, are jointly responsible for this improvement.

....Altho we reviewed an unusually large number of children's books in our last issue, still many have come in since too late to mention. Some of these we are rather glad to have an excuse to omit, but there are a few of them that we must mention, not because they are new books but because they are old, the true and tried favorites of more than one generation. *Hans Andersen's Fairy Tales* is publisht by Lippincott at $1.50, with pen drawings by Helen Stratton. A more artistic piece of work by the same publishers is *Legends from Fairyland*, by Holme Lee, illustrated in medieval form by Reginald and Horace Knowles ($1.50). *A Child's Guide to Mythology*, by Helen A. Clarke (Baker & Taylor, $1.25), is a collection of folk-tales of an unusually wide range from the Hindu to the Russian and from the Greek to the Iroquois. *The Story of Sir Galahad*, retold from Malory's "Le Morte d'Arthur," by Mary Blackwell Sterling (Dutton, $1.50), will be an inspiration to young knight-errants of the present day in quest of other Sangreals. George MacDonald's story of *The Princess and Gurdie* has lost none of its charm in twenty-five years of service. This new Lippincott edition of it has twelve really interesting illustrations in color by Maria L. Kirk ($1.50).

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Christ-Mass

CHRISTMAS we must never lose out of our national life. It must, however, be always a living thought commemorative of a *living* Christ. As a holiday it has degenerated least of all holidays, for the thought of giving until every one shall have a common share in universal joy is still dominant. As such it is the most remarkable day that has yet been conceived by humanity; a day of universal good will, and in it not a little of self-sacrifice, and has grown sweeter and richer among the common people of all lands. Fortunately, in commemorating Jesus, that one point was hit upon as most salient, where Christianity differentiates itself from all other religions, the giving of self and the sacrifice of selfishness. In Christmas as a holiday we get the concentered thought of God as the unselfish soul of the universe, and of Jesus as His divinest expression; and this is the key of the incarnation.

The power of Jesus is hard to understand, from any common standpoint of the world. Born of the sweep of the Roman Empire, and the catholicity of the Roman faith, rather than the narrow, but poetic, patriotism of Judea and Galilee, Christianity comes to us as cosmopolitanism. It is a happy and wonderful thought that this Man of Israel has outlived a thousand creeds that have risen and withered in His name, and that He still stands in His fresh young manhood, in spite of the clash of Athanasians and Sabellians, hierarchies and democracies. In the halo of the Sermon on the Mount, Jesus meets every advancing faith and hope of humanity and survives all struggles. Christianity is still the struggle between gentleness and brute force. It is peace and endurance against pride and revenge. It is still the world against the clans. It calls us around, again and again, to the proclamation "On Earth Peace, Good Will to Men"—the sublime declaration of universal peace.

Tolstoi makes a moral as well as a social blunder when he assumes that we must overlook all the evolution of nineteen centuries, and in order to be Christlike must re-establish ourselves after the pattern of the first century. The rising of Christ in our own day is what concerns us; and it is the continuous incarnation of God in the world that cheers on the centuries. We can read the Golden Rule and the Parables and the Lessons in the wheat fields and the gardens as having substantial fitness to this twentieth century. Shakespeares never die. Christs are resurrected in every age. There is not one stirring passion of our times, individual or social, that is not reflected in the Gospel. Jesus was a workman and in full sympathy with our labor struggles. He was a free thinker and in full sympathy with progressive thought. He was a leader in the greatest religious and social revolt the world has ever known. The genius of Christianity is found in its adjustability to changing conditions. We grow nearer rather than more remote from the simple-hearted teacher who took His pupils back to Nature in the gardens and fields of Galilee.

What we need is a real Christ-mass; a continuous resurrection of the spirit of Jesus in our hearts and our lives, in our ways of teaching, preaching and voting; in our social as well as our private affairs. There are neighbors still who go along the street unrecognized. The Christian gentleman—that is, the gentleman of the

Christ type—is too rare. We still doff our hats to wealth in preference to poverty. We let our neighbors suffer under the indifference of social pride. The Jesus of the fifteenth or even of the eighteenth century cannot serve the twentieth century. The Christ that we need is the moral life of our own age; the inspiration of the voter who rules a republic, of the farmer who tills a continent, of the merchant whose ventures are all on oceans. The Jesus of today is not measured in his vision by Palestine, or even by the Roman Empire; his views will not be traceable to the sayings of the Talmud and the Scriptures of the Jews, but they will spring out of the accumulated sciences of all the centuries since he was crucified.

Christianity is today a larger idea than in the days of Jesus, and it is growing still larger. It must reach out to take in the Chinese as well as the European. It forbids hate, it denies the right of jealousy. It commands peace and good will and refuses to recognize racial prejudices. Catholicity is a growing idea and a growing power. Coöperation grapples with the affairs of continents. Cosmopolitanism has two ways of working, either as a unity under a controlling force or as a unity in freedom. We are learning the weakness of absolutism and the strength of individual purposing. There is a growth of modesty in the world. In the Church no one appears to take the place of Calvin, and in the State there is no one to replace Henry VIII. So it is that Christmas is an eternal movement; not a sudden revolution. We have learned to leave off that letter *r,* and to believe in evolution; a slow but lawful and sure change for the better.

Another conspicuous feature of Christmas is the childlike spirit that pervades it. Here is where the real Jesus reigns. For with keenest insight he discovered that our only salvation was in making us childlike. For one day of the year at least we clap our hands as the children do, and we sing our way thru our troubles. That our Christmas shall have done something toward a permanent child-likeness of life and character is essential; that it shall have leveled the high as well as lifted the lowly. We have grown too far apart. The essential oneness of humanity is too easily forgotten. Let our Christmas extend its spirit till it covers the year. Let it establish as a sound economic principle, Except ye become as little children ye shall not see the kingdom of God. We grope after the Christ idea. It is just near enough to shame our heredity from the brute, but it is not near enough for us yet to measure and absorb it. It calls out steadily more and more of our heredity from God. If not today, at least in some near tomorrow, it will be true that "in Him we live and move and have our being." Christ shall have arisen, and the world shall be born again.

The Conflict with the President

It is most unfortunate that so near the end of his term there should have arisen so serious a breach between the President and Congress. The unanimity of action by both branches of Congress, embracing both parties, indicates their view that the President's language was unjustified, and it is bitterly resented. We give in our "Survey" the text of the separate actions of the two Houses. The House demands of the President that he present his evidence that the reason for limiting the use of the Secret Service was the unwillingness of the members of Congress to be investigated by its men, and asks him to report what evidence he has that any Congressmen are corrupt; while the Senate will make its own investigation into the illegal employment of the Secret Service.

We said last week that if it be true that, as the President said, a chief reason given for limiting the employment of the Secret Service was that Congressmen did not wish to be investigated by it, then the President's language would seem justified. But the House has challenged and denied the truth of the assertion, and says it has found no evidence for it in the records. We await the President's response. If the House's utterance is correct, his language was quite unjustified; and at any rate it may seem to have been an untactful and hasty expression of warm feeling. At the same

time Congress is taking it more seriously than is called for. For many years it has been the custom to employ the detectives of the Secret Service in other departments, and at the expense of the departments to which they were detailed. It was partly by their testimony that a Senator and a Congressman have been convicted of land frauds, and very possibly others have been involved in similar frauds. The custom of such details is a good one, altho, of course, errors may be made in the employment of detectives. The reason for the restriction of their use is not clear. The President suggests one reason, and perhaps he will prove it had its weight. At any rate, the restriction was made after the detectives had found evidence against members of Congress; and members of Congress ought to be investigated as well as other people, and they have been proved not to be superior to temptation.

That the House of Representatives should ask the President for evidence that "the chief argument in favor of the provision was that Congressmen did not themselves wish to be investigated by Secret Service men" is dignified and proper, especially as they declare that they can find no evidence of its truth. But the resolution adopted interprets the President's words quite too severely. It declares that "the plain meaning of the President's language is that Congressmen were in fear of being investigated." He did not say "in fear of," but "did not themselves wish to be investigated," which is a different thing. It may be an annoyance to an innocent man to be followed and investigated and put to trouble in defense, while he has no fear of the result. But the main objection to the action of the House has reference to its last paragraph, in which it asks the President to transmit to the House any evidence he may have that any of its members have been guilty of corrupt practices. To transmit such evidence might be quite "incompatible with public interests," and we do not see why, as relates to this paragraph, the House refused to insert the usual paragraph. If there has been found evidence against any member who has not yet been brought to trial it may be quite improper to make it public.

An Educational Failure

A BUSY professional man took half a day off and went shopping. Thru hurrying multitudes he made his way, selecting here a book for himself, and again a present of greater value appropriate to the Christmas season. Returning to his office, he indulged in a remark to the acquaintance awaiting an interview.

Profanity? No. He was not in a profane mood. He had observed something which awakened other than the expletive centers of his brain. "I have seen today," he said, "some thousands of human beings, and not one unmistakably happy face. What does it mean? I have seen men who looked worried, and men who looked bored. I have seen women who looked irritated, and women who looked ready to drop with weariness. I have seen children who looked spoiled, and children who looked hungry. I have seen saleswomen who could barely distinguish one tag from another, and who had long since ceased to know where any particular thing could be found. I have seen floorwalkers who looked hopeless and helpless, and drivers to whom arrest and imprisonment for killing would apparently have been a relief, and nowhere have I seen the look of joy, or even of satisfaction."

Not every holiday shopper, even in the crowded market places of New York and Chicago, has had so discouraging an experience, and in the towns and country places that are still collectively the larger half of this American nation, there is plenty of cheery happiness and healthy zest in life. Yet it is not to be denied that too many of our eighty million persons, more or less, are failing to get the best that they might have out of their struggle for existence. They give to the onlooker an impression that somehow and somewhere they have bargained off a birthright for a mess of pottage.

Human beings never had so many "things" as they possess today, and the happiness-producing efficiency of each unit of commodity was probably never so small. It has become a rare thing to meet the grown-up or the child who evinces spontaneous delight in the latest additions to his stock of goods, for which, perhaps, he has toiled or teased, until his

nerves, or the nerves of his family, are shattered. With superabundance have come both litter and waste, while leisure and serenity, to say nothing of a quiet taste, have vanished into the backgrounds of history.

Everybody knows "what ails us," but how few of us have the resolution to follow the ways that would make for abiding prosperity, and the happiness for which alone prosperity itself has warrant of existence! In that simple and obvious rule which Poor Richard laid down for the intellectual life we have the philosophy of all right living: "Read much, but only a few books." Who in his reading follows that rule today, or who applies the principle of it to any of his affairs? We pile our tables not only with books, but with fresh issues of papers and magazines that will go to trash heap with leaves uncut. We fill our houses with junk, our days with distractions, and we balance our checkbooks with despair.

Back of all this passion for worthless accumulations and for meaningless change is a psychological disorder, and back of that lies a deplorable failure of educational discipline. The American nervous system is a hair trigger, too sensitive and not substantial. It tires too easily of repetitions of old and familiar stimuli; it responds too easily to stimuli of novelty. We are not so pessimistic as to think this disorder constitutional. The American population has been bred and recruited from sturdy folk of every European nationality, and there is nothing in the blood essentially different from the blood of Europeans, who acquire habits, and are capable, therefore, of that measure of contentment which is essential to happiness. The American environment is not more stimulating in itself than Europe is. Indeed, with its more diversified topography, its differentiated national organization, and its more eventful history, Europe is actually the more richly varied complex of stimuli. No, the American failure in these matters is discreditable, but happily it is remediable. The American child since the Civil War days has been *taught* to be unstable, superficial and unhappy. He used to be taught to be stable, thoro, earnest, thrifty, self-controlled and happy. He could be so taught again.

The art is not mysterious; it is not difficult. It does not lie in sampling a dozen sciences, in tasting a dozen sensational pleasures. It consists in choosing a few disciplines, a few enjoyments wisely, and getting out of each one all there is in it. When American training in the home and in the school comes back to this well tested plan we shall see another scheme of American life and another type of American face.

Catholic Finance

THE most extraordinary and sensational collapse of the Fidelity Funding Company, managed by Mr. Keiran, involving the loss of very large sums by Catholic institutions, calls attention to previous similar misfortunes. One of these brought grief to the last days of Archbishop Purcell, of Cincinnati; and the Catholic University at Washington and other ecclesiastical institutions only a few years ago suffered sadly by the financial speculations of their trusted agent and adviser. Now Mr. Keiran's extraordinary financial methods, with the failure of his Fidelity Funding Company, hastened as it was by the panic, has dismayed Church authorities in various large cities.

Mr. Keiran is a Catholic, a very plausible man, full of schemes, and quite able to persuade all but the most cold-blooded financier. His plan was to make loans to priests wishing to build or enlarge a church or erect a school building, or to sisters of various orders for their buildings. He would discount their obligations so as to pay them the money in portions as needed. Then he made this company of his finance his other companies, one a trolley company, another a viaduct company in Virginia, and two of them construction companies which would build and furnish the churches for which his company had made loans. A favorite and not quite illegitimate way with him was to loan say $100,000 for building a church, and then insure the lives of a sufficient number of the parishioners on a twenty-year-endowment plan, so that at the end of

that time the maturing endowments would pay the loan, he collecting enough as interest on the loan to meet the discounts at the banks and the insurance. But that required more careful management than his eager spirit could well assure. This must be said, that the business was conducted in a careless and perilous way, the bookkeeping being of a sort which would not allow proper investigation of accounts.

But we are not now concerned with Mr. Keiran's end of it, but with the institutions with which he dealt. If a priest wished to build or repair a church he had to get the permit of the bishop after the latter had investigated the need and the prospect for funds. Now there are bishops and bishops. Some are excellent business men, such as Archbishop Quigley and Bishops McFaul, of Trenton, and O'Connor, of Newark, to go no further. Others are less capable financiers, or are old and feeble. Then priests having received permission are not always careful to keep within the assigned limits, and may be themselves ignorant and careless. The conditions may be worse with orders, particularly of sisters, that are not under episcopal supervision. It is very easy for such men and women to be encouraged to their own loss by a plausible and enthusiastic promoter who will tell them how easy it will be to build.

Thus it was that the Sisters of Charity at Cincinnati gave a mortgage for $400,000, when they had received no such amount of money by $110,000. Such a transaction seems inconceivable, but they knew no better. Sister Mary, of the Benedictine Sisters at Nauvoo, signed notes in blank, with no date or amount or person to whom payable, and sent them to Mr. Keiran to the astounding amount, when filled out, of $1,400,000. Mr. Keiran had the way of having notes renewed and not returning the old ones, which still stand against the borrowers. They did not know enough to ask for them.

All this shows a very extensive carelessness, notwithstanding the careful rules laid down by the Third Plenary Council of Baltimore. Rules will not execute themselves; that requires men. What better could be expected of the Polish priests at Pittsburg, who are now so angry, but who did not know enough to understand the engagements they had made, but who trusted so good and wise a Catholic?

We are not sorry that the receiver of the Fidelity Funding Company gave the facts to the press and warned the creditors two or three days before he was obliged to make official report. That balked Mr. Keiran's plans. Under shrewd legal counsel he had nearly succeeded in getting releases and compromises with all his creditors. He mist it by so short a time. Since then he has been a fugitive from justice.

Would it not be better if Catholic ecclesiastical property were held and controlled by laymen instead of by the bishop? Under any system there would be errors made, but would there not be likely to be in any board of trustees of a valuable property some competent and careful business men who would protect it against such losses as these? It is a matter to be considered.

The Escape of Crime

THE best lawyers and judges complain of the intricacies and delays of the law and its frequent failure to secure justice equally for the rich, who can buy costly counsel to entrap justice, and the poor, who cannot. Here is the case of those just convicted of the monumental frauds in the building and furnishing of the State Capitol at Harrisburg, including the contractor, J. H. Sanderson, ex-Auditor-General W. P. Snyder, ex-State Treasurer W. L. Mathues and ex-Superintendent of Public Buildings J. M. Shumaker. They were sentenced to prison, but were immediately bailed out for $25,000 each on appeal to a higher court. Poor men could not have raised that amount of bail. Of their guilt there can be no doubt. This is one example of the failure of equal justice.

Another example of the failure of justice, but for a different reason, is in the escape thus far of those guilty of murder, arson and robbery in the case of the Springfield, Ill., riot.

We regret to say that no conviction of those who have been indicted for crimes in connection with the riot of last August has been secured up to the present date, altho prosecutions were conducted vig-

orously and persistently until the expiration of the State Attorney's term of office about two weeks ago. His successor has exprest his determination to push the trial of the remaining cases as rapidly as possible, but it is now nearly four months since some of these men were imprisoned; it is reported that they will claim release on the ground that a trial must be had within that period.

Immediately after the riot a special grand jury was convened and over a hundred indictments were framed. If these had been simply for riot, it is probable that convictions would have followed, but the punishment would have been insufficient for the serious crimes which had been committed. Public sentiment as reflected by resolutions of the Chamber of Commerce, Business Men's Association, Ministerial Association and other bodies demanded that an effort be made to secure convictions for murder, arson, malicious destruction of property and similar offenses subject to imprisonment in the penitentiary. The first trial was that of Abraham Raymer, a young Russian Jew who had been driven from his home by persecution, and who showed his gratitude for the protection he was receiving in this country by persecuting negroes. He was indicted for murder in connection with the lynching of the aged negro Donegan. The prosecution did not attempt to prove that Raymer had cut the throat of the victim, or had helped to hang him, but proved conclusively that he was one of three or four leaders of a mob which started toward Donegan's house with the intention of lynching him. He was undoubtedly a leader of this mob till it reached a point about four blocks from Donegan's house, but there is some confusion of testimony as to the leadership beyond that point; yet by his own admission he was in the mob, claiming to be merely a spectator, when the lynching occurred. The judge charged that the leader of or participant in a mob was responsible for the acts of the mob, but in spite of this charge the jury returned a verdict of not guilty. Raymer and others were also tried for malicious destruction of property. The accused was abundantly identified, but the jury disregarded their evidence on the ground that their testimony did not agree as to the manner in which he was drest.

After this trial it was evident that convictions could not be expected with the regular panel made up of jurymen selected by the supervisors to pay political debts. When special jurymen were summoned there was at first some disposition shown to evade the service by claiming prejudice on one side or the other. Strong editorials were written and sermons were preached on the subject, resulting in an awakening of public sentiment and an expression of willingness on the part of the best citizens to discharge this duty, but most of these were challenged peremptorily and set aside by the defense. The prosecution then showed unlawful procedure in the method of selecting jurymen; all names were removed from the wheel and others were substituted. It was the delay occasioned by this change which prevented an earlier trial of the rioters. Only one or two cases have been tried by the new jurors, but these have resulted in acquittal, much to the disappointment of the law-abiding element of the community. Springfield feels deeply humiliated over the result of these trials. There has been a sincere and earnest effort on the part of prosecuting officers, aided by many citizens, to obtain convictions, but it is much harder to find witnesses who can identify rioters than is commonly supposed, and none too easy to get an honest and competent jury. The question is, whether in a Northern or a Southern city it will be possible to convict a rioter who has killed a negro citizen.

Primeval Man

During the past week two announcements have been made indicating the discovery of human remains in the Tertiary period. One of them is Canadian of a series of human footprints under eighty feet of sedimentary earth or rock, but it rests solely on newspaper story. It sounds well, if it is only true and bears scientific investigation for its antiquity. The other sounds more hopeful, and is of the discovery of bones of the skull and body of a man said to be of a very low type, like the man of the Neander-

thal skull. That seems genuine, and there is no reason why it should not be, but the full scientific report has not yet reached us.

Scientific hoaxes delight the unscrupulous journalist and the credulous public. There was the moon hoax, that startled our grandparents, and in the later days we recall the reports that even got into our best scientific journals of living mammoths in Alaska, and the surviving glyptodon, as big as a hog and with a shell like a turtle, which bored its way underground thru the alluvium of Central America. There have been Cardiff giants, magnetic women and magnetic springs galore. We accept no hasty reports of startling discoveries.

Further, genuine discoveries need most careful sifting. Was the Calaveras skull that of a period before volcanic depositings, or did it tumble down from a late Indian grave? How about the little idol dug up at the bottom of a well out West somewhere; and when we find human remains with extinct animals in Europe, the cave bear or the Irish elk, who knows when those animals became extinct? And we observe that craniologists differ much as to the character of the oldest skulls found. One says it is simian, and another that it might have been the skull of a philosopher. For a study of dozens of these skulls, of which thirteen are figured, from the lowest Javan Pithecanthropus to one from a barrow at Stonehenge, we refer the reader to the Hunterian address, in 1901, by N. C. Macnamara, of the Royal College of Surgeons of England, entitled "The Craniology of Man and Anthropoid Apes," and republisht by the Smithsonian Institution.

Beyond all question man has existed on the earth from the later portion of the Tertiary period. The Javan Pithecanthropus is of that age. So are flint implements of a rude age. But anything that we can call civilization is of a comparatively late origin, and it is not easy to prove that any human culture which involves diversified industry or writing, either in Egypt or Babylonia, goes back of 3000 or 3500 B. C.

An interesting problem not yet settled is that of the cradle of the human race. The usual view is that man succeeded the higher anthropoid apes, the orangutan, the chimpanzee and the gorilla; and that he originated in Southern Asia or the adjacent islands. But many other theories have been suggested. Ex-President William F. Warren of Boston University, says in an article on the subject in the current issue of *The Methodist Review*, that the question cannot be settled by any possible interpretation of the Garden of Eden narrative of Genesis. In a volume entitled "Paradise Found" he put the human origins in a continent which surrounded the North Pole, and which paleontology proves was profuse with vegetation at a late geologic period. In his late and very interesting article he names more than a score of recent American, English and German contributions to the discussion of the Cradleland problem, and shows that the theory of the Arctic origin of mankind has more supporters today than twenty-five years ago. He is certainly right in his contention that in the secular cooling of the earth life must have began at the Poles; but it needs fuller evidence that man, the latest of all the series of evolution, was not produced after the quadrumana had occupied the torrid zone.

The Reform of the House of Lords

THE House of Lords does not wish to be "ended"; it prefers to be "mended," and a select committee has been at work for months studying the problem, and it has presented its very important report. If it is adopted it introduces a general elective system in place of the hereditary system, but limits the right of voting to the nobility. That is, it extends to the entire kingdom the system by which the Scotch and Irish lords at present choose out of their ranks a certain number who shall have the right to sit in the Upper House.

Omitting the Scotch and Irish peers, there are 542 dukes, marquesses, earls and viscounts. These will choose 200 of their number, who shall sit and vote for them during a single Parliament. Equally the 24 bishops will choose 8 to serve in Parliament. These are elected for each Parliament, but the two Archbishops will serve so long as in charge of their sees, and equally three princes of

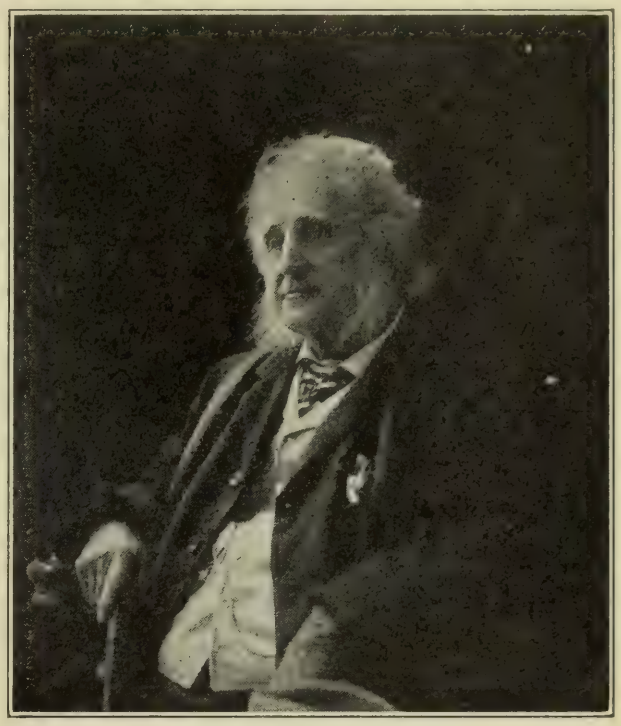
the blood royal, and in addition 130 peers who shall serve for life without election, including such as have been members of a Cabinet, viceroys, governors of the larger colonies, and military officers of high rank; while, as in France, the four larger colonies will have official representatives in the House of Lords; also any man who has served twenty years in the House of Commons will pass into the House of Lords.

This is a very serious reform. It eliminates the worthless, sometimes vicious and discreditable hereditary peers; they will not be elected. It makes a more effective and worthy body; and it reduces the number of members from 618 to about 350. But it is still mainly a House of hereditary peers, for the electors are mainly lords, and lords are mainly members. Those not of hereditary right to be admitted are the bishops and archbishops, ten in all; certain official representatives of Canada, Australia, New Zealand and South Africa (not India); certain high military and naval officers, who will, however, probably have been already made peers if not peers by birth. The number will be very small, almost insignificant.

Such a "mending" may save the House of Lords for a generation. That is the purpose of the proposal, and we presume it will be adopted. The holders of special privilege never yield till they have to, and then only as far as they must; for the very fact that they possess a privilege not allowed to others is proof that they have not the democratic spirit; they are aristocrats, and believe that Nature, or God, has given them special rights not belonging to others. It is possible that when the time comes to vote on the reform, the 618 will flock to London to forbid the loss of their peculiar claim to rule the British Empire as they flocked to save their beer. But that would only hasten a more drastic reform. It is amazing that Great Britain should be more conservative in this thing than any other nation. In the Upper House of the Austrian Reichsrath but a third of the members have the hereditary right. In the German Bundesrath, the members are appointed only for the session; in France no nobility has any political privilege. Even in the British colonies, as in the case of the United States, all the people are equal peers. In Great Britain the institution remains an oligarchic survival of feudal times, an archeological curiosity, which ought to be consigned to the museums of history. And it needs not many such defiances of the people's will as the present Government has suffered to arouse the anger and disgust of the British people. Hence this attempt to sweep back the tide and save the institution from total wreck.

Another Major Planet

It has required courage and faith for Prof. W. H. Pickering, of the Harvard Observatory, to announce that a planet belonging to our solar system, and hitherto unknown, lying beyond the orbit of Neptune, is likely to be found in 1909.0, in approximately Right Ascension $7^h\ 47^m$, Declination $+21°$. This is not one of the scores of asteroids that are constantly turning up, but a full-grown planet, far, far beyond any hitherto known member of the solar system. One can imagine the immense amount of careful observation and mathematical calculation necessary to compute the attractions and perturbations which it has caused to other planets, and the triumph of mathematical science if it should turn out to be found where it is expected, just as LaVerrier and Adams foretold the discovery of the planet Neptune. The discovery would increase the honor of American astronomy. America led in the discovery of a multitude of asteroids by Dr. Peters, and later, in the finding, by Asaph Hall, of the two moons of Mars; while in other branches of the science America has not lagged behind any other country. And astronomy, tho called the queen of the physical sciences, is practically the most useless of them all. It is of use solely for navigation, and not much for that.



Forest Preservation

The Commissioner of Agriculture reports that he will need an appropriation for the Forest Service of $3,200,000 for 1909; that is, he wants to spend 2 cents per acre in the preservation and improvement of our forests. France spends annually on her state forests 95 cents per acre, and Saxony spends $2.32. The countries which spend most on their for-

ests are brought to the highest state of development, and they also reap the largest profit from the forest itself. It has been thoroly demonstrated that forest land can grow successive crops of trees, just as well as plowed land can grow successive crops of wheat. This is a view of forestry which the average voter must understand. To reserve large areas of forests in order to conserve our water supply is not to keep those acres in idleness. The Department at Washington lays great stress on the fact that there has been a demand for cattle range in our national forests thruout the West sufficiently large to use up the productive capacity of the land. There were grazed last year in these forests over one million horses and cattle, and over six millions of sheep and goats. The high price of meat in our larger cities demands that we have a national oversight of the sources of our meat supply. Forest reservation means, then, not only the preservation of our farm fertility, but the feeding of our congested crowds. Meanwhile new sources of paper pulp have been discovered, and the supply of timber from reservations is a matter of growing revenue to the Government. If prices go no higher than at present we shall, in five years, be taking annually from timber sales at least $2,500,000.

Donald G. Mitchell

It was nearly sixty years ago that Donald G. Mitchell acquired fame by his "Reveries of a Bachelor," followed the year after by his "Dream Life." They have not ceased to be read, but they have become almost classics, like Washington Irving's volumes. Indeed, "Ik Marvel" belonged to the school of Irving, as much as any one of the age just succeeding his. The titles describe the books, but they must be read by young men, perhaps college boys, in leisure, dreamy hours to get the impression of gentle, peaceful, yet humorous revery which so captivated the youth that lingered over them first. Perhaps the college youth nowadays are more strenuous — or frivolous — and would not seek that sort of charm. He loved his garden, loved to write of it, but he has taught us the demoniac facility with which in the hot days of summer "pusley" infests the vegetable beds. He died in New Haven, aged eighty-six years, and in his departure a much loved venerable figure, whom we thought of as ever young, was lost to American literature. He has no successor. Indeed, our serious concern leaves little place for pure literature. We have history and doctorate theses, and we have stories, but few light essays or dreaming, meditative divagations. Why waste time on such trifles? Even the only great active British poet is purposeful, and flings his clubs at us in rude defiance of all elder art. The simple, pure, quiet and always restful and charming "Ik Marvel" deserves a garland laid on his fresh grave before a more practical generation buries him from its memory.

DONALD G. MITCHELL.

Andover and Slavery

We thank Dr. William E. Park for calling our attention to a statement in our sixtieth anniversary number that requires modification. It was there said of the first years of THE INDEPENDENT that "those were the days when the theological professors at Andover signed a proclamation that slavery was a divine institution." The definite article should have been omitted. The reference was to a paper signed by a multitude of distinguished defenders of slavery in Mas-

sachusetts, among whom were Profs. Moses Stuart, Leonard Woods and Ralph Emerson. Of these one was still an acting professor in the theological seminary, and two venerable men had retired from service. Three others, B. B. Edwards, C. E. Stowe and E. A. Park, acting professors, tho strenuously urged, declined to sign. The paper was a defense of Daniel Webster's suicidal Seventh of March, 1850, speech in favor of obeying the Fugitive Slave Law. It is said of Professor Emerson that he signed it without reading, in general admiration of Daniel Webster. Daniel Webster's acknowledgment was addrest to "Prof. Moses Stuart, Prof. Leonard Woods and others," and this helped convey the impression that Andover was committed to the defense of slavery, an impression which Mr. Garrison's *Liberator* did its best to extend. One at this day can hardly conceive the blind admiration which so many felt for Daniel Webster. He was to them above criticism, and among his most enthusiastic admirers were Professors Stuart and Woods. These older men seemed to represent Andover Seminary; and the three acting professors were all under fifty, Professor Park but forty-two years old. It is by no means fair, as Professor Park's son reminds us, to represent either Andover Seminary or the students as all gone daft after Daniel Webster, as "Maine went, Hell-bent, for Governor Kent."

Repudiating a Direct Primary

The Atlanta mayoralty is a case in which the decision of the direct primary has to be revised. The Democratic primary, whose action is equivalent to an election, renominated J. G. Woodward, who had made a scandal two or three times before by getting drunk while Mayor, but who had faithfully promised never to do it again. This time, in the interval between the direct primary and the election, he was arrested for being drunk and disorderly in the red light district. The good people were indignant, and he was persuaded to withdraw, and a committee of Democratic citizens persuaded Robert F. Maddox to accept the place. All went well till Mayor Woodward was persuaded by his friends at a big public meeting of those who would pardon such an offense to recall his withdrawal, and now he claims the nomination and asks the election. But Mr. Maddox will remain a candidate, as against the decision of the primary. With him will be the best citizens of Atlanta, while in favor of the present Mayor will be those who do not care for reform. Here is a case where every good citizen should vote for one or the other, and no Republican candidate in the field. Mayor Woodward says other people get drunk and are thought no worse of for it, and he does not see why he should be repudiated.

The Saloon in Politics

The New York State Wholesale Liquor Dealers' Association had a meeting the other day, and voted that "prohibition and local option legislation work confiscation of property," and they protested solemnly that "confiscation of property without due process of law is contrary to the spirit of American institutions," etc., etc. The sense of the American people is that it is the saloon that robs and confiscates property and is the creator of poverty and crime. It is a new idea with us, however familiar in England, that saloon property deserves compensation when destroyed by law, any more than that decayed food needs compensation when condemned and destroyed. The Liquor Dealers' Association is greatly alarmed at the spread of prohibition, but it declares that it is "greatly cheered by the result of the November elections in Ohio and Indiana." They may take what comfort they can, for it will not last. The temperance forces will surely win before long. The association declares that it will go into politics to fight the Anti-Saloon League and prohibition in this State. That is well. Let the issue be joined; it is welcomed.

Birds and Bridges

A curious instance of the hold that superstition has even over the scientific mind is the declaration of Edward E. Sinclair, C. E., that the security of the new Queensboro Bridge, which he is constructing across the East River, is proved by the fact that birds light on it in large numbers. The cantilever bridge at Quebec, which recently collapsed, was, he says, avoided by the birds. This is

nature faking beyond the dreams of Reverend Long or Mr. Thompson-Seton, for it credits the birds with a knowledge of the strength of materials which the engineers in this case did not possess. The immediate cause of this accident has never been determined. We suggest that it was because some bird, making an error in the calculation of its strain sheets or not having taken a C. E. degree at all, lit upon the uncompleted structure and precipitated its downfall. But what becomes of Victor Hugo's beautiful simile of faith:

"As the bird sways and swings
Upon the bending bough and fearless sings,
Well knowing he has wings."

It happens occasionally that the poet is more rational than the scientist.

Latin in the Colleges

Some surprise has been exprest in certain quarters at the statements quoted in a late issue of THE INDEPENDENT as to the failure of Catholic colleges to give any adequate instruction in Latin to their candidates for admission to the theological seminaries. It has been generally supposed that much more familiarity with Latin is there required than in other institutions. In all the Catholic colleges, with perhaps five or six exceptions, it is the Jesuits that have control. It is an open secret that now in the seminaries English and not Latin is the language of instruction. A few years ago a professor would not recognize English. In France, Germany and many parts of Italy the vernacular is now used. Latin is still used in Canada, and the demand for Catholic textbooks in Latin is chiefly from the two Americas, and not from Europe. In all the teaching of Latin, treating it like a vernacular, much as German and French are taught, so that the object may be not so much linguistic science as the ability to read the literature of the language with facility, and to talk it when desired.

It is a startlingly frank statement of reason which the British Government gives for not yet recognizing the transfer of the Kongo Free State to Belgium. It wants guarantees of improved conditions. It declares the manner in which the Kongo has been governed has been "notoriously different from that obtaining in neighboring territories." It wishes to be assured that the new administration will not repeat "the fatal errors of the old," and it asks "some guarantee that the system of government of which they have constantly complained will be changed."

Señora de Costa, of Buenos Ayres, the devoted apostle of peace, writes of the deep concern felt by the workers for international peace in South America over the sudden outburst there of the passion for big navies. Speaking for her own Argentina, she says: "There is absolutely no need of it"; and she adds sadly and reproachfully: "It is a shame that this great United States should have sent that flotilla around the world to stir up the military spirit." Doubtless the visit of our fleet fostered the desire for a new navy for Argentina, but we doubt much if it was a controlling influence. It was the Brazilian navy and the fear of disputes with Brazil that was the chief cause.

In an address at Carnegie Hall last week President Eliot specified various forms of prevalent lawlessness, and then put the chief blame on society itself. It declines, he says, association with burglars and forgers, "but not with dishonest promoters, corrupt officials and lawyers who teach their clients how to evade laws." That last specification cuts deep. Lawyers of very high standing are glad to get such commissions. The remedy suggested is that of President Hadley, Don't invite them to your house; treat them as undesirable associates.

While the interest of the manufacturing public is on the revision of the tariff on iron and textile goods, and that of statesmen on that on sugar and tobacco and hemp, for the benefit of the Philippines, the public generally, so far as they have any interest at all, are interested for a reduction or removal of the tariff on works of art, ancient and modern. Artists, art dealers and art museums all agree for free art as an educational benefit to our people. We commend the "brief" of the American Free Art League, submitted to the Ways and Means Committee.

There are two rulers now who cannot talk politics—the Emperor of China and the Emperor of Germany.

Financial

Bond Prices and Income Values

In the pages immediately following we publish complete and authoritative tables relating to all the bonds reported on the regular daily lists of the New York Stock Exchange. These tables—prepared for us by Francis Emory Fitch, the well-known publisher of standard quotation statements and other Stock Exchange records—show the title of each bond, its interest rate, the year of its maturity, the dates of interest payments, income (or annual return, irrespective of maturity), yield (or approximate annual return, if the bond be held until maturity), the highest and lowest prices, with dates, since January 1st, 1906; prices at latest sales, with dates; and last week's bids and offers. The quoted prices include interest to date of sale, exceptions to this rule being plainly marked. There are also distinguishing marks for bonds in which the savings banks of the State of New York are permitted by law to invest. Our readers will observe that the information is given not only with respect to all the railroad bonds, but also concerning government securities and the issues of gas, electric light, street railway, coal, iron, industrial, telegraph and telephone companies.

Since the beginning of the year there has been a steady absorption of bonds by investors. While panic depression was keeping stock transactions within narrow limits, exceptionally large sales of bonds were taking place. So it has come about that the sales of such securities have been twice as great in 1908 as they were in 1907. Investors have been critical and exacting; they have sought safety. This demand has, of course, increased prices and thus in some degree reduced the income rate. This is especially true of bonds which are best known and of the highest grade. These tables show, however, many trustworthy issues which at present prices yield quite satisfactory returns. Those who find attractive income figures attached to bonds which have not become prominent in the market, but which may be of excellent quality, should seek the counsel of bankers who are familiar with the history and present condition of such securities.

The New Building of the Dime Savings Bank

The Dime Savings Bank of Brooklyn, which was incorporated in 1859, and which has for many years occupied the building at the corner of Court and Remsen streets, has erected a new building on DeKalb avenue and Fleet street, near the junction of Fulton street. The Dime Savings Bank moved from its old to its new building on December 19th. The moving process had to do with the transportation of more than thirty million dollars. This was accomplisht successfully under a heavy escort of police. The new home of the Dime Savings Bank is regarded by its officers as one of the handsomest bank buildings in the country. Its style is after the Greek, and the material used for exterior construction is pentelikon marble. The interior is lined with what is known as royal Irish green marble. The total cost of the new building was approximately $500,000. The accompanying illustration is from a photograph taken especially for The Independent. The last statement of the bank showed total resources of $34,199,863, together with a surplus of $2,233,175.99. The officers of the bank are as follows: J. Lawrence Marcellus, president; George W. Chauncey and John Truslow, vice-presidents.

....William M. Chase, cashier of the National Butchers and Drovers Bank, has been with that institution fifty-two years and has been cashier since 1879.

....Zoheth S. Freeman, who was formerly in charge of the credit department of the Hanover National Bank and more recently was cashier and vice-president of the Merchants National Bank, has been elected vice-president of the

THE NEW BUILDING OF THE DIME SAVINGS BANK OF BROOKLYN.

Liberty National Bank of New York, of which Frederick B. Schenck is president. The capital, surplus and undivided profits of the Liberty now amount to $3,500,000.

....The Trust Company of America last week declared a dividend of 2 per cent., its first dividend since the panic of a year ago, and is to be heartily congratulated. The company withstood last year the longest run in the history of New York banking.

....In giving the list last week of the fourteen banks now flourishing in this city which were in existence in 1848, when THE INDEPENDENT was founded, we failed to mention the Gallatin National Bank of the City of New York, of which Samuel Woolverton is president. The Gallatin was chartered in 1829 and began business in 1831, and was known as the National Bank until the National Bank Act became law in 1865. The capital of the Gallatin is $1,000,000. and the surplus and profits are $2,400,000.

....An investigation of considerable importance is to be made in New York by a commission appointed by Governor Hughes to ascertain what changes, if any, should be made "in the laws of the State bearing upon speculation in securities and commodities." The members of the commission (who serve without pay) are Horace White, author of standard works on banking and formerly editor of the *Evening Post:* Charles A. Schieren, founder of a prominent firm in the leather industry, and formerly mayor of Brooklyn; David Leventritt, formerly Justice of the Supreme Court; Clark Williams, the State Superintendent of Banks; John B. Clark, Professor of Political Economy at Columbia University; Willard V. King, banker, president of the Columbia Trust Company; Samuel H. Ordway, lawyer: Charles Sprague Smith, director of the People's Institute; Edward D. Page, merchant and member of a firm prominent in the dry goods trade.

This List contains all of the Bonds reported on the regular daily New York Stock Exchange Lists.
Prices include interest to date of sale Prices ex interest are distinguished by an X.
Under INCOME will be found the annual return of the investment, irrespective of maturity.
*Under YIELD is given the approximate annual return if held till maturity. ● Legal for investment for Savings Banks New York State. *In Bid and Offered column means amounts less than $10,000.*

The Independent

VOL. LXV NEW YORK, THURSDAY, DECEMBER 31, 1908 No. 3135

Survey of the World

International Conference on Natural Resources

There is to be, at the White House, on February 18th, a North American conference on the conservation of natural resources. Invitations have been addrest by the President to the Governor-General and the Premier of Canada and to President Diaz of Mexico. These will be delivered in person by Gifford Pinchot, Chief Forester and chairman of the National Conservation Commission, who left Washington for Ottawa on the 28th. From Canada he will go to Mexico. It is expected that the two Governments will send representatives to Washington, where they will confer with representatives of the States and of our National Government and with the Conservation Commission. In his letter to Lord Grey, Governor-General of Canada, President Roosevelt narrates briefly the history of the two conferences already held (in May and December of the present year), and then says:

"It is evident that natural resources are not limited by the boundary lines which separate nations, and the need for conserving them upon this continent is as wide as the area upon which they exist. In view therefore of these considerations and of the close bonds of friendship and mutual aims which exist between Canada and the United States I take especial pleasure in inviting you to designate representatives of the Government of Canada to meet and consult with representatives of the States and other departments of this Government and the National Conservation Commission in the city of Washington on February 18th, 1909. The purpose of the conference I have the honor to propose is to consider mutual interests involved in the conservation of natural resources and in this great field to deliberate upon the practicability of preparing a general plan adapted to promote the welfare of the nations concerned."

The conclusions of the conference, he adds, while wholly advisory in character, can hardly fail to yield important beneficial results, both in a better knowledge of the natural resources of each nation on the part of the others and in suggestions for concurrent action for the protection of mutual interests related to conservation.

Municipal Corruption in Pittsburg

Seven prominent members of the Pittsburg City Councils and two bankers were arrested on the 21st upon informations sworn to by the secretary of the Voters' Civic League, charging conspiracy, corrupt solicitation and bribery. The action thus taken was due to an investigation which has been made by detectives brought from another city, and which has been in progress for nearly a year under the direction of Mayor Guthrie and the League. Other persons are soon to be arrested. The evidence shows corruption like that which was exposed in St. Louis by Prosecutor Folk and brought to light in San Francisco by Spreckels, Heney and Burns. The Councilmen arrested are William Brand, Jacob Soffel, Jr., Hugh Ferguson, Captain John F. Klein, W. H. Melaney, Joseph C. Wasson and T. O. Atkinson. The last named is a member of the Select Council; the remaining six are in the Common Council, of which Brand is president. As members of the finance committee they had much power, and were known as "the big six." So far as can be learned at present, they solicited the bribe money and distributed it, as was done by the "combine" in St. Louis and by Ruef and Chief Supervisor Gallagher in San Francisco. With them were arrested W. W. Ramsey, president, and A. A. Vilsack, cashier, of the German

National Bank, for paying in June last a bribe of $17,500 to secure action making the bank a depository of city funds. Proof of this payment was discovered by a national bank examiner sent to Pittsburg, it is understood, at the suggestion of President Roosevelt. Vilsack admitted that the money had been paid. He and Ramsey were removed from office by the bank's directors a few hours after their arrest. It is reported that in all $176,000 was paid by Pittsburg banks for the privilege of holding city funds. It appears that the corrupt councilmen put a price upon nearly every act of municipal legislation for which application was made. Bribes were demanded and paid in connection with ordinances relating to paving, street railway franchises, the purchase of bridges, the construction of filtration beds, etc. It is said that $45,000 was distributed among sixty members for favorable action upon a street railway franchise. An interesting part of the evidence is a flashlight photograph of a councilman taking a bribe of $10,000 in a hotel room. He had been trapped by detectives. Only by force was the money recovered from him after the camera had done its work. At the hearing in court on the 23d testimony was given by Robert Wilson, one of the detectives, and it was so convincing that two or three of the accused men lost their bondsmen. Wilson said Klein (the owner of several steamboats in the excursion trade) told him that there were only six incorruptible men in the Councils; all the others were for sale at prices ranging from $5 upward. There are twenty-two warrants not yet served. About thirty men have been warned that they will be arrested if they attempt to leave the city. The overtures of arrested men who are willing to become witnesses for the prosecution have been rejected. The president of the League says such testimony is not needed. He adds that the League has "more than enough evidence to send to prison every man under arrest and also to convict others who will soon be taken into custody."——The four men convicted of conspiracy to defraud the State of Pennsylvania in connection with the completion of the new capitol have been sentenced to be imprisoned two years in the penitentiary. Each also must pay a fine of $500, with costs. The convicts are W. L. Mathues, formerly State Treasurer; W. P. Snyder, formerly Auditor-General; James M. Shumaker, who was Superintendent of Public Buildings, and John H. Sanderson, a contractor.

The Panama Canal

Judge Taft will sail for the Isthmus on or about January 25th. The armored cruisers "North Carolina" and "Montana" will carry him and his associates, probably starting from the port of Charleston. He will be accompanied by several eminent civilian engineers. It is understood that one of these will be Alfred Noble, recently interested in the construction of the Pennsylvania Railroad Company's tunnels under the Hudson River at New York. Mr. Noble was a member of the Walker Canal Commission in 1901, and five years later was a member of the Advisory Board of Engineers, whose opinion concerning important questions relating to the canal was sought. A majority (the five European engineers and three of the Americans) reported in favor of a sea-level canal. Mr. Noble was one of the five American members who recommended the use of locks, and the lock plan was adopted by the President and by Congress. The recent loss of a part of the unfinished Gatun dam has excited interest once more in the question whether the lock plan can safely be used. It is asserted by some that sufficiently firm foundations for the great dam have not been obtained and perhaps cannot be secured. This is denied by the Government's engineers. A thoro inquiry will be made by the experts accompanying Judge Taft, and thereafter a final decision as to the type of the canal will be made.

Reelfoot Lake Night-Riders on Trial

After the abduction and murder of Captain Rankin, on October 19th, at Reelfoot Lake, Tenn., by a band of night-riders, more than one hundred indictments were found and many persons were arrested. Eight of the indicted men are now on trial at Union City, Tenn. They have been clearly identified as leaders of the band of as-

sassins. Col. R. Z. Taylor, the rich attorney who was abducted with Captain Rankin, but who escaped by diving into a river and swiming beneath the surface, told his story to the jury. Four members of the secret and oath-bound organization became witnesses for the prosecution and made full confessions on the witness stand. Three of these had been present when Rankin was killed. Their account of what took place agreed with Colonel Taylor's. The lives of these witnesses had been threatened in court, and one of them while testifying was surrounded by six armed soldiers. These four men will be pardoned, and, as they cannot live hereafter in safety at their present homes, the State authorities will help them to find new homes in some distant part of the country. The history of the organization was revealed, and its oaths were repeated. It was shown that the men on trial and their associates had committed many outrages. Among the witnesses was a woman whom they had dragged from her bed in the night and severely whipt because she had applied for a divorce from one of the night-riders. She begged the court to give her a guard when she should leave the witness stand for her home. When making raids, the members of the band were accustomed to wear masks and long black coats. They had sentenced to death several prominent residents of the county, one of these being the judge presiding at this trial. Testimony for the defendants will be given this week. They will attempt to prove that they were at home and in bed when Rankin was murdered.

Labor Leaders Sentenced

In the contempt cases under an injunction relating to a boycott of the Bucks Stove and Range Company of St. Louis, sentences were pronounced in Washington on the 23d by Judge Wright of the Supreme Court of the District of Columbia. The sentences were as follows: Samuel Gompers, president of the American Federation of Labor, one year in jail; John Mitchell, vice-president, nine months in jail; Frank Morrison, seccetary of the Federation, six months. More than a year ago the St. Louis company applied in Washington for an injunction forbidding the Federation's officers to publish the company's name in its "unfair" or "we don't patronize" lists. A temporary injunction was granted in December, 1907, and this was made permanent in March last. As the order was not obeyed, the three defendants were cited for contempt, and the arguments were begun on November 10th. After the sentences had been made known, last week, notice of appeal was given, and the defendants were released on bail. The appeal is first to the Court of Appeals of the District of Columbia, and then to the United States Supreme Court. More than a year must elapse before a final decision can be reached. In pronouncing sentence, Judge Wright reviewed the history of the case at great length, criticising the defendants with much severity. There has been in the press some comment upon the tone of his opinion, which would have been more satisfactory to many if it had shown less evidence of the judge's indignation and heat. The sentences have excited a protest in the ranks of organized labor. Many persons have exprest to President Roosevelt their objections or have asked him to pardon the three defendants. On the 24th he informed Attorney-General Bonaparte that he desired with his assistance to examine the history of the case. On the 26th there was given out at the White House an explanatory statement, part of which was as follows:

"Whether the President does or does not think the sentence of Mr. Gompers and his associates excessive is not at present of consequence, because he cannot take any action or express any opinion while the case is pending before the courts. When final decision is made then the President can properly consider whether the terms of imprisonment are excessive or improper. But it is of course impossible for the President to act while an appeal is pending, for he has nothing whatever to act about. The courts must finish with the case first, and the defendants are at the present moment at liberty on bail.

"If the defendants see fit to abandon their appeal the matter will then of course be at once brought before the Executive, in which case it will receive immediate and most careful consideration. But the defendants have a perfect right to prosecute their appeal, and if unsuccessful in final court then to ask for pardon or commutation. But as long as they are prosecuting an appeal the President has nothing to do with the matter.

"The President has already instructed the Department of Justice to keep him fully informed as to the progress of the case, so that in the event of its becoming proper for him to act he may already have at his disposal all of the facts which will enable him to decide whether there was justification for the sentence, and whether if there was justification for some punishment the sentence is or is not altogether too severe. But at present the President has no more to do with the case than the case of the $29,000,000 fine imposed by Judge Landis on the Standard Oil Company, which is also on appeal and concerning which the President has also been repeatedly asked to interfere by well meaning persons who did not know that he could not interfere while the matter was still before the courts on appeal."

On the 27th Mr. Gompers sent word to the Central Federated Union of New York that on account of the Supreme Court's decision in the Danbury Hat boycott case he had decided to discontinue the publication of the "we don't patronize" list until further effort should be made to secure legislation excluding labor unions from the restrictions of the Sherman act.

End of Castro's Rule in Venezuela

Castro is no longer President of Venezuela. The office has been taken by Juan Vicente Gomez, Vice-President, in whose charge Castro left the Government when he sailed for Europe. There are indications that Gomez was loyal to Castro until he discovered a plot of Castro's friends to assassinate him. These friends held a meeting on the night of the 18th, at the house of one Guzman, formerly a Cabinet Minister, to whom Castro had committed his personal affairs. It was decided that Gomez and several others should be assassinated and that the Government should be seized. There is some ground for a belief that the plot was inspired by Castro himself. Torres Cardenas, formerly Minister of the Interior, was appointed leader. News of this conspiracy reached Gomez the same night. In the morning he personally and without aid arrested Castro's brother (the commander of a regiment) and Torres Cardenas. The latter attempted to shoot Gomez, who disarmed him. Other arrests followed. Gomez's courage commended him to the people, who promptly gave him support. He decided to eliminate Castro influence from the Government. Removing the old Cabinet, he appointed a new one of progressive men, and straightway sought a settlement of Venezuela's disputes with foreign Powers. In a proclamation setting forth his peaceful purpose, he plainly declared that the "diabolical plot" had been the work of Castro's "intimate friends." All this became known in the United States on the afternoon of the 22d. Gomez had already exprest to Secretary Root a desire to resume friendly relations with our Government, and had asked that we should send to Venezuelan waters "an adequate naval force" to assist him. Therefore the battleship "Maine" had sailed for La Guayra on the 21st. She was followed by the "Des Moines" and the "North Carolina," the latter carrying William I. Buchanan, a diplomatist of much experience in Central America and South America, whom the President had appointed a special commissioner to negotiate for a resumption of friendly intercourse. Gomez had approached Holland in a similar manner. He suspended the operation of Castro's decree affecting trade with Curaçao, and the Dutch warships were withdrawn. To Europe he sent Dr. Paul, formerly Foreign Minister, to settle Venezuela's disputes there. This was not all. He resumed friendly relations with Colombia, released all of Castro's political prisoners, establisht freedom of the press, abolisht Castro's cattle monopoly, and invited all the political exiles to return. The leaders of the Matos rebellion at once started for Venezuela, General Rolando saying he would heartily support the new President. The Venezuelan offices of the New York and Bermudez Asphalt Company (fined $5,000,000 by Castro) were reopened. At last accounts Gomez's authority was generally recognized, and foreign Powers were regarding his course with approval. On the 23d, Castro, then in a Berlin hospital, had not been told of his deposition. A day or two later he publisht a statement, which was virtually an abdication, altho he questioned the assertion that the Gomez Government was hostile to him. Gomez had caused the Bank of Venezuela to cancel the letters of unlimited credit which it had given to Castro, but it is understood that the latter has millions on deposit in Europe. The general expectation is that he will never return to Venezuela.——Gen. Antoine Simon, leader

of the successful revolution in Hayti, was inaugurated as President on the 20th. He has placed none of his rivals in his Cabinet. The most formidable of them, General Firmin, has been appointed Minister to the United States.——In Cuba, on the 24th, the Electoral College formally cast a unanimous vote for José Miguel Gomez to be President, and Alfredo Zayas to be Vice-President.

The Austro-Turkish Conflict

This has been a pessimistic week on the Balkan question. It had been understood that the negotiations between Austria and Turkey had reached a point where the only important difference of opinion was the amount of money to be paid to Turkey as compensation for the annexation of Bosnia and Herzegovina, and that Austria had offered $10,000,000, and Turkey was willing to accept $20,000,000. Now it is announced with considerable authority that Marquis Pallavicini, the Austrian Ambassador at Constantinople, has informed Kiamil Pasha, the Grand Vizier, that Austria absolutely refuses to make any compensation. The Grand Vizier insists upon a pecuniary indemnity regarding the commercial concessions offered by Austria as altogether inadequate. If the deadlock remains unbroken it is likely to lead to a general European conference, if not to war. The position of Russia on the question is difficult and involved. The Russian Foreign Minister, Mr. Isvolsky, showed this plainly in his speech of the 25th in the Duma. He defended his Government against the attacks of the press, because no protest has been raised against the annexation, by saying that he had been obliged to take into account the treaties of Budapest and Berlin, for Russia maintained that international treaties could be modified only by an agreement of the signatory Powers. It would have been dangerous for Russia to have made an individual protest unless the nation was willing to back it up with arms. Russia, he said, was acting in harmony with Italy, France and Great Britain in the endeavor to settle the matter in a pacific manner, and he hoped that Germany and Austria-Hungary would not be obdurate. Russia, he declared, would continue to occupy a disinterested position, but will warmly support the interests of the Slavs. The proposal of Austria that the question of the annexation of Bosnia and Herzegovina be made a matter of preliminary negotiations between the various cabinets instead of being immediately brought before a conference of the Powers has received the approval of Russia in a note to the signatories of the Treaty of Berlin. The acceptance is conditional upon similar action by the other Powers, and the note refers to the actions of Austria and Bulgaria as "violently shaking the foundations of political equilibrium and endangering the peace of the world." This is not likely to lead to a settlement of the question, at least not for a long time. Bulgaria, like Austria, refuses even to consider the question granting an indemnity to Turkey for her action and has addrest a note to the Powers protesting against the offensive tone in which the Sultan in his speech to the throne refers to Bulgaria. The boycott in Turkey against the Austrian and even German goods still continues. At Avlona, Albania, the boycotters threw into the sea the provisions of one of the vessels of the Austrian Lloyd Line. The Austrian mails at the same port have also been interfered with by a mob. The Austrian position may be best stated in the words of the Austrian Premier, Baron von Bienerth, in his speech on the annexation bill:

"From the beginning Austria-Hungary regarded the idea of a conference with sympathy, and lost no time in defining her position in regard to it so soon as the nine points of the program became known. Except Turkey, no State has yet, so far as I know, done as much. We even consider the meeting of the conference to be positively desirable, and we are ready, by showing all possible consideration, to do what we can to realize it. Our only condition is that a complete agreement concerning the tasks of the conference shall previously be attained between the Powers. We must hold fast to this condition, because the boundless debates that would otherwise take place would restrict the beneficent influence to be expected from the conference.

"Our good right proceeds from our previous rule in Bosnia and Herzegovina, a rule unlimited as to time and not susceptible of material increase. The extension of his majesty's sovereignty to Bosnia and Herzegovina was solely the perfecting of a registration of his legal title to possession. A constitution for the two provinces is in course of preparation, and the joint government is sincerely endeavoring to

solve the question in a manner corresponding to the real needs of all classes of the population. The settlement of the position of the provinces in regard to Austria and Hungary is reserved for the future, and I can only give the assurance that the government will exercise to the full the influence of Austria in the solution of the problem. Austria has borne, to say the least, an equal part with Hungary in the work and cost of the occupation and administration. The discrepancies between the texts of the Austrian and Hungarian annexation bills cannot affect the equality of Austrian and Hungarian rights."

French Affairs

Some little excitement has been stirred up in Paris by an insult offered to the President of the Republic. As President Fallières was taking his usual morning walk on Christmas Day, a man came up behind him and seized him around the throat. He proved to be Jean Mattis, a café waiter and a fanatical Royalist. He was unarmed and claims that his intention was only to pull the President's beard. In his room was found a mass of reactionary literature, and it is evident that he is a weak-minded man incited to the act by a desire for notoriety, and by reading the Royalist attacks upon the President, which have of late been unusually virulent. The opposition papers have exploited a scandal, of which there appears to be no foundation, connecting the name of André Fallières with the murder of Avocat Astresse by his wife. In their comment on the affair the reactionary newspapers assert that the whole affair was instigated by the Republicans in order to provoke feeling against the Royalists.——The same elements are concerned in the riots in the Medical School of the Sorbonne. The students revolted against the inauguration of a new system of examinations, and two thousand of them paraded the Latin Quarter denouncing the university authorities. The police were unable to handle the mob, which charged them with stones, eggs and sticks. Numerous windows were smashed and nearly one hundred persons were injured. It was found necessary in the end to call out the Republican Guard, which cleared the streets. As a consequence of the riot the University Council has closed the School of Medicine to the first and second year students for a period of three months. In their discussion of the affair the French papers generally admit the necessity for reform in the medical schools. It is said that the education given to the medical students is too theoretical and that the examinations are not impartially conducted. M. Thalamas, whose lectures on Joan of Arc in the Sorbonne were regarded as blasphemous and anti-patriotic by Royalists and Catholics, is having great difficulty in continuing his lectures this year. His first lesson of the year was broken up by the students, who attacked him with physical violence, and since then the lecture room has been guarded by the police. On the occasion of his third lecture it required a force of 150 police to maintain order in the vicinity, and twenty-five arrests were made of the students from the organizations that attempted to invade the building. No one was admitted except on a personal card signed by the rector or M. Thalamas.

Russia

A serious conflict took place on Elk Island, a summer resort near Moscow, between the police and the leaders of a revolutionary organization. The villa where a meeting was being held was surrounded by the police, but as they approached they were fired upon by the revolutionists. Troops were called upon to reinforce the police, but were the second time beaten back. In this charge Baron Cotte, Chief of the Secret Police, was killed and Colonel Muraki was wounded. For twenty hours the revolutionists held the house, until finally the artillery was brought to bear upon it. Only two men were found in it when it was captured—Tchernoff, head of the Central Committee of Social Revolutionists, who had fired eighty rounds of ammunition, killing himself with the last round, and a comrade named Sidorkin, who was seriously wounded.——The Duma past a bill dissolving the mirs or village communes and distributing among individuals the land hitherto held in common. There was a strong opposition to the measure in the Duma, particularly from the peasant deputies, who objected to an attack upon this ancient Russian institution, but the speech in the Duma from Premier Stolypin explaining that personal ownership of land was an indispensable condition of agricultural progress carried the day. The Duma past a bill for continuing the increase in pen-

sions to army officers which was establisht during the war with Japan. Foreign Minister Isvolsky's statement of the Government Balkan policy was approved by the Duma by a large majority, and sympathy was expressed with the kindred Slav peoples. Mr. Pokrovsky, a Social Democrat, created some excitement by declaring that the Russian Government had encouraged political assassination in Bulgaria during the reign of Prince Alexander and the early years of Prince Ferdinand. Upon his asserting that "when an Armenian appealed to Christ to save him from massacre, Christ was dumb, being silenced by Russian diplomacy," the deputy was suspended by the president for three sessions of the Duma, and another Social Democrat who protested against this sentence was also suspended. The entire body of Social Democrats then left the chamber. A provisional budget authorizing expenditures amounting to $421,137,000 has been approved by the Cabinet, and will be promulgated by an imperial ukase after the adjournment of the Duma for the holidays. It shall provide for the expenses of the Government until next April, when the Duma will be able to finish its examination of the regular budget for 1909. ——In St. Petersburg the Asiatic cholera has revived with increased virulence. On Christmas Day there were thirty-one new cases and thirteen deaths reported. The hospitals have been reopened and now contain 225 persons suffering from the disease.——The Jews in Finland are being again persecuted by the Russian authorities. Hundreds of them have been driven from their homes and have suffered from cold and starvation. Very few Hebrews have been permitted to acquire citizenship in Finland, and all others are regarded as foreigners, and are subjected to annoying restrictions in regard to residence and occupation. Individual licenses permitting six months' residence in Finland are granted only by action of the Senate. By a law of 1894 they were allowed the trading privileges of other foreigners in the towns of Helsingfors, Abo and Viborg alone. The late Finnish Diet refused to consider a proposition abolishing Jewish disabilities. The Jewish young men are obliged to serve in the Russian army, and when their term has expired they are not allowed to return to their homes in Finland. Another blow has been struck by the Society for the Prevention of Cruelty to Animals, which has introduced a bill in the Diet prohibiting the Jewish manner of slaughtering animals for Kosher meat. This will cause further emigration of orthodox Jews.

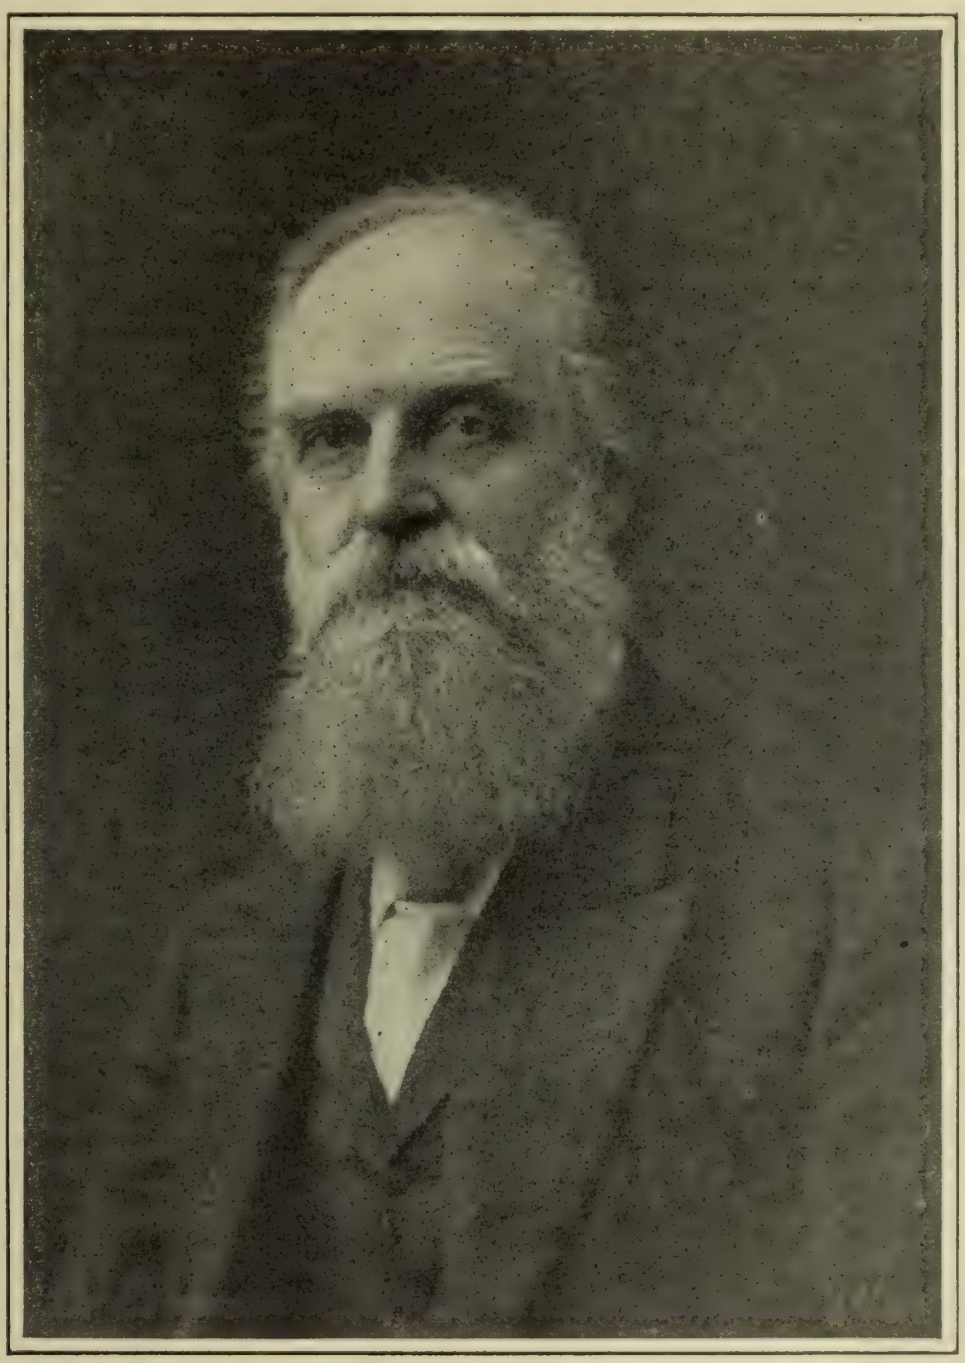
China

The Dalai Lama of Tibet has left Peking for Lhassa, where he will probably remain henceforth. He left his capital four years ago, when Tibet was invaded by the expedition of British troops under the command of Sir Francis Younghusband, and took refuge in Mongolia. He has ever since been traveling from point to point, thru Mongolia, Manchuria and China, where his visits were regarded as a great honor on account of his sanctity as the reincarnation of Buddha, but nevertheless as a great burden because of the expense of providing for his caravan of four hundred persons with the necessary camels and horses. The effect of the British invasion has been to strengthen the hold of China on Tibet, where the Dalai Lama had become practically supreme. Henceforth the Chinese Commissioner or Amban at Lhassa will supervise his acts. The Chinese Government has conferred upon the Dalai Lama the title of Sincere and Loyal Spreader of Civilization, indicative of the policy of reform which he is expected to inaugurate in Tibet.—— It is feared that the Regent, Prince Chun, is in danger of assassination, and an imperial guard taken from the Manchu regiments has been organized for the purpose of protecting the palace.——An attempt to enforce the anti-opium edict resulted in a riot at Tungan, twenty miles north of Amoy. The natives persisted in planting poppies in spite of orders of the authorities to the contrary, and in the resulting conflict one officer and ten civilians were killed.——New explanations continue to be given in regard to the object of Tang Shao-yi's mission to the United States. The latest is that publisht by the *Asahi* that he was sent to Washington for the purpose of obtaining a loan for the colonization of Manchuria by the Chinese as an offset to the Japanese invasion.

The Story of My Imprisonment

BY NICHOLAS TCHAYKOVSKY

[We recall no Russian in recent years who has so endeared himself to the American people as the patriot, Tchaykovsky. When he was arrested and cast into prison some months ago for the crime of being a hater of injustice and oppression, hundreds of the leading men and women of England, France and the United States united to ask the Russian Government either to try him or set him free. It was feared that his advanced years would not survive the rigors of another winter in prison. If the Russian Government does not heed the piteous cries of its own people it does have a respect for foreign opinion, especially when loans are to be made, so finally Mr. Tchaykovsky was released on a bail of 50,000 rubles, which was raised largely in London and New York. The story which follows of his imprisonment is the first he has written since he has left prison.—EDITOR.]



IT is only natural that my personal friends in America, as well as the friends of my country generally, are eager to hear at least a few words from me, and I feel bound to respond. I thoroly understand the state of their minds. They are like friendly bystanders standing on the sea coast watching a terrible storm which has seized a frail boat with its single-handed rower. So many valuable lives, so many dear souls, have already perished on this fatal spot —their gaze is riveted on the misty foam where the conflict between an individual human spirit and the blind forces of the elements is waging. At last the crisis is over, the boat, as if by magic, is safe, while the rower embraces his friends on the coast, for the elements had somehow glided over him and the shell-like boat without injuring either. The miracle, however, lies not in the saving, but far deeper. The critical moment of facing the terrible danger instead of disabling the rower has only strengthened him. The overfilled heart is ready to overflow. But first as to facts.

A year and a half ago I left the British shore for Russia, craving to learn, to see and to hear with my own eyes and ears the actual situation. So incredible, so perplexing seemed the news which came thru the press and thru arriving eye witnesses, neither supplying any intelligible key to the puzzle, that the wave of faith and of courage was evidently retreating. But why? Was it because

"The sweetness of mercy brew'd destruction
And the frightened monarchs came back once again?"

I arrived in St. Petersburg in August, 1907, and decided to make a tour thru the eastern and northeastern provinces, which were the least known to me, for the purpose of learning and observation. I knew only too well that my plans were bound to be frustrated by my arrest had I appeared at the frontier under my own name. Therefore I had provided myself with an assumed name and a false Russian passport, and safely went thru those provinces by rail, by boat and by horse chaise. I saw, heard and learnt what I wanted; all went well with me until the very eve of my departure from the capital for England. On that last day I had unfortunately caught what they call here "a tail," probably thru merely the accidental coincidence of having entered a house where some one else was being watched, consequently as soon as I entered the railway station the following noon I was significantly touched on the shoulder by a gendarme and arrested by order. When asked for my name and passport in the gendarmerie room of the railway station I produced my false document, acknowledging that altho I had been residing under that name it was not my own passport. I moreover declined to reveal my identity until a formal accusation and the reason of my arrest were declared. Then all my papers, packets and luggage were ransacked, cataloged (altho not without omissions and disappearances), sealed and together with me sent under a strong escort to a preliminary prison. There I had to live for three days in an empty and dirty room temporarily converted into a prison cell, at night sleeping without undressing on a bare and

hard oilcloth couch, using my fur coat as a pillow and my overcoat as a blanket. When two days later the legal situation was explained to me I disclosed my real name and received permission to write letters to my family in England and inform them of what had happened to me.

NICHOLAS TCHAYKOVSKY.

I learned afterward that these first letters never reached their destination. Fortunately I had provided myself with a good sandwich for the journey before starting, for no food of any kind was given me during my first eighteen hours in this dirty prison. An atmosphere of sulky suspicion and hatred, veneered with military deception, surrounded me here, altho my own super-politeness, added to my gray hairs and decent clothing, preserved me from actual rudeness.

On November 14th, 1907, we were taken over to the fortress in two double-horse carriages with dark curtains, one for myself and three armed gendarmes and the other for my luggage and further escort. The formalities of handing me over to the fortress authorities, the passing thru the formidable iron railings

by which the Trubetzkoi Bastion is guarded, after the arrival of a special key keeper, the sight of a whole detachment of soldiers with rifles, formed the details of the transfer. I was then marched between two gendarmes up a stone staircase, along a corridor with a mysterious looking row of wooden doors on the one side and of windows, overlooking the square of the bastion, on the other, until we reached a door wide open as if eager to receive me in its cold embrace. I found myself in a spacious vaulted cell with whitewashed walls and a yellow painted floor, scantily lighted by one narrow window far above my reach in the thick wall. Here I was ordered to strip by my guards while they stood in front of me eagerly scrutinizing every motion. A prison garb had to be donned instead, rough linen, a thick loose and long coat of woolen cloth and a pair of loose leather slippers, rough pieces of the same linen for a handkerchief, a napkin and a towel completed my new wardrobe. This ceremony over my own things were removed and I was left in the empty cell in the position of an unwilling Diogenes alone with my thoughts.

My cell appeared to measure about 20x 10x10 feet and allowed at least a good walking space, ten paces one way and five the other. The entire furniture consisted of a rough iron table bracketed to the wall, an iron bedstead close to the table, also fixed to the wall and floor and always open; an electric lamp covered with a convex glass over the table in the wall; a porcelain basin fixed to the wall under a water tap in one of the corners and, last but not least, an ordinary water closet without any lid or screen. The bedstead had a thin mattress, so that the iron trellis underneath could be distinctly felt; a sheet, a blanket (or two if necessary) and a decent pillow; a small copy of the New Testament in Russian and a quart mug on the table; such were my surroundings.

Piercing the wall, 2½x3 feet thick, was the window, about 2x3 feet, with double glass framed in iron and wired to prevent doves from outside visiting the cell thru the ventilators. This window admitted a very limited amount of light, principally due to another external wall of the fortress of the same height as the Trubetskoi Bastion itself, arising at a distance of ten to fifteen feet from the windows of the cells of both floors; consequently only a very narrow strip of sky could be seen from the upper cell and none at all from the lower ones, as I learnt subsequently, being temporarily placed in one of these lower cells. The dark brick external wall reflecting very little sunlight thru the windows leaves them half dark even on bright sunny days. Moreover these lower cells are positively damp, and this, together with the darkness, must act terribly upon the nerves and the health of those who are unlucky enough to be incarcerated therein for any period over a year. (Solitary confinement in the fortress even for two years is not a rare occurrence.) Fortunately for me I was placed on the upper floor, and in order to escape rheumatics asked the authorities at the very beginning to allow me the use of my own woolen underclothing, to which I had been accustomed for the last thirty years of my life in England. This request of mine was granted, I was informed, out of regard for my age. A few months later I was even transferred into what was said to be the best and lightest corner cell in the whole bastion, where the external wall retreats from the window and leaves an open space for the southwest sun rays.

When I entered the Trubetzkoi Bastion the food allowed by the prison consisted of hot water and black rye bread in the morning, two courses of meat for dinner at noon and a pudding or stew of some kind with hot water for supper at 6. All additions to this, such as tea and sugar, milk, white bread, fruit, sweets, tobacco (I did not smoke), etc., had to be ordered once a week at the prisoner's expense from shops outside. I had no reason to complain of the diet, especially as I had money and could buy all the extras that I wanted; materials were fresh and the supply sufficient, altho the cooking was somewhat indifferent.

There is a small but select library of books left by previous inmates for many years. Each prisoner may borrow thru warders two books at the time three times a week, having not more than five books altogether in the cell. It is a curious statement to make, but a good many young Russians, especially artisans, owe whatever higher education they have,

such as knowledge of languages, philosophical works, etc., to prison libraries. As to myself, I wrote once to my daughter from the fortress that I was there passing thru a supplementary course of higher education, as I read and studied in the course of eleven months over one hundred volumes of different works. My wife and daughter supplied me thru the authorities, with books wanting in the library, and when I left the fortress I left about twenty volumes.

Letters are allowed to be written from the fortress twice a week to near relations only. All such letters undergo the inspection not only of the fortress authorities, but are also forwarded to the ministry for the strictest censorship of procurators and examiners. No current politics or social topics are allowed to be discussed, no complaints or criticisms of any authorities, no literary productions; in fact in order to express one's opinion on any subjects of general interest beyond merely personal wants one ought to learn the special Russian art of writing between the lines. And it must be admitted one attains a considerable proficiency in this art under the circumstances.

Visiting prisoners in the fortress is permitted only to the nearest relations, usually thru two small windows, separated by a space of four by five feet where an officer has to sit; only in exceptional cases is visiting in an ordinary room allowed. Endless limitations are prescribed for these visits. In my own case I received permission to be visited by my wife and son about the same time as the American and English addresses reached here. Soon after that my wife received permission to visit me regularly in an ordinary room, and when she left the capital my daughter, Mrs. L. V. Bressey, visited me in the same way twice a week. These visits were to me like flashes of fresh air and light to one buried alive. I used to live from one visit to another and often counted the days and even hours left till the next meeting. It was not because one feels merely lonely, I had always plenty of imaginary personages and thoughts of my own to keep me company, but while staying all the time and dealing with one's self one begins to lose the sense of reality and is apt to identify one's own phantoms and abstractions with real things, which makes one feel curiously uneasy and to lose confidence and interest in one's own thoughts—a most disheartening sensation.

Fresh air exercises were allowed in the Trubetzkoi Bastion daily (except one Saturday in each fortnight devoted to going to the Russian hot bath), from fifteen to thirty minutes in the square of the Bastion, where a few trees and bushes are growing. Such a narrow limit of time was explained by want of space for exercising more than one prisoner at a time, the Whole Bastion being capable of admitting nearly seventy inmates when the cells of both stories are filled. Prisoners use their own clothes when walking in the square.

Generally speaking I could not complain of the *régime* in the fortress as applied to myself. But I had good reason to ascribe the comparative leniency of the authorities to myself much more to the expression of public sympathy and interest in my case in England, the United States and France than to anything else.

For the last eleven days of my imprisonment before liberation I was transferred to the so-called Cross Prison or St. Petersburg Prison,where the *régime* is supposed to be much milder than in the fortress. But I found some of the prison conditions, such as sanitation for instance, far inferior to that of the fortress, while the cubic space of each cell in the latter is about 2,000 cubic feet, in the "Cross" it is only about 700 cubic feet, which is hardly sufficient for one inmate, even without the traditional Russian "parashka," *i. e.,* a pail for human refuse, present there and polluting the air of the cell every time it is opened. Consequently the atmosphere of the cells, especially in winter time, which prisoners have to breathe twenty-three hours out of the twenty-four is simply insufferable.

As to my case of law I had seen no examiner nor were any questions asked of me for the first month and a half. And then it appeared that the accusation made against me consisted of two main points: (1) Participation in a criminal conspiracy against the state, *i. e.,* under Article 102 of the criminal code; and (2) agitation abroad — the former accusation based on so fantastic and inaccurate a statement of facts that it was not diffi-

cult for me to knock the bottom out of it. As to the second part of the indictment I never made any secret of my sympathy with the whole liberal and revolutionary movement in Russia, neither my readiness to supply the public opinion of the world with reliable information as to the truth and the whole truth of the situation in Russia. Moreover I am ready at any time to bear the responsibility for doing so if this is a crime according to the present interpretation of the Russian law.

My present position is as follows: A golden thread has taken the place of the iron fetters which formerly held me. A golden thread of 50,000 rubles. At first it was officially stated that on receipt of this sum the government was willing to let me out on bail. The conditions of this temporary freedom were couched in terms which were apparently misunderstod both by the lawyer and my daughter, as they informed me that I would be free to live abroad or in Russia until recalled for my trial.

This was, however, later proved to be a false hope, as now it turns out that I am tied by law to the town in which my case is proceeding. There was even a doubt whether I should be allowed to make a flying visit to Kazan to see my dying mother, who for thirty years has yearned to see her youngest born; she is now eighty-six, stricken in health and fast passing to her last rest. This latter doubt has, however, been dispersed and I am on the point of departing to Kazan via Moscow.

While in prison I was not idle. I read a good deal and hope to publish some of the work which I sketched there. I have also compiled a booklet on the new American method of cultivating the arid soil, the so-called "dry system," by H. W. Campbell, and hope to see it soon in print and of some use to the mass of Russia's agriculturists. As soon as I have time to be working again I shall prepare some of my "Letters from the Fortress" for print in England and Russia.

ST. PETERSBURG, RUSSIA.

On Tantramar

BY WILLIAM HERVEY WOODS

We showed him all the city's pride,
Our streets, and towers, and harbors wide,
Yet not for these his woodsman's eyes
Gleamed once with wonder or surprise;
He looked our latest marvels thru
And heard more tongues than Babel knew
Unmoved; his homesick thoughts afar
Still roamed the shores of Tantramar.

But on the dusky bay by chance
Our Northman cast an upward glance,
And lo! across the fading blue
A silent wild-fowl phalanx drew,
And as he marked with face alight

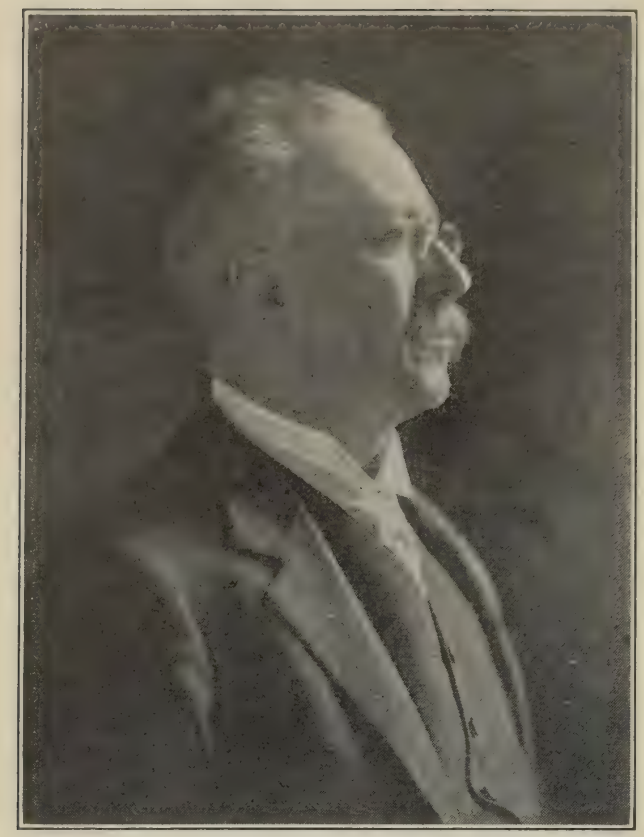
"Then, then we pile the hearthstone high,
As kin and clansmen gather nigh,
Enliven then the festal board,
Their ordered wheeling down the night,
"They came," we heard him sighing say,
"From Tantramar but yesterday!"

"On Tantramar" (and now his words
Ranged freely as his vanished birds),
"Like night-clouds driving in from sea,
The wild-fowl gather countlessly;
Their myriads paint the marshes brown,
Their wings outroar your clanging town,
For days; and then twixt sun and sun
The call comes, and their hosts are gone."
"On Tantramar the marshes spread,
Once in the sunset ruby red,
Now daily wear a dimmer tone;
The ice-rim round the pools has grown,
And soon, where now the ripples play,
The fox's foot shall careless stray,
And hares their moonlit revels keep
On snow-piled Tantramar asleep."
Good cheer, good friends, and kindly word
Or else far over wood and lake
Our snowshoe bands their outing take,
And song and laughter tingle far
Across the fens of Tantramar."

We listened; and our clanging ways
Grew tame, when thus we heard him praise
The wilds, for us uncharted yet,
Wherein his eager youth was set;
For tho we boast of storied art
'T is nature's touch still rules the heart,
And a bird's flight may help unbar
Our path to some lost Tantramar.

BALTIMORE, MD.

MUSIC ART AND DRAMA



New Operas at the Metropolitan

To the war between our two opera houses has been added a civil war within the domains of the Metropolitan, where the dual management has not proved a success. When Mr. Gatti-Casazza was persuaded to give up the Scala in Milan, which he made the leading opera house in Italy, and come to New York, he was under the impression that he was to be the sole manager here, as he had been there. When he arrived he found, to his surprise, that he was to have a partner of equal authority in Mr. Dippel. Inasmuch as the famous Italian does not speak English and was utterly unfamiliar with the situation here, the directors had deemed it necessary to engage a man who does speak several languages and who could make the necessary arrangements with singers of both continents. The newspapers urged that Mr. Dippel be chosen for this task, and the directors followed their advice. He did his work admirably, securing the best available singers for all the operas to be given, making the orchestra bigger and better than it has ever been, bringing over from Germany the finest operatic chorus ever heard here, and introducing many reforms in stage management. So far as the present season is concerned, little, in fact, remained to be done when Mr. Gatti-Casazza arrived. After there had been a few clashes of commands regarding rehearsals and other matters, he nevertheless promptly demanded that the directors give him supreme authority. The directors, at a special meeting, complied, prolonging his engagement from one year to three years.

Perhaps, in view of what he had given up in Milan and had expected here, this was only just. Yet everybody felt that Mr. Dippel, who had done nearly all the work, and had done it so exceptionally well, had not been fairly treated. He will remain assistant manager till the end

of the season, but his continuance thereafter will depend on the good will of Mr. Gatti-Casazza. It is hoped that that Italian will be sufficiently just—and astute—to retain Mr. Dippel, who is by far the best available man for the kind of work he has been doing.

It was unfortunate for Mr. Dippel that he had the privilege of bringing forward the first novelty of the season and that this novelty was not a success, which gave his opponents a chance to cry: "He is not a wise manager." But he was not to blame for accepting D'Albert's "Tiefland," or for its failure to please Metropolitan audiences. It would have been foolish *not* to try that opera here, for in Germany it has been a huge success, having been sung in Berlin alone over a hundred times and acclaimed in dozens of other cities. Mr. Dippel secured for it a cast that no foreign opera house could have duplicated; it included Destinn, who shared the honors of the last London season equally with Tetrazzini and Melba; Schmedes, the leading tenor of the Vienna Imperial Opera; Feinhals, the best of all German baritones; Hinckley, an American who has been heard repeatedly at Bayreuth; and two of the best of the Metropolitan's singers for some seasons, Goritz and Reiss. It was a cast to conjure with; and yet the opera failed.

Why? Chiefly because of the vast auditorium. "Tiefland" is an opera in which the play is more important than the music, and in the vast spaces of the Metropolitan no play can be effective. The music, while it contains some very excellent passages, is not of sufficiently sustained interest to atone for this disadvantage, and hence "Tiefland" has been sung only five times, including one performance at the new Academy of Music in Brooklyn and one in Philadelphia. The story of this opera is based on a Spanish play by Guimerá, of which there are several English versions, in one of which, under the title of "Marta of the Lowlands," Bertha Kalich has appeared in this country.

The second Metropolitan novelty, Puccini's "Le Villi," appeared under the auspices of Mr. Gatti-Casazza, and was an even greater failure than "Tiefland"—again thru no fault of the management, for it was well staged, and the cast—including Madame Alda, Mr. Bonci and Mr. Amato—was adequate. In this case the auditorium was less to blame than the opera itself, as regards both the libretto and the music. The plot is based on a legend current in the Black Forest, a ballad about a young man named Roberto, who, on inheriting a fortune, squanders it in riotous living, forsaking his village betrothed, who dies of a broken heart. She becomes one of the Villis, or spirits of deserted maidens, who haunt the forests and waylay faithless lovers. They surround Roberto, who is on his way home, and drag him into the mad whirl of their dance till he falls exhausted and dies.

For a pantomimic ballet such a plot might serve very well; for an opera it lacks variety, detail and contrast. Why was this opera produced? Because it is by Puccini, the present hero of the operatic world. As he is slow in producing new works, the managers have gone back to his earlier efforts. "Le Villi" is the earliest of them all; he wrote it when just out of the conservatory. The music is crude and tiresome, and yet there are

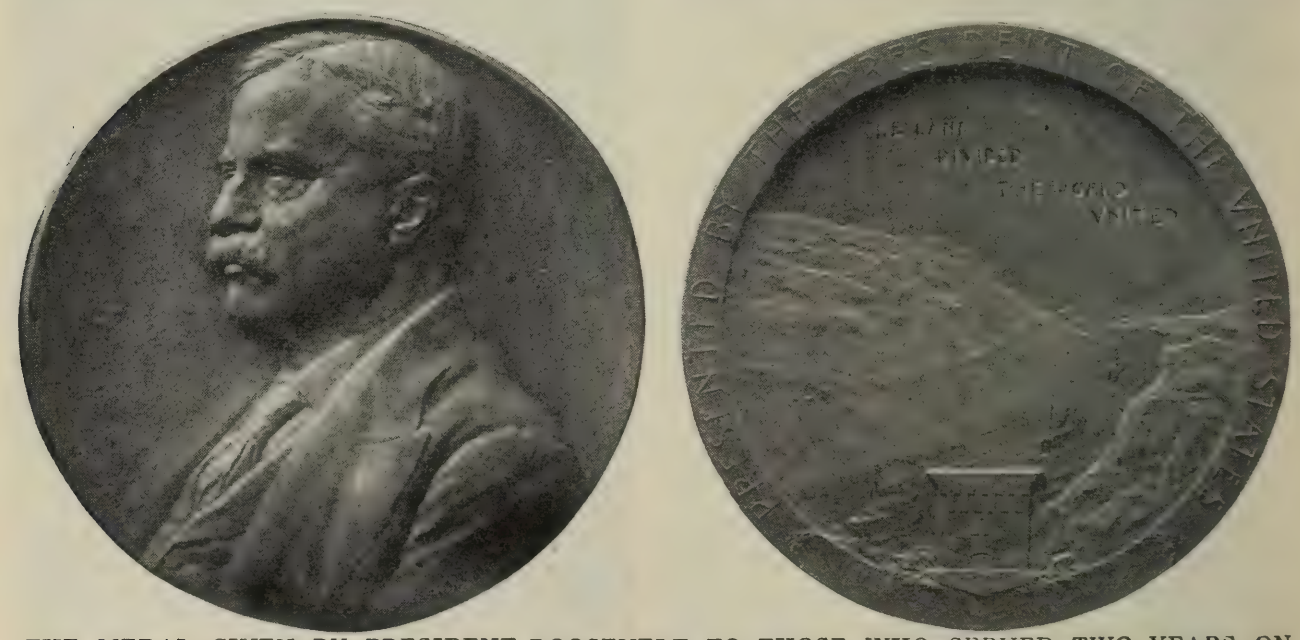
not a few passages which foreshadow the genius of the composer of "Tosca" and "Madama Butterfly." What is more interesting still is the proof this opera affords that the peculiar, vigorous style, abounding in violent contrasts, of the post-Verdian Italian opera originated with Puccini and not with Mascagni, whose "Cavalleria Rusticana" is generally supposed to have been the first work of this school, but which was composed six years after "Le Villi." Had Puccini's early opera been known, much of the honor which went to Mascagni as an innovator would have been withheld. Nevertheless, "Cavalleria" is a much better opera; it was instructive to hear it on the same evening as "Le Villi"; and as its cast included Caruso, Destinn, Gay and Amato, the astute management was thus able to obscure the fact that "I Villi" is not a success, even tho at its first two performances the public had to pay $7 for $5 seats.

Artistically the most important event at the Metropolitan so far has been the début of Mr. Toscanini as a Wagner conductor. He put new life into the Verdi and Puccini operas, and he made the most of "Carmen"; but would he be able to enter into the intricacies of a Wagnerian score with the same success? He showed, in conducting the "Götterdämmerung," that he could not only do this, but do it without once looking at the score during a performance lasting four hours and a half. He is an ideal Wagner conductor, having the gift of revealing the melody, of delicate shading, of building up powerful climaxes. Another notable event was the revival of "Parsifal," which, under Dippel's personal supervision, had a performance in some respects better than any ever heard here. It will be repeated on New Year's Day.

New Operas at the Manhattan

It is becoming more and more obvious that Mr. Oscar Hammerstein has an advantage over the rival opera house in possessing a smaller auditorium, which not only makes the acting of an operatic plot more impressive, but brings the music nearer to the hearers, making their nerves vibrate with it as Berlioz said they should for the full enjoyment of music. It is to be hoped that the new and larger opera house he has announced his intention to build will not forfeit these advantages and destroy the intimacy now enjoyed. It is doubtful if the fine art of Mr. Renaud, Mr. Gilibert and Mary Garden in the Massenet operas would be quite as enjoyable in a larger opera house. At the same time Mr. Hammerstein doubtless needs a new theater; not only because the Manhattan sometimes does not hold all those who desire tickets, but because the structure is not up to date. It was not intended for "Society," and there are few boxes; but Society now patronizes these performances freely, and it is incumbent on the manager to supply more plutocratic surroundings, after the fashion of his new Philadelphia Opera House, which has a pleasing exterior and an interior of dazzling beauty, with plenty of luxurious boxes for the millionaires.

It is not at all unlikely that the two novelties Mr. Hammerstein has so far produced successfully this season—"Samson and Delilah" and "The Juggler of Notre Dame"—would have been



MISCHA ELMAN,
The Russian violinist, now touring this country.

failures in the larger Metropolitan auditorium, and conversely that "Tiefland" would have been a success at the Manhattan. "Samson and Delilah" was, in fact, sung at the Metropolitan a number of years ago, but the audience was so small and so frigid that it was promptly withdrawn. At the Manhattan, a few weeks ago, it drew a crowded house and aroused enthusiasm, and it has had a number of repetitions. In Paris this opera is second in popularity only to the works of Gounod and Wagner, and it is therefore gratifying to record that New York has at last discovered its worth, all the more as this result will doubtless encourage Mr. Hammerstein to mount another Saint-Saëns opera next season, probably "Henri VIII." In most American cities "Samson and Delilah" is well known thru performances of it as an oratorio. Its beautiful music is, however, even in the purely choral sections, much more effective in connection with the operatic scenery and action. The opera was performed admirably under Mr. Campanini, with Madame Gerville-Reache and Mr. Dalmores in the two leading parts.

Egyptian Tile of the XXth Dynasty. Among the recent acquisitions of the Boston Museum of Fine Arts.

Massenet's "Juggler of Notre Dame" also proved to be an interesting addition to Mr. Hammerstein's repertory. It is called an operatic miracle play and has a medieval monastic atmosphere which suggests "Parsifal"; indeed, this opera has been referred to as the "French Parsifal." It is far from being as strong musically or as marvelous scenically as Wagner's last work; yet it presents to the eye some realistic pictures of monastic life, and the music has a quaint and charming medieval color, with a good deal of melody, and a spirit of religious mysticism and ecstasy which Massenet shares with Gounod. The story is taken from Anatole France's "Etui de Nacre" and tells the adventures of a juggler who, failing to amuse the populace with his stale tricks, follows the call of the Prior of the Abbey of Cluny and becomes a monk. Knowing no Latin or fine art like the other monks, he is at a loss how to show his adoration of the Virgin, and finally decides to exhibit his tricks before her image. He is discovered and denounced for sacrilegious conduct, but the image of the Virgin comes to life and with a loving look and gesture

THE MEDAL GIVEN BY PRESIDENT ROOSEVELT TO THOSE WHO SERVED TWO YEARS ON THE PANAMA CANAL WORK.

of the hands bestows a blessing on the juggler, who sinks down dead. His part was originally intended for a tenor, but was at the Manhattan assumed by Mary Garden, who succeeded amazingly in transforming herself into a young monk with tonsure and all. As Boniface, the cook, Mr. Renaud gave one of his best and most amusing impersonations.

Dr. Wüllner and Mischa Elman

The opinion prevails abroad, especially in Germany, that Americans care only for beautiful voices and are indifferent to artistic interpretation. As a matter of fact, Lilli Lehmann had to come to America before she had an opportunity to show that she had mastered not only the art of *bel canto,* but also could interpret Wagner and the great song writers with consummate skill; and the same was true of Jean de Reszké, the best side of whose art was appreciated here before it was in Europe. Further proof that we are not barbarians has lately been furnished in the reception accorded to Dr. Ludwig Wüllner. This remarkable artist has been called "the singer without a voice," and while this description is absurd, it is, nevertheless, true that were he to rely on the beauty of his voice alone he would be a lamentable failure. It so happens that he has a brain and a heart as well as a throat; he applies to the *Lied* the same methods that Lilli Lehmann and Jean de Reszké applied to operatic singing, and the result is that notwithstanding his vocal shortcomings he has been obliged to quintuple his engagements, and the enthusiasm he arouses is extraordinary. To hear him sing Schubert's "Erlking" or "The Phantom Double," declaimed with the art of a great actor, is to experience a pleasure like that one enjoys at a perfect performance of a Wagner music drama.

Mischa Elman, the Russian violinist, also conquered the American public at first hearing. He is now in demand everywhere—at recitals, at Sunday night concerts, at the symphony concerts of the Boston Orchestra, the Philharmonic, etc. His technic is faultless in the most difficult concertos, his style as brilliant as Kubelik's, but more instinct with artistic vitality and warmth. One can listen to him two hours without a sense of monotony, so beautiful is his tone, so artistic his phrasing, so catholic his taste. He is still growing; at present he stands midway between Kubelik and Kreisler, and the chances are that he may catch up with the last named, who is the greatest of living violinists.

Mahler Concerts

Important changes are impending in the orchestral world. A number of wealthy women are endeavoring to raise a million for a permanent orchestra modeled after the Boston Symphony Orchestra. The Philharmonic Society is to be

MEMORIAL WINDOW GIVEN BY MRS. RUSSELL SAGE TO THE NEW YORK HISTORICAL SOCIETY.

taken as the nucleus, and the conductorship will probably be offered to Mr. Gustav Mahler. This eminent Bohemian was much admired last year at the Metropolitan as interpreter of operas by Wagner, Mozart and Beethoven; but the first opportunity to hear him as concert conductor was not given until lately, when he gave three concerts, one of which was entirely devoted to his own second symphony—a big work constructed out of small ideas. As a conductor he aroused such enthusiasm that no doubt remained that under his leadership a permanent Philharmonic would become an institution of national importance.

Exhibitions of the Month

Of all the works of art that have been presented to the public of New York for inspection during the past month, there seem to us none more interesting and beautiful than those of that distinguished negro painter, Mr. Henry O. Tanner.

The French Government has paid its tribute to the genius of this great man by purchasing two of his pictures, which hang in the Luxembourg; the rest of his works are now gathered together for the first time, and were to be seen until the 28th of December at the American Art Galleries in Madison Square. The subjects are all taken from Biblical history, and are revealed with the most intense sympathy and reverence. It is this intense sympathy which has enabled Mr. Tanner to lift the veil for us and to present to us modern, living and convincing pictures of the storied past. Daniel appears in the lions' den as convincingly free from danger as he seems free from fear. The mental exultation of the man is apparent in this wonderfully posed figure, and we are not surprised that these very real lions, as they pace up and down, should edge away as they approach this silent power. Wherever Christ figures in a picture it is noticeable that the artist cares less about showing the form and

THIRD ANNUAL BOOKS OF THE YEAR EXHIBITION AT THE NATIONAL ARTS CLUB.

features of the man than the spirit. Always the people in the presence of Christ are held silent and spellbound by this radiating essence. Martha and Mary regard Him with loving reverence, the disciples, carefully characterized, listen with wonder to his words, their natures strung to the highest tension. It is impossible not to realize that the speaker is no ordinary man, that his words are felt to be inspired and prophetic, and it is also difficult to put a curb on one's enthusiasm for the artist. To the special natural qualifications that Mr. Tanner has brought to his work he has added culture. All his abilities, mental and technical, seem to be well under control.

EDITH WYNNE MATTHISON AS HERDISA.

A work of great power and intensity and in a way comparable to Mr. Tanner's is Lorado Taft's "The Blind," shown at the Academy Exhibition, Maeterlinck's symbolic play, embodied in statuary. It consists of a number of male and female figures of varying age. A woman in the center of the group holds aloft a child who is not blind; with this exception all the figures are blind and groping. The figures are modeled with the utmost simplicity and grouped with great skill; the hands are specially endowed with the sensitiveness so often seen among blind people, and the whole group moves forward with a yearning for the light which the little child alone is not denied.

There is plenty of good work at the Academy, both among painters and sculptors, and, of course, a good many portraits of the wrong people. Among the painters George de Forest Brush has a dignified and charming portrait of a boy, revealing the almost angelic quality of beauty that is sometimes seen in children. Ellen Emmett shows a most vivid portrait of Mr. H. C. Perkins, and Lucia Fairchild Fuller in a miniature group of Mr. and Mrs. Richard Aldrich has characterized so strongly that there hardly seems room for the two personalities in the picture; this is in the nature of a defect.

Among sculptors the portrait of John La Farge by Mrs. Boroughs is very sensitive and clever. It is an extraordinary face and hand. We can understand that the latter could not be left out. Mr. Paul Bartlett's model for a head of Lafayette is also interesting. The treatment is simple, and the expression full of the exalted enthusiasm of a youthful idealist. It is a very sensitive nose, but the head does not show great reflective powers, and this was probably not remarkable in the man. The portrait of Dave Warfield by his friend, Robert J. Aitken, strikes us as affected, and Mr. Brenner's "President Roosevelt" is quite unconvincing; but Herbert Adams's "Portrait of a Lady" is sincere and delicate.

The landscape painters, after their various predelictions, present to us pictures of scenes they have considered interesting or beautiful. "Italy," by Willard D.

Paddock, conveys an idea. In "The Storm," by Jonas Lie, leaves are being torn from the trees most convincingly; but Arthur B. Davies has specially synthesized and created a picture called "Life-bringing Sea." Mr. Bancroft's "Angel" has wings certainly, but the features are too individual to convey anything abstract.

Once more among the sculptors. "Earth-bound," by Louis Potter, is a conception, and a remarkably composed group, but we have not very much sympathy with Augustus Lukeman's "Group for Soldiers' Monument." This kind of thing has been done nearly to death by the French. The "Melvin Memorial," a mourning victory, is unconvincing, and suggests that Mr. French might have been experimenting. "The Incoming Wave," H. A. MacNeil, is playful, but rather gross in form. Louisa Gudebrod's "Spirit of Admonition" is convincing, but the face is too large for the brain-pan. It is remarkable in this exhibition that sculptors, whose special medium for conveying thought is the human figure, have shown very little reverence for the nude form, and only Solon Borglum has succeeded in suggesting beauty with it. There is too much muscle and contortion displayed and not enough love.

The third annual exhibition of the books of the year was held at The National Arts Club galleries, No. 14 Gramercy Park, from November 11th to 27th inclusive. The exhibition was larger and more carefully selected this year than last, and the large attendance testified to the popularity of the exhibition. Original drawings by the best modern

MRS. FISKE IN "SALVATION NELL."

SCENE FROM "VIA WIRELESS."

illustrators were shown in connection with the books in which these were used in reproduction. The effect was entirely pleasing and attracted highly favorable comment. Manuscript bindings, posters and other units in book making were on view. One of the features of this year's exhibition was an important showing of Edward S. Curtis's book and his magnificent Indian photographs in sepia and other mediums.

Mrs. Russell Sage has given to the Historical Society of New York a stained glass window that commemorates the Huguenots and their flight to this country after the revocation of the Edict of Nantes by Louis XIV. The window is the work of Miss Mary Tillinghast, of No. 3 Washington Square North. It was on view from November 7th to November 20th at the Knoedler Galleries. The subject of the window is the Revocation of the Edict immediately succeeding the affixing of the royal signature to the document. The room in which the scene occurred at the Palace of Fontainebleau enters into the composition as an essential motif. The king appears in a white costume in the central panel; he wears rich embroidery and a mantle of royal purple. The tall wig and high-heeled shoes affected by him to increase his hight also appear. Courtiers are near him and a soldier is represented as kneeling at the King's feet. With his sword Louis points to the edict, which he holds in his hand. His wife stands at his left. Interesting details of the window are armorial bearings of Henry IV and those of James II of England. The coloring of the window is characterized by a richness of detail together with an impressionistic accuracy of costume details.

The delightful showing of the etchings of Joseph Pennell at the Grolier Club, shown from November 6th to 21st, and which included more than one hundred and fifty examples of Mr. Pennell's work with the etching needle was followed by a much more elaborate exhibition in commendation of the tercentenary of the birth of John Milton, which began on December 3d, and will continue until January 9th. The current Grolier exhibition includes original editions of his poetry and prose works, together with

327 engraved portraits. The series of titles of "Paradise Lost" shown at the Grolier Club is complete. The club may well be congratulated on its ability to exhibit the printer's manuscript of the first book of "Paradise Lost." Notwithstanding there have been two previous exhibition of Milton portraits, etc., one at Columbia University and the second at Milton's old college, Christ College, Cambridge, the collection of engraved portraits shown at the Grolier may be said never to have been equaled. Many rarities are included in the showing, such as the two portraits engraved by Phinn (Nos. 55 and 85), as well as the equally rare print by James Gwim (No. 49). Forty-two American portraits have been given a place in the exhibition. The early ones by Norman. Haines, Socles and Anderson are very rare.

Drama

It was, no doubt, as much of a disappointment to the enthusiastic supporters of "The Servant in the House" as it was to the author himself, that Charles Rann Kennedy's "The Winterfeast," which forms the second in his series of seven plays, failed to keep the stage. Yet the cause of its withdrawal was not hard to find, and we say this, at the same time holding to our firm belief in "The Winterfeast's" excellent qualities from a literary standpoint and from the side of its technical development.

Another current play has been publisht —"The World and His Wife," being Charles Frederic Nirdlinger's version of José Echegaray's "El Gran Galeato." In passing we would record a former production of this piece some years ago, by the Independent Theater, of which Paul Kester and Norman Hapgood were the prime movers. Mr. Nirdlinger has done a very creditable piece of work, which is more than a free translation, and we have never seen Mr. Faversham give a more spirited interpretation; he is the third in a triangular affair—a perfectly honest friend of a married couple, who scout the gossip of Spanish society, to the point where the husband is at last blinded by jealousy, and the wife is driven into the arms of Don Ernesto. Such is the power of the world.

Instead of attempting a rôle of any exceptional emotion, Mrs. Fiske accepted the manuscript of Edward Sheldon, a young man not far over twenty-two years of age. The play is called "Salvation Nell," and its chief distinction rests in its being a real slice out of life, however conventional its immoral situation and however stereotyped the salvation of the brute man, thru the preaching of the woman he has harmed. From the mere ensemble standpoint, we have never witnessed a more perfect reproduction; there is realism of high order in "McGovern's Empire Bar," even as there is triumph in such scenic art as is displayed in the "Cherry Hill" act.

ANNIE RUSSELL,
In "The Stronger Sex."

By its very construction one can tell the youthfulness of the playwright, but the crudity has the excellent quality of sincere imitation. Mrs. Fiske and Holbrook Blinn have raised the characterization above the level of the commonplace, and Mr. Sheldon should be thankful to

them. But in the future he should let "Salvation Nell" be his own salvation. For he has, in this first effort, shown himself to be interested in local life; his observation is to be encouraged, even as his technique is to be improved.

Much praise is due "Via Wireless"—a healthy, exciting melodrama, which is the joint product of Paul Armstrong and Winchell Smith; it is frankly thrilling, with the typical villain, who wilfully spoils the gun of a naval officer while it is in the furnace. The love scenes are novel and the stage settings striking, especially the "Furnace Room of the Durant Steel Works" and the "Wireless Room of the Steamship 'Mongolian,'" where for fifteen minutes or more the audience is gripped by a painted storm at sea and the blinding sparks of the "wireless" and the loud explosions of the receiver—knowing all the while that the heroine, not far distant, on a sinking yacht, is sending the messages for help.

Two women "stars" have each found rôles admirably suited to their individual methods of acting. Miss Ethel Barrymore plays excellently well in W. Somerset Maugham's "Lady Frederick," which contains quick repartee and is wholly adequate as a story. Miss Annie Russell moves in "The Stronger Sex" with her usual quiet, simple comprehension of a woman's nature. Neither play is distinctive; success is due very largely to the personality of the actress.

In closing, we would say some word about the efforts being made in many directions to establish a Children's Theater; in our month's theater list we have three pieces which are supposedly suitable for girls and boys, in lieu of Mr. Frohman's determined refusal to allow Miss Adams to revive "Peter Pan" for the holiday season.

"The Pied Piper," as conceived by Austin Strong, and as set to music for De Wolf Hopper by Manuel Klein, just falls short of being a most excellent diversion for youngsters. Its weakest points are to be found in the lyrics, which introduce unnecessary references to divorce and to the fickleness of men and women; we are not over-squeamish in saying this; our one idea of the theater in its relation to children is to give them a good, wholesome, imaginative time. We can see that Mr. Strong had this in mind when he wrote "The Pied Piper"; he certainly produced something noteworthy when he wrote that ill-fated "Toy Maker of Nuremburg," in which we have faith to the point of hoping for its revival in the future. The errors of "The Pied Piper's" way are not those of Mr. Hopper, who makes a splendid figure, and not those of Miss Marguerite Clarke, who is winsome and girlish, but excrescences of stage management, which could be easily removed.

Then we went to see Harry Smith's and Victor Herbert's extravaganza, based on Winsor McCay's cartoon of "Little Nemo," a disappointing piece, because of its lack of surprise and its commonplaceness of scene. Usually such presentations are a perfect wilderness of color, and a large assemblage of mechanical marvels, but "Little Nemo" is rather barren of these effects; the color is lacking in gorgeousness, and the choruses are far from rich. Children, however, will find enjoyment in the wanderings of "Little Nemo," and because there is no better the theater will be patronized.

The Hippodrome has excelled itself this year, the generosity of the management being almost prodigal. The fairy-like quality of successive scenes goes far beyond the dreams of childhood; two shows could easily be made of all the wonder, the riot of color, the daring feats that constitute the "three hours' traffic of the stage."

Yet, despite all this, we are in need of a Children's Theater, and we heartily applaud L. Frank Baum's efforts in that direction. Not only has he contributed to the movement by writing his "Wizard of Oz," and, furthermore, added to this, by traveling the country thru, telling his stories before juvenile audiences, but he has likewise succeeded in gathering sufficient capital to announce the theater building itself. We are interested, but, after all, the Children's Theater depends upon the children's play. Who, besides Barrie, can write one?

Tariff Revision—In the Sixty-first Congress

BY WILLARD FRENCH

THE convening of the last session of the Sixtieth Congress brings tariff revision close enough for conjecture, which is not without anxiety, concerning the real complexion of the extra session. If the bill were to be considered during the present session, with the old men and old machinery, one might fairly estimate the end before the beginning; but the extra session comes in the Sixty-first Congress, and between this and that there is a gulf in prospect wider than history recalls except in cases of complete change in politics. In all that pertains most intimately to tariff revision there will be material differences, both in quality and quantity.

Speaker Cannon has grave considerations ahead of him. He was not in the least disturbed by the press and the public impression, some weeks ago, that his grip on the gavel was loosening. He laughed at it. But other matters cause him to tilt his cigar and recall the Bible query: "Why do the heathen rage and the people imagine a vain thing?"

Judge Taft certainly won in his first conflict—if it was a conflict. Speaker Cannon promised to be good, tho he says that he never intended to be anything else. While the uncertainty lasted it was very real so far as Taft was concerned, at least, and he was very much in earnest. In forecasting revision the reported position of the President-elect, in this matter, must be taken into consideration, not only for its wisdom and determined forethoughtfulness, but as suggesting a bigger than the "big stick," to which we have grown accustomed, which may yet be wielded by the chief of the incoming administration.

Judge Taft has evidently been studying Presidential prerogatives from a rather new viewpoint, and has apparently arrived at certain radical conclusions. To wit: If promised results are not reached by legislation he will have failed to keep his compact with the people. Without full coöperation of the Congress he cannot be sure of results. Therefore insure coöperation—in advance.

When he let it be known that he was determined to have a sincere revision he made it perfectly plain that to avoid open opposition to his re-election Cannon must pledge himself to progress and abandon the rôle of obstructor. Other hints followed from Hot Springs about using the power of patronage; about drawing the line so sharply on the character of revision as to force those who dread being taken to task by their constituents; about a veto which waited for a tariff bill which did not meet the approval of the Executive, as filling the promises of his letter of acceptance and the pledges of the Republican platform.

The conversion of Cannon, the great stand-patter ("coercion" is an unpleasant word and would be impolite to both), was the first necessity he faced. It was vitally necessary that they work in harmony. It was the more easily accomplisht, so far as Cannon was concerned, for he could not fail to see that the only path which he could successfully follow, for the present, at least, lay along the lines of party pledges. That was conclusive from the moment it became apparent that Taft proposed to enforce them. Whether or not the threatened opposition of the President-elect was the effective argument may be doubted. Cannon would be a hard man to beat for the next Speakership, wholly aside from the proverbial difficulty of overcoming something with nothing. He might even have felt an inclination to test his strength against Taft, for the fun of the fight. It would have been Cannonesque; but in two years he must again go out to Danville for re-election—to a district which even in the last election gave him a majority reduced by at least one-third from two years before. It was nutually necessary that the two should pull together for the present, and pull together they surely will—for the present.

That question being settled, there are

others concerning the working of the new Congress in extra session which give them both anxiety. The suggested possibility that there is a scheme on foot for sowing discord between the new Congress and the new President may not materialize; but Cannon is a veteran tiller of political soil. He knows the seeds of tares and the men who have them in their sacks. Coöperating with Taft he can be of great assistance if this be true; for good relations between the White House and the Capitol are essential to successful legislation, especially when the Executive and the majority are of the same political party. Historically, the Executive may come into conflict with the Senate and fight it out with that end of the Capitol alone. But he cannot combat the House without finding the weapons of the Senate also turned against him. The "big brother" sentiment is strongly developed. Cleveland's second administration was wrecked on this shoal. Every one who would see the campaign promises honestly redeemed must work for harmony. Only those who secretly hope for failure can afford to foster discord.

According to the apparent conclusions of the President-elect, with the constitutional authority to call an extra session and the duty to present to Congress measures for consideration, with a pledge to the people to press the fulfilment of issues upon which he was elected, with the right of veto in his hands and the powerful influence of Federal patronage at his command, and with the certainty that the people will hold him responsible for the results, it is unreasonable to claim that the President has not also the right to interest himself in the organization and conduct of the body upon which he must rely to fill the gap between his promises and the results by which he must eventually stand or fall. Cries of usurpation will always come from those who lose by executive influence, but the line has never yet been clearly drawn between proper and improper intervention. The apparent position of the President-elect is not entirely new, but in manner more than material it suggests that before he has finished his term he will have developed in a way to astonish those who know him only as the smiling pacifier.

At present he is working for harmony thru the extra session, and his only definition of harmony is co-operation for an honest revision of the tariff. To that end it was by all means wise to keep even a *pro tempore* converted Cannon in the Speakership, however insistently the insurgent element may howl about a czar and autocrat, and quite aside from any question as to whether or not he could have ousted him if he had tried. The uncertainties connected with the coming Congress demand a level-headed and veteran general. The Speakership is the most important legislative position, and Mr. Cannon is the best experienced legislative commander in the country.

If "the rules" have become too stringent or drastic, that is another matter. The Republican members, in caucus, can change not only the rules but the rule-making power, if the majority wills. A vigorous effort to that end will doubtless be made by the Republican caucus at its convention next March. No power can prevent the effort or restrain the majority, and the Speaker must abide by the result. But in failing to elect Mr. Cannon the party would be depriving itself of the services of the best qualified lawmaker in the land, at a time when it has the most need of them. For, even to Cannon, controlling the next session will be no child's play.

Representative Dalzell may be right that the House will be ready to vote on a tariff bill after one week of debate. Dalzell knows as much about the possibilities of the present legislative machinery as any one but Cannon and Payne; but in the first place it may require a month to organize the new House, before a bill can safely be presented. And the announcement, the other day, that the new tariff bill will be prepared by the Ways and Means Committee of the present House, which has been taking testimony on the subject, and will be ready to be presented at once to the extra session, has this weak point—the extra session begins a new Congress. The bill prepared during this session can at best be no more than a recommendation to the next, with no possible obligation to accept it as more than a general basis for renewed consideration. It will have to be referred again to the Ways and Means Committee of the new House, to act as independently as tho nothing had been done. And if, during the preliminary

caucus, "the rules" are materially changed, Dalzell's week of debate may easily stretch out indefinitely — after which, the Senate.

A number of new men will be on hand for the extra session, pledged to strengthen the present insurgent element, while some of the strongest of Cannon's old generals will be missing. But the fight over the rules, in the preliminary caucus, may not be as stringent and effective as rumor represents, since Hepburn, of Iowa, has been defeated at the polls—if, indeed, he remains defeated. Hepburn is at present chairman of the caucus, and the insurgents are in need of him as chairman of the next caucus. In the main he has been a Cannon man, but among the many things against which Hepburn has kicked, nothing has received such persistent and vigorous attention as "the rules." From time out of mind he has not missed the opportunity of a biennial caucus to fight "the rules" and the system. Year by year he has gathered adherents; but from the next caucus, when it really looked as tho there might be strength for a winning battle, Hepburn is eliminated. It is the more important to the insurgents, because, while Hepburn's kick was against Czarism in the chair of the House, he was as willing as anybody to take advantage of every opportunity to aid legislation he desired, in the chair of the caucus. Worst of all for the insurgents, the majority will doubtless elect a Cannonite—presumably Mann —for the new chairman. Still, there will be a fight, and something may be changed.

There are several propositions prepared for the caucus, relative to "the rules," from materially changing the rules themselves to changing the construction of the Committee on Rules, with its arbitrary powers. At present the committee consists, primarily, of Cannon, Sherman and Dalzell, with Payne as ex-officio consulting engineer, and, incidentally, of John Sharp Williams and De Armond, as an ineffective Democratic minority. The fact that the latter two have not been upon cordial terms since their fistic unpleasantness has not strengthened the shadowy force of the minority on the famous and effective committee.

At present the committee is appointed by the Speaker, but the most prominent proposition is to make it consist of five to fifteen members elected by caucus, eliminating the Speaker. Against this it is urged that a man worthy to be Speaker of the House is worthy of certain power and latitude; that the conditions and duties of the coming Congress especially demand this. For Samson, shorn, was hardly weakened as Cannon would be without his Committee on Rules. Indeed, it is generally understood that he has determined to decline re-election to the Speakership in case of any material change in the present order.

Considering the prospects it is little wonder that Burton did not want the job, and that no one else who understands it has been eager to go into the caucus and count noses against Uncle Joe. Cannon himself will require all that experience has taught him to meet the emergencies; aside from the fact that with a Republican majority of less than fifty, five and twenty recalcitrants bolting to the Democrats might make matters most embarrassing and delay legislation 'way beyond Dalzell's publisht schedule. Most of all the Speaker will miss from among his potent aids the Vice-President-elect, who is now the keen legal light of the Committee on Rules, an organizer and parliamentarian of rare ability and a man of tremendous persuasive power, owing to his position as chairman of the Congressional Campaign Committee, which enabled him to do many favors requiring reciprocation. Laudenslager or McKinley will probably go on the Committee on Rules, if it still rests with the Speaker, and Knapp, of New York, to Sherman's place at the head of the Committee on Indian Affairs, but no one can possibly replace Sherman as a Cannon field marshal.

Watson, of Indiana, is another serious loss to Cannon. He was a strong man on the Ways and Means Committee, which handles the revision bill, and one of the most effective orators of the House. But, above all, Watson was the ideal Republican "whip." It would be almost as easy to find another Cannon as to find another "whip" equal to Watson. Burke, of Pennsylvania, has been his understudy and will doubtless succeed him,

but it will require the experience of more than one Congress for him to work in the harness as effectually as Watson.

Another important lieutenant who lost in the last election in Indiana is Overstreet, chairman of the Committee on Post Offices and Post Roads. He was not so much in the public eye, but he stood high in the confidence of his colleagues and was a man upon whom Cannon could safely rely for effective influence.

Landis is still another Indiana man whom Cannon will miss. He was not in the pow-wows of the inner circle, but on the floor he had oratory at his tongue's tip, and words to burn in fiery eloquence and cutting epigram whenever Cannon wanted the red flag waved. He was also chairman of an important committee and ranking member of the Committee on Foreign Affairs, the chairmanship of which has also been left vacant by the retirement of Cousins, of Iowa.

Another unobtrusive but most efficient aid who failed of re-election is Jenkins, of Wisconsin, chairman of the Committee on the Judiciary. That, too, is a position which Cannon cannot afford to let fall into uncertain hands, for if its incumbent failed to co-operate with the Speaker he could cause a deal of trouble.

Even Hepburn, as chairman of the Committee on Interstate and Foreign Commerce, was a good Cannon man, and but for his kicking at "the rules" he, too, would be among the losses. It would surely have been unwise to add another to the complications of the new session by beginning it, with its burden of important legislation, under an untried Speaker. But aside from the uncertainties of this kind which face him, there is another change which is pregnant with disturbing possibilities for Uncle Joe. It is Champ Clark, of Missouri, the new minority leader, and Democrat on the Committee on Rules.

Long ago Cannon sized up John Sharp Williams, the retiring leader, and laughed at him. The powers of the House have had a lot of fun with Williams; but no one has ever yet sized up Champ Clark or found him a laughing matter. Where Williams cajoled and coaxed discordant elements it is suspected that Clark may be able to command a discordant phalanx.

So much pertains to the fate of the bill in the House alone, but Judge Taft's anxieties do not end with the Speaker and his troubles. At the other end of the Capitol there are to be changes of personnel and possibly of complexion, almost as radical and influential, without a Cannon to curb them or any one in particular to convert; while suggestive of what may happen to the bill when it gets there is the experience of the railroad rate bill, which was turned inside out and upside down by changes made in the Senate, after it left the House.

When the tariff bill comes over from the House it must go to the Committee on Finance in the Senate. Aldrich is chairman of that committee. There will be at least three new Republicans and one new Democrat on the committee for the extra session. After it passes that ordeal it will fall to the control of the Steering Committee. By that time Aldrich may also be chairman of that committee—if not, then Hale, who has just been elected chairman of the Republican caucus—in the place so long and ably filled by Senator Allison. This committee is not listed, like the others, in the Congressional Directory, but in many respects it is the most important committee of the Senate. It is the silent power which determines what legislation shall eventuate into law and what shall not.

It is when the bill reaches this stage that the clash will come, if it comes at all, between the White House and the Capitol. For Mr. Taft has decided views of what the revision must be to meet his approval. They are broad and moderate. He is a protectionist, but not a standpatter. He considers the tariff from the point of benefits it can bestow upon the whole country. There are many members of the Senate who differ with him. The strength of the old *régime* will not be enthusiastically co-operative. But from a tendency which has been increasingly apparent in the Upper House, together with the character of changes taking place—Bristow and Cummins, for example, replacing Long and Allison—it is strongly probable that Taft will have a better show for victory if he is forced to measure swords with the conservative power of the Senate than he would have had in opposing Uncle Joe.

If the President should have to assert himself, it will apparently be against Al-

drich and his followers. Aldrich is still the Republican leader in the Senate, notwithstanding Hale's position, and however significantly his control may have weakened in the last two sessions; but Taft will find a strong body of new men ready to join the younger element, which has long been fighting for a foothold against the Aldrich domination. Borah, of Idaho; Cummins, of Iowa; Bristow, of Kansas; Bourne, of Oregon; Brown, of Nebraska; Jones, of Washington; Crawford, of South Dakota; Burket, of Nebraska—will be among them, indorsing Taft, however much they may differ among themselves as to details.

If to this force there is added Root, of New York, and C. P. Taft, of Ohio, the President-elect stands an apparently good chance of eventually securing from the extra session a fairly satisfactory tariff revision—some time next August, for instance. But unless the leaders of the Senate see, as Cannon has seen, the wisdom of co-operation, the session will be long drawn out and the present lines of the Senate organization will be materially changed before the fight is finished.

WASHINGTON, D. C.

Progress in Arbitration

BY JAMES B. McCREARY

[Hon. James B. McCreary, United States Senator from Kentucky, enlisted in the Confederate Army as a private. He rose to be major before he was of age. In 1875 he was elected Governor of Kentucky over John M. Harlan, now associate justice of the Supreme Court of the United States. He recommended his opponent for that office and in 1885 followed him to Washington as a member of the House of Representatives, where he served for twelve years as a member of the Foreign Affairs Committee, being chairman of that committee four years. Upon his election to the Senate he was assigned to the Foreign Relations Committee and is now the senior Democratic member of that committee. In 1888 he introduced the bill providing for a conference at Washington of all American nations, from which conference has sprung the Union of American Republics. He introduced the legislation looking to an all-rail route from New York to Buenos Aires, which is now nearing realization. He was the author of the bill providing for the arbitration of the Behring Sea seal dispute with England. He managed in the House of Representatives the legislation declaring against European control of any canal in America connecting the Atlantic and Pacific Oceans, and was author of the report made to Congress that European control of such a waterway would violate the Monroe Doctrine. He is now a member of the Pan-American Committee and president of the Peace and Arbitration League.—EDITOR.]

ARBITRATION for the settlement of international disputes has been steadily progressing thruout the civilized world. In the last two decades the progress has been wonderful, but in the past five years this progress has been most notable and encouraging. First, we had the Pan-American Conference held at Washington, authorized by an act of the United States Congress approved May 24th, 1888, for the purpose of preserving peace and promoting arbitration for the settlement of internatioal disputes and encouraging reciprocal commercial relations between the republics of North, South and Central America.

Second, the Inter-Parliamentary Union, composed of members of various national parliaments, organized in 1889 to promote arbitration for the settlement of international disputes. This Union has held fifteen meetings, the last at Berlin, Germany, in September, this year. Under a resolution of this Union President Roosevelt called the second Hague Conference.

Third, the International Hague Peace Conferences, held in 1899 and 1907, which establisht a permanent court of arbitration, and which was the greatest event of all in respect to international arbitration. Forty-four nations of the world indorsed the movement for peace and arbitration by participating in the conference.

Fourth, the Central American Conference, held in 1908, composed of delegates from each of the five republics of Central America, which provided for a judicial tribunal composed of one judge from each of the Central American republics,

to which tribunal all international disputes of the Central American republics are to be submitted.

Fifth, and last, but not least, the Senate of the United States ratified twelve arbitration treaties with the great nations of the world at its last session. It is apparent, therefore, that the first decisive legislative acts of the Congress of the United States in favor of systematic arbitration of international questions occurred in 1888, when Congress past the act providing for a conference of the American nations at Washington to preserve peace, promote arbitration and encourage reciprocal commercial relations thruout the Americas.

It is a source of pleasure to us all that our country took the lead in the first legislation to promote arbitration, and in the first reference of an international disagreement to The Hague Tribunal, namely, the case between the United States and Mexico. Then the United States showed the world its confidence in the great movement by ratifying at one session of the Senate twelve arbitration treaties, and in the same year both of the great political parties of our country in their national platforms indorsed international arbitration.

No man can express more forcibly, eloquently and truthfully the results of the first Pan-American Conference held in the United States than did Andrew Carnegie on the 11th of May, 1908, at the laying of the cornerstone in Washington of the building which is to be the future home of the International Bureau of American Republics, when he said:

"Today my thoughts revert to the first Pan-American Conference, of which I was a member. The work then commenced will, I believe, culminate in the banishment of war from the American continents and the dedication of the Western Hemisphere to international peace."

The second Pan-American Conference was held in the City of Mexico in 1901, and the third in Rio Janeiro, Brazil, in 1906, and the fourth is to be held in Buenos Ayres, Argentine Republic, in 1910. All the conferences which have been held have been conspicuous for the promotion of the good work commenced at the first conference.

A permanent union of the American republics was one of the great results of the first Pan-American Conference. Then followed the erection of the first temple of peace in America, built with the donation of the generous benefactor and prominent leader of arbitration, Andrew Carnegie, and with the contributions of the various republics of North, Central and South America, thus furnishing what perhaps has never been furnished before, a common meeting place and a home for common deliberations of people representing twenty-one republics.

The conferences which have been held and that are to be held in the near future are rapidly crystallizing a public sentiment on international questions thruout the American republics, and the existence of such a sentiment will prove very important, not only in American international efforts, but in the future Hague conferences. It is a source of pleasure to all friends of arbitration that permanent provisions have been made for periodic conferences of the American nations, and that all American nations are in favor of making permanent provision for general conferences of all nations at The Hague, or some other convenient place. It was this important situation which induced me to introduce a bill in the United States Senate to secure by legislation proper representation for the United States at the forthcoming Pan-American, Hague, and all general international conferences. The bill provides that former Presidents of the United States shall be ex-officio representatives for life at all of the conferences where the United States participates, in conjunction with not exceeding four other persons to be appointed by the President of the United States. I think it is time that the United States Congress, which annually appropriates millions of dollars for war, should appropriate at least a few thousand dollars for the maintenance of peace, by the passage of this bill. This will prove our confidence in the further progress of the cause, and will ensure proper preparation between conferences. The experience a President must have to attain the position he holds ensures his having the requisite capacity and also experience.

While treaties of arbitration, international conferences and courts are being perfected as rapidly as public opinion will permit, the United States should have adequate national armament for properly meeting conditions as they are. President Roosevelt has made emphatic

his approval of the program adopted by the North Carolina Peace Society and by the Peace and Arbitration League.

In replying to an invitation to assist at the North Carolina Arbitration and Peace Congress, recently held, the President said in part:

"I am glad to learn that the North Carolina Peace Society has declared itself in favor of adequate armament as well as effective arbitration. There is no inconsistency in advocating both of these things at the present time; on the contrary, those who have the public welfare at heart fail in the performance of a part of their duty if they neglect to labor for both. Effectual arbitration should be desired by every far-sighted citizen; while under present conditions, not to provide adequate armament would be inexcusable on the part of those charged with the responsibility of preserving the rights of our people. The North Carolina Peace Society is to be congratulated on its position, and should be supported by all good citizens in this effort for the general welfare; and great credit is due to the State of North Carolina for this action.

"The entire nation and the cause of peace and justice thruout the world benefit by this new departure in promoting the general peace movement.

"The approaching Congress will certainly concentrate the thought of our people upon the fact that adequate armament necessitates an unquestionably superior naval power in the waters adjacent to our possessions, and that effective arbitration necessitates agreements between all the Powers to respect each other's territory and sovereignty in said territory and to arbitrate all other questions. The acceptance of these facts as axiomatic must speed the day when our country will be so armed as to minimize the chance of wars that are invited by national weakness; while the establishment of an effective system of international arbitration will greatly diminish the chances of conflict among nations of approximately equal strength."

While endorsing this heartily, I am able to see along with other observant persons that armaments must be proportionate to dangers, and that a permanent widening of the area of arbitration can bring, in due time, a decrease in armaments by increasing security thru arbitration.

In the course of his remarks, from which the foregoing passage is taken, the President expressed a wish that societies advocating this program be formed in all parts of the country. The Peace and Arbitration League came into existence to meet this need.

An active campaign will be commenced at once and continued without cessation until the various governments of the world have united with our Government in the establishment of law and order in international affairs, to be achieved thru the use internationally of the best political machinery that is now known or that may be hereafter devised.

The League will take steps to have the question of armament in its relation to national security and international justice thoroly investigated. Every element entering into the problem will be carefully considered and scientifically classified. The report of the commission will be given the widest possible publicity. As conditions change, the League will observe and publish the fact, together with such recommendations as the changed conditions may make desirable, both in regard to national armament and international arbitration.

Arbitration and peace congresses will be organized at suitable places and opportune times to enable the people to confer with the leading authorities on the questions which pertain to the peace and prosperity of the nation.

The headquarters of the League will be at Washington, D. C., for securing the most effective co-operation of members of Congress and all who are interested in the great work, and personal interviews and correspondence are desired. Local offices will be opened in various places as progressive people manifest an interest in the work and accept membership on a Board of Directors for their respective States. Representative people from every department of life will be members and directors of the League, so as to secure the widest possible influence for its broad and scientific program.

The officers of the League are Theodore Roosevelt and Admiral George Dewey, honorary presidents; James B. McCreary, president; Hon. Richmond Pearson Hobson and General James Grant Wilson, vice presidents; Walter Douglas Walker, secretary and treasurer, and Hon. Richmond Pearson Hobson, chairman of the Executive Committee.

In addition to the active officers, the General Board of Directors contains two distinguished members of Congress, eight eminent educators, three of whom are college presidents; two eminent jurists, three business men of large interests, two editors, and several important Government officials.

In the history of the Christian churches there has never been open a broader and more superb opportunity to serve mankind than that now open and which is now calling the members of the churches to encourage and carry forward the movement in behalf of peace and international arbitration. The ministers, the members, the teachers can perform a great and glorious work by doing their duty and helping forward that which preserves peace and stops bloodshed. Every profession, members of every trade, men and women of all classes, are interested in peace.

I love to contemplate the rapid progress that has been made in international arbitration since the day in 1888 when I found such difficulty in getting a hearing on this subject in the House of Representatives, and I rejoice that our nation has taken the lead, was the first nation in the world to declare by Congressional legislation for the settlement of international disputes by arbitration instead of by war. There is no work going forward in the world more worthy of deep interest and warm approval than that which the American republics and the leading nations of Europe also are engaged, and I hope under God's decree it will not be long before we will have not only the Pan-American Conference and The Hague Peace Conference and a Permanent International Court of Justice, but also a permanent conference of all the nations of the world, in the interest of peace and arbitration.

What a glorious example the United States of America would present as the peace-maker of the world. What a glorious work could our country perform by bringing about such an adjustment of international relations as would materially reduce war preparations and after awhile "ring out the old era of war and ring in the new era of peace."

We are able to cope with any nation, or to defend ourselves against all nations, but we bow in obedience to God's words, "On earth peace and good will toward men."

WASHINGTON, D. C.

What Is the Superman?

BY THOMAS STOCKHAM BAKER

[The author of the following article is the headmaster of the Tome School for Boys, of the Jacob Tome Institute, Port Deposit, Md.—EDITOR.]

WHAT is the superman? Is he a mere conception of an extravagant German philosopher? Is he a plaything of George Bernard Shaw? Is he a dream of Darwin? He is all this and more. The superman is the symbol of much that is latent in literature, life and art at the present time.

The "beyond-man" has been since the earliest times a subject of veneration, and there have been in all ages "superior" men, but it has remained for the philosopher Nietzsche to summarize much of the undefined aspiration of recent times, to combine with it certain scientific suggestions, and in doing so to give to the world a name for an old type which has been worshipped under various forms. The superman is the new creation.

"*I teach you beyond man.* Man is something that shall be surpassed. What have you done to surpass him?

"All things hitherto have created something beyond themselves, and are ye going to be the ebb of this great tide and rather revert to the animal than surpass man?

"What with man is the ape? A joke or a sore shame. Man shall be the same for beyond-man, a joke or a sore shame.

"Ye have made your way from worm to man and much within you is still worm. Once ye were ape, even now man is ape in a higher degree than any ape.

"He who is wisest among you is but a discord and hybrid, of plant and ghost. But do I order you to become ghosts or plants?

"Behold, I teach you beyond man."

These are the words of Zarathustra from Nietzsche's prose poem, "Thus Spake Zarathustra." It contains the gospel of the superman and presented with an authority and a rhetorical skill which are unique in modern literature. Nietzsche in reality claims to be preaching a sacred message, and he has chosen a form of expression which will give to

his work as authoritative a character as is possible.

The events of Zarathustra's life, so far as we know it, are used in no way. In fact, there are very few incidents in the book: Zarathustra comes and goes from the mountains to the city and back again to the mountains. He wanders over the earth; sometimes he crosses the sea. Much of his time is past in complete isolation, except for the presence of his servants, an eagle and a serpent, which minister to his wants. He preaches; he meditates. There are no climaxes, almost no incidents, and the book might be terminated at any point without interfering with its unity.

Because of its style, if for no other reason, it may be reckoned as one of the great books of German literature. The author has realized new possibilities of expression for the German language, and nowhere are such examples of sustained elevated prose to be found as in "Also sprach Zarathustra."

The idea of the book, Nietzsche said, came to him in 1881. The composition of the first three parts took place during portions of the years 1883-85. The fourth part, which was not intended to be the last, was not publisht until 1892.

"A man hath been only an attempt." "Dead are all gods; now we will that beyond-man live." "I teach you beyond man." And how is this to be accomplished? How is the state of being the superman to be reached? This is the basis of Nietzsche's philosophy. The teaching of the "beyond-man" is the development of the individual, the doctrine of love of self, the cultivation of self, the emphasis of egoism. Such expressions as the "sovereignty of the individual," "selfhood," "individualism," "personal freedom" are frequently employed.

"The thou is older than the I; the thou hath been proclaimed holy, but the I not yet; man thrusteth himself upon his neighbor. Do I counsel you to love your neighbor? I rather counsel you to flee from your neighbor and to love the most remote. Love unto the most remote future man is higher than love unto your neighbor.

"One must learn how to love one's self—thus I teach with a whole and healthy love, that one may find life with one's self endurable, and not go gadding about."

It is the new law-giver's task to proclaim the rights and obligations of the I. By neglecting the conventions that the Church, the State and ethical codes have placed around man, the possibilities of reaching the superior condition of the "overman" are increased. But the individual of today can contribute only a small share toward the growth of perfectionism. He can hardly hope to attain to this blessed state himself, but generations of emancipated beings may bring about eventually a race of supermen.

It is an intensified doctrine of the survival of the fittest that Nietzsche preaches. Man must climb over the prostrate forms of his weaker brethren to reach the development that he would wish for. Pity, sympathy, charity are of no consequence to the man who strengthens himself by climbing. The "Much-too-many" survive. Far too many are born. Let the superfluous go the way of the weak, and let swift death o'ertake them. These are some of the ideas that will help in the growth of Nietzsche's Utopian human being. But we may not rest with the thought of our own growth from "species to beyond-species" is the philosopher's real desire. "From you who have chosen yourselves, a chosen people shall arise: And from it beyond man."

Such teachings run counter to every traditional conception of Church and State. "The destroyer of moral, I am called by the good and just: my tale is immoral." Writers on the subject of Nietzsche's philosophy have had much to say on this question. He is not immoral in the usual sense. He simply does away completely with the traditional standards —he is rather unmoral.

There is one remarkable feature of Nietzsche's philosophy which cannot be emphasized too strongly. Man is not to grow into a superman for any special purpose. One must not strive for self-improvement merely to increase his enjoyment or his capacity, but rather the act of development is sufficient reason. All questions of reward, or of punishment for failure to improve one's opportunity should be neglected. The superman will understand the perfection of living. He will be able to get from every moment the highest degree of power and in gaining this strength and in displaying it he will reach the greatest degree of enjoyment.

By his creation of the word "superman," George Bernard Shaw made himself the godfather of Nietzsche in England, and with such a flippant, jocose sponsor, the philosopher's life can hardly be expected to be especially happy. The attitude of the two men is as far apart as the Antipodes. Nietzsche is an avenging fire, who proclaims the necessity for the destruction of all the false gods. Shaw's superman is an amiable phrase-maker, whose idea is to make himself comfortable, and then if there is time to talk over pleasantly the inequalities of existence, the false standards of life, the pretenses of the world. His superman is a man of wealth, of good position. He has an attractive hobby in the shape of being an intellectual anarchist. There is a dash of high finance about John Tanner, "member of the idle rich class," as he styles himself in the play of "Man and Superman," that contrasts strangely with Zarathustra's locust and wild honey existence.

Apart, however, from the amusement that Shaw's "Man and Superman" inevitably creates, the author has done a service to the English language in finding the translation "superman" for Nietzsche's *Uebermensch.* Alexander Tille, in his translation, makes use of the expression "beyond-man," but it is cumbersome, altho it has some of the archaic quality which is appropriate to Zarathustra. "Superman," on the other hand, is just the sort of rendering that one might expect from Shaw. It is convenient, it is even illogical, in that it is neither Anglo-Saxon nor Latin, but inasmuch as the idea that it intends to convey has never had a name before, there is no great necessity for logic or a regard either for etymology or precedents.

"The great central purpose of breeding the race, and breeding it to hights now deemed superhuman: that purpose which is now hidden in a mephitic cloud of love and romance, and prudery and fastidiousness, will break thru into clear sunlight as a purpose no longer to be confused with the gratification of personal fancies, the impossible realization of boys' and girls' dreams of bliss, or the need of older people for companionship or money, etc."

The *Uebermensch* presupposes an intellectual emancipation and his increase in stature is to come about thru a greater mental and spiritual development; and above all thru a more intense and serious cultivation of the will. Nietzsche says:

"What is good? Everything that increases in man the feeling of power, power itself." "What is evil? Everything that grows out of weakness." "What is happiness? The feeling that power is increasing—that an obstacle is overcome. Not contentment, but more power; not peace at all, but war; not virtue, but strength." Again, "Life for me is instinct for development, for endurance, for the heaping up of forces, for might: Where the will for power is lacking, there is retrogression in the will for power."

Der Wille zur Macht is the keystone to Nietzsche's fabric; "the vital force" is Shaw's pet phrase. The expressions in themselves are thoroly characteristic.

Contemporary criticism of Nietzsche is very extensive and very divergent. The fact that a fierce battle is being waged over his tenets shows that he has at least made great progress. In the earlier days he was simply disregarded, most frequently past over in silence. Whatever allusions there were treated him usually as an intellectual quack, as a sort of philosophical scandal. The change is illustrated very graphically by the space devoted to Nietzsche in the "History of Philosophy" by Heinze-Ueberweg. In the edition of 1888 he is dismist with a few lines. In 1897, along with Max Stirner, he receives four and a half pages. The edition of 1902 devotes an entire division to Nietzsche. The spirit which he represents is most pervasive. It touches contemporary thought in almost every field—philosophy, art, all phases of literature, politics, even theology, which branded him as the anti-Christ, has not been unaffected by its arch enemy. A clergyman in Bremen of some prominence attracted great attention a short time ago by delivering a series of Zarathustra sermons.

In the realm of art Nietzsche has left a strong impress upon such men as Max Klinger, the sculptor. His works suggest, in a peculiarly obvious manner, the titanic ideas in plastic form of the philosopher. Much of the aggressive idealism to be observed at the present time in the field of sculpture and painting must be attributed to the same source. In the department of music, which would seem to be far removed from philosophical theories, there are numerous traces of the tread of the superman. One of the

most remarkable musical creations that has ever been accomplished is named after Nietzsche's *chef d'œuvre.* Reference is made to Richard Strauss's tone poem, "Thus Spake Zarathustra."

The courage of a "beyond man" must have been necessary to induce a composer to treat such an elusive subject as the conceptions of a philosopher, but Strauss has bravely undertaken the task. Whether he has succeeded or not, is a matter of taste; whether the superman has any place in music is also questionable; but he has come into this province, and seems likely to stay there.

Strauss's tone poem is an attempt to produce in musical terms some of the sentiments suggested by Nietzsche's book. It is a gigantic effort and one which has employed all the machinery of the modern orchestra. It is supermanish in its disregard of traditional contrapuntal and melodic teachings and in its swashbuckling overriding of musical forms. However, what it has attained in strength has been at the expense of what might be called pure music.

As the appreciation of Nietzsche grew it became the fashion to bracket him with Max Stirner. It must be said, however, that Stirner's reputation owes more to Nietzsche than Nietzsche's to Stirner. Had it not been for the great anarchist the turgid theories of his predecessor would have attracted little attention. Now, however, Stirner is spoken of as the forerunner of Nietzsche, and in this rôle is enjoying a vogue somewhat inconsistent with his real achievements. In spite of Nietzsche's extremely destructive criticism of the world and its institutions, one respects the thoughtfulness which is behind it. With Stirner, on the other hand, we are imprest above all by the lawlessness and license which prevail in his writings.

The thought around which all of Stirner's writings center is *the individual.* In emphasizing his theories he razes the fabric of all human institutions—the State, the rights of others, the Church, all moral codes. He finds that society is merely another name for a political ruler, and that we are governed more rigorously by its demands than by an arbitrary monarch. "The individual," he says, "must come into his own. He must not be hampered by abstract notions of obedience to political rulers, to religious lawgivers and to social conventions." Such theories as these must lead to the most extravagant consequences. His most enthusiastic advocates grant that he has no constructive ability, that he offers no practical substitute for the institutions which he abolishes, so that one cannot but feel that the influence of such a man is in every respect pernicious.

He maintains that what is called human rights or freedom is, after all, a delusion. He says: "I have no objection to make against freedom, but I wish that you should have something more than freedom. You ought not to be merely free from what you do not want, you ought not to be only a freeman, you ought to be your *own man.*"

If one wishes to construct Nietzsche's philosophy into a system, he is very much embarrassed by the fact that the philosopher has left no connected and coherent analysis of his views. Nearly everything that he has written is in the form of aphorisms, brief paragraphs and short chapters. This form of literary expression was well adapted to his temperament, and it may be questioned whether he could ever have submitted to the rigorous demands which the development of a system of philosophy would have made. His enthusiastic apostles deduce many theories from his sayings which might be questioned. In destroying all forms of religion they claim that he is striving merely for an higher ideal of faith, one that is stript of the hindrances of an historical church. They claim that, on that account, he is religious in the highest sense of the word, and that he is supplying just the spiritual food which a large body of serious and profound thinkers desire.

It is the fashion now in certain quarters to deal with Nietzsche as a constructive thinker. Formerly he was treated as one of the greatest of iconoclasts, whose every theory was destructive and negative. It has required twenty years to traverse this distance, namely, from the man who denies to the man who creates. There is, however, great danger of going too far, and it is probable that Nietzsche's greatest contribution to the world does not consist in any theory or system, but in his power of suggestion.

PORT DEPOSIT, MD.

Literature

John Keats

SOMEWHAT too smart in style, with a frequent straining for effect, is Mr. Hancock's *John Keats*.* Yet it is an admirable book, accurate and well-founded in its learning, and judicial in its verdicts. The warm devotedness of the author to his subjects stops "this side idolatry," and he weighs his judgments with care. He has, too, in spite of the general overcrispness of his style, many felicitous phrases, embodying the inevitable word for the right thought.

The real Keats appears here—the hard-working and conscientious devotee of his art, the poet and high priest of Beauty, and withal the good friend and fellow-being — wholesome and sound even under the supersensitiveness induced by his mortal illness. He was born before his time, and his contemporaries would not understand him. It was an age of energy—an age of war and factory building and expanding commerce. And while such an age may choose romance for its softer side, it can hardly choose the contemplative worship of Beauty. The Oriental romances of Byron and Moore were received with a whirlwind of favor, while poor Keats was hooted from the stage.

It was many years before the reaction came. Twenty-seven years after Keats's death Monckton Milnes publisht the life and letters of the poet, and tho previously his fame had made its way slowly, from that time must be dated the real beginnings of the recognition of his genius that has fixt him among the immortals.

It was long held that Keats's death had been brought on by the suffering caused thru the savage attacks made upon him by contemporary reviewers. The notion was long ago given over by the learned, but it is not yet wholly dispelled. Keats died of consumption—of "hereditary consumption," says Mr. Hancock, tho modern science denies the hereditability of this disease. But there is no doubt of the consumption. The autopsy showed the "lungs completely gone," and "the doctors could not conceive how he had lived" the last two months. The most favorable reception of his work by the critics could not have extended his doomed life. Mr. Hancock well shows that at the very time—the fall and winter of 1818-19 and the succeeding spring —the poet was supposed to be sinking under attacks of the reviewers, he was really producing the verse which has assured his fame. He had times of self-distrust and dejection, but his sustained mood of the time, as shown in his letters, was one of confidence in himself and heroic determination in his work. Byron wrote better than he knew when he penned the half-cynical distich:

"'Tis strange the mind, that very fiery particle,
Will let itself be snuffed out by an article."

Strange, indeed, and long ago shown to be utterly false in the case of Keats.

The development of Keats's genius Mr. Hancock brilliantly traces thru the variout poems to its final mastery in the Odes. The defense of the immature and unfortunate "Endymion" is lukewarm; the poem as a whole is dead, he concedes. Yet it has merits, he declares, but they must be sought in certain widely scattered passages, wherein the poet rises far above the ordinary level of the poem. It is with "Isabella" that he reaches the beginnings of his mastery, and after that his product is pure gold.

No critic, we believe, has so clearly shown as has Mr. Hancock the innate purity of Keats's poetry. The most sensuous of poets, he was the least sensual. "Isabella" is much cleaner from Keats's hands than it was from Boccaccio's. In the "Eve of St. Agnes" "he portrays with fervor the dualism of human nature. Yet always with a saving sense of the holiness of love's privilege. It is the atmosphere, charged with holiness, that keeps the imagination sweet and clean." Even "Lamia," tho it

*JOHN KEATS. A LITERARY BIOGRAPHY. *By Albert E. Hancock.* Boston: Houghton Mifflin Co. $2.00.

is "a well-nigh perfect picture of the blandishments of sensuous love," is neither "gross nor passionate." It reveals, perhaps better than any of the other poems, because of its subject, this distinctive characteristic of Keats's mind.

With careful judgment and in well-chosen words, Mr. Hancock concludes his work with an estimate of Keats's powers and rank. Tho he grants his poet supremacy in his own province, he recognizes his limitations. "He may become a universal poet; he could never have become a poet of the universal. His type of genius is minor, profound, permanent."

Mr. Wells's Philosophy

We are inclined to think that Mr. Wells writes too much. He has formed the bad habit of thinking aloud and of giving the public his unmeditated thoughts. As a consequence, each book is a revision and correction of its predecessor. From "Anticipations" to *First and Last Things** is a long run; and in making the run he has radically changed his point of view. The oligarchy of engineers and scientists who, in "Anticipations," were to take possession, willy nilly, of the governments of the world, gave way, in "A Modern Utopia," to a democracy tempered by the moral rule of the ascetic Samurai. He has now disbanded and dismissed his Samurai, and has given us nothing in place of them but a vague notion of a "worldwide brotherhood."

In all things he changes except in his eager espousal of the title "Socialist." But his socialism, he takes great pains to disclose, is not that of other men. He opposes "the philanthropic socialism of the kindly prosperous"; the "fierce, class-hatred socialism" of the orthodox school, and the "furtive socialism" of the Fabian Society. He will have his own socialism and no other; and his own he describes as something which "holds persistently to the idea of men increasingly working in agreement, doing things that are sane to do, on a basis of mutual helpfulness, temperance and toleration."

He touches lightly, often ingeniously and with stimulating suggestiveness, upon social ills and defects; he has notions on every conceivable subject—on egotism and humility, on the character of Christ, on the repudiation of debts of honor, on a more flexible marriage code, and on the duty of staying in the establisht church until one gets kicked out. But he fails to relate his multitude of opinions to any fixt and fundamental principle.

The sweep and range of his imagination, and the vividity and charm of his style make amends in considerable measure. He draws wonderful and appealing pictures of a regenerated society, and moves men's minds to a hope and expectancy of better things. He forces their attention from the mean commonplaces of everyday life, and concentrates it upon the great social problem.

The most original part of the volume is the first, dealing with the fundamental conceptions of logic, along the same lines as his lecture on "The Imperfection of the Instrument." In this he identifies himself with the pragmatists, but no pragmatist has hitherto dealt so daring a blow at syllogism and definition as he does in denying the possibility of valid categories. We would have gladly dispensed with many pages of his desultory thoughts on things in general if he had devoted the space to the thoro development and application of this very revolutionary theory.

*First and Last Things. *By H. G. Wells.* New York: G. P. Putnam's Sons. $1.50.

Jerusalem*

In this work Professor Smith undertakes to do for Jerusalem what he did for Palestine in general in his well-known work, "The Historical Topography of the Holy Land." This may, in fact, be regarded as a sort of sequel to the latter. Like the earlier work, it is of great value to the Bible student; indeed, once created, it has become an almost indispensable part of the working apparatus of the Bible scholar. It comprises in one whole the topography, geology, archeology, political and social economy, and the religious and political history of Jerusalem, from the earliest times down to the destruction of the city; and the

*Jerusalem: The Topography, Economics and History from the Earliest Times to A. D. 70. *By George Adam Smith, D. D., LL. D.* New York: A. C. Armstrong & Son. 2 vols.

passages of the Bible referred to in the separate indices to the two volumes are so numerous that it would appear as tho, by means of them, the ordinary student might make those volumes serve as a fairly complete commentary on both the Old and New Testament, not to speak of Josephus and the Talmud.

The work is divided into three parts: 1, Topography; 2, Economics and Politics; and 3, History; the latter occupying the entire second volume. The style is somewhat discursive, but perhaps on that account the easier to read and understand. The latest results of scientific study are presented in a form intelligible to and readable by the ordinary man. Abundant notes refer the technical scholar to authorities and sources, and advise the ordinary student of the existence of other views. A very full general index to each volume, with special indices of Bible passages, including the Apocrypha, Josephus and the Talmud, facilitate reference. The author is cautious, dealing as little as possible in theories, and when theories are presented they are distinguished as well as may be from facts. He is content to confess ignorance on certain points, as, for instance, the line of the second wall, involving, incidentally, the site of the Holy Sepulcher. With regard to the position of the original Zion and the City of David, he holds to the present commonly received view that it was on the eastern hill southward of the present Haram area. With practically all scholars of the present day, he locates the Temple proper behind, that is, to the westward of the Sakhra, now enclosed in the Dome of the Rock. In his treatment of the name of the city, and in his chapters on "Earthquakes, Springs and Dragons" and on "The Waters of Jerusalem," in which he considers the possibility of changes in the springs and watercourses in and about Jerusalem as the result of seismic phenomena, he seems to us to be somewhat overcautious. As to springs, fountains, etc., while shaking our faith in the permanence of all things by his suggestions of seismic changes, Professor Smith still inclines to think that, while the Dragon's Well of Nehemiah's time was of earthquake origin, and "that earthquakes *may* have affected the other springs of Jerusalem," the two important water sources of the Jerusalem of today, the Virgin's Spring and the Well of Job, have been substantially the same from the earliest historical times, the former being Gihon, or "the upper Gihon," the latter En-Rogel, the Fuller's Spring, identically or substantially. The puzzle of the pools and aqueducts of Jerusalem Professor Smith does no more than state. Much fuller excavations and explorations will be necessary to furnish us a key. On the south the Low Level Aqueduct is still in use, and can be traced thruout its course; the High Level Aqueduct has been traced only in part. How it entered Jerusalem and what it fed is not known. On the north of the city a conduit feeding the Twin Pools has been traced beyond the city walls, but from what source it brought its water is not known. The date of these various aqueducts and of most of the numerous pools in and about the city is as uncertain as their connections and sources of supply, and Professor Smith makes the reader realize the uncertainty to the utmost. He is inclined to reject the etymology Uru-Salim, City (of) Salim, suggested or supposed to be suggested by the Assyrian and early Babylonian forms of the name, the latter contained in the Tell-el-Amarna Tablets, and to give a slight preference to Yerushalem, with various suggestions as to its possible meaning, or even to the etymology fire (*ur*) or *"hearth of peace* or *inviolate health,"* but without pronouncing any definite opinion. It seems to us that the argument for the first etymology is fairly established, and that this etymology receives curious confirmation in the reappearance of Salim in the name of Solomon.

On the whole, the most interesting part of the book and the one which will probably be most useful to the largest number of readers, is the second volume, which tells the history of Jerusalem consecutively, picturing the religious and political development of the people in connection with the growth of the city, and more especially that part of this volume which deals with prophets and the fulfilment of prophecy in Christ. Like Professor Smith's other works this, in its treatment, is what is commonly called constructive, not destructive. There is very rarely any polemical material or direct criticism of

the views of others, which makes his few remarks on page 540, with regard to the tendencies of recent New Testament criticism, the more striking:

"Coming up to the study of recent New Testament criticism from long following the history of Israel, . . . much of this criticism fails to allow enough to the immediate action of Prophecy. Carried away by the influences on our Lord's time of the Apocalypses, the full appreciation of which has but recently become possible, some critics almost entirely ignore the direct influence, untinged by Apocalypse, of the Hebrew Prophets. By others the main tendencies of religion during the period are defined as only two, the Legal and the Apocalyptic, while the Prophetic is regarded and treated as subordinate. This may be true of some, but not of all, of the popular religion. It is not true of the circles in which Christianity arose, nor of our Lord's mind whether about the Jewish system or about Himself. . . . No one may understand the origins of Christianity who does not realize in them a revival—after a silence of many centuries—of Prophecy, . . . which, whatever relation it might assume to the ritual and institutions of Israel, felt itself independent of these and delivered its own direct message from God."

A wholesome and a timely word.

The work is well publisht, fairly easy to handle, and very light in proportion to size, satisfactorily supplied with maps, plans and photographic views.

Orthodoxy. By G. K. Chesterton. New York: John Lane Co. $1.50.

To those who read in "Heretics" merely a merry tilting at contemporary writers and their theories on the part of an idle and witty wielder of the pen, the evident sincerity of this companion volume will come as a surprise. Yet it should not, for "Heretics," overloaded with whimsicalities tho it were, fought a consistent battle. As it attacked theories from the unexpected quarter, so *Orthodoxy* defends dogma for reasons not used by the clergy, yet perhaps none the less suggestive and serious. Mr. Chesterton, earnest as he is, will yet always labor at a disadvantage. He can never achieve what Mr. James calls the obscure distinction of not being offensively clever. In his gravest moments Mr. Chesterton cannot resist a paradox. Sometimes these are so witty the reader thanks him. Sometimes they are so frequent the reader wishes he wouldn't. To build into a clear and convincing statement one's own beliefs is a more difficult business than the piercing of one's neighbor's defenses with barbed arrows, and *Orthodoxy* is at once more serious and less irritating than its predecessors. It deals with dogma rather than spiritual conceptions, for which the author's vivacious method would jar upon the devout. Starting with the premises that only belief in something greater than himself outside himself keeps a man sane, and that only under law is freedom—two chapters, entitled "The Maniac" and "The Suicide of Thought"—the rest of the volume is devoted to the effect of Christianity on the human mind. In "The Paradoxes of Christianity" is the gist of the whole matter, and in "The Ethics of Elfland," apart from its bearing on the topic, a bearing quite evident after Mr. Chesterton has pointed it out, is a wholly delightful and original defense of fairy tales, now seriously in need of such championship. "Fairyland is nothing but the sunny country of commonsense," he says, truly. "If I were describing in detail I could note many noble and healthy principles that arise from them [fairy tales]. There is the chivalrous lesson of Jack, the Giant Killer, that giants should be killed because they are gigantic. It is manly mutiny against pride as such." "There is the lesson of Cinderella, which is the same as that of the Magnificat, *exaltavit humiles*. There is the great lesson of Beauty and the Beast, that a thing must be loved before it is lovable." It is a misfortune that Mr. Chesterton, by his very brilliancy, fails of being seen as he is. Darting about his subject, be it Watts the painter, or how to gain breadth of view, "Pickwick Papers" or the Miracles, the reader takes him to be drest in motley, whereas in actual fact he is a stern and eager moralist. His gaieties are surface gaieties. He ridicules, not for love of ridicule, but because it is the weapon fitted to his hand, and fight he must, for he is a man of enthusiasms deep and vital.

The Man From Home. By Booth Tarkington and Harry Leon Wilson. New York: Harper Brothers. $1.25.

This play, which ran for a year at the Studebaker Theater in Chicago, and was put on at the Astor Theater, New York, in August, is publisht in book

form, with such copious notes upon the scenery, upon the characters and their clothes, with such minute directions in every particular that it should be popular with amateurs in social circles everywhere. Certainly any company of young people could give it, whether they had ever seen a play acted before or not; and while the motive is not especially elevating, it is instructive. The methods by which international marriages are made, the contrast between the real American—the Man from Home—and the Anglo-American snob is drawn with a wit that is caustic as well as diverting. And every scene is one of lively interest.

Literary Notes

....The Macmillan Co. have already issued the following poetic dramas of Percy Mackaye, viz.: "Sappho and Phaon," "Jeanne d'Arc," "The Canterbury Pilgrims," and "Fenris the Wolf." The Macmillans also have in preparation Mackaye's "The Scarecrow; or, The Glass of Truth," a tragedy of the ludicrous. $1.25; each volume in uniform style.

....D. Appleton & Co. publish a very amusing little book by Francis W. Crowninshield, entitled "Manners for the Metropolis." The following extract will serve as an example: "Young girls when visiting at a house party, should be quiet and gentle, well behaved and agreeable; but when at home there is no reason why they should not be perfectly natural." ($1.00.)

....Thomas Nelson & Sons have added another edition to their Standard American Revised Version of the Bible. It is in very clear ruling type, 3½ to 5⅝ inches, with half a dozen maps, and sold in various bindings from 45 cents for cloth to $5. We particularly like the 95 cents or $1.25 styles, in Egyptian seal and divinity circuit, as presents from teachers for their scholars. The cheaper styles in this or in larger type ought to be distributed in prayer-meeting rooms. We recommend always the American Revised Version.

....In *Jesus of Nazareth: a Life*, by S. C. Bradley, we have an account of the "Man of Galilee" that is sympathetically told The text comprises history, biography, and at times romance, all of which is cast in the words of everyday thought and life. No matter what conception the reader may have of the "Man of Sorrows," no matter whether this conception is colored by theology or psychology, he cannot but have a profound admiration for Him as Mr. Bradley pictures Him after many years of study in preparation. (Boston: Sherman, French & Co. $2.00.)

....A recent writer in *The Circle* tells a good story about Francis Wilson as follows: "Mr. Wilson was speaking at the Players' Club not long ago of the all too prevalent ignorance of dramatic literature in the country today. 'Why,' said he, 'a company was playing "She Stoops to Conquer" in a small Western town last winter when a man without any money, wishing to see the show, stepped up to the box office and said: "Pass me in, please." The box office man gave a loud, harsh laugh. "Pass you in! What for?" he asked. The applicant drew himself up and answered, haughtily: "What for? Why, because I am Oliver Goldsmith, author of the play." "Oh, I beg your pardon, sir," replied the other in a meek voice as he hurriedly wrote an order for a box.'"

Pebbles

CASHLY (at the club)—Is your wife entertaining this winter?

Stockson—Not very.—*New York Tribune.*

"WHAT was that sentence the choir repeated so often during the litany?"

"As near as I could make out it was 'We are all miserable singers.'"—*Boston Courier.*

THE BOY (Fervently)—You are the first and only girl I ever loved, Ethel.

She—Ah, what lots of fun you have ahead of you, Freddy!—*London Opinion.*

"MORE than five thousand elephants a year go to make out piano keys," remarked the student boarder who had been reading the scientific notes in a patent-medicine almanac.

"For the land's sake!" exclaimed the landlady. "Ain't it wonderful what some animals can be trained to do?"—*Chicago News.*

YOUNG Surgeon (in hospital, after having just removed a patient's leg)—Does the operation meet your approval, doctor?

Head Surgeon—Very well done, except for a slight mistake.

Young Surgeon—Why, what's the matter?

Head Surgeon—You've amputated the wrong leg.—*Illustrated Bits.*

DAVE REED, the well known song writer and author of "Texarkana," "Door of Hope," "Bye, Bye, Mah Caroline," "Love Me and the World is Mine," and fifty other popular songs, had the laugh given him recently by the boys at Witmark's.

Mr. Reed, who is extremely dignified, was escorting an old lady from the country thru the Witmark Building one day last week. To make himself doubly agreeable to her, Mr. Reed sat down at one of the pianos in the professional rooms and began to improvise a melody to show her how composers get their tunes. After he had finished, the old lady turned to him and asked what the lovely selection was that he had just finished playing.

"That, madam," explained Mr. Reed, "was an improvision."

"Mercy me, how stupid of me!" exclaimed the old lady, "now that you tell me the name I remember the melody quite well. In fact, it is an old favorite of mine which I heard a hundred times!" And the old lady wondered why Dave looked so angry at her and abruptly excused himself.—*Exchange.*

The Independent

Entered at New York Post Office as Second Class Matter
Publisher, Clarence W. Bowen
130 Fulton Street - - - New York

A WEEKLY MAGAZINE. FOUNDED IN 1848.

One Year, $2.00. Single Copies, 10 cents.

Single copies over six months old 25 cents. Postage to any foreign country in the Universal Postal Union, $1.75 a year extra; to Canada, $1.00 extra. Subscriptions will be received for other periodicals, and clubbing rates will be granted as low as offered by any responsible agency.

Order for the change of an address should be received two weeks before change is to take effect. The old as well as the new address should be given.

For the convenience of our subscribers we will send on receipt of publisher's price any book reviewed or advertised in our columns.

Volumes of The Independent are completed at the end of December and June, and a full index is furnished free on application. Neat binders holding in book form thirteen current issues will be furnished for 45 cents.

If the numbers comprising any semi-annual volume are returned to us prepaid in good condition with $1.50 we will bind the volume in handsome and substantial half buckram and deliver it free anywhere in the United States.

We are always glad to receive articles for examination, but writers desiring the return of their manuscripts, if not accepted, should send a stamped and addressed envelope. We cannot, however, even so, hold ourselves responsible for their return. Authors should preserve a copy.

Advertising rates will be furnished on application.

Looking Across the Line

We can see over into 1909; will it be as short as 1908? Our views of life have changed; the years are shorter, but life is longer. If we spend less time preparing for another life, we need more time in decently living this life. Wars and dangers grow less and less to our taste. The modern definition of life is a power to gather the material of the universe to ourselves, to make it our own, and use it under the control of a well-trained will. In this way a great many things are becoming matters of righteousness which were excluded from the catechisms. The new questions are, What shall we wisely eat? What and how should we wisely study? How and when should we sleep? and What share shall play have in the daily life?

All these things come into the vitalizing power of environment. The object and end of life is to create moral ability, based on intellectual ability, which is itself dependent on clean vital physical power and then use it for the benefit of the world. As the years move by, the question is, What have they done in the way of accumulating for us moral and intellectual vitality? We desire to live longer on this earth, and we mean to do it. We mean to make the value of life greater, and we answer with emphasis that life is worth the living.

Manhood is magnified from the industrial standpoint. 1908 has been worth two of 1808, and ten of 1708. With the aid of machinery we are already able to do ten times as much work per day as our fathers did one hundred years ago. This makes life so much longer, and the years count for more. We travel ten times as fast, and the conveniences are such that we execute with a speed not dreamed of when the Republic was founded. We pick up in our hands and carry about such little instruments as the typewriter, the sewing machine, the telegraph, and the telephone, each one of which has wrought an absolute revolution. Mere work, that is, the use of our limbs where machinery may as well be used, has lost much of its glory. Yet work has a beauty of its own, and this we are in danger of forgetting. What we want to do is to accomplish the very most in the very shortest period of time, but we must not learn to tolerate shoddy. As a compensation relaxation has assumed a place in the moral category. Amusement has become re-creation. Playing and praying are in some sense correlative terms, as well as are *"orasse"* and *"laborasse."*

More is thought of quality and less of quantity. The wastage of large families, poorly bred and poorly fed, does not fit itself to our modern view of life. Heredity and environment are what we are learning to look at. Darwin's gospel is getting a translation into all customs and hopes of life; is even readable in the transformations of the Orient. Man is rising, not falling; and it is this rise that concerns us. To believe in progress is to believe in God. To lack faith in progress is the real atheism. Skepticism is a ghost not worth the fighting. The old infidelity that was abhorred in the middle ages was the shadow of a new and higher faith. The skepticism that injures is to doubt the power of good over evil, and the presence of a divine certainty in the universe. A soul is motion, activity, unrest; it is the capacity of endless

aggression. Every one comes into the world inheriting a law-book. Man's first duty is to learn to read his own book. Nature writes new words in it as fast as we spell out the old.

The burden of enormous wealth is a novelty, but it has proved itself to be worse than poverty. Socialism offers itself as a saving force, adopting the shibboleths of modernism. But as a putting out of individualism socialism has not won a rood, and it never will, nor will it ever have changed or abrogated the unit power of the family. Equality is no more in sight than it was before the Christian era. Yet coöperation is a saving principle, and as the years roll by we are sure to find this principle more thoroly incorporated into human society. We cannot afford the enormous loss involved in many of our family customs. Waste of time and of labor grow intolerable. There is no reason why fifty persons or fifty families shall repeat fifty times what, done once, and well done, may suffice for all. Coöperative housekeeping belongs to natural evolution.

Internationalism is a word better suited to the trend of our times. It proposes to save by letting each nation grow those products that are natural to its part of the earth, and with this to allow freedom of commerce. This was Madison's idea and it was Jefferson's. Commercial warfare must cease before we can put an end to the strife of brute force. Build more ships of trade and your ships of war will not be needed. Each land has its own fitnesses; and so has each race and people. New York began its history by shutting out Connecticut, and barring the commerce of New Jersey. Boston fought Manhattan, and little Rhode Island not only had its own creed, but a very stout opinion of its boundaries. The Constitution ended all of that, and fifty States have learned to work together, very well, from the Atlantic to the Pacific. Instead of shutting out the Chinese we shall learn to invite them; but it will be to allow them to perform that which they can do better than anybody else, and at the least cost.

What we want is universal prosperity. We not only desire to put an end to strife, but to put an end to selfish rivalry. Equality of privileges and comforts does not find a natural boundary when it comes to the limits of our own territory. Nothing can be more irrational than to build up ourselves at the cost of others. When the larger idea of human fellowship is the code of the peoples, peace will follow naturally. It cannot be forced; it will follow of its own accord. With international common sense coming in, there will go out the greatest cost of government. The United States spends more on war in time of peace than on internal improvements. The age of reason has not dawned; but we have taken long strides away from the axioms of national selfishness.

We said that 1908 was finished, but that is not strictly true. It has hardly begun to do its work in history. More and more the years are marked with mighty punctuations. The Hague Conference; the development of national temperance; the anti-opium laws of China; the growing coöperation of South American peoples; the general fraternization of European nations, and the strides toward civilization in Africa and Asia mark the augmentation of ethical power thruout the world. It is a year to be proud of in spite of its business perplexities. The world is a better world at almost every point. National conscience is less plastic to selfish logic.

In business affairs what we may call the American conscience has had a distinct revival, a revival that more than compensates for the jar of the exposure of rascality. Our Presidential election past over with barely the smell of fire. It approximated the ideal when each man unbought will tell his political faith, and every candidate will seek the public welfare rather than his own. Never before did we have nobler candidates for the Presidency. Hark back, if you will, to the days when Webster, Clay, Calhoun, and Benton were our candidates; and yet with Hughes and Taft and Bryan and Johnson and Folk and Gray and La Follette—not a duellist or a drunkard or a loose liver among them—we have men that embody the stern qualities of Governor Winthrop and Governor Bradford with the most sterling power of a riper age.

A Good Riddance

THE political world is done with President Castro, and good riddance to him! He sailed from Venezuela for Europe, assigning as his reason the need of a surgical operation; but he took with him wealth enough to last him in luxury all his days, and he has not lived like an invalid. He has gone thru the forms of buying vast military supplies, but if he should pay cash for any of them he could not land them in Venezuela, for the Dutch cruisers will not let either him or his arms enter the ports. He is shut out from the country which he left as President and actual dictator; and if the Dutch blockade did not exclude his return, his own people have risen against him, and President Gomez is his successor.

Venezuela has been an international nuisance these many years. The United States did its best to support and protect her, but in vain. We backed her with our Monroe Doctrine, our Ministers and the Hague Court, but it did no good. Hardly was Venezuela—which means Castro—got out of one difficulty than she got into another. Thru the Hague decision half a dozen national claims were settled, but only to supply new claims with the same and other countries. At last American patience was exhausted. Our diplomacy did no good. We attempted no longer to act the part of pacificator. We made no objection to the threats of France or the acts of Holland, which were tantamount to war. What less than war is it when the Dutch navy seizes the Venezuelan vessels right under the guns of a fort? Castro says that the United States has encouraged the outbreak against him in his absence. There is not the slightest evidence of that, but it cannot be doubtful that our Government has looked on benevolently as Holland has taken violent means to maintain her rights; and it has not grieved that the outbreak in Caracas has made it impossible that Castro should be received back at the capital, even if he should escape the Dutch cruisers.

We do not pretend that in the quarrels Castro has been all wrong and the claims against Venezuela all just. Quite otherwise. Beyond all question promoters and concessionists have made extravagant demands, and United States citizens have not been slow to join the exorbitant army and to try to get much and give little. But, on the other hand, the action of Venezuela, that is of Castro, has been lawless and insulting to the representatives of the Powers, and has compelled the withdrawal of European representatives. Reference to arbitration has been refused, and no sort of reparation has been offered. The action of Holland became practically a necessity.

Now the people of Venezuela have taken advantage of President Castro's departure to overthrow his Government and proclaim his successor; and this is done without bloodshed. This seems evidence that the people were tired of his tyranny. There was no general indignation at the seizure of the Venezuelan gunboats; on the other hand, they turned their wrath against Castro himself, and the new President prepares to undo what Castro had done and make terms of peace with Holland and France. So, to the great satisfaction of all the world that has any knowledge or care about the little and obstreperous republic, the period of long international disturbance is over. The old difficulties will have to be settled; but we may expect, under a man so well spoken of as Gomez, that the best period for any country, that of a peace which has no history, may come to Venezuela.

As for Castro, he joins the large succession of Latin-American Presidents, pretenders and revolutionists who have left their country for their country's good, to be succeeded in turn by the flight of their successors, all with well-lined pockets, to live abroad a life of quiet ease or of designs and plots for new revolutions. But in all probability Castro has run to the end of his tether, and will live a fugitive and exile the rest of his life. Few are they who will bemoan his fate, except that he has carried with him the means for a life of luxury.

Nationalism and Sectionalism

No one can have traveled much over the country without noticing a marked contrast between the Northern and the Southern States in their attitude toward sectionalism. There is vastly less expression of sectional feeling in the North

than in the South. The Southern journals and the Southern people have much to say about the South and its special interests and feelings. In the Northern States such a sentiment about the North as distinct from the South is almost never to be observed. We do not talk about the South, we do not think about it as a section having separate interests from the North, unless in a political campaign we wish that there were great doubtful States in the Solid South, as there are in the North. Ohio and Indiana and Minnesota elect Democratic governors; that is almost unthinkable in Georgia or Texas, which have the intense Southern feeling, with a bit of rankling jealousy or even hostility toward the North. No similar feeling exists in the North.

The reason for the difference—or the apology—is easy to tell. It all hangs on the Civil War. We have not yet quite got over the friction of that confiict. The South was fighting for a section and a sectional institution. The North was not fighting at all for its section or for any of its institutions, but for national unity; fighting to preserve the whole country as one nation, and not for a portion of the country to be set off by itself. It followed, necessarily, that in the South sectionalism should be the dominant thought, and that its influence would remain largely dominant after the close of the war. It followed with equal necessity that in the rest of the country the spirit of nationalism should rule. It follows that the Northern States do not think of themselves as separated in any sense from those States which fought against union, but have now heartily accepted its blessings.

Patriotism fights sectionalism. We need to develop more and more the love of the entire country, and to minimize any loyalty to a section which can possibly take the place of patriotism. This does not mean that one should not have a special love for his native town or his native State. That is regarded as one of the parts that make up the total country. There is in it no rivalry of loyalty or affection. But it is an error and wrong if school-books on history or geography set section against section or are guilty of perpetuating the memory of the hostilities of the days of the elder generation. We cannot complain that the soldiers, the few that remain, delight to meet in annual reunions or in local posts and recall and maintain the old fellowships; that is beautiful. But let it be left to them. There is no good and much evil in the maintenance of Sons or Daughters of the Union Veterans—if there are any such, we do not know of any—or of Sons or Daughters of the Confederacy. All that we want forgotten, or left to the historians and the genealogists. We will not cease to be proud of our pedigrees, of the bravery of our ancestors, but we will not teach our children to retain and cultivate the sectionalisms of their grandparents. What do they know about the war? What have they known of slavery? Let the dead bury their dead, and do we follow the country's banner.

Accordingly we bid the people stand and join in the national songs, "The Star Spangled Banner," "My Country, 'Tis of Thee." They are not sectional, but belong to all of us, North and South, East and West, one nation, one land. So we do not rise, nor ask any one to rise, for "Yankee Doodle" or "Dixie." They both represent, or seem to represent, what is sectional, and sectionalism must never, never take the honor from nationalism.

The South is becoming less sectional and more national all the time. An admirable way of promoting and accentuating the national spirit is to be observed in the annual meeting of the Governors of the States to consult not on sectional, but on common national interests. Intercourse is doing much. More and more the people of the North are going South for the winter, and to a less extent the people of the South are coming North for the summer. Business is the great harmonizer and assimilator, and the diversification of business in the South, with the introduction of Northern capital and the growth of manufacturing centers, all tend to assimilate the conditions with those of the other sections of the country. With this also must be considered the spreading of the negro population over the whole country, so that the negro problem is no longer wholly a Southern problem, but belongs to the

nation. Still more, the strengthening of the public school system over the South is sure to reach the backward settlements and unify conditions by lifting the people. All this is hopeful, and looks to a warmer and deeper love of the whole country than that which is said to have been developed by the war with Spain. Our larger love belongs to our whole nation.

The Injunction

THE writ of injunction is the highest prerogative known to free institutions. With it the judge combines in himself the legislative, executive and judicial branches of government. Even tho he makes a mistake and issues an order which is unlawful, his mistake is law:

"I place the decision of the matter at bar distinctly on the proposition that were the order confessedly erroneous yet it must have been obeyed."

So states the court in condemning Gompers, Mitchell and Morrison to jail for six to twelve months.

A prerogative so exalted as this strikes the man in the street not so much as the "supremacy of law over the rabble" as the supremacy of usurpation over the law.

Very few of the undistinguished trade unionists who have violated injunctions have been possest of the financial means required to take appeal and get a correct statement of the law from the highest court. It would have been an example worth while if these three distinguished unionists had served their sentence, like their unknown co-unionists. And it would be unfortunate if a political branch of the government should grant them a pardon, which could only conceal for a time for political purposes the true situation regarding injunctions.

But the appeal is, of course, commendable, tho, in the light of the decision in the hatter's case, it does not seem that the present decision will be reversed. The question will then be clearly at issue, to what extent wage-earners may advertise their grievances and call upon their fellows to aid them as customers where they cannot aid them as strikers.

The case of the Bucks Stove Range Company is peculiar, and brings out clearly the alternative lines of settlement of the ever-present conflict of capital and labor. The company is a member of the Stove Founders' National Defense Association, the association of employers which for twenty years has substituted conciliation and trade agreements with the unions for strikes, lockouts, boycotts and blacklists. Had the company called upon its fellow employers for help they would soon have forced the union of polishers to withdraw the boycott on the penalty of locking them out from all stove foundries in the country, just as they already had done in requiring of the molders' union the discontinuance of the union label. But the company appealed to the courts, and the courts entertained the appeal, with the result that a tremendous class struggle, threatening the independence of the courts and opening the opportunity for the politicians, seems to be coming upon us. A similar struggle in Great Britain, much less dramatically initiated by the Taff-Vale decision, resulted in shearing the courts of jurisdiction over disputes of organized labor and capital. Voluntary conciliation and trade agreements are menaced by the limelight appeal to the courts; and the Parliament of Great Britain, in eliminating the courts from these controversies, has drastically, but apparently with wisdom, thrown the combatants back upon their own resources of organization and conciliation. England has chosen the method of the Stove Founders' National Defense Association, instead of the method of obedience to a judge's order that might be "confessedly erroneous."

Is the Human Race in Peril?

IF in the Augustan age learned men had foretold the end of that grandeur that was Rome, and had said that in five centuries ignorance and superstition would everywhere darken her mighty empire, the cheap wits of the market places and the thermæ would have made merry over the theorizing of academic minds. Today the flippant wits of the newspaper columns and the magazine pages find good substance to their hand in the warnings of the Levasseurs, the Dumonts, the Willcoxes and the Cattells,

who tell us that the civilization which man has built with the mighty toil of ten millenniums will have no heirs to inherit and enjoy it unless the ideas and the morals that now prevail shall undergo a profound regeneration. Happily it does not follow that because Rome was sacked by barbarians the modern human race must perish in its sins. It may yet be convicted and converted.

When Professor Willcox told us the other day that if present tendencies continue there will be no birth rate at all in the United States in the year 2000, we smiled—most of us. The idea struck a nerve of taciturn humor, rather than our brain centers of seriousness. That effect will not be produced, we venture to think, upon those who carefully read Professor Cattell's article on "The School and the Family," in the *Popular Science Monthly*. For a number of years Professor Cattell has devoted patient study to the correlation of modern educational methods with the falling birth rate. Some of his conclusions have been sobering, but nothing that he or anybody else thus far has written on this subject has sounded quite so stern a note of warning as this searching and merciless indictment does.

It is but fair to mention that Professor Cattell does not set a high value upon modern school and college education as a preparation for life. The proposition that "people are what they feel and do, much more than what they know," is to him, as a specialist in psychology, axiomatic and fundamental; and this is why, notwithstanding the fact that he is not only a university professor, but is also the editor of *Science* and of the *Popular Science Monthly*, and knows the world of scientific men more intimately probably than any other American of his generation, he ranks the home and the Church immeasurably higher than the school, as true educational institutions. Indeed, he is capable of writing:

"Civilization may persist and progress without the family; but human and pre-human societies have been so completely based on it that no one can foresee the results of its destruction. Mankind will last only so long as children are born and cared for; and no plausible substitute for the family has been proposed. It is in any case evident that the premature weakening of the family will bring disaster. . . . The school by its nature weakens the family . . . The modern city it surely subversive of the home and the family. . . . The Sacraments of the Church—baptism, confirmation, marriage, burial—are closely interwoven with family life. The school supersedes the Church as a socializing factor to the injury of the family. . . . Perhaps the principal danger to our civilization is the checking of instincts by rationalistic considerations."

It is from this psychological base-line that Professor Cattell surveys the present state of our education and our domestic morals, and draws the conclusion that we must be born again, and soon. Those whom he offends—and they will be numbered by thousands—will say that he is a traitor to the rationalistic spirit of modern science. In fact, he is nothing of the kind. He says plainly that our only salvation—now that we have betrayed and trampled upon instinct, lies in going on to a larger and higher reasonableness. We must in the light of reason see our folly and wickedness, and as rational beings alter our course.

What, then, is it that we are doing? Wherein does our folly and wickedness lie? Here are some fragments of the answer. The Harvard graduate has on an average seven-tenths of a son, the Vassar graduate one-half of a daughter; and these figures are representative of the entire educated or so-called intellectual class in America, and the world over. Last year in France the deaths exceeded the births by 19,920, and all civilized nations are tending toward a similar state of affairs. The common belief is that this decline of the birth rate is caused by voluntary prevention, and is attributable to luxury, selfishness and love of ease. Professor Cattell presents sobering evidence to show that it is very largely a result of sheer physiological failure, an actual loss of reproductive power, and he attributes this failure in a large degree to the substitution of the school for the home as the chief educational institution. One single item of fact is profoundly significant:

"It is probably not an exaggeration to say that to the average cost of each girl's education thru the high school must be added one unborn child."

Physiological failure, not psychological choice, is here meant. And hardly less significant is another fact. It has been said that human progress was held

back a thousand years by sacerdotal celibacy, which cut off the lineage of the ablest men:

"With equal plausibility it might be argued that the 400,000 American women teachers withhold the million children who might give to our country the intellectual distinction that it lacks."

How shall we be restored to normal ideas, ideals and conduct? Professor Cattell suggests the development of a rural school, essentially like the home in its aims and methods, and fitted to educate youth for the sane and wholesome life of the country places. The suggestion is admirable, but whence shall come the impulse to follow it? It will come, we believe, if at all, from the failure of modern satisfactions to satisfy. It will come when in sheer ennui and disgust men and women turn from the tawdry shams and rubbish for which they spend their strength today, to rediscover in life itself—in children and children's children—the objects for which effort is worth while. In the psychological law of the diminishing returns of selfishness and folly lies our hope.

The Tariff on Iron and Steel

It may now be predicted with confidence that the duties in one of the most important schedules of the tariff law, that which relates to iron and steel, will be largely reduced by the approaching revision. Because of the testimony of Mr. Carnegie and Mr. Gary at Washington, Congress and its committees must make a substantial reduction of these rates. Mr. Carnegie, for years the most eminent of American steel manufacturers, repeated his recently publisht assertion that American steel needs no protection whatever. Mr. Gary, chairman of the directors of the Steel Corporation, which represents more than 60 per cent. of our iron and steel industry, admitted that without protection his great company could continue to carry on its business and could withstand competition from abroad, altho its profits would be decreased. Other American companies, however, he asserted, would fail. Probably they would be absorbed by the Steel Corporation, which would thus become a complete monopoly.

It is not necessary to consider the probable effect of a removal of the entire duty, for by the coming revision it will not be removed. It ought not to be cut off now, altho it may be expedient some years hence to abolish it. To this high rate the industry has been adjusted, and altho the adjustment involves extortion from consumers, the injury caused by removal of the entire tariff barrier would be greater than that which can accompany the retention of a part of it. But a considerable part should go now, and all, or nearly all, of the remainder should follow at the next revision.

Mr. Gary's testimony shows how American consumers are deprived in this industry of the benefits derived from what are called the economies of combination. His company, he says, could stand free trade in steel, because its cost of production is less, by $1 or $2 per ton, than the cost at the works of its weaker competitors. Has his company given to consumers in this country the benefit of this lower cost? Are not his company's prices here substantially the same as those of his less fortunate rivals? Has there not been what amounts to an agreement thruout the industry for the maintenance of practically uniform prices? Undoubtedly there are economies due to such a consolidation of producing concerns as is seen in his company, but suppression of real competition with what he calls his competitors has withheld the benefit of these economies from the public.

But if consumers here have enjoyed no advantage by reason of the Corporation's saving in production cost, consumers abroad may have gained something by it when the finished products were sold to them at prices far below those exacted here. Mr. Gary sought to defend this discrimination against our own people. When a protected manufacturer says that such sales abroad are justified because they keep the mills going and give continuous employment to workmen, the excuse can be swept aside by one or two simple questions. Why did you not offer the goods at the same prices to Americans here at home? Do you not know that at such prices the goods would have been quickly taken here? Could not the mills have been kept going and the men have been em-

ployed continuously by American buyers' money as well as by the money of buyers abroad?

The truth is that offers at the low figures are not made here because such offers would break the agreement by which much higher prices are here maintained. And it is also true that these higher prices are maintained by means of the tariff duty. The first defense of this discrimination in favor of foreign buyers, or the earliest that we recall, was made by John W. Gates when he was at the head of a steel company which is now a part of the great Corporation. His argument was like Mr. Gary's. A frequent repetition of it in testimony or in other public statements is to be desired, for it shows how a high tariff duty which is not needed for protection is used to the injury of those who have granted it.

As we have said, we do not think the entire duty on steel should be removed now, even if there be no real need of any part of it for protection. The effect of so great a change, so sharp a transition, upon a leading industry, and upon other industries and business generally, would be unfortunate. It should be remembered that the export prices of steel produced in Germany have not been determined by cost of production. Germany has a domestic price, and also an export price which is lower. As we have "dumped" goods in Canada and elsewhere, so Germany has "dumped" them in various countries. German steel would be sold here at very low figures, probably, if we had no tariff. Thus the output of American mills might be sharply cut down. Moreover, the removal of the entire duty, involving a considerable reduction of profits, would undoubtedly cause our manufacturers to reduce wages at once. The duty should not be taken off at one blow. It may be that a cut of one-half now would be enough.

The Administration at the University of Illinois

The University of Illinois has been coming to the front in the last few years more rapidly than any of the other State universities. It now ranks eighth among the great universities of the United States in the number of students, and is receiving large appropriations from the Legislature, for the people of Illinois are determined that their own institution shall not be surpast by any within the State, especially one founded by John D. Rockefeller. More important than its growth is the raising of the standard of scholarship, the introduction of new men of ability and promise, and the opening of a graduate school. This rapid progress is to be credited chiefly to the energy and initiative of President Edmund J. James, who left Northwestern four years ago to take charge of the State university.

But the University of Illinois is suffering somewhat from the twinges of growing pains. Such a radical and rapid transformation cannot be effected without hurting the feelings of some one or several. One such, Dr. George T. Kemp, has made his grievance a public question by his articles in the local papers and in *Science* of October 9th, charging President James with duplicity, dishonesty and abuse of official powers. Dr. Kemp does not ask for sympathy on personal grounds. If his manner of leaving the university has impaired his chances of getting a position in another college, he can fall back on his profession, and make more money by the practice of medicine. But he holds that the question of academic freedom versus presidential tyranny is involved in his case, and it is therefore of public importance.

The essential facts seem to be as follows: When the Graduate School was established a year ago, certain departments were selected for development, as it was impossible to bring them all at once to this rank. Professor Kemp was not one of the professors promoted, his salary was not raised to the prevailing rate, and his department did not share in the general prosperity. He felt, doubtless rightly, that this indicated that he was not in favor with the administration, and, being a high-spirited man, he resented it as a slight upon his honor and ability. He forced the issue by demanding "a court-martial" before the board of trustees and the formulation of specific charges. This mode of procedure was not adopted, but Dr. Kemp appeared before the board two or three times, presenting witnesses and papers to prove his

success as a teacher and investigator, and calling attention to alleged defects in the organization of the university. Then finding the opposition to him still undefined and undiminished, he resigned his position and has since been waging war from the outside against President James and "the system." The board of trustees, regarding his resignation as voluntary, refuses to reopen the case and holds that he had no just grievance against the administration.

Dr. Kemp bases his charge of duplicity and unfair treatment chiefly on the fact that after his last appearance before the board his case was discust by the President, who at that time stated his opinion of Dr. Kemp and why he did not regard him as worthy of promotion. We do not see that this charge is well founded. We do not see why the technicalities of legal procedure should be followed in such cases. Certainly our courts are not so prompt and efficient in their action as to commend their methods for extension into academic circles. It is the business of boards to talk over freely the qualifications and defects of the professors, and they would be seriously hampered in their consideration of the subject if the individuals discust had to be present or represented by attorney.

The reason why no definite and serious charges such as would necessitate his dismissal were brought against Dr. Kemp was probably because there were none to bring. The president seems to have objected to him on the ground that he was not a first-class teacher or administrator and that he was a hard man to get along with. These are as intangible as they are important, and it is difficult to see how they could be proved or disproved by any form of court-martial. President James practically appealed to the trustees to express their confidence in his judgment of men, and this is what they have done. Since to be a good judge of men is one of the most important qualifications of a college president, they could hardly have decided against him if they thought him worthy of office. It may be that President James underestimated Dr. Kemp's ability and overestimated his incompatibility, but the error, if it were such, does not involve any moral obliquity. The University of Illinois should have the best physiologist it can find, and it is not clearly demonstrated that Dr. Kemp is that man.

We believe that the board of trustees are right in holding that further discussion of the case is unnecessary and detrimental, altho we do not regard their resolutions, reported in *The University of Illinois Press Bulletin* of December 16th, as satisfactorily worded. We do not find in Dr. Kemp's letter of resignation the reasons they quote as his. The letter as publisht in *Science* gave altogether different reasons. And the statement made by the board that Dr. Kemp's resignation was not even suggested at the board meeting is quite too sweeping an assertion.

On the whole we fail to find evidence to prove that academic freedom is in danger in the University of Illinois or that President James is more autocratic than other successful presidents, as, for example, our revered President Eliot. He certainly is less inclined to be arbitrary and dictatorial than his predecessor, President Draper. We cannot here enter upon the wider question of whether a more democratic system of government, such as is advocated by Professor Cattell, is desirable. At present the tendency is to regard a strongly centralized and personal administration as best for universities and cities. The liability to abuse such power is checked by the watchfulness of supervising boards and by the fact that an aggrieved party may appeal to Cæsar, *i. e.*, *Science.*

Goldwin Smith's Philosophy

Prof. Goldwin Smith, on the occasion of his eighty-sixth birthday, writes to the students of Cornell University, and thus speaks of a subject which interests us all, while referring to the changes since he was a child:

"The child when still a youth heard a great professor of physical science struggling to reconcile geology with Genesis. Now he reads the work of a religious writer such as Gladstone struggling to reconcile Genesis with geology.

"Let the evolutionists, however, remember two things: First, that evolution cannot have evolved itself; second, that unlike brutes humanity, as we have been here noting, advances, and we cannot tell what the end will be; whether it may not be the final ascendancy of

the spiritual over the material in man. Man, let the evolutionists remember, advances and rises. The beast does not."

But it was almost a generation ago that Gladstone was trying to reconcile Genesis with geology, as Hugh Miller and Edward Hitchcock and James D. Dana had tried to reconcile geology with Genesis. In these days no one thinks it necessary to reconcile them, as they move on different planes. It is a fact of tremendous import which Goldwin Smith states, that evolution cannot have evolved itself. Not even the first differentiation of atomic matter could have evolved itself, not to speak of living organisms.

The Andover Question Settled

At last we have the end of the Andover question, which began with some needless, but harmless, attempts on the part of one or two professors in the seminary to straighten out God's justice, an effort which greatly alarmed certain conservative theologians who did not like to have it straightened out in any new way; and which has ended in the decision of the Visitors, who are the final protectors of orthodoxy, that the trustees were justified in moving the seminary to be under the wing of Harvard University. There has been a great effort on the part of certain graduates to represent the removal as a going over to Unitarianism; but they are of those who have not had their eyes open to the fact that Harvard is no longer Unitarian. Its theological professors are Baptists and Congregationalists, and a Congregationalist was called from a leading pastorate to have charge of the religious interests of the university. The new Andover Seminary at Cambridge will remain entirely separate from the university, but will gain advantages for its students from the accessible lectures. Some years ago three of the ablest Andover professors left the institution, Professor Moore to go to Harvard, Professor Tucker to become president of Dartmouth, and Professor Harris to be president of Amherst. The future of the seminary, which has lately had hardly as many students as professors, depends on the wisdom of the trustees in securing and holding teachers of the first rank. It is men that draw pupils.

The Old Affections

The unity of humanity in all ages and among all races, and the depth of the universal family affections are hardly anywhere better to be seen than in an ancient Babylonian psalm, from a period doubtless as much as 2500 B. C., of which we find a translation in a French philological journal. It is a prayer to Bel-Inlil, the protecting deity of Nippur, at a time of invasion and distress. After petitions repeated in various forms to the god:

"O honored one, repent, behold thy city;
O lord of the world, repent, behold thy city.
O lord of the faithful promise, repent, behold thy city;
Eulil, father of the earth, repent, behold thy city," etc.,

the prayer continues:

"Unto the estranged city, when wilt thou be merciful,
The city to which thou didst give abundant grain,
Where the thirsty was satisfied to drink no more,
Where the young bride could say, 'My husband,'
Where the young mother could say, 'My child,'
Where the maiden could say, 'My brother,'
Where the expectant mother could say, 'My babe,'
Where the litle girl could say, 'My father,'
Where men crowded or hurried in the streets,
There the little ones perish, the great ones perish,
Her booty the dogs defile,
Her pillage the rude foe defiles
In her banquetting hall the wind revels."

Christmas Trees

About four million Christmas trees were cut down in the forests this year; and in these days when we begin to think of preserving the forests the question has arisen in many a mind whether it is right thus to endanger the water supply from the hills. But let us do a little ciphering over it, or, rather, take the figures given out by the Forest Service at Washington. Four million trees—one tree for every fourth family—is a small number in the forest. If planted four feet apart they could be grown on 1,500 acres—that is, on two and a half square miles, the space of a rather large farm. This need not worry us when we remember that the supply of lumber requires the cutting of 100,000 acres every day in the year. Of course there has been damage in places by the

cutting of Christmas trees, particularly in the Adirondacks and some parts of New England; but the damage is insignificant beside that by forest fires. In Germany they use more Christmas trees than anywhere else in the world, and there they have the best system of forest preservation. They grow the Christmas trees, and then cut them out to thin the forest, and make a good profit out of them. The Christmas sentiment and the pleasure to children are reason enough for using the land and cutting the trees, even at some loss, just as it pays to use land for a flower garden. What we need is more intelligence in caring for our forests, so that the small Christmas trees may be a sort of by-product, filling the interspaces while the permanent trees are growing for lumber. Or, indeed, it would be just as legitimate to cultivate ten acres of a farm for Christmas trees as for potatoes or grapevines or roses. We thank the Forestry Service for setting all this plain. Our consciences need not be disturbed.

President Hadley tells a curious incident in college history. About half a century ago, about the time that President Eliot was in the Harvard boat, the president of Harvard wrote to the president of Yale asking assistance in stopping the "contemptible and demoralizing" sport of intercollegiate boat-racing. The effort failed, not because boat-racing is so interesting a sight to the spectator, for President Hadley says he knows no other ordinary occupation of human life in which you go so far and see so little as does the spectator at a boat-race; but because such men as Charles W. Eliot were in the boat. It is the competition for prizes that men want to see. President Hadley says that if the college winners of today in intellectual contests are the strong men tomorrow in the nation, then intellectual ambition will come to its own, and effort and honor go to something higher than physical superiority. But has it not always been true that brains and scholarship in college have won the prizes in after life?

Think of this: With the beginning of the year we have a parcels post arrangement with Austria (not Hungary), under which parcels which weigh eleven pounds and are three and a half feet long can be sent for twelve cents a pound; but we have no such favor granted to our own citizens as we give to foreigners. The utmost limit we allow them is four pounds and a cent an ounce. Why don't we do as much for our own citizens? Because it does not please Senator Platt and the powerful express companies. Japan has over fifty-two million dollars in postal savings banks; we have none.

On the side in favor of postal savings banks may be mentioned not only the experience of European countries, but that of the Philippine Islands, where they have been establisht by our Government, to the great advantage of the people. In Hawaii they are asking for them again, for they had them before annexation. The Honolulu Chamber of Commerce, and practically all the bankers, have signed the request. In the city of Liège, Belgium, the children in the public schools have a deposit of over $70,000 in the school savings bank, and the practice teaches thrift from childhood.

The tariff is "a local issue"—did not General Hancock when candidate for President say so? And who shall deny it now that Southern Democrats from North Carolina are urging the Ways and Means Committee at Washington, in the hearings, to raise the tariff on barytes, inasmuch as fine deposits of it have been found in that State? It is used to adulterate white lead. So Louisiana wants a protective tariff on sugar, and South Carolina on rice. What is the difference between Democrats and Republicans anyhow?

Here is an unusual advertisement in an English newspaper:

> "*To Bridge Players:* On the 1st of December, the birthday of our Gracious Queen, will you give one-twentieth of your bridge winnings that day to assist in building an extra aisle to St. Paul's Church, Winchester? . . . If so, please forward the amount to Admiral R.," etc.

And yet about the earliest pronouncement by a Pope of Rome was directed against gambling.

Insurance

The Passing of Otto Kelsey

It was announced last week that Otto Kelsey, Insurance Superintendent of New York, had accepted appointment as First Deputy Comptroller under Comptroller-elect Charles H. Gaus, and his retirement from the insurance department will leave the office open to an appointee of Governor Hughes. The slate makers have since been busy, and among the names mentioned for Insurance Superintendent are the following: Matthew C. Fleming, of New York; Senator Alfred R. Page, of New York; former-Senator W. J. Tully, of New York; Senator W. W. Armstrong, of Rochester, and H. H. Bender, of Albany. Governor Hughes is said to be considering the advisability of recommending to the Legislature an increase in the salary of the Superintendent of Insurance to $15,000, in order to secure the services of a man with the requisite qualifications for the place.

More Changes in the Provident Savings

The Provident Savings Life Assurance Society, which has recently been so checkered in career, has now undergone one more transformation. The stock control again past last week, and Arthur G. Langham has resigned the presidency which he so recently assumed. His successor in the office is Commissioner Elmer E. Rittenhouse, of Colorado, thru whose agency the Provident Savings was obliged, in 1907, to cease writing new business. The new owner of the majority interest is nominally Judge Nash Rockwood, of Saratoga Springs. The Provident Savings has shown remarkable vitality in spite of very adverse conditions. The result of this last change in the company is expected to have exceedingly beneficial results, and there is much ground for assuming that because of the change the company secures a new lease of life. Timothy L. Woodruff once held the control of the company and acted as president for a time. He sold out to F. Augustus Heinze, E. R. Thomas and O. F. Thomas. The transactions between the Thomases and the Philadelphia syndicate headed by C. C. Coyle and John E. Grady were but recently in the public eye and excited wide newspaper comment. The company was rapidly going to pieces when the intervention of Mr. Rittenhouse arrested its disintegration. Its financial condition has since steadily improved, and it is stated that the impairment, which at one time was about $400,000, has been reduced to less than $150,000. That under capable management, such as Mr. Rittenhouse is likely to give it, the company can be made a flourishing institution there is no doubt.

The official examination of the Manhattan Life Insurance Company by the New York Insurance Department, which has just been completed, was the first made of the Manhattan Life Insurance Company since the passage of the new insurance laws, and was of a most searching character. Every item of income and disbursement was most carefully examined and checked, and found to be correct, as set forth in the company's annual statement as of January 1st, 1908. The assets of the company were also carefully examined. The real estate was appraised by the department's appraisers, and resulted in increased valuation. The bonds and stocks owned by the company were checked over, counted and valued by the department's examiners, and the value of same was found to be within $4,500 of that claimed by the company. All the other assets were examined and found to agree with the company's report. The reserve liability was thoroly checked over, and the policy records tested with the applications and with the premium paying records. The unpaid death losses were also checked and found correct. The whole report must be very gratifying to the company and to those interested in it.

Frederick A. Burnham, sometime president of the Mutual Reserve Life Insurance Company, who was under indictment in connection with the recent insurance scandals, suffered death by gas asphyxiation last week.

Financial

The Securities Market

As a result of last week's transactions on the New York Stock Exchange, a slight net advance in prices was shown. Four leading industrials gained an average of about 3 points. United States Steel was not one of these. Steel issues were unfavorably affected by tariff testimony and the probability that protective duties will be reduced. The average gain for fifteen active railroad stocks was nearly 2½ points, but for a majority of these issues the advance did not exceed 1¾. The average was raised by New York Central's 5⅝ and Union Pacific's 2⅞. Bond sales continued to be large, exceeding $11,000,000 on the 22d. Last year's sales were only $526,000,000; this year's, up to Saturday last, were twice as great, or $1,060,000,000. The recent course of the share market may be indicated by the statement that the average advance, for the ten most active stocks, in four weeks after the election, was about 10 points; that this was succeeded by a decline of 7½, and that the recovery since the 22d has been about 4¾.

....Australasia's wheat crop will be about 60,000,000 bushels, against 40,800,000 a year ago, and the surplus for export will be 36,000,000 bushels.

....In Manitoba, where the telephone system is owned by the Government, rates for the coming year will be reduced by nearly 40 per cent.

....More than $25,000,000 has been paid out of the relief funds of the Pennsylvania Railroad Company—$15,050,644 to members disabled by illness or accident and $10,276,227 to the families of members who have died.

....The Bankers' Trust Company, of which E. C. Converse is president and J. F. Thompson vice-president, has elected the three following additional vice-presidents: Benjamin Strong, Jr., formerly secretary of the company; D. E. Pomeroy, formerly treasurer, and Fred I. Kent, manager of the foreign exchange department of the First National Bank of Chicago. The former assistant secretary, F. N. B. Close, has been appointed secretary. The Bankers' Trust Company has deposits of $36,810,000.

....In 1908 there were constructed by the railroad companies in the United States only 3,214 miles of new main track, against 5,212 in 1907 and 5,623 in 1906. In comparison with last year, Canada, on the other hand, shows a gain of 21½ per cent., and the increase in Mexico was 23 per cent.

....Tables compiled by the *Journal of Commerce* show that dividend and interest disbursements in this country next month will amount to $180,250,188, against $182,653,533 a year ago. Interest payments are larger by about $5,000,000 than in January last, but dividends show a decrease of $7,500,000.

....George T. Smith, vice-president, who has just been elected president of the First National Bank of Jersey City, was born in New York, and for thirty-five years has been connected with the Pennsylvania Railroad Company, rising from clerk to general agent for New York and vicinity. Mr. Smith is vice-president of the Pavonia Trust Company and president of the Joseph Dixon Crucible Company, one of the largest corporations in New Jersey, and has recently been elected vice-president of the New Jersey Title Guarantee and Trust Company, of which William H. Corbin is president. Edward I. Edwards remains as cashier of the First National Bank, but the new vice-president is Robert E. Jennings. The directors are: Hamilton Wallis, Charles Siedler, George T. Smith, William H. Corbin, Robert E. Jennings, Edward L. Young, Thomas J. Maloney and Edward I. Edwards. The First National Bank of Jersey City was organized in 1864, and has a capital of $400,000, surplus and undivided profits exceeding $1,250,000, deposits of nearly $8,750,000, and total resources of over $10,700,000.

Woods

$200.00 IN SIX MONTHS FROM 20 HENS

TO the average poultryman that would seem impossible, and when we tell you that we have actually done a $500.00 Poultry business with 20 hens on a corner in the city garden 30 feet wide by 40 feet long we are simply stating facts. **It would not be possible to get such returns** by any one of the systems of poultry keeping recommended and practiced by the American people, still it is an easy matter when the new **PHILO SYSTEM** is adopted.

The Philo System Is Unlike All Other Ways of Keeping Poultry

and in many respects is just the reverse, accomplishing things in poultry work that have always been considered impossible, and getting unheard of results that are hard to believe without seeing; however, the facts remain the same and we can prove to you every word of the above statement.

The New System Covers All Branches of the Work Necessary for Success,

from selecting the breeders to marketing the product. It tells how to get eggs that will hatch, how to hatch nearly every egg and how to raise nearly all the chicks hatched. It gives complete plans in detail how to make everything necessary to run the business and at less than half the cost required to handle the poultry business in any other manner. There is nothing complicated about the work, and any man or woman that can handle a saw and hammer can do the work.

Two Pound Broilers in Eight Weeks

are raised in a space of less than a square foot to the broiler without any loss and the broilers are of the very best quality, bringing here three cents per pound above the highest market price.

Our Six Months Old Pullets Are Laying at the Rate of 24 Eggs Each Per Month

in a space of two square feet for each bird. No green cut bone of any description is fed, and the food used is inexpensive as compared with food others are using.

Our new book, the *Philo System of Progressive Poultry Keeping*, gives full particulars regarding these wonderful discoveries with simple, easy to understand directions that are right to the point, and 15 pages of illustrations showing all branches of the work from start to finish.

Don't Let the Chicks Die in the Shell

One of our secrets of success is to save all the chickens that are fully developed at hatching time, whether they can crack the shell or not. It is a simple trick and believed to be the secret of the Ancient Egyptians and Chinese which enabled them to sell the chicks at 10 cents a dozen.

Chicken Feed at 15 Cents a Bushel

Our book tells how to make the best green food with but little trouble and have a good supply any day in the year, winter or summer. It is just as impossible to get a large egg yield without green food as it is to keep a cow without hay or fodder.

Our New Brooder Saves Two Cents on Each Chicken

No lamp required. No danger of chilling, overheating or burning up the chickens as with brooders using lamps or any kind of fire. They also keep all lice off the chickens automatically or kill any that may be on when placed in the brooder. Our book gives full plans and the right to make and use them. One can be easily made in an hour at a cost of 25 to 50 cents.

A FEW TESTIMONIALS

Your system of poultry keeping should appeal to all poultrymen. The advantages of your system are many, and the quality of the large flock of poultry you have raised on your city lot is the best evidence of its success.

GEO. L. HARDING, Binghamton, N. Y.
Valley Falls, N. Y., Sept. 5, 1907.

It was my privilege to spend a week in Elmira during August, during which time I saw the practical working of the Philo System of Poultry Keeping, and was surprised at the results accomplished in a small corner of a city yard. "Seeing is believing" they say, and if I had not seen, it would have been hard to believe that such results could have followed so small an outlay of space, time and money.

(Rev.) W. W. Cox.
Windsor, Vt., March 8, 1908.

I consider the one dollar I invested in the Philo System, Poultry Review and American Poultry Advocate the best investment for the money I ever made.

ROBERT L. PATRICK.
Jacobs Creek, Pa.

I received the Philo System Book mailed to my home address, Beechtree, Pa. I am highly pleased with it, and am anxious to spread the good news as far as I can. I am a preacher of the Gospel engaged by the Baptist Association to do Evangelistic work. I am on the road all the time, have about 14 days in each town. I am very much interested in the hen and will do all I can to help the other fellow to know how, and to spread the good tidings received in the Philo System.

(Rev.) F. B. WILLIAMS.

SPECIAL INTRODUCTION OFFER By special arrangement we are able to give for only $1.00 the book, with the right to use all plans. One year's subscription to Poultry Review. A monthly paper for utility breeders. One year's subscription to the American Poultry Advocate. Upon receipt of $1.00 you will get the book by return mail and your subscriptions will start at once.

Copy of the Philo System book and a year's subscription to Poultry Review and the American Poultry Advocate, all for $1.

Remington

AUTOLOADING RIFLE

LOADS ITSELF—STRIKES THE BLOW OF A TON HAMMER
CLEANLY PENETRATES ¼ INCH OF TOUGH STEEL
BREECH REMAINS OPEN AFTER LAST SHOT—
HAS PERFECT SAFETY DEVICE AND IS STRONG
SURE AND ACCURATE

Last year's hunting season brought in scores of hearty recommendations of the new Remington Autoloading Rifle. John Goff, the President's big game guide, and Steve Elkins, a famous Colorado guide, endorsed it. J. O. Curwood, in his hunting story in a December magazine, said: "I use a .35 calibre Autoloading Remington, which I believe is better than any other heavier calibre I know of. It will kill moose, caribou and deer as far as one can easily see them, with only moderate recoil and without undue mutilation."
